Now, you are putting more and more negroes into such and such positions. Why? Because they get votes. And if there were 5 million Mohammedans in United States, you would have Mohammedan judges and Mohammedan police officers. And if they were Buddhists you'd do the same thing. You'd pay off to any bloc. Correct? Regardless of whether or not it is justified. I am not deprecating the negroes. Do not misunderstand me -- that is not the point. The point is that we will sacrifice anything in the way of principle in order to make a bloc payoff, and we encourage them. What? To ask for bigger and bigger payoffs. Correct? Well, how far can you go?

We, as an organization, are pretty proud of our record. Of course, I can't go into all of the details, whether it's railroad or highway design, or city design, farms, or a million other things, but as and when they come to operate them on a larger scale, they will have to come to our schematic general principle of organization and design. In other words, Marx or Engels or Lenin -- they never had any modulus or calculus of design of operating anything. They were essentially pamphleteers and soapbox revolutionists. And to attempt the same kind of political would be the creation of a gargantuan monstrosity in this country, because it will have to operate. Have you had enough?

JUST ONE QUESTION, CHIEF. WHAT KIND OF SOCIETY CAN WE HAVE?  
WHAT IS POSSIBLE HERE IN NORTH AMERICA?

Well, you can produce and distribute an abundance with a minimum of the healthy adult population of United States; in fact, that is what we are headed to now. If we keep this up very much longer, there will be a crisis in effect that we will not require the majority of healthy, able-bodied Americans to produce and distribute the abundance. We will have to give them ration tickets for mink coats, automobiles, gasoline, and champagne in order to consume the terrific productivity of the minority. And that wouldn't work under this system. What? Everybody has Cadillacs?! No, sir, you know it wouldn't work. The General Motors Board of Directors would all quit in disgust.

Like the newspapers in Canada ask us why we do not form a political party and accept a responsibility of political and social responsibility for our ideas. We're not interested in helping this Price System one iota. Be frank about it. We wouldn't do a damn thing to keep it alive one single second. After all our knowledge, we're still not trained, we still don't have the capacity that the politicians have. They have an infinite capacity for doing something that we will never be capable of doing; so, therefore, let's leave the job to them. They are experts at anarchy in the long run.

IS THERE ANY DANGER THAT THIS FANTASTIC DEPLETION OF RESOURCES IN THE PRICE SYSTEM CAUSING A DELAYING ACTION WILL REACH THE POINT WHERE IT WOULD HAVE AN EFFECT -- A DETRIMENTAL EFFECT -- ON THE OPERATION OF A TECHNATE. WE'RE

OUT OF OIL -- I MEAN, WELL, THAT'S IT, WE'RE OUT OF OIL. CAN YOU SEE MY POINT?

There's enough on this continent if we don't take another fifty years to get to it.

IS IT HANDY ENOUGH TO GET TO QUICKLY?

Not under this setup, no.

I WOULD LIKE TO HEAR YOU COMMENT A LITTLE BIT ON HOW THE TRANSITION COULD BE MADE BIG ENOUGH TO LAST ANOTHER FIVE YEARS. IF I UNDERSTAND IT CORRECTLY, SOME OF THE MAJOR OIL FIELDS WILL BE DEPLETED WITHIN THREE YEARS.

It might be any time. For instance, in the Sprayberry field in west Texas, look what the Texan Railroad Commissioners hold. Instead of permitting one well to every four to eight acres, they moved it up now to one well to 150 acres. You don't sense what this is, do you? You reduce the wells from 20 to 1 in that same area, don't you, so as to prevent the allowable from becoming public that they are declining. Get it?

Yes, there are resources on this continent, but we are going to do our damndest to gobble them up. Are we going to bring back the crabs, the oysters, and the clams in the Chesapeake? Is there any clam in the entire Chesapeake business? No.

Now, we've got the leisure time of a terrific volume of the population. We've got the equipment, the technological know-how that we can do all these things and maintain a stable economy.

I'M SORRY, I DIDN'T QUITE GET THE RESPONSIVENESS AS I UNDERSTOOD IT, WHICH IS THIS: IF THE PRESENT KIND OF EXPLOITATION OF NATURAL RESOURCES CARRIES ON FOR A PERIOD CALLED 'X', AT THE END OF SUCH A PERIOD OF TIME AS THE VARIOUS DIFFICULTIES COME ABOUT THAT YOU REFER TO, WILL THERE BE SUFFICIENT LEFT TO PERMIT THE INAUGURATION OF A TECHNATE AND STILL HAVE ENOUGH MATERIALS LEFT?

The hypothetical question is how long it could continue. But, after all, Italy has no future and neither does Britain today, or Greece.

BIRTHDAY TALK  
HOWARD SCOTT, NEW YORK

4-4-53

AT WHAT POINT IN TIME WILL U.S. BE WITHOUT VERY MUCH FOR A  
TECHNATE, GIVEN THE PRESENT RATE OF EXHAUSTION OF  
RESOURCES ?

We're not only exhausting U.S. -- we're out around the world  
doing it.

THE TIME MAY COME, THEN, PRESUMABLY, WHEN THE INAUGURATION  
OF A TECHNATE WOULD BE TECHNOLOGICALLY DIFFICULT BECAUSE THE  
RESOURCE BASE WOULD HAVE BEEN EXHAUSTED BEFORE THE  
CHANGE .... ?

You still have to do it. It would be more imperative than  
ever, because the only way you would live would be to do it.  
Don't think this continent can go back to human toil and hand  
tools. The only thing is, the longer it is delayed, the more  
drastic it is going to be when it happens.

.... IN FAVOR OF THE U.S.S.R. OR ANYTHING LIKE THAT .... AND  
PROBABLY IF THEY WERE NOT HELD BACK BY A WAR CONDITION OR  
WAR PSYCHOSIS WORSE THAN OURS, IF POSSIBLE, WOULDN'T IT BE  
REASONABLE TO BELIEVE THAT THEIR TECHNOLOGICAL  
EQUIPMENT .... SOCIOLOGICALLY THEY MAY BE TIED UP WITH  
PHILOSOPHIES WHICH THEY MAY NEVER BE INTERESTED IN .... BUT  
TECHNOLOGICALLY, WOULDN'T IT BE REASONABLE TO BELIEVE THAT  
THEIR PRODUCTIVITY IS EVEN GREATER THAN IT HAS BEEN AND THEY  
ARE SUPPOSED TO BE THE SECOND GREATEST NATION FROM A  
PRODUCTIVE POINT OF VIEW TODAY.

No, you see all our efforts -- our concentration to compel  
the U.S.S.R. to develop a know-how and the technological  
equipment on their own, and if they do it on their own, look out.  
Years ago, I was present at a dinner when General (Poulard?)  
turned to Tony Potts (?) and said, "Tony, you had better watch to  
your laurels, because the United States Air Corps is going to  
imitate your wings and your design," and the Dutchman, Tony  
Potts, just smiled and said, "General, that won't worry me a bit,  
but if the United States Air Corps ever really starts to design  
its own, then (he said) I'll be scared." Am I making it clear to  
you? In other words, you are forcing the Russian bloc to develop  
a technological know-how. Oh, no, we won't give it to you. Then  
you produce more pressure than ever was produced in these

countries to produce the technological know-how, correct? And, brother, you are going to have pressures.

Incidentally, where is the largest blast furnace in the world? Talking of daily tonnage rates, I mean, don't think of the sawed-off Nipponese. He didn't have a suddenly-acquired genius. He's got to have sufficient capacity. All he had to do was get beyond a certain state, and they were off to the races. The same thing could go for the Africans or any place else on the globe. You don't have to be a Christian, a Mohammedan, or a Buddhist. All you have to acquire is a certain extent of technological know-how and the resources in the area, and what? A great percentage of trained people? Oh, no, because today we can design equipment where you put the photograph in or the tape, and if they were all imbeciles -- let's get it -- with the exception of 1%, you could turn out better than we do now. Frightening prospect, isn't it?

Now, wait a minute! Your Cross machines -- that's one of your biggest machine designers in Detroit, the new equipment coming off the Cross designing board is what? Has a feedback system with a memory. Remember those long lines of Cross equipment? Ah, but they are going to be different now. They are going to change the tools and everything else. And who is going to change the tools? The memory feedback system. And what are you going to do with the individuals? Get them the hell out of there! He's in the road.

But we're still naive. We think we are going to fight a war with men. Well, on that basis, China has got the manpower. China is the third military power in the world. China could keep six million combat troops in the field, suffer 20% losses for 25 years, and be better off at the end of it than she was when she started. Can we? And what's our rejects today? What percentage are rejected? [20-25] Raise it two. Now you can see your psycho cases develop -- the Marine that shoots a .... it's all over. You don't know what you are training them to do. What is the social objective of 156 million Americans? The trouble is they don't know.

What we are trying to show is that in the next decade we are going to have it in our lap. Let's hope that it is 10 years and not the next 5.

WHAT ABOUT MANAGEMENT?

In what respect, sir? You said management?

TO WHAT EXTENT CAN YOU ELIMINATE MANAGEMENT? THEY ARE SOMEWHAT OUT OF PROPORTION. THEY CONSTITUTE A GREATER PART OF OUR OVERHEAD, AND I'VE SEEN PLENTY OF CASES WHERE IT WAS OUT OF PROPORTION WITH THE ACTUAL PRODUCTION FORCES IN THE PLANT.

You would have to go into a detailed explanation of what was included in management.

OFTEN YOU CALL IT BUREAUCRACY. I SHOULD SAY THAT IN A MODERN PLANT WITH CONTROL IN THE WAY OF TIME-STUDY AND SO FORTH THAT COULD BE ELIMINATED.

There is no sense in time study. [I WOULD LIKE TO GET YOUR OPINION] Taylor, a way back, when he made those time studies for the Bethlehem Steel, when he had that big husky Dutchman that weighed 230 pounds that used to get up, you know, around 4:30 in the morning and do a little work in the yard and then run to work -- he was dealing with making the human being efficient. Good heavens, how stupid does one have to be? Don't try to make that jackass efficient. He only has one quality that isn't prevalent over the entire species, and that is his ability to originate if given the opportunity. But don't try to kid him -- that you make the human being efficient. Today we don't want a human being to be efficient; we want to get him out of there.

Take your new battery plant -- those little dry cells -- a million per shift, all done up in the final carton. What's their cost? Six mils. Well, can you afford to have human beings wrap them or label them? You can't afford to have human beings do anything but watch it. Let's be honest.

Take the new coal mining machines that are capable of doing 3 to 5 tons a minute on a big coal face. Have you room for the miners? Good heavens, no, he's not even in the mine any more. John L. Lewis has 200,000 less miners than he had when the war ended, and in another like period of time, he will have a further reduction. In fact, in the next five years, at the present rate

of reduction of miners, John L. Lewis' remaining coal miners will get a greater bonus per year than their wages. You understand? And if that happens, do you think that the steel industry or the automobile industry aren't going to holler for the same thing?

WITH JOHN L. LEWIS' MINERS, YOU HAVE DONE AWAY WITH STEAM LOCOMOTIVES HOW DOES THE COAL TONNAGE LINE UP WITH THE MAN-HOURS?

Well, but the coal tonnage total has dropped a little, but then the tonnage per man has widened all the time.

I AGREE WITH THAT, BUT COAL ISN'T THE GREAT FACTOR IT WAS IN" 1946 WHEN THE STEAM LOCOMOTIVE WAS DONE AWAY WITH.

But that isn't what's doing it. What's happening is that you are developing mines today that are doing the tonnage, and the little mines are going. And you have more coal oversupply on the market than you ever had. Now, there is only a fraction of the mining that is done by your new method, where you are doing 90 to 140 tons per man per day. When you put in a complete long wall system, why, you are doing 3 to 5 tons a minute.

THAT'S STRIP MINING, ISN'T IT?

No, no. Underground mining -- 3 to 5 tons a minute. The only reason we haven't got it completely hooked up is because it takes an entire conveyor system and coal treatment plant at the other end because no car system could handle it.

IS THAT THE NEW THING THAT JOY MADE THAT RUNS THROUGH THE THING .... ?

Well, that's one type, but there is a better type than that.

.... ONE THAT DIGS IN, AN AUTOMATIC CONVEYOR BELT. [ANOTHER PERSON FROM THE FLOOR: I'LL TELL YOU. THE MINE COLLAPSES ON US. THEY LEAVE US THERE AND SEND ANOTHER ONE IN TO DIG IT OUT.]

Joy is only introducing a couple of machines--only a fraction of it.

BIRTHDAY TALK  
HOWARD SCOTT, NEW YORK

4-4-53

JEFFRIES IS MAKING SOME.

Jeffries, Joy -- they're all at it. The British are at it. The Russians are at it.

UNION CARBIDE AND CARBON HAS ONE.

Yes, they're got another one. After all, my friends are coming back to bother me, because I started the original plant of Chemicals and Carbide in Nitro, West Virginia at Charleston on the Kanawha River, Muscle Shoals, and a few others. We can't keep out of it even if we would.

Well, have you had enough?

CHIEF, JUST ONE MORE QUESTION. COMMENT ON THE ORGANIZATION JUST A LITTLE BIT. HAS THE MEMBERSHIP INCREASED AND IS THE WORD GETTING OUT ANY BETTER?

Yes, that is a very interesting question. In Canada and the Pacific Northwest, our reports are showing a rather interesting situation which is occurring -- a complete change; namely, that our monthly meetings and our public meetings are showing 60-68% nonmembers. Do you realize that -- nonmembers. And our sign-ups are 7-10%, and our total audience increase is greater than 100%. It shifted like this in the last year. It's shifting all over the place. And who are they getting in? The younger people. The war veterans. The one that's 35, 37, 38, that got his GI Bill-of-rights, that got the job, got the girl, got the home ....

All right, you go down to Greenville, South Carolina. They've got a lovely Section -- as good as any commercial office; in fact, the only other thing on the floor is a very swanky loan outfit. Where are they? Right opposite the city hall. Who are they? Most of them, war veterans. They run from a vice president of the biggest wholesale hardware, the owner of two jewelry stores, a chief mechanic, railroad men -- and their women are into it. Let me give you something strange. In South Carolina, you know, there is no dancing -- there's Baptists. And here is a group of young southern Americans who are quite aware of the ancestry of being Hard-Shell BB Baptists and what it's done in the backwardness, and they're not the slightest bit interested in the type of yesterday and the southern position. It's gone, it's

BIRTHDAY TALK  
HOWARD SCOTT, NEW YORK

4-4-53

down the drain, and, sir, it damn well better stay there! It is interesting. They cook a dinner; they've got tables as long as this. Their main room in their headquarters is almost this size. They have a big kitchen, and a private office. They did it themselves. And remember, these Technocrats were never at a public meeting of Technocracy until they came to Operation Hamilton. They did it on their own. Well, we are coming up. We've had Sections move into new headquarters, and they .... If you don't kill us off now, brother, before now, it is too late, that's all I've got to say.

CHIEF, DO YOU THINK YOU COULD ARRANGE TO HAVE TWO BIRTHDAY PARTIES A YEAR?

Well, it's been lovely to have you all here, and I won't go into my appreciation. My thanks to everyone. We're going to see a lot of fun in the next 10 years. I only hope that I have the health to be around to enjoy it. I'll have to make a tour across the continent this year. I think there is going to be considerable reaction.

EASTERN AREA CONFERENCE  
"A NEW STATESMANSHIP FOR NORTH AMERICA"  
HOWARD SCOTT  
AKRON, OHIO  
SEPTEMBER 6, 1953

Well, here we are again -- Technocrats assembled from various points on the continent. We have seen a lot of water go over the dam, and we've seen a lot of things happen; but Technocracy has maintained itself as an organization these many years. We have gone through the greatest war in history and the greatest depression, and we are moving up. You only had approximately 70 cars today in that motorcade. If you had had 250, they would have had to turn out the fire department in Akron. It doesn't make any difference what anyone thinks. There is no city in United States that can take 500 cars in a motorcade without turning out the entirety. They are not operating contrary to the law. You own your own vehicle. They have been inspected. You have a driving license, and you are privileged to drive your car and spend your money for gasoline. There is no other organization in the country that paints its cars.

The Chairman of the Board of one of the greatest financial institutions of this country said, "Mr. Scott, how do you do it? How do you make these Technocrats paint their cars? Is it compulsory?" I said, "Not at all. It is purely voluntary." "Well, he said, "the bank of which I am a member and Chairman of the Board, whether it is 79 branches abroad, I couldn't ask the employees of the bank to paint their cars. I couldn't even suggest it, and yet the Technocrats paint their cars without any force majeure being applied. What methods do you use?" Well, he kept on insisting and finally I had to tell him. I said, "After all, the employees of your great financial institution know you; the Technocrats know me." He allowed as how that was the smoothest insult he had been hit with in thirty years. We are moving up. There are more decals going out. There are more cars being painted. We have some places that report 400% to 600% increase in painted cars.

Well, what is it? What's driving them to it? Remember we have been advocating this for years, but a great many, inside the organization and out, thought our policies and our ideas were too long-ranged, didn't they? Thought we ought to be involved in something immediate. Well, the march of events is catching up to us. We as a country, back 160 to 170 years ago, with the great

expanse of territory, virgin soil, virgin forests, and untapped resources -- the original thirteen colonies were simple. Plato could have sat down at breakfast with George Washington and at lunch and at dinner and they would have understood each other perfectly, because their values and their concepts were similar, if not identical. Even Abraham Lincoln still belonged to that era.

In the last sixty years, modern science and technology have introduced in this country and Canada terrific changes. Those changes are also becoming apparent around the world. Our institutions -- social, political, economic, and otherwise -- remain back with the ox cart, the hoe, the shovel, and the indentured mechanic, servant, and the apprentice mechanic.

We are the only major nation on the face of the globe that has not had a fundamental change in its political structure in 160 years. In fact, our political-economic structure that directs the national policy is an anachronism in this day and age. What kind of a structure have we? Let's look at it for a moment. We have 48 states today, and there is a probability that there may be 50 shortly. There are over 3,000 counties, over 16,000 municipalities, approximately the same number of townships and school districts. In other words, the total of governing bodies in these United States is 116,000. 116,000 bodies that have the power to levy taxes and to collect them, to pass laws and regulations. The State of Minnesota has 9,000 such bodies. That is progress? Hardly. But because our economic progress has been so swift and the amplification of material wealth so great, we haven't had sufficient pressures to bother us to do any thinking about it. So, we elect political party members on a geographic basis -- the state legislatures to mayoralities, wards of aldermen, counties, townships, school districts, water districts, state, and federal. In fact, we elect about every damn thing from the sheriff and the undertaker up, don't we? And how long are they in office? They're never there long enough to really get any training. Their tenure, of course, is precarious; so, therefore, it isn't training that counts. How do you expect to run a complex economy when you elect morosity high, wide, and handsome in 116,000 governing bodies? Let's be frank about it. What is it? Is it electability on the basis that we are doing it? Do you elect competents? No, you elect party members, and the party member is the one who has said NO to every innovation, to every advance,

and to every change. It's like the army and navy officers. The only way the army or navy officer succeeds -- he runs on his record card; therefore, he has to say no to everything until he gets to be colonel. Beyond being colonel, he runs on File Number 201, and if he said the wrong thing at a dinner party or made advances to the wrong person's wife, he doesn't get to be a general. It's no wonder we have no generals! We have smoothies.

Well, that is the structure of our organization. Now, once upon a time, when you travelled by riverboat, by riding horse, ox cart, the old prairie schooner, the Conestoga wagon, the little local organization, the cracker barrel, and the spittoon, they contributed to the political administration of this continent; but with the complex technological, industrial mechanism that is interdependent and tenuous from coast-to-coast, from Venezuela to the North Pole, that kind of nonsense better be buried under a tombstone before it buries us. Let's be honest about it.

The problems that face this continent and this country are problems that are not being dealt with by any political party, by any periodical, by any fraternal organization, or by any ecclesiastical organization. Do you know of any church, do you know of any fraternal order, do you know of any financial institution that takes up the problem of water continent-wide? No, you do not. Arable soil continent-wide? Oh, no. They only want to take up a problem in the corn belt for the corn growers, so that they can buy the votes out in Iowa or Illinois. The same way with the fruit in Florida or California.

Once upon a time, when there were only a few automobiles, such as that one you saw today with the high wheels and the linen dusters -- remember? -- that came in at the end of our motorcade -- it followed us right in the motorcade to this corner here -- the old antique. Well, when there were few cars like that roaming the muddy ruts in this country, that was one thing. Each car owner could exercise his anarchic concepts as he or she pleased. Now, with over 44 million passenger cars in the United States, can you exercise that great liberty of anarchy concept as and when you please? Well, it is all right provided that 20, 30, or 40 million of you do not decide to go in the same way, the same direction, at the same time, and if you do, you don't move at all! It's your car, your gasoline, it's your country and your road, and yet you can't move. What's the matter with you? Can't

exercise that God-given right, can you? Why? Because the concept is that if everybody has it, it will be ideal. It will be democracy and you'll all have it; and you'll all go the same way at the same time, and it will be wonderful. The hell it is! All you have to do is run up the density of cars per mile and it stops. Through no fault of the individual driver, you understand. Not at all. The fault of a system and a concept. Well, that is one of the things we are running into.

It used to be that when a young man went west -- the saying was, "Go west, young man," you know. Now there isn't any west to go to or any south or any north. No president of the United States can say what Abraham Lincoln did, that, "We'll win the next election because we can give a quarter section to every soldier in the Union Army." Truman or Eisenhower couldn't say that to the army of World War II. There "hain't" that much land any more. So, there are certain things you can't do any more. It's like that song during the war. "You can't have that. No, sir, you can't have that. We ain't got that no more." Well, United States has reached that point, and we are faced with another problem. There isn't any more loot that can be dispersed to the average homo sapiensus Americansus any more. The loot has to be restricted to the big boys. So we cannot appease the populace of these United States by a general dispersal of loot of land, of timber, or anything else. It doesn't remain any more.

Now, when it comes to building houses, what do we do? Why, build your own home -- be a home owner; then you're a safe citizen. Oh, are you? What's happened in the last thirty years, and, more specifically, in the last fifteen? There has been tremendous construction of housing, but what kind of housing? Those escrow Indians have gone out and bought out farms -- beautiful farm land -- 20 miles, 30 miles, 40 miles, 60 miles outside of cities, and subdivisions have been opened up. Phoenix, Arizona, used to be a nice drive from Mesa or Superior and now it is just a neon tube-lighted highway of motels, booze joints, shops -- why, they have big plateglass windows away out in the desert full of refrigerators! What are you going to have them do in the desert -- keep the tarantulas and the sidewinders cool? It is the same way in Los Angeles, San Francisco, New York, Philadelphia, Cleveland. Now, I wouldn't know about Akron, but in every major city in the United States the same phenomenon is observable.

What has happened is that the income group of \$2,500 to \$8,000 fifteen years ago is now the income group of \$6,000 to \$25,000, and this lush expansion we have had, they have migrated from the urban center out to the suburbs. They all want a ranch home. Oh, yes. They want the "terlits" fur-lined. They want Cadillacs in the garage. And then they discover -- as they do down here at Morrisville where you have four swank subdivision -- that the lawns had to be mowed three times a week, and the lawns were two acres. You couldn't mow your own lawn -- that had to be part of the suburb contract. The cost ran up for months. So, if your income didn't expand greater than when you bought the place, you'd go broke maintaining it.

Now what is all this expansion in housing predicated upon? Cheap automotive transportation and cheap automotive fuel; in other words, available supplies of petroleum that can be sold in huge volumes cheaply. We have in the United States in excess of 5.2 billion horsepower of prime movers. Let's get that fixed -- in excess of 5.2 billion. Ninety-two percent of that amount is in automobiles -- the greatest amount of horsepower ever installed by any people at any time in history, and we have them standing around on our streets and our highways, our backyards, and our lots. Why, we can afford it! We have been able to afford it but the question in the near future is will we be able to afford it? What does it take to run the cars? It takes oil, gasoline, space, mechanics, other materials. Well, United States is producing 6.4 million barrels of petroleum a day. Our petroleum consumption is headed to 8.2 barrels a day by January or February next -- 2 million barrels of petroleum short. Well, anything to worry about? No, not a thing, brother, not a thing. Are the oil fields there? Oh, yes. Right here in Ohio and down in Pennsylvania, there used to be oil fields -- do you remember? If you are on in years, yes. There were great lush days in "coal oil Johnnie's" day -- Colonel Draper -- but that was 1859 and in the 70s and the 80s; but in Pennsylvania the oil is just a memory. We are building tankers abroad in foreign yards of 45,000 tons deadweight capacity. The sixth largest ship in the world is a tanker. What are we building them that size for? To import oil. Now, is the gasoline to remain down? Is gasoline going to go lower in price when we have to import more and more and more? Gasoline is more likely to go up, up, and up. Very nice problem, isn't it? A problem that touches every state in the union, every

municipality, every county, and every township; because, brother, they've all got cars, haven't they? And what are they going to do with them? If gasoline goes to 60 cents a gallon, what you all goin' do?

Take the automobile plants of France, Great Britain, and Germany. What do you think the percentage of the employees, officers, and board of management total? What do you think the percentage is in a great automobile plant abroad that drive to work in automobiles? Most of them ride on busses, bicycles, or walk. Only a fraction of one percent in the very corporations abroad that make the famous cars can afford to ride in the automobiles they make. Well, they have to export them for raw materials and for food.

We've had a wonderful time dumping our resources around the globe. There was the day, I remember, 33 years ago, when we wrote a report for the steel industry of the United States, in which we predicted that the iron ore -- the hematite iron ore -- of the Mesabi Range, if the growth of the iron ore and the steel industry were to continue at that rate of growth, the economic feasible ore of the Mesabi would be exhausted by 1950. The only thing that prevented it from coming correctly on the nail was the depression of the dirty thirties. But, let's sum it up -- you can't fight a World War III with the hematite that's left in the Mesabi. It just isn't there.

Copper? We haven't any of the rich copper left. We're mining copper ore in the United States -- all copper is less than .8 of 1% copper content. Well, remember we were the great producers of the world of copper -- the great exporters of copper. We were the steel kings of the world; the petroleum kings of the world. Well, are we any more? We still have the labels, we still have the gas stations and the advertising in all the magazines, but how are we going to meet an ever-increasing consumption of petroleum? The same thing with water, with iron ore, with copper, with lead, with zinc. They have mounted to a point to where THEY are the significant things -- not the wishes, the desires, or the concepts, or the human conduct or behavior; because what we face on this continent, ladies and gentlemen, is not a moralistic conduct of human affairs. You can philosophize about that and have been for several thousand years, but you face something new. You face a government not of men but a government of things, and

you had damn well better get about it I Whether you believe your next door neighbor is black, white, brown or green or whether he is good, bad, moral or immoral, hasn't the slightest effect on altering the copper content, the petroleum content, or the hematite or the available water. And if you are going to turn out more and more energy-consuming devices in this country and this continent to consume ever-and-ever greater quantities of our natural resources, then you had better start thinking.

Your politicians, your so-called statesmen, your literati, and your intelligentsia are kidding you. Well, everything's lovely. You get it every day in the papers. Two-and-one-half to three million babies a year -- why, by 1960, there's going to be so many million more diapers and baby carriages and bottles. We are going to be assured ever-and-ever greater business, aren't we? Wonderful, if you believe it. But where are you going to get the substance -- the material substance -- to maintain this industrial complex? After all, God isn't going to send down manna. If it isn't in the geologic structure and conformation, you're not going to get it.

So, all right, they sell you insurance policies, and they advocate pension plans in your plant or the corporation you work for don't they -- although the pension plans are not negotiable or transferable; so, if you are fired two weeks before your pension is due, you are out of luck. Nice, kind, Christian people, aren't they?

Now all of this is building up. Do you have water in Ohio? Where is it? Florida, that thought it had the great supply of lakes -- it's even happening in Florida. Sewerage is going out into our rivers, into our lakes, and down into our drainage structure, and you have pollution here right in this State of Ohio. Remember the several cities that were dumping their sewerage down in the porous limestone for years boasted about their low taxation? Now what's happening? The typhoid is turning up forty miles away. Wonderful! We as a people never had to bother about who lived in the next block or who lived in the next city or the next county. The hell with them! We were making our way.

Now, what kind of a situation are we in in these things? In oil -- let's sum it up very neatly and succinctly. We are

drilling 43,000-44,000 wells a year. We're drilling in Canada. We are drilling in other places on this continent. The average production per well per day in the United States is 11 barrels per well. In Venezuela, it is slightly under 300 barrels per well per day. In Saudi Arabia and Iran, it is 8,000 to 10,000 barrels per well per day. But don't think that was tops. In the Golden Lane in Mexico, Sarazul No. 4 and No. 7 were running 100,000 barrels per well per day. One well ran 81 million barrels before it turned to salt water. The Golden Lane is no longer the Golden Lane. The oil just isn't there.

Well, can we go on and find more oil by drilling? Yes, somewhat, but the odds of finding a major pool great enough to satisfy one year's consumption of the U.S.A. is greater than 1,000:1. Same thing has happened in Venezuela. Venezuela at the present moment is being torn apart by a discussion as to whether they should go on and mine the guts out of their oil because the foreign oil companies have been drilling wells and maintaining the huge output, but the visible reserve is falling; and Venezuela without oil is sheer anarchy, because they'll probably eat each other. They don't produce enough food, and once the oil goes -- . Human hamburger might be all right provided they are nice, young, fat, and tender. But I would hate to have to live on a diet of some of these state legislators. Of course, we of Technocracy ironically have put it out that the only cure for certain things is to open up a canning plant and can these politicians and businessmen for export to the cannibals. Well, it would kill the cannibals off, too. It would accomplish two things. So, maybe here it is coming involuntarily.

Now if a major oil field fails in the United States -- in other words, if there is a drop in our internal production from 6,400,000 barrels a day down to around 5,000,000, are you going to have all the gasoline stations you've got now? If gasoline goes to 60 or 70 cents a gallon, what happens? Is your ranch house going to be wonderful 45 miles out? It's going to smell awful bad unless you use a hand pump and flush it down into the septic tank.

We've graduated more millions of human beings into a "le grand bourgeoisie" than any people in all of human history, and what are they? They had some liberal, progressive inclinations when they were in the urban center. When they moved out to the

suburbs, they ceased to have any progressive, liberal, or even slightly leftish tendencies. They all became fat and Republicans -- reactionaries.

Every big city is worried about the migration from the center of its urban center, producing blighted areas. And what happens in this migration is, they move out to the suburbs, they build their ranch houses and their bungalows, and they raise the cost-of-living in the small town and the village and the suburbs. So they force the lower income groups in the suburbs to move back into the city. That process, ladies and gentlemen, is on and has been on. They are worried about it in New York and they are worried about it in Chicago and Los Angeles. Why are they worried? Because the cities, if this trend continues, will become an ever greater concentration of low income groups, correct? The assessed values on property, the taxes -- well, it will also be a great concentration for relief, will it not? So, therefore, you will have the bourgeoisie of the suburbs against the so-called proletariat and depressed population of the urban center. Well, it would be better to be in the urban center on relief than to be out in the suburbs 60 miles out without gasoline, vraitment? It would.

Transportation in these United States? We have more miles of railroad track, we have more telephones -- the City of New York, for instance, has more telephones than China, India, and Russia. That's marvelous, isn't it? That's progress. Or is it? Now, our cost in transportation is costing more and more, for human beings or freight, and it is becoming more and more complicated. The cost of shipping in carload lots from Chicago to New York -- pardon me, I'll correct that -- to the Jersey side, it costs just as much to move it from the Jersey side over to New York as to ship it from Chicago double . Isn't that wonderful?

Your trucks stand in line to load a ship four, five, or six days. They can't get out of line because they're lined up away back here. Is that any kind of a system to have? Oh, it's wonderful! It's private enterprise; it's private competition. Well, it's collective private imbecility. That's the correct name for it.

You have thousands and thousands of places in any major city in which commodities are stored. A few years back, there were

10,000 places in the City of New York listed in the Bureau of Combustibles in which silk was stored -- 10,000. Well, that is an awful lot of things to maintain just to store silk, isn't it?

Everything is wonderful so long as we can go out and buy the property, exercise our anarchy, and all have what the other fellow has but just have it slightly different. You know, the way you buy an automobile. You want a car like the other fellow but you want it just a little bit different. You don't want a four-wheel drive or something like that, or a pancake, an opposed piston in the rear. No, that's something you don't understand; but you want it the same as the other one, only a little bit different.

Well, we have built it up, and where there was no problem in Andrew Jackson's day or Abraham Lincoln's day or even President Harding's, we are now faced with problems that you cannot solve by any manipulation of the ages of scarcity. All the juggling that has gone on, no matter how adept you are at it, you are a total loss. Remember your gamblers of yesterday -- if they could only deal the cards, they could deal them from the bottom or from the center. Now it doesn't make a damn bit of difference whether you deal the cards from the bottom, the center, or the top. They're all the same because there are no spots on them anyway. Just try playing cards with blank pieces of paper. You can be as crooked as you like, you can be as honest as you like, and it doesn't make a damn bit of difference, does it? Not a bit, because you can't play at all, right?

The gamblers of the commodity markets of a few decades ago, when they had a hundred, two hundred, or three hundred million bushels of wheat to juggle with, that was all right. You could store it, you could sell it somewhere, sometime, maybe at a loss, maybe at a profit; but when wheat comes in the order of magnitude that we have it now -- Canada's incoming wheat crop this year is 603 million bushels plus 363 carry-over -- almost a billion bushels. U.S. is 1.3 billion and over 600 million carry-over. When you get 3 billion bushels north of the Rio Grande, is there any sense trying to juggle it? Any sense trying to be smart? Why, you can't even store it, you can't even move it. In other words, there are no spots on any of the cards any more. You can't even play. So we pour wheat into the empty vessels on the Hudson River to the tune of 17 million. We are pouring 12 million more. What

the devil sense is there in 29 million bushels being poured into the hulls of the old Liberty Ships and Victory Ships. They're kidding you. It doesn't solve anything, except you can take the ships out, sink the ships, sink the wheat, and then you have gotten rid of the ships and the wheat, but 29 million bushels is not enough. If you could sink a billion bushels of wheat or a billion and a half would be still better. So your fanners vote for what? They vote for quotas.

Cotton is headed for the same thing. The world does about 34 million bales of cotton a day, but the reports coming in from China, Russia, Sudan, Egypt, India, Pakistan, Turkey, Brazil, Peru, and Australia, well what? Very simple. They are following Uncle Sammy's example, and Uncle Sammy hasn't turned out to be a good example. In Egypt, the King lost his job and a general is in, and all because Egypt followed our example and bought up surplus cotton. Brazil has bought up surplus cotton; so Brazil is loaded. Even Turkey has it. We go abroad with our Point Four -- our loans -- we want every country to follow our example. We want them to be as nuts as we are.

Here's an example: Here we are worrying our heads over what to do with our surplus wheat. What did we do in Turkey? Turkey used to produce 60-70 million bushels of wheat, and if there was a slight drought, they didn't have enough. Now Turkey is producing what? Over 200 million bushels and has 100 million to export. Funny, isn't it? Remember that old saying, "Do others good before they do you good"? We're being done -- to put it mildly.

China last year did 5.3 million bales of cotton, assuming their reports to be correct. They're moving up. Their cotton production this year will be greater. India's production will be greater. So will Russia's. And if world cotton production passes 40 million bales with the increase outside of these United States, you'll pile the cotton on the sidewalks down south and you can use them to loaf in the shade of the cotton bales. All right, a couple of years ago, a few years after the war, United States was having a great rush and exporting 2 billion square yards of cotton goods. This year, India will export in excess of one billion square yards, Japan around 1.3 to 1.4 billion, all Europe 1.7 billion. We'll be fortunate to export 500 to 600 million square yards compared to 2 and a fraction billion five

years ago. Going, going -- pretty soon he gone, huh?

Well, we have too much cotton, too much tobacco, too much wheat, too much olive oil, too much cheese, too much butter; so we take the money in taxes from the population -- that withholding tax -- then we slide it out in credit to bolster what? The big corporations and the commodity markets, in order to buy the votes of either the manufacturer, the miner, or the farmer. That's nothing short of sheer lying hypocrisy. You're kidding yourself. Butter purchases by the government in one day have exceeded the national consumption of butter in the same week. In other words, they are buying more butter in a week than the country was eating. Wunderbar, yah? In other words, if you can't do it in the U.S.A., it is only just and meet that your government should do it for you, Well, what do we do with the high-priced butter? We only sell so many million pounds to Italy for 11 cents a pound. Now, weren't you able to buy number one point butter for 11 cents? Remember the days when we used to say what the devil are these Danes so crazy about? They sell all their butter and they eat margarine. Well, what happened to us? We can't even sell our butter and we're eating margarine.

Water? Oh, yes, we've always had lots of water. We always had lots of land, oil, copper, lead, zinc, hematite ore, timber. That's correct -- we did. Now we have an industrial complex that is such a huge consumer that unless we control it and plan it, not on the political grab bag and day-to-day expedience of trying to buy this bloc or that bloc, but on your long-range technological, scientific planning to where the rate of growth of your energy-consuming devices is controlled, until then you are going to have more and more of this high pressure, higher costs, and more energy. Can you solve it by voting? Has the American public solved it by voting 'Arry out and putting Ikie in? What difference is it between them? The only difference is that the Republicans have been out for 20 years, so they will have to loot it faster, and they are going to loot it faster, because they are going to sell the synthetic rubber plants, the atomic power plants, the hydroelectric plants, the irrigation and everything else; and they even propose to sell the post offices back to private enterprise -- and I hope to hell they do, because nothing short of that will teach the American public anything. So long as they have enough gasoline to run that lizzie, buy the beer, and look at the television -- hoopla, what do they care? Why, Joe's

starving down the block? Oh, he is? That's too bad. How did that happen? Well, that's his fault. There are no deserving or undeserving when they get to be forty million. No matter what their religion, their belief, their morals, or what their color is. They are all Americans and they are all here on this Continent of North America,

On defense -- what kind of defense do we have? Do you want a military defense? Can you build a morale with the type of armed forces we have, where your ones in the rank -- your private, corporal, or sergeant -- they're second-class citizens. Why, even the commissioned officers -- if they are below colonel -- don't get the . You get to be a four-star general -- when you retire, you're made chairman of the board of a corporation, aren't you? So, anybody short of a four-star general is a plain HA. What, you don't know what I am talking about? That rear end of a horse.

We're rather bitter about it. I said it before and I'll say it again. Any man that has fifty million made that fifty million in looting this country's resources or exploitation of equipment, resources, and manpower and is entitled to have you dumb jackasses go out and fight for his fifty million. If he is that good, you are entitled to die for him. So, we haven't got a military force that is composed of first-class citizens, and you never will so long as we have an elite that graduates from West Point or Annapolis, and the rest are pulled out of the labor market, and their concept is that they will go over and do a quick job and get back so they can get their nose back into the gravy trough. Or back to the girl friend or somebody else's girl friend. You know I know what I am talking about, but nobody else will ever tell you these things, will they? You never heard a governor of a state or the president of the United States talk this way. Why, he wouldn't be elected, would he? As we are not running for political office, we can say it without any fringes on it. So long as we have an organization of our military forces on that basis, there will be a low-grade morale.

In Korea, we ran up against it; namely, it was doubtful, very doubtful, if we could have fought another year in Korea, even if the Chinese had kept on retreating for another year. Why? Not the enemy. Our morale was going down faster than the enemy. The American didn't know what he was doing in Korea, didn't know

what he was there for, didn't know what he went there for in the first place, and didn't know where he was when he got there; and when he got back, he didn't know where he had been. All right -- it cost a lot of American dead, but it did save American business for a short time. Isn't that wonderful that you can contribute your blood to save the business that you paid for, that you -- each and every citizen -- paid for out of taxes. It's yours but you don't own a darn share of it, because 3 percent of the 53 million families of United States own over 80 percent of all stock certificates. So, if you belong to the 90 percent or more, you went out and died to maintain the 3 percent and their ownership of the thing you paid for originally. I don't know why you should be so upset about it. After all, you have had ecclesiastical institutions selling you building lots in the hereafter for the last 1900 years, and you have been sucker enough to buy it. Why, certainly. You even put in your order for a halo -- you wanted a No. 8 halo and a No. 10-1/2 harp. Oh, you wanted to play a zither, huh?

All the housing development we had is not good housing. It's high cost -- I am talking about national operation -- very high cost. When you have to move human beings every day -- 72 percent of all automobiles are used daily in the transportation of Americans to and from their jobs, and it is a high cost, energy high cost, transportation. No other country in the world can afford it, and we won't be able to afford it long. Public transportation -- phooey, we sold you an automobile, we sold you a tire, oil, and gas. Akron, of course, is very vulnerable, isn't it? You make so many things besides cars. What, somebody's laughing? Cleveland, of course, is a little more diversified. Detroit is somewhat of a larger example of Akron, put it that way.

We have steel plants -- we have more steel plants than we ever had before, but steel is becoming in surplus supply, is it not? Well, how about the rest of the world? There were no steel plants in South America worthy of the name outside of an electric steel plant in Brazil in 1940. Now you have the giant Vollerotunda in Brazil and two others. You have a big steel plant operating in Chile. You have one operating in Venezuela and additions being built. The Arthur G. McKee Company of Cleveland has a \$47 million contract -- not the total contract but just \$47 million -- for the steel plant in the Republic of Colombia. Japan has

11,700,000-ton steel capacity. The Russians have built a modern steel plant on the Pacific Coast with a continuous strip mill. The Indians have the giant works at , and they are going to build two more of 1,800,000 tons of capacity each. The German-Czech consortium is going to build one of them and the Japanese are going to build the other, and the Japanese are going to take it out in trade. Australia has steel plants, Canada has steel plants, Mexico, South America -- why, everybody has steel plants, honey!

In hosiery, we have a capacity of 1.2 billion pairs in the United States alone. That doesn't include Canada. What's wrong with the depressed state in the hosiery industry? Even if the females had three sets of gams, it wouldn't help any, because those femmes are taking not to wearing stockings at all in summer. Well, that's bad.

Whiskey -- we have 768 million gallons of whiskey in storage in the hands of the distillers alone. That does not include a single drop of whiskey held by saloons, bars, liquor stores, wholesalers, or importers -- 768 million gallons, plus 115 million gallons of proof spirits. How much whiskey is that? Well, if the distillers quit tonight, they have enough in storage to meet the annual consumption of United States for the next nine years. So what do they do? They get the government -- the Treasury Department and the Internal Revenue -- to change the law so that now they can keep the whiskey in storage twelve years before they pay the tax on it. That isn't evading the tax, is it? No, that's just extending it.

In plywood, go back a few years, and we only had a half dozen plywood plants in the United States, with a capacity of less than 200 million. Now we have 82 with a capacity of 4 billion. "Is" you going to run them at full speed all the time? Well, if you "is", what are you gonna do with it? You gonna make outdoor privies for the Chinese? Gotta figure out some way.

I won't go into tires. That's a little too sensitive here in this city. You know about tires. You don't have to be told about them, but, of course, rubber out of Malaya, Java, the Peninsula generally, they produce more and more rubber, and what is it? We are the great consumers of rubber, but the rest of the world also learned how to make synthetic rubber. So the growers in Malaya

are complaining that we are not paying high enough prices for the Malayan rubber, and, therefore, we are contributing to the spread of Communism in the Malayan Peninsula. Isn't that wonderful?

Whether it's wheat, whether it's corn, tobacco, olive oil, refrigerators, radio sets, television -- Now, Burroughs Adding Machine is building its new adding machine in its new plant on the banks of the Clyde in Scotland -- not building them here anymore -- and you have a Technocrat here that drives in in a Ford made in England (from Canada), so they bring the Fords back from "Blighty". What are you going to do with them? What's Britain going to do? What's Italy going to do? Japan? Can we in the United States continue this nonsense with a foreign policy engaged in where we believe that Japan can be prosperous, self-sustaining -- Japan that has no iron ore and no petroleum. All she has is copper, rice, synthetic pearls, excellent forestry but limited, no coking coal, although it has two deposits of low-grade coal. Japanese coal will not coke. It requires 55 percent addition of Manchurian or American coal or other coal to coke Japanese coal.

Japan is going up at the rate of 1,600,000 to 2,000,000 a year -- 84,000,000 population. We're naive enough to be fed this hokum that we can hold up Japan, that we can hold up Italy, that we can hold up Greece, we can hold up France, West Germany, and the British Isles. What in hell is the matter with us? We can't even hold up ourselves. What do we do? We build a brand new steel plant in West Austria -- a coke oven, strip mill, everything. We have Mesta and United. We really do a job. Well, Austria has iron ore but no coal. How does that steel plant over there now run? We tried running it a while, selling them U.S. coal at \$27 to \$28 a ton delivered. That was too much; so now that plant buys its coal from the Czechoslovakia-Polish-Teschen area and gets its scrap from east of the Iron Curtain. What happens? That plant has to pay for its coal and its scrap, and those darned dirty Russians won't even take American dollars for it. They insist on delivery of finished steel. So, here's the brand new American built plant operating at high speed on materials from the other side of the Iron Curtain and it has to deliver materials to the other side of the Iron Curtain. Who's goofy?

The fertilizer cartel of Europe in 1938 was paying Russia \$2,500,000 a year to limit its export of fertilizer to 1.5

million tons. Russia today has greater fertilizer capacity than ever before and controls 80 percent of the European production of potash, which it didn't before the war, correct? And is now in a position to export fertilizer in huge amounts. Look out!

Great Britain juggled its imports and its exports around a little, but it cannot keep going unless it reorganizes, and you can't expect a Tory government under a Winnie Churchill or any of the rest of the Tory Party to reorganize the British Isles. The Labor Party, unfortunately, went in for social abortion instead of delivery, and an abortion, if it isn't done properly, leads to cancer, and that cancer is growing in the British Isles. It can be reorganized, but it is a drastic proposition.

France -- 42 percent of the French population are peasants on the soil, and they pay 2 percent of the total taxes of France. Combine the peasants and shopkeepers -- now you might think the shopkeepers do not amount to anything, but kindly bear in mind that there are more shopkeepers and more stores per 10,000 population in France than any country in the world. It has reached its saturation, because there is one wholesaler for every four retailers. Isn't that wonderful? Now, taking all the so-called shopkeeper class and you combine those with the peasants and it runs over 55 percent of the total population. What taxes do the storekeepers pay? Oh, monsieur, they don't keep books. Isn't that wonderful? And you wonder what the trouble is with France. Who gets it in the neck? The government workers, small professionals, industrial workers -- they're the ones who get squeezed.

Britain's population is going up at half a million a year. So is Italy's. You have resources in Italy? We're going to hold Italy up forever? Oh, no.

Now, remember what our policy is: introduce American business the world over. Whoopee! High, wide, and handsome, and the devil take the hindmost. Kid the public at home and bribe them abroad. Well, the bribing isn't doing so good. We staged a counterrevolution in Iran. We have subsidized the Catholic Centrist Party of Adenauer in West Germany, the Catholic Centrist Party of deGasperi in Italy, and the Catholic Centrist Party of Schumann and Bideau Movement Republican. What's happened? deGasperi has gone down. That was even too raw for the Italians.

Adenauer may survive this election, but he isn't for long. We backed Churchill and the Tories. We are trying to create trouble. We're trying to get into Indochina and we don't like India because India insists that its natural resources be the property of the nation and not of private enterprise of foreign capital. So, we don't like India.

Now, on the walls of the cities around the world is a slogan: Yankee Americans, go home! We had better take their advice and get out when the going is good before we have to go out in the dark of the moon in high gear with burnt cork on our faces.

We have never done any national planning. True, Roosevelt and the New Deal made a little stab at it. He grabbed 18 Technocrats and ex-Technocrats and thought he was going to make the New Deal a success. The Technocrats and ex-Technocrats under the political leadership of F.D.R. managed very skillfully to appease this bloc and that bloc and to save private enterprise. That is what F.D.R. did. So, you should hang a painting of F.D.R. next to Christopher Columbus -- not next to Abraham Lincoln, because while Abraham Lincoln is credited with saving the union, after all, F.D.R.'s place is alongside of Christopher Columbus, because when Christopher Columbus started out, he didn't know where he was going, and when he got there he didn't know where he was at, and when he got back he didn't know where he had been, and he did the whole damn thing on borrowed money!

Now, we have been borrowing the money from whom? We are taxing the citizens. We take those taxes amounting to billions and what happens to them outside of the incidental operating expenses of the government bureaus? We feed that gigantic credit out. Let's get it clear once and once for all, it is not monetary inflation, but it is a more disastrous process; namely, credit amplification on a continent-wide basis. So we feed it out. We enable the big corporations to build brand new plants to lower their operating costs to produce more with less manpower, and it's done on your money, suckers. Ah, but wait a minute -- the insult has only started, because then they grant the corporation a certificate of necessity which permits them to write off 20-25 percent amortization a year and to include that in their annual cost before they calculate their profit. Now, \$100 million amortization a year and their markup is 22 percent, how much in

profit do they get from the amortization alone? You get \$22 million, don't you? So, instead of \$100 million amortization, it is \$122 million.

Goebbels and Hitler were pikers. They were small fry, because this is being done to you wholesale, and the irony of it is the American public loves it. They think they are going someplace. To be frank about it, there isn't going to be any consciousness. Reach up here in a collective sense until their posterior is kicked closer to their ears.

Now, let's view something on the constructive side. Railroads -- there has been no fundamental change, innovation, invention, or discovery by the transportation industry in the last 70 years. Realize that. The MCB coupler, the air brakes, Welshad valve -- none of them came from the transportation industry. The Erie Railroad in the north and the railroads in the south were wider gauge, and out through this state -- the Erie runs out through here -- and you still ship your widest machinery by the Erie, because it once upon a time had wide gauge track. Your right-of-way is wider. What's wrong with your railroads? There hasn't been any original designing other than doing gadgets. So long as you have 4 feet 8-1/2 inches railway gauge, the center of gravity is going to be way UD in the air. In order to carry the loads, you have to build your freight cars higher up, longer, entailing heavier girders, and then it licks you because the oscillation starts in at any speed. Your gauge should be three meters. Translated into feet and inches, it is 9 feet 10-1/4, something like that, in width. Then your center of gravity is way down. Your cars are wide, and an express train can hit 150 miles an hour safe speed or six hours between New York and Chicago. Can you run the average airline if your railway trains make New York to Chicago in six hours? You'd sooner rather ride in a train, wouldn't you? Because now it will take you more than six hours to go from your residence to the airfield and go to Chicago, won't it? It certainly will. So, your railroads should be rebuilt, reorganized.

Your cars are just as cockeyed. You've been imitating La Douchettes and their carriage. It's not a transportation vehicle. It's not efficient. You want it efficient. It doesn't have to be as wide a gauge as your railway track, because you can run to the center of your tires on your trucks and therefore slightly less

gauge -- the center of your tires, not the edge. But with a three-piston engine, pancaked in the rear, four-wheel drive, no axle, and what have you got? Why, a car that is 8 feet wide. You can actually sleep in it. Oh, you couldn't have that -- that would be a contribution to sin, wouldn't it? You know the automobile has liberated more American females than any other mechanical device and put more males in hock.

Your roads are just as stupid. I believe you have an Ohio throughway under construction. The Pennsylvania Turnpike, Jersey Thruway -- very simple. You can have highways. You can have cars in which you cannot have any accidents. Oh, no, you've got to have free will. You've got to have individual liberties. Why, they have the right to shove the pedal down to the floorboard and do whatever they damn well feel like, haven't they? So, you kill as many in a year as we kill in military war. In fact, in the last two decades, you killed more on your highways in United States than you've killed in all the wars we ever fought. Is it something we are going to do anything about? Oh, no. We're not going to do anything, because it is always the other chap, isn't it? Too bad! The only question you ask is, was he insured?

Our housing is all wet. Why? Bear in mind that your house is an energy-consuming device, and you are building them what? Are you insulating them? No, you want a ranch home here, you want this, that, and the other. So, you have to provide highways, sewers, water, communications, and every time you add more to it, as these cities that want to take in the municipalities around them are finding out, we're going to take those municipalities in and that will help us on our taxes. Oh, yes? Yes, it will raise taxes in that little municipality on the outskirts, but it won't solve anything. Why? Because the unit costs, instead of declining as you enlarge, increase, so the greater the area you take in, the faster you cut your throat. Isn't that wonderful? Why? Oh, you must have a house just like everybody else's. What's your housing density? You go out here and you mess up the whole damn countryside for 3,000 miles. Look at Ohio. It is typical of it, isn't it? Pennsylvania. Somebody goes out here and buys 5 to 10 acres. The brother or brother-in-law follows and buys a couple more acres. Three or four others move out. Well, what's out there? Nothing. But they help build their house and they've got homes, and they drive 40 miles to work. Well, it is all right so long as only a few of you do it, but when it is done by millions,

it's anarchy. Am I making my point clear? And it's a very tenuous anarchy. That is what I'm trying to point out about the oil.

Now, if you are going to go on being this naive and think that if you change the local mayor, alderman or your representatives in the state Legislature or Washington, that they are going to do anything about it -- they're not going to do anything until they're forced; and if it is too drastic, they'll leave for foreign parts. No politician wants to take the rap. He only wants it when the public is unconscious about what is happening, because he knows if the public ever becomes conscious of what is happening, he'll become unconscious.

Now, there is no continental planning of either rail transportation, automotive transportation, air transportation, or of annual control of entire hydrological runoff, or of forestation, or of wildlife, or of agricultural production, or of mining, or any kind of mining. There is no control of growth of your cities or your housing or your sewerage -- dump your sewerage, baby, where you please. Down in Florida on the Keys, slap in some dynamite and blow a hole in it. Run it in there. What happens to it? The tide comes in, takes it out a little and shoves it back in. Well, wonderful, so long as you only have so many cesspools in "the coral, but suppose you get a million there? The little guppies go in for sewerage -- but we mustn't plan anything.

Remember this organization advocated -- and was mostly responsible for -- the introduction of the cotton picker, the sugar cane harvester. Well, we were crazy. We're still crazy. Go back to the earlier editions of FORTUNE MAGAZINE and you'll find a reproduction of a front cover of a TECHNOCRACY MAGAZINE with the cotton picker on the cover, and Henry Luce gets his nice little sarcasm in that Howard Scott and the Technocrats are using the cotton picker to frighten the American bourgeoisie. It will never happen in our time. It didn't? Henry is only accepting paid advertisements from six corporations manufacturing cotton pickers in full page color. Same in everything. Here's this denial of change, and we are in the midst of the greatest accelerating change; but we all want to maintain what? This little anarchy of the ranch house, nice little suburban. We want to belong to the women's aid and the auxiliary, and the golf club, as if that were an achievement. We get sentimental over somebody on the radio

telling us about some child afflicted with hemophilia or cancer and we'll send in our money by the thousand and the hundred thousand. What are we doing? We are appeasing our little necks, aren't we? If you want to read something on charity, read Mark Twain. There are two things that Mark Twain wrote that were on the back shelves for years; WHAT IS MAN? and the other one. Go find them in your public library. They're still worth reading.

Here we are in 1953 facing a future that as far as this organization is concerned is full of promise. As far as the country and the continent are concerned, it's full of potentiality of promise or disaster. Thank you.

---

Now I want you to ask me questions, and I'm going to preface this -- just stop and think for a moment that when you count opinions, whether it is the opinion of one, an autocracy, or whether it is the opinion of 160 million people, it's still opinion. You're entitled to it, brother, but it's of no damn use in running a technological complex as great as we have on this continent. So what? Whether you all vote or none of you vote, what are you doing? When you vote, you vote to elect an individual of a political party into a particular office. You do not decide any of the fundamental physical problems of this continent one iota. You don't influence in any way shape or form. You merely express your opinion and your preference for an individual. But you can keep on expressing your opinions and preferences for individuals, provided the physical world around you doesn't change.

Now, we are in a situation where, instead of the guess-and-by-God opinion of counting noses, whether of one or two hundred million, it is equally valued. There has to occur on this continent the arrivation of an entirely new form of social decision. Counting noses will not do it, whether they are dirty noses or clean. They are still noses. There has to be inaugurated an entirely new method of social decision, and that social decision has to do with the operation of all the energy-consuming devices in this area and time. And what will be the decision? What will make the decision? The number of noses involved or not involved? No, none whatsoever. The mathematics of the probabilities and the energy factor of those energy-consuming

devices will determine the next most probable state and operating load factors of the entirety. Now, if you try to decide it as this complex grows ever greater by continuing this nose counting game, we're headed for hell and high water. I am just trying to give you an idea.

Now I'll entertain your questions.

HOW FAR CAN THIS PROCESS OF CREDIT AMPLIFICATION BE CARRIED?

Well, theoretically, you could carry it to the point to where you build so many new plants that there's nobody working in the plants at all; but sometime between now and then, you would have to reorganize the social system. You see, what we are headed for on this continent can be stated simply in these terms, that for the first time in the history of man, possess the scientific knowledge, the technological know-how and equipment, to produce and distribute an abundance to the people of this continent with a minority of the healthy, able-bodied adults of this continent. Therefore, the majority will not be required. So, you have to contemplate and consider the possibility that this system will make last desperate efforts to issue ration cards for mink coats, automobiles, champagnes, night clubs, and anything else, so that the majority can consume the abundance produced by the minority. The system is going to last very long? It's going to have about just as much chance as a celluloid dog has of catching an asbestos cat in hell! You're running into trouble in the next two years. I've said it before -- that the next five years will be the most decisive in the social history of man and the next ten the most conclusive.

Come on, don't be afraid that you don't know anything. After all, you're mostly Technocrats, and I'm not going to throw the kitchen sink at you. You're not a public audience.

WHAT HAVE THEY DONE IN THE FIELD OF RESEARCH ON A SYNTHETIC TYPE OF FUEL FOR THE OPERATION OF THE AUTOMOTIVE INDUSTRY? THERE MUST HAVE BEEN SOME ADVANCEMENT IN THAT LINE. AM I CORRECT?

Nothing much. Are you talking about putting some tablets in a can of water or something? Well, after all, you have to put in your energy. It either has to be atomic fission, fusion, fossil

fuels, or solar energy, or long-range cosmic rays. What are you going to use? No pellets in a can of water.

CAN YOU TELL US SOMETHING ABOUT THE TRANSISTOR IN RELATION TO CONTROLLING OUR TECHNOLOGICAL EQUIPMENT?

Well, the transistor is only a refined development -- minute -- that does the work of the valve or the tube. Reduces it down, makes it more compact, just the same as your motor of 50 years ago. Your 5 hp motor was a huge thing. Now the 5 hp motor is only a fraction of that size. Well, the transistor is only a similar development in the electronics field that has occurred in every other field.

I WOULD LIKE TO ASK TWO QUESTIONS: THE FIRST IS, WHAT CAN WE EXPECT TO THINK OF THE ULTIMATE CONCLUSION OF THE KOREAN AFFAIR, AND WHY DO THEY PUT A RESERVE OF SIX YEARS ON THE BOYS WHO HAVE SERVED ACTIVELY FOR TWO YEARS?

The ultimate conclusion of the Korean affair. Well, frankly, of course, the United States was defeated in Korea. Let's face it. Red China is the third military power of the world today and demonstrated that it could fight the most highly mechanized war on the most highly mechanized opponent on earth, and it could have continued. It could maintain six million combat troops in the field for twenty years and suffer 20 percent losses per year and would be better off at the end of that twenty years than when they started. Could we? Besides, if you did fight any longer in Korea, what would you get? After all, the second largest tungsten mine in the world is just north of the 38th, and that's where our line bent, in that northward bend on the eastern end of the Korean front, and we have been mining tungsten ore there at the rate of in excess of 400,000 tons a year. I am quoting IRON AGE, if you please not a Chinese or Communist periodical. The end is we'll get out of Korea. We are a non-Asiatic power and the French will have to get out of Indochina and the British out of Malaya. We predicted it long ago, so, brother, have your last gin and bitters or your Singapore Sling in Raffles Bar, because time is running out. Asia for the Asiatics and their new sense of nationalism. Now, don't blame the Reds, because that problem was there before the Reds got there. They merely had sense enough to jump in and lead the band parade after it was started.

We have backed the wrong party everyplace on the globe. We backed Bao Dai in Indochine, Syngman Rhee, who was 35 years out of Korea and who married an Austrian Roman Catholic and can't speak Korean when he gets back, and whose chief of secret police -- they were shooting them off at 100 or 150 apiece at a time -- pregnant women, women with babies in their arms -- it didn't make any difference. They were political opponents. The British troops in Korea protested three times. The third time they moved in and stopped it by physical force. We didn't. Korea is nothing for any American to be proud of, except that we did establish that our Air Corps has been the elite (troupa) of destruction. Quite an honor, ladies and gentlemen.

Do you want any further details?

PARDON ME, I THOUGHT YOU WERE READY TO ANSWER THE SECOND QUESTION.

That's all right.

WHAT IS THE IDEA OF THE SIX-YEAR RESERVE PLACED ON THE BOYS WHO HAVE FINISHED TWO YEARS OF ACTIVE SERVICE ABROAD?

I wouldn't know. I am unable to read the minds of those in Washington, because I doubt if there is any such thing. Merely that they want to hold them liable for duty in case of emergency, that's the only thing. It's their fault. They believed in it, didn't they? They all voted for it. Remember, every audience you go to, they voted, didn't they? How many in this audience voted in the last election? Come on, I want to see. Well, did you get what you voted for -- did you? Oh, no, I'm talking the national election. My God, it's an intelligent audience -- 99 percent of them didn't vote.

There are a lot of questions you could ask me. Come on, the gloves are off. This is bare knuckles, you know.

UNDER TECHNOCRACY, WOULD YOU BE ABLE TO TAKE CARE OF AN INCREASING POPULATION ON THE NORTH AMERICAN CONTINENT?

Yes, we would, but then we would control our consumption of resources. There is a limit to everything, sir, and the scientists of North America are working on a very nice problem.

Now bear in mind that it has been known to the physiochemists and biochemists for some years, for some generations, that the female of the human species has the capacity under extraordinary circumstances to dissolve the fetus without any deleterious effects to the reproductive mechanism or to the female. That is known and has been known for many years. The scientists have at last found the trigger for that mechanism. Margaret Sanger and her birth control, you know -- the best statement she ever made was cotton balls for the poor. That's all they could afford -- cotton tampons. Well, but that was still a matter of individual decision, was it not? It was planned parenthood, not birth control. Now comes what? A colorless, tasteless liquid, that in a minute percentage placed in the water system of any urban center, and not even the four-legged kitty cats will conceive. Isn't that wonderful? I told you we'll get you sooner or later.

India, of course, is trying to practice -- issuing millions of little sets of beads so the female can discover her particular safe period, but it isn't going to work. You'll have to do it wholesale, brother, not individually. I am merely pointing out the possibilities that, if necessary, it can be done on that basis -- not individual discrimination of whether some are entitled to or not. You can cut it cold.

DO YOU THINK THERE WILL BE A THIRD WORLD WAR?

We would like to have one, because we are facing that dilemma of how in the devil to maintain this system. We are putting one prop after another under it to hold it up. It's like building levees down on the Mississippi -- if we keep it up, we'll have the Mississippi up on stilts and we can raise mushrooms underneath it.

We have deliberately pulled a coup d'état in Iran. We backed Negev in Egypt. We're into counterrevolution and reaction anyplace we can pull it. We're more worried what? The hooey about the Russians coming to attack us? That isn't where our real worry is. It's whether the roof is going to cave in and the cellar floor boil up, and who's going to do it? The Russians? No. Homo sapiens, mostly sap, American. The question is to keep it on any stability, and we'd like a war. Dulles belongs in that category; so do a lot more, but the question is to find any ally, and, brother, we haven't got them any more. Are we going to fight

a war all by ourselves?

Remember that years ago I suggested that there was only one war for American business to fight, and that was to declare war on an area whose statesmen couldn't negotiate a surrender and whose armies couldn't capitulate; namely, the 69,000,000 square miles of the Pacific Ocean. Then you could squander the resources on the lend-lease to your heart's content -- while it lasted! Who are you going to fight? We would fight anybody if we could get a good war out of it, because a good war would justify anything. Am I making my point clear? The odds that we will fight one -- you can take it against it, because our allies won't go along.

IF AND WHEN THE UNITED STATES WITHDRAWS ALL ECONOMIC AND MILITARY SUPPORT OF FREE ASIA AND WESTERN EUROPE, WILL THEY BE ABLE TO SET UP AN ECONOMIC SYSTEM THAT CAN STAY OUT OF THE RUSSIAN ORBIT AND WILL THAT BE PRACTICAL FOR THEM?

Well, you've raised something else more important. Would the Russians permit them in their orbit? In other words, do the Russians want deficit nations? Only the United States has taken over deficit nations. Now the Russians can't possibly be as dumb as we are. So far, they have kept away from deficit nations. What has Italy got? What has Japan got? What has Western Germany got? What has Great Britain got? The nations with assets are here in this hemisphere and in Asia. Where's the largest copper mine in Europe? The largest zinc-lead? West of the Iron Curtain? I'm talking of Europe. Western Europe hasn't any oil. It has Ruhr coal, yes. The French coal deposits are poor and high angle, and the French miner has to work on his side like this, lying on his side. Thin seam coal. They can produce, yes, but they've got to reorganize their entire system. If they are going to export Swiss cheese, gorgonzola, they're all going to manufacture different kinds of automobiles to a luxury market all over the world? No. They're going to be in trouble. They will have to undergo a real renovation, and whether they are capable of doing it, that remains to be seen, but it doesn't follow that the Russians will take them into their orbit at all. Remember that Russia today -- not her satellites -- has three times the sedimentary formation area that United States originally had in oil. Potentially, that's something. We are squandering our oil resources. They, whether it is intentional or not, are not approaching our rate of squandering.

WHICH IS MORE IMPORTANT TO JAPAN -- TO HAVE THE MONEY CONTRIBUTED BY THE UNITED STATES FOR COAL AND ALSO THE CONTRIBUTIONS OF THE SOLDIERS THROUGH SPENDING IN JAPAN OR TO KICK OUT THE UNITED STATES AND HAVE THE RESOURCES OF ASIA? WHICH WILL BE WORTH THE MOST?

Well, it's not quite that simple. During the war, United States military supplies and occupation was contributing over \$700 million a year to the Japanese economy; in other words, that was providing a fictitious balance. Now that will be over, Japan is in a bad way. But let's put it another way. The destiny of Japan is set. Japan can only be a manufacturing satellite to the Continent of Asia. Her resources lie on the continent and her giant market lies on the continent, unless you are going to assume that Japan, with the help of some great military power, reconquers the Kurils, Sakhalin, Manchuria, Mongolia, Korea, China, Indochina, Siam, Burma, Indonesia, and all the rest; and to contemplate that, the only one that is stupid enough to even try it would be John Foster Dulles and his ilk, and he wouldn't succeed. So, if that cannot be made a fait accompli, then Japan is going to be up against its population pressure and its lack of resources. Is that clear?

ASSUMING THAT THE AMERICAN BUSINESSMAN IS NOT AS BIG A FOOL AS HE IS ACTING AND FULLY REALIZES THE CATASTROPHE THAT HE IS ABOUT TO RUN INTO IN CONSUMING THE VAST AMOUNT OF GOODS, WHAT DO YOU THINK HE WILL DO ABOUT IT?

What he always does -- have a hemorrhage.

SECOND, I WOULD LIKE TO KNOW, SINCE WE ALL HERE ARE AWARE OF THIS VAST CATASTROPHE WE ARE HEADING INTO (I AM NOT A MEMBER OF TECHNOCRACY BUT YOUR PRINCIPLES AND YOUR IDEAS ARE SIMILAR TO MINE), AND I WOULD LIKE TO KNOW JUST WHAT CAN BE DONE, WHAT CAN WE DO, TO INFLUENCE A MUCH LARGER MASS OF PEOPLE TO REALIZE THE DAMNATION INTO WHICH WE ARE HEADING?

Well, sir, you have an example of it today. The old Chinese proverb that one picture is worth 10,000 words. You can drive a painted car. You can be deaf and dumb. You don't have to be able to say a word, but you can drive a car and it speaks louder than if you could talk Shakespearean English. We've seen it happen in

a small way here today. Others have seen it on the giant Operation Columbia in various parts of Canada and United States. Remember that it was only a few years ago that the CIO wanted to know could they paint their cars gray and have the Technocracy insignia? Would they have to join Technocracy? We said, "We'll give you the decals, provided you paint a minimum of 5,000." We wouldn't care if they belong to the organization or not if they did 5,000 of them, but the public would know they belonged to something. They'd have it 500,000, wouldn't they? So, you can't do it as individuals, ladies and gentlemen. You can't do it by individual sincerity in your own home. We have had enough of that. Take World War I, we had thousands of sincere people who objected to war -- socialists, IWWs, pacifists, sentimentalists -- they were overwhelmingly individually sincere, but it was stupidity of the worst order. Nobody has ever attacked us for publishing 14 million full-page copies in the press of the United States and Canada of our Total Conscription, have they? Why, they'd rather have peace than total conscription, wouldn't they? And how! If war has to be done on the basis of total conscription, they wouldn't have war. You begin to sense something?

WOULD YOU TELL US SOMETHING OF THE RELATIONSHIP BETWEEN CANADA AND ITS POSITION FACING A CRISIS TO THE UNITED STATES?

Well, Canada has come up industrially -- now practically the third export nation of the world. The same thing is happening in Canada as in the United States, except that you are putting in technology that is newer and the Canadians know it. Life isn't as simple in Canada as it was 20 years ago; it changes fast. But remember that you only have a small portion of Canada that is habitable. Most of the Canadian population -- 96 percent of it is within 200 miles of the boundary. Now, just as in Canada, you have in big meetings there, non-members stand up and accuse us Technocrats of advocating that United States take over Canada, and we say, "It's such utter nonsense." We point out that statistically -- it is on the records and a matter of evidence -- that the greatest export Canada has had for the last 50 years is native born Canadians, and that all we are going to do is ask those Canadians to go and take their country back. You don't have to have any move of aggression. Canada and United States are part of this continent.

Now the only way you can oppose the contiguous continentalism of a foreign ideology, whether it is communism or not, is to constitute, erect, and construct a contiguous continentalism on this continent equal to or greater than any continentalism anywhere on earth. Canada and Mexico -- it is the same continent -- the rivers don't pay any attention to the boundary lines, neither does the weather, and we have the same technology, and the old ties across the ocean are pretty well dissolved. You can maintain the United Kingdom as a nice memory, but, remember, they are born on this continent, and when they are born here, they tend to grow taller and they tend to take on characteristics peculiar to this continent. The animals on this continent -- the men, the buffalo, the bear, the elk, the deer, they have what? They differ from their European counterparts; namely, they have large heads, large forequarters, and smaller hindquarters, while their European counterparts have large posteriors, smaller shoulders, and smaller heads. If you are in doubt of some of your relatives, just examine their structure to see whether they are still European. The American animal puts his big head down and goes into the storm against it. The big posterior animal of Europe turns around and puts his behind into the storm and goes with it. That's the great difference, gentlemen. So the future belongs in this hemisphere and in Asia. Europe can take its antiques and breed them in flowers or something else, but Europe is gone as a dominant power in the world.

WILL THE ARAB PRODUCING COUNTRIES OF THE MIDDLE EAST FORMA  
COALITION AMONG THEMSELVES FOR THE CONTROL OF THAT AREA?

Will the what countries?

ARAB MOHAMMEDAN COUNTRIES OF THE NEAR EAST IN THE OIL-  
PRODUCING AREAS.

Will the Arab Mohammedan countries of the Near East form a coalition amongst themselves? Well, that is rather complicated. You see, United States and Great Britain manipulated -- forcing out the Hashimite family from Mecca and Medina, and because of that, they got Ibn-Saud in there. Ibn-Saud is Arabian, and they got the concession of Saudi Arabia and Qatar. Well, now the Hashimite family had been in control of Mecca and Medina for

centuries, and the Hashimite family are head of Jordan and Iraq and others. Ibn-Saud is old and decrepit and he has a lot of Hasimitekeetas, legitimate and illegitimate. We used to say down in Venezuela, "Goman cetat." Now you have so many of them, there is going to be a battle over that terrific royalty. The same way in Qatar and Kuwait. But remember, the Hashimites are over there, and let one little slip, and the Hashimites are going to get their revenge for being driven out of Medina and Mecca, are they not?

Do you know your Arabs and your Mohammedans? After all, they were driven out by foreigners, British and American money, power, and influence, in order to get the oil concession. You got the oil concession and what? So, which coalition are we going to back? The Ibn-Sauds or the Hashimites? The same way, are we going to back Israel or the Arabs? Are we going to back the Moroccans, which we would like to do in order to favor the Mohammedan Near East, but then we have to oppose France, don't we? You're licked if you do and you're licked if you don't. You shouldn't have gotten in there in the first place.

Now, if they had any long-range vision -- remember that your Aramco Oil -- Arabian and American -- is no longer a U.S. corporation, although it is still legally incorporated. Its books, its officers, and its headquarters have to be in Saudi Arabia. Isn't that beautiful? The Arabs know how to institute the squeeze, you know. So the squeeze is on in Kuwait, Qatar, Saudi Arabia, and they have to move over there. Well, the fun starts. What are we going to do -- back the Arabs or the Israelis? Now, when the Arab-Israeli fight started, it was an aggression for the simple reason the Arabs were winning, but when the Israeli forces got Czech arms and British officers -- Jews trained in the British Forces, and they started to lick the Arabs, it became aggression in the United Nations. Just the same as the instigation for the invasion of Kashmiri by Pakistani came from U.S. and Britain -- oil in Kashmiri passes of the Karakoram and so on, the boundary line with Afghanistan, Russia, and Sinkiang. Well, then when the Indian troops moved in and stopped the Pakistani, ah, then it became aggression, and we had to stop it. So which are we going to play? No matter which choice we made, we could have made a long-range one; and there is only one: We could have said to the Russians, "You're the only country that can march in. So, we'll make the deal with you. We'll split it

50:50." The Arabs would have had to keep their mouth shut from then on. But, no, we were so smart we had to fight the Russians. So now we're going to be stuck with it.

THIS IS GOING TO BE A LITTLE TOUGH. I WANT TO GET AN IDEA OF TECHNOCRACY IN OPERATION; FOR INSTANCE, A MAN WANTS TO BUY HIS WIFE A PRESENT OR GET A PRESENT. HOW WOULD HE GO ABOUT IT? HOW DO YOU DETERMINE HOW TO GET AN AUTOMOBILE, WHAT WOULD BE THE PROCEDURE? HOW LONG COULD YOU KEEP IT OR SUCH AS THAT?

You don't buy an automobile.

AND ANOTHER QUESTION --

Wait a minute -- I'll answer that. You purchase automotive transportation, sir, and the cost of automotive transportation is based on the national load factor of use. In other words, you could pick up a car here and turn it in in San Francisco or anyplace else you wanted to go. You don't open the hood -- you can't. It's locked. You don't pay for the gas. The Bureau of Transportation handles the car; but you'll find that if you left the car parked outside your house for four days, it would cost you more than operating it, because you are charged for the national load factor rate of operation; and, furthermore, your wife could get the car whether you wanted it or not. She could take off any time just the same as you could.

Now, buying your wife a present -- that all depends on what it is. If it is something that she consumes as a female and is not general consumption, I am awfully sorry, males, you can't buy her the present, because she has an income equal to yours and she can buy her own "scanties." Now you're up against the other peculiarity, in that she can't go into your right-hand pocket and lift your billfold. And, incidentally, you can't swap hers. Gets rather complicated, doesn't it? In other words, for the first time in history the female has her share of the national economic income independent of any male, whether she is moral, immoral, whether she is good, bad, or indifferent, good-looking, beautiful, or just plain hedge fence. It doesn't make the slightest bit of difference. She is in the same position as the male. She can't give it away, she can't loan it, she can't steal it, and she can't leave it to her children; because if her child

HOWARD SCOTT, AKRON, OHIO  
EASTERN AREA CONFERENCE

9-6-53

is born in Technocracy on this continent, they are guaranteed, independent of whether their parents are good parents, lousy parents, intelligent, moronic, or otherwise. Let's have Americans what? Survival of the fittest? Let's have the arrival of the fittest on this continent!

REGARDING THIS AUTOMOBILE SITUATION. YOU WANT TO VISIT A FRIEND IN THE HOSPITAL AFTER YOU ARE THROUGH WORK. IS THAT CAR AVAILABLE RIGHT NOW SO THAT YOU CAN GO AND VISIT AND COME BACK, AND THE NEXT DAY TAKE IT OUT TO USE AS YOU WANT?

Yes, that's right.

SUPPOSE I LIVE IN OHIO AND I WANT TO MOVE TO PENNSYLVANIA? SUPPOSE I'M RUNNING AN ELEVATOR TODAY AND TOMORROW I WANT TO BE A CARPENTER?

You what?

SUPPOSE I AM DOING ONE JOB TODAY AND I WANT TO GET ANOTHER JOB. HOW DO I GO ABOUT IT?

Well, how do you mean? When you travel? Is that what you mean?

I WANT TO CHANGE JOBS. MAYBE I'M DOING ONE TYPE OF WORK TODAY --

If there was any kind of work available, but, frankly, we are going to eliminate most of it.

THE POINT IS, HOW WOULD YOU DETERMINE IF I COULD DO THE WORK SOMEONE ELSE IS DOING. MAYBE I WANT TO DO THEIR KIND OF WORK.

You can try them out. Only question is testing and elimination. The same way you do on a track out here for 100 yards, a quarter mile, or a mile. Put up your string lines and say, "Go to it, boy. There's the electric timing mechanism."

SO YOU CAN'T CHANGE JOBS. IS THAT IT?

Oh, yes, you can change jobs. We are not trying to alter human nature. After all, the mule out here -- you can't work him

overtime. You can't make him overeat, you can't overload him. He quits on time. He doesn't work overtime. It's only the human jackass who owns him that does that. Now, what's the sense of work. You have been raised on this morality of toil, that if you weren't busy, the devil would find evil for idle hands to do. Well, how many of you are working 50 hours a week? Come on. Anybody here that is working 50 hours? Darn few of you, heh? Well, how long do you suppose your grandfather worked? I remember in the steel industry when they were working 84 hours a week. Anybody here in the steel industry remember that? Now the work week has been going down, hasn't it? Less and less. What's the sense in being a coal miner. The only time a coal miner ever gets to be anything is when he quits and gets the hell out of there. Anything that's repetitive and consistent, we can do it better and faster when we get the human being out of there. The farmer is the same way -- the farmer with his human toil and hand tools on a small farm, the only way to do it is to get rid of the farmer. Don't try to put a coat of paint and a new bippy in his house to make it comfortable. Get-rid of him. He's no good as long as he's there.

What's the secret of modern technological production? Under your old handicraft guild for centuries, you moved what? You moved the man around to the work. To the job. You moved the man around to the job. On continuous straight-line production, do you move the man? No, you move the work right past the man. He sits there and looks at the dial. Well, what's the sense? Now, after all, you've got to get a different concept of sin. All the oldtime concept of sin is just pure, downright incompetence. It wasn't sin. The only way you can define sin today is to define it as a state of mutual competency simultaneously arrived at, and that is damned rare. I see some body has a sense of humor.

Come on, now, we're just having some fun. Get going on this.

IN THE WINDSOR PRESS LATELY, THERE WAS A REPORT TO THE EFFECT THAT THERE IS A NEW NATIONALIST PARTY BEING ORGANIZED IN QUEBEC. WOULD THAT INDICATE THAT PERHAPS THE POWERS TO BE IN THE VATICAN REALIZE THE FADING POSITION DUE TO THE deGASPERI DEFEAT?

Wait a minute, now! A new nationalist party being organized where?

IN THE PROVINCE OF QUEBEC.

The Province of Quebec. Now what's that got to do with deGasperi?

THE POINT IS THIS: IT WOULD APPEAR -- IT HAS BEEN STATED THAT PERHAPS THE POWERS TO BE IN ROME ARE WANTING TO MOVE ONTO THIS CONTINENT. I WAS WONDERING WHETHER THE OSTENSIBLE OBJECTIVE OF THIS NEW GROUP WAS TO PROTECT THE FRENCH CANADIAN CULTURE, AND I WONDERED IF THERE WAS A TIE-UP OVER THERE.

You mean that the Vatican might move over to Quebec, is that it?

I WAS CURIOUS TO KNOW IF THAT WAS IT.

Now, look, the Vatican -- true, it has made its major mistakes on this hemisphere, but it's not that stupid. It would pick on someplace that's warmer than Quebec. Buenos Aires or Rio. Quebec's too cold. You can't walk around in those smocks in Quebec. Don't believe any more fairy tales like that.

IN THE EVENT OF A COLLAPSE OF THE PRESENT PRICE SYSTEM IN THE IMMEDIATE FUTURE, IS TECHNOCRACY IN THE POSITION TO PREVENT NATIONAL CHAOS AND RETROGRESSION?

We are not in any position to prevent chaos. From a matter of will, we wouldn't help save this system. Let's be frank about it. We wouldn't do anything to save it. Now, we are not extensive enough and we are not big enough, although we are growing, to prevent it. The American public will have to prevent it themselves. What we can do is form a climate of opinion, as you were, and an example, widespread across the continent; but we can't prevent it if the American public simply doesn't want to act. That, I think, is obvious.

You've got lots more questions. Come one. You're not limited to the United States. You can ask your questions on resources the world over -- geographical conditions or historical conditions.

YOU READ ABOUT THE POSSIBLE COLLAPSE OF RUSSIA, BREAKING DOWN INTERNALLY. DO YOU CARE TO SAY SOMETHING ABOUT THAT --

THE STRENGTH OF RUSSIA INTERNALLY AS WELL AS BEING POWERFUL,  
MAYBE AS FAR AS MILITARY IS CONCERNED?

Now, the propaganda in 1941 -- you had exactly the same propaganda, that the Russians had no leadership. You had it in '39 in the Finnish-Russian War. And as we in Technocracy pointed out, the propaganda reached such crazy proportions that the Finns had captured more Russians than the total population of Finland according to computation of reports of THE NEW YORK TIMES and THE NEW YORK TRIBUNE. Don't forget that THE NEW YORK TIMES reported officially the death of Lenin 19 different times. The same NEW YORK TIMES and the same Western Union Associated Press declined to accept the telegram and THE NEW YORK TIMES refused to print it of the first flight of the Wright brothers in Kitty Hawk. We know our press.

Now, when they talk about something collapsing that is 8,000,000 square miles and that fought through this war, and while its losses were great, its losses were never great enough to equal the annual increment of youth coming up. The German losses were greater. As for collapsing? Well, what? Why be naive and depend upon your opponent having nervous prostration or going to pieces? If any boxer entered the ring with that idea, he would be licked before he starts. Any man that steps into the ring with the hallucination that his opponent is a palooka and a pushover and that he doesn't have to do anything else but smack him, why, he's going to collapse in front of you. It isn't going to take anything at all, is it? Now that's the kind of nonsense that is perpetrated. Bear in mind that propaganda is the enemy's lies and truth is our own lies, and we get stuck with both of them.

CAN YOU GIVE US ANY IDEA OF HOW LONG IT WILL BE BEFORE THE  
GOVERNMENT OF THIS COUNTRY IS FACED WITH A CHOICE OF EITHER  
A MAJOR WAR OR A MAJOR DEPRESSION?

Can you have two more years of surplusses? What's our surplus now? Oh, that's just the 80 billions of inventory. That's manufactured goods. But how about all the inventories we are piling up of raw materials? Can you stand another wheat crop? another corn crop? another cotton crop? The only hope is that there is drought. Like west Texas, they hope it spreads clean to Ohio. Then you can go out and business can get the government to spend the money to rescue the populace, can't it? Can it go on

indefinitely? No, it can't go on indefinitely. Where are the oil wells of Pennsylvania, the Golden Lane of Mexico? Did it go on indefinitely? Where is the great silverlead of ancient Greece or the mines of Laurion? The holes are still there. That made Greece the Mediterranean power of the ancients. Nothing goes on forever. History doesn't repeat itself, and the last sixty years will never be lived again, because never again will you have such a consumption or an acceleration in consumption of natural resources, and you can't repeat it.

Now, come on. We're just getting into the fun of this. You haven't even made me start to work yet.

DO YOU HAVE ANY REGARD TO SENATOR MALONE OF NEVADA AS CONTRASTED WITH HIS FELLOW SENATOR PAT MCCARREN?

Senator Malone and Senator McCarren? I don't know why we should discuss the members of the most exclusive club in the world. The United States Senate is the most exclusive men's club in the world, is it not? They are. paid a salary to belong to it, aren't they? Do they have to have any qualifications to belong to it, except to have the morons elect them? Why, heavens sake, let's quite distinguishing between one stink and another. I'm not reflecting on their individual thing. What the devil good is McCarren or Maloney or Mulrooney or whatever the devil his name is? They are United States Senators, In Canada, they elect them for life. The only way to get rid of them is to poison them or they die. Congressmen are in the same boat. You've got a fine collection of representatives from Ohio. I don't know what the hell you want to ask questions about any other state for. They're nothing to be proud of from this state.

I HEARD SENATOR MALONE TALK A NUMBER OF TIMES, AND THE REASON I BROUGHT THIS UP IS THAT HE HAS VIEWS SIMILAR TO TECHNOCRACY; THAT IS, WHILE WE ARE TODAY, NOTHING IS BEING DONE. ... NOW IN EXISTENCE .... HE SAYS THAT THE PEOPLE THAT ARE NOW OPERATING THE FACTORIES, MINES, PUBLIC TRANSPORTATION ARE DOING THE BEST JOBS THAT THEY CAN POSSIBLY ....

They're what?

WELL, THEY'RE DOING THEIR BEST IN THEIR VENTURES, YOU MIGHT

SAY -- IN THEIR FIELD.

Doing their best? Well, the best isn't good enough. The trouble is that the stumblebums at the top are only as good as the stewbums at the bottom.

THE AMERICAN PEOPLE ACCEPT IT. THAT'S THE THING.

Well, that's just what we are pointing out. If you only had a few percent of the public of the United States aware of 5 percent of what we are aware of, your cockeyed system wouldn't survive sunrise tomorrow. The reason I have to come out and talk to an audience. What's the matter with their brains -- are they brand new and have never been used? I shouldn't have to go out and speak across this continent. We have the best communications system that the human race has ever seen. We have the best printing presses, quantity production. They should be informed. They should tell me, not I should tell them. I am not trying to condescend to hand something down to anyone. I'm just trying to insult people so they will get at least sufficiently irritated to wake up.

WHEN THEY WERE TELEVISIONING THIS U.N. CONFERENCE THAT HAD TO DO WITH THE ACTS OF AGGRESSION IN KOREA AND THERE WAS SOME CONFUSION AS TO WHO STARTED SLUGGING FIRST, WOULD YOU BE ABLE TO GIVE US ANY DETAILS ON THE INTRIGUE THAT WENT ON AS TO MILITARY BUILD-UP AND THE DIPLOMATIC INTRIGUE THAT TOUCHED OFF THE KOREAN INCIDENT?

What difference does it make who started it? We were dumb enough to get into it. Now, we had an opportunity when General MacArthur went north and reached the 38th, he could have stopped there and notified the United Nations that aggression had been eliminated in the Republic of South Korea, could he not? And then have turned the entire problem over to the United Nations. But that was not his instructions. He was going on to the Yalu; not only was he going to the Yalu but he was headed for the Manchuli 1,600 miles beyond it if he could. The only trouble is he got licked. He was dumber than the dumbest private he had under his command. A general, yes? So they make him Chairman of the Board of Remington Rand. In other words, we promote imbecility.

Don't get me started. I know whereby I speak. Don't forget

General MacArthur sat on the Court Martial Board that handed down the decision on Billy Mitchell. And what happened at Clark Field in Manila? General MacArthur's intelligence were arresting Filipinos for reading subversive literature with the maps and everything else, that the Japs would land in Lingayen Gulf. Yes, written by an American. It wasn't subversive -- written by Homer Lea, "The Valor of Ignorance," and MacArthur's bombers lined up in the bright sunlight and the Japs came in and splattered them exactly the way they did in Hawaii. Well, we decorate the dumb ones. I understand the Russians shoot them.

SOME OF THESE FIRES THAT WE HAVE AS A SUBSTITUTE FOR A LABOR STRIKE --

Some of the what?

FIRES, BIG FIRES.

Oh, no, I think you are speaking of arson.

OH?

You never mention the word "fire" where arson is concerned; of course, you know that psychologically there are certain types of arson that are connected with sex repression, where the male is frustrated by the female, and he goes over and burns down her house. Oh, yes, that is quite prevalent in arson. But in the case of an industrial corporation that hasn't any market and finds its inventories piling up, would you say it is psychological frustration? It can be arranged: "We can get it for you wholesale."

MR. SCOTT, IS THERE ANY POSSIBILITY THAT YOU WILL BE GOING ON A CONTINENTAL SPEAKING TOUR, SAY, WITHIN THE NEXT SIX MONTHS?

That's what I'm afraid of. I expect to be on the West Coast, especially the Northwest Coast, within the next 60 or 70 days. How do you like that? You know, a lot of people for many years envy me on account of my height. They say, oh, it must be wonderful to be your height; you can see over all the other people. And when I say, no, there isn't anything wonderful about it, oh, then they're quite downfallen and downcast, you see, that

you don't agree with them. Well, don't you feel that way? I say, no. The only things I can buy are handkerchiefs, socks, and neckties. The shoes, the hats, the clothes, the overcoats, and the bed -- I'm just not tall enough, you see, to be in the Ringling's Circus as a freak and I miss being a doorman for one of the nightclubs, but I am oversize. Now, my trouble is that the doors are too low, the beds aren't long enough, and the women are too short; in fact, it is a hell of a world! So, in my next life I want to be born average height and just beautiful!

IS THERE SOME SIGNIFICANCE TO YOUR GOING ON A TOUR? I MEAN, IS THERE SOME SPECIAL REASON YOU FEEL IT IS NECESSARY TO GO ON A CONTINENTAL TOUR? WOULD IT HAVE ANYTHING TO DO WITH THE COLLAPSE OF THE ECONOMIC SYSTEM COMING IN THE NEAR FUTURE?

Don't try to read any motives into what I am doing. Remember, it doesn't make the slightest bit of difference whether somebody does something because they wanted to do it or whether they did it unconsciously. They behave "as if." Isn't that correct? They behave as if, whether it is conscious or unconscious. I see you are experienced with "women unlimited." I'm sorry, I couldn't help that. I didn't mean to be that personal.

MR. SCOTT, SOME OF US MAY HAVE HEARD THIS BEFORE, BUT WOULD YOU REPEAT THE JOB YOU HAVE CHOSEN FOR YOURSELF IN THE TECHNATE?

I happened to have been brought up, you know, kind of lazy, and never would stand up if I could sit down, and I never sit down if I could lie down. So, when it comes to this Technate of North America, I've consistently staked out one job that I don't want anyone else horning in on. I think it is an ideal job for a lazy Virginian. I want to be custodian of the bears in Yellowstone Park, because in the wintertime they hibernate, and in the summertime, the guests feed them. You see, what is so strange about this organization as far as the public is concerned is that we have no ambition -- doesn't Scott want to be president of United States? Doesn't he want to be dictator or something? No, I would rather be correct about something than occupy the highest political office, and I don't think it would be any honor to be asked to move into that collection of Americana antiques in that so-called White House. I think we better leave it as a

muesum with all its antiquities. Georgie was all right in his day, but, remember, he got defeated down here twice and surrendered twice, didn't he? Georgie Washington -- don't you remember -- in the same place! He never was a general. He was a gentleman -- married to the richest woman in North America. Well, I never had that privilege; so, I don't want to join the contingent.

HAS THERE BEEN ANY ATTEMPT MADE TO INVESTIGATE YOU BY ANY GOVERNMENT BODY OR OF THE ORGANIZATION?

No, you can write the various committees in Washington. We have all kinds of letters from Congressmen and Senators when people have written in, and there is nothing in the records. There is no investigation. What are you going to investigate an organization about? We have no foreign connections. We only have ideas. Well, are you going to stop ideas? If you are, brother, get ready for the windup! After all, we have been attacked by the Communist press, the Catholic press, the political press, the financial press; in fact, about every press on this continent. We have been lied about; we have been maligned. There isn't any adjective they haven't stooped to use. Remember, I was a three-bottle-a-day drunkard. I was a dope fiend -- yes, I've been met on railway platforms and air fields by the mayor and aldermen, the chief of police, and the public health officer, and the public health officer looked at me and said, "What is that whiskey that you drink three bottles a day, because if you drink three bottles a day, brother, send me a couple of barrels!"

Investigated? What is there to investigate? We remember some years ago -- in July, 1932 -- when I predicted the banks of the United States would close on or before the first of April, 1933, when I was speaking in the Arena in Minneapolis and telling them to go out and pull their money out of the bank if they didn't have their return ticket home, and they went out like this in droves -- 22,000 people -- and the meeting practically went to pieces; and the Mayor of Minneapolis, the Attorney-General, and the District Attorney came to the Hotel Curtis accusing me of making statements inimical to the safety of public institutions, and the telephone rings in the room and the desk in the hotel says, "Mr. Scott, the extras have hit the streets -- the Governor of Ohio has closed all the banks!" And then the Attorney-General wanted to know what we would advise him to do with the state

funds of Minnesota.

Well, the Attorney-General of United States asked was there any reason why he shouldn't proceed against us for the statements we had made. We said no reason at all; proceed at your pleasure, but as and when you do, we will bring up the Hibernia Trust of New Orleans, the Union and Guardian of Cleveland and Detroit. The Attorney-General of the United States stopped somewhere; we never heard any more about it.

Just like this racket that the hydrogen bomb secret has been stolen and all that nonsense. Now, the theory of fusion of deuterium and tritium has been known since 1934 and 1935. The complete description was published in 1946-47 by Dr. Hans Thring of Vienna, Austria. It is public property. For heaven's sakes, quit kidding yourselves, will you? Dr. Fuchs or the Rosenbergs or anybody couldn't steal it -- it was wide open! How dumb do we have to be! We knew it long ago. So, you had them stay in the same apartment house at \$9,000 a year to keep track of me and to ask everybody that I spoke to what I said. When was that? 1942. We didn't give it away. Who was it that asked Roosevelt for \$2 billion on our instructions that if you asked for \$2 million or \$200 million, it wasn't enough, but that at \$2 billion, they'd buy it for atomic plants? We'll give you the name. Who was the United States representative on the combined chiefs-of-staff for atomic plants? He never heard of Technocracy, did he? Only a charter member! You want to investigate? Yeah, we'll fill in a lot. It is a suprising picture. I'll tell all, and then look out!

MR. SCOTT, WHICH COUNTRY HAS THE BEST SCIENTISTS IN THE WORLD?

I couldn't answer a question like that. Scientists are neither best, good, bad, or indifferent. They're scientists. It doesn't make any difference if they are tall or short, black, brown, white, or green, provided they know how to handle their subjects without the intrusion of their personal prejudices, beliefs, fixations, or frustrations. But we had better start raising some more technically trained or some other countries will catch up on us. What are you raising in the United States? Graduates of the liberal arts, aren't you? So they can all go into business. Well, you had better cut it out and get them really trained, because you'll need it in this industrial

complex.

HOW IMPORTANT ARE THE NAVIES OF THE WORLD IN RELATION TO  
COMING EVENTS?

How important are the navies of the world? Admiral Mahan, of course, has been the bible of naval strategy as far as United States and others are concerned, but you have to bear in mind that a navy is a very nice thing to have for a show, but you can't blockade a contiguous continentalism with all the navies in the world; but the navy would consume a terrific amount of material and energy fuels to romp around on far distant coasts to satisfy the prestige. What do you have in a navy? You have a battleship or a cruiser, and the more men that you have on there polishing brass and doing nothing and wandering around in that damn uniform, which is a hangover from the old days when they had to stand up on the poop deck; so you have to have then with their pants done up behind and their "pigtails so you would know who to spit on. Now, that's a fact! That's where that uniform comes from. It is a disgrace for any country to wear it. For God's sakes, let's get up-to-date. We propose a uniform where all branches of the service are the same, whether privates, sergeants, captains, colonels, or generals or admirals or gobs. The same cloth, the same standard of everything; and the only insignia rank is on the underside of the right sleeve, so you don't know who he is until he salutes. In other words, if you are going to have an armed force of first-class citizens, let's make them first-class. Don't dress them like a bunch of bums.

What did you do on the shoe in World War II? The committee spent months trying to design a shoe that was a serviceable shoe for service but looked like hell, so that the private and so on wouldn't like them. And what did you do -- you sneaked another pair into your overshoes, didn't you, under your cot? You wouldn't wear the things out. You couldn't dance in them. You couldn't go anyplace in them. They didn't want the shoes to be better than what they sold to the suckers. They could have made one easier.

As for the women's uniforms, there is only one group of women whose uniform ever amounted to anything, and you abolished that in quick order. Why? Because it made General Arnold and the Air Corps look like a bunch of tramps. I can show you a color

film of it. They looked like a bunch of bums. They were the Women's Flying Transport. Oh, yes, they had grey, vermilion, and silver on them -- what do you call them, lined coats; and they were just about the smartest thing that ever walked into any hotel dining room. They brought all the wolves out from under the benches, but you couldn't have that. You had to dress them like WAVES or WACS, etc. They were the only ones that wore the trousers -- the jodphurs -- and the straps down under them. The cap would expand to take in any amount of hair, and the visor, and the bolero jacket. Well, all you had to do was take the bolero off, and you had evening clothes.

We can do it. We have the brains on this continent and this country, but we use a smaller percentage of our brains than other countries. Don't think it isn't correct. What happens to real incentive, creative brains here? Well, you are lucky if you don't starve to death. I remember one chap used to come over and I'd buy his meal. I didn't have much -- he had less. He died of starvation. His name was Cristie, father of the fast tank from which the Tiger Mark VII was copied and the Russian tank. An American -- you have two of his models -- he died of starvation.

I knew Nicola Tesla when he was right, and I knew him when he was feeding the pigeons in front of the library. His mind was gone -- one of the greatest geniuses this country has ever known or the world has ever known -- the father of all polyphase.

You had another one that developed smokeless powder and a few other things. He couldn't make a go of it. He goes abroad, the British give him a title and make him a multimillionaire. You know his name? Hiram Maxim. Come on, we'll go down the list of 156 such things -- all Americans. What happened to them? They were bums, but if they make \$2 million out of an all-day sucker or something, they're big wheels, and you elect them to Congress or the Senate from Ohio.

CHIEF, WHAT DO THEY MEAN BY PARIS TECHNOCRAT? THERE WAS A MAGAZINE CAME OUT HERE LAST MONTH, "CIE MAGAZINE" ....

Well, Paul Rolle started that and the French reactionaries started over in France. Well, the point is that the old Bolsheviks -- they had some knowledge of the outside world and they were liberal. You had a chance with the old Bolsheviks, but

these Bolsheviks have been brought up technically trained in the Russian regime. They were like these Technocrats -- they wouldn't compromise. They were tougher than hell! Why, the old Bolsheviks were sissies. So, they are trying to make out these new ones, you see, are like the Technocrats, and you can't get anywhere with them at all. That's kind of a compliment in a backhand way, but they are also trying the smear stuff. Well, that's been tried before. We don't worry about it. We don't care frankly what they say about us as long as they say it.

Come on here, I've only started. I'm trying to get some reactions here. There's one down here. C'mon, get a couple of others ready and we'll get it rolling here.

CHIEF, IT'S BEEN REPORTED IN THE PRESS THAT IN THE EVENT OF A MAJOR DEPRESSION THAT THE GOVERNMENT HAS GOT PUBLIC WORKS SET UP AGAIN TO GIVE THE AMERICAN PEOPLE EMPLOYMENT. DO YOU HAVE ANY IDEA HOW LONG SOCIALLY PEOPLE WILL TOLERATE THAT -- THE AMERICAN PEOPLE?

Well, of course, in the last depression in the Dirty Thirties, they put the WPA to work with hand tools. If they had given them machinery, they would have rebuilt the country. Now we've got better machinery. You can't put the Americans to work really doing something. That will wreck the whole shebang. We don't want anything constructive done. We want to pour the resources of this country and this continent into something that is destructive and where they are totally destroyed and not of use to the public. Fair enough? So what? Are they going to have vast public works projects? No, they're going to single out a few deserving ones that they can construct as a relief project and sell it back to private enterprise when it's running successfully.

WILL THERE EVER BE A TIME WHEN TECHNOCRATS WILL ASK THE GENERAL PUBLIC TO GET ON THE BANDWAGON? WHEN THE TIME COMES, WILL IT EVER BE LIKE THAT -- WILL WE ASK THEM TO GET ON THE BANDWAGON?

The public of any nation in social change never has to be asked to get on any bandwagon; they jump on and shove you the hell off it! There would be so damned many that you'll have to get out of the road.

MR. SCOTT, IN THE AUTOMOTIVE INDUSTRY WE HAVE SEEN QUITE A FEW CHANGES IN THE DESIGN OF CARS SINCE THE ORIGINAL, AND YET, AS I UNDERSTAND IT, THERE HAS NEVER BEEN A MAJOR CHANGE IN THE CARBURETOR. NOW JUST RECENTLY I CAN RECALL READING AN ARTICLE WHERE A CHAP -- I FORGET HIS NAME -- IN WINNIPEG HAD PERFECTED A CARBURETOR WHICH WOULD GIVE 216 MILES PER GALLON AND HAS USED IT EFFECTIVELY FOR TEN YEARS ON HIS CAR.

We know all about it. It was a nice stock promotion. There isn't that much energy in a gallon of fuel the way fuel is used. Figure it out yourself. Quit worrying about carburetors. Why don't you design a car so it hasn't any axle, so that you can run it into the curb sideways, or point the nose of it at the policeman's belt and travel right around the policeman like this without even moving the policeman? Why don't you design a car? What kind of a car is it? It is a free piston pancaked in the rear. Anybody know what I am talking about? I've told it time and time again. The only seat that's fixed is the driving seat. You move the rest of them around to suit your friends. But you build the highways to suit it. Then you can't have an accident. You could shove the throttle down to the floorboards, stick your feet out the window, or make passes at your girl friend, and you'll go at the speed that lane is set for and no faster or no slower. You can't run into the car ahead of you and the car behind you can't run into you. Furthermore, a rainstorm, sleet, snow, freezing weather -- you've got a concrete post with a metal grille every 1,000 meters, and that transmits your weather information back and your frequency in your coaxial cable changes and down you slow, whether you want to go fast or what you want to do. You "gotta" protect these individuals from exercising their own opinions.

We had to do it in the power industry. In the central station, the day was, you know, when you could walk into a switchboard and you wanted to go fishing. Why, you pulled the switch any time you darned well felt like it -- just walk up and stick a broom stick in it, trip the bars of copper. Try pulling 60,000 or 250,000 kva load. Oh, no, you don't pull it when you want to. You can't trip it on peak load. It's designed just so the moron can't do it. You trip it on the no load. We've got to protect that stupe from injuring the equipment.

MR. SCOTT, THAT CAR YOU WERE REFERRING TO -- IS IT A GASOLINE-CONSUMING ENGINE: IF SO, WHAT IS THE MAXIMUM -- ?

I didn't say it was gasoline. You could use gasoline, but why refine the gasoline? Seeing there's so much butter, you could run this one on butter or margarine or that olive oil they're buying up. Wheat dust, for instance, makes a beautiful fuel. You can run a car on wheat dust or wheat itself or any protein ground up becomes a propellant. Am I correct? Corn -- try that; that will do, too. Of course, corn should be processed, so should wheat; but we've been throwing the corncobs to the pigs out in the back for so long -- of course, we did make some into pipes and then others they used as life's little daily irritations occasionally. Corn cobs, by weight, can be digested, sulfuric acid processed, and 25 percent by weight are furfural, as great an intermediate as  $C_6H_6$ ; in fact, it will be a greater intermediate because it's an organic fuel and it's got a greater range. So we throw more away when we throw the corncob away than the corn which we sell. Who's goofy?

Now, you have processes today where you could ferment the wheat or the corn either to ethyl alcohol or isopropyl and leave all the proteins in the mash and then mix your salt and slight mineral addition and feed your animals right off the end of the process line. Why go through this thing of having them scattered around in a lot of pigpens? You see what it would do to your costs? But, no, you want to maintain the little homesy farm, don't you? Home, sweet home. Look what the hell it costs you.

Like A.O. Smith offered to build one 10,000-ton boat every 2-1/2 hours. It would have meant only one shipyard, so we couldn't have it. Built upside down in a continuous mass assembly line and you turn it upside down, and when you turned it upside down, it would go into the water with all the equipment and go off under its own propulsion. Can it be done? Certainly it can be done. But no. It's just like the three 8-hour shifts in war industries. Would you have the theaters run and the stores run on that? Oh, no, there would be less theaters, less movies, less stores, less restaurants, wouldn't there? Couldn't have that.

You see, we have designs for commodity terminals, for shipping, for transportation, for power lines, almost anything you'd care to name. And the Swedes and Norwegians are proposing a

million-volt DC transmission line down Scandinavia across the Skagerrak and to tap Central Europe. You never heard of that before, did you? I should sue them for infringement, shouldn't I?

CHIEF, I UNDERSTAND THAT THE FEDERAL BARGE LINE HAS BEEN SOLD BY THE GOVERNMENT TO PRIVATE ENTERPRISE. WHAT WOULD YOU SAY OF THE CONTRAST TO THE CONTINENTAL HYDROLOGY MARINE TRAIN?

Well, the Federal Barge Line, of course, finally was the only thing making money. It lost money to begin with, but then when it got going, it has made money and built its equipment out of its earnings; and now that the Federal Barge Line is up to where it is a paying proposition, we sell it to private enterprise for a . Of course, we never developed our waterways. Take Muscle Shoals and TVA -- don't forget that I was in on the original before a TVA was formed, and our surveys then -- we called for development of the Tennessee for a dam at Short, Mississippi. The elevation is 458. You ran your canal due west, dumped it in the Tombigbee. At elevation 150 you would have more power in one single generation than in the entire TVA, and you would have had a new channel in the Mobile Bay across from it into the Mississippi. Only we proposed it 22 feet deep -- not that lousy 9 feet over sill. Same thing with the waterway that we argued and fought for and proposed for years -- the St. Lawrence River Seaway. What is it? They wanted 27 foot. Well, in freshwater, that means less than 25-foot draft. Freshwater hasn't the buoyancy of salt. But your main bottleneck in any St. Lawrence Seaway up the Great Lakes is the difference in elevation between Lake Ontario and Lake Erie, 326 and a fraction, 327 feet. It takes over 8 hours to go through your Welland Canal, but our hydraulic lift locks would put 60,000 tons up and 60,000 tons down in 15 minutes.

Does the public of this continent always have to buy all the junk and obsolescence simply because the politicians hand it to them? I remember speaking out at Grand Coulee -- remember we had proposed a Rio Grande Coulee. They had the public exhibits of the models there, and they would put the model dam with its little pegs in, and here was your balcony for-the public, and that is the dam that was going to be built there. Then they would take out the larger one and put it in and say, "Well, here's the position that some scientists and engineers have proposed." On

the contour map, that would back the water up to [Baccus?] on the Canadian boundary. But the one we proposed would run the water beyond the Canadian Pacific Railway Bridge at where? Way beyond the head of Arrow Lake -- about 370 miles of deep water transportation, a million-and-a-half more kW, and you would have had only about 60 feet to pump the water up.

I mean, we have the things, whether it's for the St. Lawrence Seaway, whether it's for the Nile or the Yangtze, our proposals will still top anything, and we're correct about it.

Well, ladies and gentlemen, I've tried to get you to throw things at me, but whether it's the weather or whether you are timid -- you see, you're not as good as an audience of non-Technocrats.

THE FLYING SAUCERS YOU READ SO MUCH ABOUT IN THE PAPERS, IS THAT A LOT OF MALARKEY?

Look, are you trying to get salacious? Ever since the angels found out that St. Peter was sterile -- you know what they did. They threw him away. If you believe all that nonsense. You have light effects, yes; but what was it they wrote it up down here? They were only two feet high, crawled out of the flying saucer. They saw them, didn't they? You know, there is a peculiarity about people who have DTs. Have you ever known a number of them? If one ex-DTer meets another ex-DTer and they both have seen the same kind of little animals, they're friends; but if they have seen different kinds of little animals, they won't speak to each other. Why, they know he doesn't belong to the same lodge, so what's the use? He didn't see the same things. What's the use of talking with him? How dizzy can you get? You've had that happen in so-called religious miracles and every other kind of psychological fits and fancies. After all, we had a number of Americans hanged, didn't we, because two young adolescent females got up and gave testimony? Do you know your early history of Massachusetts -- how many were hanged? Quite a number. They saw visions, didn't they? One more. I'll entertain it.

CHIEF, WOULD YOU TELL US A LITTLE MORE ABOUT THE ORIGIN OF TECHNOCRACY AND THE MEANING OF THE WORD?

Technocracy comes from Greek root words. You have

plutocracy, autocracy, democracy -- you have a lot of them. Plutocracy is the rule of wealth, autocracy is the rule of one, democracy is supposed to be the rule of the majority, and Technocracy is the rule of science.

There are three orders of knowledge known to man: One is theology or ecclesiastical knowledge; and one is philosophic. Those two orders have been the ascendant orders of knowledge that have dominated mankind. Now you have physical knowledge, or science, that has to come into its own. Let's leave the other two orders of knowledge be relegated to their proper place -- individual sublimation and satisfaction, but do not try to drive them in in the operation of the greatest scientific, technological complex on the face of the earth. If you do, you're going to blow the fuses and the windings. In other words, call in somebody that knows and quit guessing and quit speculating. Now, if you want to keep on electing them in Ohio or any other state, that's your privilege, but don't blame us for what happens. We won't have any part of it. Well, I have done what I could for you. Have you got anything else back there on that microphone?

SOMEBODY BACK HERE HAS TWO QUESTIONS. WILL YOU ELABORATE ON THE SECOND WORLD WAR REGARDING RUSSIA CALLING FOR A SECOND FRONT?

Was Russia calling for a second front?

THAT'S WHAT THE QUESTION READS.

Well, of course, Churchill and Roosevelt stalled. They couldn't get ready in time, and Stalin offered to supply all of the troops -- 2 million of them -- provided the United States and Great Britain provided the sea transport. That is in writing in the archives of our State Department and our military headquarters. Kind of funny is it not? I don't think I had better go into that because it is a long, dirty mess. Our name for the campaign of World War II in the Mediterranean was "the Spellmanization of the Hesscapade." We have said it from every platform, over the air, and have written it, and nobody dares contradict it. It stinks. In other words, the Germans could have put ten more divisions under Rommel and he would have gone through to the Persian Gulf. How big a front did he have at El Alamain? Well, there are only 26 miles between the Mediterranean

HOWARD SCOTT, AKRON, OHIO  
EASTERN AREA CONFERENCE

9-6-53

and the Quattara Depression, but only 18 you could fight on, because they tail into a swamp. We know our terrain, but the public didn't know that. How many divisions did Rommel have? A handful. After all, Eisenhower accepted the Italian surrender in Spain with the British before a single U.S. soldier landed in Italy. How do you like it? I am quoting that statement. He admitted that under oath in a hearing in Washington, D.C. You think it was on the level, do you? The poor boys who did the fighting didn't know. Don't blame them.

WERE YOU FINISHED ANSWERING THE QUESTION OR DID I INTERRUPT YOU?

Never mind. If I've got something to say, you won't interrupt me. I'm a hard person to stop, you know.

Now, that's a pretty sad picture, and there is no use in giving you just parts of it. There are members here I've gone into it at full length with at other meetings, and I think that's pretty well covered on tape recordings. We have the data down and in the reviews we have written on military books, like Major-General Fuller wrote back to us on account of Wilton Ivie's review of his history of World War II -- oh, he didn't like it a bit; but he never commented on what we pointed out -- he left that strictly alone. After all, do you think wars are on the level? Let me ask you: Do you think business is on the level? Well, if business is upright, forthright, honest, and everything else with high honors, then war must be the same way. If you believe that, you're cockeyed.

I think you've had enough. We've had a grand time. You came from all over. Go back and, as the French Marshal said, "Attack, attack, and attack!"

HOWARD SCOTT TELECONFERENCE  
LOS ANGELES AND CHQ  
MARCH 21, 1954

LA: HAPPY NEW YEAR, CHIEF.

HS: Happy New Year.

LA: WE HAVE A LITTLE ADVANCE INFORMATION HERE FOR YOU. WE'VE GOT PEOPLE FROM ALL OVER THE ENTIRE AREA: THAT IS. THE SOUTHERN CALIFORNIA AREA AND EVEN AS FAR NORTH AS SAN FRANCISCO -- MR. ROSENBLOOM. AND THEN WE GO CLEAR UP TO ROSENBERG. OREGON -- WE HAVE MR. AND MRS. WHEATMAN: SO. WE'VE GOT QUITE A NICE TURNOUT HERE.

HS: Anything north of Oregon?

LA: NO. NOTHING NORTH OF OREGON. BUT IT IS FROM ALL OVER THE SOUTHERN CALIFORNIA AREA. MY NAME IS WINCHESTER FROM SECTION 2, 11833.

HS: I thought I recognized your voice. Winchester.

LA: THANK YOU. WE HAVE SOME QUESTIONS WE WANTED TO ASK YOU AT THIS TIME. EVERYONE IS WISHING YOU LUCK ON THE NEW PROJECT AT THE FARM. AND WE ARE REALLY LOOKING FORWARD TO YOUR COMING OUT HERE.

HS: Well. I'll be glad to get there.

LA: QUESTION #1 IS: WHAT IS BEHIND THE LATEST SOUTH AMERICAN DIPLOMATIC SESSIONS AND HOW WILL IT AFFECT NORTH AMERICA?

HS: Well, of course, what the South American nations are trying to do is get a guaranteed market for their raw materials and the so-called strategic materials: and, as they have stated in the resolution at the Caracas conference, they don't want anything declared strategic unless they agree to declare it strategic.

Now, Chile has a surplus of copper, but Chile has been holding its copper above the world market. Now, if United States is going to declare certain things as strategic, then we'll have to buy all the surplus of South America. Isn't that interesting?

LA: YES.

HS: In order to prevent its being non-strategic. The present government in Venezuela is a direct instigator of. let's say, our military and foreign policy. It's a military junta, if you know your Spanish. Well, the one in Colombia is a similar setup. The only time that a government in Colombia that has been to the United States has occurred once in the last 50 years. Then it only lasted 6 weeks. Now. Dulles, in his performance at Caracas, was carrying out in principle the same thing as McCarthy; namely, that there's only good and evil and that the world has to be purged of the great carnal sin: therefore, he's asking all the nations -- all 21 of South America -- to agree to purge themselves: and if they can't purge themselves, he wishes them to consent to intervention in another form, but also to agree to economic intervention on the terms of American private enterprise.

And, as they already know American private enterprise down there, they wish to get in on the gravy more than they do. As we find most of the Brazilian coffee, Chilean copper. Venezuelan oil and iron ore. and the copper of Tierra del Pasco, and the tin of Bolivia -- we could go on with this -- various products; in other words, they want a guaranteed market in United States for all that they produce at prices above the world market. They wish to be the select supplier. That guarantees them economic assistance such as Peron in Argentina, the Venezuelan government, the Columbian government. the Peruvian government. and the present mess in Chile. That answer your question?

LA: YES. THEY WANTED TO KNOW. TOO, WHAT IS BEHIND THE RECENT DIFFERENCES BETWEEN THE CATHOLICS AND THE PROTESTANTS IN ITALY.

HS: Well, you have to realize that Italy is somewhere between 96 and 98 percent Roman Catholic, and there never has been any differences because they're under the Italian law and Vatican law. The church is recognized as the first basis and the only basis. There is no salvation outside of the Roman Catholic Church. Therefore, anybody that attempts to start

or open any other kind of church not sanctified by the Vatican is immoral, illegal. and unholy. Now, they do say. of course, that there is religious liberty, provided you do not attempt to practice it openly; and that's well known.

For instance, in South American countries, you cannot be a nurse, a doctor or hold public office unless you are a Roman Catholic. Well, in Italy, the Monarchists are Roman Catholic, the Republicans are Roman Catholic, the Fascists are Roman Catholic, the Christian Socialists are Roman Catholic, and the Communists are Roman Catholic. Now, if there weren't any Communists in Catholic Italy, well. Catholic Italy wouldn't get any sustenance from United States: in other words, there would be no menace to the center of Christian culture of civilization. That's very simple. The Protestant, of course, is too dumb to know it.

I think that sums it UP. doesn't it?

LA: YES. WE NOTED THE RECENT DISPLAY OF FIREARMS IN THE HOUSE OF REPRESENTATIVES. WE FEEL IT MUST HAVE A DEEPER SIGNIFICANCE THAN THE NEWSPAPERS HAVE INDICATED. WE WOULD LIKE TO KNOW WHAT IT IS.

HS: Well, that's only a more fanatical brand of Puerto Rican nationalism, a few hundred: and in Latin Catholic countries, when they attempt to become revolutionary, they always become anarchists rather than political revolutionaries, So. assassination is one of their political methods. It doesn't mean very much except that they're here in United States; they are allowed in as citizens. There's 2.4 million Puerto Ricans and they have a high birth rate -- practically no resources. The pressure is on and they want independence; so, why not grant them independence? Independence from the rest of the continent, and don't subsidize them with American funds and American resources.

The question is. what kind of security forces do we have in Washington to permit a whole crowd to get in the gallery, all with arms?

LA: THERE SEEMS TO HAVE BEEN A LOT OF WILD GUESSES TO WHY COFFEE PRICES HAVE GONE UP SO HIGH. WE WONDER IF YOU HAVE ANY

INFORMATION ON THIS.

HS: No. Naturally, why shouldn't coffee prices go up? The demand is increasing all the time, and we want our South American neighbors to have the highest price; and, of course, the South American neighbor is great at putting on the squeeze play. The American public is going to drink coffee, Brazil produces coffee in such vast amounts that the rest of the world is staggered by it. So, after all. we're willing to pay for it. After all. the Brazilians aspire to ride in solid gold Cadillacs, too. Why shouldn't they? So, if you can get \$1.20 or \$1.50 per pound of coffee in United States, why, the Brazilians will have solid gold Cadillacs, Nothing for us to worry about; that just happens.

LA: THERE HAS BEEN COMPARISONS MADE BETWEEN THE PRESENT CONTROVERSY OF EISENHOWER AND MCCARTHY AND THAT OF HINDENBURG AND HITLER WHEN HITLER WAS COMING INTO POWER. I WONDER IF THERE WAS ANY REAL BASIS FOR THIS COMPARISON AND WAS IT JUST ANOTHER SIDE SHOW TO KEEP OUR ATTENTION DIVERTED FROM THE REAL PROBLEMS AT HAND?

HS: This administration in Washington is the McCarthy administration. After all, may I repeat that criticism voiced by the British that McCarthy has been able to achieve the surrender of the armed forces of the United States? Something that Burgoine and Cornwall is never succeeded in doing. Now. McCarthy, after all. is a member of the Roman Catholic Church, a political boss of Wisconsin that maneuvered him into the position as a Roman Catholic, and, of course, the tactics he uses, the instrumentalities are the same tactics that were used by Roman Catholic Fascism in Europe, and the objective is not to convict Communism -- of which there is so few in United States, but to intimidate the ten million Americans who dissent from the bourgeois moronic concept. Up to date, it has been successful, but McCarthy is taking in too much territory. He's attacking the Protestant churches, the universities, the schools, the United States Army, the armed forces, and now he's taking on the radio and television. Besides, the 27 million people who voted for Adlai Stevenson are all traitors, and the 30 million who didn't vote are traitors because they didn't vote for the Republicans. So. that's 57 million traitors.

That's too much territory.

You cannot sense that many traitors; in other words, the answer to McCarthy is this: if you are not a Roman Catholic, you are a Communist. Very simple.

LA: THEY WANT TO KNOW HOW ACCURATE ARE THE AVAILABLE FIGURES ON OUR PRESENT UNEMPLOYMENT.

HS: Well, the figures don't lie. but the trouble is that the liars figure, and when it comes to figures on unemployment, it's not the total unemployed. Of course, the total unemployed is greater than they announce, but it's the total that are employed in United States at a full week's pay; in other words, there are 15 million that are employed at less than a full week. You have a total working force in United States of 63 million, which does not include the armed forces. Now, you only have around 47 million that work a full week. That's an entirely different story. Overtime is being eliminated and the work week is being reduced.

In other words, it's quite possible in United States to have everybody working and nobody making a living, because you'd only be working a few hours a week. Of course, if unemployment rises to between 7 and 8 million, it will cost the country more than 17 to 20 million did in the Dirty Thirties. The Filthy Fifties will be astonishing; so, don't worry and don't get in a hurry, because you'll get there eventually.

LA: SOME OF OUR MEMBERS NOTED WHILE WORKING AT THE FACTORIES AND PLANTS WHERE THEY SEE LONGER LINES OF UNEMPLOYMENT. EVERY DAY THEY ARE LOOKING FOR JOBS; AND THESE MEMBERS FEEL THAT BECAUSE OF THIS MORE NON-MEMBERS SHOULD BE SHOWING AN INTEREST IN TECHNOCRACY THAN HAVE BEEN SO FAR. SO, RATHER THAN BEING "LATER THAN WE THINK," WE ARE WONDERING IF IT IS ALREADY TOO LATE, AND IF WE AS AN ORGANIZATION HAVEN'T ALREADY FAILED IN OUR JOBS OF MAKING THE GENERAL PUBLIC AWARE OF TECHNOCRACY?

HS: No. nobody's failed. After all. it's the job of every Technocrat to go out and tell the individual. You've got to be belligerent about it. In the words of that famous French

Marshal, "Attack, attack, and attack!" If you're going to sit on your fannies, you'll get warts on them; in other words, conditions are on the move and we're going to see plenty of it. This is only the beginning, and you haven't seen anything. Wait until 1956 when we have between 120 and 130 million installed kW in our central stations -- when we'll have a capacity to put in 20 billion kW hours a week or more instead of 8 and a fraction. If you think it's funny now at 8-1/2 and we're flooded with potential abundance with a declining work week, what in hell are you going to do with 22 billion kW hours a week?

Now, you just couldn't answer that. We can, but we're not going to tell you.

LA: IT'S ALSO MENTIONED HERE THAT IT TOOK ABOUT A YEAR FOR HITLER TO BREAK UP THE LABOR UNIONS. DO YOU THINK THAT MCCARTHY CAN DO THE SAME?

HS: Well, the labor unions are facing something greater than McCarthy; in other words, right now we have a capacity of 130 million tons of steel, and in that 130 are 20 million tons of obsolescent capacity, in which the labor costs per ton of steel are 3 times that of the most efficient steel plants. Now, that 20 million tons are going to be liquidated, and when it is liquidated, 280,000 employees in the steel industry will never work in the steel industry labor unions -- McCarthy? Oh, no, brother, don't kid yourself about that. Technological obsolescence is going to do it, not McCarthy. Am I making it clear?

LA: YES.

HS: John L. Lewis, what? Has he the same number of coal miners working that were working in 1946-47? No, he has not. There's going to be 100,000 less coal miners in the next two years. Agricultural unemployment? How many millions has that dropped since 1946? Is this disposal of jobs due to McCarthy or Eisenhower or Truman? Not a bit; in other words, these jobs are gone forever, not because of somebody's fascist rantings or somebody's attacks. Is that clear?

LA: YES.

HS: O.K.

LA: I MIGHT MENTION WE HAD A MEETING OF THE DIRECTORS AND CHIEFS-OF-STAFF IN REGARD TO YOUR TOUR OUT HERE. AND WE CERTAINLY HAD A VERY SPLENDID TURNOUT AND ACCOMPLISHED QUITE A BIT. WAS THERE ANYTHING YOU WOULD LIKE TO ADD AT THE PRESENT TIME BEFORE WE SIGN OFF?

HS: No. You have to bear in mind your biggest job is to have the members sell tickets. Sell them in the office or shop or anyplace else. And my title in Seattle is: PEACE OR PROSPERITY? In other words, you can take your choice. Roll it up because -- just take the gloves off. I'll be sweet and comic, but I'll be dirty and I won't say a naughty word.

LA: WE GOT THE GENERAL MAILING ON THE DETAILS OF THE FARM. IS THERE ANYTHING YOU WOULD LIKE TO ADD TO THAT AT THE PRESENT TIME?

HS: Well, there is more construction work going on. and it looks better all the time: of course, if we could do as much this year as we did last year, we'll have a nice little miniature university here -- at least in embryo. All we need is money, materials, and manpower. We have manpower. If we get the money, we'll get the materials to put in place. And if you're coming east, drop in and take a look at it. When I go out, I'll take a few photographs and colored slides for some idea. Think you'll like that?

LA: WE SURE DO.

HS: All right. Anything else on your mind?

LA: NO, NOT RIGHT AT THE PRESENT, CHIEF. WE CAN SIGN OFF. EVERYBODY'S HAPPY AND GIVES YOU A BIG SALUTE. WE'RE SURE LOOKING FORWARD TO YOUR COMING OUT HERE.

HS: You have any idea where you'll hold the meeting?

LA: THE BEST WE COULD GET, CHIEF, IS THE EMBASSY AUDITORIUM.

HS: The same one you had before?

TELECONFERENCE, LOS ANGELES AND CHQ

3-21-54

LA: YEAH, BUT WE'LL GET THEIR MAIN HALL. AND WE'LL MAKE A RESERVATION ON THE SIDE IN CASE WE NEED IT.

HS: Right. Well, that's good enough. Fill that and I'll be satisfied.

LA: O.K.

HS: O.K. Salute. Good night.

"PEACE OR PROSPERITY"

BY

HOWARD SCOTT

SEATTLE, WASHINGTON

APRIL 16, 1954

It was just twenty years ago that I first spoke in Seattle in this very same hall. So, there are some of you here this evening who were there then, were you not? A lot of water has passed over the dam, but Technocracy as an organization has gone through the greatest depression in history and the greatest war in history, and today its Units and Sections are frail Nova Scotia to Hawaii, from Alaska to the Republic of Colombia. Done on what:? The dimes, the nickels, the quarters, and the dollars of the average American, without any subsidies, without any favors, from any group. We think it is an achievement; in fact, we know it is.

Tonight I would like to try to explain to you the nature of the system that we are working under and living under. For thousands of years, we human beings had one method of producing physical wealth: by human toil and hand tools. Regardless of the so-called political structure of any human society of the past, the methods of producing wealth remained unaltered, whether it was an autocracy or a kingdom or any other, and within the memory of many of you here this evening, you can recall when the farmer worked 7 days a week, 12 hours a day -- 84 hours a week. The steel industry, only a few years back, was working on the same basis -- 7 days a week, 84 hours.

Well, bear in mind that Plato could have sat down to breakfast with George Washington, and they would have understood each other thoroughly, because they both had the same concepts, the same values, derived from exactly the same process of the production of physical wealth. And yet, in the last 40 years, science and technology have altered the very structure and the nature of our economy, our country, and our continent. We have grown in population, we have grown in monetary wealth, and the problems we are facing today are unsolvable by any moral approach, philosophical approach, or two-party political system approach. Those problems are quite different than any of our ancestors faced in the last 5,000 years. Let's see if I can bring it home a little clearer to you.

So long as we produced physical wealth with human toil and

hand tools, we could only hope to amortize out the principal and interest of a major debt once in a century. Because the annual increment was so small, you couldn't pay off the bond issue in less than 100 years. That was true in Hammurabi's time in 1350 B.C., and it was true at the beginning of this century here in the United States and Canada. That meant that you could only reinvest your capital once in a century. Bear that in mind. For thousands of years, regardless of whether they were the oppressor or the oppressed, capital could only be reinvested once in a century.

Today in United States, we have technological equipment that, if operated at 75 percent or more capacity, will amortize out their principal and interest in 5-1/4 weeks, or a capital payoff time of 964 times in a century. Shades of Karl Marx and Adam Smith! They never even dreamed of it;, did they? And, naturally, your insurance companies, your investment trusts, your banks are wondering what they're going to do with the billions. Where are they going to invest it tomorrow, because science and technology will march on, and we'll devise even faster capital payoff. Well, that is one phase of it.

There is another phase of it. As we produced physical wealth with human toil and hand tools, we had no recourse as human beings except to move the human being, around to the job with his hand tools. As science and technology march up, we take the tools away from the individual human being, and we move the work past the man. It requires more and more technological equipment, more and more energy -- not of human energy but of extraneous energy; and it makes of little moment whether that extraneous energy is generated from coal, oil, gas, hydroelectric power, atomic fission, solar energy, or any other source whatsoever, it is still extraneous energy.

In the old days of human toil and hand tools, a few simple tools sufficed. We have at last arrived today where there are several plants in United States at this moment that have \$3,600,000 worth of equipment per employee. Isn't that wonderful? What does the employee do in that kind of a plant? He sits and reads a magazine or falls asleep until the buzzer or the lights wake him up. There is no contribution of human effort, and if he lets himself fall asleep, there is no damage anyway, because it stops automatically. That's a long cry, isn't it?

Now, going back to our 84 hours a week, look at our work week. Our work week is declining bit by bit by bit. Do you remember the sign that used to be in the old barbershops of the three heads, faces with the three combs, the herpicide ad, you remember that? Going, going, gone. We're approaching it. Now, many of you feel, of course, what the Technocrats say is all right, but it isn't going to happen in our lifetime. Brother, you're dead wrong. Right now we're consuming slightly over 8,300,000,000 kW hours per week. The power generating equipment under construction, mind you, in U.S. today that will be installed in 1956 -- only two and a fraction years -- we'll have a total installed central station capacity of 130,000,000 kW. Not in 1980 or 2000 but in 1956. 130,000,000 kW capacity in our central stations will enable us to dump 22,000,000,000 kW hours a week into our operating industrial complex. If you think we are bothered with the plague of abundance with 8,000,000,000, what in the devil are you going to do when there is 22,000,000,000? You don't know. Neither does the banker or the politician.

Now, remember this is only a short ways away. We have abundance, and abundance is plaguing us. Remember, a few years ago, the old vaudeville joke about those dumb Danes over there that produced the fine hams and bacon and butter -- well, they sold all their butter abroad and ate margarine. Why, the audience had a laugh every time that was pulled. Here in the United States today, these intelligent Americans produce millions and millions pounds of butter which we can't sell, and we eat margarine. On the first of April, the United States government had purchased for storage 390 million pounds of butter, 400 some million pounds of cheese, and over 500 million pounds of dried milk. Now, that is not the total storage. Commercial storage is in excess of that. According to the statistical estimates for 1954, there will be an increase of between 2.4 and 2.7 in the total producing milk cows in the United States. In other words, this year will see more billions of pounds of milk produced than we had in 1953. What are we going to do with it? Ask Mr. Eisenhower. He doesn't know. Nor does Mr. Dulles, nor Mr. Benson, Secretary of Agriculture.

Now in agriculture generally, let's take a brief look at the picture. Canada last year had a production in wheat of around 668 million bushels. Up to this moment, Canada has not sold a single

bushel of its 1953 wheat crop. Not a single bushel! And it has today, at this moment, almost 800 million bushels. United States has around a billion bushels. We're loaded with corn; we're loaded with cotton. We attempt to put in restrictions. Is that going to cure anything? Well, the modern farmer today that has the capital to buy the equipment also knows that with hybrid seed and fertilizer, he can up his production, even with the reduced acreages of the restrictions, and will proceed to demonstrate it to you this year by a national glut. Because you will have more of it than you have ever had.

On the east coast, the big mothballed fleets of ships -- they've been filling them with wheat. Well, they are all full -- 70 some million bushels. Of course, it is very nice because you can take the ship out and you can sink the ship and the wheat, too. The only trouble is that 70 million -- what's 70 million bushels in a billion some bushels? Nothing. Now, there's one thing -- back thirty or forty years ago, the buyer put sane calls and futures in the wheat market -- the wheat pit -- because even if the market didn't go up, you could hold the wheat and some day, maybe weeks, maybe months, maybe next year, you could sell it. Maybe you sold it at a slight loss -- maybe you didn't, but you still had a potential. But when United States and Canada at the end of a crop year have 2,500,000,000 bushels of wheat, what's the use of buying puts and calls of futures? What's the use of talking about it, because you can't even move it! You pile it up on the ground about a half-mile long or you pour it in the chimney or the steeple of the school, board the windows up, and fill them up to the roof. But can you distribute your abundance to your fellow North Americans? Oh, no, you couldn't do that, could you? You can just take the butter that is going at 70 cents a pound here and sell millions of pounds of it at 11 cents to the Italians, but to the deserving Americans on the North American Continent, you couldn't even give it to them, could you? What kind of people are we? We had better stop and examine ourselves.

Well, the whiskey industry has built beautiful distilleries during the war, and now we have whiskey. Few months ago, there were 768 million gallons of whiskey in the hands of the distillers alone and 115 million gallons of true spirits. Through a very nice maneuver, they reduced the inventory by shipping 50 million gallons to Canada for storage and putting another 25 or more million in bond for export. Technically that reduced their

inventory. But, actually, they could stop making whiskey tonight, and how much whiskey would they have? Well, let's put it in simple terms: if they never made another drop, they have sufficient whiskey in the hands of the distillers -- now, remember this does not include saloons, liquor stores, or importers, purely distillers -- they could maintain the consumptive demand for the next nine years. Isn't that wonderful? Oh, that's wonderful.

Several Technocrats, last August, completed a brand new plant for one of the major companies of this country. It runs automatically -- very beautiful equipment -- makes flashlight batteries -- you know them, you use them. They raised the price recently. They used to be two for a quarter. Now they're 15 cents straight. This plant produces a million batteries per shift. The cost? Seven mills per battery. Who's the sucker? You're not getting the difference, are you? But you pay for it.

Now, let's watch all of this. What is this process that has been going on for the last 14 years? Well, the press would have you believe that it is monetary inflation. It is no such thing. Monetary inflation can only occur when there is a dearth of goods and then the government either prints new money or prints additional zeros on the existing currency. Now, United States and Canada have not been in any process of monetary inflation. They have been in a process of credit amplification -- a totally different thing. The end results are totally different. Monetary inflation could be continued theoretically for a thousand zeros after the digit, and it would not fundamentally alter in any way whatsoever the productive processes and the distribution processes of any national economy. It would, it is true, liquidate a certain proportion of those on fixed incomes and pensions, but that is of minor importance; while the process of credit amplification does fundamentally alter the whole process of the production of physical wealth and its distribution in that national economy. Let's see how that happens.

We use the power of taxation and its collection by the federal treasury, and we underwrite and subsidize the corporation, the contract, and the raw materials. They go out and build brand new plants on what? On the credit from the taxes collected from you and you and every other American. It is your money that's done it, and having insulted you in that manner,

they proceed to insult you twice, because they get a certificate of necessity which enables them to indulge in a fast write-off; for instance, if they get a write-off of a hundred million a year, they add the hundred million onto all the cost of materials, labor, and then they calculate their profit on top of that hundred million, so that if the profit calculation is 20%, they get 20 million and a hundred million write-off. So, after having taken the money from you in the first place, they make you pay for it the second time. Isn't that wonderful? The land of the free and the home of the brave!

Now, where did that process occur before? We'll tell you. That was the process that Hitler used in Germany in a minor way. It's being done to you on a gigantic scale. Hitler was peanuts! What are the end results of it going to be? Well, you can observe it. Consolidation after consolidation. The little man -- he's going, whether he is the little man in merchandising, in manufacture, or in farming. His day is done. In retail stores, there are slightly over 6,000 supermarkets in U.S.A. Those 6,000 supermarkets are doing a greater annual volume of business than 369,000 other stores, and the percentage of growth occurring to those 6,000 supermarkets is increasing, while to the 369,000, it is declining. We are building more supermarkets and we are building them bigger, and there will be less and less of the others.

In farming, well, the individual little farmer with his 20 dairy cows -- his 30 or 40 -- his operations aren't big enough to put in the capital investment of equipment to do away with his arduous toil -- barn cleaners, silo unloaders, all the rest of it -- no, that costs too much for his little operation. So, he struggles along with his aging father or brother, while his children, if they have any, go to high school and college, and they came back and look at him, shake their heads, and say, "Huh-uh, dad, you have it, but not for us." He can't even pay them to stay there. You try to employ farm workers today -- do they want to work 12 hours a day, 7 days a week? Oh, no. They want to work only 8 hours at the most and only 5 days. Well, then, how are you going to run it with split shifts? Your operations aren't big enough.

Now, this is happening all over the lot, and it is happening from top to bottom of our entire industrial structure. Right at

the present moment, General Motors is producing 50% of the automobiles, Ford approximately 36%, Chrysler about 12%, the independents 2%. Are your independents going to be with us long? Not very long. General Motors is spending \$1,500,000,000 on new plants. What are the new plants being built for? To do away with human labor to reduce the costs. They are putting in automatic equipment. Ford is spending a like amount. Chrysler goes out and borrows \$250,000,000 from the insurance companies, and, ladies and gentlemen, it is not enough. \$250,000,000 is not enough. A billion is required or more, so Chrysler will be in hot water, shortly, if not now.

The steel industry of the United States right now has a capacity of 130 million tons. There are approximately 20 million of that 130 million tons that are obsolete, high labor cost. The labor costs per ton of those 20-odd million tons are approximately three to one -- three times what the most advanced steel plant in U.S.A. is at the present moment. Those 20-odd million tons are going to be liquidated between now and next year, and when they are liquidated, there will be 280,000 employees in the steel industry who will never work again in steel. You see why the union leaders are worried and why the steel industry is worried, too?.

Well, John L. Lewis has 100,000 less coal miners today than he had two years ago. He'll have another 100,000 less in the next 2 to 2-1/2 years, and he has had to notify his miners that the royalty pension fund isn't great enough to meet the emergency and their conditions, has he not? Yes.

Well, where is this all going? You are bombarded with nice statements about the total labor force of United States. Well, the total labor force of the United States according to the United States Department of Commerce and Labor is in excess of 63 million. That does not include, of course, the armed forces of U.S. NOT, there are approximately around four million unemployed in the U.S., but that isn't the whole story. There are 15 million that are working, but they are working less than 30 hours a week. There are 2.3 million that are working less than 14 hours a week. Overtime is being cut back all over the country. Now, agriculture has 6 million less employed than it had in 1948-49, and agriculture is going to have millions less in the next three years.

You don't see anybody building highways with a pick and shovel anymore, do you? In fact, in travelling across U.S. and Canada, it's really difficult to find anybody who is doing any work except standing around trying to sell some sucker something. A few mechanics, yes, and a lot of equipment, and yet we are producing an ever greater volume of goods. The abundance is piling up. In spite of the layoffs and the shutdowns, since last October, our inventories keep increasing; in fact, they are two and a fraction billions right now, greater than they were last year.

Let's take a view of another sector. The Hotpoint Company has completed a magnificent big appliance plant outside of Chicago. Westinghouse is building another one farther south -- 1,700 acres. So is the General Electric, a single unit plant for electric stoves -- another one for washers, another one for Irons, administration building, a beautiful research building -- well, what are the figures? At Hotpoint, one refrigerator, crated, on the warehouse platform, ready to go, every 41 seconds. You think that's pretty good, don't you? The rate is one out of three in a minute. Now, four big firms -- just four -- will have the capacity of five million refrigerators a year. Honey chile, whatcha gonna do with all them cold boxes, huh? You gonna give them away Chinese, huh? Because you sure can't sell them, can you?

Now you look at the 1953 National Cash Register annual report. Over 50% of their gross no longer comes from United States and Canada. Never mind why answering that, but there is a very interesting fact: there is now one cash register in the United States for every 32 Americans. How crazy do you have to be? Where else can you put cash registers? Usually, you mark up the dollars and cents. Well., the only place that you can add any more is where it isn't nice to speak of, and it deals in "scents", too. I see sense of you have a sense of humor.

We have a capacity of 32 million radio sets. Now, remember, that the television industry was going to save business, wasn't it? We can make television sets -- we have so many television sets now in storage, we don't know what to do with them. Hot water heaters? Close to a million of them. In fact, we have so much of everything, we don't know what to do about it. And yet

you have Americans scattered all over this continent who are living -- what? The so-called great American standard of living? No, they are living on a subsistence basis that every American ought to be ashamed of. Have they got televisions, refrigerators, bathrooms? No. Have they got sufficient food? No. But we want to go out and help all the rest of the world, don't we? Well, it's got to the point where even the rest of the world doesn't want it.

We've helped put in new plants with our money and equipment around the globe. Western Europe today has a capacity in its steel plants of 72 million tons. Britain has come up in its steel production. Now look where there are steel plants where there weren't in 1940. Brazil has three, Chile has a nice big one operating. Venezuela has one. The Arthur G. McKee Company only has a \$78 million contract for one in the Republic of Colombia. Your Japanese steel plants are coming back. Whether it's Mexico or Australia, they are both adding steel capacity, and in India they are building a million and a half ton capacity. Everybody is in on the act, and the result is what? Well, they'll have steel. Well, of course, some of you are sentimental. You say, well, we should help these people. We do, and look what happens.

Turkey used to produce between 60 and 70 million bushels of wheat a year. In some years they would have just enough; some years it would have to last a little longer. So we in our Point Four full of our natural magnanimity that we have abroad, we rushed over our agricultural experts, our crafters, our certified seed, and our fertilizer, and last year, what did Turkey do? -- 250,000,000 bushels of wheat and she now has wheat for export. Well, sucker, how do you like it? Do you think they are doing this in only one place? No, they're doing it all around the world. You build a brand new, air conditioned, fluorescent-tube lighted plant in India -- built by one of the biggest corporations in this country -- what? to produce 1,200,000 ground and polished wrapped in vaporproof paper of -- 1,200,000 a year. What has been the capacity consumption of in India? 280,000. Isn't that wonderful? They'll have a million for export.

We can go on down the line -- we can give you thousands of illustrations, anything you want. In automobiles, we have a capacity in the United States of 10 million cars on a 50-week

basis of 40 hours a week, and we're loaded with automobiles. We have 700,000 new cars in the hands of dealers. Now I wouldn't even attempt to guess at the amount of used cars. In the east, the papers are carrying advertisements of Cadillacs with under 600 miles -- let's get this, used Cadillacs under 600 miles, \$1,850 off list. Now you know they haven't been used. They just put the front wheels up like this and ran their speedometer off, didn't they?

Well, the automotive association comes out with its ballyhoo, and what does it say? It's an optimist -- it's a booster. We're going to have 85 million passenger cars in operation in the United States in 1960. Isn't that wonderful? That's prosperity. And what does it base it on? Well, last year, there was almost 4 million babies in the United States; therefore, if we keep this up, there's going to be more diapers, more baby carriages, more customers, and more time payments. Wunderbar! Well, let's see. Let's see if there is a hole in it.

Traffic on your highways today -- if you had all the cars registered in the State of New York all out on the highways in the State of New York -- the paved roads -- at one time, bumper to bumper, there isn't enough room in the State of New York to hold them. They would have to go over into a couple of other states. Simple, isn't it? And we only have about 45 million right now. So the automotive association wants to add another 40 million by 1960. Now remember that's not automotive vehicles, that's passenger cars. There naturally would be an increase in the busses and trucks beyond what we have now.

Well, there's another little angle to this. We, in our economy, our aspirations have all been predicated upon cheap automotive transportation and cheap petroleum. We spread out all over and suburbia has grown four times faster than the national rate of growth, made possible solely because we had the consumer -- you could pass the cost and the hazards on to him with automotive transportation and cheap gasoline. United States today is producing approximately 6,300,000 barrels of petroleum a day. Our consumption of petroleum has passed 9,000,000 barrels. Approximately half of the petroleum produced in U.S.A. comes from Texas. Texas is growing, of course, and naturally most of the wells drilled. We're drilling more wells practically every year and we are drilling them deeper. Texas wells are drilled on the

average 800 feet deeper than the national average; in other words, Texas is drilling more and drilling them deeper, more and more to get less and less. U.S.A. is producing U barrels of oil per well per day, Venezuela 280, Saudi Arabia 7,000 to 8,000; Iran, when it is running, over 10,000. What are the odds of discovering an oil pool capable of supplying the total consumption of the U.S. for one year? They are greater than 1,000:1. Any gambler will take you on those odds.

We are now building tankers of 45,000 tons deadweight capacity or ships as large as the liner UNITED STATES. What for? To haul oil. California is bringing oil in from the Dutch East Indies every week. Down in Long Beach they have drilled the wells so close together they can't get another oil well drilling rig alongside it. What does all this mean? Let me ask you, what do you think would happen in U.S.A. if gasoline goes to 60 cents a gallon? Do you think that home you've got 40 miles out in the suburb would be worth a plugged nickel? And if you shipped gasoline in and only one gasoline station has the gasoline under those circumstances, you would have to have sandbags, you would have to have the National Guard, and machine guns. Seventy-three percent of all passenger cars in the United States are used every day to go to and from work. Remember you can cut a tree down and also a tree will grow again, but when you pull oil out of the ground, you can't grow petroleum, brother, or coal or copper or lead or zinc or hematite ore.

We've had a wonderful time in the last fifty years. The last fourteen have been utterly amazing. In this last fifty years, United States has graduated more low-grade morons into multimillionaires than all the rest of the world has done in human history.

We cannot fight another war as large as World War II and consume the same amount of steel as we did in World War II from the hematite resources of the Mesabi. They are gone. Bear in mind that your speaker wrote the report in 1920 that if the mining interests of the Mesabi, Cayuna, and other ranges of iron ore, continued at the then-existing rate of growth, that the economic feasible ore of the Mesabi would be exhausted in 1950, because the Fe content of the iron ore will decline as a function of depth and your Si content will increase as a function of depth, and it has. The advice then was to mine Labrador and Venezuela

that far back.

Well, where are we on lead and zinc and copper? The great lead mines that existed fifty years ago are gone. So are the great zinc. The mines over here in Idaho closing down, they once were great mines. They aren't any more. The total copper mined in United States today is .8 of 1% copper content. The government is subsidizing the copper companies to the tune of hundreds and hundreds of millions. Your new open pit projects in Nevada, Arizona, and New Mexico, for what? Vast deposits of low-grade. You'll scoop them out. President Eisenhower gets very generous here a few weeks ago and, of course, stockpiles 100,000 tons of Chilean copper, and no sooner was that announcement made than the Chilean Copper and the Copper announced a 33-1/3 shutdown of their Chilean mine. Beautiful, isn't it? Who pays for it? You do.

No matter what kind of legerdemain, trickery, chicanery, or anything else, you can't put copper back in the ground, or zinc or lead or hematite ore or petroleum.

Now, out here in Seattle, of course, you wouldn't think that freshwater is any problem. You have a lot of it up here, but freshwater across the continent is a problem. There are over 1,000 cities in the United States at this moment that have passed legislation restricting the use of water in their municipalities. Water is getting scarce whether it is in Ohio, Peace River, Texas, the Dakotas, or California. The San Joaquin Valley -- the little acreages are on the east side, the big acreages are on the west side of the Valley. On the west side, they are drilling wells over 2,000 feet deep. Wonderful! Akron proposes to pump water from Lake Erie; so does the City of New York. The Fox River Commission of Wisconsin wants the Metropolitan Chicago Water Authority to deliver 900 million gallons a day from Lake Michigan over the Fox River Divide. There are cities that have ruled already that one half of the city gets the water one day and the other half gets the water on the alternate day. You can't wash automobiles or water your lawn or flowers, and yet, brother, will we sell them air conditioners! Sure, put one in every window -- hoopla! The bigger the better. If you can't sell it to them on one year down, sell it to them on ten years down.

Is this going to catch up with you? Yes, very shortly. If

you have a normal expectancy of living the next five years or the next ten, stick around. I'll be able to enjoy the stink with you, because it is going to be awful. Now you may think you belong to a labor union or that you are a professional man or that your little business is just that much selective, or that you know just a little more than anybody else -- that you won't be caught in it. The hell you won't, brother! You'll be in it up to your eyes.

Now on top of all this, remember that in 1950 your economy was slumping badly, wasn't it? It was headed for the bowwows. So, we engaged in an adventure known as the police action in Korea, and that, brother, sure helped. Of course, if we had had any sense, we could have laid down the law that MacArthur could have stopped at the 38th parallel and that would have stopped aggression in Korea. Oh, no, we couldn't be that sensible. He had to develop the grandiose idea that he was not only going to the Yalu, he was going to the Manchuli 2,200 miles beyond the Yalu. What happened? Well, you know up to the waist where the fighting stopped, the mountains in Korea run crossways; in other words, the valleys provide lateral connection across parallel to your front. North of the waist, the mountains run this way across; so, when MacArthur went up the troughs headed north, the Chinese were on the ridges. MacArthur was in the bottom. Now, MacArthur and this country were notified before he ever crossed the 38th -- the Chinese Government notified them that if he crossed the 38th, the Chinese would not tolerate it; and when MacArthur says he doesn't know it, he's a cockeyed, lousy liar, because it was published high, wide and handsome. But no, they had ambitions. What happened? The only reason we had any American forces left in Korea was not because of the generalship we had, but because the Chinese didn't have sufficient trucks and gasoline to catch up to us. Let's be frank and honest about it. That is what happened.

So now we are in another decline, and we're out looking for what? For some other part of the world where we can stage an adventure. Well, Indochina is three times the size, approximately, of Korea. Where Korea has practically no timber, bare. Indochina is heavily covered; therefore, air observations will tell you almost nothing. You can move guerillas and armies almost with impunity. Fighting there has been going on eight years. Even if we dumped in a billion a year, what good is it? Or five billion? Well, what does it take -- how much does it take a

year? When our gross national product capacity of United States in 1950 was \$280 billion a year, we had a 25 percent deficiency in our national purchasing power; therefore, Washington voted \$70 billion, or 25 percent, did they not? Now our gross national product capacity has risen to \$380 to \$390 billion. Will \$70 billion do it? It will not, because the deficiency has increased percentage-wise, too. So, if you want to hold this cockeyed economy up, you will have to sink \$100 billion into it. Charming thought, isn't it?

The more credit amplification that you go in for -- remember, that this vast capital that builds up faster and faster because of your increased capital payoff time that I mentioned before -- there's only one place left for your great billions for investment, and that's for investment in selling the obsolescent equipment of this country short -- mainly, go out and build bigger and better plants so that you can scrap the junk that is lying around. Well, are there plants being scrapped? Oh, yes. There are 92 in New Hampshire being liquidated, 79 in Vermont. The American Woolen is liquidating 11 plants -- one of them the largest woolen mill in the world, 2,300,000 square feet of floor space. How is it going to do it? It's going to sell that plant to a corporation -- whatever its name is; it will be in reality nothing but a wrecking corporation. They will dispose of any equipment that's salable as equipment, they will sell the remainder as junk, forget to pay their taxes to the City of Lawrence, and the giant plant will revert to the City of Lawrence for unpaid taxes. Isn't that wonderful? That is going to happen and is happening in place after place across United States.

Now if you think as a little manufacturer or a little businessman that you are going to be smarter .than the march of events, go ahead; but we'll give you fair warning: 98 percent of you that try it, all that you'll get out of it is gastric ulcers and chronic colitis. So you had better save yourself the trouble.

Now this situation is piling up. You have an election -- what? A national election. The country voted for a change, didn't it? Well, you're getting it but not what you voted for. It doesn't make the slightest bit of difference who you elect to Washington or your local state government. These are fundamental propositions, and whether you elect senators, congressmen, or others, no matter what they are doesn't alter these fundamentals.

We have 48 states in United States today, over 3,000 counties. We have 16,000-some-odd municipalities, 17,000 school districts, and go on, or to total it up, we have 116,000 political governments in these United States that are empowered to collect taxes and issue debentures. That includes counties, municipalities, school districts, water districts, etc. -- 116,000. The State of Minnesota has 9,000 alone. Isn't that amazing? We have been so wonderful in the last 50-100 years and so efficient that we have organized national confusion into planned anarchy. That's really what it boils down to.

Now, you're going to get rich by working? No. Some of you have enough sense to know that, but you're still slightly defective mentally -- you think you can vote for it. Look what you voted for. The Republicans aren't going to do you any better than the Democrats; in fact, they'll do you worse.

Now in the next couple of years -- bear in mind what we have said to you, there's going to be bigger things and in less number. The farmers in United States today are 5 million, one million less than Japan. Japan's farms average 2.3 acres per farm. Ours run around 260 today. Our farms are getting fewer in number and larger in size, and if you have to pay \$50,000 for a farm today, you'll find that to stock it with animals and machinery will cost you another \$50,000, and it will take another \$50,000 for operating capital. That's \$150,000. Well, if you have \$150,000, you damn fool, what the hell do you want to go farming for?

I don't want to tire you out. I want to give you a chance to ask me questions. We'll proceed with the intermission and I'll come back.

THIS QUESTIONER ASKS: HOW DOES TECHNOCRACY HOPE TO ASCEND TO POWER OR, MAY I SAY, LEADERSHIP?

That, amazingly, is asked in a number of questions. Technocracy Inc. is a nonprofit, nonsectarian, nonpolitical, membership organization, incorporated under the laws of the State of New York. We are not a political party. We do not run candidates for political office. Any citizen of the United States is eligible for membership in this organization provided that he doesn't belong to a political party or hold political office. The

only thing we are partisan about is that we think all the political parties smell alike. Why distinguish between stinks?

Technocracy is not a social philosophy. It is a scientific, social analysis and method of design and views the entire continent as an engineering, operative field; therefore, we're technological and scientific consultants. We haven't any theory of assumption of power. We can design a social system for you -- I don't mean detailed design but a general schematic proposition, whether it's the railroad system of the continent, continental hydrological system, continental power, distribution, or anything else. The same thing occurs in a firm of consulting engineers -- they submit the analysis and design, but the consulting engineers do not fabricate the material for a Golden Gate Bridge; neither do they elect them, do they?

Now, you realize you vote almost everything from the dog catcher to the president into office, don't you? You exercise your political prerogative. Leadership in this country is determined by those special interests, the custodians of the status quo. They are the ones who manufacture the so-called nominal leadership. They will spend millions in publicity. They will manufacture the setup for a man on a white horse, sloganize it, publicize it, and everything else, so they get the public of the United States to believe the man on the white horse is the one who will lead the crusade; but they, in their knowledge, must be convinced that while he may appear as the man on the white horse to 160 million Americans, they have to know that he's a moron and a jackass just like themselves or they'll never underwrite it!

So, we in Technocracy have no illusions. We are not running for public office; we're trying to present the overall design of what is going to happen, so at least a few of you won't jump out the 20th story window or have a breakdown. Now don't think that social change in the United States or the North American Continent is caning because Technocracy points anything out. It isn't. We in this organization are pioneers. You may not like us -- we've never asked you to like us. The only thing that we try to do is have any audience leave one of our meetings with more questions in their mind than when they entered it. Howard Scott has never asked you to like him or to elect him to political office, and he never will. The White House is a nice place, but

let's keep it as a museum for antique Americana where it belongs.

WILL THE POLITICIANS SELL AN INDOCHINA WAR TO THE AMERICAN PEOPLE?

Well, did they sell you the adventure in Korea? It kind of saved business for a while, didn't it? As I pointed out before, Indochina is not big enough. It would take a much larger operation. Of course, you have been propagandized about aggression -- well, the last four years have proven, we've proven it; that aggression doesn't pay. But we've also proven that stopping aggression doesn't pay either. When you start a war of any magnitude, you've got to have allies, and who have we got for allies? The most amazing collection of deficit nations on the face of the globe. Japan, with 86 million population, increasing annually with from 1,800,000 to 2,000,000 a year, without any iron ore -- with good copper, yes -- without sufficient food or arable soil to maintain the existing population yet alone the increase, hasn't sufficient resources -- about 97% of the hydroelectric power is already developed. Greece is a deficit nation. Italy has almost 48 million population, going up half a million a year. Great Britain has over 50 million, going up at 500,000 a year. British coal is deep down Sweden replies that, of course, it cannot permit as a neutral nation the transport of troops unless Great Britain and France are declared belligerents. You have over the signature of the Foreign Secretary of His Majesty's Government of Great Britain and the Foreign Minister of the Republic of France that His Majesty's Government and the Republic of France will declare war on the USSR on March 16, 1940. Why didn't they? The Finns surrendered two days before. Will you find anything in your newspapers to that effect? No.

You can go on down a long list and it is replete with such things. If you want to believe your newspapers, it is a pretty sad proposition, because the press of United States is the most accurate source of misinformation extant. Don't forget that THE NEW YORK TIMES and the HERALD TRIBUNE in the Finnish War reported more Russians dead and captured than the total population of Finland. Go back a few years before that and THE NEW YORK TIMES reported the death of Lenin 19 times -- the same NEW YORK TIMES that, back when Orville and Wilbur Wright attempted to have its first message sent of the flight of man -- the Western Union refused to carry the message -- and THE NEW YORK TIMES refused to

print it. Wonderful, isn't it? Now we've become more adroit and more complex; so the public is handed it on television with a little soothing syrup.

We have a lot of questions about what Technocracy proposes to do about it, but to get up and explain a continental hydrology or the continental system of accounting -- you can read it in the literature -- except try to realize this: that you can't do business with abundance. We have the science, we have the inventions and the knowledge. We do not need to discover a single new thing in order to produce and distribute an abundance on this continent, and in only a few years the technological advance will be such that United States will be able to produce an abundance of physical wealth and distribute it with a minority of the adult population of this country. It will not require the services of a majority. Now, is that off in 2000? No, it's within this caning decade -- closer than you think. What are you going to do about it?

It's very nice to listen to me or any other speaker, but, after all, we cannot compete with the TV if you want to be amused or have an escapism. We'd like to know how you feel about it. If you have any initiative and want to go into this and take a position nationally on it, the organization is here. Join it and go to work. Nobody mates any money out of it. After all, whatever you are doing isn't half worthwhile as what you could do in here. Now, remember when Waldo Emerson went to the jail because Thoreau was in jail, and he said to Thoreau, "What are you doing in there?", Thoreau said, "That isn't the question. What in the hell are you doing out there." Well, speaking for Thoreau today, I'm asking you the same question. You cannot do it as an individual. You can only do it as a collective organization of Americans that have sufficient intelligence to take a collective position. We'll never ask you to fight the battle with either bullets or ballots. We'll merely ask you to take the position and stick to it, because you can do it.

Those of you who have sufficient initiative, there are tables darn front here and you can come on and get going. Now, I don't know how you feel about it and I'm not going to pressure you. I'm going to leave it to you and turn the meeting over to someone else. Thank you.

"TIME FOR DECISION"

EVERETT, WASHINGS

4-23-54

HOWARD SCOTT

I think it's approximately twenty years ago to the day that I first spoke here in Everett; of course, not in a nice new building like this built by the WPA. That was in that old ramshackle hall that you had up here -- we had so many in it that it almost collapsed. Do you remember? Well, a lot of water has passed over the dam since then, and, of course, we have had the war prosperity and the prosperity of the postwar boom, and now we have a public across the country that is rather befuddled as to what type of economy we're living under. The newspapers of the United States, of course, have contributed to the confusion, because they have erroneously written it up as monetary inflation. Monetary inflation can only occur in any national economy when there is a dearth of goods. Then, of course, the government of that economy resorts to printing new money or printing zeros after the digit on the old money. Now monetary inflation can theoretically go on to add a thousand zeros after the digit without affecting the fundamental process of production and distribution one iota. It would, of course, carried to any extent, liquidate those with fixed income, but it would not alter the basic processes of production and distribution whatsoever. You would merely change the figures on the price tags and the inventory tags, and, of course, if it finally reached the point to where there would be so much paper currency that the paper, in weight of paper, would provide more BTUs under a boiler than the paper currency would buy. That has happened in previous cases.

Now, what we have really had in United States is not monetary inflation, but credit amplification, and credit amplification has an entirely different end point than any monetary inflation. Under credit amplification, you collect the funds, the taxes, from the people, the citizens as a whole, and the treasury, acting as a repository of those huge collections, of course, can extend credit, whether it is a direct government credit or whether it is RFC or the export-import corporation or the commodity corporation doesn't make the slightest bit of difference. Under credit amplification, those who receive the giant extensions of credit go out and liquidate the obsolescent plants and build brand new ones, and those brand new ones -- each succeeding one has greater capacity than the previous one -- consume more extraneous energy per hour than the previous ones, and they employ less human beings and consume less man-hours

produced than ever before.

It's a peculiar picture. If you'll think back for a moment, for thousands of years mankind had only one process for producing physical wealth; namely, by the application of human toil and hand tools to the raw materials. Under those methods, there was only one way by which the production of physical wealth could be increased; namely, that you work more people -- longer hours, and even then, the increment was so small that it was barely noticeable in anyone's average lifetime. You see, bond issues from Hammurabi's time of 1350 B.C. down until just yesterday were 100 years or more; namely, that it required 100 years to amortize out the principal and interest of any major debt, due to the fact that the annual increment produced by human toil and hand tools was so small that it took all that length of time to make enough to amortize out the principal and interest; therefore, those holders of debt -- the trustees of previous status quo -- could only reinvest their capital once in a century, because it took a century to amortize out that principal and interest.

Now, it's only a few short years back, namely, thirty-five or forty years, when the steel industry of United States was working 84 hours a week -- 12 hours a day, 7 days a week. Farm labor was doing the same thing. Well, modern technology has come into being with a rush. It started and got under way just previous to World War I, and World War I gave it the first great boost. As we throw in more extraneous energy, we increase our production and for a period -- that period of expansion which we have been in since World War I -- it isn't noticeable what is happening, because, apparently, employment goes up, but, then, let's look at the picture and see what happens.

We have six million less employed in agriculture than we had during the war. John L. Lewis has 100,000 less coal miners today than he had two years ago. With the new equipment going in, he'll have another 100,000 less in two years. The steel industry, the textile industry, the chemical -- they're all changing. Now, what kind of a change is it? Is it the same system of producing physical wealth that mankind has known for centuries? No. Here is another system -- a new system of producing physical wealth which is the antithesis of the century-old process of human toil and hand tools. Now, remember, that under human toil and hand tools, you could only increase the total production of wealth by working

more human beings longer hours. Under the technological production of physical wealth, we consume more and more extraneous energy, and, therefore, we can only produce more physical wealth by working less human beings less hours.

It's difficult to understand. Well, what happens to the capital payoff time? Is it changed? Oh, yes. We no longer have to wait 100 years to amortize out the principal and interest of any major debt. We have equipment in United States today that, if operated at 75% or more of capacity, will amortize out its principal and interest in 5-1/4 weeks or a capital payoff time of 964 times in a century.

Now, no other people in history have ever faced these conditions; so, therefore, there is no precedent for what we are facing. There is nothing to look back to. There is only the problem that is here in hard, cold reality, and where we go from here. We as a people, of course, individually are the most competent and skilled people individually on the globe; collectively, I don't know whether we can quite say that. There are some doubts about it.

Let's see what's happening. We are building plants in United States today that have \$3,600,000 worth of equipment per employee. Those employees in that kind of a plant do not contribute any effort whatsoever. They are there merely as, say, attention boys, and even if they do fall asleep, there will be no resultant damage to the equipment, because the equipment will automatically shut itself off. Naturally, of course, sane of you will say, "Well, what's all this got to do with it?" Well, we'll come to that in a moment, because it is intruding itself into every single field of production in United States. The automobile industry today has a capacity on a single shift basis of 48 weeks in the year, 40 hours to the week, of ten million automobiles. General Motors today is producing 50% of the cars produced; Ford, 36%; Chrysler, about 12%; and the independents, 2%. General Motors is spending \$1,500,000,000 to put in what? Automatic plants. Ford is following suit, and they will probably spend closer to \$2,000,000,000 each before they complete it. Chrysler has borrowed \$250,000,000 from an insurance organization -- \$250,000,000, ladies and gentlemen, is not enough. Nothing less than a billion will get them anywhere. And as for the independents -- they might just as well close up now, because

their days are numbered.

Well, you say, oh, that's automobiles. Oh, yes, but it is happening in other fields. In your field of distribution, there is slightly over 6,000 supermarkets in United States. We are building bigger and better supermarkets. Those 6,000 supermarkets are doing an annual business greater than 368,000 other stores. The percentage of national business accruing to them annually is increasing. The percentage of business accruing to the smaller stores is declining, and it will continue. That trend is a long-term trend.

Now, let's for a moment look at agriculture. Back in the early 1700s -- from then on to the 80s and 90s, the agricultural trends in United States followed that of the rest of the world; namely, that the total number of farms kept on increasing and declining in size. The reverse set in some 60 years ago, and now our farms are increasing in size and declining in numbers for a number of years. Japan, for instance, has six million farms. The average size of all farms in Japan is 2.3 acres. Here in United States today, we have five million farms, and the average size is around 260. It's going up and up. The small dairy farmer, the small broiler or chicken farmer, the man with 25, 35, 45 cows -- 50 -- his operations are not large enough to put in the capital investment to handle it automatically. So, he's going to fold. On a broiler basis, to be really stable, you should have 30,000 minimum load factor. How many of you in the broiler business in this state have 30,000? If you have under it and you can sell out, sell out. It will be easier on you, and you'll avoid gastric ulcers and chronic colitis.

These trends are in operation -- they're not short-term, they're long-term, because the new agricultural equipment caning out, the new hybrid seeds, and the new fertilizers will all contribute to a greater capital expenditure and larger and larger operations; therefore, the little man will be forced out. Now, we are not saying that this is good or bad. We are merely pointing out that these trends -- the evidence supports it. There isn't any other way.

In production, the same thing is happening as in distribution. Let's see what's happening to the work week. According to the U.S. Department of Commerce, we have over

63,000,000 working force in United States outside of the armed forces. Without getting into any controversy about the unemployed, there is another picture. There are 15 million, according to their reports, that work less than 35 hours a week. That doesn't include the unemployed, remember. There's 2 and a fraction million that work less than 14 hours a week. So, instead of the 63, we've only got around 46 million that are working a full week. What week is that that we are working? Now, the Fisher Body and General Motors and others, up until last fall, were working 54 hours a week. They had a 40-hour union contract, so that was 14 hours over their union contract. At time and one half, that was 21 additional hours, was it not? Very interesting. But that overtime is cut, it's gone, and clean across the country, all overtime is being cut out and the work week is even being reduced. So that the question of the man with a wife and several children and a home that he purchased on a long-term basis, plus the gadgets, you know, he did that on the basis of the overtime; and now with the overtime wiped out, they are up against it. In Pittsburgh today, not only the union labor is worried, but all the merchants are worried, because that overtime provided the great purchases of consumer materials other than food. That no longer is there.

Now there are more married women working than there are single, and there are more people who have two jobs than ever before in history. Of course, it's really gotten to a point where monogamy for the average man is precarious. The only way he can possibly hope to succeed is marry three women and have them work, and then he would be able to pay for the gadgets in the kitchen.

What does the picture look like? Let's get at a few more things. The Hotpoint has just completed a giant appliance park outside of Chicago. The Westinghouse and the General Electric -- one is building a 1700-acre appliance park outside of Paducah, Kentucky. Four giant firms are building great appliance parks. What is an appliance park, in their definition? They have a separate plant for refrigerators, another one for electric stoves, another one for washing machines, another one for heaters, a research building, an administration building, and a giant storage. In the case of the Hotpoint, what are the Hotpoint's own figures? One refrigerator boxed and on the platform every 41 seconds. Well, the others are slightly higher. What is the capacity of the four? Five million refrigerators a

year. Well, but wait a minute. What about all these other firms that are making refrigerators? Are we building five million hones a year? Oh, no. Is there such a thing as saturation? There is, but no newspaper and no periodical or chamber of commerce wants to admit it.

The National Cash Register in its annual report points out that more than 52% of its gross no longer comes from United States and Canada. What is the great reason for all that? Well, there is a very little simple statement; namely, that there is one cash register in United States for every 32 Americans. For heaven's sakes, how many can you have? They don't wear out overnight. The same thing in the capacity of the radio industry, the steel industry, the chemical industry. We're finally catching up -- this technology -- and the results are going to be interesting. For instance, in the States of Vermont and New Hampshire, there are, respectively, 79 and 82 plants that are being liquidated -- not just shut down -- being liquidated. The American Woolen is liquidating 11 of its plants. One of its plants it is liquidating is the largest woolen mill in the world, 2,300,000 square feet in Lawrence, Massachusetts. What will they do with it? Why, they'll sell it to another corporation. The other corporation, regardless of its name, will be a wrecking corporation. It will ship out what machinery is salable, it will junk the remainder, and then it will forget to pay the taxes on the property, and the property will revert to the City of Lawrence, and they can play (ouija) ball, or other games in the giant space.

Now, this is happening in various parts of the country -- all over. Here in Everett, of course, you haven't much industry, and you are relatively unaffected as yet, but come May first, you'll probably feel it right here; because if your paper companies and others slow down, you'll know it. And they will probably slow down, cane May first.

This is a process which is in operation all over the country. In the steel industry, there is a capacity of 130 million tons at the present moment. Of that 130 million tons capacity, slightly over 20 million tons are so obsolescent that their labor cost per ton is three times that of the most efficient plant, say, Morrisville and others. What will happen in the steel industry? That 20 million and more tons will be

liquidated in the years to come, and 280,000 employees in the steel industry will never work in steel again. Same thing is happening in coal -- the same thing in textiles. The greatest revolution in the history of textiles is happening -- two of them. One, of course, the creation of new fiber. That is one side of the picture. But the other side of the picture is the development of equipment that, up until the other day, they thought there would never be any other way of weaving cloth, except the old shuttle, bobbin, and the terrific racket of the loom floor. Well, there are two methods: one of laying in your fibers electrostatically and the new rotary looms which operate in a magnetic field vertically and do not need to be fastened down to the floor, they do not make any noise, but you need a conveyor belt to take away the cloth. A six-foot diameter loom will produce cloth twenty feet wide.

So, what is happening? Firms that are perfectly solvent that are over 100 years of age whose names are known all around the world are voluntarily liquidating themselves.

Our country faces a situation that is serious internally. Not only do we have that picture of industry -- I've tried to sketch it a little for you -- but we have some other serious problems. Hematite ore in the United States of economic feasible grade is fast disappearing. In 1920, I was consulting engineer to firms in the steel and the mining field, and I wrote that report on the Mesabi Range that the Fe content of the hematite ore in the Mesabi would decline as a function of depth and that the Si content (silicon) would increase as a function of depth, and that the economic feasible ore of Mesabi, if they continued unabated the rate of growth of mining, would exhaust itself in 1950. We advised the exploitation of Labrador and other ore fields then. That's 34 years ago. Well, there is still some ore left in Mesabi, but if we had to fight a war that consumed as much steel as World War II, there is not enough hematite ore to meet those demands.

Copper, lead, zinc, in these United States, are declining quantities. We haven't made any new discoveries. All the copper ore mined in United States today is .8 of 1% average. Do you realize that? .8 of 1%! Remember, we were the great copper boys of the world -- mines like the Calumet and the Hecla, those are in the dream days of our great yesterday. Yes, we're opening

giant open pit mines in Nevada and Arizona, but they are all low-grade, .8 of 1% and lower. Zinc the same way; lead the same way.

Now, let's look at another problem. We have slightly over fifty million automotive vehicles in United States -- about 45 million passenger cars. The automotive chamber of commerce is ballyhooing nice stuff to the public that U.S.A. will have 85 million passenger cars on the road by 1960. Will we? We don't know what the devil to do with the ones we've got on the road, let alone the terrific volume of cars in every used car lot and the 700,000 that the dealers have -- and 700,000 headaches. Even your Fords and your Chevrolets are starting to back up.

Our whole economy, nationwide, our whole development of housing, our suburbia, has been predicated on cheap automotive transportation and cheap petroleum. What are we producing today in the United States? Around 6,300,000 to 6,400,000 barrels a day. What are we consuming? Our national consumption of petroleum has just passed 9,000,000 barrels a day.

There are 5,200,000,000 horsepower of prime movers in the U.S.A. -- 5,200,000,000. That includes all industry, all tractors, all cars, trucks, busses, marine boats, and everything, planes included. 5,200,000,000, and 93% of that 5,200,000,000 is in automobiles -- the greatest luxury that any people in history have ever indulged in. And we have this terrific capital account of prime mover equipment standing idle most of the day and night on our streets. We use 73% of all passenger cars to go to and from work every day. That enabled us to move out into the suburbs. We neglected public transportation and we passed it on to the individual consumer. We've socked him in the eye and loaded him up. His purchasing power for the next, two years or more -- he's in debt.

What is the oil situation? We are producing 11 barrels of petroleum per well per day in United States -- just 11. Venezuela is doing 280 per well per day. Saudi Arabia is doing 6,800 to 7,000. Iran, when it was operating its 82 wells, was doing 10,000 a day. Well, that's not so much. Go back to the days of the Golden Lane in the Tampico field of Mexico, and Sarazul (?) 4 and 7 were running 100,000 barrels a day apiece, and No. 4 produced 82 million barrels from that one well before it went saltwater. Well, we had things like that back in the days of

spindletop, but not since. We are drilling more wells than ever before and we're drilling then deeper. We have more knowledge of geology and geophysics, and our oil companies have multiplied their geologic parties and their geophysical survey parties, and they are out in every nook and cranny of the globe trying to find it. And nine out of every ten new wells drilled are dry. What are the odds of discovering an oil pool in United States great enough to equal one year's consumption? The odds are greater than 1,000:1.

I know what a lot of you will say -- there's oil over there someplace. Can't we take it in? Well, we are bringing it in; not only that, but we're building oil tankers of 45,000 tons capacity, and they're on the high seas. We're building more. 45,000 tons deadweight capacity is approximately the same size as the liner UNITED STATES, because it hasn't got the heavy equipment inside it as the liner has. Well, we'll build more tankers, but that doesn't solve it. You go down in California on Long Beach and they have wells drilled so close together on each side of the road that you can't get a rig in. They're pumping. There are practically no gusher fields. And pumping in the United States in oil wells has reached the point where we have 60,000-lb. load on the sucker rod. alone. Can't go very much greater.

The public -- does any other organization in this country tell you these things? No. The press, the chambers of commerce, and everything else, they want to fill you with a nice rosy optimism, that there's nothing to worry about, and all you have to do is vote the right ticket and be nice people. Well, if you have a failure of a major oil field in United States, what do you think is going to happen? How many of you would be here or anywhere else if gasoline would go beyond 60 cents a gallon at seaboard? Would your suburban heme 40 miles out -- what would it be worth? It would be nice for a doghouse, yes, but you'd find you couldn't afford to pay that amount in transportation per week -- not 80% of the population. 20% of the families -- the top 20% in United States -- receive 53% of the national income. The remaining 80% receive 47%. When it comes to the ownership of equities, stocks, bonds, debentures, the top 20%, of course, own practically 80% of them. This is a very nice picture. As the work week shortens and as we put in more energy, these things will become more and more obvious.

Now, what are the trends? The United States is consuming approximately 8,400,000,000 kW hours a week. By the end of 1956, the actual generating capacity now under construction will be installed and there will be approximately 130,000,000 kW installed capacity in the central stations of United States alone. That does not include a single kW capacity in industry -- that's central stations alone. So, if we are plagued by abundance when we consume 8,400,000,000 kW hours a week, what kind of a plague is it going to be when we dump 22 billion kW hours a week?

Now, we're headed to this whether we like it or not. It is very difficult for people to see it, and it isn't a hundred years off and it isn't fifty and it isn't twenty-five. I remember when we first introduced the cotton picker and the sugar cane harvester. I remember the men down front with guns in their belts. No, suh! You couldn't introduce no such contraption as that -- not over their dead bodies! Well, today the cotton picker is going down the long lines of the delta and the negro that used to work there amid those snowy fields of white -- he doesn't work there any more; he's gone north, east, and west, and is still going. Just the same as those who cut down the tall, sweet grass--the sugarcane. They're disappearing.

Here's the same kind of development coming. Look back and Samuel Gompers rose to fame in the labor world, because he was first president of the International Cigarmakers' Union of America and later president of the American Federation of Labor. No one can ever rise to be president of the American Federation of Labor again from the cigarmakers. No, sir. The Washington machine makes four million cigars a year with four girls. It just isn't there any more.

The famous glassmakers' union, the blowers' union, and Leon Henderson -- his father was a glassblower down in Vineland, New Jersey, well, back in those days, it was the aristocrat of the labor world. The only way you could get into the glassblowers' union was by the chromosome route -- you had to be born into it. They didn't live very long. They generally passed out right after forty. One glassblower and two helpers, working 12 hours a day on piecework, could do 1,000 bulbs for the old Edison carbon and filament plant. The new Pitney Corning process does 1,100 a minute without the glassblower.

The cigarmakers have gone; the glassblowers have gone; the wrought iron puddler has gone. Remember the sign that used to be. in the old barbershop with the three heads with the comb -- going, going, gone. Herpicide, remember that? Well, that's the situation we face. It's here, and if you have a life expectancy and live another five to ten years, it will slap you in the face, if it also doesn't slap you in the other extremity. You will be very fortunate.

What does all this mean? Remember, that if you have to go in and mine taconite iron ore, up goes the cost of steel. If you have to import the ore, the copper, the zinc, the lead, up goes all the costs. And who is going to be in clover? 80% of the population of this country? Oh, no, brother, don't kid yourself! 20% maximum.

Now, we as a nation have been on the greatest binge of any people in history. We created debt in the billions and billions. We are still doing it. We're holding up the system in a last desperate effort, but the majority of people -- it still hasn't hit them individually. Now, if you are sending your boy to the university for a liberal arts course -- there is some sense, of course, if you send him there to get some technical, scientific training -- but if you send him there to get an arts course and you want to send him into business, cut out the hypocrisy, because if you just place him over under a gangster, he'll learn more faster. That is the setup in business.

Now, abroad, we have been exporting social change and revolution. Have we been exporting it as political propaganda? Oh, no. How have we been exporting it? In technological equipment. We have built steel plants, chemical plants, ports, power plants, all around the world. Brazil today has three steel plants -- the great, giant Volta Redunda . The Arthur G. McKee Corporation has a contract for \$78 million for only part of the steel plant in the Republic de Colombia. Venezuela has one. Chile has a giant plant in operation. There are additions being built in Japan, India, Australia. The giant Solat in France, with a capacity of around 1,800,000 tons, another one with 900,000 metric tons of sheet steel capacity. Mrs. Mesta, of course, goes to Luxembourg, and Luxembourg shortly after gets a steel plant. No relationship, of course. As the movies would say, "Purely coincidental."

Well, we've put in the hydroelectric power plant in Austria, we equip the mines with the last word in long cableways, conveyor belts, we built a brand new steel plant, and where does it get its coal from for the coking coal? Well, coking coal from U.S. landed in Trieste at a cost of \$28 to \$29 a ton and still had to be transported overland. So, that steel plant is buying its coking coal from the Teschan-Czeck-Polish area; in other words, from behind the Iron Curtain. It's also getting its petroleum from there and its steel scrap. The result is, of course, they won't accept U.S. dollars, but they have to pay in finished steel products. Rather ironic, isn't it?

We are holding up Japan. Japan has 86 million population, and the rate of growth of Japanese population is between 1,600,000 and 2,000,000 annually. It won't be long until it is 100 million. Japan is a deficit nation. It hasn't any iron ore. It has, on the other hand, excellent copper. It has two high-cost, low-grade coal mines, but it is impossible to make coking coal with it unless you add about 65% Manchurian or United States coal. There is a little oil on the north shore of the Island of Hokaido -- about 2-1/2 million to 3 million barrels a year. Japan hasn't got the mineral resources to operate -- to export the production and equipment necessary to feed its fast-growing population.

Italy is almost 48 million population and going up at half a million a year. Well, outside of olive oil and wine, there isn't much that Italy has. She has insufficient land; she hasn't the coal; she hasn't the ore; she's a deficit economy.

Great Britain has over 50 million population and going up at 500,000 a year. British are mining iron ore of 23% Fe and are mining coal miles out under the sea.

Now, those are all deficit economies. Greece is another one. West Germany -- all that West Germany has is the Ruhr coal, and the Ruhr coal is 1,400 feet down compared to the average depth in this country of 260 feet. That will give you some idea.

No matter what our happiness boys in Washington state, and no matter what the attitude of the State Department or the RFC or the foreign aid, you're not going to put iron ore or petroleum or

any other resource in the ground if it isn't already there.

We've put in the technology, we have increased the manufacturing capacity of France, of Italy, of West Germany, Belgium, Holland, Britain, and other countries -- South America -- to where their consumptive demand for raw materials is greater than ever before. With 72 million tons capacity of steel in Western Europe and the ilmenite ores of Alsace-Lorraine remember that they are only 30% odd plus ores, under 40%, so that would require three and a fraction tons to produce a ton of steel, and at 70 odd million tons of steel capacity, your ore production would have to be 220 million tons. Is it going to last long?

All of this, of course, isn't brought home to you. The public is filled up with the idea that if you support Japan or Italy or Britain or France or West Germany or Africa -- well, there's going to be trouble in all of these places. Why? Because the economic sustenance is not there. In Africa, there is 160 million blacks, and only a little over 6 million whites. In South Africa, there's 9-1/2 blacks and 2-1/2 million whites. The disparity is even greater in Northern Rhodesia, Kenya, and Nyasaland. Africa is boiling, and yet the United States and Great Britain and others have gone in heavily for new refineries and equipment in there, and the day is going to come, and it's not far away. In other words, you can review history, and when Woodrow Wilson enumerated his League of Nations, the principals of that organization, Americans were eulogized around the globe -- everywhere, and even in spite of the fact that when Henry Cabot Lodge's father pulled the political rag out from under it and sunk it in this country, Americans were still eulogized around the globe; but today with our policy of a technological revolution on the one hand and suppression on the other, we are not being eulogized.

As I told the radio commentators several years ago that the day would come, if they continued their nonsense, that they would have less and less places to broadcast from until finally, they would only be able to broadcast from their own backyard here in the U.S.A. and that would be so damned full of international dead cats that it would stink. Well, it's happening. It's closing in. Now, remember, it's not due to the average American -- the average American is a forthright person -- he's worked, he's done his job -- but it's due to those trustees of this status quo who

turn out the information. By and large, the press of United States is the most accurate source of misinformation extant. Just as in our schools -- the last time they study geography is about when they are 11 and 12 years of age. You can't expect them to know anything after that. So here we are facing a continental problem here on this continent and a world problem. When it comes to decisions, remember that if you are playing poker and you lose, there is always another game tomorrow. You bet on the horse races, and it doesn't turn out right, you can always bet on another horse race. The same way with the stock market, but when you pull the petroleum out of the ground and the copper ore, the hematite, the zinc and the lead, no, sir. You might state it this way: Natural resources and political Kerenskys never come back. Why? Because on a national and world basis, when you guess wrong, you only have one opportunity.

There are many kinds of problems. We have them. We have a problem here in United States and Canada of resources. This continent has 50% of the freshwater of the world, and yet we have done to water exactly as we have done to these other resources. We've used our water hell bent for election and the devil take the hindmost, the same way as we have done with the petroleum. And today there are over 1,000 municipalities in the United States that have passed bylaws and regulations restricting the use of water -- over 1,000. New York has just issued the orders -- you can't sprinkle your lawn and you won't be able to wash your car in New York City either. New York City, the greatest waterworks system in the world, has gone out to three other states to get its water. Why, it would never be short of water. Oh, no. You look in the reservoir today, and the stone ruins down in the bottom are showing up.

Well, in Albuquerque, you only get water in one half every day, the next half the other. Whether it's Moose Jaw, Saskatchewan, or Peace River, or Akron, Ohio, or where it is, water is a problem. Now they are proposing to pump water from Lake Erie to New York. Akron wants to put a pipeline into Lake Erie. The Fox River Commission of Wisconsin wants the Metropolitan Commission of Chicago to pump 900 million gallons a day from Lake Michigan. Down in Florida, it was all right, but we've had a terrific boom in Florida -- the frozen orange juice industry -- you may have heard of it. It used to be, you know, that they planted orange groves in 5-, 10-, and 20-acre size, but

now they are planting them by the dozens of square miles at a clip. You can drive down central Florida, and as far as the eye can see on either side of the highway -- new orchards, little ones, and others coming in. True, frozen orange juice has increased, but the planting of orchards has increased far faster. And what is happening? Florida, with its 30,000 or more lakes, the lakes are going down and down and down. Either there's no rater there or there's a trench 500 feet, so that the suction pipe for the pump can reach the rater. It would never happen in Florida, but the main pumping in Florida has yet to begin. It will be around '56 or '57 when these orchards come up high up enough to where they will really require the pumping. Then look out. Whose responsibility is all this? It's the responsibility of every citizen on this continent. You can say, "Well, I'm not my brother's keeper." No, you may not be, but you're going to be whether you like it or not.

What's it headed to? It's headed to this: That the consumption of extraneous energy will increase, and technological equipment will also increase. It will be faster and bigger and better, so that we are able to produce right now without a single additional invention or discovery. By 1956, we'll be able to produce and distribute an abundance of everything in United States with the employment of only a minority of able-bodied adults of U.S.A. The majority will not be required. What are you going to do with the majority? Are you going to issue than ration tickets for mink coats, champagne, automobiles, for holidays in Florida and California? Well, it's going to be difficult, isn't it?

You see, we're the only major country on the face of the globe that hasn't had any fundamental revision of its political structure in the last 160 years. We have 48 states, over 3,000 counties, 16-17,000 municipalities, the same number of school districts, townships the same number; in other words, there is a total of 116,000 governments in U.S.A. that are empowered to collect taxes and issue debentures -- 116,000. There are 9,000 in the State of Minnesota alone. We as a people have become so efficient that we have organized national confusion into planned anarchy. How the devil are you going to plan anything with 116,000 different units, all going out for their special privilege and to cut anybody else's throat until they get theirs.

Now when it comes to water -- water is not limited by township boundaries, counties, or states -- it's continental. The same is true of resources, so that we will have to reconstruct our concepts and our perspective in order to face the science and technology of this atomic age. It doesn't make the slightest bit of difference if you develop energy from the atom or the sun, it is still extraneous energy, and the more readily available any new source of energy is made, the greater will be the acceleration in the consumption of raw materials.

Now, I have tried to give you in quick order a summation of a terrific problem. It is a problem of all of us, if we are alive five years from now. We'll have to participate in a decision, because in the next five years, it will be the most socially decisive in the history of man and the next ten the most conclusive. Thank you.

---

Some people make like human beings, you know. One card here is, "WHAT MAKES WATER SCARCE?"

The answer to that is simple: the human jackass.

WHAT ARE THE CHANCES OF WAR?

In 1950, when the economy was sliding down, we had a national product capacity, a gross national product capacity, of \$280 billion, but we also had a deficiency in national purchasing power of 25%. So, our administration in Washington votes \$70 billion, or 25%, does it not? And the economy got a shot in the arm out of the police action of Korea. Well, since that time, the new equipment going in has produced marvelous results. We now have a technological capacity in United States for a gross national product of \$380 billion. The disparity is even greater today than it was then; namely, that in order to sustain it, you would have to inject \$100 billion, so that any little petty two-by-four thing like Korea or Indochina isn't big enough. We're face to face with the fact that the hydrogen bomb, of course, is many times that of the atomic bomb, but if you really want to do damage, you can enclose the hydrogen in a cobalt shell or a cobalt interior and trigger it with an isotope, namely, lithium-6-deuteride, then you won't have to refrigerate your components

and you'll produce radium. And if you want to add strontium to it, you can produce strontium-90 with a half life of 25 years. In other words, it would go up and go around the world and kill off all the customers. Well, brother, that's no good, is it? Business wouldn't have a chance to make any billions out of war materiel, would it? So that kind of a war "hain't" no good. Your chambers of commerce are going to be "all agin it."

While you are at it, you might just as well realize it, that the production of nuclear weapons in United States is one of the most costly things in the world. It's consuming vast quantities of rare metals -- vast quantities. It is also consuming, according to , more kW hours for a week than consumed by the British Isles. Is that clear?

Well, does somebody want war? Yes, somebody always wants war. But this is a case where you have reached the ultimate in destruction and in speed. Wars have always been profitable provided you had time enough to supply materials. This isn't. All your civilian defense, of course, is a sheer lot of nonsense. Even the most bombed city in Britain has cancelled its civilian defense. And then you have those jackasses that propose to evacuate our cities. Well, if you had all of the vehicles and had everybody ready and there were no mistakes and you conducted it with maximum efficiency, you could evacuate the City of New York in 7-1/2 days, but, oh brother, what would you do when you evacuated them? There would be no water taps, no water closets -- you'd die from suffocation. I see somebody here has a sense of humor.

There are several here on atomic bombs and radioactive materials. I think I have answered it. It would go around the globe 2-1/2 times.

SOMEBODY WANTS TO KNOW IF TECHNOCRACY IS SO GOOD, WHY ISN'T IT IN OPERATION RIGHT NOW?

Stop and think for a moment. Have the great social changes in history ever come about through the cogitation of the human animal or its intelligence -- the individual? No, never. Only when they were compelled to, that's all. We haven't any illusions. In other words, we'd go on with this waste as long as we have resources. The only kind of a war to conduct for business

is to declare war on the 69 million square miles of the Pacific Ocean for the simple reason that its armies cannot surrender and its statesmen cannot capitulate, and you can dump the resources in at a high profit until you exhaust the entire continent! That's the only kind of a war. But as for same thing coming in by intelligence, no. The telephone didn't come in. You go back to when the Wright brothers -- they had a bicycle shop in Dayton and they were experimenting. Their sister was engaged to be married, and they took her little dowry and savings to experiment, too, and, of course, they were blamed. They should have knuckled under and made a living -- they shouldn't have done anything like that. When they took off at Kitty Hawk, the Western Union refused to accept the telegram and the NEW YORK TIMES refused to print it. So, don't expect anything as far advanced as Technocracy to come in until the physical conditions compel its acceptance. I think that's clear to everyone.

Remember, Technocracy is not a political organization. We are a nonprofit, nonsectarian, nonpolitical organization -- membership incorporated under the laws of the State of New York. We stated years ago that we would never ask the public of this country to indulge in either ballots or bullets -- they are both stupid in the face of these fundamental problems. I suppose quite a few of you here this evening a couple of years ago voted for a change. Well, you're going to have it but it's not the one you voted for. What have you got in Washington? You've got a military junta; in other words, you have more generals than ever before in history: General Motors in the cabinet, General petroleum, General rubber, General steel, General chemical, General mess, General confusion, and General Eisenhower -- you've got them all!

SOMEONE WANTS TO KNOW ABOUT TOPSOIL AND TIMBER.

Well, we're doing the same thing to topsoil and timber that we have been doing to water, copper, petroleum, and the rest. Of course, this administration realizes -- not that they are different much from any other, but it realizes that it better get it while the going is good, because private enterprise -- they want to sell back Grand Coulee, Boulder Dam, all the synthetic chemical plants, and, if they could do it, they would transfer all the post offices back to private ownership. Why not? The public paid for it, and the American public is so damned stupid, it doesn't even know it! Well, that's what hurts. After all,

hazardous Harry -- he was a little bit naive, but he admitted he didn't know.

Now, anybody in the armed forces that serves for 35 years, the only way you succeed is on your record card, and that's by saying NO to everything. You never engage in any innovation, you never commit yourself; so, therefore, if you do get beyond your record card, you operate on File 201 -- that means you must have said all the proper things at all the dinners and flirted with the proper wife of the proper official; in other words, you are a smoothie. Technocracy defines a smoothie as "a human being that always shaves a posterior before he kisses it."

SOMEONE WANTS TO KNOW DID PEARL MESTA SUCCEED IN INSTALLING STEEL MILLS IN THE USSR WHEN SHE VISITED THEM.

Well, I don't know. Technocracy is not an authority on the USSR, but Pearl is liable to do anything. After all, we send an ambassadress to Italy, and she immediately plays politics and interferes in the Trieste proposition; and, of course, Tito notified Britain and United States that his armies would march if the Italian troops crossed the border. Then we asked her to come home in a hurry. You know of whom I am speaking -- Clare Booth Luce. Of course, my name for her is slightly different. I dubbed her this some years ago. My name for her is Father Sheehan's Folly.

You have quite a few questions that are somewhat similar.

SOMEBODY WANTS TO KNOW IF TECHNOCRACY IS RECOMMENDED BY THE U.S. GOVERNMENT.

ANOTHER ONE WANTS TO KNOW IF WE ARE SUPPORTED BY THE STANDARD OIL.

Well, Technocracy is supported by its members. We have no angels, no subsidies from any source whatsoever. Nobody makes any money out of it. The CHQ staff all get paid the same amount per week, whether they are a stenographer or the Director-in-Chief -- \$35.00 before taxes, \$30.50 after withholding tax. \$10 out of that for food, so that's \$20.50. The only thing we regret about it is that it isn't a racket -- then you'd understand it. We would love to be subsidized by the Standard Oil or anybody else,

but our regulations are the same. If they did, they'd have no strings upon us, and that's quite different.

THERE ARE A HALF DOZEN HERE THAT WANT TO KNOW ABOUT THE COLD WAR.

Well, the Cold War will continue as long as we can pump in money to aid, supposedly to aid those abroad, but spending most of it here. What we are really doing is subsidizing American business at home. That's what it amounts to. But the world production is faltering. Canada, for instance, hasn't sold a single bushel of last year's 1953 wheat crop. Canada is loaded with wheat -- so is United States, but United States is also loaded with corn, cotton, and butter -- 390 million pounds of butter in the U.S. Government storage April first, over 400 million pounds of cheese, 500 million of dried milk. You remember we used to have a wisecrack about those damn, dumb Danes over there, that used to raise such wonderful pigs and export the beautiful hams and bacon and their wonderful butter they used to sell abroad -- they didn't eat butter, they just ate margarine. Well, those Danes were really something, because we here in United States, we're producing billions of pounds of milk, we produce more butter than Denmark ever thought about, we're eating margarine and we can't even sell our butter abroad!

Now, in case you are worrying about this year, if any of you have any tiling to do with milk cows, you'll have approximately 3% more milk cows in United States in 1954 than you had in 1953. I'll ask you, when you go hone, take out your pencil and calculate how much more milk that means and how much more butter; in other words, you're going to have more milk, more butter, and more cheese. Isn't that wonderful?

The distilling industry, up until a couple of weeks ago -- they built brand new plants during the war and since -- had 768 million gallons of whiskey plus 115 million of true spirits. Bear in mind that that is distillery storage alone -- that does not include any liquor held by any saloon, cafe, liquor store, or imported. Well, how much is that? To state it in terms that you would understand, if the whiskey industry stopped making whiskey tonight, they have enough to supply the consumptive demand of the United States for the next nine years! How dizzy can we be?

The same thing is true with every other. Now, Ocala 442 in California -- the greatest Californian that ever lived, his name is George Harrison. He is the one who originated, devised, and developed Ocala 442, that averages for all of California close to 800 pounds of cotton to the acre, and your best irrigated land does 3 bales of long staple, high tensile strength. But there is too much of that. Where is cotton going to? The rest of the world is increasing its cotton acreage, and your annual cotton production of the world is slightly over 34 billion bales. If it goes to 40 billion bales, most of the increase will be abroad. If it goes beyond forty, you'll be piling the bales in the streets of our southern cities and you can look at them, but the rest of the world won't be taking them. Has the cotton export of the last few months inclined or declined? It has declined.

How about our cotton manufacture? We were doing over 2 billion square yards. What are we doing now? 500 to 600 million. We are coming down.

Now, that's a slightly different picture. So, if we have a normal crop year this year in United States and Canada with over a billion bushels here and almost 800 million in Canada, what are we going to do with it? On the east coast, they have filled up the ships of the mothballed fleet -- the total mothballed fleet will only take about 70 some million bushels. Well, we are now in a position to take the mothballed fleet out and sink both the ships and the wheat. The only trouble with that is what's 70 million bushels in 2-1/2 billion bushels in Canada and United States? Nothing. Abundance is ruining the scarcity, isn't it?

Africa has cane up in tobacco. In the last few years, tobacco production in Africa has increased over 700%, and it will continue to climb. The rest of the world is putting greater acreage into cotton and other products; in other words, the great material markets that we once enjoyed an exclusive monopoly of, we will not have. So, when you came to actually reduce the cotton, wheat, and corn of United States and Canada to our own consumption with a safe surplus, and if you develop, as we will develop, a similar thing to an Ocala 442 in cotton for the south, then 2/3 of the cotton farms in United States to 3/4 will no longer be required. Honey chile, here we come! We scientists are going to get you one way or another.

SOMEBODY WANTS TO KNOT ABOUT SENATOR McCARTHY.

Well, he announced to the public that the 27 million Americans who voted for Adlai Stevenson were traitors, didn't he? Then the 30 million that didn't vote at all -- they are also traitors, because they didn't vote Republican. So that makes a majority, doesn't it? Well, Senator McCarthy is using a technique that in Europe everyone understands -- it's a Catholic Fascist technique of Europe. The actual number of Communists in United States according to President Eisenhower's own statement -- is only 1/64 of 1%, so that McCarthy's great endeavors are certainly not to obliterate that 1/64 of 1% -- that's too simple. In Europe, the same technique was used by Catholic Fascism to intimidate the intellectual, the liberal, the progressive, and the dissenter. And that is what it is being used for here. The 10 million or more Americans that have sufficient gumption and knowledge to dissent from the norm, they want to intimidate you. Well, if you haven't got the guts, crawl under a bed. Technocracy lays it down. If you don't like it, I can give you something even tougher.

ANOTHER ONE IS, IS TECHNOCRACY ANTI-CATHOLIC?

No, we're not anti-religion. We are opposed, though, to any ecclesiastical proposition interfering in the physical operations of this country and this continent; in other words, the spiritual field is theirs, but when any ecclesiastical oligarchy attempts to interfere in the physical operation of this continent, Technocracy objects. We are anti-clerical -- not anti-religion.

ANOTHER ONE WANTS TO KNOW WHAT FASCISM IS.

Fascism only occurs where you have a triumvirate of three oligarchies: an ecclesiastical oligarchy, a political oligarchy, and an economic oligarchy; in other words, Genghis Khan, of the 1220s, was a dictator, but he wasn't a fascist. Kaimil Pasha of Turkey was a dictator, but he wasn't a fascist. Now, Salazar in Portugal, Franco in Spain, and, if Hitler had won in Europe, Mussolini would have been bumped off -- so would Franco and Salazar, and Hitler would have been crowned titular head of the restored Holy Roman Empire of Europe. There isn't any doubt about it. Quite a different story.

This organization has opposed European ideologies for over twenty years. Any citizen of the United States can join Technocracy, is eligible, provided they are not members of a political party. That's distinct. The Communist Party has attacked us full page time and time again with photographs. At least they recognize that we are a greater enemy than the other obvious sources, because we know what they are.

In our opposition to any foreign ideology, we are anti-Communist, but I'll be damned if we're going to go Fascist in order to prove that we are anti-Communist! In other words, that we have to cure the eczema of Communism with the syphilis of Fascism. That's what it boils down to. You don't have to worry about either, because the technological equipment of this country and this continent isn't Fascist and it isn't Communist. It wasn't designed by Marx or Pareto. It has an entirely different background. So, all your petty hatred or prejudice for or against won't make the slightest bit of difference.

HERE'S ANOTHER ONE: HAS TECHNOCRACY EVER BEEN CITED BY ANY GOVERNMENT ORGANIZATION AS A COMMUNIST FRONT OR SUBVERSIVE ORGANIZATION?

No, it never has and never will be. We have no connection with any European thing. We have never taken anything from anything abroad. We are purely American, developed and originated here. The leadership in this organization has never been associated -- our godfather, if you can use that term, was the great thermodynamicist, the father of phase, vapor phase, of all your energy diagrams, Willard Gibbs of Yale. Even Yale didn't know it had a genius until some years back. So, we are not interested in all that nonsense. We're interested in presenting a problem -- the problems as they exist to the people of the country, and we have seen a good deal happen. We've been responsible for the introduction of more things than any other organization, and we're the only organization on this continent to have the same membership application and the same membership card, the same accounting system, the same rules and regulations, whether it is north of the Arctic Circle or whether it is down in Venezuela or Colombia. We do not go off the continent. All we're asking the people of this continent is to use their collective effort, to study the problem so there will be some at least partially intelligent climate of opinion when they are face to

face with it. Technocracy is not running for political office. You can't elect us to anything. We are a research, educational organization, and all that we ask in help from the public is that if they are interested, come on in and join us and go to work. There's a nice job to do, but don't think that you're going to get any political office out of it, because we don't run candidates and we don't oppose political candidates. Our literature is printed in both Canada and United States. We train our own speakers, and we number amongst our members from unskilled labor to the top flight scientists of this continent. Now, remember, FDR thought that if he grabbed 18 Technocrats and ex-Technocrats, he would be able to validate his New Deal. Well, just a few of those: Leon Henderson, Price Administrator, that was one. Leland Olds, Federal Power Administrator, was another. Otto Byers, Deputy Administrator of ODT -- Office of Defense Transportation, was another. Dick Tolman, atomic representative of the United States on the Combined Chiefs-of-Staff, was another. We can go down a long list. What did he grab? The brains of 18, but he didn't grab Technocracy, and you can't validate the New Deal, a fair deal, or any other kind of lousy deal under the nonsense we are operating on. And that's the problem and that's the decision that we will all have to face in the next few years.

You have your decision. If you are interested enough in the common good and the general welfare of this country and this continent, the organization is here for you to get into and work for. If you're now more interested in your own personal avidity in the acquisitive field, stick to it, brother, because we'll still be here when you won't be able to practice your avidity. It's that simple.

I think I've done enough for you. I could go on answering all these questions for another hour, but they are mostly the same.

Now, that decision is up to you what you do with it. Remember that we have across the United States and Canada -- we have 216 of these Units and Sections that support themselves. They are composed of all kinds of North Americans, and they will still be here. We have yet to be proved incorrect. I think with that, I'll close. Thank you very much for your courtesy in coming.

"PEACE OR PROSPERITY?"  
HOWARD SCOTT  
LOS ANGELES, CALIFORNIA  
5-8-54

These are, of course, interesting times in the history of our country and of the world. There are more people today in the United States perturbed and afraid than there have ever been in any social system in history. There are more frightened of what tomorrow is going to bring or will not bring, according to their imagination, than ever before. The prosperity of the war and the postwar period have graduated more millions into the bourgeoisie than any social system has ever done before in the history of man. It's been wonderful. They have more gadgets and more houses and the appearance of more physical wealth. In fact, it has reached the point in these United States where monogamous marriage is a hazard for the average man, because the only way he can survive is to marry three women and have them all work in order to pay for the gadgets in the kitchen.

There was a time, of course, only a few years back, when the farmer worked 7 days a week, 12 hours a day, 84 hours; when the steel worker worked the same. Remember, that's less than forty years ago. Yet today, what has happened? 84 hours is unknown, and 40 hours a week is something they are trying desperately to hold up.

What is back of all this? It is something totally different than any human society ever faced before. Let's see if we can present the picture to you. For thousands of years, mankind only had one system of producing physical wealth; namely, human toil and hand tools. They moved the man around to the job. The only way that more physical wealth could be produced was to work more human beings longer hours. No human society previous to this age on this continent has ever known any different. And, of course, the total amount of physical wealth that could be produced by that process was insignificant. Ninety-five percent of the population of any economy of the Middle Ages or 100 years ago or even parts of the globe today are in the submerged class.

There is another system for producing physical wealth; namely, by the degradation of extraneous energy through technological equipment, and the only way you can produce more physical wealth with this system is to work less human beings less. Technocracy has been pointing this out for years, and it's

rolling in. It's only beginning. What does it look like? Well, let us see.

John L. Lewis and his coal miners, the coal miners are only working 2 to 3 days a week. John L. has 100,000 less coal miners than he had two years ago. He'll have 100,000 less than he has now two years from now. There are six million less employed in agriculture than were employed in 1946. The same thing is happening in every field. Technological equipment is producing more and more with less and less man-hours, but it is also doing something else. It's altering completely the capital payoff time, or if you wish to state it in other terms, the reinvestment rate of capital. So long as we had human toil and hand tools, the annual increment was so small that it was impossible to amortize out the principal and interest of a major debt in less than a hundred years. Bond issues from Hammurabi's time of 1350 B.C. down to yesterday were all based on a 100-year basis. So, therefore, you could only reinvest the capital once in a century.

The picture today is completely altered. The latest equipment in the United States, if operated at 75% of capacity or more, will amortize out its principal and interest in 5-1/4 weeks, or a change of reinvestment rate of 964 times in a century. Isn't it wonderful? Wait a minute and see how wonderful it is.

In the 90s and the early 1900s, the glassblowers union in the United States was the aristocrat of the labor world. They were the ones who wore the silk shirts. The only way you could get into the glassblowers union was by the chromosome route. There wasn't any other way. They were the elite. Well, what happened to the glassblowers? It's very interesting. For instance, Leon Henderson's father, the Price Administrator under the Roosevelt administration, his father was a glassblower in Vineland, New Jersey. Back in those days, one glassblower and two helpers, working on piecework, would blow 800 to 1,000 bulbs for the old Edison carbon filament plant in 12 hours. Today, the Pitney Bowes does 1,100 bulbs a minute without the glassblower or the helpers.

Never again in history will anyone rise like Samuel Gompers did to become president of the International Cigarmakers Union of America. Because of the thousands and thousands of cigarmakers he

also became president of the American Federation of labor. Now there aren't enough cigarmakers left to form a baseball team anyplace. Why? Because the Washington machine -- one machine alone -- will make four million cigars a year with four girls.

Now, remember all this that we are telling you has been in the memory and experience of many of you sitting here tonight. The wrought iron puddler, he has vanished, too. You can go on down a long list. The first continuous strip plant that I went through -- it was the first one -- only operated 480 feet a minute. We have than operating now at 7,000 feet a minute, and the ones on the board, when they are turned out, will do 10,000 feet a minute.

Paper? The old paper drums up in the Fax River District of Wisconsin -- there used to be 120-inch runs, and they would turn over 4-600 feet a minute. The Northern Pulp and Paper of Maine has just completed the fastest one in the world -- 146-inch run -- rolling 3,400 feet a minute. That, of course, is just the beginning, because the new electrostatic disposition of fibers dry without the water, the speeds in paper will go over 4,000 to 5,000 .

All of this, of course, has a bearing on all of you, because you believe, along with the Great American dream, that if you are thoroughly industrious and pursue the almighty dollar fast enough, you will be able to acquire a security. Well, the march of events is going to prove how damn dumb you are! Because unless you've got \$40 million now, your chances are zero.

We're heading in this direction. We have been. Technocracy has been carrying this for years -- that the tide is going to roll in, ladies and gentlemen, and look out for it. Right now your General Motors is producing slightly in excess of 50% of the automobiles of the United States; Ford, 36%; Chrysler, 12%; and the independents, 2%, What's ahead in planning for the automotive industry? General Motors has under construction approximately \$2 billion worth of plants. Ford is crawling up close. What kind of plants are they? They are slightly automatic. Why are they doing this? Because the only way to reduce costs is to cut out the labor entirely, and, as I pointed out to you before, the only way to increase the production of physical wealth when you use extraneous energy is to get rid of the human jackass completely.

Yes, the plants are going in, ladies and gentlemen. Long lines. Is anybody doing any work? Oh, God forbid. They push buttons once in a while. Well, if they fall asleep, what happens? It stops. You can't even injure it.

In the chemical industry, the same thing is happening, over a wide, a very wide field. We can build plants in the chemical industry or the oil industry where six men can operate the biggest tiling that can be built. Several of our members designed a plant and put it in operation last August -- a very simple thing, you all know it -- the little flashlight batteries, you know. They used to be two for a quarter, but I understand that they are now 15 cents apiece straight. Well, that plant is completely automatic, right even to putting the little cartons into the big cartons, and it makes one million of them per shift. The cost per battery? Seven mils. Do you get it? Sucker, no, you don't get it. The one that had the capital to put in the giant technological equipment is raking the cream and you are getting the dust.

There are other plants and other processes -- that are all moving in the same direction. There are several plants in U.S.A. that have \$3,600,000 worth of equipment per employee. Well, where are the hand tools? \$3,600,000. And just try to find the human being in there. You have to take a scooter to run around, anyway. Now, that's the trend -- there's going to be more of it. Why is there going to be more of it? Because every time you slam in one of these latest developments, remember, that it pays off, if it operates, its principal and interest faster than ever before in history. Therefore, the more you have of these, the faster they can write off and liquidate their obsolescent equipment.

There is considerable outcry about unemployment in U.S.A. There is slightly over four million, but that is the least of it. There are 15 million others, according to the Department of Commerce labor force report, that are working less than 34 hours a week, 2.6 million that are working less than 14 hours a week. Plants in the east in industrial centers that have been working since 1947 at 54 hours a week -- remember, they had a 40-hour labor contract, and 14 additional actual hours is 21 total hours, or 61 hours total paycheck. That is gone, and is there a \$146 a week paycheck in the steel industry in Pittsburgh? No, honey

chile, tain't there, no more. They are down to the \$70s and \$80s and less. They're cutting out the overtime, slashing it all over. Why? Well, the technological equipment we have in this country is flooding us with abundance, whether it is in agriculture, automobiles, chemicals, liquor -- yes, they've done a wonderful job, for instance, in distilling -- the distillers of United States have 768 million gallons of whiskey in storage, plus 115 million gallons of true spirits. Now, remember, that doesn't include the liquor in any saloon, cafe, liquor store, wholesaler, or importer. That's just the whiskey in the hands of distillers. Well, let's put it in other terms: If the distilling interests in United States stopped making whiskey tonight, they have sufficient whiskey on hand to meet the consumptive demands of the United States for the next nine years. Now, if you talk about spiritual food, ladies and gentlemen, there it is! You can have spiritual sustenance without further production for nine years more.

The automotive industry used to be on a three-shift basis. It's now on a 48-week year, 40-hour week, and a single-shift basis, and its capacity is 10 million cars without strings. Are they going to do it? Hardly.

Now, let's take a simple little thing like refrigerators. There are many firms making refrigerators, but the big four at the top are building giant appliance parks. Hotpoint has one outside of Chicago. Westinghouse and General Electric -- their size is about 1,700 acres each -- one at Paducah, Kentucky, and one farther down. The figures on the Hotpoint, which was completed first, is one refrigerator boxed and crated and tiered on the platform every 41 seconds. The others naturally want to be better, so the figures from the latest appliance park are three refrigerators every minute. What's the combined capacity of the big four? Five million a year. Oh, it's wonderful.

In nylon stockings, we have a capacity of 1,200,000,000 pairs. Why, sister, it just won't help if you had three pairs of gams and they gave them away.

No matter where you look at it, you have these tendencies showing up and the fabric is shot full of holes. The National Cash Register no longer draws the majority of its gross from Canada and United States. Over 52% comes from abroad. Well,

what's the trouble? National Cash Registers, you know, are synonymous with the Yankee and the word "American" all over the world, aren't they? If you look in that report, you'll find it: A nice, little, simple statement, because there is one cash register in United States for every 32 Americans. How dumb have you got to be? Are you going to put one in every john? I mean, how crazy can you get?

When it comes to tin cans -- oh, we've done a wonderful job. We're rolling out in excess of 34 billion, not million, mind you, 34 billion tin cans. Why, we have one brand of soup alone that exceeds 500 million cans a year. They've got the American female up to where she can't operate unless she's got a can opener. You know what that's done to the male.

Whether it's strip mills, whether it's paper, bottles, cans, whiskey -- anything you'd like to name -- technology has entered those fields, and there is going to be no retreat.

Let's look at another phase of it for a moment -- In the States of Vermont and New Hampshire, there are, respectively, 79 and 92 plants that are being liquidated -- not closed, you -- understand liquidated, scrapped. The American Woolen is liquidating 11 plants -- the largest woolen corporation. One of those 11 is the largest woolen plant in the world -- 2,300,000 square feet of floor space. What's this -- you liquidate something that large? Yes, honey chile. How are they going to do it? They'll make a legal sale to a new corporation, and whatever its name, it is simply a scrapping corporation, that's all, because it will take the machinery out that it can sell and the rest it will scrap for junk, and then it will forget to pay its taxes and it will revert to the municipality. Isn't that wonderful?

What has accelerated all this? What has provided the impetus behind this? Some of you will say, why, we've had inflation. You're incorrect. United States has never had any monetary inflation in this period. It is an entirely different process. Monetary inflation only occurs when there is a dearth of goods and a dearth of money, and the government of a national economy under monetary inflation either prints new money or adds additional zeros after the digits. Theoretically, in monetary inflation you could go on and print a thousand zeros after the

digits and it would not alter one iota the fundamental processes of production and distribution of that economy. It would liquidate, true, those on the lower, fixed income budgets, and you would be compelled to change the marking on your inventory tags and on your price tags, but it would not in any way alter the fundamental processes of production and distribution.

But there is another process and the one that we, the people in United States and this economy have been engaged in; namely, credit amplification, and it is totally different in its end point and its result and its consequences than any process of monetary inflation. Credit amplification is very simple, because it taxes the individual American, takes it away from him before he sees it in most cases, deposits it in the treasury, and then advances it by underwriting new plants, new contracts, and new business for the deserving corporate enterprise. That enables corporate enterprise to liquidate its obsolescence and to make billions.

Franklin Delano Roosevelt stated that World War II wouldn't create any more millionaires. He was right. What it did do was a 600% increase in the billion dollar corporations in the United States -- only 600%. We have 68 that are over one billion in assets. So, instead of making ordinary millionaires, it has made billionaires; and, of course, the average human being has got a little of the drippings off the gravy train. The result is that their ego is inflated, and they have been able to crawl about 3 or 4 layers higher up in the social manure pile, and they think they've got to where it smells more like Chanel No. 5 than you know what.

The process of credit amplification is rather interesting, because after they advance them the credit and the negotiable contracts -- where did it come from? It comes from the people of this country. They paid for it. It belongs to them. But then to add insult to injury, what did they do? They issue a certificate of necessity. For instance, let's assume a hypothetical case, or lean give you an actual one, where the certificate is for \$500 million -- \$100 million a year. Well, you add that \$100 million a year in on top of your cost of materials, depreciation, and if your markup is 20%, you make \$20 million on the amortization alone. Isn't that wonderful? They made you pay for it in the first place and then they make you pay for it in the second

place. As a nation, we're supposed to be the best educated, the best informed nation in the world. We may be individually, ladies and gentlemen, but collectively we're the greatest collection of jackasses.

This process has enabled the big ones to grow bigger, and what will it result in? The elimination of the little ones. If you have a little farm, a little store, or a little business, your days are numbered. There are over 6,000 supermarkets in United States that are doing a greater annual volume of business than 368,000 other stores, and the percentage of business accruing to them is increasing, while the percentage accruing to the 368,000 is decreasing. Very shortly, there will be another 1,000 or 1,500 or 2,000 supermarkets completed, and when they are, they will do more business than 600,000 little stores, if there is that many left. The little farmer and the dairyman with 25 milkers -- 35, 45, 55, 65 -- can he afford to put in the capital investment for automatic silo unloaders, automatic barn cleaners, milk pilers, tanks? Oh, no, not unless he has 15 kids and 3 women again. His days are numbered.

The small manufacturer is going out, because he cannot afford, and he hasn't the source to begin with of credit, to put in the giant machinery necessary for him to keep pace. As an illustration, Chrysler borrowed \$250 million from the insurance companies. Well, frankly, \$250 million isn't enough for the Chrysler Company to catch up with Ford and General Motors -- not in that technological capital war. You've got to have a billion or over to stay in the game. And \$250 million is only one of these little lousy yellow chips, you know, the lowest in any gambling game.

In agriculture, what's happened? The same thing, identically the same thing. Canada hasn't sold a single bushel of its 1953 wheat crop. We haven't done so good, either. We only have 1,250,000,000 bushels on hand -- outside of farmers' hands -- Canada has around 800,000,000. We now admit that last year's cotton crop was well over 16 million bales. We now fake our figures, you know. We used to be fairly accurate at it. Yes, cotton production has increased per acre, but it's still only half of the average you have here in California, and, of course, the greatest Californian that ever lived is still living, and most of you don't even know his name. He's done more for

California than any of your damn pioneers and your chiselers. His name is George Harrison. I see you don't know him, do you? He is the father of Ocala 442 that knocks over a greater annual production than the gold of the gold rush days. Correct? Around \$300 million a year. Well, if he was in the Bank of America, you'd know him, wouldn't you? Or if you voted for him.

The total world crop in cotton is slightly in excess of 34 million bales. China, Russia, India, Pakistan, Sudan, Egypt, Peru, Australia are all increasing their cotton acreage. But also, the research is headed to agritypes similar for their area as your Ocala 442 is to California, and when they hit it, brother, look out, and they're going to hit it. That means the world production will go over 40 million bales, and cotton in the United States -- if you maintain this acreage -- you'll pile it on the streets of the south. It will be swell to sit on provided it's in the shade. On the other hand, in the United States, if we produce by research agritypes, so that they are similar to Ocala 442 for Mississippi, Louisiana, Arkansas, where they only require 1/3 of the cotton acreage used in U.S.A., who is going to decide who plants cotton? You see where it's going? Oh, you don't? Well, wait a while.

The new research in wheat is going to produce, and has produced experimentally right now, a multiple head of wheat -- one single head of wheat but it is multiple -- it outweighs any seven heads of wheat right on the scale. Remember, we technologists and scientists, the only way we can teach you is smack it right over the head. You wouldn't accept it in the last 25 years, well, all right, it's going to beat it into you.

The new corn will mature in less than 80 days. What does that mean? You can grow corn on the Peace River in Canada. It's coming. One after another, these things are going down.

We are living in a new energy age, and all the concepts that the human animal has had are of no use, because 99% of human beings on this continent haven't got a concept that's later than 1648. I'll be honest with you -- you haven't. You know it. It takes you 40 years to find out that your parents were liars, and then you're too damn old to start over again. I'm not deprecating the parents, because they had the same thing happen to them with their parents. It's not their fault. You're still trying to kid

yourself that if you bring the children up to be honest and forthright and give them an education, they will be able to avoid the hardships you've gone through. Wunderbar, isn't it? Why, you send them to the university to get a liberal arts degree so that they can go into business. Well, you'd be much more practical if you cut out the college and university and send them over to the leading gangster in your community, and he can get a far more proficient course. Because here is big business in the saddle as there has never been in any economy. Of course, the public of U.S.A. voted for a change, didn't they? Well, they are going to get it, and it won't because of the Democrats, either, or the Republicans.

We have an administration in Washington which might be described most accurately as a military junta of generals. It has more generals than all the cabinets and administrations in the history of U.S.A. I'll prove it to you: General Motors, General steel, General petroleum, General rubber, General confusion, General mess, and General Eisenhower. Well, whoever gets in there is naive enough to believe that the conduct of human affairs can be conducted in this day and age of energy on the premises of political government of yesterday is either naive, a hypocrite, or a liar, one of the three, because the problems facing this country and this continent today have never been faced by any people in history. There is no precedent for it, and it will never happen again. Let's see what some of those problems are.

No political party in U.S. has ever drawn up plans for the conservation and use of the entire water resources of this continent. No political party has ever designed a system of production of natural resources and their conservation and their use. Or of power, transportation, communications, or of anything other in the physical system that we work with. So long as there were human toil and hand tools and 95% of any human society were on a submerged basis, then, of course, you could talk and consider the conduct of human affairs, because you couldn't alter anything anyway. But now you are compelled to deal with a government of things, because the government of things, the energy conversion per capita through your technological equipment is many times the consumption of energy of the individual for his food, many, many times. And without accurate design and control of the energy-consuming devices in this country and this continent, you will be headed for trouble. And you cannot solve

those physical problems by counting noses, whether there is one nose or 160 million or 260 million. If your ego is flattered and you feel that your nose ought to be counted, very well; but it doesn't contribute. Why doesn't it? Because they are no longer the problem of yesteryear. When you have a little spring on a hillside with a trickle of water the size of a pencil, the order of magnitude is so low that there are over 2,000 ways in which that flow of water can be regulated. The interesting part of it is whether you step in it, throw a rock in it, throw a bag with the body of a dead skunk, whatever it is, in the long run it makes very little difference.

Well, let's take the same water, same chemical and physical compounds. We raise it to 600 pounds pressure and down go the number of decisions that may be made regarding its control and its regulation. All right, let's step it up. When it has a head of 4,000 feet to where one whiskey glassful of water produces one horsepower at the bottom, oh, have you got 2,000 ways. 1,000, 100, 10? No, you only have one way. Why? Because the problem is an unique problem and only a unique solution is possible. That is what we are facing in this country and this continent. There are not problems that are solvable or can be evaded by counting noses of a minority or a majority. It is going to take something far greater than that, because science and technology are taking you into abundance whether you like it or not. It is here and it is going to be faster tomorrow than it has been today.

Now, atomic energy does not make the slightest bit of difference, because energy, no matter where it comes from, if it is more available than the previous sources of energy, will merely accelerate the consumption of resources and accelerate the entire . . . Let's look for a moment at our resource situation. We once had vast copper resources. Today, all the copper mined in the United States is .8 of 1% copper content. Get that -- .8 is the average of all mines in United States. We no longer have the great copper reserves, and we haven't got the great zinc or lead reserves. The hematite of the Mesabi is fast fading. There is not sufficient high-grade ore in the hematite deposit in Mesabi to fight another world war with the consumption of steel like World War II. It just isn't there.

Now, we'll have to go farther afield. That means higher costs. And, of course, most of you are here or in any other

building or your home in these days in United States because of cheap automotive transportation and cheap petroleum. We have fabricated our whole economy and predicated it upon that; in other words, we passed on the responsibility to the individual consumer, and public transportation has been neglected for the past 40 years. Well, is anything going to be wrong with the picture? Isn't it going to be wonderful, all those nice suburbs 30 or 40 miles out. Just ask yourself what they will be if gasoline goes to 65 cents a gallon seaboard. Honey chile, you will have had it and you have damn near got it right now. Oh, yes, don't worry about the price where it is. I am talking about the resources.

We are only producing 11 barrels of oil per well per day in United States. In Venezuela, it's 280 per well per day. In Saudi Arabia, it's 6,700. In Iran, when the 82 wells were running, it was 10,000 barrels per well per day. We are drilling more wells and we are drilling them deeper. Texas is producing approximately one half the oil, and is drilling its wells in Texas 800 feet deeper than the national average. We're producing in U.S. today about 6,400,000 barrels per day, and our consumption has passed 9,000,000 barrels per day and it is upward bound to the wild blue yonder. Nobody cares; nobody is interested. Just vote another politician into office and trust to God. Well, brother, if you don't start helping yourself pretty soon, God won't help you either, because we are going to be faced with something -- remember, we are the most tenuous, interdependent people on the globe. No other people are like us.

Now at the rate at which we are moving, let's see if I can picture it for you.

Right now we are doing slightly in excess of 8,400,000,000 kW hours a week. By the end of 1956, we will have 130 million installed kW capacity in our public service stations -- the end of 1956, that's only two and a fraction years. With that capacity we can dump 22 billion kW hours a week. If you are astounded or appalled at the problem of abundance and falling man-hours and unemployment at 8 billion, ladies and gentlemen, what are you going to do when they pump in 22 to 24 billion? The interesting part is that you don't know, and neither do they! I'm talking of the trustees of this Price System -- our tycoons of business, because, let's get it clear, that the democracy of the

private enterprise system has made -- this country safe for morons, and that fascism and communism has made the rest of the world unsafe for everybody else.

So here we are moving at a definite, accelerating rate of speed, and if you have a life expectancy of just ten more years, stick around, because it's going to drive it home to you a posteriori. Oh, you don't know your Latin, I see. Now, it all depends on whether there is sufficient people in this country that can realize the situation and have some semblance of what can be done -- some considerate climate of opinion and realization that it can be planned and that it can be designed with a maximum security and conservation and operation at the highest standard of living. But where are you headed? We're headed in just several years to where the consumption of extraneous energy in the United States will be such that we can produce and distribute an abundance of physical wealth in this country with a minority of the healthy able-bodied adults of U.S.A. The majority will not be required. Technocracy asks you and every other American, what do you think you are going to do in that kind of situation? Are you going to issue the majority ration tickets and coupons to consume the mink coats, the champagne, the vacations, and the automobiles that the minority produce, are you? And do you think your system will work? This political system of ours has not undergone any major renovation in 160 years. We have 48 states, over 3,000 counties, over 16,000 municipalities, and a corresponding number of school districts and townships. Or, to state the total, there are over 116,000 political governments in United States empowered to collect taxes and issue debentures. There are 9,000 in the State of Minnesota alone. I wouldn't venture to guess how many there are in the State of California.

Here you are faced with something -- your press won't tell you, your press could educate you and prepare you for, and the press of United States is failing signally to do that job. Why? Because the press of U.S.A. is the most reliable source of misinformation extant.

We are trying to present a series of pictures to you for your consideration. Bear in mind that you cannot elect us to public office. We are not a political party. We are not appealing to the public of this country to use either ballots or bullets.

We are, as scientists, technologists, engineers, and ordinary Americans, trying to present the facts that this country and this continent can be operated so that there is security and there is abundance for everyone. You are facing a situation where it is going to be jeopardized from within. Many of you, of course, have fallen for the hooey that you are subject to outside attack. Well, before we start throwing our weight around the world, let's put this house in order to where it can stand up under a stable operation. You can't have a foreign policy that has any validity unless it is a reflection of your internal policy, and our internal policy is what? It has been one continuous expediency after another, because we've succeeded in being so efficient in organizing our national confusion that it has been one planned anarchy.

I think I have presented you with some of the things. You will have an opportunity to ask me questions. It's the best part of a meeting. You can get a lot of information and a lot of fun out of it. I'll leave you and you can write your questions. Thank you.

SOMEONE WANTS TO KNOW, WILL THE INCREASE OF POPULATION IN THE UNITED STATES MAKE CONDITIONS BETTER OR WORSE.

In 1953, the births were just under 4 million. At the existing population increase in U.S.A., the economy, in order to be stable, would have to create 900,000 to 1,200,000 new jobs a year. We are not creating any new jobs a year -- they are decreasing. Now, U.S.A. is not the only country in the world face-to-face with that. Italy has 47 million population and is increasing at half a million a year. Great Britain has 50 million and is increasing at the same rate. Geographic India has 420 million population and going up at the rate of 50 million every ten years. Japan has almost 86 million and increasing at the rate of between 1,600,000 and 2,000,000 a year.

Italy, Japan, Great Britain are deficit countries, and the population problem in relation to resources becomes more and more acute. But South America has an even greater rate of increase and may have. Puerto Rico and South America -- some countries -- are 12 points higher than the rate of growth of Japan.

Now, what Japan is going to do -- remember, we, United

States, have been holding her up. The Korean war effort has dumped in between \$750 and \$800 million a year. Japan has no iron ore. It has excellent copper. It has two high-cost coal deposits, but they are non-coking. It takes an addition of 65% of Manchurian, U.S., or Indian coking coal to make Japanese coal coke. There is about 2,300,000 barrels of annual oil production in Japan on the north shore of Hokaido. They produce, of course, seed pearls. They have excellent prime timber, but with that population growth is headed for trouble.

Italy has very little.

In Great Britain, they are mining an iron ore of 23% Fe content. They are mining coal that is miles out under the sea, and the British Empire today is following the flag home. Its day is done, not because of the immorality of the British people, but because those two islands off the coast of Europe can no longer squander their inheritance around the globe. They have spent it, and the harpies are going to come home to roost.

ANOTHER ONE HERE IS, IF MR. DULLES, NIXON, NOLAN, AND MCCARTHY MANEUVER US INTO ANOTHER LITTLE WAR, WHAT DO WE DO THEN?

After all, the State of Wisconsin has a bad odor, but you haven't got anything to be proud of, because Nixon and Nolan smell just as bad, almost. Those names are only representative of those elected to political office, but back of that is your economic interests that realize that this economic system of ours requires what? In 1950, we started to slide downhill. We had a gross national product capacity of \$280 billion, and there was a deficit in national purchasing power of 25%, or \$70 billion. Washington provided it with its budget, and the so-called police action in Korea managed to maintain it. Now that Korea is a stalemate, the situation has changed, because we have installed a terrific amount of capacity since then. The United States today has a gross national product capacity in excess of \$380 billion, and if you wish to hold it up, it will be \$100 billion a year and where are you going to find the war to do it? Just where, because never has a nation of the size of ours had such a collection of allies as we have -- deficit nations.

What does Japan have in the way of resources? The

Philippines? Great Britain? France? Italy? They are deficit areas. We won't mention little Greece. And we're going to go into a war big enough to maintain \$380 billion gross national product capacity? Oh, brother. Have we got the resources to do it if we did get in? Let's see.

What was your long-range fighting plane in World War II? It consumed 54 gallons an hour. What's your jet plane today? 268 gallons an hour. You are going to have as many planes in the air in another war as you had in World War II? Oh, no, brother, you aren't, because it just isn't there. Where are you going to get the petroleum from? You are importing it. The State of California has been importing oil right along from where? From the East Indies. And we're building tankers bigger and bigger -- 45,000 tons deadweight; in other words, they are as large as the liner UNITED STATES. They are trying to hustle more oil in so you can keep those jalopies running.

War would be a nice, easy evasion of our national problems, because why? It would grant an administration the emergency power to juggle additional credit and finance, but it would not solve the physical problems that we face in this country. Business would love a war, because never have they enjoyed such a wonderful time as they did in World War II. I'm not talking of little business. After all, we had our snoot and all four feet in the greatest gravy trough in history, and the only objection that the great mass of the American public had is they didn't have two snoots and four sets of feet. They were quite willing for them to die over in Korea, oh, yes, so long as the overtime and the bonuses and the contracts kept pouring in, weren't they? You're damn right they were. Now, they will maneuver us if they can, but the point is that the odds are against us.

It's difficult for people to realize that when you fight a war today, it is a different kind of proposition. Yes, you can say, well, we can use the hydrogen bomb. Yes, we could. Scientists have been trying to tell them for some time they could cease the refrigeration of their deuterium and trigger it instead of with an atomic bomb with a chemical trigger, with a light isotope of lithium known as lithium-6-deuteride, which the Russians used last August and which we have been attempting to catch up ever since. Now, if you enclose your hydrogen fusion in cobalt or an alloy of cobalt and strontium, for instance, then

you can generate a radioactive cloud -- 98%, remember, goes up and the horizontal wave is only 2% -- and you can create pure radium and strontium 90 with a half life of 25 years. Of course, it will go around the globe several times and eliminate those who set it off. Well, why isn't it desirable? Well, stop and figure a moment. It would not provide business with that beautiful economic opportunity of providing war materiel, would it? And on top of that, it would eliminate customers, wouldn't it? And what the devil is wrong with this economy? Why, customers with sufficient purchasing power, isn't it?

So, war isn't going to settle it for U.S.A., Canada, and North America, and if they do do it, it will probably be the last one.

SOMEBODY WANTS TO KNOW WHY OUR FOREIGN POLICY IS SUCH A TRAGEDY OF ERRORS.

Well, that's very simple to answer. Any time you send out a bunch of pinochle players to play chess, what the devil do you expect? That's actually what it is. You can't have a foreign policy until you have a definite long-range, strategic policy of operating this country and this continent. Until you have that, you have nothing but expediency after expediency, and you're always trying to interpret what the damn Russians are thinking. Well, anybody that takes that attitude, it's because they are not thinking themselves. For heaven's sakes, do we have to wait until we find out what we think the Russians think they're going to do? Isn't there any capacity left? Isn't there any ingenuity or ability or have we become a lot of stamps? It would seem like it, wouldn't it?

IT SEEMS TO BE BOTHERING SCME OF YOU PEOPLE. THERE ARE A NUMBER OF QUESTIONS ABOUT IT. WHAT WILL McCARIHYISM DO TO OUR COUNTRY?

Well, do you want it? I'll give it to you. The technique that Joe McCarthy is using is a technique that's well known in Europe. Wait a minute! The actual Communists in United States, according to President Eisenhower, is 1/64 of 1%. That's all it is. The process of intimidating the liberal, the progressive, and the ten million dissenters in the United States is the same process that Catholic Fascism in Europe used under Hitler,

Mussolini, Salazar, and every damn politician! And it is so obvious. What happens? You get scared and look under the bed for a "Red", don't you? You've gotten so bad that you can't even enjoy yourself at night, because you feel you have no privacy.

The purpose of that Fascist method is not particularly to catch Communists. It is to intimidate your progressives, your intellectuals, your liberals, and your ten million dissenters. After all, Senator Joseph McCarthy was being introduced by Cardinal Spellman at the giant Holy Name breakfast in New York with a eulogy, and exactly at the same time -- almost -- in Chicago, Bishop Shields was condemning him. Well, what are those indications? The indication is that the church is getting ready to throw Jonah to the whale. I am speaking of the Roman Catholic Church. If you want any more, I'll give it to you. This is the only organization on the continent that can hand it out to you. We haven't any foreign connections. We're solely American in origin, content, and objective, and we're not afraid of anything.

THERE ARE A NUMBER WHO WANT TO KNOW MY OPINION OF THAT GENTLEMAN FROM WISCONSIN.

I don't care to ....

SOMEBODY HERE SAYS, "NO JOBS, NO INCOME. HOW CAN WE PAY FOR OUR NECESSITIES OF LIFE?"

Well, cheer up. There are soup kitchens in the City of Detroit, in case you don't know it. There is also a soup kitchen in Calgary, Alberta. You are generally about eight months late out here on the Pacific Coast, but it is very interesting to observe the number of empty stores and empty buildings in San Francisco and Los Angeles that are increasing and increasing. It is quite obvious. Of course, you are still building a few homes, aren't you? One city in Kansas has 641 brand new ones all completed in one block. Homes are lovely. There have been over eleven million of them sold. Are they all paid for? No.

What's the size of the average family today compared to what it was after World War I? It is much larger; therefore, the responsibilities and the number of dependents are greater than ever before. If you have a decrease -- you don't have to have a real depression -- you only have to go down 30 percent. You only

have to go a little over 7 million unemployed and it will be worse than when you had twenty million in the Dirty Thirties. The Filthy Fifties can really show you. After all, whose responsibility is it? It's the responsibility of the citizens of the United States and their government. It's very interesting what will be ahead of you, because if the Republican Party of United States enters another Hoover decline, the public of this country will bury that Republican elephant so damn deep that it will never come back. And those who applauded that had better realize that when that happens, they'll have to move the elephant over to make room for the jackass.

WELL, THERE ARE A NUMBER OF QUESTIONS HERE RANGING FROM BIRTH CONTROL TO SHOULD POPULATION GROWTH BE CONTROLLED OR CAN POPULATION BE CONTROLLED?

Well, of course, most of you know Margaret Sanger and the birth control. That's an incorrect way to state it because what she advocated was, in reality, voluntary parenthood. Well, that's an approach on an individualistic basis, isn't it? The situation around the world has reached that predicament where an individual approach is asinine. We scientists have just about got it. The female of the human species has been known for quite a long time that she has possessed the physiological capacity to dissolve the fetus without any deleterious effect to the organs of reproduction or the entire female mechanism. Science has at last discovered the trigger for that action. It is tasteless, colorless, and odorless, and its cost is practically insignificant. How would it be applied? You would merely put it in the water system of any urban center. You can't taste it, you can't smell it, and there's nothing two-legged or four-legged will conceive. I told you we'd get you. What, you don't like it?

There's many an ancient civilization used to park its excess babies outside the stone walls to be eaten by the wolves and the dogs. Look it up -- you'll find I am correct.

WELL, TO CHANGE THE SUBJECT -- IS THE REASON THAT CONGRESS IS PASSING THE ST. LAWRENCE SEAWAY BILL BECAUSE THE MESABI RANGE IS RUNNING SO LOW THAT STEEL WILL HAVE TO BE BROUGHT DOWN FROM LABRADOR?

Well, not steel but ore. The unfortunate trouble about the

Seaway bill is this: The St. Lawrence Seaway, under their design, calls for 27 feet over sill. As freshwater has not the buoyancy of saltwater, that means that the draft of your boats will be less than 25 feet. Besides that, the Welland Canal has 8 locks lifting from Lake Ontario to the Lake Erie level -- a total of 326 feet -- and it takes 9 hours. It's a bottleneck. Now, Technocracy's continental hydrology has 40 feet in our seaway, and it would have hydraulic lift locks that would put 60,000 tons up and 60,000 tons down from Lake Erie to Lake Ontario in 15 minutes.

The Seaway is already obsolete before it ever was voted! That's the trouble.

Not only is there iron ore in Labrador, but there is still iron ore of even greater deposit in Angava in the Belcher Islands in Hudson Bay. Of course, some of the best ore is the titaniferous magnetite with a percentage of nickel and manganese, but that ore cannot be used in the present blast furnace process of producing steel. It would take a high frequency, hydrogen process, but that's a little too much, and unless we get going and utilize the brains and the genius we have in this country, some foreigners are going to introduce the process first.

WE HAVE A NUMBER HERE ON SEVERAL SUBJECTS. ONE IS, DO WE THINK THE RUSSIANS WILL ATTACK IN WEST EUROPE?

Half a dozen laughed. Well, why should they? What resources has France, West Germany, Italy -- what have they got? Italy, with 47 million, almost 48, Britain with over 50 million -- let's look at it for a moment. East of the Iron Curtain they have the resources. Outside of the coal in the Ruhr, nothing else in West Germany worth talking of, and that's 1,400 feet down average compared to 280 in United States. The French coal mines are thin seams and at a bad angle. The ilmenite ores of Alsace Lorraine are in the 30s of Fe content. What's the sense of kidding ourselves? Even the Italians don't want it -- they want to leave and come over here, don't they? Because they haven't got it. Never underestimate your opponent. Never enter the ring with the concept that your opponent is a palooka and that you don't have to train, and that you can lick him with one hand tied behind your back. If you do, you'll be seeing birdies.

There isn't any reason why any major entity would want Western Europe in its present hookup. Now, don't come back at me and start to tell me about their industrial technology. The answer to that is phooey -- we know what it is. Forty-two percent of the French population are peasants on the soil, and they pay 2% of the taxes. When you combine them with the storekeepers, the little businessmen -- bear in mind that they don't have to keep accounts in France for their revenue -- so that over half the population of France pays less than 4% of the taxes. There are 463,000 manufacturing establishments in France employing an average of 5.3 persons per establishment

Well, that's all very well. There are some new large plants. Who put them there? The French put a few there, and our money paid out to big corporations here have installed, say, the Solat, the Dinard, nice brand new steel plants.

There isn't any group here in the country. Right here in California, can you name me any group of Californians that has ever designed a complete hydrology for this state? No. They're not enough interested. Well, but you will be. Where are you going to get your water from? There are over a thousand cities in United States that have passed legislation already restricting the use of water in this year of our Lord 1954. The City of Greater New York will not permit you to use water to water your lawn this year, and washing cars canes next. Of course, you have no water problem in California, have you? It doesn't occur out here. Well, if it hasn't yet, it will. They are drilling wells on the western side of San Jaoquin 2,000 feet deep. It's serious, and it's serious all the way from Peace River to New York State. We're operating on the delusion of grandeur that we have lots of water. Yes, the original freshwater resources of this continent were 50% of the freshwater of the world. And have we handled it? No, we are ruining it the same way we are attacking everything else -- the almighty dollar first and the devil take the hindmost. The only trouble with that is that there is going to be one big, beautiful collection of millions of Americans in the hindmost, and you're going to be hit with it. Yes, you can have water in the San Jaoquin. Bakersfield is only about 420 elevation, so you could have 10,000 tons deep sea shipping in Bakersfield. No? Come around sometime and I'll show you. But have you enough Californians interested enough in their own state? It's the same thing in every other state. So long as you have

HOWARD SCOTT, LOS ANGELES

5-8-54

this gravy train, hoopla!

HOWARD SCOTT

SOMETIME DURING 1955  
IN CANADA

.... have drilled in the last year, just close to there, 1,000 feet and not found it -- 872 feet in sandstone and not found it.

Out in Ohio today, all the wells in the Akron-Kent-area that have been drilled in the last 20 years are a gold mine for the well drillers. They are working night and day, Sundays and every other day. Why? Because the huge housing developments that have come in without any waterworks or sewerage, they have put down a terrific number of wells. Well, the people who have built houses and have been there 20 years or more, they have to redrill their wells 45 to 60 feet deeper to get water. It's happening all over and there is no use in talking about water for one city. the entire runoff in the watershed.

Wisconsin wants the Metropolitan District of Chicago to pump 970 million gallons a day over the Fox River Divide. Ah, but wait a minute! When you start to take that much water out of the Great Lakes, you will find there is a Canadian United States Treaty regulating the amount of water that can be removed. You're not going to do it by hit-and-miss real estate developments in individual towns or cities. It can only be done by watersheds, and watersheds run over states and county boundaries and national boundaries.

[Audience comment but inaudible] That's part of it. That would bring additional water into the Great Lakes -- the excess water of the Peace and the Athabasca into the North Saskatchewan, the North Saskatchewan into the South Saskatchewan, into the Qu'Appelle Valley into the Missouri. In other words, the Missouri flow is nothing. If you attempted to dump that much water into the Missouri, you had better do a job of designing or you'll have a new Missouri River. The Canadians out there are howling for water in the Prairie Provinces. Remember, if you go out to play football, you have to take your drinking water with you. Just outside of Moose Jaw and other places, you wash your face in the water and then you save that to wash your socks. So, they need water and they'll have to go a distance for water. And they're going to think in terms, what -- small terms? No, vast terms,

MEMBERSHIP MEETING  
HOWARD SCOTT, CANADA

SOMETIME IN 1955

because they have to go the distances to get the water. And when they get it, as the Dominion Resource Board said to the Bureau of Reclamation of the U.S. Engineers Corps and the U.S.G.S. Survey, well, what are you doing? You're thinking of the Missouri in terms as your river. We'll have to bring water from the Peace and the North Saskatchewan. They said, now, you're not advocating that crazy Technocracy scheme, are you? The Chief of the U.S. Engineer delegation said, "You'd better look at that Canadian's wrist." He had one of these. And they did design the dam on the elbow exactly to the elevation above sea level required by this design.

In other words, there are people thinking. What you've got to do is solve their problems.

Now there are a lot of things you can throw at me. Just state it.

WHAT ABOUT THIS CONFERENCE JUST FINISHED BETWEEN THE ROMAN CATHOLIC PREMIER OF CANADA AND THE ROMAN CATHOLIC EL PRESIDENTE OF MEXICO AND THE NOMINALLY PROTESTANT UNITED STATES GOVERNMENT?

Well, it wouldn't make any difference if they were Hindus and Mohammedans in the existing setup, would it? Not a bit.

, he's almost 70, if I remember correctly, a French-Canadian attorney, isn't he? Naturally. And what's-his-name from Mexico [MARTINEZ?] -- yes, that Martinez isn't cognizant. The last one with any vision in there was . Of course, if comes back as Presidente, I give you fair warning. [HIS POLITICAL STRENGTH IS INCREASING.] Yes, all at once it will be so again, if it happens. Not that I want to take part in Mexican politics.

HOW LONG CAN WE GO ON BUILDING UP OUR SURPLUSES AND MAKING PROMISES TO THE GOVERNMENTS LIKE MEXICO SO THAT IT WILL NOT INTERFERE WITH THEIR ECONOMY?

Well, that's questionable. You can pile up surpluses and credit to fantastic heights. The chief thing here that we have to understand is that this process--this economy of ours -- is a combination of laissez faire and a semi-managed economy, in which the administration and the dominant business interests are using

credit amplification -- not monetary inflation -- credit amplification. You thereby change the physical process by wiping out the obsolescent plants and installing new ones with the taxpayers' money -- the taxes they will have paid. That's the beautiful part about it. The end point comes when you get enough new plants in -- now don't think that General Motors has any vision or Ford or any of the rest of them -- they've got a balance sheet vision -- because you can design an engine block plant today that would produce 20,000 blocks a day. That's the minimum you can build it for -- you cannot build it for less. You must build it for 20,000 blocks a day with a total of 16 employees in the 24 hours, and it will produce the blocks -- finished -- for less than .0001 tolerance -- doesn't have to be bored or any metal removed at all. Wait a minute! How many plants does it require for the automobile replacements? could you have three such plants? could you have two? [IF YOU HAD TWO MODELS, WOULD IT TAKE TWO PLANTS TO RUN IT?] No, you could run them all in the same plant even if you had a half dozen models. That wouldn't make any difference -- that's just a mold form.

That's the trend for our plants in United States today. They have \$3,500,000 worth of equipment per employee. The only reason that there are any employees in the plant is because that corporation doesn't have complete control of its gathering and final distribution. If it had, it wouldn't have any employees.

The only place to put surplus capital today in United States is selling the obsolescent equipment of United States short. Am I making myself clear? Sell it short, and the shorter you sell it, the new equipment will have to what? Have a capital payoff faster than ever before in history, will it not, and it will pay you back faster than ever before and you will have less and less places to put it sooner and sooner.

Now, here's our highway system that we had models of 20 years ago -- three-lane, unidirectional, frequency control. What do you have? The electric light industry of the United States publishing full-page advertisements of it in THE SATURDAY EVENING POST and in COLLIER'S, and now, to add insult to injury, General Motors has a model of it, and it's going to tour the country with it in its Motorama. I believe I have priority rights, do I not? We had models running around in Section windows over 20 years ago. As I told the Executive Vice President of one of our largest

MEMBERSHIP MEETING  
HOWARD SCOTT, CANADA

SOMETIME IN 1955

automotive corporations in Detroit, "I don't mind your advocating it, but I do object to you throwing my own spitballs back in my face and claiming they are original on your part."

They are where they are using the word "Technocracy" with a capital "T" in advertising automation.

HOW LONG WILL IT TAKE TO DISSIPATE THE NATURAL RESOURCES IN VENEZUELA -- ITS IRON ORE DEPOSITS?

Well, to give you an example. We have been using the figures of 300 barrels of oil per well per day for Venezuela. They were correct in 1950. There are 146 per well per day in Venezuela today -- a 50% decline in 5 years. And your greatest repressuring station in the world -- the greatest gas turbine -- is built by and will pump millions of feet of gas a day into repressuring the in the hopes of sustaining its life a little longer. In other words, Venezuela has passed its peak, passed the point of inflection, and is going down. There's a big discussion on in Venezuela these days -- whether to open it wide for exploitation and the devil take the hindmost or whether to stop it. Have any of you read the NEW YORK TIMES a couple of weeks ago? [WHERE THEY HAD TAKEN THE TECHNOCRATIC PATH?] Yes, that's a 2-1/2 hour interview, ladies and gentlemen, given by the Minister of the Interior -- we only get a small portion of it, but we'll get the transcript. And they're worried about where they're going, and they're not going the right way and they know it. So he didn't like Thomas Jefferson and he doesn't like democracy. He didn't mention my name as irrelevant and immaterial. He didn't like Thorstein Veblen. [HE USED THE WORD "TECHNOCRACY"] Yes, he used it several times.

THIS COUNTRY GREW FROM THE START AND PEOPLE IN IT .... DON'T YOU THINK THAT ALONG WITH THE GROWTH OF EMPIRE IN THE UNITED STATES THE INTELLIGENCE OF THE PEOPLE HAS GROWN, TOO, AND THAT INDIVIDUALS ARE MORE KEENLY AWARE OF THE WASTE AND MISMANAGEMENT .... THEY HAVE HAD EXPERIENCE AND GUIDANCE AND TRAINING AND A LOT OF PEOPLE KNOW THE PAST -- THAT NOW THERE IS MORE OF THAT TYPE OF PEOPLE AROUND AND THAT SOMETHING IS MORE APT TO HAPPEN FOR THE BETTER OF THE COUNTRY THAN CONTINUE TO DECLINE. DO YOU THINK THE ADVANCEMENT OF PERSONAL KNOWLEDGE AND THE TRAINING HAS INCREASED IN CAPACITY TO CORRECT THE PROBLEMS OR TO ACKNOWLEDGE THEM?

Well, not necessarily. I mean individual knowledge is one thing and collective knowledge is an entirely different thing. In other words, you can photograph and study the bounding movement of molecules in a gas for the next hundred years, and all of the observations that you make about the behavior of a molecule will teach you nothing about the next most probable state about gas. Who am I quoting? The great physicist and mathematician, Henri . . . And the same thing occurs socially. We have built over 10 million houses in the suburbs since the war. We moved approximately 40 million out into the suburbs, and what's the curse? Sameness, conformity; in other words, we are wondering why we can't train scientists, technologists, and engineers, and why Russia has trained . . . The reason is the mores of the community that were set up. And Britain is cursed with the same thing. Your leftist party, your radical party, what? Opens its meetings with prayer and sings hymns, and you have Attlee looking like a drowned rat . . . The idea is here -- look at the Socialist Party. The Socialist Party had hundreds of thousands of loyal, sincere individuals in it that gave everything they had, and their leadership was sentimental, was personal, and subjective and dissipated it.

Now, talk about leadership of the right -- you've got reaction and fascism -- that's what you have down in the United States today. Leadership of the left? They've been carried up just as the background of the British Labor Party stems from what? From the revolutionary background of thinking? No, not at all. It stems from Murray . . . and what? A John Ruskin, a Robert Owen -- they all wanted to do good, didn't they? They nationalized the Bank of England, they took over the defunct coal industry. If they had wanted coal, they could have bought it for four cents on the dollar. If they wanted to nationalize something, nationalize the Imperial British Chemical, Unilever Brothers, and a few more, but for heaven's sakes, don't make the mistake the Canadians did at . . . when the Grand Trunk Pacific and Canadian Northern went into bankruptcy. Four banks in Canada were involved and the Canadian Government steps in to rescue the four banks, and you have all these millions of dollars of bonds when they could have got it at four cents on the dollar.

Now, what kind of strategic leadership is that? What's a moralist or a puritan? He's really a . . . without the courage

MEMBERSHIP MEETING  
HOWARD SCOTT, CANADA

SOMETIME IN 1955

of his convictions. They haven't the vision; they haven't the sense.

[SOMEONE TALKING ABOUT CAR GENERATORS BUT MOSTLY CANNOT BE UNDERSTOOD] HE SAID THESE VARIOUS MOTOR COMPANIES, ALMOST BY DESIGN, WILL PUT OUT A HALF DOZEN DIFFERENT GENERATORS OR SOMETIMES FOR THE SAME CAR, AND THEN HE PULLED OUT A CHRYSLER BOOK AND SAID THAT IN 1953, THE CRYSLER LINE IN THE COURSE OF ONE YEAR HAD FIVE DIFFERENT GENERATORS, YOU HAVE TO SHOP AROUND TO GET THE PARTICULAR THING . IF THEY HAVEN'T GOT A GENERATOR OF INPUT-OUTPUT FOR ALL THE THINGS STANDARDIZED. I SAID TO HIM, "MY GOD, WHAT A WASTE THAT IS." HE SAID, "DON'T I KNOW IT!" AND HE'S A MECHANIC. SO I HAVE TO GO BACK TO MY 90,000-MILE JALOPY. SO THEN I HAD AN IDEA I WOULD LIKE A PROPER UNIT FOR AN OIL FILTER -- IT HAPPENED TO BE AN UNUSUAL OIL FILTER, A LITTLE DIFFERENT SIZE, AND I WENT TO VARIOUS PLACES, AND I FOUND SHEET AFTER SHEET OF AN INCREDIBLE VARIETY OF NUMBER OF SIZES OF OIL FILTERS, INCLUDING AUTOMOBILES, AN INFINITE VARIETY, AND SO A COUPLE OF THESE PERSONS I TALKED TO SAID, "DON'T THINK WE DON'T KNOW IT. WHAT DO YOU THINK IT IS FOR US TO HAVE TO HAVE AN INVENTORY JUST TO TAKE CARE OF 18 DIFFERENT SIZES"

THERE IS, IN A VERY SMALL WAY, THE NOTION AMONG THESE PERSONS THAT ONE KIND OF THING IS WRONG, THAT THE ENORMOUS AMOUNT OF WASTE IN THESE MINOR DETAILS WHICH MAKES IT QUITE HARD. THEY ARE AWARE OF IT AND CAN'T DO ANYTHING ABOUT IT.

You can multiply that thousands of times.

NOW, THIS MAY MAKE ALL OF YOU LAUGH, BUT I AM KIND OF SERIOUS ABOUT IT. IN THE ADVERTISING WORLD, IT SEEMS THAT EVERY COMMERCIAL HAS SOME OUTSPOKEN PHILOSOPHY -- AN ADVERTISING SONG OR SOMETHING LIKE THAT, OR EVEN THIS HERE BISHOP OR CARDINAL FROM BOSTON -- HE'S ON SOME KIND OF A COMMERCIAL. I WAS JUST WONDERING IF WE COULDN'T GET ON SOME KIND OF A COMMERCIAL. WE COULD ADVERTISE BEER OR WHISKEY OR ANYTHING ELSE AS LONG AS YOU COULD GET YOUR POINT ACROSS.

Bill, I was on television in Cleveland.

JUST A MOMENT. DOES THIS YOUNG FELLOW HERE REALIZE THE FACT THAT THERE ARE MILLIONS OF YOUNG MEN JUST LIKE HIM IN THIS

MEMBERSHIP MEETING  
HOWARD SCOTT, CANADA

SOMETIME IN 1955

COUNTRY THAT ARE MORE INTELLIGENT THAN THEIR FOREFATHERS WERE, AND THE ONLY REASON THEY AREN'T ORGANIZED IS BECAUSE WE HAVEN'T GOT A CONCENTRATED BREAK FROM KIDDING THESE PEOPLE, AND I BELIEVE THAT WE COULD MAKE THAT AND IT WOULD COST US DOLLARS TO GET ON, BUT I THINK WE SHOULD TRY IT.

I was interviewed on television out in Cleveland on the Great Lakes Network. Whose program was it? The Shell Oil. The interviewer was quite a famous commentator out there who said, "Well, I didn't expect that answer." Another ten minutes of the interview and she would have had a nervous collapse, and I would have had to carry her off the Cleveland television. Now, I didn't say anything indecent. I wasn't trying to take advantage of the lady.

YOU DIDN'T SAY WHAT YOU WERE SUPPOSED TO.

Well, after all, I have been interviewed by experts up and down and across this continent, you know.

DO YOU THINK THAT AT THIS TIME THERE IS A CHANCE FOR THE PEOPLE TO BECOME JUST LIKE THE GENERAL FEELING IS TOWARD A DECLINING OF THE . I THINK THAT THEY ARE QUITE AWARE OF IT. I HAVE TALKED TO 4 OR 5 PEOPLE, AND THEY HAVE THE SAME ATTITUDE THAT THE COUNTRY IS CAPABLE OF REACHING A HIGH LEVEL. THEY CAN SEE A GREAT FUTURE AS FAR AS WITH OTHER COUNTRIES, ETC. THE FACT THAT OTHER COUNTRIES ARE GROWING FROM NOTHING TO GREAT COUNTRIES IS AN INDICATION. [We're going to have a great future because they are?] THERE IS AN INDICATION THAT PEOPLE CAN BE TAUGHT NEW AND BETTER IDEAS. IF CHINA AND RUSSIA CAN GROW UP FROM NOTHING, WHY CAN'T AMERICA ITSELF TO TRUTH AND A LITTLE ACTION TO  
?

[ANOTHER PERSON] IT SEEMS YOU ARE MISSING A LITTLE THING IN A WAY. THE CONCEPT YOU ARE SETTING FORTH CAN BE ANALOGIZED TO THE CONCEPT THAT REVOLUTION AND EVOLUTION IN THAT IN THE ONE SENSE YOU CAN OVERTURN SOMETHING JUST BY SETTING WHEELS IN MOTION; IN THE OTHER, JUST AS IN THE HALF LIFE OF AN ATOMIC PARTICLE WHEN YOU CAN EITHER HEAT IT OR COOL IT AND STILL NOT CHANGE THE RATE OF DECAY, SO THAT A SOCIAL INSTITUTION HASN'T EVOLVED -- EVEN A TECHNOLOGICAL AND HIGHLY COMPLEX SYSTEM AS WE HAVE. YOU CANNOT CHANGE THIS

MEMBERSHIP MEETING  
HOWARD SCOTT, CANADA

SOMETIME IN 1955

RATE OF EVOLUTION UNLESS YOU CHANGE THE TECHNOLOGY WITHIN IT. SO THE PEOPLE'S THINKING WOULD HAVE TO FOLLOW THIS RATE OF EVOLUTION OF THE SOCIAL SYSTEM, AND I'M AFRAID THAT NOTHING YOU SAY OR DO IS GOING TO HAVE ANY EFFECT AMONGST "THE PEOPLE WHO ARE PROPAGANDIZED, WHICH IS, IN FACT, WHAT IT IS -- WILL GET YOU ANYTHING MORE THAN A GUEST SPOT.

You do find people all across the continent, but they are in the minority

I THINK THAT ANY POSITIVE ACTION

Wait a minute! They want you to run for president. I've had it thrown at me all over the continent.

I THINK THAT ANY POSITIVE ACTION THROWN AT AN INFORMED BODY SETS IT IN MOTION, AND THAT CAUSES A TREND AND THE THING CAN'T BE STOPPED ONCE IT STARTS, AND OVER A LONG PERIOD OF TIME WILL GAIN MOMENTUM.

You can have one thing happen here. You can have a lot of things happen, but just one thing. You have the exhaustion of a major oil field in the United States. Bear in mind that our whole economy has been predicated for the last 50 years on cheap petroleum and cheap automotive transportation. Our real estate values, what? Failure of a major oil field and gasoline would go to 65 cents a gallon seaboard. And now here's the figures from the research department of the Chevrolet Division of General Motors. What are they worried about? Because they are travelling farther and farther every day to go to work, and in many cities, the average mileage in 10 months on a new car is 29,000 miles. Get it? He can trade in that car and another one, but he can't do a third one because there is no equity left, and how are you going to finance it? Brother, they're going to get it next year. Do you understand what I am getting at? In other words, he would still be paying and have no equity in what? Are you going to sell him cars on that basis? You see, they are way ahead of the others publicly, because they are getting the data, and we have pointed that out long ago.

Now, where are you going for copper? Looking for copper has its price. Are you going to save the situation? No, we used our copper up -- we used all our metals -- what do we care? We'll

MEMBERSHIP MEETING  
HOWARD SCOTT, CANADA

SOMETIME IN 1955

turn out 38 billion tin cans or more this year. We'll throw more paper on the dump. The same way with our petroleum; in other words, success is what? The more sales, the more profits. You use it up -- whoopee! What difference does it make?

Now, you're in conflict with the doctrine of success on the one hand and your technological progress over here on the other versus the resource capacity of the area on the world. Now, unless you reconcile that with long-range planning where you have a maximum conservation and -- 73% of the 58 million automobiles going on the road with one person in them. What kind of insanity is it? Only this country has been rich enough to indulge in that kind of insanity, and you won't indulge in it very much longer.

YOU SAID BEFORE THAT WE HAVE THE MEN WITH THE BRAINS AND THAT WE HAVE THE TECHNOLOGICAL SKILL TO OF SCIENCE, AND YET WE ARE BEING SHOWN UP BY COUNTRIES LIKE SWEDEN AND RUSSIA, AND I WAS WONDERING IF IT IS JUST A LACK OF VISION ON THE PART OF ....

The Russians didn't do it and the Swedes didn't do it -- it came from here.

AND YET THEY TOOK ADVANTAGE OF IT, AND WE DIDN'T BECAUSE WE JUST DIDN'T SEE IT.

[ANOTHER QUESTIONER] WHY DIDN'T WE SEE IT -- THE AVERAGE PERSON, FOR EXAMPLE?

Well, the average person isn't running the country.

THE AVERAGE PERSON ACTUALLY HAS ONE DIFFERENCE .... HE GOES OUT AND BUYS A LOAF OF BREAD FOR 12 CENTS. HE CAN'T BUY 4 LOAVES OF BREAD BECAUSE HE HASN'T THE MONEY. SO THE AVERAGE HASN'T GOT THE FINANCES TO PUT IN BIG PROJECTS BUT PERHAPS THEY WOULD TAKE WHAT RESOURCES THEY HAVE FINANCIALLY .... SO THE DIFFERENCE BETWEEN THE AVERAGE PERSON AND HIS CONCEPT AND THE GOVERNMENT AND THEIR CONCEPT .... PHYSICALLY.

Wait a minute! You sit down a minute after that. Never have so few produced so much for so many -- sold for practically

MEMBERSHIP MEETING  
HOWARD SCOTT, CANADA

SOMETIME IN 1955

nothing. Never in history has it happened. We're talking about they can't spend more than they have. We wouldn't have gotten here unless we spent terrific amounts more than we had at the moment. The United States, since 1940, has dumped \$112 billion abroad. \$112 billion -- and what have we got for it? We're being spit in the eye and kicked in the pants all over.

YOU'RE GETTING AN EQUALIZED WORLD.

Equalized?

IT'S A LOT BETTER THAN IT WAS, AS FAR AS EQUALIZATION.  
[REMAINDER IS TOO INAUDIBLE TO TRANSCRIBE]

Let's get one thing clear -- before any process of gestation starts, you have to have conception, right? Conception is, say, relatively simultaneous. Gestation takes a period of time. Only the doesn't take any period of time, or you'd strangle it. Now, what's the great difficulty here? All across the country -- Canada and United States -- the majority of our so-called leaders -- political, social, spiritual, economic -- haven't a damn concept that's later than 1648. And why haven't they? Because they're complacent. Take the United States Steel Corporation. It's made money. It never had to have any concept of a new idea. It was big enough. It has never made a single contribution to the technology of ferrous metallurgy in its existence. Neither has GM to the technology of automotive transportation. Now, so long as that complacency -- in other words, they have the resources, they have the manpower, and they have the market, and with the credit amplification available to them, do you have to think? What re your Boards of Directors doing today? They don't even want a chief engineer or a research department. Why? Because they can go out and employ a string of consultants, and the consultants will give them a report. That is more important than their own firm of research position. They want something that they can pay for as a contract basis, which is a panacea. But for heaven's sake, it's the same way in the army. The way you succeed is by saying NO. .... yes, but a renovation, a complete design, no. ...

CHIEF, ALONG A LITTLE DIFFERENT LINE. IF WE COULD PUT A  
TECHNATE IN NORTH AMERICA, CANADA WOULD JOIN IT, AS I  
UNDERSTAND IT, .... HOW ARE CONDITIONS IN CANAHA TODAY?

MEMBERSHIP MEETING  
HOWARD SCOTT, CANADA

SOMETIME IN 1955

WOULD WE BE READY FOR A CHANGE NOW?

Well, what have you got in Canada? Where is your population? Ninety-seven percent of your population of Canada is less than 200 miles from the border. What's the greatest export Canada has had in the last 50 years? Native-born Canadians, and Canadian audiences have said, "Mr. Scott, is Technocracy proposing to come up here and take over Canada?" We said, "Oh, no, we're not proposing. We're just going to follow the greatest export your country has had in 50 years to come and take their country back."

Now, the same things are working there that are working here. With the plants that are going in, what? Are they employing the people? No. Your farms are getting bigger and your urban centers are growing. And , she's up against it. True, there's \$13 billion of capital -- foreign capital in Canada -- \$11 billion of which is Europe's, and the Canadians are rather indignant. But the same technological factor of work there as here, and the passing of the British Empire -- and it is passing -- because is gone. They will have to get out .... the Middle East and .... and with the passing of the British and other European empires, Canada and the United States have no place to go except this continent -- they've got to come back to this continent and revise their thinking. Their strategy has got to be a reflection of their internal operation and not a dollar expediency. I've talked to audiences all across Canada. I've drawn larger audiences with paid admissions than any Premier of Canada has drawn free. Bear that in mind, and from nice hot weather to thirty below zero, too. There isn't any doubt about it.

Go down to Mexico and Central America -- it's slightly different, but they're with it the same way, but they've got the problem of illiteracy down there more so than you have in Canada, where you are highly literate, and they do more social and political thinking than we do here and are more conscious and more aware.

CHIEF, WHAT ABOUT THE APARTHEID PROBLEM WE'VE GOT IN THE UNITED STATES IN THE SOUTH?

You could grant the negro all rights and privileges and we could desegregate them -- for what? That doesn't solve anything

SOMETIME IN 1955

until you've changed the economic conditions. After all, we introduced the cotton picker in the south. As we told the southern owner of , the liberals, and the radicals, what we were doing to the south, well, until you make labor both black and white -- so costly that they cannot afford to accept them even if they are given free. Then the problems south of the Mason-Dixon Line become the problems of the continent and not south of the Mason-Dixon Line. Desegregation, yes -- you have narrow-minded idiots like Senator Eastland of Mississippi. We entered Mississippi and got what? We got one woman, two brothers, and a superintendent of one of the largest cotton plantations in the world owned completely in Scotland. That's all we got in the whole State of Mississippi, but that, ladies and gentlemen, was enough. Remember FORTUNE'S sneering at us in 1935, publishing the front cover of our magazine with the cotton picker on it -- Howard Scott was using the cotton picker to frighten the American bourgeoisie, and, oh, that they've been tried numerous times in history, so and so and so and so -- and FORTUNE today accepts full-page color ads from six corporations manufacturing the cotton picker. They do not learn. I mean, desegregation was brought up by the Republicans in order to pull the rug from under the Democrats in the south. That's simple. They've done a very good job, but are you going to solve anything? In other words, the southern negro in the white home, whether it's Memphis or in Alabama, why, she drives a negro cook home everyday in her own car. That's considered the thing to do. Well, until we changed the economic conditions, they were coming up here and getting jobs and getting the vote, weren't they? They were playing for the negro vote in what? New York, Philadelphia, Baltimore, Cleveland, Detroit, Chicago -- and if there were 5 million Mohammedans in the United States, we'd kiss Mohammed, and you know it.

Now, we're not opposed to desegregation or is Technocracy. We have negro members. The trouble with the negro in the United States is what? As soon as he gets an education and a little money, he wants to graduate into a black bourgeoisie four times better than the existing white bourgeoisie. I can go down in parts of the south and say what none of you can say and say it tough. Only don't try it if you are a Damn Yankee! I've had them sit down there, rows and rows of them, 250 of them with their guns sticking out of their belts. They weren't going to let me talk. It didn't happen, but they were ready to do it. That's true

MEMBERSHIP MEETING  
HOWARD SCOTT, CANADA

SOMETIME IN 1955

-- it was in Louisiana.

Come on, there are a lot more things you've got on your minds.

WOULD YOU CARE TO MAKE ANY COMMENT ON THE VERY NEAR FUTURE AND WHAT MIGHT HAPPEN? [A FEW MORE COMMENTS THAT WERE INAUDIBLE]

Your administration is going to seek more and more ways of pumping more and more in. Look at your gigantic highway scheme; in other words, you're going to put up so much, then the states are going to put up so much, and they're going to raise the taxes on , etc., etc, and then there are a number of states that are going to add to their gasoline taxes. What's the price of premium gas in Detroit right now, do you know? Thirty-eight cents a gallon. Is it going to stay there? No, because the State of Michigan is going to slap on two cents more. Your wages are going up, your freight rates are going up, your passenger rates are already up. The faster it goes, the better. I've had automotive people speak to me about wages. I said, well, the union asked me which side we're on, and I said neither, because we're in favor of your getting \$5.00 an hour. If you can get \$5.00 an hour, the sooner they'll put in more equipment to put you out where you don't get anything. You go on relief.

Now, you see in this democracy of ours, we're all equal -- except some are more equal than others, and anything we do is all right provided that only a half dozen or a relatively small number of us do it, but when millions and millions start to do it, the system is out of whack.

Now, the highways, what? They jam up. You're putting in sewers -- building big developments out here -- 8-inch pipe. Well, what are you going to run through it -- mice? Because you've no sooner got that installed, and you build up houses, and 8 inches won't carry very much when you've got a couple of bathrooms in each house on each side of the street. It costs a million dollars and a half a 30-year bond issue, and it's only 8-inch pipe!

If you've got a house in the country, for heaven's sake don't go under 6-inch pipe for your drainage .

MEMBERSHIP MEETING  
HOWARD SCOTT, CANADA

SOMETIME IN 1955

TALKING ABOUT WAGES, I WAS AND A DISCUSSION CAME UP, AND HE SAID, WELL, IF WE GET A RAISE IN WAGES OUR STANDARD OF LIVING WILL GO UP, AND I THOUGHT A MINUTE AND SAID IF THE WORKERS DIDN'T GO ON STRIKE OR GET AN INCREASE IN WAGES FOR THE NEXT TEN YEARS, THE PRICE OF COMMODITIES WOULD GO UP ANYWAY. HE SAID, HOW DO YOU FIGURE THAT? I SAID WE'VE GOT A SYSTEM OF EVERYBODY BUYING BONDS. I SAID EVERY TIME YOU BUY STOCK IN A COMPANY, THE PRICE OF THAT STOCK GOES UP, AND IF THAT GOES UP, THEY'LL HAVE TO BRING IT UP TO PAY THE STOCKHOLDERS

Well, I won't go into that, but bear in mind that the United States today is getting their iron ore from where? Ontario, Labrador, Quebec, Newfoundland, Venezuela, Brazil, Chile, Liberia, West Africa, and some more, and Great Britain is importing around 15 million tons of iron ore in order to run and a million tons of coal a month, and for the first time, West Germany is importing coal. Now, copper -- where are we going to get our copper from? One of the greatest producers of all times in Chile has just shut down for the last time. Yes, they are going to open another one 60 miles away. Well, Africa -- copper is coming from abroad. With \$200 million reconstruction finance, the export-import bank to that consortium of the Chile-Braden and Pasco for that property right on the Chilean boundary. That's got .8 of 1% Cu; in other words, it's low grade. Your big developments in Nevada, Arizona, and New Mexico -- they're all low grade.

Now, Bethlehem -- it's spending a few million on Marmora in Eastern Ontario. Iron ore will come down Lake Ontario. You're going down 3,000 feet for a 38% Fe iron ore. We can give it to .you all over the globe. What's happening? Are we going to have cheap iron ore any more? No. Cheap copper? No. Cheap zinc? Lead? No. What's happening internally? You increase your wages, you increase your prices, and, automatically as you mark up the profits -- they are a percentage markup, are they not? -- then your profits increase, but your taxes are also a percentage, so they increase too, do they not? It's a vicious spiral. [AND ALL THE WHILE, AUTOMATION IS CUTTING DOWN PURCHASING POWER.] Not only automation -- technological processes. Automation is only a little minor sequence; in other words, the Gulf Oil in its field today in Louisiana is operating a number of

MEMBERSHIP MEETING  
HOWARD SCOTT, CANADA

SOMETIME IN 1955

pools, but notice that each pool pumps into a centralized source and then pumping out into a main line . They have prime movers at each one of those 14 different places. You have to set up the tanks, you have to select the pumping time and the . The nearest thing to it is 180 miles away. You come in once every four months to take a look at it to see if there are any problems. That is not automation -- that's technological orientation. [THAT'S MURDER] And, brother, don't they know it!

WHAT IS THE POSSIBILITY OF INSTALLING A TECHNATE ON THIS CONTINENT WHEN THE EXPONENTIAL CURVE IS RUNNING CONTINUOUSLY TO ZERO IN OUR NATURAL RESOURCES; IN OTHER WORDS, WILL WE BE ABLE TO ESTABLISH THIS TECHNATE BEFORE OUR RESOURCES ARE DEPLETED?

Well, that isn't quite the question. You see, collectively no people in history have ever moved by cogitation or persuasion or education; individually, yes, but collectively, no. Can we permit it to become [legislation?]; in other words, this country or any other country enjoying the bourgeois prosperity that we have are not going to move until one part of our anatomy is shoved so close to our ears that our breath smells bad. Have we ever had any cohesion here over the years? The consolidation of the CIO-AFL -- that's a retreat. That's a defensive measure. That's not an advance. That's the same kind of strategic error that the British Labor Party made, that you can convert people. Here they're not going to be converted. Here, the top echelon -- yes, they're big shots in the Board room, the manager or director's office or the laboratory, they are. And until the moment they drive up the driveway into their house, and then they become what? The reason there are more horses' rear ends than there are horses' front ends

[A LOT OF INAUDIBLE DISCUSSION]

SOON THE OTHER COUNTRIES OF THE WORLD WILL BE EXPLOITED FOR THEIR RESOURCES. WHAT'S GOING TO HAPPEN WHEN THEY START TO USE ENERGY AND WANT TO USE THEIR RESOURCES ?

Stop and think a moment, because I'm going to throw something at you. United States today is consuming 52% of the world's production of nonreplaceable resources. Fifty-two percent

MEMBERSHIP MEETING  
HOWARD SCOTT, CANADA

SOMETIME IN 1955

of the world -- 6% of the population, and if we continue at this rate, unrestricted, we will consume almost 80% of the nonreplaceable resources of the globe by 1970 -- not far away. Stop and think for a moment. It would be cheap for the rest of the world to pay 200 million dead to annihilate us. Wouldn't it? It would be cheap if it cost the rest of the world 200 million dead to eliminate us. That idea is coming up in Britain and Europe today and around the rest of the world; in other words, if you don't stop this thing from going, there will be nothing left for the rest of them. So don't look towards heaven or to the hereafter. What was it the fellow said to the girl when he had her out on a date? If you're not here after what I'm here after, you'll be by yourself hereafter. In other words, on the international scene, never has a major country in history had such a collection of malnutrition nations for its allies around the globe. How are you going to hold them up?

[SOME QUESTION ABOUT FLIGHTS TO OTHER PLANETS ----]

you have this x-1 and that kind of stuff, you know. And what are they doing? They have space ships going to Mars and other places to get iron ore, don't they? Well, you don't have to go off this earth. I can show you where there are excellent ore bodies. One of the richest copper deposits of the world -- the specimens were on exhibit for a hundred and how many years at the South Kensington Museum in London, England -- 46% Cu . Are you going to take it out with private enterprise? No, baby, you are not. Why? Because it lies on Coronation Gulf. Edmonton in Canada today are in a crazy stock scheme, because the richest samples of lead in the world -- 82% lead -- are on exhibit on Athabasca Avenue. Where is it from? Coronation Gulf. And the Mayor of Calgary and all the public officials are advocating that the Canadian Government build a railroad from Calgary and Edmonton north to the Coronation Gulf at Canada's expense. Where is Coronation Gulf? [AT THE ARCTIC CIRCLE] Slightly. [COPPER FEVER IN CANADA IS EVEN OVERSHADOWING URANIUM] Yes, but you've got a big copper uranium in Northwestern Quebec here, but the rich samples are only 1.98% copper.

DOESN'T THE DEW LINE GO ACROSS THERE?

Yes, it certainly does, but that isn't the important thing. If we could put a (barrage?) across here which stops the

HOWARD SCOTT, CANADA

SOMETIME IN 1955

from coming in here, over on the other side of the gorge between            and the Russian mainland, there's a channel there where the cold            current            comes down and that's what freezes up your ports of Vladivostok and others. The maximum depth is only about 26 feet. Most of it, of course, is only about 11 to 12. You could fill that in very simply, and then cold current would go all around Japan,

Now, if you are talking about something for the Near East, why doesn't the United States propose to put two twin tubes below the Mediterranean level, bring them through, and build a powerhouse at minus 1,250 on the Dead Sea, generate about 3 million kW, and there would be the largest chemical plant in the world, the largest magnesium, the largest bromine, and the largest iodine plant in the world.

END OF TAPE

PUBLIC LECTURE  
HOTEL SHERMAN, CHICAGO, ILLINOIS  
3-15-56  
HOWARD SCOTT

It is interesting to travel across this continent of ours and realize that we as a voluntary organization, nonpolitical, nonsectarian, nonprofit, we may have a little audience here -- we call this a small audience -- but we also run paid admissions of 4-8,000, you know, so don't let that fool you. In Canada, we draw bigger paid admissions than any Premier of Canada has ever drawn. Quite an interesting thing, isn't it? Prime Minister McKenzie King started out to follow us west, and we had 4,673 in the Winnipeg Auditorium the same night as he had 216 in the Manitoba Club. When he arrived in Saskatoon going west, he gave up.

Now, it is bard to explain how an organization such as this, without subsidies, without angels, without advertising, has kept going in this country of ours and on this continent in spite of the opposition, in spite of the attempted sabotage and bribery, and, believe me, there has been plenty of it, and yet here we are spread out across this continent from Hawaii to Nova Scotia, from Venezuela to the Far North. The insignia of Technocracy is known. We have official painted cars in Mexico, Panama, and Guatemala. We have them in Hawaii, we have them in Alaska, and there are fleets in Canada.

Now, remember that all of this is done voluntarily, without any hope of reward, without any promise of political office. Technocracy, years ago, made the statement that we will never use bullets or ballots. We are not interested in , and we have been attacked for that reason. In other words, we have been attacked by the press for not assuming political responsibility because we have criticized the voting public for voting for the stupid nonsense they vote for. We were the first to attack fascism, and we brought out all the facts on the shipments of scrap steel and oil to Japan, to Italy, and Germany back when the Japanese officers on the Japanese boats in Long Beach, California, sneered and said, "Ah, see, when they come back to you, they won't be bouquets!" Do you remember my phrase which has gone nation and worldwide? "Mrs. America," what? What did I say? "When your son is killed with a 6th Avenue El, a Ford rear end, or a Pennsylvania coal car, don't, because it's coming to you." And when was that? That was before even Roosevelt was elected.

Let's go back a little in history. This organization is unique; namely, that we are more left in a political sense and a revolutionary sense than any organization in history. We are so far to the left that Communism is considered by us to be so far to the right that it is bourgeois. Let's get this. Communism is revolutionary enough in the backward lands of the world, but is totally incapable of going anyplace here, because it will take something far more revolutionary than Communism and far, far tougher than any Fascism.

What do you find, reviewing the American scene? Back before World War I, the Socialist Party of United States gained its greatest number of votes when Eugene V. Debs ran for president. Well, fighting Bob LaFollette gained four times as many votes running on the progressive Issue, didn't he? And the Socialist Party has declined since that time. Your Socialist Labor Party is a dried up little attrition. One after another, the so-called radical left -- now, remember, that Technocracy is not deprecating these people, it's regretting the fact that thousands and thousands of Americans spent their time, their money, and their loyalty on a sincere but misgotten, misdirected effort.

You look at the Labor Party in Great Britain, and what? The saddest thing -- I wish I had the photograph here of Attlee shrouding himself up in his Lord's robes like a wet comforter -- the summation of 35 years of leadership in the British Labor Party. And you say, well, how does it happen? How does it happen? Well, what was the background of the British Labor Party? Did they stand for any revolutionary concepts? No, they did not. They came out of Ruskin, out of Wesley, and of Robert Owen. They were revisionists, reclaimants, do-gooders. They opened their meetings with prayers and they sing hymns. What in hell kind of a movement is it? Now, they were honest, they were sincere, and one of the first things they did was to take over the defunct coal mining industry of Britain. What should they have done? It was bankrupt. Let it go bankrupt and buy it in for four cents on the dollar. You had the same thing happen in Canada with what? The Canadian Northern and the Grand Trunk Pacific. It could have gone under. Of course, three or four banks could have gone under, too. And the Canadian Government could have bought it for ten cents on the dollar. No, you had to rescue it in Canada. The same thing as the British Labor Party had to rescue what? The owners of the coal-producing properties that were already defunct and obsolete.

So here they try to put in their welfare state. If they had let it go its natural course, instead of nationalizing the coal mines, if they had nationalized the Imperial British Chemical, the Lever Brothers, and the British Petroleum, the Anglo Iranian, they would have nationalized something. But, no, they got magnanimous, they wanted to do good. Well, look out for people who want to do good, because they will always do you good properly.

What's the history of this organization? We have been trying to demonstrate to the public of this country that a new era -- that we're on the verge of it, we're on the threshold, and that science and technology are the precursors of social change. Over 20 years ago, I went down into the south -- the deep south, Mississippi, Louisiana, Arkansas, and Alabama -- to introduce what? The cotton picker. Did you ever hear of it? Yes, I spoke to audiences in Clarksdale, Jackson, Hattiesburg, Natchez, and Memphis, where I had 250 men sitting in the front row with guns in their belts. No, sir, you weren't goin' to introduce no such contraption down here, not ovah our dead bodies! What did re get? We got 3 in the entire State of Mississippi, one a woman, one a foreign corporation owned in Scotland and Great Britain, and two brothers -- that's all we got in the entire State of Mississippi. Henry Luce in his FORTUNE MAGAZINE reproduced the front cover of Technocracy's magazine that Technocracy and Howard Scott are using the cotton picker to frighten the bourgeoisie of the United States. What year was that? It was over 20 years ago, ladies and gentlemen, and now FORTUNE MAGAZINE is accepting full-page color ads from six corporations manufacturing cotton pickers. At that time the liberals, the intellectuals, the radicals of this country were saying, "What are you people trying to do? Why don't you advocate this-and-that in the south?" I said, why don't you get some perspective and some vision -- until you introduce the technological equipment in that area to where you make any labor, black or white, unprofitable -- as we told the southerners then, your problem south of the Mason-Dixon Line, you have got to introduce the technological wherewithal to where your problems become not south of the Mason-Dixon Line but that of the entire continent.

And what have you got in Chicago? Who forced the migration up here. They increased 80%, did they not, in the last census

period in the Chicago area. Am I not correct? But it has also happened in St. Louis, Baltimore, and Washington -- clean across the country. We were responsible for the introduction of the sugar cane harvester and the cotton picker. Ever hear of the heat pump? Well, they are making it, aren't they? Westinghouse, Chrysler, and all the rest? When did we introduce it? Twenty years ago -- 21 years ago.

I have a special reason for bringing all of this up, because we're going to hand you something this evening.

We've had our battles. Nobody in the organization makes money, and whether it's the Director-in-Chief or whether it is a stenographer, realize this -- they all get the same amount. There are no expenses paid except when on tour, and if any of you want to come and help us at \$35 a week before taxes, we'd love it. I just want to show you that it's a battle. Don't kid yourself that it isn't a battle, because when you start to fight the mores and the big business and the bourgeois of this country, you are in the dirtiest war in history. Don't think it isn't. There's nothing nice, kind or clean about it. They'll put amoebic dysentery in your drinking water enough to kill a regiment. I am not talking out of my hat; I'm talking out of the book. They handed it to me, and I had hemorrhages. The Transportation Club of New York -- it was in my drinking water. Nice, kind people, aren't they?

It's difficult for people to realize on the ordinary job. After all, if I pursued a few discoveries and inventions and draw on the royalties, lived out in the suburbs and played a game or two of golf a week, I'd have been like Ikie, wouldn't I? That would have been all right. You have a university here -- the University of Chicago -- and their Department of Economics and Sociology hate our guts. They really do. They're going to hate us more, brother, and in very short order! They think that because we didn't cater to the academician and the intellectual -- we had enough scientists, we had enough engineers, and we went out and approached the continent -- we got miners in the far north, we got farmers. We'd rather have thousands of individuals -- just ordinary human beings. If they'll stick, then you've got something. You don't make a movement out of vice presidents, ladies and gentlemen -- for heaven's sakes, realize it. And as for the education profession of the United States, they're in a

pretty sad position, because the trustees are what? Are business chiselers in their districts. And the unfortunate educational profession are really the great third American sex, because they never can make up their minds to which sex they belong; because the only way they can live is in another town under an assumed name. And you know it and I know it. I can give you names and dates.

So, here we are -- Technocracy as a social organization, has been responsible for more technological innovation and introduction than any other organization in history. Now, it sounds like a boast, but we're [there] to prove it. We've got a lot more things coming up -- multipleheaded wheat, continuous process in steel and metals, high pressure extrusion -- you can go on. Have many of you have seen the full-page ads in SATURDAY EVENING POST and COLLIER'S of the three-lane unidirectional highway? Well, but Technocracy had models of cars and trucks in windows how long ago? Twenty years ago. Who introduced the first patents on them? Well, the patents have run out. It's very nice of General Motors -- they are now going to tour the country with its Motorama, advocating a three-lane, unidirectional, frequency-controlled highway. That's very nice. I've just been in a conference in New York, and I said, "Gentlemen, of course, legally we can't collect anything from you now, but I object to you throwing my spitballs back at me!" We have photographs of it -- there isn't any question of it. We had priority. We were recognized abroad for it -- the Swedes, the Swiss, the Russians, the Germans, the British, the Indians -- only in our own country.

So few people who have studied economics -- those who have developed a preference for Marx and the Socialist school -- after all they think if you have an expropriation of the capitalistic producing class, a legal, political expropriation millenia arrives. You arrive at nothing of the kind. You can expropriate the ownership of all the automobiles in United States tonight and they could all be publicly owned. Now, the Socialists in Britain and other places have found it out. We, long ago, have said that the legal expropriation of the means of production is only a minor factor -- that unless you alter the load factor of operation, the legal expropriation is a gesture in a gale wind. But no, they have to learn the hard way.

We're up against something here that you need. We're face-

to-face with the greatest so-called prosperity the world has ever seen, due to what? Not primarily to business. You had the same laws of interest when? at least back in the time of Hammurabi, 1500 B.C., but it's due to technology. For thousands of years, under human toil and hand tools, the annual increment was so low that you couldn't amortize out the principal and interest of any major debt under a hundred years. It took you almost 60 years to catch up to the interest. Therefore, you could only reinvest, ladies and gentlemen, your original capital once in a century. No wonder in 6,000 years, you never could get anywhere. No matter if they were all Christians, or all Mohammedans, or all Shinto, it wouldn't make 1/10 of 1% difference. Let's quit kidding ourselves. Until you alter the energy conversion and the load factor rate, you've done nothing. You can pass all the laws until you're blue in the face. You can swallow all the wafers of communion until you choke to death. I'm not meaning any disrespect -- believe what you like, but don't try to kid yourselves that you're going to go anywhere in the operation of any large geographical area of this globe surface and alter their standard of living by legislation, human toil and hand tools, and philosophical morals. It cannot be done.

Now, we have today in United States, what? What has happened? What has altered the rate of capital payoff or the rate of reinvestment? Instead of once in a century which existed for 4,000 years, we have equipment in these United States today that, if operated at 75% of capacity or greater, will amortize out its principal and interest in 5-1/4 weeks or a reinvestment rate of 964 times in a century. Going, going, gone! Remember the old herpicide ad in the barber shop? When you get that fast a capital reinvestment rate, what is left for capital? There is only one thing it can do: Invest in selling its own. obsolescence short. It's the only thing open to it. We have a few applications in United States where the total investment in equipment -- not in lines -- is \$3,400,000 worth of equipment per employee. Where are you going with it? The only reason that there are any employees left in those several plants is because they haven't, under this present political-econanic system, complete control of their gathering and complete control of their disposal. If they had, you could operate it by remote control from Florida.

Members of Technocracy have developed the world's highest pressure process -- 78,000 tons. I don't know whether you know

what that means or not. What that means is that you can take stainless steel and shove it out like macaroni. I've been fighting with a number of our technically trained scientists to complete the research on piping high frequency so that you could heat 200 lbs. in a billet -- you pipe the frequency in, you know. So, therefore, you could make a die casting of 200 lbs. in one shot [like that], but you can't do it if you have to heat it outside. It has to be heated instantaneously with high frequency. It has arrived. So, may I point out that the new contract between Reynolds Aluminum and Ford to build two plants side by side in Alabama for 600 million pounds of aluminum -- for what? What do you think it's for? To make hummingbirds? No, to die-cast engine blocks. Do you smell anything coming?

Anybody here in the railroad industry? Anybody work on the railroad? Well, in the last five years, there was a reduction of over 200,000 employees in the railroad industry of the United States. Correct or not? Thank you.

Now, I want to bring out a few long-term trends. You have had a lot of discussion in the last few months about the farm bloc and the plight of the farmers. Poor farmers. There's 21 million of farm population. Thirty years ago, there was about 6,400,000 or better total farms in this country. Now remember that Technocracy for years has been pointing out that the farms would continue to decline in number and increase in size, and that the little farm was on its way out. What, yesterday? No, for years we've been pointing this out. Now, what is the farm situation as of today? There are 4,600,000 farms in United States, hundreds of thousands less farms in United States than there are in Japan. Funny, isn't it? The average size of the farm has increased. There are 100,000 farms in United States, as of January, 1956, that produce 26% of the total agricultural production of United States. Is that clear? 100,000 -- 26% of the total 4,600,000 produce 74% of the entire agricultural production of the United States. So, let's face it. There are over 2,000,000 farms in United States that are doomed to extinction in the next couple of years; and, instead of the 21 million farm population, the total farm population sometime around 1960 will be nearer 9 million than 21 million. And, what the devil will you talk about a farm bloc vote for with 9 million split up over all the country? There won't be any farm bloc. Is that clear?

If we had our projection equipment here from CHQ, we could show you an actual operation where they are planting and fertilizing what? Wheat -- 70 acres of wheat planted and fertilized per hour, with what? With one tractor and one man running and one supply car. Ah, yes, but what does it take to do that? Can you do it on 100 acres? Oh, no. Can you do it on 200 acres? Nope. 400? No, it takes 16,000 acres. Because, after all., that equipment travels at about 5 miles an hour.

And cotton? Remember we promoted the cotton picker. It costs about \$34.90 to hand-pick a bale of cotton -- hand-pick. You can machine-pick it for less than \$5.00 a bale. Your big cotton producers -- one of those that re got in Mississippi -- you can read about it in U.S. NEWS 6 WORLD REPORT, they can produce cotton and make a profit at 7 cents a pound. Can the little family farm of a hundred acres, 200 acres, or 400 acres? No, they cannot. They're going out, whether it's dairy or cotton or wheat or corn, potatoes or what. Well, so is the little store, so is the little manufacturer.

Now, don't let's get sentimental and weep tears about the poor little man. That's what happened to the Populist, the Socialists, the Progressives, and everything else. They started to bemoan the little man. They tried to keep the little farmer on instead of realizing that you never got any change until you got the farmer off that land! Get him out of there, because he never had any ideas about anything so long as he stayed there. Neither does the little store owner or the little manufacturer. You've got to dispossess them in quantity --- not individually. Don't misunderstand me.

So, we're all in favor of the automobile companies mopping up on each other -- the GM and Ford -- Chrysler's going to have a battle to stay in -- the independents only do 3% of the market. The new equipment going in, ladies and gentlemen, will reduce the automotive workers union. In 1955, there were 83,000 less dues-paying members in the steelworkers union of United States than there were in '54, and we produced more steel than ever before.

Go back a little in our history, and there was a day when there were 478 blast furnaces in United States within the memory of those here. There are 201 maximum operating producing twice as

much steel as the 478. In that same time, there were 780,000 coal miners. Today there are only 350,000 coal miners working part-time, and there's 200,000 of those are slated for compulsory retirement. True, they've raised the production rate in coal to the highest in the world -- 8 tons per man per day -- but your new machines coming in do 8 tons per minute. Get that man out of the road -- he's interfering with the progress. He never was any good anyway. But you still have the slavon morality of Christianity that what? If you don't work, the devil must find what? Come on, what's the matter with you -- weren't you brought up in Christian homes? You know it. Yes. And now what? Technology and science are taking that away from you, so you can't even indulge in sin the way you used to.

One after another, these things have gone down in our time. Leon Henderson, who became Price Administrator under the Roosevelt administration -- he was one of our men, remember. Roosevelt grabbed 18 Technocrats and ex-Technocrats on the basis that he was going to get all the brains and the vision and the intelligence. Well, he got sane good men, but it still didn't help save the New Deal. After all, he couldn't use his legs and the other one couldn't use his head. Now you know that. The present one never was a general, but he was the best public relations officer the armed forces of the United States ever had. He's a smoothie. I've said this before and I've written it: That he always shaves a posterior before he kisses it. And do you notice that he always shuffles it off -- the responsibility onto somebody else -- and then when it gets too tough, he pulls the rug out from under the other one? We've had more resignations from this cabinet in record time that we have had in how many other cabinets? You know of any cabinet that ever had. I'm not being anti-Republican, don't misunderstand me. We haven't any preference. We're trying to analyze this thing to show you. Remember that Technocracy predicted that Eisenhower would be nominated before the Republican Convention was held and that he would be elected. Correct? Oh, yes. If we could have got enough people to bet on it, we would have made a lot of money. The trouble is they won't bet with us, because when we came out with something ....

Now, there's a very peculiar illustration of that. The first time I spoke in Canada, I was teasing a Canadian audience, that, after all, they are more intelligent in Canada than they were in

United States, because they have less morons up there than down here, because they have less people, and that the Senators in the United States were elected for a certain term, but in Canada, they were elected for life, and the only way you could get rid of them was an act of God or an accident. After all, you couldn't blame them for what happened because they didn't know how to interpret the Canadian laws because they had no copy of the Canadian Constitution, the British North America Act. The audience .... and the press broke loose -- the insolence, a damn Yankee coming up here to tell us about our political government? Whee-ee-ee! I should be deported. Some of them had enough sense to get on the telephone and call Ottawa, and Ottawa or anybody else didn't have a copy of it. We had found that out from our research because we wanted a photostatic copy, and we had to go to the Archives of the Tower of London. There wasn't any in all Canada. So your newspapers today say wait a minute now -- don't go off the deep end, because you know what they did to us on that Constitution BNA Act. We slaughtered them! They had to take it back. These are simple things.

We, as people, we're delighted, aren't we, all of us, with this lush prosperity -- \$390 billion gross national product -- about \$100 billion deficient in purchasing power. What kind of an economy is it? I don't know whether you realize it or not, but in 1955, United States consumed 38 billion tin containers -- billion, please, not million; 100 billion paper containers; and 8 billion hot dogs. We have finally arrived, haven't we? Isn't it magnefique?

Our tin can production, our automobile production, everything is headed towards the wild blue yonder. The automobile chamber of commerce and the National Automobile Dealers Association are predicting 85 million passenger cars in 1960. Remember this is 1956, is it not? Well, where are you going to get it from? Not that you can't turn them out, don't misunderstand me, because you have the production capacity in the automotive industry between 10 and 12 million passenger cars a year in the United States alone, let alone Canada. Yes, you can produce the cars, but where are you going to get the kitty to feed them. How much oil does the United States produce a day? Some of you know. Do we produce enough to meet our consumption? No. When was the last major oil field in United States discovered? East Texas was the last one, was it not? When was it?

1930. When was spindletop, the great gusher? 1901. We are drilling approximately 57,000 wells a year or better. We are drilling them deeper, average over 4,000 feet -- we may hit 4,500 feet this coming year. The oil industry -- the boys downstairs, a bunch of officers of the oil companies, have been saying, "Well, but you're awfully pessimistic, Mr. Scott. Haven't you got any optimistic note at all?" I said, "Well, you tell me where you're going to get it from." The simple question that caused all this -- I asked then, "What would you do if gasoline goes to 65 cents a gallon seaboard in United States?" Well, that ranch home you've got out there 40 miles out, what's it going to be worth?

These are things that the average American has got to consider. Never mind voting somebody into office. You can vote any idiot you like in there, and it doesn't make a darn bit of difference who you vote in, because these are fundamental problems that have yet to be solved regardless of any Republicans, Democrats, Voodoos, Hottentots, or what. You can evade the responsibility of political office, but you cannot evade this.

We're bringing in over 116,000 barrels a day on the west coast from the far Pacific oil fields. We are going to bring in more and more oil. What's the average production per well per day in United States? Eleven barrels per well. Venezuela was doing 300 barrels per well per day in 1946. What's happened? It's under 150 today. Over in Saudi Arabia -- Kuwait, of course, is the big producer -- about 4,600 to 6,200. Iran, when it was running, 82 wells was the total number of wells ever operated at one time in Iran by the Anglo Iranian -- 10,000 barrels per well per day. Well, you say that's pretty good. Oh, is it? How about Sarazul No. 4 in the Golden Lane? 100,000 barrels per day and it ran 82 million barrels before it went salt. Where are those kind of wells today?

Could you fight a World War III with the iron ore from Mesabi that you took out of it in World War II? No, ladies and gentlemen, that hematite is not there -- we cannot do it.

Your copper? Yes, we're promoting, we're loaning export-import banks -- everything to big copper -- Arizona, Nevada, New Mexico -- these projects and equipment are under way, and what? What kind of a situation is it? All of the copper ore mined in

United States averages less than .8 of 1% copper per ton! They just loaned \$200 million down in Peru to a combination of Chile and Tasco and the others, right on the Chilean border and southern Peru. The workings will be -- the mine starts about 10,000, the town will be at 8,000, the port will be at Ilo. They'll have 634 employees in their refinery at Ilo . Two hundred million of U.S. capital have gone in there. What's the copper content? Less than .8 of 1%! We're running out of zinc, lead, copper, petroleum; in other words, diminishing returns have set in. We're no longer the haves. We're on the edge of being have-nots. And who's responsible for it? Why, the greatest collection of lush hogs in history. Business has looted it. Don't blame anybody else -- don't blame the Russians or the Communists -- because they haven't a damn thing to do with it. Business I More and greater profits! The greatest profits in history.

Now, from the standpoint of operating the General Motors under this system, yes, they are doing the correct thing: they're operating on the profit and loss, balance sheet method. General Motors has never made a single contribution to the technology of automotive transportation. Neither has the United States Steel corporation made a single contribution to the technology of ferrous metallurgy. But, ladies and gentlemen, they both have made billions for their stockholders. Isn't that wonderful? If you only own that much stock, you can have your snoot and all four feet in the greatest gravy trough in history. And what's the trouble today with this public? They're sore because they haven't got two snoots to put in the trough!

You take the State of California where water is something -- where they are up against it -- do you think the public of California -- they should be interested in water. Phooey! They're interested in the television. So, the nice, kind parent buys the kids television, so they can listen and see more idiocy than they did when they couldn't see it. Here's the Feather River Project -- \$1,600,000,000 they are proposing to put in there. A dam on the Feather River will bring the water down the state and tunnel it through. What are you going to do? You've got your water at 900 feet if you put the dam in, and then you'll drop the water down to sea level and use the power from the dam to pump it up again. "What manner of men are these?" Shakespeare said. I won't go into the rest of it, but you know that quotation, or don't you know your Shakespeare?

Everything we do .... we did have the technological leadership of the world. We're losing it, and we're losing it fast. Why are we losing it? Because business and the business-political leadership of this system will not permit intelligent initiative to proceed in any field! This organization designed the flying wing. Ever hear of it? Well, a small one just did 1,132 miles an hour for the speed record of the world, and the big one is coming next.

Officials in Washington asked us some weeks back how the Russians could let loose a thermonuclear device, and we said it was released at 82,000 feet. They said, oh, they used a balloon, and we said, "Oh, that's utter nonsense. It was either taken there by a Bison or a directed missile. You have no control over a balloon." They said, "Could a Bison go that high." "Yes." "Well, have we got planes that go that high?" "Yes, you've got one that is taken up piggyback and then went on [and only had fuel?] -- one." What kind of design have you got?

Now, back in 1924, this organization came out with its continental power transmission of a million to a million-and-a-half volts DC power transmission -- and we're grinning, because the State Department is probably going to accuse me in the next six months -- what's the news? The Swedes have a 26-mile experimental line -- the Russians have a 60-mile, and the Russians have just announced they are going to build a 4,000-mile line on these specifications! My God, what manner of men are these Americans, that you've had it here for 24 years and you allow a bunch of foreigners to take it away from you! I know what? Captain Lord of the Navy was my assistant and I designed as consulting engineer to the State of New York when I drew up the basis for the New York Power Authority -- 1923-24. And we brought Leland Olds in to be Secretary of the New York Power Authority, and years later Roosevelt made him what? Federal Power Administrator, right?

One after another the events are catching up on this country -- are catching up on what? The imbecilic stupidity of the biggest business in the world. Years ago, this organization designed an automobile: four-wheel drive, engine in the rear, no axle, individual wheel torque, Hickman bottom (in other words, smooth like a boat), each wheel being , you could turn

the wheel at 180 degrees -- move it sideways. What do you run it on? Peanut oil, palm oil, crankcase refuse -- anything! You think I am talking out of my hat? No, there's just been an engine over here -- what did it run on in its test? They drained the trucks and the cars of their crankcase and put it in a 10-ton truck, and it drove the 10-ton truck loaded 20 miles on one gallon of crankcase oil. For heaven's sake, what is the automotive industry of this country talking about using liquid cooled motors, carburetors -- my God, they rent out years ago. No sane engineer would design a motor today with a carburetor -- solid injection. Well, I could go on with so many things.

We're trying to show that you can anticipate, that you can lay down what's going to be done next, if you have Technocracy's methods of analysis and social design. What are they doing? They're doing our highways, aren't they? They're doing our power system, but re have a lot more, and they're going to be forced to do those next, whether they like it or not. Is it any wonder that we have a contempt for a Charles "engine" Wilson, or a Charles "electric" Wilson, or any other Wilson -- not as an individual, don't misunderstand; we have nothing but sincere regret as an individual.

What do you expect when you elect people that never had an idea and never will have an idea? They're incapable if you took 50 of them of designing a privy on wheels. Some professor in a great university -- in fact, he was Dean -- got up and objected to that. I shouldn't say such things, but I said, "Very well, Dean, I shall take the wheels off the privy."

Now, we're not trying to be polite -- we're not trying to hurt anyone's feelings -- but we are trying to lay it on the line. If you get upset by it, realize that we have a thousand times more ammunition than any one man can fire at you.

What's going to happen and who is going to do it? Do you think the Republican Party or the Democratic Party are going to solve the question of water? There are over a thousand municipalities in United States that have passed legislation restricting the use of water in United States. They are drilling for wells on the west side of San Joaquin over 2,000 feet in depth and they are not getting it. We have just drilled two oil wells in this country over 20,000 feet in depth, and they didn't

get any oil.

You know, the Greeks considered hope the worst of all human vices. Oh, it's nice to belong to the Rotary Club, the Boy Scouts, and all the rest of it, but, for heaven's sake, quit kidding yourself. What are you going to do with the Great Lakes? Can you take any more water out of Lake Michigan. Come on, can you? Well, you have to get the consent of Canada, haven't you, on the international agreement, haven't you? They stopped you cold on that Chicago drainage, did they not?

This city -- has it anything to be proud of? Has New York or any other big city anything to be proud of? Have we done a job in designing housing? Do you know who has done some of the finest jobs? Who do you think -- come on, tell me. [SCANDANAVIA -- VENEZUELA ] Venezuela has done pretty well -- Cuba -- Brazil (one of your best designers is Brazilian). Now 34-40 stories -- reinforced concrete, not where you have steel structure to hold it up, but your walls hold the load and where you've got your restaurant on top to form a vantage -- they're an excellent designing job. In fact, the premier reinforced concrete designers of the world today are not American, that is, U.S. Americans, they are Americans. Why? You haven't got any latitude; your big corporation won't let you. They're making money out of it.

You'd think the citizens of California would be interested in water. No. What are the citizens of Illinois or New York or Pennsylvania -- the majority -- are they interested in anything? That's the sad part of this cockeyed nonsense. They'll get bullied and beaten into it, but not until they get squeezed to where it really hurts them personally.

Now, we as an organization are appealing to the country. We can't be elected to any kind of office; we do not run candidates. We don't care whether you vote or not, but we do say that if you vote, you ought to get transportation or at least \$2.00 for it. If you are so danged dumb that you don't get anything for it, we don't think you ought to be a member. That's just a good sense of humor.

These are the trends. We have moved almost 40 million human beings out into suburbia in the last 15 years. You are using up valuable land. Now you have reached a point where the extension

of credit is such -- remember you shut it down last year, squeezed in a little, then you had to open it up to 30-year mortgage again -- we were pumping 3 billion a month into housing. Well, what does it take? It takes \$40 billion of the federal government for defense materiel. Now remember there are approximately 3-1/2 million in the armed forces, there are 1,250,000 civilian employees in the defense department -- that's 4 million and three-quarters, there are over 6 million employees in private industry employed in producing the war materiel -- how many does that make? You'll find when you add it all up -- foreign aid and so on -- that it comes to about 14 million Americans employed in doing what? In demonstrating the usefulness of educated imbecility -- erudite as hell!

Since 1940, this country has dumped \$112 billion abroad. Since the war, we have dumped practically half of that or less than half, and what have we got for it? Why, we saved western Europe, didn't we? Wait a while -- wait a while. How are you going to like it if we have to land troops on the Persian Gulf, and believe me, you may have to. And there's going to be some question as to whether the Americans have the morale, because why? The Persian Gulf has heat, has sand, has flies, has filth, but there's no place to go, there's no girls, there's no beer parlors, there's no Paris, no Berlin. What the devil is a division going to do under circumstances like that? They're going to have a nervous breakdown, for heaven's sake, unless we organize and send the girls over from here. Oh, no, no, American soldiers never do anything like that! How many negro babies are there in Great Britain -- the children of those Indian night fighters that came over? All right, how many are there? We know, we can get the facts.

We're a pretty smug, hypocritical bunch.

You all know Grand Coulee. You used to have people come here from all over the world to visit the T.V.A. Back some years ago, I happened to be the one that proposed -- I was down there, you know, in World War I, chief technologist -- and we proposed a dam at Short, Mississippi, and a canal over to where it dumps in the Tombigbee. Then you would have developed more power out of the Tennessee Valley than they now develop out of their dam, because you dump it into the Tombigbee at elevation 151.12 from 468.74, 200-some feet with all that volume. Besides, you'd have a new

exit. The world came here. Now it's going to be slightly different. Why should you come to United States to witness or look at a defeated T.V.A. or a Grand Coulee that has been hamstrung, when you can go to Russia and see four hydroelectric projects that are all greater than Grand Coulee! How do you like it? Kuibyshev, what? 4.7 million kW hours transmitted at 400,000 volts, three-phase AC multiple circuit 600 miles. Oh, I can go on. Do you think they want to cane here when they can go to a place where they can see four? Why, certainly not.

The Russians laid the road into Kabul. The Chinese have just completed a road -- 2,700 miles from , of the greatest highway construction in the world over the roof of the world, with more tunnels and bridges than any highway in all history, and the trucks have rolled in. Our propaganda here was that it wasn't going to be done for another half dozen years; in other words, we have been underestimating our opponents, we've looked down our nose at , and the Burmese and everybody else all over the world. Why? Because they weren't directors of The Standard Oil, the General Motors or the United States Steel, and what a denouement you are in for. It's this kind of thing we are going to face and the question we want you to realize is, where is United States going to get its oil, its copper, its hematite ore, its lead and its zinc, and its water -- not in the next 50, not in the next 25, but in the next 5 years. Are you going to elect more idiots, more individuals, you knew, regular guys like yourself -- you know darn well you don't know and you know he doesn't know either. Let's be frank. Until you get some kind of education, same kind of basis to proceed on, what are you going to do -- by guesswork? Well, you'd get far better results guessing at it and throwing dice than you would voting on it. Thank you.

VOID

Now what happens to the water in the Nile? Right in here is a giant swamp that consumes 60 to 65% of the total runoff of the Nile and has for thousands of years. You're not going to solve it by building something down here, particularly for Egypt. What is Egypt? Egypt is only a strip along each side of the Nile, a few hundred yards wide up here to a few miles, with the densest population per square mile of any country in the world in the delta -- 22 million population. There's nothing in the likes of

Egypt. What do we operate it for? Political bribery -- the only terms we can think of are in dollars. There's your boundary line of Egypt; there's your source of the Nile. There's where your dam should be. Now, she falls out of here on the Ripon Falls into a low lake and she falls over 1,200 feet into this one. Right here just south of Mongola , you'll find Mongola on any African map, there should be a high dam built and a canal go northeast to this tributary and avoid the swamp, and Egypt would get 60% more water than it ever did in all of its 7,000 years of history -- and you'd have deep water navigation from the Mediterranean to Mongola, which is right there. What's the matter with it? We're crazy, aren't re?

Now, wait until you see what the Russians do. They finessed us into doing this -- then they can come back and say to Sudan and the rest of Africa, "Ah, you've ruined the Nile by taking the American money", and they would be correct!

Now any area you want, any resource you want, anyplace in the world -- just hold your hand up and I'll see what I can do for you.

THERE'S CONSIDERABLY MORE TO TECHNOCRACY'S PLAN THAN YOU CAN LEARN IN .....

VOID IN TAPE

They'll go in for any political overture. They'll even support Communism, because, after all, there might be a Commissar, but in this, of course, that wouldn't count. So business isn't likely to support anything except business -- it never has and never will. Your Bourbon never learns and they never forget, realize that. This country of ours has graduated more morons into multimillionaires and the bourgeoisie than all the rest of civilization has done in all of history. It's an achievement to be proud of -- in complete disgust, because it is epitomized only in a solid gold Cadillac. Why get buried with a tombstone? As Ikie said to Abie, "That's an awful funeral. He could afford something. For \$200 more, he could be buried in a Cadillac!" Well, that's this system, and you and your children are riding in it. To be hit by a Ford is an insult -- to be knocked down by a Cadillac is an honor. Go on with you -- you know it. If your daughter goes out with a bum in a Ford, nyaah --

but, if she goes out with a louse in a Cadillac, it's all right.

You're a little too tender yet. I really could hit you with a lot of things.

WHAT ARE THE CHINESE GOING TO USE THEIR NEW HIGHWAY FOR? TO TRANSPORT AMERICAN GOODS?

(From the crowd reaction, Chief was obviously amused). Half of this map is over here. I could only get one half. This is part of your Tibet. Way over in Sinkiang Pass, 2,700 miles, will come out here at Chiang-tu and down to Hanoi. They are building south of now to Darjeeling, and the British military built the military road in India to Darjeeling, and I'll make you a safe bet -- that when that road meets the British military road at Darjeeling, India, at the boundary, it'll make that British military road look like a cowpath.

Here are American contractors -- Morris and Knudsen of Bechtel Afghanistan Corporation objecting to what's going in Kabul right now. Why? Because they are laying the pavement so thick that no private enterprise contractor could do it. What's the idea? Why, it's simple: It's the propaganda of the deed, is it not? And the Russians know it may cost them money, but if they put in something they don't have to touch for 35 years, all Asia will go over it. They'll keep that clean with a whisk broom.

It's simple. No, you're not going to pull American goods over there.

Now up in here, you've got the Ho Hwang-ho, the Yellow River, that curves way up like that, rises away up here right in this lake. The Chinese have just completed the Kiangsu Canal, over 200 miles in length, 420 feet wide, and a few meters deep. A meter is 39.37 inches. It will irrigate 4 million acres of flat land. Eight meters deep would float most of the shipping of the United States, wouldn't it?

Now this kind of construction is going on, whether they are Russians, Chinese, Voodoos, Hottentots, or what they are. Try to realize that technology doesn't care who tramps on the pedal or who pushes the button, provided the design is correct. The Toyota in Japan is coming out with a Japanese duplication, more-or-less,

of the Deutsche Volkswagen. It'll be out when? Before June.

American goods? China is exporting lathes, boring mills, is exhibiting in different shows around the world. You've got different projects on. You have a big uranium atomic up here in the [Kinguang?] Range -- power plant and everything else. You have steel plants, chemical plants under construction. You have a brand new seamless tube plant in China producing 9-1/2 inches ID with thick. You've got to have a steel plant to do that, haven't you? It's likely. Well, they've got their lengths piled up. Somebody says, well, they can make gun barrels out of them. Sure, they can make gun barrels out of them when they are 30-40 feet long.

Now what have you got? You're already running from Peiping to Hanoi way down here in northern Vietnam, express trains. Right here on the edge is Lanchow. From Lanchow they are building a railroad west. You go through Urumchi, the capital of Sinkiang, and will join the Karagon, the double track division of the Russian railroad system at Alma Ata. At that rate, you are going to have what? From Singapore to Moscow.,

Now, we had better wake up. Are there projects on this continent? Yes. Are they comparable in size? Yes. Are some of them larger? Yes. Are we ever going to do it? Only provided the American public gets enough will to lift its posterior up off their apathy. Don't mind my being cynical, because I can throw it at you from any angle.

MR. SCOTT, YOU DON'T VOTE THE TECHNOLOGICAL SYSTEM INTO HISTORY IN WESTERN CIVILIZATION. IN THE ORIENT, THEY DON'T VOTE IT INTO HISTORY. HOW ARE WE GOING TO PROPERLY EXPLOIT TECHNOLOGY AND SCIENCE?

How are we going to exploit the knowledge?

YES, HOW ARE WE GOING TO DO IT? WE DON'T VOTE IT INTO EXISTENCE EITHER IN OUR CULTURE OR IN THAT OF THE ASIATIC CULTURE.

Well, here you have the knowledge in United States and Canada. We have the technological wherewithal, the equipment -- we have it here -- in order to produce anything. We can produce

You see, we have a record to stand on, because we are the only organization that ever protested Grand Coulee. The Bureau of Reclamation had a big exhibit, a relief map, for the tourists to come in, and what did they have? They had one model of the dam, which they put in on the pegs and let water in, and they backed the water up to markers on the Canadian boundary line on the map, and then they said, "There's considerable opposition to this, and there is a proposal for a larger dam," and they would pull up the model of the present one, put in the larger one, and instead of a dam designed for 1,288 elevation above sea level -- that's water level -- 1,420 -- that's our design -- and it would have backed the water up where? Beyond Trail, the City of Trail, not the refineries and smelters and so on -- they would have been under water, but what's the use of that city anyway. The refineries and so on are out -- they're good equipment. Castlegar would have been under water, the Arrow Lakes. It would have backed the water up beyond the Canadian Pacific railroad bridge at Revelstoke, B.C. And you say, so what?

1117

wines, dines hunting parties just like the rest of than, and they propose a dam farther up. Only they make a little better terms -- they will return the dam and all the work in 30 years instead of 50 to the Province of British Columbia. The Dominion Government steps in and says huh, uh, uh, no soap.

Let's now see what the fun is. They have developed a nationalistic attitude in Canada that Canada's resources should be developed for use in Canada. So now they are proposing a dam at Mica Creek beyond which our elevation would have backed it over Mica Creek site at elevation what? At 1400 -- remember ours was 1420, and an 8-mile tunnel under Eagle Mountain into Eagle River and dump the entire thing into Lake Shuswap and then into the South Thompson which runs into the Fraser. They would only let sufficient water to go to Grand Coulee to comply with the legal United States-Canadian Treaty, and all your dams down the Columbia River below Grand Coulee? Who's got vision? Who's got foresight. In other words, you couldn't even put those dams in if you built ours. Am I making the picture clear to you?

Now, you talk about how you are going to get something in. Remember, we protested Boulder Dam to all the associated engineers on the Pacific Coast, and there wasn't a single engineering body on this continent -- no. You had to put the dam in the wrong place, then you have to put it what? The state line has to divide it dead center and you have to have a power house in Nevada and one in Arizona. Why? States rights. Arizona wants its water, so you're going to propose to build another dam, see, in the Colorado, and a power plant, and a second dam way down near \_\_\_\_\_, a reclamation dam, and you're going to transmit the power across here to the second dam and pump up the water -- the Arizona rater -- into the Saratoga Wash, right alongside the Colorado -- and then dig a mainline canal across the whole State of Arizona 200-some feet wide. What's the rate of evaporation in Arizona? Instead of putting it up in Marble Canyon, drilling a 68-mile tunnel, dumping it in the headwaters of the Verde with power, and then you still have it high enough above the Salt River Valley to have pressure irrigation. Oh, no, don't, for heaven's sake, do a job of real designing.

You had a man here several years ago in America -- he developed a new mechanism -- he couldn't get anywheres here. He got the boot! He went abroad -- what? They made him a Knight

Baron and a multimillionaire. What is his name? Ever hear of Sir Hiram Maxim? He was an American.

Somebody came up here and asked me about turbodrilling, didn't you? Dresser Industries -- that's one of the new big consolidations -- had just signed the contract with the Russian Government oil division for the production in the United States, licensed by the Russians, of the Russian turbodrilling. Two models are coming over here, plus Russian engineers. They have had four of the Dresser engineers in Russia for 3-1/2 months. It only operates ten times faster than our best rotary. Well, now wait a minute. That's been proposed here for years, but could you get any corporation here to do the research development? What do you do? Instead of driving 10,000 or 15,000 feet of rotary drill rod all the way down, you've got to pump barium mud anyway, you run it on the mud and the mud runs the turbine right close down to the drill head. You also put chemicals in the mud, which also . So we are going to manufacture it.

Jet engines? This organization proposed a design of ceramic internals and externals -- a motor where you could operate at a temperature of over 3,000. Your efficiency in jet motors is  $T_1T_2$  -- any technologist knows that. What have you got on your Russian Bison. Our planes here have 8 jets. They've only got four and they've got more power and climbed higher. Oh, for heaven's sake. I'm utterly disgusted with it.

Now, you see, we've had this for years. Before the war, Technocracy designed a tank, besides all-purpose guns and everything -- what was the tank? A pancake diesel, fluid drive, 120-mm. long barrel gun with a Schneider compensator and automatic recoil on the . A 9-inch rocket tube and a slot on the back; in other words, you went in the slot and loaded, kicked up out of the slot and fired up over top of the tank. Did we get any recognition from them? Uh... Now when the Stalin tank and the Tiger Mark VII -- we have our top unintelligence in Washington come up to us and say, "Isn't it possible that the Russians got hold of your design?" We said, "Well, certainly, it's possible -- we sent it to you!"

The Chief Medical Officer that was sent out to Guam just before the war started -- the chief medic -- we explained to him that when he went out there how hazardous it might become,

because United States had purchased the Imhaus fuze, which was a German clockwork mechanism, and due to the high rifling, that is, the greater number of turns in our anti-aircraft barrel, it threw the timing out, so that we had to reduce the rifling in our anti-aircraft guns in order to make the Imhaus fuze work. And if they come over there, your acks-acks will be going, but you won't be reaching them and it'll splatter your wounded right on the beach. And he gets to dinner at the Officers Club and he says that, and they said, where did you get that information? He tells them. Well, we're surprised, and what was the remedy. There's an American fuze far better. It was designed on the rotation of the shell rifling, and what happened? He had his wounded out on the beach, and his wounded were splattered and he became a war prisoner in Japan before Doolittle ever flew over. Who am I speaking of? I am speaking of the man, who when in a Japanese war camp with a combination of tin cans and bottles and a scientific knowledge, developed what? The cure for beri-beri. Hang a medal on him? Hell, no!

I mean, these things are known.

Now, what are you going to do? The public you know, all your friends, how much time do they spend on the television? Come on. Come on, how much serious work do they read? There were 800 million books published in 1955, mostly paperback, of course. They published so many they had to burn them by the millions in order to take them off the market.

I'm not trying to explain the social design of Technocracy. I'm trying to get under your skin.

IT WILL HAVE TO GET MUCH WORSE BEFORE THEY LISTEN TO YOU. IT WILL HAVE TO BE SO HOPELESS THAT ....

It isn't hopeless. How many of your friends agree with you?

NONE. ISN'T THAT HOPELESS? NOT ONE.

This gentleman over here asks how you are going to do it if you can't vote it in. You can't even get a consideration out of anybody.

MAYBE REVOLUTION IS THE ANSWER. IT ISN'T VERY CULTURED TO

SUGGEST REVOLUTION, OF COURSE.

No? I'm here to say that it's not going to be done by any Hollywood custard pie, and it's not going to be done by sending you out a postcard by the postman. It isn't going to arrive by American Express.

VOID IN TAPE

.... the man who drives 29,000 miles, not big on me. Is he learning anything? Yes, the hard way. There's going to be others, the hard way. We're just trying to tell you that here is a prescription, here's a consulting organization that has the consulting -- we're not going to put it in. Oh, no. We're the consulting engineers. We invite anybody to come in and help us. Watch and see if we aren't correct. We need your help -- the help of everybody. I'm very much afraid that it may not be so nice. I would like to see it done but I'm afraid it won't. Not when you have a Senator McCarthy and a Dickey Nixon; of course, if Dickey Nixon had enough dogs, he might be able to do something. I am just as irrespective of whether they are Republicans or Democrats or what they are. The attitude of Technocracy on political parties is why distinguish between stinks -- they all smell alike. Don't get me started.

No, the Chinese will not use the highways to transport American goods. You see, they are developing their own technology. The third highest dam -- the Bhakra Dam, is in India. There are three steel plants under construction, and it was the Russian that they offered than. They are only going to build one of a million tons, but then there is a little dirty thing in that, because the Russians are building a completely integrated steel plant of a million tons, plus graphite lining, and they are building an oxygen plant, and then they're going to tell the Indians, "Well, it's a million tons capacity without the oxygen, but you've got the lining -- it's all yours, you can raise it 35%." If any of you know steel, you know what I am talking about.

No. Put it this way -- can you ever imagine the Republican Party ever voting big business out of office? Certainly not. Can you imagine the Democratic Party of United States saving the little farmer? No. What is it you want to do -- go to Christian

Endeavor and pray about it? Now, remember, I'm not deprecating anybody's faith. If they find consolation -- psychologically or spiritually -- by all means, but don't try to run a continent. Keep it where it belongs.

JUVENILE DELINQUENCY IS GETTING FARTHER AWAY AND LESS CONFINED TO THE UNDERPRIVILEGED CHILD. HOW IS THIS TO BE CORRECTED BY A CHANGE IN ECONOMIC OPERATION?

We have had several large riots in Philadelphia in the last six months. We had one with over 3,000, and they tore the windows out in almost two blocks of a giant store. There were several hundred arrested and held under \$2,500 bail each. There were others held in the police station -- hundreds of others until their parents came down and identified them. So the political structure appointed a commission of respectable citizens to investigate this. Well, the first hearing, TV and everything, was very nice, and the second one blew up. Why? Because on the fourth mother and father they hit, they would ask the question, "Are you Henry Taylor?" "Yes." "You're Mrs. Taylor? You're the father and mother of so-and-so and so-and-so? You live at such-and-such an address -- work at so-and-so. You work, Mrs. Taylor." "Oh, yes." That was fine giving data. And then Mrs. Somebody-or-other said, "Well, Mr. and Mrs. So-and-So, that are the father of this boy and girl, give Marjorie \$10 a day and a convertible and give Jimmy \$10 a day and a convertible. How do you expect our children to compete with them." And they followed it with other names. What happened? Bing, your television, your radio, cut like that without any notice whatsoever. The home of the free and the land of what? THE BRAVE. Not so brave.

In other words, your juvenile delinquency is a matter of the mores of this setup. Your emphasis is on what? Success and the dollar. The kids see adults getting away with it -- well, why shouldn't they get away with it? Walk out into any really better class suburb -- you wander around long enough, you'll find a bunch of the nice children; as children have, they'll venture to get into a fight. And here's little Jimmy, about 9-1/2-10, and Bobbie makes some remark about Jimmie's father, and Jimmie, being very fast, hauls off and leads with his left and crosses with his right, and Bobbie goes down right on the nice driveway, and so on. All the respective mommas rush out and grab their respective offspring, and Jimmie's mother drags Jimmie in and says, "Jimmie,

you've got to realize you musn't strike Bobbie." Jimmie says, "But, momma, he called Dad a liar." She says, "It doesn't make any difference, Jimmie, what he calls father. You musn't strike Bobbie." "Buy why, mom?" "Jimmie, you've got to understand that Bobbie's papa is daddy's best customer." Right there, you've made a louse out of every parent in the country.

You know it. It smells. Have you got a minister or a priest across the country that won't say, "Bless you." I can give a good imitation of some of them.

SOMEONE GIVES ME A COMPLIMENT. HOW COME THAT YOU KNOW ALL THE ANSWERS AND EVERYBODY ELSE SEEMS TO KNOW NOTHING.

Well, whoever it was, thank you very much, but we do not know everything nor do we know all the answers. We're trying, and we are neither related to nor dependent upon God or associated with him in any way, shape, or form. God's in his own realm. We're not like Ikie, we don't consult him beforehand and then correct him.

SOMEONE WANTS TO KNOW WHAT HAPPENED TO RAMIE.

Well, ramie is being produced in Florida, China, and other places; of course, your synthetic fibers are much easier to handle. Of course, you could grow ramie with its long fiber all the way north to the Peace River, but who wants any fabric that lasts? The suit I've got on -- how old is it? Looks very presentable, doesn't it? It's 78 merino. In women's wear today, they'll take 10% of this and make a yard of it and charge you \$4.75 a yard. There isn't any textile company that will make it -- they don't want to make it. They say, why should we make it -- we can make ten yards of the ordinary dress goods and sell them at market price. This stuff? I wish I had a thousand yards of it or ten thousand yards, but you would have to build a textile plant in order to make it. When it comes to that, we could make even better with synthetic. Remember the first nylon women's underwear that came out? We had members in the organization that got some of the original, and they still have it. They're going to leave their undies to their grandchildren. That doesn't say that the nylon underwear women are getting now is that. Oh, no.

IN TECHNOCRACY, HOW WOULD CNE GET PURCHASING POWER?

You'd get it as your contract of citizenship. The only way you could be deprived of it is by an act of treason or by leaving this continent. It is nontransferable, nonnegotiable, you can't give it away, you can't steal it, you can't loan it, and you can't borrow it. It is going to be rather difficult, isn't it, to be philanthropic? When you receive your currency, the national cost of operation has already been paid. Now, it's part of a continental cost accounting system, a modified Dewey decimal system. Mathematicians at Columbia University have figured out there's one chance in beating it -- a one in four billion -- in the first 24 hours.

Now, we're not trying to do the same attitude as people now that is punitive to make you steal. We're saying, "Brother, if you can beat it, we'll reward you." Just as Technocracy long ago has pointed out how to stop the dope racket. Establish a federal clinic, fingerprint, photograph, and examination, and you get free -- bear in mind that any racket can operate so long as it distributes 80% of its take -- 80 cents out of every dollar, but the moment it can only distribute 20 cents out of every dollar, there isn't sufficient take to "keep the boys in line." The moment that you have narcotics free, there isn't any "take." Who's against it? Your churches, your medical profession. Like the other day, they were going to put a caesarean birth operation on TV -- when your Catholic church objected, they have withdrawn it. Something born by caesarean isn't a natural birth -- it hasn't any soul, I guess.

Now, we scientists and technologists are going to get you sooner or later. I just want to drop this as an indication of how far things are going. The female of the human species has had the capacity for untold centuries to dissolve the fetus of a conception -- perfectly natural without any deleterious results. That's been known to the scientific world and the medical profession for a long, long time. In all this talk, by Margaret Sanger and the Birth Control League, that's merely voluntary parenthood. It's nonsense. You can't apply it. The scientists have been trying to discover what triggered this physiological, biochemical thing in the human female, and they've found it. You see, you don't realize what this means. It's odorless, colorless, tasteless, and its cost is infinitesimal, and when you dump it in the waterworks of a major urban center, there isn't anything,

two-legged or four-legged, that will conceive. What? Nobody likes it, does he? In other words, you can stop all breeding for five years, or one year, except you drink whiskey or have a spring from which you drink bottled water. Horrible?

MR. SCOTT, LADIES AND GENTLEMEN, I AM FROM JOLIET, ILLINOIS, AND I'VE GOT TO GET IN MY CAR IN A SHORT WHILE AND I WOULD LIKE TO SAY A FEW WORDS ABOUT YOU. I WANT TO LOOK BACK IN RETROSPECT AND SAY A FEW THINGS ABOUT YOU THAT POSSIBLY VERY FEW IN THIS ROOM KNOW ANYTHING ABOUT. I USED TO BE A FOR THE BROTHERHOOD OF RAILROAD TRAINMEN AND A MEMBER OF THE BROTHERHOOD OF RAILROAD TRAINMEN. I HAVE KNOWN YOU SINCE 1935 WHEN YOU APPEARED IN CLEVELAND AND SPOKE TO THE TRAINMEN'S ORGANIZATION.

AND NOW, LADIES AND GENTLEMEN, WHAT IT WANT TO SAY IS THIS: MR. SCOTT TOLD IN 1921 THAI THERE WOULD BE A CRASH BY 1930 IN THE UNITED STATES OF AMERICA. HOW DID HE KNOW IT? HE KNEW IT BY THE UNITS OF ENERGY THAT IT WAS BOUND TO COME, AND IT SURE DID. AND WHAT WAS SAID ABOUT HIM? HE MISSED HIS GUESS -- HE MISSED IT BY TWO MONTHS AND EIGHT DAYS. IT CAME OCTOBER 24, 1929, AND WE HAVE NEVER FULLY RECOVERED FROM THAT THING YET AS OF TODAY. AND WHAT WAS SAID ABOUT IT IN OUR BOOKS? I DON'T THINK THAT ANY OF THEM HAVE THE BOOK THAT I HAVE. IT SAYS IN THAI BOOK, "WHO IS THIS CRACKPOT ENGINEER WHO IS MAKING THIS PREDICTION THAT THIS CRASH IS GOING TO COME?" BUT THE CRASH CAME AS HOWARD SCOTT SAID IT WOULD COME, AND, JUST AS HE IS TALKING TO YOU HERE TONIGHT, IT IS GOING TO COME AGAIN 100 TIMES WORSE THAN IT WAS THEN.

I WANT TO THANK YOU, MR. SCOTT. I HAVE TO GET TO MY CAR AND GO BACK TO JOLIET.

Thank you. Well, that was unexpected. I didn't know anything about it.

[QUESTION RATHER DIFFICULT TO UNDERSTAND, BUT THE ONE SPEAKING SAID HE WAS IN THE MEDICAL PROFESSION]

Are you in the medical profession? YES. A doctor? YES. A doctor of medicine. Are you licensed to practice? YES. Well, then you know the law and you know what has happened on the question of abortions. It's become extremely difficult. In New York, they

are sending you to Switzerland or Cuba and paying the airplane fares, and it's still cheaper than trying to finagle it in the State of New York. But it is also possible if you know half a dozen biochemists in New York to do it without any surgery or without any physical operation whatsoever.

WELL, I HAVE LEARNED SOMETHING I DIDN'T WHEN I CAME IN, BUT IT ISN'T UNIVERSALLY KNOWN.

I know it isn't, sir. In fact, generally when we spring something, it isn't universally known. Then they come and bounce it off us sane years later. Now, what is intriguing us is, is that the Indian Government at Pandinaro is extremely interested scientifically. So are other governments, and it will probably be sane other government than ours that would first utilize that kind of thing in a major control measure.

TO WHAT DEGREE DO YOU IN YOUR THINKING AND YOUR PHILOSOPHY CONCERN YOURSELF WITH THE PROBLEM THAT MANY OTHER PEOPLE ARE TALKING ABOUT WITH GREAT INTENSITY OF POPULATION CONTROL AS A NECESSITY WITH RESPECT TO WORLD RESOURCES?

Resources are limited. Malthus was correct under a human toil and hand tools civilization -- Malthus was correct. It's only when you introduce the factor of energy and technological equipment that Malthus was for the time being . But how much gasoline, oil, and everything else -- let's put it this way to show you what a serious problem it is. What is the percentage of population of United States to world population? Around 6%. Well, United States right now is consuming over 52% of the nonreplaceable resources of this globe with 6% of the population. At the present rate of growth, ladies and gentlemen, in another 15 years, it will be consuming almost 80% of the world's nonreplaceable resources. And, what? It would be cheap -- dirt cheap -- for the rest of the world to sacrifice 200 million dead to annihilate us! Let's face it. Correct? You didn't attack that angle of your birth control, did you?

YOU, I TAKE IT, ARE REFERRING TO OUR CONSUMPTION, AMONG OTHER THINGS, OF RESOURCES WHICH WE DRAW FROM OUTSIDE OUR BORDERS. TO WHAT EXTENT DO YOU THINK IT LIKELY WITHIN THE FORESEEABLE FUTURE THAT SOME OF THESE COUNTRIES THAT ARE DOING THINGS, A LITTLE MORE SMARTLY PERHAPS, A LITTLE MORE

UNCONVENTIONALLY, WILL GO FURTHER AND GIVE UP THE IDEA OF TRADE, THAT IS, THIS BUSINESS OF SELLING GOODS FOR MONEY AND DECIDE TO KEEP THEIR RESOURCES PHYSICALLY FOR THEMSELVES.

They' re already doing it. Why are we sore at Pandinaro -- do you know why? I see you don't. India has the greatest and richest deposits of thorium, and we tried to grab the thorium phosphate in unlimited quantities. Why? Because your best and most efficient reactor is 99% thorium and 1% U-235, although thorium U-232 is not fissionable, but under bombardment, U-235 becomes U-233, does it not? If I'm incorrect, check me. Now, India sat down and said we'll give you a quota allotment of thorium nitrate, you understand, not thorium phosphate, and Brazil followed suit.

The export of iron ore from [Karena], Sweden, is limited by law. This is happening in various places. It is already in. What's Russia doing? Is she selling for dollars? Take the steel plant. Austrian iron ore is a strip, a big mountain. We put in the equipment, modern mining, and everything else in an integrated steel plant. Well, where did they get their coal from? Coal from here cost \$27 a ton for coking coal delivered over there. They are getting it for around \$17 from the Teschan, and their scrap? Where do they get it? From the east. And the Russians refused U.S. dollars. Pay us in finished steel! You see, it's happening in various places.

BARRING THE EVENTUALITY OF A WAR, DO YOU EXPECT A BUSINESS-ECONOMIC CRISIS WITHIN THE NEXT FEW YEARS.

Well, they may have war in the Middle East.

I MEAN A WORLD WAR.

No, not a world war. The only ones that want a war on the part of their economy is United States. Let's get that straight. We have to have war or the threat of war to pump in sufficient credit to hold it up. in United States

LIKE THE FELLOW SAID -- WE NEED RUSSIA FOR OUR PROSPERITY HERE, HUH?

Well, it's the same thing in Italy: if there weren't any

Cannunists in Italy, the Pope would decree that there had to be Communists in order to get aid from the United States. What a lot of suckers we all are!

THESE RESOURCES THAT OTHER NATIONS POSSESS THAT WE SEEM TO BE USING UP GREEDILY FROM THEM, CNE, PARTICULARLY, THAT YOU MENTIONED, THORIUM FROM INDIA GETS ITS VALUE MAINLY BECAUSE OF SOMETHING WE OURSELVES HAVE DEVELOPED, SUCH AS ATOMIC ENERGY, SO THAT IF THE INDIANS DID NOT HAVE ATOMIC ENERGY PREVIOUSLY TO WHAT OUR CULTURE DEVELOPED IT INTO, THEN THEY WOULDN'T BE LOSING ANYTHING UNTIL WE GAVE IT VALUE.

Value is some thing which is a philosophic entity. I'm a scientist, technologist, and engineer, and, frankly, I don't know anything about value. Now, you've got excellent scientists in India -- Dr. and others, and they are building reactors right now.

WE ARE THE ONES THAT DEVELOPED IT IN ORDER TO MAKE IT WHAT IT IS. IT BECOMES AVAILABLE NOW TO OTHER COUNTRIES OF THE WORLD .....

Well, I know, but you are asking me to get into a question of who did what.

TAKE PETROLEUM. THERE WAS A TIME ONCE WHEN PETROLEUM, ONLY A HUNDRED YEARS AGO, WAS CONSIDERED -- THE GASOLINE PRODUCT OF IT WAS CONSIDERED THAT IT WOULDN'T EVEN WORK IN ANYTHING, AND NOW IT IS THE MOST VALUABLE INGREDIENT. THESE THINGS RESULT FROM THE PROGRESS OF A CULTURE AS A WHOLE, SO THAT YOU CAN'T SAY THAT SOMETHING IS A RESOURCE REALLY UNTIL THE PEOPLE MAKE IT INTO A RESOURCE.

Now, wait a minute; in other words, this is metaphysics with a vengeance. In other words, you're not conscious of the brick falling until the brick hits you. Don't spring metaphysics with me. That's what you are involved in. It doesn't make a cent's worth of difference whether there are any people at all in Antarctica -- you have the resources there.

MR. SCOTT, ARE YOU EXPECTING OR IS YOUR ORGANIZATION EXPECTING AN ECONOMIC DEPRESSION IN THE VERY NEAR FUTURE? FROM WHAT I OBSERVE, I HAVE TO AGREE WITH YOU THAT WE HAVE

TO HAVE. THE THREAT OF WAR OR AN ENEMY TO SPEAK OF -- WE HAVE TO HAVE SOME ENEMY IN THE UNITED STATES -- THE NEWSPAPERS OF THE UNITED STATES WOULDN'T PUBLISH IF WE DIDN'T HAVE SOME ENEMY. TODAY RUSSIA IS OUR ENEMY -- TOMORROW RED CHINA IS OUR ENEMY -- THE NEXT DAY IT WILL BE INDIA -- WHO KNOWS WHICH COUNTRY WILL BE NEXT.

We've run out of countries right there.

DO YOU EXPECT AN ECONCMIC BREAKDOWN -- INFLATION OR DEFLATION?

Now try to understand what your situation is today. You do not have to have a 72% catastrophic decline of the Dirty Thirties. An 18-20% leveling off of this expansion of economy will make these Filthy Fifties dirtier than the Dirty Thirties ever were. You've got over \$85 billion of home mortgages. That's the nominal value. Now, on a 30-year basis, you pay \$1,884 for every \$1,000 in nominal mortgage value. That brings your total value of home mortgages -- total payment commitments -- closer to \$140 billion than \$85. You are mortgaging what? More and more future purchasing power to build what? The sweetest collection of junk that anybody was ever visited with.

What you are really doing in this country is you've been contaminated with the doctrine of success. You think, and it's the public generally -- there's no proletariat, there's no working class. You're all aspirants to be chiselers. You don't resent somebody trimming you -- you envy them! You want to go home and do likewise. So, therefore, what is your basic premise: that if you can pile this manure pile, like the oil industry and the API, seven layers higher than it is, it won't smell like manure -- it will smell like Chanel No. 5.

IS IT POSSIBLE THAT RUSSIA HAS FLYING SAUCERS, AND WHY HAS THE UNITED STATES KEPT SUCH A LID ON THEM?

Now, let's don't go into that, because you will be seeing those little men who walked out of the plane down in Mexico.

GRANTING YOUR MAJOR PREMISE THAT WE PEOPLE ON THIS CONTINENT ARE DEPLETING THE VITAL IRREPLACEABLE NATURAL RESOURCES ESSENTIAL TO A TECHNOLOGICAL CIVILIZATION AT SUCH A RAPID

RATE THAT IT WILL SOON REACH A SATURATION POINT, WHAT WILL TECHNOCRACY TAKE OVER?

You are mistaken. Technocracy is not going to take over anything. It is up to the American people. They can take over a mess -- they can take over something else. They can take over something worthwhile, but it is up to them. We're social consultants -- the consulting engineer that draws up the design for a Golden Gate Bridge doesn't fabricate the materials, he doesn't build it, or own it, correct? We have no assumption of power theory. Listen, I've toured this continent, I've spoken to more audiences in more places than any half dozen presidents of the United States. It's a matter of record -- 25-30,000 in a single audience. Well, I know this country. Do you think it would be any compliment to me to have them elect me? For what? To embellish their national morosity? Unless they are going to get the initiative and vitality to have some cohesion themselves.

AND WHAT'S GOING TO BRING THAT ABOUT? ARE WE STUCK WITH IT?

No, you'll have to join and have to form an organization to be something. After all, those of you who joined the Socialist Party years ago -- Eugene V. Debs was sincere, he had courage, there were thousands of them who had courage -- but Eugene V. Debs went to jail for what?

FOR PRINCIPLES -- WHAT HE THOUGHT WAS RIGHT.

Oh, don't go to jail for principles. There are no principles under this system.

WELL, AT THAT TIME THERE MIGHT HAVE BEEN.

No, this system has no principles. They'll cut your throat or anything else. Why did we propose Total Conscription? Look what happened to the IWW, the social party. Victor Berger went to jail. Rose Pastor Stokes, Eugene V. Debs, whole slews of decent, honest people. What? For their principles -- they were going to stand up and die for them. We proposed Total Conscription. Do they want Total Conscription? Whee-ee-ee. We were patriotic, weren't we? We published 14 million copies of it and not a single objection! Don't you see how beautiful it was. Not a single comeback. Don't forget that we were barred in Canada. Why were we

barred in Canada? Because on June 1st to 4th at the Western Conference of Municipalities in 1940, first of June, we came out with Total Conscription in Canada when French Canadian Quebec had gotten Prime Minister Mackenzie King to promise that conscription would not be introduced, would not even be discussed. So, the Honorable LaPlant, Minister de Justice of Canada, put an order in Council, which is unconstitutional when the parliament is sitting, to declare us, not treasonable -- oh, no, for the duration of the war. Well, what did they do? The Prime Minister of Canada himself had to lift the ban unconditionally at noon October 12, 1943, in the midst of the war, didn't he! I mean, we have the record. In July, 1932, when I was speaking to the giant conference and I stated the first part of July that the banks of United States would close on or before April, 1933; and the Attorney-General of the United States under the Hoover Administration wanted to move for the indictment of Howard Scott and Technocracy for making statements inimical to the safety of public institutions, and we said, "Your Honor, we wish that you would proceed. We would love to be indicted, but as and when the Attorney-General indicts us, Technocracy will open up on the Hibernia Trust of New Orleans, the Guardian and Union of Detroit and Cleveland, and may God have mercy on your soul!" I was speaking at the National Educational Convention in the giant auditorium in Minneapolis. Glen Frank, now dead, who was president of the university, was to follow me. There wasn't much use, because I asked that huge audience if they had any money in the bank, if they had their railroad tickets home, if they hadn't, go and wire home to take the money out of the bank. I get back to the Curtis Hotel, and the Attorney-General of Minnesota, the District Attorney of Minneapolis and the Mayor there. Yes, sir, they came in armed to take action [just a moment, I'll finish this] and the telephone rings and the desk downstairs says, "Mr. Scott, the extras are out. The Governor of Ohio has closed all the banks in Ohio." The difference in time between what? Minneapolis and Ohio. I had preceded them slightly.

I HAVE NO QUARREL WITH YOUR INTERPRETATION OF TECHNOLOGY. JUST BRIEFLY, DOES TECHNOCRACY MAKE -- HAS IT MADE ANY RESEARCH -- I THINK THIS QUESTION IS PERTINENT. HAS IT MADE ANY RESEARCH AS TO WHY SCIENCE AND THEN TECHNOLOGY MADE THIS ENORMOUS PROGRESS IN THE LAST 300 YEARS? AND MAN HAD BEEN EXPERIMENTING MANY, MANY THOUSANDS OF YEARS BEFORE THAT -- WE CAN CALL IT EXPERIMENTATION, YOU CAN SAY THAT -- WHAT

MADE THAT ENORMOUS ....

You know yourself -- I should judge you are some student of history by the questions you are asking.

.... SPURT THERE. AND, OF COURSE, WHEN WE SAY TECHNOLOGY AND SCIENCE, IT MEANS THE UNDERSTANDING OF NON-LIVING PHENOMENA LARGELY

As you know ....

WE HAVE VERY LITTLE SCIENCE IN THE ORGANIC WORLD COMPARED TO THAT IN THE NONLIVING WORLD. WHEN WE SAY SCIENCE AND TECHNOLOGY TODAY WE MEAN THE UNDERSTANDING OF INERT [FORMS] LARGELY. WHY THIS ENORMOUS RISE IN THE LAST 300 YEARS?

After all, Hero, in the year of 150 B.C., had the principles of propulsion steam turbine, did he not, in Alexandria, but for two thousand years they had actual historical evidence that here and there there were the beginnings of discovery, and archeologically there is evidence that it goes way back beyond that but it was suppressed or buried, and so on, and you can go down in the, I call it the mega , and you can find your stone pipe bored out , male and female joints that was done before Christ -- it's a beautiful boring job, but that was lost. Take your hollow metal casting which was done thousands of years before what's-his-name of the Middle Ages did it. It was done on this continent. Well, but here communication, printing, etc. and the application of it -- it's only within the last 80 years that there's been any acceleration in it. In the last 80 years, its acceleration has been so great that you cannot do another 40 with the same acceleration.

Now, I have tried to really disturb you a little. What we would like to do is see you get in the organization and help move it. Or do you just want somebody to entertain you as I have done?

WE NEED THE LEISURE. THERE ISN'T ENOUGH TIME TO GET IN.

Time has to be made.

WE'RE SO BUSY AND HAVE SO MUCH TO DO, I HAVEN'T GOT TIME

Remember, I'm living on less than about 99% of you.

IT'LL HAPPEN SOME DAY, THAT'S SURE.

So, I mean, don't tell me about living. You try living on \$30 a week and pay for your laundry and food. So, don't talk to me about cost of living. We know what it is to fight. It doesn't make any difference if somebody gave us \$1 million or five -- that's the basis. Coming into CHQ, put it on that basis. Burn your bridges behind you. I haven't any illusions.

After all, what are your colleges and universities turning out? Graduates in the arts, are they not? Russia is turning out this year -- last year twice as many technical graduates as United States. Their courses are ....

DO YOU THINK THAT THE RUSSIANS BY 1970 WILL HAVE EQUAL TECHNOLOGICALLY AND QUANTITY OF AMERICAN PRODUCTION AT ITS HIGHEST PEAK?

It doesn't make any difference if they equal us. They have a different procedure. They don't have to consume the tin cans and throw them on the dump, not unless they are crazier than we are, which seems to be impossible.

WHAT WOULD BE THE IMPACT OF SUCH AN ACCOMPLISHMENT ON THE REST OF THE WORLD? WITHIN A MATTER OF 30 YEARS

It isn't a matter of 30 years -- it's a matter of the next 5 and 10. You're too far off in the blue -- it's the next 5 or 10.

I DIDN'T SAY THAT.

I know, but you don't understand me.

MY POINT IS THAT HERE WAS A NATION THAT' FOR CENTURIES WAS BEHIND WESTERN CULTURE THAT PULLED ITSELF UP BY ITS BOOTSTRAPS THAI IN 40 YEARS THEY CAN DO ....

And it didn't do it by Karl Marx.

WE'RE NOT CLAIMING THAT.

They made the mistake of delaying their technological until the early 1930s, and they damn near got licked. It was their technology that won -- not their political philosophy. In this country right now, it's our so-called bourgeois philosophy of success that is the dangerous thing -- not the Russians or the Communists. That's the deadly. Let me put it this way. Your normal cell lives by respiration, does it not, sir? An abnormal cell, that is, one deprived of oxygen, becomes a cancerous growth and your entire bourgeois business proposition are a fermentation, non-oxygen, cancer growth and they'll block out every other damn thing. Your danger to this country is not any internal or foreign radicals or subversives. It's your successful business man and his political adjuncts.

IF THE REST OF THE WORLD INDUSTRIALIZES IN THE FUTURE , if THIS COUNTRY IS FOOLISH ENOUGH TO GIVE TO THE UNDEVELOPED COUNTRIES THE BENEFITS AND THE SECRETS OF TECHNOLOGY UNDER THE 4-H HEALTH PROGRAM, SOONER OR LATER WE WILL NOT BE ABLE TO USE THOSE COUNTRIES AS A DUMPING GROUND.

No, but we'll make an awful lot of billions in the process. What's the future got to do with it? We're piling up profits. Take the average girl today -- what does she want? A built-in Hotpoint, doesn't she? Got to have that Cadillac gold plated. It's your concept.

IS THERE ANYTHING NECESSARILY PATHOLOGICAL IN THE HUMAN BEING WANTING THE GOOD THINGS OF LIFE IN THE WAY OF ....

No, what is it that the human being has been emulating for thousands of years? The only thing he's emulated: the louse. Let's be honest, and the louse has killed more human beings than all the wars in history. The louse will stick to you, won't leave you until you die. A chiseler will stick to you until you are no longer alive financially. It's a nice, kind Christian world.

ARE THOSE MORES THAT YOU ARE CONDEMNING KM IMBEDDED IN THE UTILITARIAN CONCEPTS THAT GOVERN MODERN CAPITALISM ....

Look, understand that the expropriation, of mere capital is not enough. It's proprietary rights. Now, for instance, in Britain, if the British Labor Party had had any vision and forced and allowed the coal mines and others to go into bankruptcy, and

then had reorganized it -- but wait a minute, if you reorganize it, it only takes two pipe lines up the British Isles on each side -- your pipe line plant can make pipe line at 39 miles a day. You do it right out here at A.O. Smith down in Texas. How many days would it take to make a pipe line? Well, but you're face-to-face with the biggest union in Britain, let alone the owning class and the coal miners. The proprietary rights. You had the same thing happen here in your glassblowers union. The only way you could get into the glassblowers union was by the chromosome route. You couldn't buy your way in. And what eliminated the glassblowers? A hostile employer or an antagonistic government? No -- a process. Do you fight an ideology by bombs, bullets, or bayonets? You do not unless you are a damn fool. The only way to defeat an ideology is to supersede it with a superior one.

Now, your proprietary rights -- whether they are held by labor, farmers, ecclesiastics, bankers, manufacturers, or who they are -- is as dangerous as finance capital and have to be eliminated. What? The transport worker of Britain -- ah, reduce him, you know. Blimey, you can't do that, you know. But you are going to see it happen here. John L. Lewis' 780,000 miners 30 years ago -- 350,000 now -- and you're going to have another 200,000 out. They wouldn't learn. This man here -- I don't know him, I never saw him, that got up and spoke to me -- yes. I did the research for the railroad brotherhood. I spoke to the Tri

? Convention with all the railroad brotherhoods there. They'll never ask me to speak again. Why? Because I pointed out that they had more damn vice presidents in each one of them than the Chase National Bank, and they couldn't even run a railroad.

Try to realize that the mere confiscation of ownership -- that's a legal title -- and these proprietary rights that are inherent .... You have them in the caste system of India. In other words, this is a far bigger job. You have to eliminate the jurisprudence. Do you realize what that means -- that the proprietary rights of the -- well, some say it's the oldest profession but I won't go into that -- at least the second oldest profession wouldn't have any basis. This is far more sweeping than the expropriation of mere capital. I hope you understand what I am driving at.

MR. SCOTT, DO YOU BELIEVE THAT THE INHERENT ANIMAL NATURE OF MAN CAN BE CHANGED?

I haven't any beliefs, sir. I don't know about the "nature" of animals. I only can observe their behavior and the chemical reaction, but you give us some in the laboratory, and we'll change you with a few injections -- we'll fix you. Any woman that thinks that she has mother love and we can't do away with it, she's crazy.

WHAT WOULD HAPPEN IF RUSSIA AGREED WITH US TOMORROW IN EVERYTHING THAT WE SAY SHOULD BE DONE, AND ASIA AND EUROPE AND EVERY OTHER NATION AGREED WITH US, THE COLD WAR WOULD END, THE HOT WAR WOULD END, WHAT WOULD HAPPEN TO THIS COUNTRY WITH ALL ITS MANUFACTURERS?

The General Motors would have a schizophrenic breakdown.

All right, we have a process for direct reduction of iron ore into steel continuous -- no batch blast furnaces, no open hearths, no soaking pits, no blooming mills, high frequency reduction. The first thing you know, some of those darn foreigners are going to do that.

MR. SCOTT, HOW [SLICK] DO YOU THINK IT WOULD BE FOR AN ORGANIZATIONAL STRATEGY BASED UPON TECHNOCRACY'S PLANS SINCE ITS ORGANIZATION IN '33 TO PUT IT ACROSS SUCCESSFULLY WITHOUT BEING THWARTED BY THE STATUS QUO CONTROL AS IT HAS IN THE PAST; FOR EXAMPLE, I WANT! TO PUT ONE POINT OVER. PEOPLE JOIN ORGANIZATIONS, THEY KNOW THAT THE STATUS QUO IS THERE, THEY KNOW WHAT IS GOING ON -- ANY ORGANIZATION WOULD BE ALERT ON THAT SUBJECT AND WOULD BE PUT ON THE SPOT AS IT WAS DURING THE WAR. IF YOU WERE TO MAKE THESE DEMANDS FOR A PEACEFUL TRANSITIONAL CHANGE, HOW FAR DO YOU THINK YOU'D GET? YOU HAVE MCCARTHY, YOU HAVE THE NEWSPAPERS, YOU HAVE ALL THE STATUS QUO ORGANIZATIONS AGAINST YOU.

Surely, but then we've had them all against us, and we survived.

THESE PEOPLE ARE WORSE THAN THAT. I MEAN, HOW ARE YOU GOING TO DO IT SAFELY?

We've had it, much more, sir, than you realize. I had one of the biggest clubs in this country put enough amoebic dysentery bacteria in the drinking water right on the speaker's stand to wreck a division in the army. Did they want to kill me? Oh, no, they just wanted to render me incommunicado, so they could go on the air and say I couldn't appear. Yes, I had internal hemorrhages. We know this stuff. We've gone through it.

Now, after all, we can play chess, too.

MR. SCOTT, WHAT WOULD HAPPEN IF THEY FOUND A SYSTEM TO TAKE THE MOTHER LOVE OUT OF HUMANITY?

Well, don't let's get involved with one of those questions. You can imagine all sorts of things.

WELL, THERE WOULDN'T BE MUCH OF THE CREATION OF THE WORLD LEFT, WOULD THERE? MOSTLY ONLY ROBOTS.

There isn't a lot left in some places now. There isn't a lot left where we interdicted it in Korea, is there?

Now, you see, you are assuming that we are going to have an assumption of power theory.

NO, I DON'T. JUST TELL THEM THE FACTS AND MAKE THE PUBLIC REALIZE THAT A TECHNOLOGICAL CHANGE PERIOD IS DUE NOT.

We've been pumping this stuff out. We gave all the examples of automation and what would happen. Now, here's your latest big articles in AUTOMATION using the same thing that I wrote twenty or more years ago.

I MEAN IN A NATIONAL PUBLIC NEWSPAPER, TELEVISION, RADIO ....

But you can't do anything like that.

THE STATUS QUO WON'T LET YOU DO IT.

Certainly they won't.

HOW ARE YOU GOING TO BREAK THROUGH?

We have meetings from all over the country.

YOU CAN'T DO IT ON A SMALL SCALE.

I can go some places.

.... THE NEXT STEP.

You're laboring because you see this type of meeting. Now, if you saw 10,000, what would you think? Or 20,000?

IF IT WERE THAT NUMBER, YOU WOULDN'T DO IT BY ORDINARY ....

We have done it. We do do it.

YOU CAN'T DO IT BY CONVENTIONAL ORGANIZATIONAL METHODS.

Well, I don't. This organization is unconventional. I've had 26,000 people get up and cheer and they're all going to do it. I said, sit down, you're not going to do anything -- you're just kidding yourself.

AND IF YOU RESORT TO THE OTHER METHOD, MR. SCOTT, THEY'LL TREAT YOUR ORGANIZATION AS COMMUNISTS. YOU'VE GOT YOUR AUTHORITIES, YOUR NEWSPAPERS, AND YOUR MONEY MEN TO BACK THEM UP.

I know all that. We know all that. After all, have you heard the record they investigated?

I WAS A TECHNOCRAT HERE IN CHICAGO JUST LIKE MANY OTHERS HERE HAVE BEEN. WE'VE KNOWN YOU FROM THE PAST.

Well, you've known a bit of it.

WHAT HAPPENED TO THE OLD-TIME TECHNOCRATS?

What old-time Technocrats?

PROFESSOR KING FROM COLUMBIA. YOU SPOKE WITH HIM AT THE ROUND TABLE AT THE UNIVERSITY OF CHICAGO ABOUT TEN YEARS AGO.

Well, he's been a member of the Board for years.

WHAT HAPPENED TO THE CHAIRMAN THAT INTRODUCED YOU IN 1932 AT THE ENGINEERING HALL -- RALPH CHAPLIN?

Oh, he turned Roman Catholic.

HE DID?

Sure. If you aren't a Roman Catholic, you're a Communist. What the hell's the matter with you.

WAS THAT IN CLEVELAND?

No, it was right here in Chicago. Chaplin never knew what it was all about. He did a beautiful piece of writing. He was a poet. Well, Jack Reed was an artist. He lies buried inside of the Kremlin wall.

JOHN REED, THE MAN WHO TOOK PICTURES ALL OVER THE WORLD?

Jack Reed, yes. Jack Reed used to come in and look at our men working, and he said, "Well, have you got to know all this?"

WHAT HAPPENED TO HAROLD LOEB?

Harold Loeb was never a member of Technocracy.

HE WASN'T?

No, sir. Never at any time. You see, we're very interesting as an organization. Personally, it's the same way with women -- women under 16 and over 60, I reserve the right to be discriminating, and with certain people, we reserve the right to draw the line on membership. Now who else do you want to know about? Come on.

Harold Loeb -- his mother, of course, came from a wealthy family, and Hemingway's book, "The Sun also Rises," you'll find Harold Loeb under the name of Strauss in there. You see, Dreiser is dead, Mencken just died a little while ago, Dreiser, Mencken, Eugene O'Neil, Charley Wood, a whole bunch of us, there was the

Elbow Room, the saloon has disappeared -- it made way for one of our modern structures, it used to have an entrance here and then a back room came out, and you could get a nice corned beef sandwich, you know, and other things. We used to foregather in there, and [Odets] made a little history. What's his name, I think he's dead now, also, of Spoon River [EDGAR MASTERS] and what's-his-name Robertson who used to come and sit in the corner when they held the scientific engineering dinners, he wrote "The Mind in the Making" out of it. [ACKERMAN, IS HE DEAD?] Ackerman is dead. [BASSETT! JONES?] No, Bassett Jones is still alive. [RAUTENSTRAUD?] Rautenstrauch is dead.

WHAT PART DID THORSTEIN VEBLEN PLAY IN YOUR MOVEMENT?

Next to nothing. Thorstein Veblen was sick of TB, and, as I told him one time, I said, "Well, your approach to science and engineering, I'm afraid, Thorstein, that you got it by indirection. In other words, you married the ex-wife of an engineer, and when she died, you married his daughter." He had a sense of humor -- he knew what I meant, but he was already sick and dying at that time.

Now, Ardzrooni, the raisin king, was putting up the money to maintain Veblen. I am talking about 1918-19 -- this goes a long way back. I suppose I am the only person who ever kept Veblen up until 3:00 in the morning. He was, in his way, he was trying to open up an economic and social picture and he did have a biting, subtle .... that, he appreciated what we were trying to do on this little discussion we had on proprietary rights in the Price System -- he understood that, but all of that is long ago. We've had big figures and little figures over the dam, just as in this hellhole -- someone brought in a little pig and we put it downstairs. We kept feeding the pig until it was about 270 pounds, and then the pig was too big to get out. So we had to slaughter the pig -- it was illegal, of course, to feed a pig and have him downstairs -- so we had to slaughter the pig to take it out. Mencken used to drink beer, get a little drowsy, and then he'd go and sleep for half an hour and came back and start in like a machine gun just where he left off -- it didn't make any difference what the subject was. I'm not saying this in any rancor or antipathy to anything, but they all contributed. Dreiser made his contribution. So did Mencken, so did Charles Wood -- Charles Wood was one of the best writers of the time --

and others. But one of the best died of starvation at only 24 years of age.

Anybody else you want to know about?

HAROLD BYRON (sounds like)

Who?

HAROLD BYRON -- USED TO BE THE EDITOR OF THE IWW SHEET YEARS AGO. HE TURNED FASCIST.

Well, I told them that. He went back to the Catholic Church. Sure, and he's now editor on the what-you-call-it, one of the associate editors.

INAUDIBLE.

Well, he was a gumshoe then.

HE STILL WRITES FOR THE AMERICAN

Yes, and the other one, but he's a devout member of the church, just like Louie Bedenz. When it came out a few years ago, I had any number of telephone calls asking me if I remembered what analysis I had made of .....

I DO HAVE ONE QUESTION THAT PUZZLES ME, MR. SCOTT -- IN THIS WITCH-HUNT THAT GOES ON IN THIS OF SUBVERSIVES, PEOPLE THAT WERE HAULED BEFORE THE DIFFERENT INVESTIGATING COMMITTEES INVARIABLY YOU WILL FIND HUMAN BEINGS THAT HAVE AN EQUITY IN THE SOCIAL STATUS, LIKE MOVIE DIRECTORS, ENGINEERS -- HOW DO YOU EXPLAIN THE CONTRADICTION ON THE PART OF THESE PEOPLE THAT THEY ARE WILLING TO DO CERTAIN THINGS THAT ARE CONTRARY TO THEIR OWN ECONOMIC AND MATERIAL AREAS?

All very few. You take Oppenheimer was a pretty fair scientist. Where did Oppenheimer get his perspective? Out of Cal Tech. Whose house did he go to? The Dean of Physics. Who was the Dean of Physics? Dick Tolman, charter member of this organization in 1918, atomic representative of United States Government on the joint Chiefs-of-Staff. Oppenheimer first gets in a jam with a

HOWARD SCOTT, CHICAGO

3-15-56

girl. She commits suicide, so they use that as blackmail proposition. Then when he demands a hearing, instead of having a knock-down-and-drag-out fight, he allows the hearing committee to have McCarthy's attorney. Well, my God, how dumb do you have to be? In other words, if they knew of Technocracy 15 or 20 years ago and still can't see it, what's the use?

END OF TAPE

"THE CHIPS ARE DOWN"

Howard Scott

March 17, 1956

Detroit, Michigan

May I thank you for coming out on a dirty night like this. It is rather nasty travelling. Over the years, of course, we have had to contend with all kinds of weather, I've spoken in areas where the temperature outside was 40 below zero, and in the opposite extreme 117 in the shade -- when you could find the shade.

All of us, and anyone who is doing any cogitation today, are wondering what kind of an economy, what kind of a civilization are we really in. So it might be good to draw a few little pictures. In these United States, Canada, and the North American continent -- of course, U.S. is the dominant economic order, and that economic order might be defined as a combination of laissez faire and semi-managed economy. The war and the postwar prosperity, which everyone, of course, is getting a little wiped off on them -- a little spills over and a little trickles down to the lower echelon still it's dependent on pumping in vast credit amounts. It's hard for people to realize the orders of magnitude of the figures of billions; for instance, since 1940, these United States of ours have dumped \$112 billion abroad exclusive of the cost of two wars. Of course, you are all paying for it, as you are paying for the maintenance of this economy. Well, how is it done? Your withholding taxes and other taxes are paid in on the mandate of our political government, and that vast amount, running from \$60 to \$70 billions a year depending on whether we have a war threat, is utilized in supporting the economic order. Bear in mind today that that part of our federal budget that is spent for war materiel is approximately \$40 billion. On top of that is foreign aid, and then the various credit organizations -- accessories to our national administration -- we pumped in last year \$3 billion a month on housing alone. Prosperity is wonderful, so long as you can all have gasoline enough to run your car and you receive enough to pay for the television set, the new rug, and to maintain the mortgage on your home. Very nice; in other words, it looks a little different across the countryside after the expenditure of all these billions of credit, we have -- you might say -- desecrated this country and this continent with the darndest collection of suburbia that mankind has ever seen. We sell it to you with next-to-nothing down and thirty years to pay for it. Never have so few people

produced so much for sale to so many for so little. We're selling everything to everybody for nothing. Wunderbar!

We have maintained this by war and the threat of war. I wonder if you realize how many are involved in the military side of our economy. We have 3-1/2 million approximately in our armed forces, 1,250,000 civilian employees in the department of defense; there are over 6 million employed in private industry in the production of war materiel. Let's add them up: 3-1/2 and 6 are 9-1/2, 1-1/4 is 10-1/2; then you've got the 2 and a fraction unemployed, and you've got over 3 million part-time employed at less than 14 hours a week. So, you are running close to 16 million Americans who are dependent on this inflationary, war-generated injection. This is all very lovely, and it's done on the basis that you have an enemy, and that all preparations have to be done to meet the enemy. Well, the enemy is supposedly somebody a long, long way from this continent. Tonight I want to draw certain lines -- that the greatest enemy that this country and this continent has isn't 6,000 miles away -- it's right here. Right in our midst, and it is of our own creation and isn't any foreign subversion.

In the human body or in all other living things, the natural cell lives by respiration and requires oxygen. It is a controlled growth -- controlled by the control of any organism. The anarchic cells do not live by respiration but only by fermentation and without oxygen, and once that cell growth starts, it's out to live only by devouring all the cells that live by respiration. You know it under the name of cancer, and in the body politic of this continent, we have the same wild cells, but you've been indoctrinated and contaminated, because its real name is freebooting, free enterprise -- a million times more dangerous than all the Russians or all the communists. You want to do in Russia -- just send 200,000 American business shysters over there. It would kill them dead.

Kind of upsetting to some, because the natural comeback is, well, look at the automobiles we have, look at the houses we have, look what we have done. Yes -- with all that credit, it's a wonder there isn't more of it. In 1955, we rose to the greatest heights so far. We consumed in this country 38 billion tin cans, and we flung them away on the dump. We consumed 100 billion paper containers, and 8 billion hot dogs. Isn't that wonderful? We just

wallowed in it. We're building houses, we're building buildings, and we're turning out a flood of goods. What's the difference between 30 years ago? There were 468 blast furnaces in action then. Today there is a maximum of 201. The 201 produce more steel than the 468 did 30 years ago. There were 780,000 coal miners working a pretty fair week back 35 years ago. There are 350,000 today working a part-time week. Yes, the coal miners and the coal operators, together with modern technology, have raised the production of coal per man in the United States to 8 tons per man per day -- far above the 1 or 1 and a fraction ton per man per day in Europe. But, wait a minute, there's a cloud on the horizon. The new machines that are coming in mine 8 tons a minute, and, brother, you've got to get the miners to hell out of the road to let the machines mine the coal; and there are 200,000 coal miners of that 350,000 are on their way out before 1960 -- not in your grandchildren's time -- in your time]

You have 83,000 less steelworkers in 1955 than you had in the year previous, producing more steel than they ever did in history, and yet the steel process used in United States and Canada is obsolescent and antique. Of the 130 million-ton steel capacity in U.S.A., 22 million tons of it have a labor cost of 2-1/2 times that of the other tonnage. They employ 280,000 steelworkers. That 22 million tons is going to be liquidated, ladies and gentlemen, and 280,000 are not going to work in the steel industry, and yet, you are still facing the revolutionary thing that the process is still the same, when on the horizon are new steel processes where you won't produce steel by batch process. Now, remember, it is only a few years back when the first strip steel mill was introduced. I was present. The Armco and then the Otis -- well, 480 feet a minute, that was a great achievement. Sixty-eight hundred feet a minute today, and what's on the boards? 10,000 feet a minute, with 68,000 horsepower of motors. Well, do you have any men around at that speed? Can you see any employees? Oh, no, they have to be removed.

Now, remember our textile industry, our steel industry are antique. They're obsolescent. It is only a few years ago before the war that the Japanese came over here and tried to buy brand new Draper XX looms. They were refused, so they went out on the secondhand market and bought the junk and took it back over to Japan. What happened? They turned their engineers loose, and the Toyata loom came out of Japan -- 2-1/2 to 3 times faster than the

best Draper XX. We pride ourselves that we are leaders in modernity. Are you? Well, you haven't got a high-speed, rotary, magnetic field loom operating in United States, but you have them in darkest Africa operated by blacks. How do you like it? No more shuttles, no more terrific racket, vertical, and it's a rotating magnetic field, no mechanical contact, 2 meters in diameter. That makes the cloth, when it is opened out, 20 feet wide, does it not? You have to have a conveyor belt to take it away. But wait a minute! We are supposed to provide the brains and the leadership, and yet we are so busy in our freebooting free enterprise turning out the Kleenex, the hot dogs, the lizzies, and the ice cream cones, the comic books, and everything else -- we won't go into some of the dirtier things.

We only published 800 million books last year -- in tonnage not so big, but, oh, Lord, what a tonnage of Scott tissue. All these things we look upon as achievements.

Well, it was only a few years ago that Grand Coulee was completed, the TVA, and the rest of the world came here to look over the Grand Coulee and the TVA. They aren't going to come here any more, ladies and gentlemen, unless this country wakes up. Why? Because they can go to another country and see four hydroelectric projects in 3,000 miles -- four of them all greater than Grand Coulee. Kuibyshev is doing 2.7 million kW, generating and transmitting at 400,000 volts AC, 3-phase, 600 miles. India is building the third largest dam in the world, the Chinese have just finished Kansu Canal, over 200 miles in length, 420 feet wide, and 8 meters deep. It irrigates 4 million acres of flat, level land.

We, the United States, were once the great exporters of raw materials. We used to export at a peak 11 million bales of cotton a year. True, it was short staple, 3/4s, low-tensile strength. We'll be fortunate this year if we export 2 million. We once had the bulge on the rest of the world for our huge tobacco production. We have a billion pounds of tobacco in government storage, part of that \$7.4 billion of agricultural products that we have had to buy from the farmers. What is our life expectancy in the world tobacco situation? Lower, lower, and lower. Why? Africa has increased its tobacco production 760% since the war, and that tobacco is every bit as good and a damn sight better than a lot that we produce. It's prime leaf, as good as any

burley produced anywhere.

Cotton last year did 39 million bales for the world, and the increase was 1,500,000 in the rest of the world. When cotton hits 43 million bales, or 42 million bales, you can pile the cotton in the United States on the sidewalk and sit on it, because the rest of the world will have more than a self-sufficiency -- they'll have a surplus.

Now bear in mind this country of ours, under this freebooting free enterprise, has had the greatest gravy trough in all history. We've dumped the surplus minerals, we've dumped the surplus agricultural products, and we've dumped the surplus of our manufactured products around the globe. We had a wonderful time. We could keep the price up here, make the profit, and dump it there for the cost of transportation. During the war, do you remember, we dumped so much stuff on the British Isles that the joke was that 6 more boatloads and the Isles would sink. Remember when we, ironically and caustically, suggested that the United States should declare war on the 69 million square miles of the Pacific Ocean, because its armies couldn't capitulate and its generals couldn't surrender, and we could continue to dump the material in that vast reservoir to the ultimate exhaustion of everything you had.

What is happening? We are the world's largest consumers of rubber, copper, tin, zinc, lead, petroleum, and other things. We once were the great copper miners. The copper mines are running, yes, but all the great, rich copper -- the Calumet, the Hecla, the Miami, and so on, their day has gone. All of the copper ore in the United States that is being mined today is less than .8 of 1% copper. The Export-Import Bank and your consortium de Serra de Tasco in Chile are opening their new project in southern Peru on the border of Chile at about 8-10,000 feet elevation. Two hundred million dollars are going in there, for what? To mine copper ore that is less than .8 of 1%, and the refinery will be at Ilo on the Peruvian Coast and will employ 634 persons to operate it, which will increase the population from its present 1,500. In Arizona, New Mexico, and Nevada, we have subsidized big copper propositions, but the copper percentage is dwindling.

Last year, we hit over a million tons of zinc. The great New Jersey Zinc, which was once one of our giant producers, you could

wander through its underground tunnels, beautifully lighted -- well, Annie doesn't work there any more. There isn't any zinc.

Out in Joplin in your lead field and up in Idaho, last fall one of the great producers for years that used to hit millions a year closed down. And one of the great American-owned copper mines of Chile, one of the great producers for that country, is in the last two weeks, closed down for good. They have run out of copper ore.

This organization, and your speaker, back in 1920 -- I wrote the analysis and a report on the Mesabi ore. In that report, we stated that the Fe content of the iron ore in Mesabi would decline as a function of depth and the Si content would increase as a function of depth, and if the rate of growth of the steel industry continued at that rate uninterrupted, the economic feasible ore of Mesabi would be exhausted by 1950. The depression delayed it, but, ladies and gentlemen, realize today that there isn't sufficient ore in Mesabi to conduct a World War III if it consumed as much steel as World War II. It just isn't there, and your steel companies are out all over prospecting -- all kinds of prospecting -- for ore. The Canadians in Ontario are going from Steep Rock from north of Sault Ste Marie on your magnetite; your Bethlehem the other side of Eastern Ontario at Marmora -- they're sinking millions in there, and that's a deep underground mine. What's the percentage of Fe in that ore? 38%.

The United States in 1955, and it will show up more in '56 and '57, were bringing in iron ore from Brazil, from Venezuela, from Chile, from Canada, from Newfoundland, from Liberia, from West Africa -- wait a minute! Weren't we the country that had it all? Weren't we the haves? What's happened? But if you think that our picture is sorry, Great Britain's picture is sadder still. They have to import iron ore to live -- 16 million tons -- and the saddest part of it is that they have to import coal in order to run their own internal plant equipment. The handwriting is on the wall -- mene, mene tekem, upharzin -- because once the ore runs out or the oil runs out, all the prayer in the world won't bring it back. The postman will not ring twice! Locally, in one's own subjective affairs, if you lose in a little poker game, there's always another one next week or the week after. If you bet on the ponies, well, they'll run someplace else another week on another track. But in the international field, when the bottom

goes out, bear this in mind, the Kerenskys never come back, and the postman doesn't ring twice.

Yes, we're producing approximately 7 million barrels of oil a day in these United States. We're drilling more oil wells than have ever been drilled in history. We're drilling them deeper, and practically half of that oil comes from Texas, and Texas wells are drilling 800 feet to a 1,000 average depth greater than the national average. United States, producing 11 barrels of oil per well per day from its producing wells. Its wildcats -- 9 out of every 10 drilled are dry in the national picture. Sixteen out of 17 in California.

Try to realize what this means, because your very existence and your setup of all your cockeyed suburbia, your ranch homes, and everything else are dependent upon cheap automotive fuel and cheap automotive production. Well, how does U.S. production compare? Venezuela, that was producing 300 barrels per well per day five years ago, has dropped to under 150 barrels per well per day. The Near East -- yes, big oil. Saudi Arabia, Kuwait is the biggest volume producer, but it's only getting 6,000 at a maximum. Iran, when it was running, had a maximum of 82 wells at any time -- 10,000 barrels per well per day. Well, that's not so hot, either. There are no big pool discoveries. Spindle top, ladies and gentlemen, came in in 1901 and East Texas in 1930, and the Golden Lane between that. The Golden Lane in Mexico -- well, the reason they called it the Golden Lane was that your wells opened at 300,000 barrels per well per day, and Sarazul No. 4 and others ran 100,000 barrels per well per day until they went saltwater -- 82 million barrels of oil from a single well -- no wonder they called it the Golden Lane, that you could pave the entire area in gold. Well, that's gone salt.

Yes, we're drilling offshore. We're drilling in all kinds of places. We're drilling clean across the Sahara. We're drilling in Nigeria. We'd drill in Antarctica if we could get it down there. Let's examine the 1955 financial reports of our oil corporations, and there is a very startling thing shows up: 75% of all your big oil companies' budgets for 1956 is not for capital equipment, not for buildings, but for oil exploration -- 75% of their total budget. We're importing 114,000 barrels a day on the Pacific Coast into California from the Far East; 1,400,000 on the Atlantic Coast. People say, "Oh, well, we don't have to worry."

No? But one oil field after another in this country, one lead deposit, one copper, one iron ore after another, they have gone down the drain, haven't they? "(French quote)" or "Where are the snows of yesteryear?" Well, where's that beautiful hematite at 54-56%, and where's that 4-12% copper? Gone, and they're not coming back.

Our economy, run by these freebooter free enterprisers, the more cars, the more outboard motors, the more tractors, the more trucks, or the more anything that consumes fuel -- whoopee, let's have it! More profits. Nobody cares so long as the payoff is here and now. It's a fast buck. You were brought up under it. You are told that everyday in your press and your radio and by your so-called leaders. You cannot get a discussion of this kind, because they do not want to face it.

Our agricultural picture is changing just as much as our resource picture, because land is also a resource. Water? Why, we've always had water; what's the use of worrying about water? There are in excess of 1,000 municipalities in United States that have passed restrictive legislation on the use of water. The situation is serious. Who cares? Nobody. We'll just turn on the tap. Well, the only time the public is really going to be hit is when you turn on all the taps and all you get is (a sound made by the Chief -- no words) and when you pull the chain and nothing happens, you'll be there with your own stinks. Until that time, most of them are just going to be as complacent and apathetic as they are now, but the problem of sewerage and water across this country of pollution, why, we can give you pictures of rivers if you fall in, you won't drown. It's impossible. You'll either be poisoned or asphyxiated. You think it isn't widespread? They're hauling drinking water on the Peace River in Canada. In Albuquerque, you get water in one section of the city every other day, but if you've got a nice income and considerable capital, you can go down there and build yourself a nice, beautiful desert home and worry for the water.

Great cities like New York have the huge credit -- they go out, and what is New York doing? It grabs off watersheds in the State of New York, New Jersey, and Pennsylvania, and has to have court action to the Supreme Court of the United States in order to adjudicate them. Well, that's swell for the City of New York, but how about the hundreds and the thousands of other little

cities that have not the credit power of the City of New York -- where are they going to get it? And still New York is proposing to run giant penstocks to Lake Erie. Akron is proposing to do the same thing. So are other cities, but wait a minute! There are Canadians on the other side of the lakes and they want water, too. In Wisconsin, they want the Metropolitan District of Chicago to deliver 900 million gallons a day over the Fox River Divide, but under the international treaty with Canada -- ah, it's going to be rather difficult, isn't it? So you have to have this water in order for every little moron to have green grass, shrubbery in front of his little suburban home. They've all got to go in for shrubbery -- wonderful? But if you've got enough shrubbery, it will soon be brown, unless you get a controlled continental hydrology, continent-wide and continent-lengthwise, because there isn't any other way to handle it. Bear that in mind.

Now, water and soil. The farm problems -- you're full of it in the press, aren't you? But let's help the poor farmer, he's desperate. Well, the family-size farm is only in the same situation that the small business is, whether it is a retail store or a little manufacturing plant -- they're too small. To pick cotton by hand on 100 acres or 40 acres costs about \$34 to \$35 a bale. To pick it by machine costs \$4.90 a bale. The little farmer cannot get the credit at the local bank to purchase that equipment. Well, what is the farm situation? Technocracy pointed it out years ago that the total number of farms would continue to decline, that the average size of farms would rise. When did we come out with all this? Decades ago -- not just yesterday. Thirty-some years ago, there were 6,400,000 farms. Now there are 4,600,000 farms and declining every year. There are 100,000 farms in United States that produce 26% of the agricultural production, and 26% of the total number of farms produce 74% of the agricultural production; therefore, there are over 2,000,000 farms in United States that are going out -- when? 100 years from now, 50, 25? No, in the next few years. They are going out because they cannot survive. The total farm population was approximately 21 million. That involved men, women, children, and dogs. Now, are you worrying about the farm vote? It simply means that 12,000,000 of that farm population will no longer be on the farms a couple of years hence, which will reduce the total farm population to 9,000,000 or the total farm vote to a negligible amount when you consider it to be spread over the entire country. In other words, it won't be worthwhile going after any farm vote

very shortly, because they won't form a large enough bloc of the voting public in only a few little minor places.

What's doing it? Well, in the transition from human toil to hand tools and the agricultural equipment is still lagging behind. What 300, 400, or 500 acre farm can plant and fertilize wheat at 70 acres an hour with one tractor? We can show you movies of it. One tractor doing 70 acres of wheat planted and fertilized per hour with one truck and one assistant to feed it -- per hour, not per day. Yes, but you've got to have 16,000 acres for the equipment to run around in. What do you think this is? They're so accustomed to the rat race in business they can't think. Well, here's the technology pushing it, and yet here are the mores of the system in conflict with that technological direction denying that that is the direction to go.

Whether it's oil or agriculture or whether it's steel -- railroading in the last five years has lost over 240,000 employees, and yet it's rolling more freight than it ever did, is it not? And is due to lose even still more employees. Here in the automotive center of the world--automobiles, of course, you all know them -- are we designing and manufacturing a transportation vehicle? No, we're not. We're manufacturing upholstery and a lot of two tones and chromium for sale to the public, and you know it. You design the car correctly as a transportation vehicle, you could sleep -- it would have 3 seats in it -- and you could sleep three, they could stretch on the three seats, without turning any seats down, but it will seat four wide comfortably or twelve people to a car. I am not talking about jamming them in. It wouldn't have any axles, it wouldn't have any radiator, carburetor, or driveshaft or rear end, and the pistons would be firing in one cylinder so you wouldn't need any valve, and it would run on anything from peanut oil to crankcase oil to fuel oil. You think I am talking out of my hat? No. There's one just came over here that's driven a 10-ton truck 20 miles on one gallon of crankcase oil drained out of a car. Now wait a minute! The advance in design should have come out of the automotive industry of United States, should it not? Well, why hasn't it? What's wrong? There's something wrong.

Right here, just a short distance out of here, you have a company making machines for the Electric and Metal, haven't you? Well, then, of course, there is the sonic frequency

-- well, there is approximately only 146 such machines in the United States. Well, you say, what's wrong with that? Not a thing wrong with it, except in Russia they have 4,100. Did they steal it from here? Let's quit kidding ourselves, for heaven's sakes.

Your Indians are doing strange things -- so are your Chinese, your Swedes, your Swiss, Your foreigner -- there's the GE, Westinghouse, and others suddenly awake to something that somebody did a little research work, because they cast the insulation around their giant generators or their transformers, and it will stand a million surges of a million volts, and it will operate in excess of 500° temperature, and it is cheaper to manufacture than anything that GE or Westinghouse has. What's the matter? Haven't we got scientists and engineers here? Yes, we have, but they're not permitted to use their brains, because the policy is laid down by that bunch of freebooters that have looted the oil, the iron ore, the copper, the lead, and zinc, and are polluting every cockeyed stream in the country.

It's pretty tough. I'm going to give you some propositions and then I'm going to ask you to ask questions.

Realize that almost 73% of all passenger cars in the United States are used every day to drive to and from work; in other words, the automotive vehicle has become a vital, imperative proposition in the everyday existence of the everyday American. Let me ask you what will happen to this economy and this so-called prosperity if gasoline goes to 65 cents a gallon seaboard? Will your ranch house or your suburban residence be worth anything? You better get the hell out of it if that happens.

All right, what is bothering your dealers now that have any sense -- automotive dealers, because you are travelling greater and greater distances -- never mind the salesman, just the average man -- and your figures are showing that they are doing 3,000 miles a month average travel, so that in ten months, on a brand new car that he is still paying on, he's run up 30,000 miles. When he trades that in for another one, how many trade-ins can he make? The third one he has no equity left, and he is still paying it, is that not correct? Your biggest automotive dealers in the country are wondering how in the devil they are going to avoid it. Your oil boys are wondering where they are going to get it.

Now, we've moved almost 40 million in the last 16 years of Americans into suburbia. They might have had some liberal ideas, might have had some progressive tendencies when they lived in the city, but when you got them out in suburbia, they became reactionary, they wanted to join the country club, and vote Republican. It was bad enough voting Democratic.

Now, we have no designed transportation system in the United States. It's been haphazard. Your best transportation should be by water -- 1/10 of a cent per ton mile. You haven't got any such thing. You're not going to get it under the present setup. Your railroads, your oil interests, and your automotive have dominated the scene. Well, rail roads -- the Erie Railroad was once six foot wide -- still has the widest right-of-way from Chicago to New York. The southern railroads were wider until a considerable time after the Civil War. Lincoln, that Great Emancipator, knew so little about anything else that he wanted to build the Union Pacific three feet wide. What's the trouble with our railroads? There hasn't been a single new idea come out of the railroading industry in over a hundred years. 4'8-1/2" gauge, and then the center of gravity is so high that the only way that you can carry the load is to lengthen the car out and run it up in height. Then when you try to hit any speed, you get that whip and it pounds the roadbed to pieces. At a 3-meter gauge, you're 9'10-1/10", your center of gravity would be down on the top of the rail if not below it. and the bottom of your car would be as smooth as a boat and your speed 200 miles an hour. Don't try it on these roads. You say, well, has it ever happened? Your French railroads today have 12,000 hp electric motors and their trains go at 212 miles an hour top speed right now. The longest nonstop run in the world -- where is it? American railroads? Nonstop -- 2700 miles -- and the dirty Russians are doing it. The design for that kind of transportation is known. The design for an automotive transportation vehicle, yes, it's been out. Now, here is the payoff: there are experimental cars in Britain, in Switzerland, and in Russia that are on the road. What? Have they got any axles? No. The engine is in the rear. Have they got any radiators? No. Have they any carburetors? No. Remember, we turned out this design years and years ago, and to top it off, Technocracy has been advocating continental power transmission of a million and more volts DC transmission for these good many years, and we don't mind anybody disagreeing with us, but we are

a little bit hurt that our own countrymen -- the General Electric, Westinghouse, Allis-Chalmers, our engineering societies years ago said, well, yes, it's technically correct but we don't need it. The Swedes have a 26-mile experimental line; the Russians have had a 60-mile experimental line for some time; and what is last week's announcement from there? They are going to build a 4,000-mile transmission line to these specifications, and there will only be approximately a 10% line loss in the 4,000 miles. I suppose the State Department is going to ask Howard Scott how in hell the Russians got it from here!

Now, we're not the only brains. We're only bringing this up to show you that there is a technical, scientific, and engineering capacity in this country for vision and perspective. It's not that the Russians or the Swedes or the Swiss or the Japanese have more brains than we have. No, they have a lesser amount but they are using a greater capacity and are permitting the vision. And in case you don't know it, Toyota Motors of Japan will be out, probably in the next 90 days, with a Japanese Volkswagen.

Well, I think I have thrown enough at you. I would like you to come back at me with questions. Now, lay it on the line. There's no holds barred.

---

WHAT IS THE INTERNATIONAL SITUATION IN THE EAST READING BETWEEN THE LINES?

That's rather a vague, general question. Which east -- the Far East, the Middle East, or where? Malaya, from which Great Britain derives 16% of its hard money income, has already acquired internal independence and will achieve complete independence by August next year and the situation doesn't look good, because it automatically means that Britain will lose its hard currency income in the Near East. Britain derives 25% of its hard currency income from the Middle East. We've been smart peoples, you know, in the Middle East oil. Every stink in the Middle East is oil, and our State Department, of course, has to wait until they call up the oil boys to find out what to do next. Well, they've got it. They finally had to give a split with the Arabs 50:50, and now in Italy, they have offered the Italians the

same thing, but what? The Italians are insulted. If you give 50:50 to the Arabs, you have to give us 60:40 and pay Italian taxes on the 40%. Now, our oil boys were so smart that they wanted to crowd the Russians out and wholehog it. Remember in 1946, the British had over 80% in that field controlled. Today (and Americans only had 10% at that time), the American oil interests have 54% and the British are less than 30%. If they had been smart, they would have made the deal with the Russians, because the Russians are there where they could walk in. The Iranco Oil is a U.S. corporation, that is, it was, but it's compelled to move its headquarters, its books, and its Board of Directors to Saudi Arabia, and it doesn't have to pay taxes to the United States anymore because if the Saudi Arabians don't like the performance, they can throw them all in the hoosegow or cut their throats. These are the smart oil boys -- the tycoons that have more billion dollar corporations than any other field of endeavor in the United States. Of the 34 billion-dollar corporations, the greatest percentage are in oil. They are the ones who formulate the oil, and if this keeps up, we may have to land troops on the Persian Gulf in quantity. And it is doubtful whether the morale of our troops on the Persian Gulf at those temperatures with noplac to go, and nothing to see but the sand and the flies and the filth -- what? No honky-tonks, no movies, no Dodgers playing? Why, our forces are likely to go to hell in a handbasket!

THERE ARE A FEW QUESTIONS HERE ON SOME OF THE TECHNOLOGICAL PROBLEMS OF THE MILLION-VOLT DC TRANSMISSION -- HOW YOU WOULD CONVERT IT, HOW YOU WOULD OPERATE WITH A MILLION VOLTS DC.

It wouldn't alter your generating voltage one iota. You would use the same generating voltage you have now in every powerhouse, whether it is 12,000 or 13,500; namely, 3-phase AC 60-cycle. You'd step it up with transformers to a million volts, and then you'd kick it over with converters. Your transmission line is not a tower line -- it's a pipe line installed the same way as you do the Big Inch. Inside your line is another pipe, and inside the second pipe is a 2,500,000 circular mil conductor centered in that internal pipe in a spire. Surrounding that is nitrogen at a fair pressure. Surrounding the inside pipe and the outside steel pipe line is a dielectric oil dyed a brilliant color so if there is a leak, you can go along and show it up.

There are take-offs in any populated district every 50 miles, and you tap it off, convert it and transform it down to your secondary voltages, 3-phase, AC; in other words, you don't alter your present local equipment one iota, but you can transmit power from the Big Hamilton River in Labrador. Remember that in 38 miles of that river, according to the latest Canadian Government report, there is a potential of 10 million kW in 38 miles. You could transmit that power to Los Angeles with less line loss than we now transmit from Boulder Dam into L.A. How do you like it?

%

IS RUSSIA'S NATURAL MINERAL WEALTH MORE FAVORABLE THAN THE SO-CALLED WESTERN POWERS? HOW DOES RUSSIA'S RESOURCES COMPARE WITH THAT OF THE U.S.? IF RUSSIA HAS THE MINERAL WEALTH, DOES THIS MAKE HER THE POTENTIAL LEADING INDUSTRIAL POWER IN THE WORLD?

Well, that's a whole series of questions, Suppose we start the opposite way. What resources have the British Isles today? France? Italy? West Germany? Where are the resources? In other words, where are the "have" areas? Of course, you all know the oil in the Middle East. France, yes, has the ilmenite ore of the Alsace-Lorraine, but those ores are only 30+ Fe content. West Germany without the Saar has only the coal of the Ruhr, and average coal depth-average -- in the Ruhr is 1,400 feet down, not 280 as in the United States. Are there any copper mines in the so-called free Europe? No. Any good zinc mines? Fair -- one in Italy. Where is your best copper mine in Europe? The in Yugoslavia. Where is one of your best zinc plants? Nitroska in Northern Yugoslavia. What's Spain got -- anything? The Rio Tintos Mine -- mercury is still coming -- the iron ore -- that's gone. All they've got is quartz, a little wine, and Franco.

Now, this continent has the resources; so has Russia and her area. Well, frankly, what we have done in the international field -- we've hooked up with every depleted area, with every fascist bum from hell to breakfast; in other words, what do you call on to support -- Magsaysay in the Philippines, Sukarno Qf Indochina, Syngman Rhee of South Korea. Greece -- what has Greece got? It hasn't even got enough land to support it. Italy -- it's got a little water power. They have some gas in the Po, a little oil discovery in Sicily and one down in the boot, but nothing else. Forty-six million population and going up a half million a year.

So is the rest. What are you hooked up with? You're hooked up with nations that are suffering from malnutrition. Those are your allies. What a swell lot of incompetents! You're going to have to maintain them, you're going to have to prop them up with two-by-fours. The only trouble is you haven't got enough two-by-fours to prop up the entire lousy depleted areas of the globe.

HERE ARE TWO QUESTIONS OF THE SAME TYPE YOU HAVE ANSWERED BEFORE. WOULD YOU GIVE US YOUR VIEWS ON THE ISRAEL-ARAB SITUATION? WHAT ARE THE TECHNICAL IMPLICATIONS OF THE CONFLICT NOW GOING ON IN THE FAR EAST? [I THINK THOSE HAVE BEEN ANSWERED, CHIEF?]

Well, if you want it, you can have it. Israeli, of course, is a small territory. The Israelis have done a magnificent job, but they are entirely dependent on income from abroad. They are not making the grade in their own national income. Jordan is the worst of the Arab countries, and, in fact, in the area and the population, there isn't very much there. Saudi Arabia, of course, has the oil. Egypt -- 22 million people and a narrow strip along the Nile -- that's all there is; it's only a few hundred yards wide in some places and widens out in the delta to where it has the densest population practically on earth, and they propose to build a dam four miles above the , which would be 362 feet in height, 4,654 wide at the base, and 3.1 miles long. The Nile is 4,000 miles long, and Egypt only occupies 1/8 of the Nile. Lake Victoria, second largest lake in the world, is your source -- elevation 3,723 feet above sea level. It has high sides and you could form the most gigantic storage in Africa. You build an earth-filled dam of the type they are proposing at Aswan and you can't have river navigation. You can have river navigation for over 3,000 miles of the Nile, but this dam they are proposing to put in now would only store the water and would increase the irrigation area, but the population rate of growth in Egypt before the dam is completed will be completely nullified. It will not solve their problems.

Well, are you going to face the situation of stopping the Arabs? No, you're going to drift. Why? Because they have all been selling arms to the Arabs -- the Belgians, the British, the French, the U.S., and then you scream bloody murder because the Czechs and the Russians start to do what you've been doing. When the Arab-Israeli War started, was it declared aggression by the

United Nations? No, not until the Israelis started to lick the Arabs with Czech weapons -- then it became aggression. Who are we going to support? Well, who do you think we're going to support? You can't kick Santa Claus, can you? You can't kick the General Motors in Detroit or the Standard Oil nationally, can you? If the worst comes to the worst, it would mean annihilation of the Israelis. If you have that Christian thing, it's a nice bloodstain to pay for the oil profits.

HERE ARE TWO THAT CAN BE ANSWERED AT THE SAME TIME. MANY OF THE WORLD SCIENTISTS WILL GET TOGETHER DURING THE INTERNATIONAL GEOPHYSICAL YEAR. IS IT LIKELY THAT AS A RESULT OF THEIR FINDINGS AND THE SOCIAL INTEGRATION THAT THEY WILL MAKE TECHNOCRATIC DEMANDS ON THEIR COLLECTIVE GOVERNMENTS? WITH ALL THE TECHNICAL PROGRESS EXTANT IN OTHER AREAS OF THE WORLD, WILL NOT THIS FORCE THE U.S. TO AWAKEN TO THE REALIZATION OF THE SERIOUSNESS OF OUR PLIGHT AND TAKE ACTION TO CORRECT THE PROBLEM CONFRONTING US? IS THERE A CHANCE OF U.S. GOING TO WAR OVER THE COLONIAL PROBLEM OF BRITAIN OR FRANCE?

I will answer the last one first. The colonial problems -- bear in mind that this is the end of an era. There was a Dutch empire. There was a British empire, and a French empire. It's going out. Our duller-than-Dulles, when he landed at the airport at Delhi the other day, was received by only the police, and he was told not to come to Burma. Why? They had had enough of him. Where is it going? The Dutch have lost their overseas dominion and as such -- they are hard-working, they are capable, they are trained people, but they face the future, and that future means that they have to migrate 62,000 Dutch a year and up in order to maintain their economic equilibrium at home. Morocco is already granted independence, and in granting that, the handwriting is on the wall because French Morocco and Spanish Morocco and the international zone in Tangiers are going to go. We made our contracts for our foreign bases with one power, and that power no longer controls the area on which those bases are. Sucker! Dumbkopf!

Bear in mind in the world perspective in history that when a nation slips out of first place, you are not dealing with an automobile where there is another gear to go down to. Oh, no, when it goes out of first place, there is no other gear. But then

don't jump to the conclusion that we are so situated and have the knowledge and experience to jump into a vacuum and fill it with something like international intelligence. No.

How are you going to hang on to an oncoming Africa? The Queen of England goes to Nigeria, yes. In Nigeria, there's practically 34 million blacks with 12,000 whites. In the Belgian Congo, there are 14 million Bantus alone; the total white population is 80,000. You can go on. In the north of Africa, there's Berber and Arab and Mohammedan, but that is the small proportion of the total population of Africa which is black, and the black are the majority and the black have the resources. You had better get out of that continent while the going is good before you have to leave in the dark of the moon with burnt cork on your face to stay alive,

THE FIRST PART OF THAT WITH REFERENCE TO THE POSSIBILITY OF SCIENTISTS BEING ABLE TO DO SOMETHING OR INAUGURATE PART OF TECHNOCRACY'S PROGRAM.

Let's be frank and face it. The big wheel, be it GM or any other corporation or in oil or the chief of your research, when he is in his private offices or his marble palace of research, he's a big shot; but when he turns his car into the driveway of his house, he isn't a big shot -- he's the rear end of a horse. And you damn well know it! Oh, yes, you're making suckers out of your men. They've got to come home and mow the lawn, they've got to manicure the bushes -- what do you think they're doing? Well, they haven't got time, the poor slobs. You've got to keep this up, haven't you? So you buy television for your kids, and you bribe them so they can sit in front of it and absorb the tripe visually as well as by ear. You kind of feel proud that at least you've gotten them to take their annoyances and so on away from him. You have, and you'll pay for it.

Now don't expect the scientist, the technologist, or the engineer, who is conditioned more so by the mores of his community, because he leaves his thinking in the laboratory or in the plant and he becomes a jackass like all of the other morons who surround him.

WOULD YOU EXPLAIN YOUR REFERENCE TO KERENSKY?

I don't quite know what is meant by that. Of course, out here in Michigan you had some of your big interests maintain a lot of the White Russians for quite a while. Baron Wrangle lived out here. Check? Come on. No? Don't any of you know about it? You had more damn Russians White Russian refugees out here a few miles out. They were kind of subsidized by a few of the leading moguls of the motor industry. Years ago in this city, at the Detroit Athletic Club, some of our great tycoons on the question of what's-his-name? advanced from the Black Sea with equipment made in Detroit, with doctors and nurses from the Detroit area -- I'm going to hit you with something those doctors and nurses deserted their base hospital and their wounded in zero weather and left their wounded and they were captured and executed. Their bodies were brought back to Detroit, were they not? How do you like it? Don't kid me -- we know this -- and they had all their U.S. numbers on them. Did they live up to their professional tradition? They did not. who supplied the money for the equipment? It came out of Detroit, and this tall, distinguished individual asked a motor tycoon what he would take for the equipment, and he said he wouldn't sell. He said, is that your answer. Can I depend upon it? Yes. He said, very well, I thank you. I would like to read you that your equipment has all been captured 72 hours ago. If you want to ask question on this doctor-nurse thing, ask it. If you don't know it, dig it up and learn it.

HOW ABOUT SOLAR ENERGY WESTERN ELECTRIC HAS PROVIDED FOR OUR FUTURE POWER? DO WE NOT HAVE SCIENTIFIC LUBRICANTS IN SELF-SEALED UNITS AND NEVER HAVE TO BE REPLACED FOR OUR MOTORS? DO WE NOT HAVE REPLACEMENTS FOR COPPER, ZINC, OR LEAD FOR OUR NEWER INVENTIONS? [AND THEN THERE'S ANOTHER QUESTION ON SOLAR ENERGY OR ATOMIC ENERGY AS MAKING UP THE DEPLETION OF THE PRESENT TYPE OF POWER RESOURCES]

Theoretically, there's sufficient uranium content in the earth's crust to equal 20 times the fossil fuels of the world -- theoretically. The only trouble is that the extraction of it would involve a tremendous mining of the earth's surface, and even then, you wouldn't approach any closer than 50% of your high-grade stuff in conversion -- a 50% factor. United States is obtaining 92% of its uranium from one mine -- not on this continent. The [Shimfaloalea] is about as near as I can come to it in the Katanga of Belgian Congo. Uranium in Canada, of course,

has to go to the El Dorado Corporation and the government, but most of your uranium that has been found is .1 of 1%. Bear in mind that U-238 at a 1% is only 20 pounds to the ton, and it takes 140 pounds of U-238 to do one of 235, assuming 100% efficient conversion. Now, 60:40 or 50:50 U-235 : 238 reactor, yes, it will give you power, but a more efficient one is a 1% U-235 and 99% U-232 or thorium. Thorium or U-232 is not fissionable, but under bombardment with U-235 it becomes U-233, which is. Have we any thorium? Well, a couple of toothpicks full in about 4 or 5 little places. Who has the thorium? India. Next -- Brazil, a very poor second. So we're sore at Pandanaro because he shut down on the shipments of thorium phosphate and insists on giving us a quota of thorium nitrate, and Brazil followed suit. Bear in mind that all of the uranium pales into insignificance beside your solar energy. The solar energy falling on 8,000 square miles of Pennsylvania or Ohio at 50% conversion would be a greater conversion of energy than the total now converted on the globe -- 8,000 square miles. It makes uranium look like chicken feed. But if you ever got 8,000 miles, what the devil would you do with it under this politicoeconomic system? Build more ranch houses with it? Oh, phooey! You have to do a job of thinking.

Now that I'm at it, do you think that any Republican candidate, or any Democratic candidate, or any priest, or minister, or rabbi, or any public leader is going to lay the facts on the table for you? This is no disrespect to the religion -- it's simply facing the facts, that an ecclesiasticism is just as bad as your top ranks of your freebooter free enterprise. One does it on evaluation only of the balance sheet; the other on the take.

I think I've answered it. If you want any more questions on solar energy or on uranium, say so.

WHY AREN'T YOU PRESENTING YOUR VIEWS TO WASHINGTON? WHAT CAN BE DONE ABOUT THIS SITUATION?

Try to understand what kind of a structure we have. We have 48 states, we're trying to make two more. We have over 3,000 counties, over 16,000 municipalities, over 17,000 townships, a similar number of school districts and water districts -- a total of 116,000 political governments in these United States that are empowered to collect taxes and issue debentures and to spend it.

We did have 142,000. We have had a little improvement -- it's come down to 116,000. There are 9,000 of them in the State of Minnesota alone. We are the only major country on the face of the globe that hasn't undergone a decent housecleaning and a decent renovation in 160 years. Everyone else has. 116,000 units committing anarchy, without any direction of the whole. And you have the temerity of asking me to present it to a national gas house when you have a gas house in every state. The reporter for the Hearst paper here, interviewing me before dinner -- I doubt if he will print it. What? when he said, Mr. Scott, doesn't Technocracy, even if it doesn't participate as an organization, doesn't it take a political position? I said, yes, all political parties smell. Why differentiate between stinks, they all smell alike.

Now, what's the sense? You elect what? You elect individual human beings on the ballot to your particular political office, do you not? You do not resolve anything, you do not solve anything; there are no issues presented, and the minority of the people in this country have elected every president in history -- the minority. What kind of idiots are we? Can you solve the water problem of this continent by counting noses? Can you solve the pollution of our rivers and our lakes and our underground streams of water by counting the opposite end? Let's be frank. After all, a dictatorship only counts one nose. This so-called democracy of ours where we are all equal -- except some are more equal than others -- if you count 200 million noses, what does it do? It means you only have to use more Kleenex. It is not based on the statistical probability of the functioning of the energy-consuming devices on this continent. All the philosophic nonsense of history about the conduct of human affairs and the moral behavior of the individual pale into insignificance when you realize that the amount of energy consumed per capita per day in the United States -- what? Not the amount of food of the individual. Oh, no, the social complex. You can get by on 2,500, 3,000 to 4,000 calories, but the social complex requires around 170,000 per capita, and as and when it reaches 200,000 calories per capita per day, the minority of the healthy, able-bodied American citizens will produce and distribute physical abundance on this continent without the efforts or attention of the majority. What are you going to do -- issue ration tickets for the mink coats and the Cadillacs and the nightclubs to the majority while the minority do it for you? It simply won't work.

Don't ask me to compete for any political position. We said long ago we would never ask the public of this country to use either ballots or bullets. They're not going to use their own intelligence, and realize that we as a Technocracy are the primary, chief social consultants of this area. We make the design from the best data available; in other words, when more and better data are available, we'll render closer approximations. We're not asking anybody's favor; we're asking every American to join us. Nobody in it makes any money; so don't ask me to go to Washington. What would be the sense? Who have you got? The last president was Hazardous Harry. This one's a smoothie. He wasn't a general except as a matter of rank, but he was the best public relations officer the armed forces had. And you know what a smoothie is, don't you? One that always shaves a posterior before he kisses it. Come on, I said it in public: we wrote and said that Eisenhower would be nominated before the convention was held. We knew all about the deal between the oil companies and the GM and the powerhouse of the Roman Catholic Church -- the damn Baptists don't count; so, don't let's kid me or kid yourself about us going to Washington. Unless the public of this country gets sufficient direction and gumption, then they're just simply going to elect more of the same, are they not? Until they are forced to move.

GM IS GOING TO SPEND \$35 BILLION FOR PLANT EXPANSION IN 1956. HOW LONG CAN INDUSTRY STAND THIS KIND OF EXPANSION? WHAT ABOUT THE WAR OF GIANT INDUSTRY? I'VE THROWN THOSE TWO IN TOGETHER -- THEY ARE ALIKE.

Well, there was a mistake there. General Motors is not going to spend \$35 billion. \$35 billion is the estimated figure of investment in capital goods in 1956. We hope they do it. We'd like to see it \$40 or \$50 billion, because the faster you invest in capital goods replacement, the faster you get rid of these human beings. You take in France, the anarchic situation there is that 42% of the population are peasants, that is, on the land, and pays 2% of the taxes. There are more stores in France in percentage of population than there are anyplace else, but it has reached a point to where there is one wholesaler for every four retailers. Now, we're going the opposite direction: 6,000 supermarkets have a greater dollar sale than 368,000 other stores, and when you get 8,000 supermarkets, they will have a greater dollar sale than half a million of the other stores. In

other words, the country isn't going anyplace until you get rid of the dumb farmers. The only way to solve the agriculture problem is to get them off the land, not to leave them on; and until you squeeze the little manufacturer and the little storekeeper out, he isn't going to move as long as he can sit there like a spider in his web and get you to come in and buy. But if you squeeze enough of them out -- I'm not talking about a few individuals, I'm talking of millions -- then they'll have to move in a collective sense on this continent, will they not? Not the individual, but when you get it by millions. The faster it's done, the nicer.

And where is it going to go in the big plant? Outside of Chicago, you have your new appliance park of the Hotpoint -- a big, brand new plant. Last year, it hit the production record of one 11-foot refrigerator boxed, crated, and in storage in 41 seconds. You got your 2,400,000 square feet of your GE down there on the Lower Ohio River, your Westinghouse doing the same kind of thing, your Frigidaire; in other words, the Big Four -- Frigidaire, GE, Westinghouse, and Hotpoint -- in refrigerators alone will have a combined output in excess of 5 million refrigerators a year. The new rate at the appliance park down there on the Ohio is three per minute! But there aren't any human beings on the moving lines. You see, the human being is the jackass you've got to get rid of to get fast production.

WHAT IS TECHNOCRACY'S ANSWER TO THE SHORTAGE OF SCIENTISTS, ENGINEERS, AND TEACHERS? WHAT IN YOUR JUDGMENT IS HOLDING UP THE NEEDED AID TO EDUCATION?

What's the sense -- what's the attitude in this success economy of ours? Seven years to be a scientist? Oh, phooey! I can get a liberal arts degree and go into business. I can hire these guys for nothing flat! Huh? Sure. Russia is turning out this year twice as many scientists as we are. Their school system is every day in the week and more hours in the day, and the curriculum is tougher and the examination standards are higher. Who is that report? The president of a university in the United States and his son, who speak Russian and were over there and went to all of them. A university professor in Russia gets more money than any president of a university here. Their emphasis is on it, but regardless of their communism, bear this in mind, that it wasn't their communism or Karl Marx that saved them in the war. It was

their technology, and they licked the fascist armies of Europe, not us. Eighty-five percent of the casualties of the German forces were done by the Russians.

If we're going to do anything here, then we're going to have to put the emphasis on the training of individuals of this country and this continent, because this civilization of ours is dependent on scientific, technological, and engineering knowledge and design in operation, and if we are only going to turn out those chiselers -- after all, who's entitled to a Cadillac? The big shot, isn't it? It would be better if you'd bought GM stock 10-15 years ago and sent your boy to a gangster, wouldn't it? Come on, be honest and face it. It's pretty tough when you realize the Russians are doing twice the number that we are. And are we going to alter it? I doubt very much. Why? Because we're complacent, we're so ingrained with the success mores of our system that no one wants to spend that time. Why, they can go out and sell automobiles or toilet paper and get to a higher social level, and so long as you have that kind of a performance as a criteria of ability, may God have mercy on your soul!

HERE'S A WHOLE GROUP OF QUESTIONS THAT ARE ALL OF THE SAME TYPE. WHERE DO WE START THE WAKING UP PROCESS? WHAT CAN WE DO ABOUT THE SITUATION? NOW THAT WE HAVE HEARD WHAT IS WRONG WITH OUR ECONOMY, GIVE US THE FORMULA FOR CORRECTING THE MISTAKES. WHAT IS YOUR OPINION OF HOW TO CHANGE THE PRESENT SETUP TO A MORE SCIENTIFIC FORM? HOW DO YOU EXPECT TO ELIMINATE THE FAST BUCK? WHAT ACTION CAN WE TAKE TO HALT THE LOOTING OF OUR BASE METALS?

You know, this is very interesting. Would you dare throw these questions at any United States Senator or at any general in the armed forces of the United States? He wouldn't even permit it, would he? And he couldn't answer any of them if he tried. He'd hedge. Now, you're not going to do anything about it individually. Oh, yes, you can go home and say I can read something and I think something ought to be done about it, but as a matter of salving your individual conscience, you may make a little contribution to charity or something like that. That isn't going to do it. It's got to be a collective action. In other words, you have to stand for something as a collective body of people, and if you haven't got ..the guts and the gumption to do that, then, of course, it's going to break. Now you have an

opportunity to do this, yes. We think Technocracy is the best vehicle that you can do, but if you think you can do a better one, then go do it. We've been on the scene for quite a while. Our membership goes from Hawaii to the Far North down to South America. We have them scattered all over. All we are asking that a citizen take sufficient time out -- most of you are so loaded with extracurricular activities outside of your job that you haven't any gumption, time, guts, or anything else left, and you know it. Do you think, of course, that you are going to study anything like this and keep up with 4 or 5 lodges and half a dozen societies, play pinochle and bridge, and drink the amount of beer that some of you consume, ell, brother, you're not going to do it. I don't wish to interfere with your private pleasure. I wish you all the luck, but you'll have to sit down and frankly face the problem that you, as individuals, you will have to accord a definite percentage of your time and your interest, because what? You can't take this out of the headlines of a newspaper. Looking at a comic sheet isn't going to do it. You've got to have an actual awareness and attention on the part of collective groups of individuals.

The trouble is that when you go to church -- well, you feel very nice and comfortable sitting in the pew and you drop something in the collection plate, and you come out and well, that's that, a very nice sermon and you liked this or you liked the singing, and the congregation pours out -- quite a big crowd of people, and four blocks away, what? You can't tell the difference between that congregation and the Democrats or Republicans, can you? What's happened? They only congregated there once a week, that's all, as participants in a show. They were being entertained. And when they get outside and walk down the street, who are they? You can't tell a Christian from a Republican after he leaves the church, and you know it.

Now, unless you are forced into the realization -- now remember, it only takes one failure of one major oil field in the United States, and oh, brother, you're going to know it fast. That's all it takes. What are the chances of discovering an oil pool in the United States that is the equivalent of 90 days of consumption of petroleum in this country? The answer is 1,000:1. You're riding it and you're headed for it. Technocracy can do more than invite you to get into it, form your unit. If you can create a better organization than we've got, by all means, do it,

but we have been at it, we've been through it, we've been face-to-face with the problems up and down this continent from farmers and the miners in the Far North to down in Panama. But if you want to come in to have an entertainment club, we cannot compete with the movies or the television or the corner saloon. That is not our field. But if you've got sufficient interest in this country and this continent -- they are your country and your continent -- it's your problem, then you belong in here to collectively do something about it. If you haven't got that interest, leave. We don't want you because you're no good to us, and you're no damn good to yourself.

# # # #

HOWARD SCOTT INTERVIEW BY DOROTHY FULDHEIM  
CLEVELAND, OHIO  
MARCH 22, 1956

DF: Mr. Scott, how old is the Technocratic movement?

HS: It started out first in the winter of 1918 with sane scientists, technologists, and engineers of the World War I war industries, and the name was then, "The Technical Alliance," and in 1930, we started larger research, and in '32 we changed the name and incorporated it in the State of New York.

DF: You created quite a sensation here in Cleveland, did you not? I think you spoke at the City Club here.

HS: Yes, the first time I spoke in Cleveland was at the City Club and the Engineers of Cleveland as a joint meeting.

DF: Well, I can remember the sensation you created. Mr. Scott, in view of the fact that automation has came -- as I recall it, you expected it, you said that it would, that an impact would be felt -- what do you think is going to happen to our economy when we produce in such great abundance?

HS: Well, we'll have more automation -- more than has been installed, because this is only the prelude to a far greater expansion of technological processes in which the complete control, not only within one plant but within a dozen plants or 50 plants simultaneously.

DF: Mr. Scott, the thing that bothers me is that we have no precedents -- that never before in history has a country had too much of anything or even enough.

HS: Yes, that's quite correct. Never before in human history -- they've all been scarcity economies, and this is the first time in human history that abundance is threatening, at least one part of the world.

DF: There is a good deal of discussion about automation. Is it going to put men out of work, or is it going to create so many allied industries that there will, be enough work for everyone?

HS: Exactly the same process follows in a new industry, but in the new industry, we will make the equipment by automatic equipment.

DF: Well, then what do you envision? Men will have to work fewer hours?

HS: Fewer hours, and human toil as we know it will disappear.

DF: Toil -- what we call manual labor or unskilled -- will this no longer be necessary?

HS: Practically not.

DF: Well, then what happens? I mean, are we paid for 2 or 3 hours a day's work?

HS: Well, that is going to be the big problem is how to distribute sufficient purchasing power to distribute this abundance that is produced by energy -- extraneous energy -- and technological equipment.

DF: Why should it be a problem, though, really?

HS: There shouldn't be a problem, but always the apathy of human beings -- they are always slow to change until they are really compelled by the march of events to change.

DF: In automation, for example -- I've often been intrigued with this -- could you do away with the policeman or fireman? Could you have robots to do that work?

HS: That wouldn't be necessary with an entirely different design of urban centers, because you could design the urban center so that they are fireproof.

DF: Of course, that is an answer I hadn't expected.

HS: Well, take a case in point. There used to be 10,000 places listed in the Bureau of Combustibles in New York City where you stored the silk. Under a modern system -- a technological system of commodity terminals, there would only be one.

DF: Mr. Scott, what do you think will be our greatest achievement in the next twenty years?

HS: The conversion of solar energy.

DF: Would we have enough of it? Would there be an end to it?

HS: Yes, there wouldn't be any end to it. While uranium or atomic energy is very hard to get in mining the U 238 -- let me point out that the energy falling on the 8,000 square miles -- practically the size of the State of New Jersey -- at 50% conversion efficiency would more than equal all the energy now generated on this globe.

DF: The energy from the sun?

HS: Yes.

DF: That would be available to impoverished nations, too.

HS: Available to all alike, regardless of color, creed, size --

DF: Mr. Scott, it has been a pleasure to have you. I only regret we can't talk, with you more. Thanks very much for coming.

HS: Thank you, Miss Fuldheim.

TELECONFERENCE  
HOWARD SCOTT  
AND  
DONALD BRUCE, VANCOUVER  
APRIL 1956

GREETINGS, CHIEF! THIS IS DONALD BRUCE FROM VANCOUVER. WE HAVE A GOOD REPRESENTATION OF MEMBERS HERE THIS AFTERNOON FROM B.C. AND WASHINGTON POINTS. WE WOULD LIKE TO EXTEND A BIRTHDAY SALUTATION TO YOU AND MEMBERS WOULD LIKE TO KNOW HOW YOU ARE.

Thank you, one and all, for those salutations, and as far as I'm concerned, I'm in excellent condition, at fighting weight, and the compliments are that I'm looking younger than ever -- I don't know what to say.

THAT'S GOOD TO HEAR. IT MUST BE THE GOOD LIFE ON THE FARM.

I don't know whether to lay it to that or what.

WE UNDERSTOOD THAT YOU HAD RECENTLY VISITED THE GREAT LAKES AREA, AND WE ARE WONDERING HOW THE TOUR WAS AND HOW YOU FIND THINGS IN THAT PART OF THE CONTINENT.

I spoke twice in Chicago, twice in Detroit, twice in Cleveland, and in Akron and Kent. The audience was beyond expectations in every place. In Chicago, they took out the speaker's stand, the tables, the blackboard, and backed me up in a corner with two microphones and the man running the recording tape had to sit on the floor at my feet. There was standing room only, and it ended up out in the hall. In Detroit, we packed them in. They added more tables, and when there wasn't room enough for any more tables, there was a giant bar that wasn't being used in the back of the huge floor, and they put tables all along the bar with people at that, and the others that came had to be placed downstairs. The same thing was true of Cleveland. You'll have to remember that in both Detroit and Cleveland and those areas, there were freezing sleet blizzards on.

In Detroit, there were 38 came from Hamilton, 48 from Windsor -- they came from Sarnia, Toronto, St. Catherines, as well as, of course, Flint, Pontiac, Toledo, Niles, and so on -- a considerable distance. The same way in Chicago; they came from Appleton and the Mississippi River, from Rockford, Waukegan,

TELECONFERENCE -- HOWARD SCOTT  
AND DONALD BRUCE, VANCOUVER

APRIL 1956

Moline, into Chicago. I spoke for three hours, thirty-eight minutes in Chicago, and no one wanted to leave; and the interesting part is that sixty percent of the public meeting was non-members, and they came out of the bushes. Some of them hadn't shown up in fifteen years -- one in twenty-two years.

CONDITIONS MUST BE AFFECTING THEM.

Yes, and I was interviewed on television over the network at 6:30 p.m., and we broke the press, although we were interviewed in Detroit and the press contacted us in Chicago, but it finally broke with an interview in Cleveland.

WE'D LIKE TO SEE SOME OF THOSE ...

We'll send you a copy of the press break and we'll have tape recordings made -- we're going to dupe them -- we'll dupe the best of the lot and you people will have one out there.

WE'LL PUT IT TO GOOD USE.

I don't know whether that covers it or not.

OH, THAT'S FINE. THAT'S WHAT WE LIKE TO HEAR: ABOUT THINGS HAPPENING IN THE ORGANIZATION.

There isn't any doubt about it. They're coming in off the sidewalks; and the reason it's doing that is because the little corporation is being squeezed, because automation and new plants are crowding out the old skills and dispossessing, say, the tool and diemaker and the skilled man, dividing his occupation up into half a dozen lesser paid propositions, eliminating him entirely; in other words, the parts manufacturer, the tool and die shops -- they're going out. To give you an idea: Goodyear Tire was shipping 270,000 tires a day on three shifts per week. They're only operating four days, 7-1/2 hours -- that's 30 hours a week -- one shift, and shipping 60,000 a day.

WELL, THAT'S BEING BORNE IN ON THE LABOR UNIONS THEN.

Oh, yes, your labor is hit and so is your little businessman, your little farmer, your little storekeeper -- he doesn't know where he's going next.

TELECONFERENCE -- HOWARD SCOTT  
AND DONALD BRUCE, VANCOUVER

APRIL 1956

THE AUTOMATION IS REALLY BUILDING UP INTO SOMETHING, ISN'T IT?

The big corporations are able to capitalize on it and retire their obsolescent equipment and build brand new plants, but the little fellow cannot. He cannot get sufficient capital to put in the capital goods. His output isn't great enough.

THAT IS COVERING PRETTY WELL WHAT IS HAPPENING HERE IN NORTH AMERICA. IS THERE ANYTHING ELSE YOU WOULD LIKE TO SAY ON THE GENERAL ECONOMIC ... ?

You see, technology is entering into the picture all over the rest of the world. United States used to export 11 million bales of cotton a year; but the rest of the world is coming up in cotton production, and most of their cotton production is long staple, high tensile strength, i.e., 2-1/4 or 2-1/2 inch instead of 3/4, and you hit over 39 million bales, an increase of 1.5 million bales last year. Going over 40 million bales, they practically arrive at the cotton self-sufficiency for the rest of the world ; in other words, we will be very fortunate if we can ship in actual export 2 million bales this year.

Well, but they're also coming up in their wheat. Russia has increased, for instance, since 1955, their food production 25 percent. They are also coming up in manufacturing, in canned hams, for instance. The canned hams coming in here from abroad exceed 96 million pounds. It's going up at an ever-increasing rate; in other words, in 1955 the foreign canned ham that came in here was equivalent to over five million American pigs. Fish is coming in; equipment; machine tools; instruments; textiles; everything else; in other words, the technological equipment of the rest of the world is moving up, and the United States no longer has the rest of the world to dump its surpluses in, because the rest of the world is starting in to produce surpluses. Is that clear?

YES, APPARENTLY THEY ARE VERY WORRIED RIGHT NOW ABOUT WHAT RUSSIA IS DOING TECHNOLOGICALLY AND ABOUT THE NUMBER OF ENGINEERS THEY ARE TURNING OUT. WE SEE IT IN OUR PAPERS.

Well, it's the same old story. Dresser Industries has just

TELECONFERENCE -- HOWARD SCOTT  
AND DONALD BRUCE, VANCOUVER

APRIL 1956

signed a contract -- Connor was head of the Dresser Industries and has been in Russia for three months, and they signed the contract for the Russian turbodrills. Instead of the rotary with the long drill rods down 10,000-15,000 or how much you want to drill it, you only require a cable and a hose; and the turbine is right down at the drill bed -- not up on the surface of the ground like the rotary -- and the turbine turns at high speed; therefore, it has a drilling capacity in feet of drilling ten times that of our best rotary, and the Russian technicians and the equipment are on the boat coming over here, and Dresser is going to manufacture the Russian development here.

Another thing that is very Interesting is that the , that is, your electric spark disintegration of metal and electric grinding, has been introduced here some time ago for the removal of broken taps in dies, etc. That is coming up fast, because you can have an unskilled person run four or five machines for precision grinding to 1/10,000. We have 146 such machines in the United States, but the Russians have 4,100.

THEY HAVE SURE COME UP FAST IN THE LAST FEW YEARS.

Well, now that you're at it -- let's just get a kick out of this. We've been advocating high voltage, DC transmission for our continental power transmission system for years. Remember, I devised it in 1923-24, The Swedes have a 26-mile experimental line. The Russians have had a 60-mile experimental line for some time; and the announcement is just out in the U.S.S.R. that they are going to build a 4,000-mile transmission line of a million volts DC transmission.

WELL, WHAT THEY'RE DOING OVER THERE IS GOING TO FORCE US TO DO THINGS HERE, TOO, ISN'T IT?

The things we've advocated here -- and others besides us -- not that they have more brains than we have, but they're using a greater percentage of what they do have -- and our initiative is squelched by the free-booting free enterprise; but they're giving it scope. That plane that landed in London the other day that they're making all the fuss about -- well, that plane is already obsolete. That's why the Russians are releasing it. It has only two jets. Those jets are 18,000 to 20,000 pounds thrust each. The new flying wing they have has a speed of 1,100 to 1,200 miles an

TELECONFERENCE -- HOWARD SCOTT  
AND DONALD BRUCE, VANCOUVER

APRIL 1956

hour. Oh, brother!

WELL, THEY'RE GOING TO REALLY FORCE IT HERE ALONG WITH THE OTHER FACTORS. ARE THERE ANY OTHER FOREIGN TRENDS THAT YOU WOULD CARE TO TOUCH ON THAT WILL BEAR ON THIS CONTINENT? ANY OF THE MORE POLITICAL -- ANYTHING LIKE THAT?

The situation abroad is one of resources. Britain is importing 14 million tons of iron ore, and has to get a million tons of coal a month in order to maintain its own internal structure; and what is stranger still is that for the first time, West Germany in the Ruhr is importing coal.

United States is importing iron ore from Ontario, Quebec, Newfoundland, from Brazil, Venezuela, Chile, Liberia, West Africa, and any other place we can get it; and the rest of the world is doing the same thing. The copper market is way up, and copper supplies -- all our copper ore mined in United States averages only .8 of 1 percent.

The foreign situation is that only a few areas have resources, and the so-called western world and our allies are suffering from resource malnutrition. British imports are exceeding British exports.

YES, THEY'RE GETTING INTO A CRITICAL SITUATION THERE ...

Yes, and it will be more critical in the next 18 months.

AND THAT WILL HAVE ITS EFFECT HERE, WON'T IT?

Certainly; and the same way with Italy, France, Germany, Greece, etc.

SEEING THAT THERE IS ANOTHER AMERICAN PRESIDENTIAL CAMPAIGN COMING UP, I WAS WONDERING IF THERE IS ANYTHING WITH RESPECT TO THAT THAT YOU WOULD CARE TO COMMENT UPON?

Well, no. There will probably be more money spent in this election than in any election before, because the Republicans, for one thing, are in the chips; and they have made more money, that is, corporate enterprise, than ever before, and the plans that are on the way are that they are going to dump in more

TELECONFERENCE -- HOWARD SCOTT  
AND DONALD BRUCE, VANCOUVER

APRIL 1956

millions than have ever been spent on any election in order to insure it. There are more differences within the Republican and Democratic parties than there are between the two parties. The Democrats haven't anything to offer; neither have the Republicans except the continuation of the same, and the Democrats are arguing that they could do the same, only a little bit better if they got in. They're both scared to death about the jibes of being soft towards the Reds; so, there will be no innovations -- just a rehash -- and it will make little difference in the long-range picture who gets in,

HOW ARE THINGS PROGRESSING IN REGARD TO THE EXPANSION PROGRAM?

Well, it's coming along in fits and starts -- not as much as we would like, We haven't made, as you know, any high pressure ...

BUT IT'S ALWAYS WELCOME, NO DOUBT.

Yes, it is. We will be commencing work this year -- we've almost finished the office building. It has a new aluminum roof, gutters, and downspouts. In the auditorium, the walls are to be painted and it needs additional flooring, and a few other things, and then we'll start on the house. We ought to have it pretty well under way this year.

WHAT WOULD YOU SAY SHOULD BE THE IMMEDIATE OBJECTIVES OF THE ORGANIZATION?

Symbolization, keep on going. You're going to find that the younger people -- as we find them here in the middle west and several manufacturing areas -- they have no place to go. If they do any thinking at all, they cannot espouse the Democratic Party, the Republicans, the Socialist, Communists or the Fascist outfits, and the accumulation of mortgages and other debts -- they have less leeway than they have had. The pressures are increasing. They're driving farther and farther to work, and in your automobile industry today, what is worrying them is the number of miles they are covering in a new car -- 29,000 in 20 months; therefore, when you trade that in -- you can only do two cars. The third you can't do, because you'd still be paying on it and you'd have no equity left; so, they are wondering how they're

TELECONFERENCE -- HOWARD SCOTT  
AND DONALD BRUCE, VANCOUVER

APRIL 1956

going to finance it in the latter part of this year. By the first part of next year, they will really be in it.

SOMETHING THAT IS ON OUR MINDS: IS THERE ANY PROBABILITY THAT YOU MAY VISIT VANCOUVER OR THIS AREA THIS YEAR?

Well, I'll tell you what I'm up against, I have to have additional people stay here if I'm to take a trip. So far, we haven't been able to make satisfactory arrangements.

AND IT MAY BE, TOO, THAT THINGS WOULDN'T BE QUITE RIGHT THIS YEAR ANYWAY.

I might be able to hit part of the coast this year. I do not need any inducement. If we can get the people to come here and spend the time while I take the trip, well and good; I could make it.

WE'LL HOPE THAT THAT MAY HAPPEN. I'M SURE THAT ALL THE MEMBERS HERE HAVE APPRECIATED VERY MUCH YOUR REMARKS, CHIEF, AND WE WISH TO CONVEY OUR BEST WISHES TO YOU AND TO THE CHQ STAFF.

Well, thank you very much, I wish I could be present with you instead of this long distance away.

THAT IS SOMETHING REALLY WORTHWHILE AS FAR AS WE'RE CONCERNED -- JUST TO HEAR YOUR VOICE.

Thank you, and my best regards and salute. Carry on.

HOWARD SCOTT TELECONFERENCE  
LOS ANGELES AND CHQ  
NOVEMBER 18, 1956

HOW DOES THE "BRINK OF WAR" OF JOHN FOSTER DULLES TIE IN WITH THE RECENT ACTION TAKEN BY OUR NATO ALLIES, FRANCE AND BRITAIN, AND HOW WILL THIS AFFECT THE PROBABILITY OF WORLD WAR III?

Well, if the question of a World War III outcome of France and Britain, there is not much probability of that. As far as Dulles "brink of war" policy, of course, Dulles is -- Wilton Ivie has put it that Dulles first shakes his fist, then shakes his finger, and then he shakes all over. Of course, now he is down in Key West and will be there for some weeks. That makes, let's see, Eisenhower has been operated on, Dulles has been operated on, Wilson has been operated on, Summerfield has been operated on -- very shortly there won't be anybody in the Cabinet that hasn't been operated on. So, while Dulles before his operation might be described as the most dangerous unguided missile in the world, the fuse has been removed.

THERE WERE CONFLICTING REPORTS ON THE MAGNITUDE OF THE ACTUAL MILITARY OPERATIONS IN EGYPT. WHAT WAS THE EXTENT OF THESE OPERATIONS?

The big part of the operations was the advance of the Israeli Army. Britain chiefly dragged their feet for a week against the continuous urging of France to go into action, and that was only bombing around Port Said, and you might say they only have a beachhead there. In other words, to put it frankly, the Israelis did all the work. They defeated the Egyptian Army. If there had been any coordination and any foresight, the British and French would have occupied the entire length of the Canal, but they can't do anything correctly. They stalled and stalled, and then there is so much under-the-counter dealing that you don't know what is going on. Of course, if they had any vision, they would have backed Israeli to take everything up to the Canal. Then Africa would have stopped at the Canal and Asia would have begun at the Canal, and with Egypt holding one side of the Canal and Israeli holding the other, it would be truly an international waterway, would it not? YES. Yes, but that would be too forthright and too clean-cut. Remember, wherever there's oil, there's grease, and it's not spelled with two "es" in the center. Let's go on to the next one.

THE NEXT ONE IS A PART OF THAT ONE. AS SOME REPORTS INDICATE THAT NASSER KEPT HIS MAIN FORCES AND HEAVY EQUIPMENT OUT OF CONTACT, HIS AIRCRAFT IN HIDING, AND DID NOT ATTEMPT TO OPPOSE THE BRITISH BOMBERS.

No, he might have pulled some bombers out, but, after all, they have no force to maneuver with, and they are not following any Russian strategy of caving in their front. That's nonsense. I think we can dispose of that one. Let's take number four now.

IT'S A SHORT ONE. WHAT WILL BE THE FATE OF ISRAEL?

Well, that's not exactly a short one. The Israeli has been at war with the Arab nations for over 8 years, and the United Nations arranged a cease-fire and a truce, but the United Nations never went on to make a peace settlement. Now, Israeli's borders are not guaranteed, there is no territorial integrity guaranteed by the United Nations, so Israeli is the only entity in the Near East that is a so-called democracy and has the modern technical ability. Now, unless the United States and the United Nations and some other powers step in to guarantee Israeli's future and her territorial integrity, there will be more trouble; and are we going to do it? The answer is not so long as we are playing the Arabs and the petroleum, which brings us into question five.

THE BIG QUESTION OF OIL. WHAT HAS BEEN THE EFFECT SO FAR ON WESTERN EUROPE AND THE U.S. ON SHORT OIL SUPPLIES FROM THE MIDDLE EAST?

You see, the total oil production of the world daily is over 15 million barrels a day, of which slightly over 7 million are produced in the United States, and 2,500,000 in Venezuela, and around 3,700,000 in the Middle East area, of which 1,800,000 go to Europe, that is, from the Near East by the Canal pipelined to tankers, and we only are pulling in between 300,000 and 400,000 a day from the Middle East, and about 1,000,000 to 1,100,000 a day from Venezuela. Now, therefore, if you think back in this situation, it has been the terrific volume of money -- mostly American money -- that has poured in for royalties in Saudi Arabia, Bahrein, and in Iran that has been the cause of the seething trouble, because these millions that have been poured in have been used by Saudi Arabia and others to underwrite Arab

nationalism and trouble all over from the Atlantic clean through to Pakistan; and, naturally, as the British were double-crossed in Iran and in Southern Arabia and the way things are going -- United States, of course, is not acting officially, you understand -- you will notice in today's papers that they are leaving the action to the American oil companies. Well, that simply means that our oil companies are out to do a double cross, because they are going to retain friends with all of the Arab countries; in fact, they are not going to permit oil shipments from any part of the Near East to Europe, because that would offend the Arabs. Now so far as the United States supplying the oil to Europe, that's nonsense. We haven't got it. I think that handles that question, doesn't it?

YES, IT DID. THE NEXT ONE IS WE WOULD LIKE TO KNOW IF RUSSIA WAS BLUFFING WHEN SHE OFFERED TO GO INTO EGYPT WITH THE UNITED STATES TO PUT A QUICK STOP TO ALL AGGRESSION?

Well, if the United States would join her. You see, Russia and the United States are the only two powers in the world that if they agreed, nothing could happen anyplace in the world; in other words, there couldn't be any aggression by anybody if the United States and Russia were jointly associated in maintaining world peace. But that's not likely to happen, because the United States' economy requires further inflationary factors, and we have been operating the last ten years under war and the threat of war, and the present budget of \$40 billion for war materiel is not large enough to absorb our surpluses. Bear in mind that in 1956 our inventories are over \$6 billion larger than 1955 in spite of the huge sales and the huge production.

WILL THE UNITED NATIONS FORCES BE ABLE TO ACCOMPLISH THEIR MISSION IN THE MIDDLE EAST?

That is if they are allowed to go into Egypt? YES. Well, what is the mission of the United Nations in the Suez? No one knows. Dag Hammarskjold doesn't know, the United Nations doesn't know, the United States doesn't know, and the Russians are puzzled, so nobody seems to know. You have to define what their mission is first. They haven't defined it. All they've done is pass a resolution, so now you're going to land 6,000 troops from 14 countries. That will be a beautiful dietary and linguistic problem, let alone maintaining any morale, and morale to do what?

Are they to run the Canal? Are they to maintain peace? What are they to do? They're not instructed or empowered to do anything but land there. That's typical of the United Nations, that's typical of the circuitous runaround the United States has been doing for the last ten years in its foreign policy. In other words, one can wish them well with their blue hatbands and their blue armbands, but let's see what they accomplish in this war. Let's go on to the next.

WE WONDER IF THERE COULD HAVE BEEN ANY PLANNING BEHIND THE TIMING OF THE HUNGARIAN OUTBREAK, THE INVASION OF EGYPT, AND THE ELECTION HERE AT HOME?

The presidential election? YES. Well, you know Mad Avenue in New York -- otherwise known as Madison Avenue -- they're the greatest collection of hucksters in the world, and the present administration has been mostly dominated in all its public relations by the Mad Avenue crowd, and it was the Mad Avenue crowd that proposed the "survey from the skies" you know, which, of course, is not that, and there's no doubt that the boys on Mad Avenue were timing the situation so that it would come just prior to the election. The only trouble about all this -- I'm going to answer a few questions here in the same one -- bear in mind that Austria is neutral and that Russia evacuated Austria and that the Austrian-Hungarian boundary was left open -- wide open -- for months. Naturally, every opportunity was given to those who -- let's say agents -- who wished to intrude for various reasons. The peculiar thing about it is that the Russians at any time could have closed that boundary, and they did when they wanted to in two hours flat -- tighter than a drum. Now 130-some-odd western newspapermen and photographers all rushed into Budapest, and it was going to be the greatest newspaper break of all times. Well, they had about five days and then they took refuge in the second cellar of the American Embassy, the British Embassy, and the French Embassy, and stayed there until they got safe passage out. They didn't see anything from the second cellar of the embassies. The Russians took over. Well, what does it all mean? It boils down to simply this: that the Russians sprung a beautiful Russian mousetrap -- they left it wide open, and we'll say that those forces of counterreaction that had most to gain had spent millions, and when the Russians got ready, they closed their mousetrap. It's going to be a sad lesson, unfortunately, to Hungarians and to a lot of other people. A very nice little item

in relation to this -- I am reading from THE NEW YORK TIMES from a dispatch -- and it says here, "Reported that on his way. to Budapest, cars with United States, British, and French flags were seen driving out of Hungary. In one car was a man whom he described as Fritz Maiden, editor-in-chief of the DEPRESSA of Vienna and who years ago married the daughter of the American espionage chief, Allen W. Dulles." THE NEW YORK TIMES inserts the following little item: "Miss Joan Dulles was married to Fritz P. Maiden of Vienna in New York April 2, 1948." Do you think I could close that question with that quotation?

THAT DOES IT.

That wraps it up. All right, let's go on to another one.

IS THE SPLIT IN THE BRITISH GOVERNMENT GREAT ENOUGH TO PUT A LABOR PARTY IN POWER?

No, the split is not, because the Labor Party hasn't the slightest idea what it wants to do in this crisis. We, of course, here have been turning out propaganda against Eden, but we really wouldn't like to see the Labor Party come in. We'd like to needle Eden by apparently giving support to the Labor Party, but we wouldn't really want the Labor Party to come in, because a Myron Bellen? would really be worse than Eden. That we couldn't take. Those are just maneuvers.

HOW ACCURATE ARE THE REPORTS, SUCH AS IN THE U.S. News & World Report, THAT THE HUNGARIAN CONFLICT WAS A SPONTANEOUS UPRISING WITHOUT VISIBLE LEADERSHIP?

When in history has there been a spontaneous uprising? What do you mean -- that a few million people all eat yeast simultaneously? I mean, that's the only kind of rising that would be spontaneous without leadership. There's evidence that there wasn't any spontaneity, that the pictures that come through show shooting of unarmed people and assassinations. Well, there's nothing to sustain any U.S. NEWS & WORLD REPORT. Of course, that magazine is probably one of the most reactionary on the North American Continent, and I think we had just better leave it to the U.S. NEWS & WORLD REPORT to continue with this nonsense. Let's go on to the next question.

WE ALSO NOTE THAT SOME OF OUR NEWS COMMENTATORS POSE THE QUESTION THAT PERHAPS SOME OF HUNGARIAN BLOOD IS ON OUR HANDS.

Well, of course, you see, it all depends on how one terms aggression. After all, military invasion is a forthright use of military force, but undercover counterrevolutionary agents of assassination, bribery, murder, and anything else -- now, is that aggression or is that just a polite form of international dealings? When we went into Korea, well, there are various terms for that, or when we upset the situation in Guatamala or British Guinea. We were going into Indochina, but we didn't quite make it. Just what is aggression? The Russian charges -- if there is anything to them -- then, of course, a certain responsibility to be put upon the west. As to what the Russians did in retaliation, that is still another matter. I think that ought to handle that.

WE HAVE QUITE A NUMBER OF OUR MEMBERS WOULD LIKE TO KNOW WHAT WE CAN DO AS AN ORGANIZATION TO HELP ELIMINATE THE POSSIBILITY OF THIS POSSIBLE WORLD WAR III AND YET AT THE SAME TIME CREATE MORE INTEREST IN THE ORGANIZATION OF TECHNOCRACY.

After all, step up your organization work, symbolization, get more members; if it happens, you'll all be in it whether you're Technocrats or not, you know. That's all we can say on that at this time.

WE'D LIKE TO KNOW IF THE RECENT PRESIDENTIAL ELECTION, THE CAMPAIGNING AND RESULT, INDICATE ANY TRENDS OF CHANGE IN ATTITUDE.

No, the 1956 election campaign was indicative of exactly the same thing as happened in 1952 only more so. In 1952, Adlai Stevenson was defeated by the Democratic Party, and in 1956, he was defeated by the Democratic Party even more so. Stop and think that all of the states where the Democratic Party elected Congressmen and Senators by a good-sized majority, while at the same time they went for Eisenhower. Massachusetts, Rhode Island, New York, Ohio, Michigan -- think of the vast labor vote in Michigan, which put Soapy Williams in as Democratic Governor for the fifth term and the state goes for Eisenhower. Well, it's a laugh. Adlai Stevenson didn't even get the same number of states

or electoral votes as he did in '52, and the total votes in the election were less than in '52, although the population had increased approximately 8 million more.

WE'D LIKE TO HAVE SOME INFORMATION ON THE DANGERS OF RADIATION FALLOUT FROM THE TESTING OF ATOMIC DEVICES.

Well, there is radiation fallout, yes, and any addition of radiation on this globe today is a hazard. So, every time you let off a nuclear device, a sufficient fusion-fission one, you're going to have a radioactive fallout, and the big danger in the radioactive is the strontium-90, and that has an affinity for calcium whether in the grass or other vegetation, and in the cow's milk and the goat's milk, and in the human being; and, of course, the grandpappy, you might say the background, of the strontium-90, that starts off with krypton, which lasts around 33 seconds, and then you have rubidium, which lasts around 3 minutes, and then the strontium. The only way to do it is quit playing with it in those quantities, but, after all, we couldn't do that because that would be poor business. So, we are headed for more radiation fallout unless there is an international agreement to ban nuclear weapons. Had enough on that?

YES. WE WONDERED IF THERE ARE ANY SIGNIFICANT CHANGES IN OUR NATIONAL UNEMPLOYMENT FIGURES?

Unemployment -- after all, you have to be drawing compensation before you are on the unemployment rolls, so the unemployment figures in the United States are kind of a tricked-up device. They are never very accurate. I would leave them alone.

WE WONDER WHEN WE WILL BEGIN TO FEEL THE FULL IMPACT OF OUR PRESENTLY-INSTALLED AUTOMATION, AND WHAT ARE SOME OF THE RECENT OUTSTANDING EXAMPLES OF AUTOMATION ALREADY INSTALLED?

Well, to give a lot of that would take too long, but let's point out that coal mining some years back had 780,000 coal miners, and John L. Lewis has only got 204,000 today and will have considerably less in another couple of years; in other words, this country hasn't reached its zenith in the installation of continuous automatic equipment processing. It is starting to climb, so that in the next five years, the impact will be felt

with a vengeance, more so in the next 2-1/2.

WE ENJOYED THE ANSWER SO MUCH LAST NIGHT ON THE QUESTION OF THAT ARTICLE WHERE EDGAR HOOVER, FBI, ADDRESSED THE 2,500 ASSOCIATIONS OF THE CATHOLICS IN REGARD TO THE RED INFILTRATION OF THE PROTESTANT CHURCHES. WOULD YOU LIKE TO COMMENT ON THAT.

Now wait a minute -- repeat that question again.

WE READ AN ARTICLE IN THE NEWSPAPER WHERE J. EDGAR HOOVER ADDRESSED THE CATHOLIC ASSOCIATIONS, THAT IS, THE WOMEN FEDERATION OF CATHOLICS [Whereabouts?] THAT WAS IN NEW YORK, AND HE MENTIONED THAT THE REDS, OR RATHER COMMUNISM, WAS INFILTRATING INTO THE PROTESTANT CHURCHES.

Oh, Edgar Hoover's speech? He stated that communism was infiltrating the Protestant churches? [YES] Well, that's an old cry of the Catholic organization. After all, the Protestant churches are all split up into a good many varieties, and it isn't that anything is going to infiltrate into it -- a Protestant organization. Just imagine an idea coming into the Protestants -- it would be differentiated 80 different times, wouldn't it? You would never get any cohesion. I think Edgar Hoover was drinking some, well, let's say vodka.

SOME OF OUR NEW MEMBERS ARE ASKING HOW TO PRESENT HOW THE PRICE SYSTEM DEPLETION OF RESOURCES ON THIS CONTINENT WILL AFFECT THE ABUNDANCE OF A TECHNATE?

We've still got resources, that is, on the continent. The continent is a much bigger thing than the United States, and that wouldn't alter yet the possible abundance of the technate, but if the situation goes on for another 20 years with this inflationary production, who knows?

WELL, WE'RE GOING TO HAVE MR. KLAUS, THE DIRECTOR, GIVE SOME QUESTIONS FROM THE AUDIENCE. DENMARK, ENGLAND, AND FRANCE ARE TALKING LIMITED GAS RATIONING. DO YOU ANTICIPATE RATIONING HERE OR WILL THE OIL COMPANIES INCREASE PRICES AND PROFITS TO ACCOMPLISH THIS SAME RESULT?

Oh, no, you don't have to bother about rationing -- you'll

just get higher prices, that's all.

AND MORE PROFITS TO THE OIL COMPANIES?

Why, certainly. Who do you think is running the country?

I'VE GOT ONE OTHER QUESTION. IT'S NOT ON ANYTHING THAT WE'VE COVERED TONIGHT, BUT IN LIGHT OF THE INCREASING MEDICAL COSTS HERE IN THE UNITED STATES, WE'VE HAD A MEMBER OF THE BRITISH PARLIAMENT HERE THAT GAVE A SPEECH IN WHICH HE SAID THE SOCIALIZED MEDICINE PROGRAM IN BRITAIN WAS NOW CONSIDERED SUCCESSFUL. WHAT REPORT HAVE YOU GOT?

The British health program is and the Russians is even better. You can take your choice, but remember, you can't suggest socialized medicine in the United States.

THIS IS M.M. FERTIG OF 11734-B. IS THE UNITED STATES MILITARY POLICY AIMED AT CAPTURING ALL OF AFRICA?

Oh, no, we're not interested in capturing any real territory -- we would be socially responsible for its operations. We merely want to exploit a territory anyplace in the so-called free world by the private enterprise of American corporations. Is that clear?

NOW WE WOULD LIKE TO KNOW IF YOU HAVE ANY INFORMATION ON THE HARRY BRIGGS TOUR UP NORTH.

Briggs' tour has been very successful. It has put Spokane on the map and Portland, Oregon. Almost a 19% signup in Spokane. Do you hear that? [applause] COULD YOU HEAR THAT? I could hear that.

WE HAVE ALSO HEARD RUMORS THAT YOU ARE CONTEMPLATING A WEST COAST TOUR NEXT SPRING. HOW ABOUT IT?

I'm interested and all I need is a driver or a tour secretary.

WHAT DOES THIS BUNCH HERE THINK ABOUT A TOUR? ARE YOU READY FOR ONE NEXT SPRING? (AUDIENCE APPLAUSE)

WELL, THAT SEEMS TO BE ALL OF THE QUESTIONS, CHIEF. IS THERE

SCOTT TELECON WITH LOS ANGELES

11-18-56

ANYTHING YOU WANT TO TELL US?

What kind of a crowd do you have?

ABOUT 80 TO 90 PEOPLE, I GUESS.

Did it come through all right? Let me know. (AUDIENCE APPLAUSE)

DID THAT COME THROUGH ALL RIGHT?

Yes.

WELL, THERE'S YOUR ANSWER.

Give everybody my regards. Carry on. That is the best we can do.

O.K. CHIEF. HAPPY LANDINGS.

Same to you. Good night.

HOWARD SCOTT  
HOTEL LA SALLE, CHICAGO  
MARCH 8, 1958

"DESIGN, DIRECTION, OR DISASTER -- WHICH WAY ARE WE GOING?"

Forty years ago in 1918 a group of scientists, technologists, and engineers from the war industries of the United States gathered together and set up a formal committee. That formal committee was the beginning of Technocracy. That's quite a while back. Twenty-five years ago, we were legally incorporated as a nonprofit, nonpolitical, membership organization in the State of New York, and today we have units in Alaska and as far south as the Republic of Colombia and Venezuela and Panama. This is an interesting proposition. Bear in mind that Technocracy Inc. has never been subsidized by anyone. Its growth is from the dimes and nickels and the odd dollars of its membership. We haven't any angels, and yet it has survived the greatest depression, the greatest war in history, and now in the midst of these Filthy Fifties, you are witnessing what Technocracy has been propounding -- has been pointing out -- for the last 40 years.

For instance, in our analysis of agriculture, we pointed out that the total number of farms in the United States would continue to decline year by year, while the acreage in size would increase. That is happening. In 1957, the latest agricultural report just out shows that 1,800,000 have left the farms in United States, the greatest number in any year in our history. Well, there's going to be a lot more leave the farms, because 56% of the farms of United States only produce 9% of the total agricultural production, and 26% of the farms produce almost 16%, So, there's going to be a lot of farmers yet to be squeezed out.

Over this last half century, you have had many sincere people give their time, their money, and their effort to various liberals, progressives, radicals, socialists, labor, and other organizations, but they always bemoan the growth of technology, and they always bemoan the increasing size of American corporate enterprise. They always wanted to save the little farmer, the little businessman, the little man all around, when, actually, the only way you could get anywhere was to make the big corporation bigger, and get the little fellow the hell out of it, because he was no damn good as long as he stayed there. This is

hard, cold reality!

When we went south to introduce the sugar cane harvester and the cotton picker, and I talked to far larger audiences than this with 250-270 southern hard-boiled with guns in their belt-- no, they weren't going to permit us to bring no such damn contraption down there south of the Mason-Dixon Line. Well, you here in Chicago and New York and other cities in the north are bearing out what we said 26 years ago -- that, when you brought technology into the south, you would make the problems that were once only endemic to south of the Mason-Dixon Line the problems of the entire country; and the negro has migrated, have they not? And will continue to migrate, and here in this city, you will shortly have a million, and you have a million in New York. In other words, Technocracy has introduced more social change than all the other organizations in history. We could only get one woman, one foreign corporation, and two other men in the entire State of Mississippi to try it, and look what the hell they did! They wanted to shoot us, and now there are probably people in Chicago who would like to shoot us for causing the migration, correct?

We introduced what? Thermodynamic heating -- you now know it as the heat pump. There's going to be a grand campaign on this year by the General Electric, Westing house, and others to sell you the last word in heat pumps. Well, the heat pumps so far turned out south of St. Louis will give you heat efficiently. They are still not efficient in this territory or farther north.

Two of our members were responsible for the process of frosted foods. Well, you all eat them now, but it was a battle to get that out.

Those are just a few of the things, because we of Technocracy have pointed out that the social tomorrow had to be brought about not by philosophic or moral or intellectual change, but it had to be brought about by technological change. Your socialism of Marx or Engels, or Proudhon, Sorel, or Bakunin, well, what? A lot of philosophic concepts, just as your Labor Party in Britain makes that great error that it got its background from Robert Owen, John Ruskin, and John Wesley -- a nice lot of moral revisionists. Sincere, yes, but, my heavens, that's not what is required. You can change the title of

ownership of all the property in any major sized national entity; in other words, you can nationalize it or so-called socialize it by expropriation, and you haven't changed the load factor of physical operation one iota. On the other hand, if you technologically alter the national load factor, it axiomatically follows that there won't be any private ownership involved. Rather hard to realize that technological socialization is just a million .years ahead of the philosophic socialization of Marx.

The Russians wasted a lot of their time from 1917 to the early 1930s in the schismatic conflicts over their dogma, and they were almost too late. Bear in mind that it wasn't Marx that defeated the fascist armies of Europe. It was technology that did it, and, thank heavens, they found out in time.

This country -- after all, what have we done? The last ten years have been the greatest decade in the history of the United States. Henry Luce proclaimed in 1947 the birth of the American Century, and now its demise has to be announced -- the shortest century known to man. In that American Century of ten years, we produced 54 million automobiles, 50 million televisions, 94 million radios, 2 million dishwashers, and you can go on. The greatest array of gadget equipment that man has ever seen. What did it? We put in the technological equipment to do it, and business, of course, developed a beautiful merchandising system of selling it to the sucker by mortgaging the future purchasing power farther and farther into the future.

So, we have moved 45 million people into the suburbs, and the cost is rising. The land cost of a house sale used to be for 50 years 8-10% of the total sales price. Today, it is over 20% and 25% in most cases. Why? Because this country is running out of land, that is, land adjacent to urban centers, which can be promoted and developed into suburbia. Taxes are rising, and what? The suburbia that we built hasn't got the sewer system or the water, the storm sewers, the hospitals, the public schools, the high schools, the recreation fields, but you've got a glorious house -- that ranch house -- that two-stage, you know, split level, well, you've got them. We've done a magnificent job -- we've chromed up everything, we slipped it out, and we've got swept wings on damn near everything, and the Russians got the Sputnik. Not that we haven't technical ability here, we have.

Some years back, before World War I -- in fact, it was before World War II, nearer World War I, I rode in South Jersey in a tank development then that jumped ditches at 55 miles an hour. There are two of those prototypes in the U.S. Arsenal. The inventor and developer of those died of starvation, ladies and gentlemen, in these United States in World War II. I am speaking of Dave Christie.

Years before that, we had a man who developed a new explosive and made other inventions. He could get nowhere here; he went abroad. They made him a multimillionaire, and they also made him a Knight Baron of the British Empire -- Sir Hiram Maxim of the Maxim machinegun and cordite, if you please. Last year, Major Armstrong, the inventor of FM, committed suicide. Last year, Degroliia, one of the greatest geologists of all times, committed suicide. What the hell is wrong with this country? Stop and realize that for over 60 years in these United States, it's been undemocratic to have the brains and intelligence that was strategic, long-range with a perspective beyond your nose. If you did, you were a square, a queer, a red, or a subversive. You could invent an Eskimo Pie and cash in on it -- brother, you were wonderful. It didn't matter how big a jackass you were otherwise.

The same thing is so politically. Look at our national scene. Well, have we got any leadership? We've got clever tycoons -- they have acumen, astuteness, and that agility and adroitness by which they can extract a dollar faster than the last one. They're tacticians, yes, but they're not strategists. After all, Franklin Delano Roosevelt couldn't use his legs, Harry couldn't use his head, and Ikie swallows Nixon and gets ileitis and hasn't any guts and can't make a decision. Well, you know it. Don't forget, probably some of you voted, didn't you? Didn't you vote in the last election? That illustrates how dumb you are, because you got what you voted for, didn't you? [WELL, I DIDN'T GET WHAT I VOTED FOR] That doesn't matter -- you voted; you got it. It doesn't matter who you voted for, you got it, because you believe in the system. After all, the last vote in our family was my grandfather. He voted just before the war between the states, and he regretted that. That's the only time he voted. You see, in another three generations, I probably [will be intelligent]. I couldn't help that. But if you must vote, get \$2.00 for it. That's all you'll ever get for it. Now, where are we bound? United States today has 140 million plus tons steel capacity.

We're overcapacitized in aluminum, refrigerators, automobiles, textiles, radios, televisions, electronics -- and planes? Well, you might as well pull in your B-36s and your B-52s and park them around the country in front of the American Legion Posts as monuments to antiquity. Just park them; don't bother to operate them, because your Russian ICBM has a range of 15,000 miles and a terminal velocity reentry of over 8,000 -- initial velocity in excess of 18,000 and a target accuracy of 4 square miles. What are you going to do with it? You're going to spend billions to develop missiles, huh, to catch up to the Russians in a race to see how stupid you both can be to commit mutual annihilation. You'd think the only type of scientists were missile scientists, wouldn't you? You'd think that was the only type of scientists that existed. Well, that's the type they want, so they can trick the public into getting running scared so you'll agree to vote more taxes to help more big corporations make more profits. Who are we going to have this war with? A 10-megaton bomb dropped on Chicago, what would you have? What did Dr. Libby say? Ashes. All right, you say, we can drop them on them. True, so it's going to be mutual annihilation for what? To save the General Motors, the Standard Oil, and United States Steel, because you won't be here, and their corporate entity will exist in theory only.

Where's this all leading to? United States has no allies, except a deficient Britain, a deficit Italy, a West Germany that only has a little coal and one teeny-weeny iron deposit in which has to be beneficiated. The total steel capacity of Western Europe is so great that you don't know what to do with it. Here in the United States, we have to import iron ore from 14 countries. Britain has to bring it in from abroad. Our copper is down, our lead, our zinc, our petroleum, and this grand feeling, you know, that you've had for the last fifty years, why, we'll pull out of this. Yes, you'll pull out of it -- you'll pull out of it into what? All the copper mined in United States today is less than .8 of 1%. Your iron ore -- it's a fading quantity in the U.S. Can you maintain 140 million tons capacity in full operation in U.S.A. on United States ore? You cannot. We're scraping the bottom of the barrel. We'll have to bring it in from around the world, and when you bring it in, that means higher costs. Higher costs for what? For everything made of metal.

Naturally, you are going to come back with a typical argument and say, well, the foreigner is working for less wages and a low standard of living. Yes, they are, and in most of the places they are working for low wages, but right now, the workers in the steel plants in India, Tata and East Bengal, are receiving in terms of United States dollars more money than the workers in the German steel plants, the Belgium, the French, the Italian, and the British. And they can still lay pig iron down in the United States cheaper than they can in Europe.

Well, let's go to it -- we want to explode another myth. The copper miners in United States, well, they've had increases in wages, yes, but those workers in Rhodesia in the copper mines there have \$6,425 a year in U.S. dollars, and even at that high rate, they can produce copper cheaper per ton than you can here in the United States. Why? Because you're dealing with high-grade copper and modern equipment.

Your Japanese is sending in not only cameras, microscopes, scientific instruments -- typewriters are brought in from Italy, Germany, Holland -- adding machines from Italy, West Germany -- sewing machines from Italy and West Germany -- a lot of wood coming into this country, hardwood and plywood, Japanese. Your nicest, latest word in tape recorders are Japanese, three-speed, beautiful jobs. Well, remember the United States once had the world's monopoly, you might say. We were hog butchers to the world -- you ought to know that term here in Chicago -- but all around the world modern technological equipment has been going in in margarine plants -- well, can you sell lard much today? Nobody wants to buy lard here in the United States -- you cook with margarine and you eat with margarine. The foreigners are doing the same thing; so the big five packers have decided to quit butchering hogs in Chicago. How in the hell do you like that! Haven't you heard it yet? You will -- it will be out shortly. Why? Because of the margarine prices around the world, they no longer have the leadership in lard.

For years we held the dominant position in the world in tobacco. Africa has gone up 780% in the production of tobacco, and that is beautiful tobacco, and its acreage is increasing every year. Cotton -- well, we have been reducing our cotton acreage, haven't we? The rest of the world has been increasing its cotton acreage, and when the world crop of cotton passes 45

million bales -- remember, most of that increase will be long staple, high tensile strength cotton and not the 3/4 or 7/8 that we have here, then we'll pile that 7/8 staple in the streets of Dallas, Memphis, and other cities. It will be nice to sit in the shade of it, but you won't be able to do anything with it.

This is coming -- coming because we have the greatest collection of high-grade billionaire and millionaire morons in the entire history of man! Smarter than hell when it comes to the almighty dollar and no strategic leadership for the future and the welfare of the people in this country and in this continent.

Let's take a few more things while we're at it, go down the list. I said to them out in California in front of large audiences, "Who's the greatest Californian?" 3-4,000 Californians in a single audience -- they didn't know. They started to mention somebody back in the Gold Rush, somebody else, and I said, oh, no, his name is George Harrison. You never heard of him did you? He was the father of Ocala 442. Ocala 442 is producing more-hundreds of millions of dollars for California than the fruit crops and the tourists. It is that high strength, long staple cotton that does 800 pounds or better on dry land and 3 bales to the acre on irrigated land. In California, by law, you cannot plant any other, because the bulldozers will come in and tear it up on you. They had to put it in by force, didn't they? Even the Californians were so stupid they wouldn't change until they were kicked.

I remember well in steel, pork, tobacco, cotton, and everything else, we once dominated the world. Now you have four big brand new steel plants going in in India besides the additions to Tata in East Bengal, you've got six going into China, and you have the great Teschen one in Polish Teschen. There are additional ones in Russia. You have steel plants going in South America, and when it comes to hydroelectric development, well, Grand Coulee is about the best we've got. Kuibyshev -- that's completed, on line, 400,000 volts, 600 miles, 3-phase, 60-cycle into Moscow, 2.1 million kW. Krasnoyarsk is under construction; so is Bratsk on the Angara -- Krasnoyarsk is on the Yenesei. Bratsk on the Angara is 3.7 million. Krasnoyarsk is 4 million, and is 2.4 million; in other words, they have four giant hydroelectric that are all larger and greater than Grand Coulee, Do you think that visitors from the rest of the world are going

to come to the United States to see one lesser proposition when they can go to Russia and see four at one time? We don't have to guess twice.

Most of our open hearths are 150 to 250. The Russians are operating 400 to 500 open hearths. They have 26 blast furnaces under construction of 2,400 tons daily capacity. We have some 100 ton, a little larger, electric furnaces. The Russians have 185 and they are building 500 tons. Why, what's wrong? We have brains in this country, but the brains, if they step out of line, they are ostracized, they're exiled; but you kowtow to the financial power.

United States is running out of time, ladies and gentlemen, because it hasn't got the plethora of resources to throw around that it had a century ago or fifty years. We simply haven't got it, no matter who owns it or what their moral or philosophic or religious attitude is. It doesn't make a cent's worth of difference, because you are facing change today as you have never faced in the history of man.

United States Census Report in the decade from 1947 to 1957, the population of United States has a net increase of 26 million. There was a decline in employment in transportation, agriculture, slight increase in public utilities, and there was a total increase in manufacturing production of 46%, with an increase in employment of only 3% in all manufacturing, including construction. Bear in mind that, unless you mobilize youth into the army 15 million strong, there isn't going to be any increase in manufacturing employment in the United States in the next decade, because you're going to slaughter them, that is, slaughter the employment.

Don't forget for a minute that they are going to do everything possible to pump prime it -- handouts -- they'll have different names for it, and, as Eisenhower said the other day, the government shouldn't help with it -- the private citizen should spend more and you'll come out of this depression, didn't he? Well, recall to mind the words of Herbert Clark Hoover that prosperity was just around the corner -- we went around three corners, and it took a world war to get you around the next corner to get out of it, didn't it? And how many hundred thousand, how many million dead? Well, Herbert Hoover was the one

who organized the RFC with a half-inch pipeline. We should have had a 36-inch pipeline. Now, our capacity has increased vastly since that time. We have a capacity of gross national product between \$460 billion and \$500 billion, and \$40 billion a year for defense won't do it, because at \$500 billion gross national product capacity, the deficiency is \$150 billion. The average citizen hasn't got the money to pull himself up by the bootstraps.

There has to be a cohesiveness developed in United States, and you can't do it under the Democratic Party, under the Republican Party, or the Socialist Party, or any other party that seeks to win political achievement at the polls. You first have to build an organization clean across this continent that has a social objective, and unless you want to do that, then you may expect to be dragged kicking and screaming into a new social order against your will and under compulsion, and God knows what kind of treatment you'll get, because this isn't going to be a revolution of the proletariat. This is going to be much dirtier, more vicious, than any revolution of the proletariat could ever dream of being. This is going to be the catastrophe of the bourgeoisie when the roof caves in and the cellar comes up through the dining room table.

When gasoline gets to 50 cents a gallon seaboard, your ranch house forty or fifty miles out is going to be worth how much? A plugged nickel. These things are on the way. You won't find any other organization that will face it. You can't vote us into office. We don't run for political office. We try to get an idea over of what can be done. You can design a system for this country and this continent. It can be efficient. It can be technologically correct, and insure the maximum conservation of our resources and a maximum use. It can't be done under private ownership or political parties. Bear in mind that we have 109,000 governments in United States, There are 48 states, 3,027 counties, over 17,000 municipalities, over 17,000 townships, and a similar number of special districts; there are 52,000 school districts, of which 12,000 have over 84% of all the school children in United States. You can write to Washington and get a nice sized book on the governments of United States giving you all the data. These governments I am speaking of have the power to assess, levy, and collect taxes, and to issue debentures; in other words, over 100,000 different single entities in the United

States with that power, without any coordination, without any direction -- that is what this country is dependent on, and you think you are going to go to the moon or go anyplace with that kind of nonsense? You're not even going to go down the next mile, because when it's closed down on you with high costs, saturation, and others, this country will know it. Don't ask us to save this system. We wouldn't save it if we could. We haven't any use for it -- we have nothing but contempt for its values. So, don't shed any tears about its passing. If you live another ten years, you will be in on the "begin the beguine." Thank you.

HOWARD SCOTT  
DETROIT, MICHIGAN  
MARCH 15, 1958

"DESIGN, DIRECTION, OR DISASTER"

Well, I think we had better have a little review for a moment. We are celebrating the 40th anniversary, because in the fall of 1918, we founded the Technical Alliance out of scientists, technologists, engineers, and others of the war industries of World War I. In 1933, twenty-five years ago, we incorporated Technocracy as a nonprofit, nonsectarian, nonpolitical, membership organization. So, we are celebrating two things -- a 40th anniversary and a 25th anniversary.

It is a rather unique proposition, in that Technocracy and before it the Technical Alliance has never had any angels or subsidies, we have never had any business rackets making money for us, and yet we have gone up and down this continent and our material has gone out around the world. We have survived the greatest depression in history and the greatest world war, and the present conditions are that we are headed into something else. We on the North American Continent -- we have a choice: whether you are going to go into this new era in a manner of intelligent foresight and planning or whether you are going to be dragged into it kicking and screaming. It isn't that you have any choice about your going -- it's only about the manner of your going, and you might as well make up your minds, to do it clean as an organized, directional proposition and avoid the trouble that might be otherwise.

In the year 1900, the United States had 75 million population, and in the 1930s, 130-132; today we have passed 172 million. We ought to have arrived at maturity. Instead of that, what have we? In the last decade, this country, the United States of America, has demonstrated that it has the greatest machinery for merchandising, advertising, and promotion the world has ever seen. In the last ten years, we have made 54 million automobiles, over 50 million television sets, and over 92 million radio sets. The smallest of anything we made was practically 2 million automatic dishwashers. This is all an achievement, depending on how you view it. In this last decade, we have built 11 million homes and manufactured 14 million refrigerators. We have moved 45 million citizens out of the cities and the towns into the suburbs. We have created more bourgeoisie in the last decade in

the United States than the rest of the world has created in known history. These migrants to suburbia might have been somewhat progressive, somewhat liberal, they might have had the glimmering of an idea back in the city -- they might have even been a Democrat -- but when they moved into suburbia, they arrived in the promised land, and what are they? The most reactionary, the most conforming, and the most pathetic set of citizens anywhere on the earth. Why, did you see the lawsuit that was brought where all the residents had their mailboxes in black in one suburbia and one wanted it different -- he wanted a white one -- and they've brought suit to prevent it. You can't have one that's different.

Now, this is amazing. It's the promised land. The promise of what? If you'd had an intelligent leadership, they wouldn't have permitted any horizontal expansion, because your horizontal expansion in housing amounts to continental treason. The cost of land in a house sale for over 75 years used to be 8-10% of the total sales cost. Today, that cost has risen to 25% in most cases. Why? Because we are running out of land, ladies and gentlemen, land adjacent to our urban centers. Land has gone up -- farmland far from anything -- to \$2,000 an acre on the prospect that someone may move farther out to create a subdivision. That's wonderful, but as individual septic tanks, individual wells -- where does it go to? Down into the ground, no planning, no direction -- throw in another subdivision. We've done it coast-to-coast. It's wonderful. Sell it to them on 30 years, and now they want to sell it to you on 40 and 50 years. FORTUNE MAGAZINE proposes 50-year mortgages -- that it's so wonderful, this prosperity, that the next generation should pay for it. They also want to limit the size of the lot to two acres, but preferably of four so as to prevent the formation of slums in suburbia. If you don't like my statement, write in to the FORTUNE MAGAZINE and they'll give you a reprint advocating this with the compliments of Mr. Henry Luce -- a louse on the loose. Yes, Henry Luce was the one who spawned the American Century in 1947, and in that ten years, we have risen to new heights of magnificence, but the American Century came to an end in 1957 -- the shortest century in history. Well, you say we're the greatest country on earth, we're the most prosperous -- well, that depends on your definition. You point with pride -- you did a little while ago -- to the millions employed. Now you're scared to death to even mention it, and that's only 8 months ago. Your press is full of

the nonsense -- this is only temporary, we'll get over this. Eisenhower said it would end in March. He was correct. What he was talking about did end in March, but he didn't tell you what was beginning in March. He left that out. The last report on unemployment was in the middle of February. This is practically the middle of March. Things aren't getting any better, and there isn't any solution to it. Oh, you can pump prime it. You will have to shove it in in volume. Remember the old, old wisecrack that Conan Doyle pulled in Sherlock Holmes, when Sherlock used to say, "Watson, quick, Watson, the needle!" It's a firehose you need today, ladies and gentlemen, not a needle. It's a 36-inch pipeline.

This United States of ours today has the technological capacity of gross national product of \$500 billion. At \$500 billion gross national product, we have a deficit of \$150 billion a year. You're going to cure it by throwing in a few hundred million here for post offices and a billion for schools in three years? No, you're not. These are dribbles. It's nonsense. Remember Herbert Clark Hoover assured the people of this country that prosperity was just around the corner, didn't he? Well, you rounded three corners and a world war before you picked it up. You had better be prepared to round a lot more corners.

Technocracy years ago pointed out that at the rate of growth of energy consuming devices in United States and of the consumption of extraneous energy, the day would come when what? When you would no longer require the majority of able-bodied human beings in the production of physical wealth. What is your report of the U.S. census? For the first time in history, over 52% of the population of the United States -- the able-bodied -- are no longer employed in the production and distribution of physical wealth. In the last ten years, '47 to '57, the population increased 26 million. The increase in physical production was 46%. Employment in mining, agriculture, and other fields declined. In manufacturing, including construction, the employment only rose 3% in that decade. There will be no rise tomorrow or this coming decade, because this terrific inflationary period of so-called prosperity has enabled your larger corporate entities to amortize out their obsolescence and to pass it on to the American consumer. You have the plant, you have the capacity, but you have overcapacity.

It isn't only in United States. Technological capacity is increasing around the world, and it's increasing around the world at a faster rate of growth than here. There is practically only one complete brand new steel plant in the United States. That's the U.S. Steel plant at Morrisville, Pennsylvania, on the Delaware. The Indians are building four brand new steel plants, which will be nationalized, and additions to the Tata and East Bengal. That will be six steel plants, of which four will be brand new, completely integrated. China is building six. They will be the last word. The steel plant now operating at Teschen in the Czechoslovakia-Polish will be larger than Morrisville. These things are going on. A Technocrat left this last week by air for the Philippines. He will be building the sixth cement plant in the Philippines since the war. He just returned some months back from completing a big one in Indonesia. Cement plants have been under construction in this country, yes, and in Canada, but they are also under construction around the world. So are fertilizer plants, plywood, machine tools, chemicals, power plants. There was a day when United States could claim the biggest building, the biggest dams, the biggest power projects. Can we today? No. We have a Boulder Dam and a Grand Coulee -- they were efficient execution for the particular installation, but they were an abortion on the overall design.

Kuibyshev on the Volga is about 2.2 million kW. That's on full line, 400,000 volts, 3-phase, AC 60-cycle, 600 miles into Moscow. will be on line shortly. The Bratsk on the Angara -- that's 3.7 million kW -- that's under construction. The Krasnoyarsk on the Yenesei will be 4 million. That's not all the list, but these are four hydroelectric projects alone that are all larger than Grand Coulee, two of them twice the size. You think anybody from the rest of the world is going to come to United States to witness one secondhand, fifth-grade proposition when they can go to another country and see four of the greatest? You don't need to worry about where to place your bets. You know what will happen.

All of this is hitting us in the face. So-called Sputniks have raised quite a disturbance psychologically, but bear in mind that the Russians were developing their short-range and their short-intermediate, and their medium-intermediate, their long-range intermediate, and their ICBM long ago. They made 8 successful firings of their ICBM in May and June of 1957, fired

from the western end of the Black Sea 6,000 miles northeastern direction in Siberia. In 6,000 miles, they had an accuracy of 4 square miles. The range total is 15,000 square miles, the accuracy 12 square miles. Do you have to bother about the accuracy with a megaton? Not when the damage area is 80 square miles, do you?

Photographs and the articles on Sputnik were in United States and in the Library of Congress and the Smithsonian in June of 1957. We have no complaints. We were just too damn lazy to go over and translate them, that's all. We have been operating on the theory for years that nobody else could do anything except American private enterprise. Well, American private enterprise is in a very sad state. It's made billions. It's got everything chromed up, souped up with swept wings, and the Russians have got the Sputnik, to put it mildly. Here we can sell anything to anybody, and if they can't pay for it now, we'll give them thirty years to pay for it. The only trouble with all this is that you have been mortgaging the purchasing power of at least 85% of the citizens farther and farther into the future, and you've built up the capacity to where the capacity is now so great, it's jammed up. Not only is it jammed up here, but it is jamming up the rest of the world.

United States is no longer a "have" nation. We import iron ore, copper, lead, zinc, petroleum, to mention but a few. We bring in iron ore from 10 to 12 countries to the United States. Well, that's not so bad -- we still have coal. The Japanese haven't even got coking coal. Neither have the Brazilians, but according to our press here, nothing wrong with our system. All it needs is just a little adjusting, I'm afraid it's going to take a major operation. There are all kinds of little, petty maneuvers they can make, but those are mere stopgaps. Our railroads -- you read the latest today -- the returns are down 64%. Why, they're going to cry for nationalization pretty soon -- to be taken over. Well, the joke is, of course, that there are some liberals, progressives in this country that would welcome it, but why take over a bill of junk? Put it through the wringer. Don't give in to the error that Canada made when it took over the Canadian Northern and the Grand Trunk Pacific or the British Labor Party when it took over the coal mines. Put it through the wringer. Wring out the private enterprise and buy it for 3 cents on the dollar.

What kind of leadership have we got? Well, you know, you voted for the damn fools, didn't you? You got what you voted for, didn't you? Now, don't tell me that you didn't vote for Eisenhower. It doesn't make a damn bit of difference who you voted for -- you voted. Look what we have. Franklin Delano Roosevelt couldn't use his legs, Harry couldn't use his head, Eisenhower swallows Nixon and gets ileitis and has no guts and can't make a decision. After all, Franklin Delano Roosevelt made Eisenhower a General, but nature only made him a Second Lieutenant. What do you expect? You put it in by the political party method, and regardless of what party -- whether it's Canada or United States, what are you going to do? You're trying to put somebody in there who'll preserve the status quo. They have no ideas, no concept of any kind, and they don't want any. And, of course, they're not going to get any until conditions force it on them.

What kind of a position are we in? Has there been any ecclesiastical organization -- church if you will -- that has proposed anything socially on this continent? They've condoned it; they've approved it. Why? Because in the beautiful gravy trough of prosperity, it dripped; they got it. Your labor organizations -- look at the state they're in. You advocated guaranteed annual wage, and what the hell did you get? You didn't get a guaranteed annual wage -- you got certain supplementary benefits, as and when unemployment set in. Then they advocated the four-hour day. Well, Where's the four-hour day they were advocating? Not a word about it anymore. Now they want to share the profits of a corpse. I mean, how low can you get? It isn't that the individual labor leader is insincere or crooked. The trouble is he's sincere, and he's so sincere that he wants to share this thing with private enterprise, the damn fool! Your politician is the same. They're telling you if you vote in the proper person of the right moral character, that we can rectify this. Phooey! It wouldn't matter if you voted in Jesus Christ in this technological situation or Mohammed or Buddha or anybody else, because this is a technological situation, and voting anybody in on a political party basis -- well, if you want to get into office or something and ride his coattails, that's one thing, but don't kid yourself that it's going to solve the situation on this continent today, because this is going to really be tough. After all, the Chinese are making 9-1/2 inch ID

pierced-from-a-solid thickwall pipe, any thickness, forty feet long. They are offered for sale on the international market. They are offering for sale a beautiful diesel engine -- the Chinese, I mean, not the Formosans, don't get me wrong. Refrigerators, radios, pumps, tea, tobacco, minerals. Well, the Russians are exporting aluminum, fertilizer, tea, canned goods, steel welds, steel beams -- they'll even sell you one of their Tupelov TU-104 and the Brussels Exhibit, which is opening shortly, they have moved in one of their TU-114s, 220-passenger with two elevators in it. They parked it there. They're going to serve you vodka and caviar, and you can go through and photograph it inside and out -- 600 miles an hour, nonstop Moscow to New York. Well, we're advertising the Boeing 707, aren't we? It's going to be the first American jetliner. If you know the fuel consumption on it -- we've got jets hung down there in pods -- they look like flying sewerpipes. The frontal area is terrific. Take a look at the TU-104. It's nice, little, tucked in alongside the fuselage, but the tube is almost forty feet long. Well, that's some temperature, isn't it, with an afterburner in it? Do you do that with stainless steel? No, you don't. Now that was a job of designing, but this hustler that we created the record with here after we fueled it five times coming across the continent -- once to start with -- that's a bunch of flying sewerpipes, too. That isn't any design. You put enough power on a barn door, you can fly it, but it isn't aeronautical design.

It's great if you can sell this kind of junk to the public. It is happening all down the line. Go into your stores right here in Detroit, and what do you find? The most beautifully done microphones, coaxial speakers, tweeters, instruments, all made in Japan, really quality work, as good as their work on cameras -- at half the price of the American products. I didn't bring them with me tonight, but I have two batteries -- one the usual Eveready made in United States, sells for twenty cents; the other one, wrapped in a little polyethylene bag, made in China, sells here for nine cents. They're both the same; in other words, technology doesn't care who steps on the trip, whether you are black, white, brown, or green, provided you can step on it, that's all. They have the raw materials, the resources, they can put in the technological equipment.

Take the Kangsu Canal that's just been completed. The Kangsu Canal is 420 feet wide on the bottom, has a 1-1/2 to 2 to 1

slope. It's over 200 miles long and is 8 meters deep. Have we got any project like that? Why, we're fighting over the St. Lawrence Seaway, and we're making a botch out of that. We can't do anything correctly. What is wrong with us? What is wrong is simply this: that the concepts of free enterprise are one thing, and they're valid and don't cause a great deal of conflict or disturbance provided only a limited number engage in it; but when you get automobiles to the millions we have here, population to the millions we have, then you better start doing a unified design of the entirety, because when you have 60 million automobiles and the Bell Telephone system of United States has passed 52 million (I think) phones in U.S. -- independents add more.

All of this was all very well. Back in Andrew Jackson's day, you could go for this kind of nonsense, but with the terrific rate and volume in order of magnitude we are handling today, you can't afford to run a continent on the basis of making money for somebody. Here's the U.S. group that just came back from Russia -- the chief metallurgical engineer of General Electric, Bethlehem Steel, and others -- and they were discussing with the tops of the metallurgical industry in Russia the fact that the Russians had spent some millions in building a pilot plant purely for experimental purposes, and said that in United States we could not do that. We have to show a profit on the operation. The Russians said, "Yes, you have to make profits, we only have to make steel."

Go down the line. Your railway system -- remember that Honest Abe was a great railroad attorney in Illinois. Lincoln rose to fame as a local politician and railroad attorney. When was the last new idea in railroading? The idea of the MCB coupler, the air brakes, almost anything -- did it come out of the railroad industry? No, it did not. They haven't produced a new idea since 1860. This is fact. Has the General Motors ever contributed a fundamental innovation to automotive transportation, or Ford or Chrysler? No, they have not. Has United States Steel ever contributed a fundamental innovation in the technological production of ferrous metallurgy? It has not. Oh, but wait a minute! They've made billions, haven't they? They have, but what is happening. You're then weeding out all the long-range intelligence in this country. You accumulate only the tactical, the immediate astuteness and acumen that can gather the

fast buck first.

I rode in South Jersey in the '20s in a tank that jumped the ditches at 55 miles an hour. That man, ladies and gentlemen, died of starvation in United States at almost the end of World War II. His name was Dave Christie. He had two of his prototypes in the U.S. Arsenal, Did they use them? No, and when the Russians and the Germans came out -- the Germans with their Tiger Mark VII tank and the Russians with the Stalin tank, they came from Washington to ask us if it was possible that the Russians had somehow gotten hold of Technocracy's tank design, because we had specified wide treads, diesel drive, no gears, 120-mm. gun, and a 9-inch rocket tube in the back, and that somehow maybe they got it from Technocracy. We said, "Why not; we spilled it all over the continent and we gave it to you." Quite possible. Do you get the implication? All because the Stalin tank was 122-mm. and ours was 120. They couldn't conceive of anybody designing anything. Now, wherever you are around this globe, if you start to do a job of designing, you'll arrive at the same thing with the same function as you refine it, no matter whether you are Russian or Chinese or what you are; and the only thing that we could conceive of was that they were stealing it from us.

You've been subjected to this propaganda that the Russians stole the atom bomb from us, and somehow it's backfired because they stole the Sputniks from us! Just how in the hell do you steal something we haven't got? That's been a problem, but that is the propaganda that has been thrown at you for the last 12 to 14 years. Nobody but us could sell anything, and they're correct, nobody but us could really do it. As Gimbel's would say to Macy's, "Nobody, but nobody." But when it comes to designing, our concepts are minute -- they're picayune. For instance, Technocracy has advocated a continental hydrology -- here's the Canadians starting to do the St. Lawrence Seaway themselves -- United States rushes in; it could have done a decent job, but it is an abortion -- 27 feet over sills in this day and age! For heaven's sakes, let's have it 40 feet over sills. You could really do a job, but no, they want to prevent anything from doing it correctly.

The Russians are headed for a nice one. That's on the Irtysh on the river -- that dam will be 216 feet high and 31-1/2 miles long -- some project, but it will reverse the greatest mass of

water ever reversed from going into the Arctic and from the Caspian to the Aral to Lake Balkhash -- look it up on the map and see how far it is -- you would be able to do it by water traffic and you will irrigate a terrific area. They will also probably use their atomic explosive and even their nuclear fission to blast away from the tail end of [Malina] into the Pacific. Well, we have big things on this continent, and in this day and age the concepts have to be continental. You can't confine them to the U.S. Steel, Standard Oil, or the General Motors and their Boards of Directors and their stockholders. For heaven's sakes, let's quit kidding ourselves. What can Charles "engine" Wilson do or Charles "electric" Wilson do? All they can do is go out and play golf. That's all Ikie can do. Well, proficiency at golf on the part of any American male is indicative of approaching senility or sexual incompetence. No wonder he has to try to knock those little things around. I made that statement once before over 8,000 people, and there were 200 men came backstage to tell me they were lousy golf players. We know our homo sapiens Americansus.

Now, we're headed into something here. We have an excess capacity of steel, aluminum, chemicals, and everything else; and the rest of the world, they're putting in brand new plants. We used to have the world by the tail that we could dump our corn, our lard, our tobacco, and our beef, wheat, oil, minerals, manufacture, anything. We could dump it anywhere, because we could make the profit here and we could dump our surplus for the cost of transportation plus. But wait a minute! The new technological capacity going in around the globe -- they, too, will have a surplus, and the United States will not be able to find a place to dump it unless it dumps it in the ocean. Its surplus will be here, and if you think this is difficult, if you don't run these plants to capacity, what are you going to have? If you do run them to capacity, you won't be able to dump them on the globe. Tough, isn't it?

What's happening today? For the first time in 200 years, the manufactured cotton goods going into the British Isles exceeds the total export of British cotton goods. Canadian Aluminum is protesting to the British because the British consumption of aluminum has fallen from 230,000 tons to 153,000 tons a year, and they are protesting the import by Great Britain of Russian aluminum, which is \$42 a ton cheaper than that delivered from the

nice part of the empire -- the free country of Canada. Carbide Limited is also objecting in Great Britain to the import of alloys. The British are importing alloys from those lousy Russians, and one of the particular alloys for has been selling in United States, Canada and abroad for \$1,900 a ton. The Russians are supplying it for \$1,100 a ton. \$1,100 a ton. Oh, yoi, yoi, gevalt!

Those little flashlight batteries -- your latest automatic process would produce a million of those a day with practically nobody in the plant. Cost? About 7.38 mils per battery, and you pay 20 cents apiece. Nobody cares -- you've got it, see, but when the pressure comes on, then the fun starts. Well, but the other boys can put in the equipment, and they are doing it, and they have lower social costs and they have raw materials. Now, I want to disabuse you of certain things. You will hear it said, oh, yes, they can do that, they only pay them 50 cents a day or a dollar a day or a dollar-and-a-half a day. Yes, in certain things, that's correct, but let me point out that the employee in the Indian steel plant is higher paid in U. S, dollars than the employee of the steel plants of Germany, Belgium, France, and Great Britain. Strange, isn't it? You think your miners are paid? Then the miners of Rhodesia at \$6,426 a year U.S. -- \$6,426! What -- those black boys getting that? Sho' nuff, man, that's what they is. And the strange part of it is this, that the Indian steel plant can lay down pig iron at the ports of the United States cheaper than we can. The Rhodesian Antelope Magumba can lay copper down in this country cheaper than we can look at it. Why? Because the equipment is brand new, it's integrated, and they have the high percentage ore. Remember, United States hasn't got it any more. All the copper mined in the United States is .8 of 1% and less. Calumet and Hecla of the old days -- brother, that's gone! The old Miami, when it was 4 to 6% copper, ah, yes, that was years ago. Annie doesn't live here any more.

And this is so around the world. Look up your oil well drilling statistics for 1957, and for the first time in years, the drilling fell off 16% in these continental United States because they couldn't find oil. You think you are going someplace? Well, maybe you are, but not where you think you're going, speaking collectively. Texas produces half of the oil of United States. Your oil production has declined to 6.3 million barrels, and Texas, with 11 allowable days per month, does half

of it. That doesn't say much for all of the oil-producing wells of the rest of the country, does it? The famous East Texas field is practically squeezed in two. It hasn't got much life, and when the bottom hole pressure in the Sprayberry in any well drops below 1,200 pounds, it has less than two years to run. What does this mean to you and to every other citizen on this continent that depends on automotive transportation? Where are you going to get it if gasoline goes to 60 cents a gallon seaboard? You thought you had security in suburbia? You thought you were set and the promised land was yours? Oh, brother! You better start praying to Jesus, because you've got about as much chance as a celluloid dog has chasing an asbestos cat in hell.

What's your property worth? Now, that's one thing. If oil reaches this situation, what's it worth? What do you think it's worth if you've got to walk? You think we're kidding -- a lot of you do. I remember in July, 1932, when I predicted that the banks of United States would close on or before April, 1933, when the Attorney-General of the United States wanted to move for my indictment for making statements inimical to the safety of public institutions. Our reply was that we would be delighted if he would so move, but that as and when he did, Technocracy would open up the case of the Hibernia Trust in New Orleans, the Union and Guardian of Detroit and Cleveland, and may God have mercy on his soul! Were we? No. What happened to the Hibernia What happened to the Union and Guardian? Well, you lived here, a lot of you, didn't you? This is in July, 1932. Well, they couldn't believe us then and they don't believe us now, do you? You entertain what I say, yes, but you entertain it with reservations. Well, it might be, but it can't be that bad. Don't blame us. We laid it on the line for you. Now, it is going to take a different organization than any political party that exists in Canada or United States or in any place in the world. You cannot do it by political parties. You will have to build an organization across this continent that has the concepts that conform to the parallelism of events and the technological progression of our times. You can't do it by electing somebody to political office. You will have to develop the organization first, so that you have the concept wide enough spread, so that people will have an idea of where they as a collective unit are going. Now, don't worry about their understanding it; they don't understand what they've got now, let alone a brand new one. When they tell you that they don't understand it, you say, well, what

the hell difference does it make if you understand it -- you don't understand this one. Let's quit kidding ourselves, but we can't run it much longer with this one. We'll have to have a change, and the question is what kind of a change. Your socialism, communism, your fascism, your so-called democracy, republicanism, you might just as well throw those down the drain, because they haven't any relationship to the technological factors required. You can't find any party or any outstanding politician that has any realization -- oh, they'll try to hook onto the bandwagon once it starts to move. They all do that, but if you've got to design the working probabilities of this continent, you are not going to do it with any political party gang. You'll have to get a brand new complex. Bear that in mind. You have to face it, and reality is pretty tough, but the reality of tomorrow is going to be a lot tougher. After all, the Russians had it fairly easy. Remember here, you are not going to have any revolution of the proletariat, because there practically isn't any proletariat. They're all aspiring tycoons. They all want to acquire a corporation.

A survey of American universities demonstrates what? That 97% of the males in universities aspire to a house in the suburbs with 2 to 3 cars in the garage, a job with a big corporation -- that's what they aspire to. Time is running out, and it isn't going to work that way. The Russians had it relatively simple, but here we are going to have the catastrophe of the bourgeoisie. What are you going to do with those 45 to 50 million people who are all dressed up and nowhere to go? You think that voting the Democratic or Republican Party or the Conservative or Liberal or CCF or social credit in Canada is going to have the slightest effect? If you don't know how to run this thing on a new basis, remember you can't revive it and run it on the old basis -- you'll have to run it on a brand new one. Technocracy presents you with the problem and leaves you with it until you ask the questions.

---

THIS IS ALL VERY GOOD IN STATEMENT OF FACTS, BUT WHAT ABOUT THE PSYCHOLOGICAL ASPECTS OF HUMAN BEHAVIOR, GREED, COMPETITION? WHAT OF MORE AND MORE CONSPICUOUS CONSUMPTION, ETC. YOUR ORGANIZATION MUST CERTAINLY HAVE THE PROBLEM SOLVED.

If we have, that's more than the christian church and the mohammedan church and the buddhists, and all the rest of them have done in the past 2,000 years, isn't it? They haven't solved greed yet. Of course, if you are attempting to discuss human conduct under a Technate, bear in mind that you couldn't steal if you wanted to. Stealing is legally defined as taking something of value from someone else, is it not? Your medium of distribution which you receive as your income is of value to no one else. Even your wife wouldn't gain if she took it out of your pocket, because it is non-transferable. She has her own currency. She doesn't have to bother with you, you bum. She has an income as good as you do. For the first time in this country, the men will really have to be good, won't they?

Let's take another thing. Today you go in for hobbies, for instance, rare stamps for one, and you have hundreds of thousands spending part of their days and nights trying to accumulate rare stamps, and you have a big market in the stamp collection. Under a Technate, the Bureau of Engraving would duplicate every stamp ever published and you could buy them all for the equivalent of a dollar. That would cut that rubbish out, wouldn't it? Very simple. You see the technological approach to these problems is totally different than the moralistic arid legalistic approach. For instance, you can pass a law that passengers are prohibited from standing on the platform of this railway car. It never stopped passengers from standing on a platform yet, did it? They tried to put gates on it. Well, the engineer just designs the car without a platform, and he says stand on it if you can. You're a sucker if you try it -- it isn't there.

You can go on down the list. You might have a phobia and collect salt cellars. There are people as screwy as that today, and there will be under a Technate, but the trouble is that under a Technate, if you accumulated quite a few thousand of those, you would run into the problem of storage space. And as he couldn't get anything for it in coin of the realm, he would be stymied pretty soon, wouldn't he? You see, no citizen could exchange that in the coin of the realm. The income comes as a matter of citizenship, and when you are producing and distributing abundance, you cannot afford to differentiate in anybody's income, because there would be so much for everybody that the accounting would be so damned expensive to attempt to

differentiate it. So you give them all the same -- you merely want a continental accounting of how much is consumed in everything, every hour of the day, every day of the year. Then you have a continuous, automatic inventory. You know where it's consumed, by whom, and when. So, your conduct of human affairs as you now understand it -- that's been played on for thousands of years. What you have got to realize is for the first time you have to design a government not of human behavior but a government of things, because the things have become important in maintaining the life of everyone on this continent. The extraneous energy consumed per capita per day by the industrial complex is many times greater than that you put into yourself as food, so this industrial complex is the most important thing, it is the most tenuous, and that is something which has to be operated on definitely known propositions and not by guesswork.

HOW MANY BILLIONS WOULD BE NECESSARY TO REVERSE THE DOWNTREND IN PRODUCTION?

I think I have already told you that. \$150 billion a year is the deficit in national purchasing power.

DO YOU NOT FEEL THAT THE INTERNATIONAL LABOR MOVEMENT IS A REASONABLE VEHICLE TO PROMOTE THE IDEAS OF TECHNOCRACY?

What is the international labor movement? What do you mean by it? Labor unions, proletariat? We've had a sad case in the British Labor Party. After all, the ideology of the British Labor Party stems from Robert Owen, John Ruskin, and John Wesley. That's a kind of a moral soup, isn't it? And they open their meetings with prayer, don't they? Well, prayer is just about all they can do. So they nationalize the defunct coal mines. Why didn't they nationalize something that was really important? So, you save the coal mine owners and you give them guaranteed government bonds. Isn't that what happened? Well, why not put them through the wringer? Why pay them anything? So, you have a Clem Attlee become a Peer. You have the same kind of an attitude here -- if they can get to be senator, they've really arrived. That kind of thing isn't going to get anywhere. You've got to do a thorough job of a technological revamping of the British Isles or of France. What are you going to do in France when 42% of the population are peasants and pay less than 4% of the taxes, where you have more retail stores per 100,000 population than anyplace

in the world, where there is one wholesaler for every four retailers? I mean, how cuckoo can you get?

The International Labor Party -- what is meant by it? You mean socialist labor party? Well, the Communist Party of Russia is radical enough for that over there, but on this continent, communism is so far to the right, it's bourgeois. Let's quit kidding ourselves -- it isn't radical enough. Kind of bother you? We'll explain it to you sometime.

YOU MENTIONED THE HEAT GENERATED IN THE 40-FOOT TUBE OF THE RUSSIAN JET. IT CANNOT BE STAINLESS STEEL. IS IT CERAMICS?

Well, quite possibly it's fused silica or fused aluminum, or a combination of both. That would do it.

IN THIS SOCIAL CHANGE, WHAT WOULD HAPPEN TO STOCKS AND PERSONAL PROPERTY?

Why don't you separate the question? Stocks, bonds, debentures are either items of debt or equity in the same thing -- well, there's a terrific collection of that paper in United States today. The only trouble is it's a little too stiff, so the Technate would repulp it into finer tissue.

HERE ARE TWO ON RUSSIA THAT ARE PRACTICALLY THE SAME. WHAT IS RUSSIA'S FUTURE AND ARE THE RUSSIANS TENDING TOWARD THE RIGHT SYSTEM?

You get enough energy-consuming devices in Russia, and they could only go one way. As you approach the consumption of 200,000 kilogram calories per capita per day in the production and distribution of the physical wealth of a country, you will be more and more compelled into the arrivation of an entirely new form of social decision -- not that of counting noses or the one nose of an autocracy or the 200 million of a democracy -- you'll have to base all decisions on the probabilities of that entire complex of energy-consuming devices, because you have to determine the load by seconds clean across the continent. You can't even count noses that fast, and as Russia accumulates more and more energy-consuming devices, she tends to that. And what are your European papers and magazines -- and even here -- accusing the upcoming technically-trained administrators in

Russia today -- what are they called? The Red technocrats. How do you like it? We are the ones who have a laugh.

Well, someone wants to know about education in United States. Can we catch up with the Russians? Catch up to what. We have around 109,000 governments in United States -- 48 states, 3,027 counties, over 17,000 municipalities, over 17,000 townships and a like number of special districts, and 52,000 educational. Of the 52,000, 12,000 of those educational districts have 84% of all students of the 30-some million attending our schools. Those are school boards -- local school boards. And what's a local school board? They are appointed from the prime chiselers of their community, are they not? Well, do you think the hierarchy of local school boards is going to surrender voluntarily to higher education? Well, certainly not. They have prestige to maintain. You are not going to do it, because in these 52,000 school districts, there is no national curriculum, no national standard, no national performance, and no national coordination. So, therefore, the 52,000 would have to be abolished. It would have to be an integrated, federal, one system coast-to-coast, with the same standards, the same curriculum, and you would have to train the educational profession, because the educational profession has been brought up in the last forty years in United States that it can't call its soul its own. The only way they can really live is under an assumed name in another town. And who is responsible? The average citizen in these United States. Do you want your little Johnnie educated and your little Nellie? Yes, no matter how big a moron they are, you want them graduated. You want the standards high enough to force selectivity? No, you do not. Will you stand your schools being operated every day in the year? Oh, no, can't have that. What's wrong with it? Well, it's very simple -- for the last 60 years in United States, it's been undemocratic to have brains, other than that of the acumen of a chiseler. You could design and develop an Eskimo Pie, but God help you if you ever thought of something that was long range and strategic instead of tactical. If you did, you were a red, a queer, a square. Your community looked down on you.

Years ago, the passengers on the interurban coming into Dayton, Ohio, used to look out the window on a 40-some-acre field of alfalfa, and they said, isn't it just too bad, there are those boys -- nice boys -- now if they'd only buckle down and attend to business, they'd really be something, but you know what they've

done? They've begged and borrowed, they've even taken their sister's dowry and she can't be married because they have taken all her money. It's just too bad the way these people behave. When the commission came over from the Aeronautique de France, they were looking for two boys -- Orville and his brother. The Mayor of Dayton said, "Why, no, you don't want to see those people." "Pardon, monsieur, those are the only ones we want to see." Wilbur and Orville Wright -- cuckoo as hell! Well, wait a minute! You've got a long line in United States, You've got a man who comes forward with a new explosive and some new invention. Can he get anywhere here? Oh, no, not a bit. He goes abroad, and the British make him a multimillionaire and a Knight Baronet: Sir Hiram Maxim.

You want me to go on? Last year, DeGrolier, one of the greatest geologists of all time, commits suicide. Major Armstrong, the inventor of FM, committed suicide, and so did Young of the New York Central. Some system we've got; isn't it? Now, are you going to change that educational system? You aren't even going to catch up to a louse.

REPORTS WOULD INDICATE THAT ON THE BASIS OF PRESENT RATES OF CONSUMPTION, OUR COUNTRY THREATENS TO RUN OUT OF THE BASIC ENERGY RESOURCE, GAS, OIL, AND COAL, BY 1975. WHAT CAN BE DONE TO DELAY THIS, ASSUMING THAT VEGETABLE OIL COULD BE USED TO POWER OUR AUTOMOBILES? APPROXIMATELY HOW MUCH LAND WOULD BE CULTIVATED TO FURNISH FUEL FOR 10,000 MILES' DRIVING, ASSUMING PRESENT EFFICIENCY? AND THEN THAT CAN PROBABLY BE WORKED INTO THAT: HOW MANY YEARS DO WE HAVE SUFFICIENT OIL?

That depends on what you mean. If you mean the so-called estimated reserves in the ground -- well, try to take them out. Those are theoretical, you know. The recovery of theoretical reserves is nowhere near the estimation of the theoretical reserves. Now, quit worrying about the vegetable oil or alcohol because you are going to run American automobiles on extraction of vegetable products. It would take more soil under cultivation than all the soil given to wheat and corn in United States plus several times. Are you going to do it?

I SUBMIT THAT INEVITABLE POPULATION INCREASE WILL EVENTUALLY WITHIN THE NEXT CENTURY MAKE A REASONABLE HIGH STANDARD OF

LIVING IMPOSSIBLE UNDER ANY SYSTEM. WHAT ABOUT IT?

Well, if you permit energy-consuming devices to grow -- after all, the human animal is an energy-consuming device, isn't it? When Technocracy is speaking of energy-consuming devices, we include all the two-legged and four-legged and anything that consumes energy whether animate or inanimate. The population of the world today is 2,700,000,000. In 1800, it was only 800,000,000. Back in the Middle Ages, it was 400,000,000. Back BC, it was less than 200,000,000. The waste spaces of the world are filled up. Your highest rates are in South America, but your rates in Britain, Holland, West Germany, Italy, they're all excessive for their resource condition. In order to keep Holland within bounds, you will have to export 72,000 Dutch a year. These are not our figures; these are Holland-Dutch figures. Japan has done a marvelous job. It has lowered its birthrate, and abortions are legalized, and the total abortions in Japan exceed the live births. Unfortunately, that is not the way to go at it. You see, the human female -- it has been known for a long, long time that she had the capacity to dissolve the fetus without any deleterious effect on the human female and her reproductive organs. Men have been working on it. They have found the trigger. Its odorless, colorless, and it only requires that minute percentage of one percent -- the next time you look at a can of Warfarin -- that's that rat poison -- look down and see the percentage. Well, it's the same percentage. Put it in the drinking water of any metropolitan area and nothing -- two-legged or four-legged -- will conceive so long as that minute percentage is in the water. If you take it out within sixty days, it becomes permissible. Cute, isn't it? We told you science would get you. Tell that to His Holiness or the head of your particular church, whatever that may be.

This is not a question of persuasion; it's a question of technological compulsion, because if you are going to handle the population growth of the future, you have got to limit the growth of energy-consuming devices in certain fields and accelerate them in others. Where is Britain going with its population? Where is Italy going? There's no future for a greater number of Italians, British, or West Germans, or Dutch, and there's none for Indians or South Americans.

HOW DOES THE FACTORY WORKER OR HOW DOES THE FACTORY WORKERS'

TAKE-HOME PAY (1) IN RUSSIA, (2) IN CHINA COMPARE TO THE U.S., REGARDING STEEL INDUSTRIES PARTICULARLY, THEY ARE ASKING.

Those take-home pay things are one of the propaganda devices that you have to work so many hours. Now, there are only five million and a fraction tons of steel produced in China. There are six large integrated steel plants under construction in China, plus a number of smaller ones, that will bring in probably 12 million tons in the next couple of years. Russia's steel industry is growing. Russia at the present time has 26 2,400-ton blast furnaces under construction. Its open heart in operation and under construction are 400 and 500 tons -- not 150 or 200 as we have here. It is operating 185-ton electric furnaces, and they are building 500-ton electric furnaces. You are talking about something that once was. With that kind of equipment going in, it doesn't make a hang what anybody's comparative wages are, because you'll have to bring up the entire economy before you can talk about it. I was giving you just several illustrations that run contrary to the popular concept, that's all. I wasn't trying to compare whether the Russians pay more for bread than you do here in United States, except that black bread is a dang sight more substantial than what you find around here.

WHAT IS THE PRESENT CONSUMPTION OF KILOGRAM CALORIES PER CAPITA PER DAY IN THE UNITED STATES?

Slightly under 170,000 kg cals per capita per day. You haven't far to go.

WHAT DOES YOUR EMBLEM STAND FOR?

This emblem is one of the generic symbols of the world. The swastika is one too, except Hitler reversed the arms of the swastika and made it run the opposite way. No wonder he got .into trouble. This one is as old as the swastika. The two parts are the yin and the yang, the basic cell in biology, this symbol here -- the cell of all living things -- it's called a monad. Technocracy adopted it because it is distinctive, it's simple, and at 20,000 feet in the air, you can still distinguish it on the ground, which you can't with the star and stripes of the Canadian flag either -- they blur out, don't they?

YOU MENTIONED THE LACK OF COPPER IN THE UNITED STATES. I UNDERSTAND THERE IS A SURPLUS OF COPPER. HOW COME?

Surplus of copper where? In the world? Yes, but not in United States. What's your latest notice? Yesterday, the Kennecott and others are shutting down still further, your Miami is shutting down still further. What's the consumption of copper? The consumption is declining, isn't it? Yes. Productivity potential around the world -- in Europe the biggest copper thing is the Union Minieres de Bora in Yugoslavia, and there is an upcoming mine on the other side of the range, but there's practically no other copper. The Rio Tinto in Spain is dead and gone. They've got a little in Sweden. You have copper in Africa, Russia, China, South America, Mexico, but those are higher grade ores; but if you want a high-grade ore, go up to Coronation Gulf in Canada on the Arctic -- 46% Cu bornite -- beautiful, isn't it? Are you going to mine it by private enterprise? No, baby, you aren't. It will take a cooperative development of the continent to take it out.

HERE'S INSISTENCE ON THIS KGC PER CAPITA PER DAY. HOW MUCH LONGER WILL IT TAKE AMERICA TO EXCEED 200,000 KGCs PER DAY?

If I knew, I wouldn't tell you. After all, you're all so smart; you'd want to go home and take advantage of it, wouldn't you? What do you think I am -- as big a sucker as you are? Now, look, if the people of this country were really intelligent, if they weren't so damned moronic, we wouldn't have to come around and talk to them and explain this. We do not make these figures; we do not create these statistics. They are available to others. We shouldn't have to come around and explain this. Somebody ought to do a job of thinking and give us a rest.

HAVE YOU EVER BEEN IN RUSSIA?

No. I've never been in Russia, and I've never been a Republican, a Democrat, a conservative, a liberal, a socialist, or a communist, or a fascist. The only thing I regret is that I wasn't a communist, because in the last ten years, I could have made a nice, easy living of \$50,000 a year tax-free informing on my former colleagues. I could have been a Brother Rat like the rest of our successful Americans. Well, this could get interesting, you know, if you ask me the right questions.

WHAT COUNTRY COMES CLOSE TO OPERATING LIKE A TECHNOCRACY?

There isn't any country that does that. Russia is still a political hodge-podge, you know. They have to cater to all of the minorities and everything else. You've got so many different divisions. Down in the Ukraine, you've got the Ukranian language and the Russian on street signs. You're still playing up the culture. You're going to have the Bolshoi Theater here March 21st -- the Bolshoi Ballet. You're going to derive a satisfaction from the Russian culture? Well, that isn't the important thing in Russia -- that's a hangover from the Tzar -- two centuries. What's important is something else entirely apart from their culture. There is noplac on earth that is operated on a technological basis of Technocracy.

WHAT IS THE SOLUTION; HOW, UNDER WHAT CIRCUMSTANCES, IS THE CHANGE TO COME ABOUT? WHAT WILL BE THE IMMEDIATE EFFECT ON THE PEOPLE, AND WHAT WILL YOU DO WITH HUMAN NATURE?

Well, I don't know who asked that question, but I have this to say, that when it comes to questions, I will do my best to answer them, but no matter how great the extent of the knowledge of Technocracy is, there is one thing we cannot do. We cannot give you understanding. Only God can do that, and I won't even try to compete with him. Now, there is no sense in a series of questions like that. How does it come about and what are you going to do with human nature? Never mind human nature -- there isn't any such thing. There's human behavior. It doesn't make any difference how tall you are, how broad you are, or what your color is. Given a given set of circumstances, you'll perform that way. Bring an Eskimo down here that consumes 7,000 calories a day -- can he live like that? No, he'll be forced to change, whether he likes it or not. It doesn't make any difference what he thinks he is or what other citizens here think he is.

You could have asked me a lot more questions, couldn't you. We could have had a lot more fun out of it. Is that all there were? My gosh, couldn't you do better than that?

[THERE ARE A LOT OF DUPLICATES HERE]

Well, you've got enough here in this room to organize

Michigan without half trying. Throw Windsor and Sarnia in to boot.

All right, what kind of a railroad do you have to have if you are really going to have rail transportation? Ever stop to figure it out? Lincoln wanted to build the Union Pacific three feet wide -- that's how much he knew about anything. Your present railroad gauge is 4'8-1/2" between rails. What's the matter with it? No matter what you do, the moment you put your truck and bolster on, the only way you can carry a load is run your car up in height and length -- your center of gravity is way up here, and the moment you start to hit speed, she starts to whip and she pounds the roadbed and the rails and the tracks. The GM diesel engine division turns out locomotive diesels, doesn't it? Has it ever turned out any 12,000 horsepower for locomotives? No. Are there such locomotives in the world? Yes. Where are they -- will somebody tell me? France, yes. What speeds do they hit with a train? 214 miles an hour. Now, Technocracy's design of a railroad system is a 3-meter gauge -- 9 feet, 10-1/10 inches between rails. Your cars are over 16 feet wide inside. They are pedestal suspension, that is, they don't rest on a bolster; they are hung from up here inside -- you wouldn't see it. The bottom is smooth like a boat four inches above the rail. The center of gravity is where? Down on the rail. When you round a curve, does the top lean out? No, the bottom comes out, and the glass of water remains vertical and you don't even spill a drop. Five to six hours between New York and Chicago. Can you afford to run an airline twenty miles out in each case? No, you couldn't afford air transportation, because the other would be better and cheaper.

What are we talking about? Can you design automobiles and trucks? Yes. Why shouldn't all the pistons and all the cylinders in any automotive vehicle be all the same? What do you have to have all of these variations for? If you had opposed pistons, valveless, two-cycle, supercharged, solid injection, air-cooled, fluid four-wheel drive -- not fluid clutch, now, that's an entirely different thing -- this is a drive that is in the wheel -- all wheels drive and the wheels turn this way. We did it some years ago. We went up and put the nose of it against a traffic cop standing on his little stand in Stamford, Connecticut -- put the nose here and ran the car right around him like this, and the nose never left his belt. Simple? Well, that was 20-some years

ago.

Whose design that the insurance companies are advertising about the highway of the future? You've seen them -- the coaxial cable. Well, we had models running 25 years ago in store windows.

We published the first stuff on the heat pump -- thermodynamic heating, we called it. The same way with other things. We did more to introduce the cotton picker south of the Mason-Dixon Line than anybody else, and we're more responsible for moving the negro out of the south than all the other organizations in the United States. You put them down there and the negro migrated, didn't he? Of course, I wouldn't say there are very many in Detroit yet! Wait awhile, honey chile, wait awhile -- they's coming, because New York and Chicago are going to have over a million negroes in the next couple of years. And you're going to have problems -- this country is going to have problems it never had when they were south of the Mason-Dixon Line, and there are more schools in New York, Philadelphia, and other northern cities that are completely segregated -- solid black -- than any southern city. They are not segregated by law, no; they're segregated by geography and economic divisions. And what does the NAACP want? It wants the City of New York to transport negro students out of any school that has more than 15% negro and distribute them around to all the other schools, so that the percentage of negro students in high schools and public schools will be less than 15% per school, so that it won't be segregated. Who in the hell is cockeyed? But then you'll have to do it to the Italian, won't you? There's over a half million Puerto Ricans -- well, you'll have to do it to them. You'll be so dizzy running busses back and forth, they'll have no time to even get to school!

These are practical propositions, and you can vote until you are black in the face and you are not going to solve them. But if you had a real designed railroad system, highway system, power system -- here is our continental power system, one million volts DC -- well, that was 1924 when we brought that out, and today, a couple of months ago, the government of the U.S.S.R. has announced that it is going to build two 4,000-mile grids of a million volts DC. Brother, take it away! In other words, here is a country -- they had it in their lap and the Russians took it. What in hell are you going to do if you can't get your own

HOWARD SCOTT, DETROIT

3-15-58

country to realize that they have to move up? What do you do? I've done about all I can for you. I started this thing sick with a cold, so I am not up to my usual form, because I didn't throw enough pipes at you, but I thank you, one and all, for being here, and on this anniversary my salute to all of you. Thank you.

HOWARD SCOTT INTERVIEW BY DOROTHY FULDHEIM  
CLEVELAND, OHIO  
MARCH 19, 1958  
WEWS TV

DF: Good evening, ladies and gentlemen, I should like for you to meet our guest, who has been here before, Mr. Howard Scott, who is Director-in-Chief of Technocracy Inc. Very glad to have you here, Mr. Scott.

HS: Glad to be with you. Miss Fuldheim.

DF: Mr. Scott, what are you here for?

HS: I am here on a lecture tour started in Chicago coming east.

DF: Where are you going to appear here?

HS: I am speaking at the Masonic Temple at Euclid and 36th Street Friday night.

DF: What time?

HS: That's at 7:00.

DF: Mr. Scott, you set the world pretty much on its ear a number of years ago by your suggesting that the time would come when the world would be producing so much that there would be enough for everyone. Do you think this has arrived?

HS: Well, there has been a terrific increase in technological equipment, not only in the United States and the North American Continent, but also in other parts of the world, and this is evidenced today where we are overcapacitized in United States in various fields; and, as you have noticed, the automobiles are running at reduced capacity, steel at only approximately 50%, and unemployment has set in in Britain and West Germany, as well as here. So the evidence is piling up that technological acceleration can produce more goods than our merchandising system can dispose of under the present means of distribution of purchasing power. The same thing has happened abroad.

DF: Well, is it your idea that there is enough for everyone? Would that mean that everyone would receive an equal

compensation for their work?

HS: Eventually, yes, because if any large-scale national entity could produce an abundance, it would not be worthwhile in a continental accounting system to attempt to differentiate anyone's income. It would cost too much to differentiate.

DF: Now, let me get this straight. You believe there is so much, our potential for production is so great that there would be enough fine automobiles for everyone, a beautiful house for everyone, Saks -- lovely dresses for everyone?

HS: Yes.

DF: And the fact that I earn more than you, let us say, or you more than I, wouldn't do any good because it was available for everybody?

HS: You would have enough. It is quite upsetting to some people, I have no doubt.

DF: Nothing would upset me if I could have everything I wanted. Would we all have to work the same amount of time?

HS: We would all have to serve a proportionate time of citizenship in order to run the continent and the country.

DF: Do you believe that the time has now arrived where this is possible?

HS: You might say it's the beginning of the beguine, as the song goes. It's here -- a few years more is just going to amplify this existing situation.

DF: Do I understand, therefore, that all the efforts that Congress and the Administration is making to pour money in so that work projects will be set up isn't really the answer?

HS: No, it is not, because that would be equivalent of trying to deal with Niagara Falls with an eyedropper. We have a gross national product capacity in excess of \$500 billion a year, and our purchasing power -- we're a deficit of somewhere

between \$125 and \$150 billion a year; so a mere billion here and there is a mere eyedropper, compared ....

DF: Well, Mr. Scott, you are aware, are you not, that this is a most revolutionary idea?

HS: Yes, and we are in a most revolutionary time, Miss Fuldheim.

DF: Is it your earnest and thoughtful conclusion that this is an inevitable way of solving the world's problems?

HS: Yes, unless you shoot all the scientists, technologists, and engineers, and destroy all the technological equipment and go back to hand tools. If one keeps on installing energy-consuming devices, the result is inevitable.

DF: Do you think there is enough, for example, to take care of all the millions in China, in India, all over the world?

HS: It would differ slightly on each continent, because each continent's resource of land, natural resources, and so on differ, but it would be much greater than it is now.

DF: Under the system as you conceive of it, there would be no point in saving any money. I wouldn't have to, would I?

HS: No, there's not much point in saving it now if the dollar continues to depreciate.

DF: Mr. Scott, you are a very devastating and disturbing factor. Do you think that really all of this is unnecessary, that we have to face the time when saving money and receiving more because you are more skilled or more lucky is unimportant?

HS: Well, we have to educate more scientists, technologists, and engineers, and more technical people in order to run a more highly complex technological setup, but many of the old things will naturally fall by the wayside, not because they were immoral but because they were superseded by something entirely superior.

DF: Mankind, then, according to you stands at the threshold of a period of abundance that he's never had before?

HS: Of the opportunity or disaster.

DF: Well, I understand why you caused so much excitement when you first came out with your ideas. Are you gaining more converts now because of this depression?

HS: Oh, yes. People are waking up all over. The interest is definitely on the upgrade.

DF: Mr. Scott, we are delighted to have had you. I recall very well our interview the last time, and I must say there is more evidence on your side now than there was when you were here last.

HS: Thank you.

DF: I am delighted to have had you, and I should very much like to hear a greater detail of your plan, and I hope to hear you Friday night.

HS: Thank you very much.

HOWARD SCOTT  
CLEVELAND PRESS CLUB  
MARCH 20, 1958

DO YOU FIND MORE INTEREST IN THIS COUNTRY, AND, IF SO, WHY?

There has been a terrific expansion in United States and Canada in their technological installations, but there is also a greater rate of growth in the rest of the world -- not all of the world -- a greater rate of installation growth than here, and as we build up that capacity -- in United States today we have a gross national product capacity in excess of \$500 billion. Our deficit in purchasing power is between \$125 and \$150 billions a year, so that all of these little maneuvers of a couple hundred million here and a half a billion there are like trying to stop Niagara Falls with an eyedropper. It's a little picayune approach, because you've got to dump that in to keep the economy expanding to meet that technological capacity.

MAY I INTERRUPT TO ASK YOU ONE QUESTION. BEFORE WE STARTED HERE AT THE TABLE, MR. SCOTT, YOU WERE DEFINING TECHNOCRACY, DEMOCRACY -- I THINK PERHAPS YOU OUGHT TO REDEFINE THESE AGAIN SO THAT WE ALL KNOW SOME OF THE EXPLANATION FOR THESE WORDS.

Technocracy comes from the Greek roots like Plutocracy, Autocracy, Democracy, and Autocracy, as you know, is the rule of one, and Plutocracy is the rule of wealth, and Democracy is supposed to be the rule of the many, Technocracy is the rule of science. Does that cover your question?

MR. SCOTT, WOULD IT BE CORRECT TO SAY THAT YOU ARE TRYING TO ACHIEVE A NEW KIND OF ECONOMIC SYSTEM THAT WOULD PREVENT SUCH THINGS AS RECESSION AND DEPRESSION?

Our contention, sir, is that if this country and Canada keep on installing energy-consuming devices in ever greater numbers that the production of abundance is inevitable, and that the present political and economic structure is not designed or geared to distribute an abundance. It is not the intentions of individuals and it is not a question that the individuals are good, bad, or indifferent. It's a question of the structure of the system.

MR. SCOTT, I UNDERSTAND THAT THE RUSSIANS ARE SUPPOSED TO BE

AHEAD OF US NOW IN THE ATOMIC ERA AND SPACE ERA, OR WHATEVER YOU WANT TO CALL IT, WOULD IT BE ADVISABLE TO START TECHNOCRACY INSIDE THE SOVIET UNION?

I think it would be far better to start Technocracy here so you'd have some chance. Right now in U.S.S.R., they have 26 blast furnaces under construction of 2,400 tons capacity each. They just announced a new microscope of over a million magnification. They are operating electric furnaces of over 185 tons -- they are building electric furnaces of 500 tons. Their open hearths -- most of ours are 150 or 200 tons -- and they're operating 400 and 500 tons open hearths with hydraulic top openings with oxygen beneficiation.

DO YOU THINK THAT ACCEPTANCE OF TECHNOCRACY WOULD ENABLE THIS CONTINENT TO CATCH UP -- TO OVERTAKE -- THE RUSSIANS IN THIS FIELD OF SCIENTIFIC ENDEAVOR?

We can't overtake anything with a set of obsolete equipment, you understand that. In other words, Technocracy is a design in modernity entirely different. There is no sense of trying to fight an ideology with bullets, bayonets, or bombs. It is never successful. The only way you can defeat an ideology is to supersede it with a superior one, and that is what Technocracy proposes.

DO I UNDERSTAND YOU CORRECTLY THAT YOU WOULD SUPERIMPOSE YOUR SYSTEM ON OUR PRESENT POLITICAL STRUCTURE OR WOULD THAT BE CHANGED ALSO?

Naturally you would have to change a structure that is as antique as ours. We have over 102,000 governments in the United States. We have 48 states, 3,027 counties, over 17,000+ municipalities, over 17,000+ townships, and 52,000 educational districts. Of the 52,000 educational districts, 12,000 have 84 percent of the 52 million students -- all with their own little anarchic power enabling them to levy and collect taxes and to issue debentures. It's hardly possible that you can get any coordination, any plan, with such an anarchic collection.

WHAT WOULD YOU DO WITH OUR POLITICAL SYSTEM THEN?

Well, that is up to the leaders of this country. We are not

politicians or a political party.

I DON'T UNDERSTAND, THOUGH, HOW YOU CAN SAY THAT IT IS IMPOSSIBLE FOR YOUR SYSTEM TO WORK WITH THE PRESENT STRUCTURE WITHOUT HAVING SOME KIND OF A THEORY AS TO WHAT CHANGES SHOULD BE MADE IN IT.

It is a physical operation, sir, of the continent.

I THINK THAT WHAT CHUCK WANTS TO KNOW, IF I'M NOT MISTAKEN, IS THAT WHO WOULD RUN OUR GOVERNMENT THEN. WOULD WE HAVE A GOVERNMENT AS SUCH?

Naturally, we would have to have a government. [WHO WOULD RUN IT?] Those who are running the physical world now.

MR. SCOTT, LET ME INTERRUPT. SUPPOSE THAT THE TECHNOCRATS IN CUYAHOGA COUNTY DECIDED TO FORM A POLITICAL ENTITY, AND SUPPOSE THE TECHNOCRATS HERE WERE ELECTED TO RUN CUYAHOGA COUNTY AND TO CARRY ON AFFAIRS OF THE STATE AND EVENTUALLY PERHAPS TO THE SENATE AND THE HOUSE OF REPRESENTATIVES? COULD THEN YOUR PHILOSOPHY BE MADE THE PATTERN OF OPERATION FOR THIS COUNTY?

Technocracy is not a philosophy, and if any Technocrat attempted to form a political party, we'd fire him out on his ear. Now, you see Franklin Delano Roosevelt grabbed 16 of our men -- Leon Henderson, Leland Olds -- go on down the line, and they were called upon to resign from Technocracy.

ALL RIGHT, ASSUMING THAT IN 1960 THE PRESIDENT OF THE UNITED STATES TURNED TO YOU AND SAID, "OUR FORM OF DISTRIBUTION APPARENTLY ISN'T WORKING. WE NEED ADVISORY HELP. WE CALL UPON YOU TO SERVE IN AN ADVISORY CAPACITY." WOULD YOU ACCEPT?

Advisory capacity to advise ....? [THE PRESIDENT OF THE UNITED STATES] To advise an antique and obsolescent institution to become a technological modernity? [YES] Well, that's asking someone to be logical about a highly illogical proposition.

I STILL GET THE FEELING THAT THE SAME QUESTION HASN'T BEEN ANSWERED, WHICH IS, IF WE ARE GOING TO DO IT, HOW ARE WE

GOING TO DO IT? HOW DO WE PROPOSE TO EVENTUALLY BRING ABOUT THIS WHAT MIGHT AMOUNT TO REVOLUTION?

We are proposing the designs and the specifications. It's up to others; in other words, the march of events is going to compel this. We have no assumption of power theory. We are not interested in being elected to any political office; in fact, any member of a political party cannot be a member of Technocracy.

Now, personally, I have never been a Republican, a Democrat, a Socialist, a Communist, or a Fascist. Of course, the only one I regret not holding membership in in the past 15 years is the Communist Party, because if I had, I could have made a nice comfortable living of \$50,000 a year informing on my previous colleagues. Then I would have joined my Brother Rats.

MR. SCOTT, WHERE IS TECHNOCRACY GOING AND HOW? YOU SAY IT IS NOT GOING TO GO THE POLITICAL ROUTE. IT IS NOT GOING TO ACCEPT AN ADVISORY POSITION IN THE PRESENT "ARCHAIC" SETUP. WHAT ARE WE GOING TO DO?

Let me give you an example. We were the first to publicize the cotton picker in the south, and when we first spoke in the south, there were hundreds of men in the front of the meeting with pistols in their belts. They weren't going to allow that contraption to come south. We pointed out that when you introduced the technological equipment in the south that the problems of the south, which had been hitherto been endemic south of the Mason-Dixon Line, would become problems of the continent, and Technocracy is probably more responsible than all the other organizations put together for the migration of the negro to the north.

MR. SCOTT, TO GET TO ANOTHER SPECIFIC EXAMPLE -- BEFORE WE WENT ON THE AIR, YOU WERE SAYING SOMETHING ABOUT A THEORY YOU HOLD ABOUT THE ST. LAWRENCE SEAWAY. WHAT WAS THAT THEORY?

Technocracy designed a continental hydrology these many years covering the water resources of the entire continent, and the St. Lawrence Seaway would only be part of that continental hydrology. The St. Lawrence Seaway under our specifications would have a 40-foot depth over sills and hydraulic lift locks -- not

water locks -- in which you could lift 60,000 tons up and 60,000 tons down from Lake Erie to Lake Ontario in 15 minutes, rather than the approximately 11 to 12 hours the present 8 locks of the Welland Canal; but there is only one harbor on the Great Lakes that is 35 feet and over in depth, and that's a natural one on the Georgian Bay. So, we have to deepen the harbors. It would enable a new type of bulk shipping, namely, a marine train -- twelve 25,000-ton run in tandem with your marine tractor either in the front, center, or in the rear hauling 300,000 tons for 1/11th cent a ton mile.

I WANT TO GET BACK TO A MORE CONCRETE EXAMPLE IN SOME WAY. ASSUMING AGAIN THAT BY THE YEAR 1960 THAT WE ARE LIVING IN THE AGE OF TECHNOCRACY, THAT THE GOVERNMENT IS NOW GOING TO PUT TECHNOCRACY INTO OPERATION. HOW WOULD THIS AFFECT ME AS A NEWS DIRECTOR OF A STATION? I ASSUME I'M GOING TO BE PAID. I ASSUME THAT SOMEHOW OR OTHER I WILL BE ABLE TO LIVE -- JUST HOW WILL IT AFFECT ME?

Well, it will affect an awful lot of people. YES, BUT USING MYSELF AS AN EXAMPLE. If you attempt to produce abundance and distribute it, you wouldn't have any advertising and you wouldn't have any debentures, stocks, and other items of debt. Let's say that the nicest thing to do with all the items of debt would be to repulp it into paper of finer tissue.

COMING BACK TO THE QUESTION -- HOW WOULD HE GET PAID? HE WANTS TO KNOW HOW HE WOULD GET PAID.

He will derive his income as a matter of citizenship. They all get the income.

YES, BUT HOW WILL I GET CLOTHING, HOW WILL I GET FOOD, AND IF I WANT A NEW CAR, HOW DO I GET A NEW CAR? IF I WANT TO TRAVEL -- HOW DO I REALIZE THESE THINGS?

Your medium of distribution will get you anything that we can produce.

WELL, WHAT IS THE MEDIUM OF EXCHANGE?

There is no medium of exchange in a continental accounting system. A medium of distribution only. It is non-transferable.

THERE WOULD BE NO MONEY. THERE WOULD BE NO MORE SAVINGS -- NO RESERVOIR .... OF WHAT ARE YOU GOING TO DO WITH ALL THE UNEMPLOYED BANKERS? The kindest thing would be to let them go out and play golf, because they would be of practically no use. Most of them are too old anyway. Retire them at once.

WELL, THEN I WOULD GET SOMETHING TO SHOW FOR THE EFFORT .... Oh, yes. THIS I WOULD TAKE TO A STORE OF SOME KIND, IS THAT IT? Yes, you have nothing to worry about. The only difference is that your wife would have the same income. (NOT HIS WIFE, BECAUSE HE HASN'T GOT ONE). Well, anyone's wife. The peculiar thing about it is that the woman couldn't put her hand in the man's pocket and take his income, because it is non-transferable. You see, for the first time in history, men would really have to be good, brother.

HOW WOULD YOU REACT TO THE PERSON WHO DID NOT PRODUCE TO CAPACITY IN AN ECONOMY LIKE THIS?

Well, I don't quite understand that question.

WELL, LET'S ASSUME HE IS WORKING IN A SHOP. HE MANUFACTURES A PART FOR AN AUTOMOBILE. I ASSUME THERE STILL WILL BE CARS OR SOMETHING MORE ADVANCED THAN A CAR. HE IS NOT WORKING HALF AS HARD AS IS THE MAN NEXT TO HIM. HOW DO YOU THEN GIVE HIM A CERTIFICATE?

After all, you have to carry the inefficient ones now. You elect them to the United States Senate and Congress and the State Halls.

I WOULD STILL LIKE TO GO BACK AND HAVE A SPECIFIC ANSWER TO THE QUESTION. HOW WOULD YOU DIFFERENTIATE BETWEEN WHO WORKS AND WHO DOES NOT WORK OR HOW MUCH THEY WORK? HOW WOULD YOU KNOW HOW MUCH, FOR INSTANCE, OF CERTIFICATES TO GIVE TO A FACTORY WORKER AS OPPOSED TO A GENIUS LIKE SANFORD MARKEY, OUR NEWS DIRECTOR. HE'D BE WORKING FOR A WEEK.

Well, of course, I can't become that personal. There would be no difficulty about that.

WELL, LET ME JUST ASK THIS. IN OTHER WORDS, THE COUNTRY WOULD BE ABLE TO PRODUCE A MAXIMUM AT ALL TIMES TO SATISFY

THE NEEDS OF ALL OF US. IS THAT RIGHT?

You would be producing and distributing an abundance, and you would know the entire production of the country in all items in every hour and you would know the consumption every hour of every item by every district.

IF WE ARE GOING TO REACH THE PEAK OF OUR PRODUCTION CAPACITY THIS WAY, WON'T THIS CAUSE SOME SORT OF ECONOMIC WAR, SAY, AS FAR AS THE RUSSIANS WERE CONCERNED OR THE ENGLISH OR THE OTHER WORLD POWERS?

There are a lot of countries, Europe included, that are passing out. They haven't the resources. Britain no longer has the resources and an increasing population. Italy hasn't got them. Japan what? Has copper and two low-grade non-coking coal deposits. This continent has the resources, and if you are talking about economic war, what is happening now? You have your Aluminum Company of Canada protesting to the British Government about exports of Russian aluminum into Great Britain for \$42 a ton less than Canada supplies Great Britain. The Carbide is also protesting to Great Britain to the import of alloys from Russia. One alloy, for instance, we've been selling for \$1,900 a ton that the Russians are supplying for \$1,100, and your British imports of aluminum have fallen from 230,000 tons to 153,000 tons.

WHAT, MR. SCOTT, ARE THE DIFFERENCES BETWEEN YOUR THEORY AND THOSE OF UTOPIAN SOCIALISM?

It has no relationship at all. It's a technological design. In other words, Utopian socialism -- well, I don't quite know what you mean by that -- if you mean the British Labor Party, the British Labor Party's origin stems from Robert Owen, John Ruskin, and John Wesley, and they open their meetings with prayer. Now, we're a group of scientists, technologists, and engineers.

WHAT I WAS ACTUALLY DRIVING AT IS THE IDEA LIKE THE ONE OF PRODUCING ACCORDING TO YOUR ABILITY AND RECEIVING ACCORDING TO YOUR NEEDS.

No, because if you go in for technological production, it is so fast that you have to get the human being out of the way; so, his ability really doesn't matter in the mass.

THEN THOSE COUNTRIES IN THE WORLD THAT HAVE THE MINERAL RESOURCES AND THE PRODUCTION RESOURCES -- THOSE COUNTRIES WILL BECOME GREAT, GREAT COUNTRIES IN THE WORLD UNLESS WE HAVE ONE WORLD.

That's correct, and your centers of power will move to where there is energy and resources.

WELL, THEN, SUCH CONTINENTS, FOR EXAMPLE, AS SOUTH AMERICA OR AFRICA MAY EVENTUALLY BE THE GREAT AREAS OF THE WORLD.

You've left out some. North America has resources; so has U.S.S.R. and China, and I might point out that Technocracy's continental power system of a million volts DC -- the Russian Government has announced that it is going to build two 4,000-mile grids of a million volts DC; in other words, they have taken the idea from United States.

\* \* \* \*

HOWARD SCOTT  
CLEVELAND MASONIC TEMPLE  
MARCH 22, 1958

DESIGN, DIRECTION OR DISASTER?"

Well, how do you feel about it? Of course, being mostly Technocrats, I won't ask how many of you voted. It's surprising the reaction of people across the country. You have automobiles in New York, Philadelphia, and other places with a sign across the back, "I didn't vote for Eisenhower." What's the matter with this country? After all, he came in with prosperity, didn't he?

It might interest you to know that United States Government has spent \$62 billion abroad since the war outside of military expenditures, and the Eisenhower Administration has spent \$212 billion in slightly over five years. Well, with such expenditures as that, this country ought to be prosperous and remain prosperous, should it not? And now, of course, you are being told that Washington is going to give the automobile industry an order for \$300 million, and you are going to spend a nice large sum on education over the next three or four years, and you are going to be asked to build post offices, that is, private enterprise will build post offices and lease them back to the government on nice, long lease terms. The highway project, which would, of course, run into some billions, that's already gone up in cost so much that they are going to add a few years more on the highway program so as to spin it out.

What's wrong with it in this government of the people, for the people, and by the people? Something isn't working. United States has developed the greatest productive equipment in history. In the last ten years, we have produced 54 million automobiles, 50 million television sets, and 92 million radios, and the smallest item in our hardware was 2 million automatic dishwashers; over 11 million homes and 14 million refrigerators. In other words, from 1947 to 1957 has been the greatest production decade in the history of the world.

Franklin Delano Roosevelt came in after the Hoover downslide. Hoover kept reassuring the country that prosperity was just around the corner. Well, we rounded three corners and went through a World War II to get a partial recovery. FDR, of course, historically, was very much similar to Christopher Columbus. Christopher Columbus, when he started out, didn't know where he

was going, and when he got there he didn't know where he was at, and when he got back he didn't know where he had been, and he did the whole damn thing on borrowed money.

FDR couldn't use his legs; Harry couldn't use his head; Ikie swallows Nixon, gets ileitis, hasn't any guts, and can't make a decision. Don't forget, you know, that FDR made Ike a general but nature only made him a second lieutenant. But he was elected; so were the others, and yet the different regimes we have had in Washington have had the fortuitous circumstances of a world war and a postwar boom, and now the conditions are arriving which Technocracy has pointed out for not one decade but several decades; namely, that the technological equipment of United States and Canada has reached that very interesting point that from now on out you are not going to have more people working longer hours. Your latest United States census reports for the first time in the history of man, the production of physical wealth and its distribution in United States was achieved by a minority of the adult working population. The employment in mining has fallen off; the employment in transportation; a very minute increase in central stations. In the last ten years, from '47 to '57, there was an increase of 26 million in the total population, an increase in the physical production of 46%, yet the total manufacturing employment in U.S., plus construction, only increased 3%; so that from now on out, there will be no more increases.

In 1957, 1,800,000 left the farms of United States -- the greatest number in history. Well, why shouldn't they leave the farms? Fifty-six percent of the farms of United States produce 9% of the total agricultural production, and 26% produce 14%. Fifty-six percent of the farms is around 2 million. Multiply that by the average family, and that will tell you the number the minimum number, that will have to leave the farms of this country in the next decade, John L. Lewis and his coal miners -- there were 780,000 of them back at World War I -- there's now only about 350,000 today. John L. Lewis and his coal miners and the coal mining industry, they have increased the productivity of coal mining in the United States to 8 tons per man per day -- the highest in the world, but the new machines coming in produce 8 tons a minute. So there is going to be less and less coal miners.

New processes in steel, textiles, chemicals, and every

single field you want to face -- there's no future in any of these fields if you are thinking of it in terms of sending your family now growing up out to work in those fields. Kind of sad, isn't it? Of course, if you can have ten million in the armed forces, they can be inducted there, but a future to take in the growing population of this country into industry that is no longer expanding in its employment. It will continue to expand in its productive capacity, but not in its employment or its hours.

This has gone on. We were the first and only organization to point this out. Remember over 30 years ago we predicted that the farms of United States would decline in number and increase in size. The United States now has less total farms than Japan; of course, there is a difference in unit size. The unit size in Japan is only 2 and a fraction acres. You can't go down to that even if you tried, unless you went back to human toil and hand tools, and you don't even know how to go back to that, because you have forgotten how to walk. You don't see anybody walking in this country except on the city streets from one building to another. With your highways from coast-to-coast practically, you never see anybody. They are all on wheels. So, here is this great decade from 1947 to 1957 proving that the United States has developed the capacity -- the greatest machine for merchandising and promotion that anybody has ever seen; but there is no design to it and no direction. There's a terrific lot of gadgets, goods, profits, and prices, and you're loaded down with them.

Henry Luce gave birth to the American Century in 1947, and he is still around to witness its demise in 1957 -- the shortest century in history. For our achievement, we've got everything chromed up, souped up, swept wings, and the Russians have the Sputniks. Just about what it has come to. We still have a little too much of this prosperity, because we're still believing that it cannot happen to us. Years ago, Sinclair Lewis wrote a book. The title of it was, "It Can't Happen Here." He happens to have me in that book at about 5 or 6 places, and shortly after its publication, he stopped me in a public place with a number of his guests and said, "Well, Mr. Scott, what do you think of it?" I said, "The trouble is, Sinclair, that your title is all wrong. It can only happen here." And he was quite upset. Too bad he didn't live, because if you live a few years longer, a lot more people are going to be upset, because they are going to find out that it can only happen here.

Think back a little while. The United States once had more petroleum than it could consume. More iron ore -- it never had to worry about it. Lead, zinc, copper, and everything else. Now the iron ore -- the hematite on the Mesabi Range is going, going, gone. Last year we imported over 34 million tons of iron ore from over 10 countries, and the only reason we are not going to import that much iron ore this year is because if the steel industry keeps operating under 50% -- why, it's going to be kind of sad. The lake boats that are tied up along the lakes here, they are not even getting them ready to take out of port, are they? Nobody is in a hurry to ship iron ore. They've got enough iron ore; they've got enough scrap. The Hanna Company -- I think it's right here in Cleveland, isn't it? -- their production of iron ore in '57 in United States was just one million tons more than they imported from Canada. The next good year, their production in United States will be less than their imports.

All of the copper ore mined in United States is .8 of 1% Cu or less. The day of the 4%, 10%, and 12% copper is gone as far as Continental U.S.A. is concerned -- never to come back. You may have money in the bank, but you haven't Cu in your ore. Lead and zinc are the same way. The famous New Jersey Zinc -- well, you can ride around underground on those beautiful tunnels -- all nice conduit wire lighting, but there isn't any zinc, and nothing runs there any more. We are shutting them down in Idaho, Montana, Missouri, and other places. We are no longer a "have" nation.

Now, remember, in view of this, that we have built up the greatest consumer demand for products. If they can't sell it to you for something down, they'll sell it to you for nothing down. They've reached the point in houses where they've got the mortgage up to thirty years. Now the Sparkman Bill wants to arrange it so you pay nothing down and 4-1/2% for 40 years, and Henry Luce of FORTUNE wants to go that one better in his brochure entitled, "Prevention of Slums in Suburbia," which you can obtain a copy by writing, a minimum of two acres, a \$50,000 house, and fifty years to pay for it. Why not? If it's this good, it's only just and meet that the next generations should pay for it. You made suckers out of yourselves, so why not make suckers out of your children? This is the kind of stuff they are handing out, and the trouble is that the average American swallows it; but so long as he can get by with it today, it's wonderful.

Something is happening, because the suburbia -- remember this exploitation of suburbia has moved 45 million Americans into suburbia. It has created more bourgeoisie in this short period than all the other countries have created in history. They might have an idea in the city, they might have been slightly progressive, they might even have been a Democrat, but when they moved out to suburbia, they took on all the coloration, they became reactionary, and even more reactionary than the Taft Republicans, and that was pretty low. Why? Because those Americans that migrated to the suburbs arrived in the Promised Land. They didn't have to have absolution -- they were there. And they believe it. The only trouble is that their world is predicated on a series of falacious assumptions; namely, that this economy could continue to expand forever and forever ad infinitum. Well, that's wonderful if you believe it, and you can for a short period obtain in these United States an apparent equilibrium of purchasing power, provided you create each year sufficient new debt in the capital goods field that will be equal to or greater than the capital dragdown that you have in the consumer goods field. If you can do that, and that will necessitate a definite per annum expansion, you will have, for a limited period, an apparent equilibrium of purchasing power. The only trouble with that is, as we have witnessed, the terrific amplification of credit has enabled a large corporation to build brand new plant and to liquidate their obsolescent junk. They moved out of the high-tax area to the low-tax area, and the new plants produce faster and faster with less and less.

It's happening. Here in the United States, the inrush of technological equipment has been terrific, but it is also happening around the world. We are no longer the hogbutchers to the world. We no longer dominate the world's large markets; tobacco, cotton, steel, copper, oil, iron ore -- I won't bore you with the long list, because it's growing. The capacity in Europe has increased. So has South America. So has Russia, China, India, and Australia. Where are the integrated, brand new plants going in in United States? Very, very few. They are going in abroad, especially in steel. India is completing four nationalized steel plants and additions to 2 privately-owned steel plants -- the Tata Steel and East Bengal have received nice large loans from this country -- in other words, we wouldn't loan money abroad to nationalize a project -- only to private enterprise. So the

Indians had to turn to the Russians, The Germans, the Japs, and the British. Well, in China, of course, that's a different story. The Chinese are building six brand new steel plants in various places. One at Wuhan, 600 miles in on the Yangtze, another one at Paotou on the Ho Huang Ho, or you'd know it better by the Yellow River, and several others. The Russians are building new steel plants; so are the Poles and Czechs. The Australians have added to their capacity. They are adding to the capacity in South America. The Polish Teschen plant will be larger than the United States Steel plant at Morrisville. Now this was unheard of a few years back. United States had the biggest buildings and more cars. Now we have around 56 million passenger cars. The Bell Telephone system in United States has over 52 million telephones. We've got so much of everything, we've got indigestion, and I might add, constipation is setting in.

The rate of growth of technological installations in this country is less than the rate of growth abroad. In foreign countries, it is growing faster than here. In the United States, we have one Grand Coulee -- one Boulder Dam, but Boulder Dam, of course, is smaller in capacity than Grand Coulee. People used to come from all over the world to see the Tennessee Valley and the Grand Coulee. They are not going to come any more; why should they? They can go to Russia and see the Kuibyshev, Stalino, the Bratsk on the Angara, the Krasnoyarsk on the Yenesei -- all larger than Grand Coulee. How much larger? Bratsk is 3.7 million kW, and Krasnoyarsk is 4 million kW, and the other two are both of them larger than Grand Coulee. That's not the only projects they are building, but that is an example of the acceleration, and they have a number of other hydroelectric developments. To give you an idea, Kuibyshev is on the Volga. They transmit that power 600 miles into Moscow at 400,000 volts, 3-phase, AC 60-cycle. But as you move east, the farthest, the Bratsk on the Angara is close to Lake Baikal. Well, that's quite a distance, and the Russians and the Swedes have both been experimenting with another form of transmission. The U.S. Technocrats know all about it. The Swedes have a 26-mile line and the Russians have a 62-mile line. The Russian Government has now announced that it is going to build two 4,000-mile transmission grids of a million volts DC. You never heard of it before, did you? Well, we've been preaching this for .... we brought it out in 1924. Technocracy can't stop the Russians or anybody else from using it, but if you are going to transmit

power long distances, that is the system you will have to use -- not because Technocracy has advocated it, designed it, but because it is the only way you can do it. And as we said long ago, we have designed a lot of our projects so that somebody else would steal it. I feel very much relieved that Stalin is dead, because if he were alive, I'd be scared to death I would get the Stalin Prize.

This thing is on the move -- not only here but all over the world, and where is it heading to? The Chinese are doing about 5,600,000 tons of steel a year. They are going to double that in a couple of years. The Russians will be over 60 to 70 million tons production in the next couple of years. China is producing trucks -- thick wall, steel tubing pierced from a solid, 9-1/2 inches ID up to 40 feet in length, with modern mills. These are the Chinese that didn't know. Well, you have seen what has hit you in the Japanese import invasion in here; cameras, surgical instruments, electronics, microphones, coaxial speakers, and you know that little battery, flashlight battery, that you buy (Eveready) that you pay 20 cents for? I brought one along with me -- one from China. It sells here for 9 cents, the same kind of battery, and it lasts just as long. Somebody is going to be hit. Are you going to have a future working for a living? Maybe.

The Dirty Thirties hit the lower and the unskilled the hardest. This situation -- they're leaving the janitor and the floorsweeper and the lower menial things there because they are relatively unimportant. They are eliminating the highly-skilled, the high-paid, and those with seniority and due for retirement. They're clipping them all down the line. So, they are firing the high-skilled, the managerial, the superintendents, and the technical staff. Why not? That brings up the interesting proposition, that if you still have 20-some years to pay on your home, you don't have to be as frightened of foreclosure as the one who only has \$1,500 less to pay. That's the one they are going to foreclose on. Why not? If you were sucker enough to pay it up, they'll clean you out. Still too much trouble if they have another 20 years.

In the airplane situation, take Smithtown, Long Island -- they bought thousands of houses out there on the long week and the overtime. The plants aren't running, and there are 26,000 houses -- that's not the total, don't misunderstand me, but there

are 26,000 houses amongst the unemployed that still have 20 years to run, and their compensation runs out next month. Are you going to cut off their water, their gas, their electric light, and their telephone, averaging 4.9 persons per home? If you do, you're going to have a nice social load.

So, here we are, the most prosperous country in the world suddenly acquiring 6 million unemployed, and there isn't a state in the Union knows what the devil to do about it, except what? To hope and to vote little trickles to increase the period of unemployment compensation and hope that Washington, Wall Street, and local business pulls itself up. We're trying to point out that this country is entering a new era. Yes, you can put in large-scale injections. You can stop it a little while, level it out a little, but the process is going to continue.

It isn't due to anybody's fault -- kindly bear that in mind. The Republicans are no more to blame for it than the Democrats -- they' re both equally stupid, when you think of them in the national sense. If you want to vote for one political smell, that's all right, but just remember that the other political smell is just as bad.

So here we are facing a national and continental and worldwide situation in which the march of technology is forcing the events and the events are going to shove us into that new era. Whether we go kicking and screaming or whether we go in an orderly fashion is the problem that faces this country and this continent.

I think I will leave it to you, and you ask me questions.

---

DO THE TECHNOCRATS BELIEVE IN A GOD, DEFINING GOD AS THE UNIVERSAL INTELLIGENCE?

Do you see any indication of universal intelligence? That's a pretty moronic question. If you want to know about a god, well, maybe you have your god, and I may believe in one, but not any god that any Christian or Mohammedan or anybody else does. Why? Their god is a punitive proposition, and anybody who would talk about a universal intelligence in this day and age of collective

moronity ought to have their head operated on.

SOMEBODY ELSE WANTS TO KNOW, HOW WOULD YOU PUT THE FIVE MILLION UNEMPLOYED TO WORK?

You mean under this system? You are going to have difficulty. Do you think you can start the WPA today? Do you think that such methods will work? Hardly. I don't know how many of you heard me over the air last night when I pointed out that all these picayune measures would be like using an eyedropper to stop Niagara Falls. Now what we are talking about is not a temporary readjustment of unemployment. It's an entire revision of the system, and under a Technate, it doesn't make any difference what you are in your personal beliefs, whether you are black, white, brown, red, or green, or whether you are tall, broad, short, or lean -- you're a citizen of this continent and you are entitled to the perquisites of citizenship, namely, the guaranteed distribution of abundance to everybody.

SOMEBODY ASKS WHY DOES THE COST-OF-LIVING RISE DURING THIS RECESSION?

That's a question to ask Eisenhower in Washington. Costs are rising in everything, aren't they? You raise the wages, you raise the prices, you raise the rates, because everybody has to get more to get more. Remember what the Red Queen said to Alice, that "you must come from a very slow country, because you have to go faster and faster here to stay where you are, and you have to go twice as fast to go anyplace at all." So what are you worrying about the prices going up? They are liable to go higher!

SOMEONE HERE SAYS IT WAS STATED THAT THE SKYSCRAPER BUILDINGS WOULD NOT BE BUILT IN THE FUTURE, BUT IT SEEMS THEY ARE STILL BEING BUILT. WOULD YOU CARE TO COMMENT ON THIS?

What does one mean by skyscraper? This attempt to provide housing in suburbia by horizontal expansion -- did you ever stop to think that a ranch house 100 feet long has the equivalent in piping of something 9 stories high? You want to see something interesting, look at the photographs of the nice suburbia built down in Venezuela for the oil company employees. Nice little two-car garage, beautiful ranch house, hedge, little swimming pool in

the yard -- just the same as suburbia here in the United States. Then go take a look at modern design in Venezuela -- the largest reinforced concrete bearing wall structure in the world -- 58 stories high, 1,500,000 square feet. There's no such thing in the United States, The Brazilians and Venezuelans today lead the world, along with the Swedes and a few more, in reinforced concrete design, and the Chinese are coming up fast. Actually, the people responsible for horizontal expansion of housing in United States should be shot with a firing squad. That's tough, yes, but it's stupid. We are using up the land, and you cannot continue that expansion. Vertical expansion, yes, so if you are talking about building buildings in the future, naturally they will go up in the air. Your costs per cubic foot for a family would be less than anything built today in suburbia.

HOW DOES TECHNOCRACY REGARD THE FIGHT BETWEEN U.S.A. AND U.S.S.R.?

What fight? There isn't any fight. There is a Cold War in the United States, and the Russians are so far out ahead, there isn't even a prospect of a fight. You can't fight with somebody unless they stay in the same ring with you. That's the situation today. Russia has developed their ICBM. Before their ICBM, they developed their intermediate, their medium intermediate, their short-range intermediate, and their short-range missile. They fired them in June and May of 1957. They fired eight long-range ICBMs, How many failures did they have? We do not know; they undoubtedly had some, but they fired eight of them from the western end of the Black Sea to northeastern Siberia, approximately 6,000 miles. According to the reports, in 6,000 miles they had a 4 square mile target accuracy. Their total range is 15,000 square miles with 12 square mile target accuracy; in other words, they can reach any point on the globe, and it brings up interesting probabilities, does it not? For the first time in 700 years, the Vatican is under the gun. It is 5 minutes from zero, because nobody's armies have to cross the Mediterranean, the Adriatic, or the Alps. His Holiness had better learn to speak Russian.

SOMEBODY SAYS, "I WAITED FOR 15 OR 18 MONTHS. HOW MANY MORE 18 MONTHS?"

I don't know what he is talking about. 18 months? After all,

(he) couldn't be pregnant; that would be 9 months. Unless you've got one of those reoccurring pregnancies. I have heard of them being perpetual. I think that's some of these subversive people. They're trying to make out that a woman is no problem if you keep her pregnant in summer and barefoot in winter. Then she stays home all the time.

WHAT IS THE TALK OF LIMITED WAR WITH CONVENTIONAL SMALL ARMS?

That's about the only kind of little fracas you can have any more, because when you have achieved this development in missiles and rockets, the annihilation and devastation is so great that there is no alternative to peace. All this talk about missile scientists and rockets and trips to the moon and missile development -- well, even if the United States catches up to the Russians or exceeds them, what have we done? We've merely spent billions to acquire parity in mutual suicide. In other words, war today -- you don't have to send Americans abroad to die on foreign soil -- they can die a damn sight faster here than they have ever died anyplace in history. The same is true of any other country, and, besides, what are you going to fight a world war for? If you go in for killing human beings in this number, you eliminate customers; and the trouble with United States today is that they haven't enough customers. It's got all the existing customers all sewed up and mortgaged their purchasing power into the future, hasn't it? So, if you kill off a lot of human beings, you kill off customers. And the other side to it, as far as United States is concerned, it hasn't got any allies. All it has is a collection of deficit nations: Britain, France, West Germany, Italy, Greece, South Vietnam, South Korea, Thailand, Japan -- what a collection of deficit areas! We have over 400 bases abroad, and most of the United States armed forces are abroad and not in United States. Isn't it kind of an ironic joke that our explorers that we have just sent up, that Dr. Werner van Braun and 105 Germans at \$14,000 a year each -- why, when you listen to this missile talk, you can't hear an American on the air. Dr. Teller, Dr. Werner van Braun, -- they all talk with a mouthful of mush and you can hardly understand them. And what? We brought them over here and we pay them. Are you getting \$14,000 a year, any of you? Oh, you aren't? What the hell's the matter with you -- you should have gone abroad.

SOMEONE WANTS TO KNOW HOW SAFE IS MY MONEY IN THE BANK?

Well, of course, this has a certain connotation to it. Back in July, 1932, I spoke at a meeting of another organization -- July, 1932 -- in which I predicted that the banks of the United States would close on or before April, 1933. They would close because national frigidity would set in and it would become national. In the last of February, I was speaking in Minneapolis in the big public auditorium, when I advised most of the 22,000 there that if they had money in the bank to go out and wire home to draw it out. Glenn Frank, the President of Wisconsin University, was to follow me. Well, they went out of there so fast that Dr. Frank said I don't think there is any use of my speaking. Before that, the Attorney-General of the United States wanted to know if they shouldn't proceed against us for making statements inimical to the public safety of public institutions. And we said we would be delighted if they did, but as and when Washington would do that, Technocracy would open up the Hibernia Trust of New Orleans, the Union and Guardian of Detroit and Cleveland, and may God have mercy on your soul. We weren't indicted, and in Minneapolis, the Attorney-General of Minnesota, the District Attorney of Minneapolis, the Mayor, and others were waiting in my suite at the Curtiss Hotel, all very solemn-faced. They were going to take action. When the phone rang, and I picked up the phone, and the manager said, "Mr. Scott, the extras have hit the street. The Governor of Ohio has closed all the banks." I said, "Send up a hundred copies."

So, someone wants to know if their money -- yes, your money is all right in the bank, because what did I say then? That it wouldn't happen again; national frigidity would not set in, but that our institutions of debt would drown in their own liquidity, And what are they doing now? They've got so much money for investment, they don't know what to do with it, because the only thing you can invest really large sums of money in today is in designing equipment to sell the present obsolescent junk short.

WOULD TECHNOCRACY ADVOCATE AN EDUCATIONAL SYSTEM SUCH AS RUSSIA'S THAT CONCENTRATE MAINLY ON SCIENCE AT THE EXPENSE OF THE ARTS AND HUMANITIES?

I don't see why we should imitate the U.S.S.R. or any country in the world, whether it's an educational system or a

powerhouse or anything else. We have ability, capacity, and brains -- the type of brains of long-range, strategic perspective. We have it here. The Russians haven't got more brains than we have; they simply use more of their brains. Here in the United States, it has been undemocratic to have an intelligence that is strategic and long-range. In the last sixty years, you were a queer, a square, a Red, or you were suspect, and you are paying for it. There are over 102,000 governments in the United States. You can write to the Superintendent of Documents and get a nice, thick book giving you all the data on it. There are 48 states, 3,027 counties, there are over 17,000 townships, over 17,000 municipalities, and over 52,000 educational districts. 12,000 of that 52,000 have 84% of the 32 million plus students in our schools. Each one of those little school boards is a little local heirarchy; there is no uniform educational standards; there is no uniform, nationwide curriculum. They are all going their own little way, and you are not going to get anything different so long as you have that 102,000 political governments that are all empowered to assess and collect taxes and to issue debentures. It's anarchy pure and simple. You will have to have one school system nationwide, one set of standards, one curriculum, and you've got to train your educational profession to function. Now the only way your educational profession can live is under an assumed name in another town far from his or her home. Remember, this country morally stinks. It does -- it's putrid. Let anyone do something different than the conventional, then, whee, you start to stab that person in the back, cut their throat, you put poison in their drinking water if you could. Why, here's your case just the other day, last couple of weeks, in that nice suburban area where they had all their mailboxes painted black with white letters, and one wanted to have it the opposite and they brought suit to prevent it. No, sir, you are going to be this way if we strangle you.

Our educational system -- look at the nonsense you've got over segregation and desegregation. For heaven's sakes, let's have a real educational system where all that kind of nonsense nobody would care about it. You put it on a decent basis. You've got millions in this country who should be technically trained. At the expense of the arts and the humanities? What the devil good are the humanities in running a technological system such as ours? You can study them, yes, but don't try to run a power

system on the arts and humanities, please. I've spoken at universities in the United States where the student audience was 8,800 and 14,000 and more. In 8,800, there was only 127, including medical, that had any science at all. If you left out the medical, what? Twenty-eight, Is it any wonder you are in a mess? The Russians have higher standards. They have a single standard. Theirs is a Russian standard. Let's design our educational system for this continent -- continentwide the same standard, same controls, eliminate your Board of Education in every little lousy district all across it, and let's put the educational profession of United States on a firm standing where they can't be accused by a breath of scandal or what somebody else says about them. If they're competent teachers, they're competent. You can't do it now. You are not going to do it under this setup.

Now, of course, some of you will be kind of upset, because if you are going to imitate the Russians, the Russians haven't any parochial schools. Don't think I am speaking only about Catholic parochial schools -- your Lutherans, your Baptists, your Episcopalians, and so on all have a parochial school. Then you have nice private schools like Hotchkiss and Groton and others -- they're on the same par with Winchester, Harrell, Eton -- they haven't changed their curriculum in 300 years, but that is the school if you are in the wealthy class to send your children to -- your boys -- you'll get the correct smell!

Now, what do you do? You fight over this question of people going to school because their color is one thing, and then you move them into a school; you pass a law. That's all you do. Well, suppose you get them all educated. Are you going to offer them economic standing equivalent to that? No, you don't. They can graduate and, by God, go back to the same darn thing. Then they call themselves Christians. You think there is any wonder that we are contemptuous of it?

PLEASE COMMENT ON THE ST. LAWRENCE SEAWAY WHICH IS SUPPOSED TO HELP THE ECONOMY.

The St. Lawrence Seaway is 27 feet over sills, and when it is completed, yes, there will be a nice power development there at Barnard Island, and the big corporations will get most of the power, at least on our side of the river, not on the Canadian

side; because on the Canadian side, the power will go to the Ontario Hydroelectric Power Commission. Twenty-seven feet over sills, and remember it is freshwater. Freshwater hasn't the same buoyancy that saltwater has; therefore, your draft will be 24 feet plus. Technocracy, of course, called for 40 feet over sill. Your Welland Canal is a bottleneck. It takes you from 11 to 12 hours to go from Lake Ontario to Lake Erie and vice versa under the Welland., Under Technocracy's continental hydrology, there would be a standardized lake level for Lake Ontario, Lake Erie, Lake Superior, etc., and you would have hydraulic lift locks that would raise and lower simultaneously 60,000 tons each way in 15 minutes the 326 feet difference in elevation between Lake Erie and Lake Ontario. Well, then you could do something. Have you got a harbor out here? What could you bring in there? Some of those hulks of rust that you trot up the lakes to get ore in? That's no way to handle transportation today. The Canadians started to do the St. Lawrence Seaway on their own, and we leaped in and said, no, you've got to take us in. Did we do a job of it? No, we wanted to prevent the Canadians from doing a job. Now we discover that there is not enough water in the Great Lakes, and we proposed to Canada that United States will enter into an agreement with Canada to pay for the costs -- at least the major portion of it -- of diverting the waters now going into James Bay and Hudson Bay and diverting them into Lake Superior, and the Canadians have accepted in principle, and then they have handed us a bombshell. They are glad to enter into this work, it will be a huge project, and that both Canada and United States need the water in the Great Lakes, but as the water originates in Canada, they think that the additional power that is generated by that water coming down the Great Lakes should accrue to the Ontario Hydroelectric Power Commission and not to private power corporations in United States. Now we're screaming bloody murder. Will it benefit our economy? Yes, but why not have done the job correctly in the first place?

SOMEBODY WANTS TO KNOW IF YOU ARE AGAINST VOTING, HOW WILL THE HEAD OF THIS COUNTRY BE CHOSEN, I GUESS?

Well, whose country? The 15% that own all the bonds, the debentures -- that's one country. I don't think there is anybody here that represents that 12 to 15%. So, you are not talking of your country; you're talking of their country. Correct? How much of a stake have you got in it? Well, the American Indian -- he

didn't have that way of looking at it. He never said, "My country." He said, "I belong to the continent." Quite a different attitude. Whose country are you going to elect the head of? The 85% or the 15%? If you are going to maintain this system -- how are national elections conducted? The minority always elects the President of the United States -- always has, and it's going to be funnier and funnier as the time goes on. Do you vote on any proposition in technology or science? If you do, you won't get anywhere. Don't let's worry about how you are going to choose the head of a country when you haven't got any country in that sense at all. If you are talking about this system, go ahead, sucker, and vote, but for heaven's sakes, get at least \$5.00 for it,

WILL THERE BE ANY CHANCE OF ANY COUNTRY GETTING COMPLETE CONTROL OF OUTER SPACE?

No doubt many of you have heard broadcasts and read articles in the press -- of course, Lyndon Johnson made the big proposition that we should move for immediate control of outer space so as to prevent the other countries from moving into the control of space. Dr. Werner von Braun was on TV some weeks ago, and they kept nagging him as to what they'd find on the moon when the first rocketship got there, and he said, "Russians." Now here you have all kinds of people in the United States that want to escape the reality in which they are in. Well, of course, they used to take a bottle of liquor and get a souse on or some other equally nonsensical endeavor. Now, of course, it has become really absurd. Now you want to escape from the reality of this globe into outer space.

The atmosphere on the moon, ladies and gentlemen -- is there atmosphere on the moon? Check up on it, please. I think that you will find that the so-called atmospheric condition on the moon is nearer a more absolute vacuum than we have ever been able to obtain on this earth. Do you want to go there? Do you want to go there? Do you want to go to outer space? You want to go to Venus with a surface temperature of 386 degrees? I mean, have some sense. True, there are probable billions of bodies in the various galactic systems, but let's learn to run one little speck in the universe before we try taking on all the others. We don't even know how to run our own part of the continent, let alone the rest of the world, and yet we want to take on all space. Who's dizzy?

WOULD YOU COMMENT ON THE 1960s' PREDICTED BOOM?

Who predicted it? Does anybody know of any boom predicted in 1960? NIXON. Nixon? Well, if somebody wants to run Nixon for president. If he gets in, you better put the constitution and the silver in some underground vault for safekeeping. He would constitute an ideal president for the business interests of this country, because he is a man of absolutely no principles. Well, how do you like it? So he goes over to Ghana for the inauguration of Ghana, and there he meets educated American negro population that he never met in his own country and he hasn't seen since. He had to go abroad, and then he plays it political. Oh, go on. If he was so good, why didn't he go down south and help them out?

WILL WE DO BUSINESS WITH THE SOVIET UNION?

Well, maybe the Soviet Union doesn't want to do business with us. Just realize that all this nonsense -- they're trying to keep this Cold War fever going with one wave of propaganda after another -- well the Russians don't have to do anything to win except stay where they are. They can win sitting down. They don't want Italy. What does anybody want Italy for? Even the "wops" don't want it -- they want to come over here or Argentine, any Italian will tell you that. What's in Italy outside of a few olive groves, wine crushers, and holy shrines -- a volcano or two? Well, yes, 3-1/2 million unemployed, and how many bambinos a year? Increasing, is it not? Well, but have the resources and soil of Italy increased? Do the Russians want West Germany? What's in West Germany outside of industrial equipment? Any iron ore? Yes, one little deposit of low grade in Brunswick that has to be beneficiated. Their coal is 1,400 feet down, and you have a steel plant on the Ruhr, ladies and gentlemen, being operated at this moment with American coal. Your Italian Government is operating ships coming to United States subsidized to transport coal to Italy to run a fictitious steel industry. Do the Russians want Britain with 50-some million population, with 1/2 million increase, with coal 8 miles out and in under the sea, with an iron ore around 20-22%. Huh, uh. Their day is gone. The resources lie east. In the long run, they don't care whether they trade with us or not. Their tough part is over. They've got the technology today. They can make the technological equipment. Czechoslovakia has risen to be the second greatest exporter of machine tools in the world, and will probably be first this year

or next, and they are beautiful jobs. So, let's don't talk about the U.S.S.R. doing business -- we doing business with the U.S.S.R. The U.S.S.R. will make its own terms, because it has a handful of aces when it comes to this.

WILL THE FUTURE CAUSE A COMPLETE WELFARE STATE IN THIS COUNTRY?

What do you mean a welfare state? You mean where every citizen is guaranteed an income -- healthy, sick, otherwise, that you have no individual insurance policies, that you are all insured so long as your citizenship remains intact. The only way you can cancel your citizenship is to permanently leave the continent or commit an act of continental treason. Nobody can take it away from you. Welfare? or are you referring to a so-called British Labor Party? You see, when you write questions like this, what do you mean? Is there a welfare state anywhere or is this Claude Manion of Notre Dame calling this a welfare state and that we are on the road to socialism in United States? Is that it? If you'd really be a little more explicit, I could have some more fun with you.

WOULD TECHNOCRACY PUT THE MEDICAL PROFESSION ON A PEDESTAL OR ARE THEY, TOO, REGARDED AS EQUAL?

Well, I don't know what that means. If they are competently trained, they have a field of their own. Equal? What do you want -- you've been thinking under the terms of the past sixty years. We're all born equal -- that's the kind of rubbish you've got -- but some of us are more equal than others. Is that what you mean? I don't know.

DO YOU HAVE THE FIGURES ON FORECLOSURES?

Well, all right, you live in this community. You tell me the foreclosures in this county. Do they issue them every day? Oh, they don't? How about all the other 3,000-some counties? Rather difficult to get, isn't it? Where are you going to put another 10 million motor cars? That's simple. Private enterprise will sell you skyhooks and you can hang them up. Why not, you're dizzy enough to try it now. You think it's all right if your daughter gets seduced in a Cadillac, but, oh my God, in a Ford! You can't have that.

WHAT'S THE QUICKEST WAY TO GET TECHNOCRACY OPERATING IN UNITED STATES?

Get a million members, paint their cars, and the public will think there is 80 million of them. Won't they? Sure they will, but you'll scare hell out of the rest of them.

WILL A SMALL WAR AND AN ARMAMENT PROGRAM BAIL US OUT OF THE PRESENT ECONOMIC DILEMMA?

No, it won't, because if you could get another war going, what would you do? What would happen? More capital goods would be installed, more technology, and you'd come out of that little impetus with more capacity than you had before. Today in United States we have over \$500 billion gross national product capacity, and we have a deficit in purchasing power of between \$125 and \$150 billion; so, when somebody tries to put in \$100 million or half a billion, it's nonsense. You see, none of the little things that you used back in the Dirty Thirties will work anymore, and if the present "recession" continues until we have 8 million unemployed long enough to run out of their compensation, the Filthy Fifties will make the Dirty Thirties smell like Chanel No. 5.

I think I have kept you here long enough, haven't I? Some of you have to go someplace? Oh, you've been. It's all right if I stay up here, is that it?

Cleveland, you know, is very fortunate. It's not as bad in Cleveland -- you should see Chicago and Detroit, and Northern New Jersey, Long Island, Pennsylvania -- why, you only have, according to the official figures here -- there's a little sector in Northern New Jersey has more unemployed than you have in the Greater Cleveland area, but wait a while. It's creeping in. You'll get it by-and-by. I'm not trying to frighten you, don't misunderstand me. Bear that in mind -- we don't have to have 17 million unemployed. At this high cost of living, you only have to have a reduction in national income of between 18% and 20% -- I'm talking individual income, now -- and millions will be up against it, because what? They're in hock for their house, they're in hock for their car, their furniture, and now they're trying to go in hock for their children's education. So, when it hits, it's

really going to be tough. After all, this building belongs to a particular organization. I'm not a member of it, but it once had something to do with the origins of this country. If you look on the back of the dollar bill, you will find reproduced both faces of the Great Seal of the United States, and the one that is not used -- not the one with the predatory eagle on there, but the other one, you will find this Masonic symbolization of the unfinished pyramid and the all-seeing eye and the words, "ANNUIT COEPTIS NOVUS ORDO SECLORUM", -- Time Makes Way for a New Order of the Ages. Well, it's time we turned that over, and it's time that these Masons forget their Dun & Bradstreet's rating and try to live up to their forefathers. They've sunk pretty low.

Thank you.

HOWARD SCOTT  
AKRON Y.M.C.A.  
MARCH 25, 1958

"DESIGN, DIRECTION OR DISASTER?"

Well, you came out on a pretty sleazy night, didn't you? This is the last meeting of this tour, I managed to last this long -- I started out with a cold, got up out of bed to get going, so I guess I'll last through the evening.

Some of you may have seen the papers -- the NEW YORK TIMES is carrying a full-page ad by McCann-Ericson that this economy is fundamentally sound, that there's nothing wrong with it, and we should be able to go on to bigger and better things. The interesting part of it is that that is the ballyhoo that has been handed out to the public for the last sixteen years. This last decade, from 1947 to 1957, has been the greatest decade in the history of any nation in the world. We've produced 54 million automobiles. The automobile companies made billions. Of course, you had to sell them on an installment basis, and yet the automotive companies of United States have never designed a real automotive vehicle. What they did, what they have done, and what they are continuing to do is they soup it up, they chrome it up, and the advertising boys from Madison Avenue dress it up so it's a beautiful job of appealing to the conditioned taste of the American consumer. Fifty-four million automobiles in ten years and not a one of them that is an achievement -- not a single damn one. Now it is utterly amazing.

We've built between 11 and 12 million homes out in suburbia. True, they range from the lower cost to the higher cost ones, but whether the ranch house or split level is \$10,995 or \$50,995, they are all abortions -- every single one of them. Did you ever stop to think that a ranch house 100 feet long has to have piping that length? If you turn it up on end, it's 9 stories of piping. Well, it's wonderful, provided you can expand the economy enough to pay for it, and if you get enough of them, it will sink you.

We've been doing this day in and day out and it has been hailed as achievement. It has been pointed to with pride that the free enterprise system of United States could do what nobody else has gone. They are correct. Everybody else in the world has tried to imitate them and made a rotten failure of it, thank heavens for that. We've moved 45 million human beings out into the

suburbs. We've grabbed off land adjacent to urban centers -- beautiful farm land -- and now we are running out of land. Why? That's evident today in your house costs, because your land cost in the sales price per home today is hitting 25%. For over 80 years, it was between 8 and 10%. Oh, not that there isn't land out in Nevada or the Mohave, the wilds of Colorado or Montana, yes, but we are running out of land adjacent to urban centers.

Go on down the line -- 11-12 million homes, 14 million refrigerators, 54 million automobiles, all these things are touted as achievement, and we have claimed world leadership. Well, the claim is rather baseless today. Let's go back and look at it. United States Steel, since 1903, has produced millions and millions of tons of steel. It has made billions. So has the General Motors, Ford, and others; yet the United States Steel has never made a single contribution to the technology of ferrous metallurgy in its existence. General Motors has yet to make any contribution of original design to automotive transportation. Ford, Chrysler, and all the rest are in the same category. They have made money. They have produced something that could be merchandised at a profit, and we have built up more billion-dollar corporations than all the rest of the world. Well, we've got it. We're souped up, we're chromed up, and we've got swept wings front and rear.

Our railroads have been sliding downhill for years. Well, when did the railroads ever make a fundamental innovation? Westinghouse Air Brakes, MCB coupler, girder frame, valve gear, go on down the line, not a single one has ever been contributed in the last sixty years by the railroad industry. Something's wrong, isn't it? We have fashion boys and we have promotion and advertising boys. They can produce the most beautiful and wonderful advertising copy the world has ever seen. Look on your TV and what's it filled with? A conglomeration of how to approach the sucker consumer. If you don't get him one way, approach him from the rear and sandbag him. All of this has been so. What has been the result?

We've raised wages, we've raised prices, we've raised commissions, we've raised taxes, we've raised rates, and we thought we were going someplace. Now we find out that the railroads aren't carrying the passengers, they aren't carrying the freight, and they're going broke.

Stop and think a moment that in United States today, 500 corporations produce 68% of the total production of United States, and 150 of that 500 dominate the 500. In agriculture, 56% of the total farms produce 9% of the total agricultural output. On the other hand, 26% of the farms produce 74% of the total agricultural output. Last year, there were 1,800,000 Americans left the farms -- the greatest number in all history -- but 56% of the farms that only produce 9% of the agricultural output -- that's over 2 million -- 4.9 persons per farm -- they are due to leave the farms very shortly.

The coal miners are going to be reduced. So is the new steel process. We were the big boys of the world in steel, weren't we? At the present rate of operating the steel industry in United States, the Russians will produce more steel in U.S.S.R. in 1958 than we do in the U.S.A. if we continue at the same rate.

Something's happened to us, hasn't it, ladies and gentlemen? You're damned right it has. We're not behind one eight ball; we're behind three eight balls. We wouldn't do a job of designing on our railroad system. Go back and look up Abraham Lincoln's AMERICANA, and you will find that he wanted to build the Union Pacific Railroad three feet wide. That's stated over his own signature. After all, Abe Lincoln was a darned good railroad attorney and a politician, but he didn't know anything about operating railroads. The Erie Railroad used to be six feet wide. Southern railroads were wide roads and weren't changed over to standard gauge -- 4'8-1/2" -- until some years after the Civil War. Now we find what? That at 4'8-1/2" you can't design a railway train. It's impossible no matter what you do with it, because in order to carry a load, you have to go up in the air and you have to lengthen, it out; and when you go up in the air and lengthen it out and you try to hit any speed, it whips, and every time it whips, it pounds the railbed, the rail joints, the trucks, and the bolsters.

General Motors and others made big claims about their diesel locomotives -- used to. Now they are kind of silent, because the biggest locomotives are not in the United States -- the most powerful. I mean, French locomotives are over 14,000 hp each. Do you have any like that in United States? I'm talking about a single unit, ladies and gentlemen, not a question of hooking up a

whole lot of them. They hit a speed of 214 miles an hour. We're reducing all our engine speeds on our railroads, because we are trying to save money for the railroad company. We are cutting out trains all over. You have cities in the United States that have no rail transportation, and the bus companies are abandoning their charters. They have nothing left but the automobile. The public -- what's been the attitude of the public? Can you find 12 of the Californians in that state who know anything about the Feather River Project although they propose to spend \$1,500,000,000 on it with 40 to 50-year bonds, and you know what 40 and 50-year bonds are -- that means you pay twice as much as the original cost. No, you'd be lucky to find a minute fraction of 12 of the citizens of California that have any idea of what the Feather River Project is.

Here in Ohio -- well, what? The steel companies and others are ballyhooing another billion and a half project; namely, to eliminate the old weir locks on the Ohio River and have 1,000-foot locks and to deepen the Ohio from Cairo, Illinois, to Pittsburgh. How much do they want to deepen it? From 9 feet to 12 feet deep. Isn't that wonderful? If you tried that in some places in the world, they would shoot you. Well, you ought to shoot them here but you haven't got guts enough. A billion and a half to do three feet of useless nonsense, when you could have 22 feet over sills with comparative ease? You've got nice high banks down there on the Ohio in West Virginia, haven't you? But the railroads are down in there, and you would have to pull the railroads out, wouldn't you? Everyplace you turn private enterprise has mucked this thing up from hell to breakfast. And here in our prosperity, there wasn't a cloud on the horizon until the day before yesterday. And now it's backing up all down the line. How are we going to come out of it? Oh, you could kind of level it off if you poured in billions, but that wouldn't help any, because you would only level it off temporarily and then it would start down again.

Our national transportation -- there's no solution under this setup; neither is there any solution to our water problem or sewerage pollution. There are over 1,000 cities in United States that have passed legislation by laws restricting the use of water, and yet across the country, you have an anarchic battle of who is going to get what water first; and when they do get it, they don't know where the devil they are going to put it. New

York is even talking about coming up to Lake Erie and taking water out of Lake Erie. Some people tell me that even Akron is considering a little project like that.

The Fox River Commission wants 900 million gallons a day from the Metropolitan Water District of Chicago pumped over the Fox River Divide. Everybody is at it, and there is no plan, no design, for the entirety. A terrific number of little piecemeal townships, counties, states, and municipalities all going at it in their own particular way. There's no policy for the whole, there's no direction, and there's no design.

Up until now, we managed to get by with it, but the order of magnitude has changed.. We have some 55 million automobiles and over 52 million telephones. We are not back in Andrew Jackson's day anymore. We're in the days of high speed production, and even if we did have to put in 30-year mortgages, we still choke up on our technological production. The question is where are you going with it all? Are you going to elect a Democratic Administration come this fall or a Republican one? Well, what difference is there between them? Technocracy's position is that it is the difference between two smells; you can choose your own stink, whichever you like best.

As for leadership, what leadership have you in the Democratic or Republican Parties or in Wall Street or in any local state? After all, Franklin Delano Roosevelt couldn't use his legs. Harry couldn't use his head. Ikie swallows Nixon and gets ileitis and hasn't any guts and can't make a decision. After all. West Point made him a gentleman, Franklin Delano Roosevelt made him a general, and God only made him a second lieutenant. Quit kidding yourselves -- you're not going anyplace with a political party under this kind of a setup, because there are problems today that none of them can solve. It has to be done on a nationwide basis and it has to be done on a technological basis. You can elect them -- no matter who you elect, it doesn't make any difference. Oh, they may favor a local water bond issue or a local school bond issue, but what difference does that make when you have 52,000 school districts in United States? Each with their own little school board. 12,000 of those districts have 84% of the 32+ million students in our public and high schools. There is no uniformity, no direction, no standard curriculum, no countrywide policy. And you are going to train scientists and

technologists and engineers with that kind of a setup? No, you're not. You're not going to get anywhere. You're just going to continue to have more of the same. Can you imagine any one of those school boards voluntarily relinquishing the beautiful little local position they have of local importance? They are not going to do it. They are going to stay there until they're thrown out.

The United States railroads could have designed a railroad system years ago. They didn't. They didn't even want to think about it. You take a railroad system of 3 meters wide, that is, 3 meters gauge instead of 4' 8-1/2", that would be 9' 10-1/10". Your passenger car would be more than 16 feet wide inside measurement. You could hit 150 miles an hour continuous speed to 200 miles an hour. In other words, it would only be 5-1/2 hours New York to Chicago, but do you think you could afford to run an airline with the airfields 25 miles out in each case. No, you'd be there before the plane got there.

All these automobiles, trucks, and buses are all dependent on cheap automotive fuel. The United States, right now, is only getting 11 barrels per well per day from its operating wells. That is 16% drop in its oil well drilling, and why did they have that? Because they simply didn't find the oil, and it's becoming more and more costly to drill for oil where you can't get it. So, they have tried to go abroad where they think they can. We are down around 6,200,000 barrels a day in United States production. Texas is doing about 3 million of that, and the Sprayberry, East Texas, field have all the indications of fading out. Of course, if Texas went, you would have to import 5 to 6 million barrels of foreign petroleum a day, and are you going to buy it for what you pay for it now? Oh, no, you're not. You're going to pay 50 to 60 cents a gallon without taxes -- taxes extra. Are you going to drive cars very far for pleasure anytime you feel like it. Not at 60 cents a gallon, brother. Those progeny of yours that borrow your car now -- you don't think anything of it -- well, they won't be permitted to borrow anything. They'll have to walk, and that's going to be tough, because United States hasn't been walking in years except when it walks down the street from one building to another in the city. You don't see people walking in the country; in fact, it's dangerous to try to walk. They'll kill you off if you go very far at it.

It gets tougher and tougher -- 50 million television sets and 92 million radios in ten years. We've sold the public up to their eyes. You've got \$107 billion of home mortgages face value, but as most of the mortgages are 25 and 30 years, that means it's double that amount -- the total amount that you will pay. The total amount the public is committed to pay. At 4-1/2 to 5%, it would be \$1,884 for every \$1,000 of face value mortgage. The present interest is soon to be doubled. We've kept this boom going by mortgaging future purchasing power, and up until now we have had the greatest gravy trough anyone ever heard of. The corporations have made more billions, the public has acquired more gadgets, and now it has reached that situation where it's a downright hazard for any American male to consider monogamous marriage, because the only way he can possibly get by is marry three women and have them all work and then they can afford to pay for gadgets in the kitchen. Otherwise, he's a damned fool.

On the other side of the picture, the percentage of females is rising, and for the first time in our history, there is a preponderance of adult females of marriageable age over males. What does history show? That every time that preponderance of females has passed 110:100, you have polygamy regardless of your religion, regardless of your morals, your color, or geographical location. So look out, kid. Oh, you older people don't have to worry -- they're all worn out anyway. But that's happened a number of times in history and will happen again the moment it reaches that percentage. Can you imagine the horrible attitude that our local Christian Endeavor and all the little churches and everything else are going to have? You'd have to bless babies from four different things all from the one source. That's getting economical, isn't it?

In population -- Great Britain's population is mounting; so is Italy's; so is West Germany's. South America has the fastest rate of increase. Japan has done a marvelous job in reducing her birthrate to lower than that of United States, and the abortions in Japan today exceed the birthrate. What are the Japanese going to do with 90 million on those islands; there's nothing else they can do, Europe is going to face it. Where is Italy going? There are 3-1/2 million unemployed in Italy, and with her birthrate, she's only going to have more Italians. But the same thing is true with Great Britain, West Germany -- there's two million going on strike in West Germany now, and all the municipalities,

power, and post offices and civil authorities went out for 24 hours last week, and they are going out again this week. In other words, something is happening in West Germany, too, isn't it? Now, there's no sense in more Germans, more British, more French, more Dutch, or more Italians where they are. The trouble is where can you move them? Well, not very many places. Antarctica, the Arctic, and a few desert places, and who the devil wants to go there?

None of our powers that be in this country want to discuss population, sewerage, pollution, water, energy conversion, transportation, or mass housing. The housing we should have gone into in this country should have been vertical housing and not horizontal. Venezeula -- Caracas -- just put into operation a 58-story reinforced concrete structure, over 1-1/2 million square feet of apartment space, plus stores, dry cleaning, laundry, all downstairs -- now, that's not a steel frame building. That's where the bearing walls hold the load. No such building exists in United States. The Brazilians and Venezuelans today are fifty years ahead of anything in United States in concrete designing. Why have we lagged behind? Because the steel boys were so good-- United States Steel, Bethlehem, Jones & Laughlin, and all the rest, you'd slap up a steel frame, hang the floor on the columns, and hang the curtain walls on the side. You don't have to be a designer to do that -- any moron can do it. You had the steel company make the drawings for you, and all you did was you slipped in your bid and they supplied the steel. Well, it's been wonderful. How is it that Venezuela and Brazil do this? Because steel was so high, they were compelled to go to a low-cost medium that could be made in their own country., and they have succeeded. The world's leading architect in reinforced concrete design, a Brazilian, was invited to Harvard last year for the honor lecture courses, \$25,000 for the term. The State Department refused him a visa because he had radical ideas. So the darned Brazilian went to Europe and got twice as much money.

This is happening all over in every single field. It doesn't make the slightest bit of difference. The day when the United States had the monopoly on lard, corn, tobacco, wheat, steel, and other materials is gone. We no longer have the iron ore, the petroleum, the copper, lead, or zinc. We are a have-not nation. We squandered it around the world for corporate profits. All the ore we are mining in United States today in copper is less than .

8 of 1%. The Hanna Company up here in Cleveland last year only mined a million more tons in United States than it did abroad in Canada. From now on out, it will be less and less in U.S.A. and more and more abroad. We've brought in 34 million tons of iron ore into U.S. from ten countries. Remember, you cannot keep this up without increasing costs. You'll face higher costs, and right now, as you know, living costs are mounting and mounting, and some of your beef yesterday went to \$39 in Chicago -- really going up. That's one of the conundrums and one of the dilemmas that we face. We've never organized our country except locally and in a minor form to see how fast we could chisel it out of the public, but on a long-range basis, we have refused to plan, we've refused to design anything, and we've refused to have any direction.

We got involved in one world war to make the world safe for Democracy. We didn't make the world safe for Democracy, and we didn't know what the devil we got out of it. We went into a second one for equally stupid reasons, and since the war United States has spent \$62 billions abroad outside of military equipment. The Eisenhower Administration has spent \$212 billion in slightly over five years, and what have you got? You've got over 6 million unemployed and several million more that are on part-time. What are the proposals? You want to build 4,000 post offices a year, and how do you want to build them? You want private enterprise to build them and lease it back to the United States Government on long-term leases. Isn't that marvelous? In other words, you want your money that you pay to the federal government of the United States loaned to the private enterpriser to build the thing so that he can lease it back to the government to have the government pay him again for what you put up in the first place. I mean how big a damn fool do you have to be? If somebody stuck you up on the street in a frank, open, decent proposition, you'd holler bloody murder, but when they take it out of you both ways, you can't get a complaint out of them, can you? They all think they're going somewhere in this beautiful descent to suburbia. You're going to witness more and more abandonment of passenger railroad traffic, and if this keeps up, the railroads will be screaming for nationalization within a couple of years. That's a hated word here, you know; because that isn't creeping socialism, that would be galloping socialism.

Canada is in a pretty bad way. You here in the Cleveland

area and Akron -- you're not really hard hit yet; you should see Chicago or Detroit or the steel district. You really should. Blocks and blocks of empty stores, empty buildings, empty houses, and it's come right down town. You can ride in from six different directions, and it's all the same. Something has gone wrong. Well, what's gone wrong? Merely private enterprise has come to the end of the road. Oh, you can stall it a little bit longer but not very much, A year or two -- what the devil's the difference in that? On a long-term basis, you'll have to face it. You'll not only have to design a new transportation system, both water, rail, air, and highway, you'll have to design water systems, sewer systems, power systems galore, and you'll have to design a directional system to control all this. Well, we've never done that. We've gotten by with all this -- 48 states, 3,027 counties, 17,000+ municipalities, and over 17,000 townships -- well, it's wonderful, but they can all assess property, collect taxes, and issue debentures. That is a beautiful example of anarchy running wild. You have no control and no direction. We're in that state today where we'll have to get direction soon or we will go down to a real disaster. Thank you.

---

I UNDERSTAND THAT THERE ARE A NUMBER OF COMPANIES WHERE THE NUMBER OF STOCKHOLDERS GREATLY EXCEED THE NUMBER OF WORKERS. DO YOU HAVE ANY INFORMATION AS TO HOW FAR THIS HAS GONE?

It has gone quite far, and it will go farther and farther into the future, because when you put in technological equipment, you can get rid of the so-called workers, you can get rid of the managerial and the accounting staff, and you can escape the question of unemployment compensation, fringe benefits, hospitalization; in fact, you can get away from wages altogether, because you can make them all stockholders and officers of the corporation. Very simple, isn't it? There are corporations today that have 4 to 8 times as many stockholders as they have total employees. Lovely. You once thought, of course, that such things as assembling an automobile engine was a matter for skilled workers. Now, you look up the Cross Company. They have a beautiful new setup where they can assemble a complete engine -- pistons, wrist pins, connecting rods, crankshafts, valves, cylinder heads, everything -- nobody on it -- over 1,500 operations -- 1,579, I think. Well, they only need a couple of

men, and they push buttons. If you can assemble all the parts in an automobile engine and gauge them and have a completed engine coming off the line with no hand tools, no human beings involved, there's practically no operation that you can't do the same way. The new automatic office stuff in the Metropolitan Life, you have machines handling 86,000 policies a day, but 1,600 girls don't work there anymore in that division; so you'll soon be able to handle all the checks, all the policies, all the invoices, and do all the bookkeeping by electronic and other devices.

SOMEBODY WANTS TO KNOW DOES SIX MILLION UNEMPLOYED CONSTITUTE A DEPRESSION OR A RECESSION.

What do you think? What would be the nature of a few more million unemployed? You only have to have a little over 8 million unemployed in United States long enough to run out of their unemployment compensation and six months further, and the Filthy Fifties will make the Dirty Thirties smell like Chanel No. 5. Your costs are higher, your living costs are going up, and you have more millions committed to more debt. In the thirties, it hit the unskilled, the janitor, and the floorsweeper -- it hit them the hardest. It hit others, too, yes, but hit them the hardest. Today it is leaving the floorsweeper, the janitor, and the dishwasher alone, and it's hitting the skilled, and it is the skilled, high-class factory worker, skilled mechanic, and so on, that have bought the houses and the automobiles, and they are the ones that are going to get slammed with it.

HOW WILL THE RIGHT-TO-WORK LAW AFFECT THE PEOPLE IN THE STATES?

After all, the right-to-work law doesn't have anything to do with the right to work. That's just a union busting proposition, and the unions have nobody to blame but themselves. Do you realize that? It's like the Democrats have nobody to blame but themselves for letting Eisenhower get in there. How did the Republican Party get in there? Well, the Republican top echelon made the deal with the Catholic Church, the General Motors, the Standard Oil, the Chase Bank, and the Democratic political machine, and they sold out the democratic voters in Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, Ohio, Illinois, and Michigan. Remember, Stevenson was elected by the greatest gubernatorial majority in history -- why, he

couldn't even get enough votes to carry Cook County, could he? So the labor unions are in much the same state as the Democrats -- they have nobody to blame but themselves. They wouldn't organize and they got it put over on them.

It's like Walter Reuther wants to share the profits with the automobile companies. A little while ago, they were out for a guaranteed annual wage and then they dropped it. They didn't get a guaranteed annual wage. They settled for SUB -- supplemental unemployment benefits. Then they started advocating a four-day week. That disappeared down the drain. Now they want to share profits with a corpse.

HOW LONG CAN WE CONTINUE TO DISSIPATE OUR NATURAL RESOURCES AT THE PRESENT RATE BEFORE THEY ARE SO COMPLETELY DISSIPATED SO AS TO MAKE A HIGH STANDARD OF LIVING IN NORTH AMERICA IMPOSSIBLE UNDER ANY SYSTEM?

That's a kind of a compound question. There are a lot of resources on this continent that private enterprise isn't going to take out. Forty-six percent Cu bornite on Coronation Gulf -- the richest copper deposit in the world, and 82% lead, and so on -- they're not going to take them out. It costs too much to build transportation into there. That can only be built in by a nationalized endeavor. So, we are still going to have resources here, but on the present method of exploitation of them, we've already run into that condition where it is costing too much, and it will cost you more in the future.

IS IT BY DESIGN OR ACCIDENT THAT WE ARE SO IGNORANT AND ILL-INFORMED?

Is somebody trying to be funny with that one? You mean that God stubbed his toe? You are all supposed to be God's children, aren't you? Well, all you can say is that he made a hell of a mess of it. Now, if that's design, it's unintentional design.

WE ARE TOLD OF THE BOOM COMING TO THE GREAT LAKES AREA AS A RESULT OF THE ST. LAWRENCE RIVER PROJECT. IS THAT POSSIBLE?

You won't get much of a boom here until you revive it all over the continent. If you are talking about water transportation, what can you do? You can only bring something in

that is less than 25 feet draft -- 27 feet over sills in freshwater. Bear in mind that your freshwater hasn't the buoyancy of salt, so your draft will be less than 25 feet. Well, but what harbors have you got on the Great Lakes? Are you prepared to handle shipping? No, you're not. Not a bit. So, you are not going to get much of a boom. The foreigner is going to build special little boats to come in here and take it away from you. They are already doing it. In other words, the St. Lawrence Seaway suffers from the same thing that everything in United States suffers from: the concept isn't great enough -- the design isn't any good. What do you expect out of a combination of politicians and local businessmen? They'll screw it up every damn time on you.

WE HAVE TWO RATHER DISCONNECTED QUESTIONS ON ONE CARD HERE.  
WHAT IS THE MEANING OF TECHNOCRACY? IS THERE A POSSIBILITY  
OF THIS INFLATION ENDING?

Technocracy, as everyone knows, comes from the Greek root word -- cracy is to rule, and techne is science--the rule of science. As for the inflation ending, you have to expand this economy in order to keep it running. If you don't expand it, then this is what happens to it. If you do expand it, what happens? Then the big corporation can amortize out and liquidate its obsolescence and there will be more advanced equipment operating faster, and they can run to full inventories in quicker time. So, you will work less in a year that you have worked hitherto. In other words, you will have more time for compensation and leisure.

WHAT IS THE REMEDY FOR OUR COUNTRY OR HAVE WE GONE TOO FAR?

What kind of a position is this country going to be in if we continue on our present course, say, until after Labor Day? As I pointed out before, all you require is 8 million totally unemployed running out of their compensation in another six months. That's all you need. You don't need 17 or 18 million unemployed the way you had it in the Dirty Thirties. This will be really tough. You see, your bankruptcies are exceeding 1,400 a month, 358 a week. Your repossessions and your foreclosures are rising. Leavittown, down in Bucks County where we are, right next to the famous Morrisville steel, their foreclosures are exceeding 34 a month. They're all nice homes, too, aren't they? You wait a while, this area will be hit. The National Tube is kind of going

to give up the ghost the first of April, isn't it -- up in Lorain? Have you heard about it? There will be a lot more, so if you go to church -- no matter what church you go to -- you had better say a prayer -- not that it will do you a hell of a lot of good, but it'll help (laughter).

WHAT PERCENT OF THE CLASSIFIED WORKING POPULATION IS IN THE NON-ESSENTIAL INDUSTRIES?

In the latest census report, 52% of the adult population of United States were no longer engaged in the production of physical wealth and its distribution. For the first time in the history of man, the majority of able-bodied adults of working age were no longer required. They are over here all over the lot. Well, what are you going to do? Have more salesmen, more babysitters, more crooners, and more bebop, more advertising? Well, why don't you elect twice as many politicians to office? After all, two more idiots won't do any more harm than one idiot.

IS THIS RECESSION THE END OF THIS ECONOMY OR WILL A WAR SAVE IT OR PROLONG IT, AND FOR HOW LONG?

Try to realize that our technological capacity today in United States today is capable of a gross national product in excess of \$500 billion. At \$500 billion, this economy is \$150 billion short in purchasing power. Now a little war like Korea won't do it. We'd like to have one in Sumatra right now to save the Sumatra oil fields for the Cal Techs and Socony Vacuum, and Sukarno's troops have just captured a lot of rebels with United States arms. We had nothing to do with it, did we? Remember that story of the farmer hearing the noise out in his chicken house and he comes out with a shotgun? And he says, "Who's there?" "Nobody but us chickens!" United States no longer has any allies except deficit allies. Great Britain, Italy, West Germany, Greece, Turkey, South Korea, Japan, South Vietnam, Thailand, the Philippines -- they're all deficit areas, aren't they? Every single one of them. You're not going to fight a war with any deficit allies. As for fighting a major war -- phooey! The Russian ICBMs -- well, they fired 8 of them last May and June. Their forces are equipped with short range, short medium range, medium medium range, long medium range, and ICBMs. How many failures the Russians had, we do not know. They fired their ICBMs from the western end of the Black Sea 6,000 miles in a northeast

direction. In 6,000 miles, they had a 4-square-mile accuracy. Their total range is 15,000 square miles and a 12-square-mile accuracy. So, it has reached the point where science has made it so wonderful that Americans don't have to go abroad to get killed. They can die right here at home in their own pigpen.

Private enterprise is bringing up this scare that you have to have this huge armed force, that you've got to have missiles galore -- well, what are the missiles for? To catch up to the Russians, you are told. If you succeed in catching up to the Russians, all you succeeded in doing is achieving parity in national and international suicide, because today there is no alternative to peace. It's tough, isn't it? We would like to have a war; in other words, the Korean episode pulled us out of a nosedive, but there isn't anyone on the horizon. The British don't want to fight; neither do the French, and neither do the West Germans. Neither do the Italians. The Japanese say the hell with it. Who are you going to get to fight?

Another thing while you are at it, bear in mind that this has altered the strategic concepts for the first time in thousands of years. Rome used to be the center of battles for thousands of years, that is, if they could capture Rome, but the armies had to cross the Alps or the Pyrenees from the opposite direction of the Mediterranean and the Adriatic. Now, His Holiness can sit in the Vatican, and it's only 5 minutes from zero. He hasn't time to cross himself. And that goes for the Mohammeden Church, the Lutheran, and those hard-shelled bastards known as Baptists.

WHAT IMPACT WILL THE SMALL FOREIGN CARS HAVE ON CARS, THE ECONOMY, AND ANYTHING ELSE IN U.S.A.?

You are going to bring in more small cars -- your Swedish Volvo, Saab, your French Dauphine -- now remember, the Dauphine is made by Renault, the Volkswagen is made by the Volkswagen organization which is nationally owned, so is the Renault plants. They are more efficient, and as the price, cost of insurance, gasoline, and everything else rise, you will see more and more people going to the smaller cars. In New York City, the number of Volkswagen buses for parcel delivery, small stuff delivery, has jumped out of sight. They are the cheapest thing they can get, and they are buying them and you can't get enough of them. Did

you know that you are even pirating shiploads of secondhand Volkswagens in here from Europe. They can't get enough of the brand new ones, and yet they don't sell them on installment basis, do they? You have to have cash or you don't get them. You can't get a trade-in. Wouldn't the automobile industry in Detroit love to operate on that basis, ladies and gentlemen, wouldn't they? No trade-ins, cash?

WHAT DOES TECHNOCRACY PROPOSE TO DO ABOUT THE INCREASING POPULATION?

No doubt many of you have read Margaret Sanger's books and others on voluntary parenthood, misnamed birth control. I knew her years ago, and, of course, the best line Margaret Sanger ever pulled in her books -- she did it unintentionally. Being the mother of a large family, she had no sense of humor, but the best line she had in all her writings was where she prescribed cotton tampons for the poor; in other words, cotton balls for the poor.

It's been known to the biochemists and the physicians for quite a number of decades that the female of the human species had the power to dissolve the fetus in the womb without any deleterious action on the reproductive mechanism of the female or of her entire organism. There have been any number of cases, well recorded, but what triggered the physiological endocrine action wasn't known until just the other day. Now it is. It is a very interesting compound, it's odorless, tasteless, colorless, and very low in cost, and only requires a minute percentage -- in fact, it is approximately the same percentage as the active ingredient is Warfarin, which is .00 or .000 something. It's about the same percentage. All you would have to do is to drop it into the water system -- any metropolitan water system -- to that extent, and there wouldn't be any two-legged or four-legged female would reproduce, so long as they kept that minute percentage in the water of a city water system. If you stopped it for 90 days, they could start in again. So, look out, ladies, we'll get you yet.

Of course, there is another beautiful angle in this -- such developments in biochemistry, you see, will be viewed with alarm, because you see what the side effects are? It's an inducement to sin, isn't it? Oh, come on, have a smile. You see, the human being is relieved of that tension of worry about additions, isn't

he? Of course, it might result in some people killing themselves, but I don't know.

BROADEN ON HOW THIS THING WILL START. I AM CERTAIN THE QUESTIONER MEANS HOW THE COLLAPSE OF THE PRICE SYSTEM IS GOING TO COME ABOUT (THAT'S JUST A GUESS ON MY PART).

I don't know whatever he or she means. What thing will start? [REMARK FROM THE AUDIENCE BUT CANNOT BE HEARD] Well, there is a movement. We've got Sections, Section offices -- we've got some very big ones in some places. We've got a lot of little ones. All it takes is human beings to move it. You've got enough human beings in this room to organize the whole State of Ohio without half trying, but what? More of you will spend more time doing tiddlewinks in the lodge or playing with your church socials, won't you? Jesus isn't going to fix it for you, and the Grand Master isn't going to help you either. If you want me to get started on you, I'll work on you!

IF TECHNOCRACY TAKES OVER, WHERE WOULD WE GET OUR RESOURCES NEEDED TO REBUILD OUR SYSTEM?

There are plenty of resources on this continent. Besides, you can also mine New York and Chicago, because they are one of the greatest metal mines of the world today. You can go down 90 feet through a maze of pipes, wires, cables, conduits, girders, everything else -- some places 150 feet. You've got more metal underground than you've got above ground in many places; in fact, you have more real metal than you have in some of the present iron mines.

TECHNOCRACY SEEMS TO BE SLIPPING BACKWARDS FASTER THAN USUAL. HOW COME IT IS NOT BECOMING MORE POPULAR?

When was it ever popular? After all, if we had collected a bunch of people who went around kissing the rearends of the businessmen, we would have been popular, wouldn't we? Soft soapers. After all, Ikie was a good public relations officer -- he wasn't a general, you know, but he's a smoothie. If we had been smoothies, we would have been popular. A smoothie is always one who shaves a posterior before he kisses it. It's very easy to become popular. All I've got to do is go on the television, and what do they say? Glamour boy! (laughter) And I do it without

makeup. And these boys on television that interview me -- they're all made up, it's very difficult when you come into the studio to tell whether it's male or female, and they sit on the arm of the chair, because they want to get up here, you know. They don't want to feel inferior.

How many of you heard the rebroadcast of my Press Club interview in Cleveland? How many did? Well, a lot here evidently didn't. In other words, my Eisenhower highball is spreading across the country. You haven't heard of that yet? You will. Business on the rocks with a dash of compensation bitters. You'll all be drinking it pretty soon.

Now as far as Technocracy being popular, we never tried to be popular. What's the first fundamental in pedagogy? It isn't to make people like you. It's to have people leave with more questions in their minds than when they entered, and I think you will have to admit that wherever we hold meetings from Mexico City to the far north in Canada, they have all left with more questions in their minds than when they entered. Howard Scott, Director-in-Chief of Technocracy, has never tried to make any audience like him, because he is not running for office. You can't elect me to anything. [WHO APPOINTED YOU?] The organization. I'm elected every three years. It's tough, isn't it? So are Section Directors and Section officers. They're elected every year. Anybody wants my job at what I get, they are welcome to it. Just try it, I don't even qualify for the minimum wage law.

ARE THERE ANY FURTHER QUESTIONS THAT HAVE BEEN WRITTEN SINCE THE TIME WE CALLED FOR QUESTIONS BEFORE?

Well, how do you feel about it? Do you think I should talk to you longer or just let you suffer?

Well, after all, I haven't acquired a corporation yet, and I haven't taken up golf. Some years ago, I spoke in a giant auditorium out west -- apropos of this golf -- and I happened to make a statement of proficiency of golf in American males, that it was either indicative of approaching senility or sexual incompetence, and there was over 230 males came backstage to assure me they were lousy golfers. Don't forget that Thomas Carlyle -- a great English author of "Sartor Resartus" and

others, got married, and the morning after his marriage -- he was noted for his rose gardens -- came out and chopped down all his roses. So we have a president that can only play golf. Now, I won't be so mean as to analyze that golf playing.

Well, over in China, they've got the first bridge across the Yangtze River in history. They have the famous Kansu Canal completed -- that's 420-foot wide on the bottom, 1-1/2 and 2 to 1 slopes, 8 meters deep, 200-some miles in length. The Russians have Kuibyshev on line -- that's 2.2 million kW, they are transmitting 400,000 volts, 3-phase, 60-cycle AC, 600 miles into Moscow. Stalino will be 2.3 million. Bratsk on the Angara River out of Lake Baikal will be 3.7 million kW, and Krasnyarsk on the Yenesei will be 4 million kW. The Russians have a 68-mile high tension DC line. The Swedes have a 26-mile line, and the Russians and the Swedes alike, along with others, realize today that if you are going to hook up the power resources of a continent, you can only do it one way. Great Britain and France have started work on the submarine power exchange between Britain and France, There is a one-hour time difference between time in Great Britain and that in France. There are 2-1/2 hours' difference in load time. The cycle difference is between 50 and 60, so they are going to convert it to a million volts DC and reconvert it to whatever frequency in either direction is required. North and South Island in New Zealand are out to do the same thing. The Russians have announced that they are going to build two 4,000-mile power grids of a million volts DC. Technocracy designed its million volts DC continental power transmission system in 1924. That's a long time ago. Talk about being without honor in your own country. The sad part of it is that it takes the Russians now to grab it when our own countrymen could have done it years ago.

You've got locks on the Welland Canal, yes. Those locks -- 8 sets of them are larger than the locks on Panama, but it takes 11 hours to go through. They are a bottleneck, and if you expect to bring in 40 to 50 million tons of iron ore from abroad, you can't do it on that kind of a locking system. It's simply impossible, and there's only one way to do it. There's a hydraulic lock system -- not water lock -- where you do the 326 feet difference in Lake Erie and Lake Ontario in 15 minutes; in other words, you raise one 60,000 tons and lower another 60,000 tons simultaneously, but it would only take 15 minutes to make the difference. If you think no such thing is in existence, there is

a small one on the Trent Canal in Canada near Peterborough; there's a big one in Europe -- German -- that can lift a battleship. This is still an advanced design over both of those. We in Technocracy have been advocating things like this for years, trying to point out that changing the legislation or changing the ownership, say, for instance, of all the Ford cars or all the Chevrolet cars tonight, or all automobiles tonight, wouldn't alter the load factor of transportation one iota; but if you alter the load factor nationally, you will axiomatically dispense with the proprietary rights of ownership.

Technocracy is a technological socialization -- not a Marxian socialization, and it is so much damn tougher than communism and socialism that it's laughable. We in Technocracy consider communism or socialism sufficiently radical for the old world, but it is so darn far to the right for this continent, we think it's bourgeois, to put it mildly. In other words, when you start to put in a technological design on this continent, you'll have to liquidate the proprietary rights regardless of whether they are financiers or a farmer out here or someone who's got a special claim.

Does that give you any idea? You want to ask a question orally, any of you?

INAUDIBLE QUESTION.

Youngstown? There's just a couple down there. We never did have much of an organization in there, but now that Youngstown is going down, probably we'll come back in Youngstown.

ANOTHER INAUDIBLE QUESTION.

No, I haven't been in Youngstown in years. Maybe I should go back there. Of course, the steel plants you have, both in Youngstown and along the lakes here, they are antiques -- they are obsolescent. I mean, you are still trying to make steel with blast furnaces, open hearths, soaking pits -- well, it will make steel, yes, but there's another way of doing it which would be continuous. Then you can handle, instead of Bessemer grade or hematite grade iron ore, you can handle a titaniferous complex ore with nickel, chrome, and manganese in it. It wouldn't operate in a blast furnace -- your blast furnace would freeze. This is a

high frequency hydrogen, only it's a continuous process, but when you put that kind in, you don't have anybody in the steel plant. Wouldn't that be nice? Just nobody. A couple of men in the gallery of control with all wired television controls. Howard Hughes has just completed and put into operation one of the sweetest plants out in California -- automatic production of airplane parts. You put the tape in one end, and 1,200 feet down the line, the parts come out. You have no men. Go take a look at the photographs of the Manasment Tube Plant in Sault Ste Marie built by the Germans, and on their own admission six times better than anything they ever built in Europe or Germany. They had to, because the labor costs and the material costs here were higher here than they were in anyplace in the world. All you have are men in the control room, and the Canadian Government thought they were going to get a big employment out of a \$70 million brand new plant, and they don't get enough for a baseball team!

Well, this is funny. This country isn't going back, ladies and gentlemen, it's going on, and it's going on to something quite different; and it all depends on you, the collective public of this country, whether you go into this new era orderly, with some stability, or whether you get dragged kicking and screaming into that new era, but you'll go one way or the other. It is up to you, the public, to make your choice how the devil you select to go there. If you are going to count noses of political parties, God help you. You are in for trouble. Thank you.

TELECONFERENCE  
WEST COAST TO CHQ  
[No specified date]  
1958

THE UNEMPLOYMENT IS CERTAINLY INCREASING IN THIS PART OF THE COUNTRY. HOW IS IT AROUND THE REST OF THE COUNTRY?

It's the same thing in other larger -- you are cutting back on plane production, you've abandoned a number of missiles, and you're cutting back on their production. Lumber, mining -- they're cut down. The American copper industry, you know, is up against it. When copper was 44 cents, they were working overtime, but now Union Miniere Katanga has just shoved the price down to around 22 cents. That's half the price it was at its peak. So, Butte, Bisbee, and other mining centers are practically dead. Calumet and Hecla in Michigan -- they're out.

You have the same thing in the airplane industry in Long Island. There are thousands being laid off there. Curtiss-Wright has been laying off 400 a week since the first of May. Does that give you some idea?

ARE THERE ANY TOTALS YET THAT AMOUNT TO ANYTHING?

No, you don't get correct totals in this country -- the most fictitious reporting of any country on the globe. After all, all those that pay withholding tax, social security, and unemployment compensation -- that goes in every month -- you have accurate figures, but are those ever published? They are not. The authorities publish fictitious statements of total employment and unemployment. Do you understand what I mean?

AMEN. WELL, WHAT ABOUT THE LEGAL DEBT LIMIT? IS THERE A CHANCE THAT THEY WILL RAISE IT AND KEEP ON SPENDING MONEY?

Oh, that could be. That would only take a little legislative move, and now that you've got this hysteria, you know, that the reason why we have fallen behind the Russians is because we didn't spend enough money; in other words, to put it mildly, it's very sad and disheartening to find out that Russian rubles are more effective than American dollars. What? Is somebody laughing out there? OH, YES, CAN YOU HEAR THAT? Yes. Well, of course, if you spend more money, you're just going to have more grief. [More laughter] Are you acquainted out there -- did you hear Dr. Uri's

proposal [ANYONE HEAR THAT? I GUESS NOT] on the air the other night, Dr. Uri, the Nobel Prize winner, proposes that we place a 30% tax on all automobiles and other luxuries for the next ten years in order that we might catch up with the Russians. Did anybody hear that broadcast? [WAS HE SERIOUS?] Why, certainly. Was he serious? Do you think he was being humorous? After all, that would really be funny, wouldn't it? If the American bourgeoisie has to pay all that money in taxes, they're not even going to catch up with themselves. I'm trying to find out if anybody heard that broadcast. [APPARENTLY NOT, CHIEF.] Oh, you mean out there in California, you don't hear things? [NOT EVERYTHING, THAT'S SURE] Only when Ikie plays golf. What's the latest on Nixon out there? [HE'S SEEN AWFULLY QUIET LATELY; WE HAVEN'T HEARD MUCH ABOUT HIM] Well, he spoke up in San Francisco the other night. He's all for spending more money. He contradicted Dulles and Eisenhower. He's got to make a play for something. [THE RUSSIANS ARE HELPING HIM OUT THEN] Not intentionally.

#### WHAT IS THE REAL SIGNIFICANCE BEHIND SPUTNIK?

Sputnik -- the name and the articles were published in June in Russia. Have you seen the photographs of the Russian magazine. [NO] You mean they don't publish that in California either? [THERE'S ONE TO EACH NEWSSTAND, I THINK; YOU ARE LUCKY IF YOU CAN GET IT] No, no, but this was published by American press [OH, THE AMERICAN PRESS?] They have just discovered this; in other words, our intelligence has had this all the time. After all, the Russians fired their intercontinental missile 8 times. Have you got that out there? They fired it in May and June. Naturally, after having sent something that distance, they would be able to launch a Sputnik almost any time they felt like it. They claim that they have a range in excess of 15,000 miles, and it lands precisely on target. Our experts here now estimate the thrust that put Sputnik up there is between 250,000 and 300,000 pounds thrust. Has there been any such thing said out in California? [NOT PUBLICLY, I'.BELIEVE. IT HASN'T BEEN WIDESPREAD] Well, does that give you any information. What I am trying to point out is that the material has been published months ago in Russia and was available here, except, of course, our so-called "unintelligence" department misinforms the people of the United States. [IN OTHER WORDS, THIS WAS ON PURPOSE] Why, certainly. What else do you want to ask on that subject?

WELL, ONE THING -- WHY DID THEY PICK THE MOST DIFFICULT ORBIT TO THROW THIS SATELLITE INTO?

Well, the United States, you know, had announced that it was going to throw one into the orbit along the equator so as to take advantage of the rotation of the earth, which would be anywhere from 700 miles an hour on up assist. Well, the Russians just wanted to show that they could do it the other way. If they did it this way, they would really do something, wouldn't they? You see, the United States had already put in a bid for the equatorial orbit. Am I making myself clear? [YES] Well, the Russians couldn't do that then; they'd have to pick another orbit, which they did. What else is on?

WELL, THE TECHNOLOGY BEHIND THIS THING, THE RUSSIANS' GENERAL ADVANCE IN SCIENCE, THE IMPACT HAS NOT BEEN FELT HERE YET, I DON'T BELIEVE, AND YET IT SEEMS TO BE CONFUSING A LOT OF PEOPLE AND CAUSING A LOT OF HYSTERIA IN GENERAL.

The Russians have been advancing for some years, but our propaganda here has been continually denying it. You remember that the Russians stole the atomic bomb from us and the H-bomb from us, and they stole the airplane design from the DC-3 they shot down and they captured. Do you remember that? [YES] In other words, Russia couldn't design anything, and it was going to take another twenty years for them to accomplish this. That has been the propaganda. And anything on rockets and missiles, the Russians didn't know anything about it. That was from the German scientists that they captured at [Penamunda?], so the poor Russians are in a pretty sad way. Now, of course, they have the only jet line airplane on scheduled flights, and they have Sputnik, intercontinental ballistic missiles, and they have a whole slew of other things. They have the world's largest hydroelectric station under construction. They also propose to build two 4,000 mile, one million volt DC transmission grid systems. How do you like that? They have announced it. [DID THEY SAY WHERE?] Why, naturally, in Russia. [LAUGHTER. THEY WEREN'T ANY MORE SPECIFIC THAN THAT, IS THAT IT?] Well, that's about the only place you could build two 4,000-mile transmission grids. That's a million volts DC. Did we ever hear of that before? [SOMEPLACE] Yes, that's part of our continental transmission system. [WELL, THE STATE DEPARTMENT HASN'T CONTACTED YOU YET TO

FIND OUT WHY YOU GAVE IT TO THEM, HUH?] Well, I don't know. It's a good thing Stalin is dead or I'd be scared to death I'd get the Stalin prize for that. [LAUGHTER] We don't care who steals it, but, after all, we have been advocating that since 1924. Finally the chickens come home to roost someplace.

WELL, HOW MUCH OF THIS DEAD CROW WITH RUSSIAN TARTAR SAUCE. ARE WE GOING TO HAVE TO EAT YET?

Not dead crow -- we're going to have to eat dead elephant -- mit borscht.

ARE THERE ANY PARTICULAR REASONS OTHER THAN PRICE SYSTEM REASONS THAT WE HAVE BEEN UNABLE TO LAUNCH A SATELLITE? Do you mean why we're in the position of our lag of scientific developments? GENERALLY SPEAKING, YES.

Yes, there is a very definite reason. In the last 60 years in United States, it has been undemocratic to have brains with any vision. If any individual attempted it, he was an egghead, a square, or a queer. He was ostracized in his community by his associates, his friends, and relatives, and the only place he could get recognition -- except, of course, he developed an Eskimo pie, but if it was anything involving the design of entirety or long-range perspective, he had to go abroad to get recognition. In the last 14 years, we have been busy graduating 45 million Americans into the bourgeoisie, and we've moved that many into suburbia. Now, you can't take and offer prizes or scholarships and pay professors and teachers more and expect this bourgeois nation to catch up to any nation. Am I making this clear? Well, now that's the major trouble. In order to revamp our education system in United States, all of you know well enough that in each township and others, your education schools are under the control of the Board of Education. Your Board of Education is dominated chiefly by the local chiselers. Well, what kind of educational system do you suppose they are going to recommend? Something which is conducive to more chiseling or more suckers, one or the other. Do you want to run schools seven days a week every day in the year? Just propose it to your friends out there. Oh, no, they don't want to run anything like that. They don't want their children going to school every day in the year. But you've got to do a serious job if you are going to educate scientists, technologists, and engineers to really achieve

something and to catch up with somebody who has had that much head start. In other words, the Russians aren't ahead of us according to our propaganda, they just got there first. You understand that? [WE GOT IT] The only trouble in this race is that there is really no second position. There's first position and a series of zeros.

Frankly, we have to face a future in which the whole policy of containment and encirclement, advocated by our State Department -- the powers-that-be, and originated principally by Kennan, we'll have to scrap that, along with the Truman Doctrine, the Eisenhower Doctrine, and all the other doctrines. We'll have to pull in our bases because they are all vulnerable -- every one of them. We might as well pull in our B-36s, B-47s, and B-52s and give them to the American Legion Posts as parking monuments, because if you have a guided missile with that range and accuracy coming in at 10,000 miles terminal velocity -- 10,000 miles an hour -- your DEW Line or your radar aren't much good to you. You've only got a few moments. And who is this you are going to fight and what are you going to fight for; in other words, this country has to make up its mind and it's going to be difficult, because it has never made any fundamental decisions in years. That is what we are facing. Can American private enterprise develop scientists, technologists, and engineers who are really not a part of private enterprise and do not share in the proprietary rewards. The whole social system is geared to the proprietary interests and rights and awards of private enterprise. We cannot make that shift overnight by voting a 100% greater budget or a 50% greater budget. Is that coming through clear? [RIGHT ON THE NOSE]

Well, Technocracy, I think, has been pointing this out for years. We've been called visionaries -- it wouldn't happen in our time. Well, brother, it's here. Now, we've got to get off the dime, because the Russians are liable to pull a couple of more things, and our name will be mud -- not necessarily here but around the rest of the world. What are we going to do about it? It's time that everybody realizes it, and it's time that you went after every individual to really do something about it. Quit sitting on your pants. Do you think you had better ask me another one after that? [WELL, I DON'T KNOW] Why not?

WELL, IT'S THE SAME OLD STORY LIKE WE'VE BEEN SAYING FOR

YEARS, THAT TECHNOCRACY HAS THE ONLY ANSWER. IS THAT WHAT YOU ARE DRIVING AT?

Well, do you know of any others? [THAT'S THE POINT NOW] I mean, we've proposed all these things years ago, and here we are still John the Baptist crying in the wilderness in this country, and the Russians are grabbing our stuff to make first. We Americans, you know, it's going to end up that we'll have to go abroad to get relief. The United States has spent enough in Europe and the world since the war to have rebuilt this continent. Well, it's time we did something at home. You don't expect a golf player to get anywhere, do you?

WELL, CHIEF, WITH THAT, ONE ITEM THAT'S OF A LOT OF INSIGNIFICANCE COMPARATIVELY, WHAT ABOUT SYRIA AND TURKEY?

That's just a little incident. They're trying to stir it up. You can't blame the Russians for doing it, but we were trying to bolster the Eisenhower Doctrine, and if we could have started trouble, we would have done so. In other words, a war would help out right now, would it not? [I GUESS SO] We not only need a shot in the arm -- we need a shot in all four arms. What other question have you got?

ONE HERE SOMEONE JUST ASKED ME. IKE JUST APPOINTED A NEW PROPAGANDA MINISTER.

What's his name?

LARSON?

Oh, you mean, Larson was moved from the United States Information into the White House?

ARE WE GOING TO GET MORE OF THE SAME OR WORSE?

Oh, it's the same kind of thing, but you will notice that all the old upper echelon are leaving the ship -- Humphrey, Wilson -- Dulles will have to go next, so you'll only have secondraters from now on, and Eisenhower is a lame duck, you know. He can't be reelected, so the big boys are going to get from under while the going is good.

WHAT ABOUT MAD AVENUE AND THEIR OPEN SKIES PROGRAM? HAVE THEY GOT SOMETHING ELSE TO TOP THAT?

No, but your open skies program was delirious to begin with, Eisenhower made the mistake when Jackson of the Mad Avenue gang proposed it. It was a smart thing to prevent any acceptance by the Russians of anything.

WHAT IS PREVENTING US FROM HAVING A BILATERAL AGREEMENT WITH THE RUSSIANS RIGHT NOW?

You couldn't have a bilaterial agreement through John Foster Dulles with anybody. The only real hope for the situation is that United States and U.S.S.R. reach an agreement, and they can have peace and order anyplace on the globe. Nobody could start anything if you had such a combination as that. After all, the Russians would be the greatest military power, and we would have the greatest, would I say, machines for the propagation of truth? We could do the advertising. We could sell the soap. What else can you think of?

THIS BUSINESS OF PUTTING A SCIENTIST IN THE WHITE HOUSE ALONG WITH THE REST OF THE CABINET MEMBERS [What?] A SCIENTIST-POLITICIAN IN THE CABINET? HAVE YOU HEARD THAT?

Oh, yes, we've heard that, but if any scientist gets that far, he's generally decrepit or senile. That's not going to have any effect that's just a gesture.

SOME PEOPLE ARE ALSO CONFUSING RUSSIA'S COMMUNISM WITH HER TECHNOLOGICAL ADVANCE. HAS HER COMMUNISM DONE ANYTHING FOR HER AT ALL OR HAS IT ALL BEEN TECHNOLOGY?

No, Russia wouldn't be here today if it hadn't been for their technology; in other words, it wasn't Karl Marx that defeated European fascism on the battlefields of Russia -- it was technology and engineering that did it. Is that clear to you?

WHAT ROLE DID COMMUNISM ACTUALLY PLAY, IF ANY?

What role does democracy play in United States? [THAT'S A GOOD QUESTION] That's the answer to that. [THAT'S A GOOO ANSWER] It doesn't mean anything here to the mass of people, and the same

is true of the other that it doesn't mean anything much in Russia. It doesn't run a car or a refrigerator or build a house, does it?

IN OTHER WORDS, IT IS THE AGE-OLD PHILOSOPHIES AGAINST TODAY'S SCIENTIFIC EFFORT.

That's correct, yes; in fact, it has been a stumbling block in the way of the Russians because they really didn't get started until the 30s getting over their doctrinal squabbles, and they're still at it.

MRS. ROOSEVELT BROUGHT BACK A LITTLE INFORMATION FROM RUSSIA. DO YOU THINK SHE IS TRYING TO COVER UP OR IS SHE GIVING ALL SHE REALLY KNOWS?

Well, Mrs. Roosevelt is a very charming, elderly lady; and, of course, they gave her a painting and a very beautiful reception over there, I doubt whether her observations are of much importance. There are several reports by engineers and scientists from United States who have been over there that are really informative. You won't find them in the public press.

WHAT DID THEY HAVE TO SAY GENERALLY?

Namely, the condition of the Russian educational system, the Russian scientific and technical developments -- they're slightly ahead of us in many things. They are still behind us in a lot of consumer goods and other stuff, and the Russians admit that their efficiency is not equal to ours in our highest cases and certain things like in Sweden. They're just under the Swedes, but then they are coming up. What do you think?

WE HAVE ANOTHER QUESTION HERE. THE SCIENTISTS IN THIS COUNTRY -- DO YOU THINK THEY GENERALLY WILL RECEIVE MORE RECOGNITION FROM NOW ON?

Oh, I doubt it. I doubt it very much, because the policy of American business is that science is to save us -- produce the gadgets to make more profits with, but scientists, technologists, and engineers should know their place. They shouldn't indulge in any deliberations on policy whatsoever. That should be left to the charming collection of Boards of Directors. So, there's not

going to be much recognition. You're going to dress up the facade with scholarships and so-called appointments, but remember there are more engineers in corporate structures in Europe than there are in American business. Is that clear? European companies have more engineers on their boards than they have in United States.

SOME OF THE MEMBERS ARE WONDERING NOW HOW THINGS ARE PROGRESSING AT THE FARM THERE AT HEADQUARTERS.

Our office building is practically finished except for acoustic tiles and some lighting fixtures, and we are trying to get organized here on the revision and extension of the housing quarters. All we need is money.

WELL, WE'LL SEE WHAT WE CAN DO ABOUT IT, CHIEF. All right.

HOW DID THE McCASLIN TOUR COME OUT. HAVE YOU ANY DEFINITE REPORTS ON THAT YET?

It came out very well, He was well received; he was on the air twice in Edmonton, Alberta, and spoke at different colleges, as well as public meetings and membership meetings. Very well received. Changes in attitude of the public are visible all over. [WE'RE BEGINNING TO NOTICE THAT HERE] Anything else on your mind. [I GUESS THERE ARE NO MORE QUESTIONS. GENERALLY SPEAKING, THE PEP TALK IS WHAT WE NEED] Did these answers of mine come through all right? APPLAUSE. From that applause, I gather that they did. WE HEARD EVERY WORD OF IT. Give my regards to everyone and a salute to you all. OK, CHIEF, HAPPY LANDINGS. The same to you.

TELECONFERENCE  
CHQ AND VANCOUVER  
AUGUST 30, 1958

WE HAVE A VERY GOOD GATHERING HERE TONIGHT.

Where are they all from?

THERE'S MR. MCGRAW FROM KIMBERLEY -- VICTORIA, ,  
SEATTLE, EVERETT, WESTMINSTER, AND PROBABLY ONE OR TWO  
OTHERS I HAVE OVERLOOKED.

Well, you've got quite an aggregation then. What have you  
got -- a full house?

NOT QUITE, BUT IT'S A GOOD TURNOUT. WE WOULD LIKE TO ASK HOW  
THINGS ARE WITH YOU PERSONALLY, CHIEF.

Personally? Do you mean a matter of health or disposition?  
BOTH. Well, my health is excellent. Nothing wrong with me either  
that a few thousand dollars wouldn't cure. Does that settle that?  
As for my disposition, well, you might put it this way. I'll  
refer you to my definition of a crazy person as being a resident  
of the North American Continent that's exactly like the rest of  
us, only more so. So, that's all that's wrong with me. It's an  
impatient disposition. I don't know what else more I could say  
about my own personal situation. By the way, we have quite a  
crowd down here. They're here from Hamilton, Detroit, Cleveland,  
Kent, Jersey, and other points. Did I miss any? IT SOUNDS LIKE  
YOU HAD A BUSY DAY THERE. We have. We have quite a construction  
crew working here.

WE WONDER IF YOU WOULD EVALUATE THE ECONOMIC TRENDS ON THE  
CONTINENT AS THEY ARE SHAPING UP AT THE PRESENT TIME?

Well, the present situation, of course -- you see what has  
happened is that this administration in United States has thrown  
billions into the breach. In July over \$3 billion was thrown into  
construction, That was in private housing, roads, schools, and  
public buildings. Industrial building, that is, plant expansion,  
on the other hand, fell practically a billion dollars. The way  
it's done is rather neat. Under your new FHA and other mortgaging  
regulations, the builder can get a cash mortgage up to 97-1/2%.  
That includes 7% profit -- his building profit -- so he only has  
to put up 2-1/2% in' order to build houses for the dearly beloved

public. On that basis, that's really a shot in the arm.

Then we've thrown billions into missiles, submarines, aircraft carriers, and we're lending billions abroad. We're subsidizing the oil industry with a 27-1/2% depreciation allowance, plus uncollected taxes, IRAMCO, for instance, is \$280 million a year in taxes we should receive here, but, according to the ruling, they can deduct that from their United States taxes, having paid that abroad. It's very neat, so that has resulted in temporary stimulation, and that's what's giving BUSINESS WEEK, THE WALL STREET JOURNAL, and THE FINANCIAL POST of Canada these indications of optimism that there has been some slight recovery. The other side of the picture, in 1959, \$86 billion of United States Government securities will mature, and the long-term bond market is pretty sick, because the dollar is going down at 3-1/2% per annum. Even if the securities were a 7% bond issue, it wouldn't be enough, so that U.S. faces a problem of refunding \$86 billion but cannot do it with long-term issues and therefore must go into the short-term money market. Well, the short-term money market has risen from a fraction of 1% to 2% on your 90-day bills. Your public cannot subscribe to 90-day bills or 120-day bills -- that can only be done by the banks, so that forces the United States Government to borrow from the banks alone, which is beautiful with the increased interest, and borrowing from the banks under this situation is equivalent to direct monetization -- in other words, the printing of money. This will add fire to the general inflationary trend. You may be paid slightly more in wages, but the wages will be less and less in purchasing value. The fact that the President of United States has just signed the bill to increase social security 7% but also increasing the unemployment compensation payment from both the employer and the wage earner, and that is a direct withdrawal from purchasing power. So, the future isn't quite as rosy as all the periodicals and the powers that be would like to have us believe. Does that answer some of your questions? IT CERTAINLY DOES. Canada, of course, is in the same position, but it is not the same order of magnitude, I might add.

WHAT ARE SOME OF THE MOST SIGNIFICANT DEVELOPMENTS ON THE INTERNATIONAL SCENE AT THE PRESENT TIME?

Well, when you say significant developments on the international, what in particular are you referring to?

WELL, WE HAD CHANGES IN THE POWER OR DEVELOPMENT IN THE VARIOUS AREAS, INCREASING THEIR INFLUENCE YOU MIGHT SAY -- OTHERS DECREASING.

What part of the world are you speaking of?

CHINA, THE MIDDLE EAST, OR RUSSIA.

You've got changes occurring all over. Great Britain, for the first time in decades, has over 30 million tons of coal above ground in which it has no market. West Germany has almost 10 million tons of coal above ground in the Ruhr and several millions tons of coke above ground for which it did have a market but does not have; in other words, unemployment is increasing in Britain, West Germany, Holland, Belgium, Italy, Denmark, and Finland. France is the only one that has a temporary boom. British steel is not operating at full capacity. Your automobiles, of course, this year will do one million and over passenger cars. That does not include trucks or other vehicles. They are hoping that the automobile export will kind of hold them, but for the first time in British history, the volume of manufactured cotton goods entering Great Britain is greater than the volume of British manufactured cotton goods leaving Britain.

As far as China is concerned, China's steel production this year will be 7.7 million tons or greater. China is building six steel plants, completely integrated, with 2,400-ton blast furnaces, 500-ton open hearths, coke ovens, benzol recovery, heavy plate and rail mills. One of them is at Pautou on the northernmost curve of the Ho Huang Ho, that's the Yellow River, and one of the others is at Wuhan -- that's about 600-some miles in from the sea on the Yangtze -- that gets its ore from an open pit 30 miles south of Wuhan. That's just giving you an idea.

Railroads, power -- the Russians, of course, are coming in with terrific power developments; the Chinese are attempting to increase and catch up to them, but it will take a while. Chinese steel industry is increasing at better than 18% a year. Does that touch upon some of the things you wanted to know? YES, IT DOES. Well, now, if you want me to elucidate on any of that, be specific.

THIS, IN TURN, WILL HAVE A BEARING ON OUR ECONOMIC CONDITIONS ON THIS CONTINENT, WILL IT NOT?

Yes, the new plants of China, India, Russia, and others that are coming in in the next two years are very interesting in the effect it is going to have on world trade. For instance, we have a Technocrat at the present moment who is in the Philippines constructing a large cement plant. He's been out there before. He finished up one in Indonesia. The one he is working on at the present time is the sixth cement plant in the Philippines since the war. That will give you an idea of the way the rest of the world is on the jump.

Russian steel production is rising. China this year will do 1,300,000,000 bushels of wheat, almost as much as United States. China has never been known as being a wheat exporter, but she has finally arrived. In case these people are interested, just bear in mind that the 620 million population of China have 80 million males of conscript age from 18 to 28.

WHAT ARE THE PROSPECTS FOR A WAR BEING CONTRIVED?

We would love a war or the threat of war to, you might say, give us the war jitters, so that we would have some hopes of recovery. They'd do anything to get into it, but the only trouble is that we haven't the allies. We'll fight if Formosa is attacked, but on the other hand, Big Quemoy and Little Quemoy and Matsu, all we've been doing is helping Chiang Kai-shek. We gave Chiang Kai-shek about 450 F-86 Saber Jets and 100 bombers and a flock of antique destroyers -- well what they've been doing is maintaining a shipping blockade of the Chinese coast, more especially the Amoy and Foochow ports, and the Red Chinese are out to break that blockade. They're not out to invade Formosa. They do not have to, because the average age of Chiang Kai-shek's Formosan army is 37. All they have to do is wait, and it will drop like overripe fruit from the vines.

We tried to create a situation in the Middle East, but it wouldn't boil. We sent over Murphy. Well, Murphy is a graduate of Marquette University. Up there in Canada, I don't suppose you have any realization of what Marquette University is, have you? IT'S A JESUIT UNIVERSITY. Oh, it is? Well, you're correct. We sent him over to Lebanon. Bear in mind that in Lebanon, about 40-

some percent of the population are Maronite Roman Catholics -- the others are Moslem, and that Camille Chamoun, the present President of Lebanon, is a Roman Catholic, and the deal that has been made to put in the new president, General Chebab, he is also a Maronite Roman Catholic; so, actually, the 15,000 U.S. troops that were landed in Lebanon were there to sustain the catholic minority of Lebanon. Rather interesting, isn't it?

YES. ARE THERE ANY TRENDS OR CHARACTERISTICS IN THE AMERICAN POLITICAL SCENE THAT ARE LIKELY TO RESULT FROM THE APPROACHING ELECTION ?

This election this fall is not a presidential election, and it will probably result in a little shift of more political power to the Democrats, but what's the difference? After all, there is no real opposition in our Congress, we have no official opposition. They haven't anything to oppose each other on. They only have a difference of labels. Is that what you mean?

HOW IS THE EXPANSION PROGRAM PROGRESSING AT CHQ?

We are walking right along. We have a whole gang here that are putting acoustic tile on the ceilings, putting in steel doors, and other things. Of course, further additions and contributions would be gladly received. If anybody wishes to remember us in their will, we'll even light candles for them.

HOW ARE CONDITIONS AFFECTING THE ORGANIZATION?

That's an interesting thing. Your MAs are showing up from here, there and all over, although the organization has taken no particular special measures to insure this. It's come about by awakening interest on the part of the public, because the hoped-for security that they thought was in the system has somehow failed them, and they are very perturbed, especially those with the better jobs who really have succeeded, and they've succeeded to what? More insecurity. That's what is driving them, but it isn't tough enough yet.

WHAT SHOULD BE OUR IMMEDIATE OBJECTIVES?

More members, more painted cars; in other words, your public that comes in and your reports are showing that you have a high

percentage of nonmembers attending your meetings -- put the bee on them. After all, it's just like the Evangelical meetings, they might just as well sign up now as wait for resurrection, because if they wait that long, they're no damn good to themselves or no damn good to us. They might just as well come to Jesus now. What are you laughing about? VERY WELL SAID. It is? Well, I feel in a good humor. How's the audience taking it? I CAN'T SEE THEM FROM HERE, BUT I CAN'T HEAR A SOUND. You can't hear a sound? Well, they ought to get some reaction out of it. What else have you got on your mind? What are you people out in British Columbia doing with this nice sellout to Wintergren? EVERYBODY HAS BEEN TAKING IT SO FAR. Yes, that big acreage that he's got up there and all the proposed dams on the Parsnip and the Peace -- it's a beautiful deal. My old friend that had the argument with me over in Kelowna, he's now your Premier, isn't he? THAT'S CORRECT. Yeah, that hardware boy. YES, THAT'S OUR BOY, He's your boy -- well, you're welcome to him. You have them in Canada just as we have them down here. An international boundary line doesn't enrich the odor any in the right direction. Well, you've had a lot of other things happening up there.

YES, IT HAS BEEN A VERY UNSETTLED SUMMER.

You've had a lot of drought, haven't you? You've had one of the driest years on record, that is, west of the Continental Divide. East -- outside of a little drought condition in Alberta and Saskatchewan -- it's generally been an excellent crop condition, hasn't it? YES. Well, we have a terrific one across United States. U.S. will come in with 1.4 billion of wheat, 3.5 billion of corn, and soybeans will hit an all-time record in excess of 500 million, so with the \$7 billion of farm products we already have on government loan storage, we'll really have an abundance. We can go out and dump the manna around the world and charge it to the American taxpayer. The Canadians can, of course, come in on the ratrace. That's about it, isn't it? YES, IT IS.

I HAVE A NOTE THAT HAS JUST BEEN HANDED TO ME. IT SAYS THE AUDIENCE LOOKS AS IF IT IS THOROUGHLY ENJOYING THE INTERVIEW.

Well, will you give them my regards and my compliments to the entire audience. My only regret is that I am not there in person. I HOPE THAT CAN BE ARRANGED. I think it could be

TELECON, VANCOUVER AND CHQ

8-30-58

arranged. You people go to work on it.

WOULD YOU EXTEND OUR GREETINGS TO ALL OF THE MEMBERS AT CHQ? I'll be very glad to do that. THANK YOU VERY MUCH. IT'S BEEN SWELL TO HEAR FROM YOU, CHIEF. Glad to have been of service.

**THE WORDS AND WISDOM OF  
HOWARD SCOTT**

Volume 3

Technocracy Inc.

**HOWARD SCOTT** (April 1, 1880-January 1, 1970)

Mr. Scott is best known for founding the Technical Alliance and also Technocracy Inc. both of which he directed. Scott was an American industrial engineer noted for his efforts in the application of the thermodynamics and vector analysis of American mathematical physicist Willard Gibbs to the realm of economic and other social phenomenon. His 1932 essay on the subject of the energetic regulation of economy was *Thermodynamic Interpretation of Social Phenomena*.

TELECONFERENCE  
CHQ AND HAMILTON, ONTARIO  
OCTOBER 28, 1958

SOMEBODY WANTS TO KNOW WHAT KENNEDY'S CHANCES ARE FOR THE NEXT AMERICAN PRESIDENT.

Well, the Democratic bunch are trying to set up Kennedy, but the Republicans are also trying to promote General Grunther. Now, if they got either one in as Vice President -- or both of them nominated as Vice President -- no matter which party won, then they would have one in office, wouldn't they? Well, they're grooming Kennedy -- this union racket stuff was built just for him, you see, to give him publicity. They're going to try it in 1960, to see if they can get a Roman Catholic on the ticket in 1960. WHAT DID YOU SAY ABOUT GUNTHER? General Grunther -- he was Chief of Planning for Eisenhower. He's a papal nobility, too. YOU CAN'T WIN THEN. Well, if they get each one nominated, no matter which party gets in, they'll win. Is that clear?

SOMEONE HAS A QUESTION ON RADIATION. THERE ARE SO MANY PROS AND CONS ABOUT THE EFFECT OF ATOMIC RADIATION FALLOUT, IS IT ANY REAL THREAT OR ISN'T IT?

It is, but the whole question is how much of a dispersal is in a given area. For instance, on actual test, there was a dentist x-ray machine in San Francisco was giving out enough radiation which inside of a year would be more than the human being could take. That isn't an atomic bomb. That's just an x-ray machine -- a dental x-ray machine.

DO YOU HAPPEN TO KNOW ANYTHING ON THE BACKGROUND OF THIS [AL BANKS] WHO IS HEAD OF OUR SEAFARER'S UNION? Up in Canada. YES. No, I do not. HE WAS SOME KIND OF AN AMERICAN GANGSTER IN L.A. OR SOMEPLACE DOWN THERE. That could very well be. They usually ship them around in the international unions. I mean, he's not on a par with Bridges or anybody like that. NO. SOMEONE HAD ASKED IF YOU KNEW ANYTHING ABOUT HIM. HE SEEMS TO HAVE A TERRIFIC EFFECT UP HERE IN WIELDING HIS POWER. THERE'S A LOT OF MONEY BEHIND HIM AND WE WONDERED .... Does anybody know what his religion is. WELL, I DON'T KNOW THAT. Where's his head office, Montreal? MONTREAL OR OTTAWA -- DOWN THAT WAY SOMEWHERE. Well, then he's probably playing with a powerful clique either in Quebec or Ontario finance, because they are generally hooked

in together, you know, same as Hoffa is here in the Teamsters. Your big corporations have contracts with the Teamsters Union. Hoffa has lived up to them, and therefore he has considerable support. Even if all the charges for gangsterism against him were correct, he'd still have that support. Am I making myself clear?

WE'RE GETTING A SERIES OF ARTICLES IN THE PAPER BY ALDOUS HUXLEY. HE WRITES ABOUT OVERPOPULATION AND POOR DISTRIBUTION. HAS HE NEVER HEARD OF HOWARD SCOTT?

His brother, the scientist, Dr. Julien Huxley, actually spent four days with me once, but I've never had any contact with the esoteric writer, Aldous Huxley. Aldous, you know, is somewhat of a mystic. He's out there in Peach Blossom, California, in the desert, and he goes around with a divining rod looking for water. He's quite a departure from his brother Julien. A good writer and all that. THERE'S AN ARTICLE STARTING IN THE HAMILTON SPECTATOR TONIGHT IN WHICH HE REFERS TO THE EVILS OF TECHNOLOGY -- IT DOESN'T LOOK TOO GOOD. Well, of course, anything that was technological and upset the status quo in which he was no longer an intellectual writer would be evil. [slowdown in tape -- cannot decipher] setup of a writer of that kind. On the other hand, his brother Julien is a bird of a different color. He's an actual scientist.

WHAT ARE THE LATEST POPULATION FIGURES IN THE U.S.?

175 million, practically, and growing. Well, but population is increasing all over the globe. South America has the highest rate of increase. The Japanese, of course, have lowered their birthrate. That's one of the biggest changes that's happened, and their abortions equal their live births now. India and China, if they can stop their population growth or lower it -- they will save themselves a lot of trouble. On the other hand, Britain, Holland, Belgium, West Germany, France, and Italy are all continuing to expand; in other words, Britain's problems are population growth -- she's still facing those regardless of any change in political government. Same way with West Germany.

I SEE THEY CLAIM THE NEW POPE IS THE TYPE THAT WILL CONCENTRATE ON SPIRITUAL THINGS -- NOT POLITICAL.

The new pope will concentrate on spiritual matters? Well, that probably would be the better part of valor, because the world is changing and the old has to make way for the new. The spheres of power which the Vatican once had -- a lot of them it no longer has, and it better attend to the spiritual side. It will be much more efficacious on that field of endeavor than it will in many of the material fields.

DO YOU THINK THERE WAS ANY SIGNIFICANCE IN THEIR PICKING A 76-YEAR-OLD MAN?

That was a compromise candidate -- 76 years old, from Venice. He wasn't the most outstanding or competent Italian in the papal heirarchy, but they could compromise on him. Probably he was a middle-of-the-roader, put it that way. The cardinal from Milano and the foreign secretariat is a much more competent person from his record than this one from Venice.

HOW MANY PEOPLE IN THE U.S.A. ARE DIRECTLY AND INDIRECTLY EMPLOYED IN THE NATIONAL DEFENSE PROGRAM. I THINK YOU ANSWERED THAT IN YOUR TALK IN MARCH.

Yes, I did. It runs into quite a figure -- quite a few million. If you mean the civil service in the Pentagon, that's another thing, but you mean in industry as well, do you not? BEG YOUR PARDON? You mean the entire amount dependent upon the war industry? YES. That runs into millions. IS IT SOMETHING AROUND 15 MILLION? Yes; in other words, we have over three million in the armed forces and over a million and a quarter in the civilian employment. Well, then, there's all the war industries. When you are spending \$40 billions a year and more, you are employing quite a few in business. IT'S THE INDIRECT PART THAT HELPS TO DETERMINE Yes, that's where the economic assist comes in. WELL, WE JUST HAVE TO LOOK AROUND HERE AND WE CAN SEE THE PERCENTAGE. It's quite a percentage in Canada.

What's the attitude in Canada about the 102 corporations that have changed hands from Canadian ownership to foreign since the war of over \$2 billion of assets? NOBODY THINKS ANYTHING OF IT UP HERE. Pardon? THERE IS NO ATTITUDE UP HERE. There isn't any attitude? I DON'T THINK SO. I DON'T THINK ANYBODY READS ANY SIGNIFICANCE INTO IT. You wouldn't say they are developing a nationalistic sentiment about the foreign corporations taking

over the great potentialities of Canada? WELL, I THINK THEY GAVE UP YEARS AGO IN THIS COUNTRY THAT THEY COULD GO IT ON THEIR OWN. Right. I mean there is a very interesting thing happening. You see, the Labrador Development, which is a subsidiary of the Rio Tinto, and the Rio Tinto is a Rothschild combination of London -- well, they are the group that got the concession in Labrador which involves the great Hamilton River and thousands of square miles for the mineral rights and timber, and they will have control of the Big Hamilton River and the potential 10 million kW that is the potential on that river. Now the same thing has happened out in British Columbia: Wintergren -- he's got the big concession on the Croft there which ties up the Findlay and the Parsnip and the Peace about 3 to 4 million kW involved and all the mineral and timber rights. And then in the Yukon Territory, the Yukon River, Pelly, and others -- that apparently comes under the Frobisher and Benches Limited. So you have three distinct groups of financial organizations in Canada grabbing off giant resources for their own exploitation for a mere pittance to begin with. It is very interesting that nobody seems to be attacking from that angle in Canada or here.

WELL, I THINK THEY ARE COMPLETELY CONDITIONED INTO RELYING ON PRIVATE ENTERPRISE UP HERE TO DO THEM GOOD.

To do them good. Well, private enterprise will undoubtedly do them good; in other words, it will follow that old Christian adage: Do the others good before they do you good.

ISN'T CYRUS EATON IN ON THE DEAL ON THE HAMILTON RIVER IN LABRADOR?

No, Cyrus Eaton isn't in on that. He's in with the Krupps on the iron ore farther up on Gava Bay. IT'S STILL A LONG WAY FROM BEING A NATIONAL OPERATION. Oh, yes, but they have it tied up for some years, you know.

Well, this is just a little diversion in case somebody had a question on it.

SOMEONE WANTS TO KNOW IF WE ARE PRETTY WELL OVER THE QUEMOY AND MATSU SITUATION. WHAT ARE THE CHANCES OF STARTING A WAR IN CHINA?

The Quemoy and Matsu are still with us. The actual situation is that the United States and Chiang Kai-shek China have been actually blockading both the Ports of Amoy and Fouchow and a portion of the Red Chinese Coast for the last 9 years. That, legally of course, is a state of war, and without United States' support, Chiang Kai-shek could never have done it; but now Red China is strong enough to force the lifting of that blockade. Of course, the Republicans would have liked to have started a war before this election. That would have saved a lot of things, but the Red Chinese were too smart -- they wouldn't even help the Republican Party out to that extent. It's dirty, isn't it?

I SEE JOHN FOSTER WAS OVER TO THE FUNERAL. Yes, along with Clare Booth Luce and McCone of the Atomic Energy Commission, and John Foster Dulles -- his Jesuit son met him in Rome. He's stationed in Rome.

IS THE AMERICAN MEDICAL ASSOCIATION SUPPRESSING THE FACT THAT THERE IS A CURE FOR CANCER?

That's problematic. They haven't a definite cure, but then -- not that we're holding forth for the American Medical Association, but everybody is talking about krobiasen and other things like that. They're not a proven proposition. Not that the American Medical Association wants to try anything. I don't think that that necessarily holds, that the American Medical Association -- while they're reactionary, they're conservative, and so on -- they would like to have a cure for cancer which could be collected upon. Put it that way.

THIS QUESTION MUST BE FROM A COUPLE OF OUT-OF-TOWN GUESTS -- WE HAVE A COUPLE GUESTS HERE FROM OUT ON THE WEST COAST, A MR. AND MRS. MERRITT -- AND THEY HAVE A QUESTION HERE -- NOW I'M NOT SAYING IT'S THEM, BUT IT JUST STRIKES ME THAT IT IS. WILL YOU BE INCLUDING ANY CANADIAN CITY IN A TOUR IN THE NEXT SIX TO EIGHT MONTHS?

Now, that would be very nice to answer that, and I'd like to say yes, but right at the present moment, I am not quite positive about it. IT WAS ART NORBERG WHO WANTED TO KNOW THAT. Oh, Art Norberg. I GUESS THAT'S UP TO US, ISN'T IT? Well, we'll see what the next few months bring forth.

THERE ARE RUMORS REGARDING THE POSSIBILITY THAT CHINA IN 20 YEARS OR SO MAY BE ABLE TO INCREASE THEIR TECHNOLOGY HIGHER THAN THAT OF OURS. IS THIS POSSIBLE?

When discussing the situation of the growth of Red China, to say that it will surpass ours is not the point. What position will the technological growth of Red China reach a position where there is a preponderance; namely, to where they have sufficient technological equipment that it itself will commit miscegenation and they will be able to expand in any direction they wish with any outside help. Now, China at the present moment has several hundred major projects under way, and this year they will be producing 1,400,000,000 bushels of wheat. They will be up to United States in wheat production. The latest reports are that China is now the leading cotton producer of the world. Steel plants are being built, and China is bringing in new oil fields and new ore discoveries. The rate of progress is really terrific. The long-range railroad from Lanchow to join the Russian railroad is expected to be completed next year. The gigantic Kansu Canal and irrigation work on the Ho Huang Ho (that's the Yellow River) is proceeding apace. There are so many developments on. Well, the Chinese haven't the obsolescence to pay off -- to amortize out -- that we have, and their plants will all be brand new. To give you an idea of the immensity of their potential, the Yangtze River at Ichang -- that's 600 some miles and that's beyond Hangchow -- that has ten million kW in one installation potential development. Now, you will hear of the Inga Rapids development on the Congo River as being one of the great developments -- well, it is, if they develop it on the high dam. On the other hand, while the Inga development is touted at its full development at 20 million kW, the Brahmaputra at the gorge -- Red China and India have just signed an agreement for that development where India will get probably a million kW or something for agreement, and that means a 10-mile tunnel and 68,000 second feet falling 7,500 feet. That's 30 million kW in one spot. That is the world's greatest. There isn't any other place on the globe that that amount of water falls that distance.

IT WAS MENTIONED IN THE LAST DIGEST OR THE SECOND-TO-LAST, IT MENTIONED HAVING DEVELOPED FOR NIGHT AERIAL PHOTOGRAPHY TWELVE TINY LAMPS SMALLER THAN A CIGARETTE. DO YOU HAVE ANY INFORMATION ON WHAT THEY CONSIST OF. DO YOU KNOW ANYTHING ABOUT THEM?

Well, there are several developments in that field. Whether he is referring to a high frequency lamp or the luminous grid, I don't know; but they will be out very shortly and we'll give you the dope on it as soon as we get it from the .... THERE WASN'T MUCH IN THE DIGEST -- IT WAS IN THE RESEARCH SECTION AND IT WAS A CLIPPING FROM THE ASSOCIATED PRESS, AND ALL THEY GAVE WAS THE USE OF IT, AND NOT MUCH IN THE WAY OF SPECIFICATIONS. There will be some out in the next month or so on that.

HOW ARE THE DOGS? The dogs, sir, are wonderful. HOW'S RABB, THE OTHER DOG? Well, he's sitting here with a headphone on. I'M GLAD HE CAN'T SAY ANYTHING IN HIS OWN DEFENSE. No, he can't.

ARTICLES ON THE MIDDLE EAST OIL DEAL ARE BECOMING MORE FREQUENT IN THE LOCAL NEWSPAPERS, THEY INDICATE THAT THE PROFIT SPLIT WILL INCREASE TO FAVOR THE ARABS. DO YOU HAVE ANY DETAILS?

Well, they will, because the Arabs will institute a squeeze play on that. The Japanese, Italians, and others have come in with an offer of exploitation, and they are generally on the 75:25 basis. So that will force the Arabs to put the squeeze on American companies. Furthermore, to move their Boards of Directors and their records and everything over to the respective Arabian countries. That's what you meant, wasn't it? YES.

THE PAPERS, RADIO, AND TV -- I'M READING THIS -- ARE TELLING US THAT THE RECESSION IS DEFINITELY OVER, YET THE UNEMPLOYMENT PICTURE IS DULL. WHAT ARE THE CONDITIONS ON THE RECESSION DOWN THERE?

Well, there has been a pickup, but then there are practically 4.7 million that are out of work full-time, and there are several million more. One set of figures by a reliable authority is that both the totally unemployed and the part-time are 8 million. We are going to have even more production likely ahead of us, but there will be 4 to 5 million that we won't be able to put back to work; namely, that our production capacity is so great and faster that we'll be able to satisfy the increased demands without these employees, and we'll leave them behind as just refuse along the way. So it depends on what you mean by prosperity. You have financial authorities and economists down

here who contend that it would be normal to have prosperity and still have 6 to 8 million unemployed.

I READ A REPORT TODAY, AND THE CURRENT UNEMPLOYMENT IN THE STATES IS 2 MILLION OVER LAST YEAR. That's correct, that is, two million who are still drawing unemployment compensation.

LESTER PEARSON SEEMS TO BE BUILDING CANADIANS UP FOR RECOGNITION OF CHINA. Right. HOW LONG WILL THE U.S. GOVERNMENT OPPOSE THIS?

Well the U.S. will oppose it as long (slowdown in tape, cannot decipher), but eventually they'll have to give in. Anything that continues to administer a nation of 600-odd million people in an area larger than United States will eventually have to be recognized. Eventually -- why not now, is the big question, you see.

DOES THE NATIONAL ASSOCIATION OF MANUFACTURERS HAVE ANY LARGE AMOUNT OF INFLUENCE IN THE PRESIDENTIAL CANDIDATE SELECTION?

They always participate. For instance, down here in the State of New Jersey, it used to be, you know, that when the State Assembly wanted to take time out, the representatives of the Manufacturers Association in New Jersey used to sit in their seat and vote in their place. That's how good it was. Is that clear to you what I mean? They'd be in the State Assembly, and if the State Assemblyman wanted to go out and do some shopping or another errand, they would sit in his seat and vote in his place while he was gone to his little particular personal errand. That is, a National Association of Manufacturers representative. I mean, one doesn't get nominated in political party circles in United States unless he's approved by high finance and the National Manufacturers Association generally.

DO YOU KNOW ANYTHING ABOUT A GERARD SWOPE OF GENERAL ELECTRIC? Yes, NATIONAL ELECTRIC ASSOCIATION IN 1931 AT HOTEL COMMODORE, NEW YORK. Right. WHAT WAS HE?

He was head of the General Electric. Gerard Swope and Owen D. Young were the famous team that headed the General Electric at that time.

I DON'T KNOW WHY THIS QUESTION WAS ASKED. OH, HE SUPPOSEDLY PREDICTED THE DOWNFALL OF OUR PRICE SYSTEM IN 1931. Who, Swope? Swope predicted that? SUPPOSEDLY. I DON'T HAVE THIS FIRSTHAND. I doubt it.

HERE'S A GOOD QUESTION. IS THE MEMBERSHIP OF TECHNOCRACY GOING UP, DOWN, OR SIDEWAYS? I CAN SPEAK FOR US -- IT IS GOING UP. It is. THE LAST HALF DOZEN MEMBERSHIP APPLICATIONS TO COME IN -- I SUPPOSE RABB TOOK CREDIT FOR THAT. No, I didn't hear anything about that. WELL, WE'VE GOT A COUPLE MORE ON THE WAY. All right, good. That's the way to do it. They are also coming in from the West Coast -- other places.

SOME OF THESE I CAN ANSWER MYSELF -- I HATE TO ASK YOU. Well, that's all right, just fire ahead.

WOULD AN EFFECTIVE AND LONG-LASTING PEACE SCARE HAVE A CATASTROPHIC EFFECT ON OUR ECONOMY?

Yes, our economy doesn't want peace, you know, in that sense. We would like to keep the Cold War going. That gives us the inducement to get more funds to feed in to uphold business -- pump priming as it were. Well, if you actually get negotiated peace, you will have to cut out that nonsense, and then what will we do with our surplus capacity? Give the missiles to all the public school boys.

WELL, THE SITUATION UP HERE IS CERTAINLY DEFENSE -- I MEAN, WE HAVE A GREAT PORTION OF OUR BUDGET DIVERTED TO ....

It's the same way down here, Doug. You see, you have an apathetic public on one hand and while you have more people eligible to vote than ever before in history, probably less than half of those eligible of voting age will vote. You see what has happened is that Franklin Delano Roosevelt has taught the people of the United States that anybody could be president indefinitely, Harry Truman has taught us that anybody could be president, and Dwight D. Eisenhower is teaching the country that we don't need a president to run the country. Of course, up there, it's slightly different -- you're a little more intelligent. I DOUBT IT. Well, you're not as moronic in Canada as you are in United States, of course, principally because there

are less people in Canada. WELL, THEY CERTAINLY ARE APATHETIC. There is no doubt about that.

HERE'S ANOTHER ONE ON THE SAME THING. IF ALL THE DEFENSE INDUSTRY ACTIVITIES WERE CANCELLED OVERNIGHT, WHAT WOULD THE RESULTS BE ON THE PRICE SYSTEM?

Well, that's catastrophic. You see what we're headed for next year is a federal deficit in United States of \$12 billion according to the estimates. The general propaganda over here is that we would like to raise the defense spending to \$70 billion or even \$100 billion a year. That's going to take some doing, because long-range bonds are very hard to float, and we'll have to do our federal financing on short-range paper. Well, when you come to realize that we have \$80-some billions of securities maturing next year and most of that refinancing will have to be done by short-term paper -- well, the short-term paper refunding interest rates are going up and up and that means that the federal government can only borrow directly from the banks -- not from the general public. That is tantamount to printing additional currency; in other words, it's adding fuel to the inflationary fires, and as the dollar is already going down around 3% per annum, it will probably heighten that effect. Of course, the banks will make money out of it. It's a beautiful gravy trough for the banks and insurance companies.

AT THE PRESENT RATE OF EXPLOITATION OF AMERICA'S RESOURCES, HAVE YOU ANY IDEA HOW LONG IT WOULD GO ON BEFORE IT WOULD BE IMPOSSIBLE TO OPERATE A TECHNATE?

The Technate will operate. They don't have to worry about that, but last year, we had to pull in 37 million tons of iron ore. Britain has to pull in iron ore, too. And as we are deficient in lead, copper, zinc, and petroleum, that will lead to ever-greater importation. For instance, your estimates for 1959 for petroleum consumption in United States are 9,400,000 barrels per day, and if you include reexport, it will be 9,600- to 9,700,000 a day. That means we've got to bring in more petroleum, and if we boost our steel consumption once more, we'll have to bring in more and more iron ore from Canada and Venezuela chiefly. But United States is pulling in iron ore from 8 to 10 countries. We used to be a nation of "haves" but now we're a nation of "have-nots" in the sense of Price System values. There

are resources which this system can't exploit very well, but the chief significance is that transportation costs will also lead to higher costs, and cars, stoves, and everything else will cost more. Then we'll have to boost the wages and the prices again -- the same old continuous round. But I wouldn't worry about the exhaustion being to a point where you can't run a Technate. They won't reach that point.

AL ROLLS WAS ASKING ABOUT THE AMERICAN AUTOMOBILE INDUSTRY AS A BAROMETER MORE-OR-LESS OF THE AMERICAN ECONOMY.

Well, only part, Doug. In other words, our cars are wider, longer, have more plate glass, more chrome, they're more souped up than ever, but it's becoming more and more expensive to own a car -- not necessarily to buy it. That's why the U.S. public is going in more and more for foreign cars, and while we're at it, you know, the Japanese cars are coming in on the Pacific Coast, and Red China is rolling off a good car at 2,500 a month, which is better than the Japanese. The rest of the world is producing more automobiles today than United States for the first time in history. NONE OF THESE FROM RED CHINA ARE COMING IN, ARE THEY? No, they're not. WE MIGHT TAKE THEM, BUT THEY WON'T DOWN THERE. That's right.

WE MENTIONED THE APATHY OF THE CANADIANS. THERE IS VERY LITTLE DISAGREEMENT ON THE EFFECTS OF THE WAR INDUSTRY SUSTAINING THE ECONOMY. YOU TALK TO THE AVERAGE MAN ON THE STREET, AND YES, HE AGREES WITH YOU 100 PERCENT THAT THAT IS WHAT IS HOLDING THE ECONOMY UP, BUT SO WHAT? THIS APATHY ISN'T THAT THEY DON'T RECOGNIZE THIS. THAT'S SOMETHING THAT BACK FIVE YEARS AGO, THEY DIDN'T RECOGNIZE IT.

That is correct, but they are just like the suburbanites here. After all, suburbia has arrived in the promised land, and all they are hoping for is that it continues. The 45 million Americans in suburbia don't give a damn about the national economy. All they give a damn about is maintaining that suburbia.

WELL, WE HAVE OUR SUBDIVISIONS BY THE MILLIONS, TOO.

That's it -- I mean, they're comparable percentage-wise.

AL SAYS TO TELL YOU THAT I'M SITTING IN ONE. Oh, you're

sitting in one? ONE OF THESE SUBURBANITE HOMES. You have picture windows and everything? OH, YEAH. How about fur-lined terlits? NOT YET, BUT IF I KNOW AL, IT WON'T BE LONG. IF YOU WOULD HAVE SEEN ME LAST NIGHT WHEN I HAD TO ANSWER THE PHONE AT 11:30, YOU WOULDN'T HAVE ASKED THAT QUESTION.

WHAT ARE THE CHANCES OF THE NEXT AMERICAN SHOT AT THE MOON BEING SUCCESSFUL?

What's the sense of going there? It costs millions every time you make one of these attempts, and if you do get there, there's no atmosphere on it. You'll just simply have to send it around, and you may get some data on radiation, temperature, pressures, densities, etc., but it's going to take more stages than the one we've fired. THE PSYCHOLOGICAL EFFECTS MIGHT BE SOMETHING, WOULDN'T THEY? Well, it might be, but then we are a little, late. We're doing a Madison Avenue stunt. We're trying to do a propaganda out in the orbit simply to see if we can create propaganda on the orbital missile field to offset the Russians. That's about what it amounts to. WHAT ABOUT THE CONTROVERSY ABOUT THE FUELS THEY WERE USING -- THE SOLIDS AND THE LIQUID FUELS? ARE THE AMERICANS STILL USING LIQUID FUELS? They're still using oxygen. You know what temperature liquid oxygen is at, and if you had to fire a group of missiles in actual combat with liquid oxygen, you're going to have quite a time with it. It's rather difficult to handle, as they found out.

ONE MEGATON WOULD ABOUT TAKE CARE OF TAIWAN.

Yes, but there is something else which is interesting. You see, the last threat to the Vatican was Genghis Khan in the 1200s, and now for the first time in history, the Vatican is only five minutes from ground zero.

WE WONDERED WHEN THE AMERICANS WERE THREATENING TO DROP ATOMIC BOMBS ON THE CHINESE COAST, AND IT WAS PRETTY RIDICULOUS WITH TAIWAN SITTING THERE SO VULNERABLE.

Well, yes, because that coast right opposite Quemoy has some nice, pretty steep hills -- rock formations. That's no place to attack and to land on the China Coast. That's one of the last places to try that, and if U.S. wants to try that, then the Chinese can try out the Russian ones on Taiwan.

THIS IS THINNING OUT A LITTLE IN OUR NEWSPAPERS AND WE WERE WONDERING WHERE THE NEXT HOT SPOT WILL BE.

Oh, there will be trouble in the Near East. There will be trouble in other places. Africa is going to be quite interesting in the next few years.

ARE THE RECENT MINING ACCIDENTS AN INDICATION OF SERIOUS SHORTAGES OF EASILY ACCESSIBLE COAL OR THE EXPENDABILITY OF HUMAN RESOURCES?

A little of both. In your Spring Hill case, you know, you are down pretty deep, and if I remember correctly, there are about six seams of coal in that Spring Hill formation, and the thickest seam is the deepest one down. Of course, they may have been robbing the pillars out of the chambers in order to get more quick coal. In that case, you may have a general roof collapse, because in between the seams of coal, there are veins of shale and slate which could bring quite a cave-in. That's one of the tricks they do, you know, when they are exhausting their best stuff.

NO INVESTIGATION WOULD EVER BRING THAT OUT.

No, because you don't investigate something that has caved in 4,000 feet down. You just take a long distance look at it from the surface.

WE'VE HEARD ABOUT A PROPOSAL TO EXPLODE AN ATOMIC BOMB IN THE ATHABASCA TAR SANDS.

Yes, that's been broached, but the Canadian authorities are objecting on the radioactive dispersal. Well, it's doubtful whether the density of the Athabasca tar sands would have sufficient conductivity to do much in the way of extracting the petroleum or in the upheaval. Pretty hard to drive heat even in that high intensity through that kind of a formation. I doubt whether it would be very effective. WE'D END UP WITH RADIOACTIVE OIL. Yes; in other words, what would be effective would be something like a giant atomic reactor processor that ate its way through miles and miles and dumped the refuse behind it. Am I making myself clear? Something like a hydraulic dredge, only an

atomic reactor.

I THINK JOHN SPITLER POINTED OUT ONE TIME THAT YOU WOULD HAVE TO PROCESS 29 TONS OF MATERIAL THERE TO GET ONE 55-GALLON BARREL OF OIL.

Well, it varies, but you have to process quite a few tons to get a barrel of oil. Of course, it does make good highway paving just as it is. That's the better grade stuff. There are pieces out in Western Canada that were done years ago that are still standing up. I DIDN'T GET THAT, There are still pieces of highway in Western Canada which were made of that, and they are still standing up. They were done years ago, but then, like a lot of highways out there in the west, they start nowhere and end nowhere.

WE'RE SUPPOSED TO BE PROCEEDING INTO ANOTHER ICE AGE IN THE NEXT HUNDRED YEARS. WHAT PLANS DOES TECHNOCRACY HAVE FOR KEEPING WARM?

Well, I know what they are referring to. They're referring to that article in Reader's Digest. You don't have to worry about that for quite some while, because the last ice age was 11,000 years, according to the carbon dating. Of course, if the dirty Russians go and let the water out of the Arctic, that's a different matter. You see, when we sent the NAUTILUS up to the Bering, we sent it up several times, you know. SOMEONE DIDN'T GET THAT, CHIEF. I say, when U.S. sent the NAUTILUS up to Bering Strait to go through, it couldn't go through the first couple of times. It had to wait until August, because the ice jammed up the Strait. You see, that's only about 60 to 70 feet deep in there, and it's shallow. THAT HAD TO GO THROUGH IN A SPECIFIC LOCATION. Yes, and they had to zigzag, and it was 200 miles before they got into deep water. Well, now the reason they sent the SKATE in the from the east and went up to the Pole and turned around is that if the SKATE had gone west, it wouldn't have been able to get out. Is that clear? The ice doesn't freeze solid but it jams up in the Bering. RIGHT TO THE BOTTOM? Right to the bottom. So it only breaks loose there in little pieces, and you can only really get through under water about August. IN OTHER WORDS, THERE WASN'T TOO MUCH SIGNIFICANCE TO THAT .... No, you're not going to make a commercial highway out of it, but it was good advertising.

HOW MUCH PROGRESS ARE THE BLACKS IN AFRICA MAKING IN UNITING?

Part of Nigeria will be independent next year ('59), and the entire Nigeria in 1960, October. Guinea has declared independence from France, and the Cameroons have also stated and so agreed by France -- the Cameroons are the old German territory between Nigeria and French Equatorial Africa and Togoland and the others between Ghana and Nigeria. Nigeria has 34 million blacks and is bigger than Texas and good-sized other states put together. The Cameroons are pretty good sized. So here is a wave of independence becoming evident from Dakar going east and the African leaders in Uganda, Tanganyika, and Kenya have all declared themselves in favor of Uganda clean from Dakar to the Indian Ocean.

WHAT ABOUT DAMMING THE NILE ON LAKE VICTORIA?

Well, of course, that's where the Nile should be dammed. You see, the elevation of Lake Victoria is 3,700 feet plus above sea level. Now, if you build the Nasser proposition of a second dam down at the Aswan, you'll mess up the navigation developed for the Nile and the evaporation rate is several times -- 6 or 7 times -- that of Lake Victoria. The big storage should be at Lake Victoria, not downriver. Lake Victoria is the second largest lake in the world, you know, next to Lake Superior, and it has high sides.

WHAT EFFECT WOULD THAT HAVE ON NAVIGATION?

If you build a big earth-filled dam practically a mile thick at the base -- not wide, a mile thick -- 4,000-some feet thick at the base, several miles long -- well, that merely blocks -- you're not putting in any locks or anything -- that would block off the navigation of the Nile. Egypt doesn't care because that dam is practically at the upper end of Egypt and it would back the water into Sudan, so that as far as navigation is concerned, Egypt would have it but it would mess up the rest of the Nile. In other words, the Nile can be made both a potential development for waterpower, navigation, and irrigation, and in its 4,000 miles in length, you could have approximately 3,400 miles of deep water transportation. This thing of Nasser's at Aswan is only a little over 500 miles from the Mediterranean, so that's 1/8 of

the total Nile dominating the other 7/8. Is that clear? YES. IN ORDER TO PROVIDE NAVIGATION, IT WOULD REQUIRE A DIFFERENT KIND OF DAM, INCLUDING LOCKS? Yes, and there's a different type of storage and everything else.

THERE SEEMS TO BE A NUMBER OF INFLUENTIAL PEOPLE WHO ADVANCED THE IDEA THAT ATOMIC EXTINCTION IS PREFERABLE TO THE DISAPPEARANCE OF FREE ENTERPRISE IN OUR WAY OF LIFE.

Well, that has been voiced by the leading Catholic authorities and leading reactionaries that an atomic war would be preferable to allowing the Russians and the Chinese to develop peacefully. Of course, the question is: how dead do you have to be?

\* \* \* \* \*

KENT, OHIO, MEMBERSHIP MEETING  
HOWARD SCOTT  
MARCH 21, 1959

Someone took the copy of the newspaper out there on the desk. Who took it? Have you got that article of the scientist? You see, things are getting very funny, because Dr. A.R.J. Groche, who is a physicist with the IBM -- you have just had this big conference in Pasadena, California, of physicists and nuclear scientists; so, he and several more practically created a riot out there. After all the ballyhoo, this man gets up and says it is all nonsense; in other words, things are beginning to boil. You have only a meager report of it in here. You have a better report of it in other papers. "Two scientists questioned the value of the missile and space research Friday, throwing the conference of their colleagues into noisy disorder. 'Our missile program is the swan song of a dying civilization,' Dr. A.R.J. Groche shouted from the floor as a two-day conference of the California Institute of Technology ended. The conference on the realities of space exploration was attended by some of the nation's leading space program experts. 'We don't need better missiles to destroy each other,' Groche shouted. 'The ones we have now will do the job adequately, and there isn't any point in zooming off into outer space. We could spend the billions better solving problems here at home taking care of our overcrowded, underfed millions. If we did that, we wouldn't need to find new worlds to colonize in space. We turn in our cars before they are worn out and our nation would go broke if we didn't. Our missile program fits into the system very well. We send up missiles that never come back, so we have to make more missiles to make more missiles. This is fine. It creates jobs and keeps money in circulation. In the not-too-distant future, men will be boarding the other fellow's satellites and destroying them. This means more satellites must be built and the economy kept functioning at top speed.'"

What I am getting at is that it is only a touch, you see. It's typical of the nonsense that you are having today. Probably never before in history have so many people been lied to so many times so much by so damn few. You are getting it every hour and every day in the press, the radio, the television, and other periodicals. You are told, for instance, in missiles that you are all ready to start a nuclear war if those Russians get tough over there in Berlin. Well, in order to shoot off missiles, you have to have missile bases and missile trained battery technicians.

How many missile bases have you? There are nine projected bases. There is only one in any operating state whatsoever. The second one is only partially constructed. They are building access roads into the third one. The other six don't have access roads, and they don't even know where they are! And you're going to fight a missile war with no bases and no trained men?

Besides this screwy missile development that we have, you are using liquid oxygen and you have high-speed pumps pour in the liquid oxygen at the last moment, and how many failures have we had? Well, we just launched an ICBM, didn't we -- 4,500 miles. It went 712. That is, we have not got the missile yet and we haven't got the bases from which to fire the missiles, and it takes two years to train men to handle all the intricacies of missile loading, firing, and interstitial guidance systems. We haven't got them yet. We only have two partially-trained batteries. This is according to the information of the U.S. War Department, and yet our political figures and our financial ones are telling the country we are all set to blow hell out of anything or anybody that objects to what we prefer to like.

General Taylor has advocated immediate national mobilization; so has McCormack -- Congressman McCormack up in Massachusetts. So have a number of others. Well, what is all this hurry about? What do they want mobilization for? What do they want war for? There must be some reasons. Technocracy has been pointing out these reasons for years. We have gone on installing more and more energy-consuming devices in this economy of ours. Canada and United States are the prime examples of that type of economy the world over.

Due to your population increase, there has not been the same acceleration in energy conversion per capita per day. It is approximately 168,000 kg-cals per capita per day, and the economy is in trouble.

John L. Lewis had 780,000 coal miners in 1920. Today he has 235,000. True, John L. Lewis, U.S. mine workers and the coal operators between them have succeeded in raising the output rate of the American coal miner to the highest in the world -- 8 tons per man per day. Yes, this is an achievement,; But the new machines coming in in coal mining mine 8 tons per minute. John L. Lewis, if he lives -- he is not very well -- if he lives a few

more years, may have the unique distinction of being the only coal miner left. There will be very few left. In anthracite a few years back, there were 172,000 to 180,000 anthracite miners working full time. Anthracite, of course, has gone down. Hazeltown, Scranton, and those places -- it is pretty sad to go there. There are empty stores, empty buildings. It has the feeling that something is about to cave in. It has all the appearance of a city in wartime where the home army has evacuated and are waiting for the enemy to move in. Why? Because there are only about 17,000 anthracite miners left.

They will sell you a saloon for next to nothing there, a movie house; and there are any number of automobile agencies -- nice plate glass fronts. In some cases, there are people sleeping in them on cots. They have something hung in the windows, of course.

Now, similar things are happening in every field. Last year, over 1,700,000 people left the farms in the United States -- the greatest in history. There has been a decrease in mining and transportation, and in ten years the manufacturing capacity of the U.S. -- its physical volume -- increased 46%, while the total employment, including all construction and manufacturing, only went up 3%. If you deduct the construction, you will find that the decline of jobs in all manufacturing was closer to 2 million. But wait a minute! In that 10 years -- from 1947 to 1957, we manufactured 54 million automobiles, 90 some million TVs, 14 million homes in suburbia -- the production was terrific; and yet the employment and the man-hours were declining.

Your business journals, financial journals, and others were touting just before the recession -- and they are bringing back the same kind of nonsense -- that the national expenditures on capital goods would assure this country of sufficient expansion. Now they say that now the recession is over, we possibly will hit \$32 billion of expenditures in capital goods up from the low of \$27 billion, but in '57 and '56 the expenditure was \$37 billion. Well, they give these figures and the increase per year in capital goods expenditures as evidence of progress and expansion.

But now let us go at it another way.

What was the expenditure of capital goods per capita in the

U.S. year-by-year? When did it reach a peak? It shows we reached a peak in 1954 and have been declining every year since. That puts a different note on it, doesn't it? Distinctly. So, it isn't \$32 billion you would have to do; you would have to do better than \$42 billion to get anywhere at all. Don't you remember what the Red Queen said to Alice? "You must come from a very slow country because here you have to go faster and faster to stay where you are, and you have to go twice as fast to go anyplace at all."

Now, all of this has a bearing. We, of course, are trying to claim the leadership of the world, and yet you have over 7,000,000 that are getting \$2,000 a year in this country. Bare subsistence living, so-called, is figured at \$4,500 for a family of four. There are millions that don't come anywhere near it. Here we are, the richest and greatest country on earth, with the greatest array of technological equipment man has ever seen, and yet we have no direction, no design, and no leadership. We are trying to tax the consumer more and more in order to hold up this system of a disadvantage. Well, for 45 years we have had a wonderful time. A few slight dips, yes, but the dead crows are going to come home to roost.

In 1952, only 3% of the total barbed wire sold in the United States was imported from abroad. Last year, 53% of all the barbed wire sold in the U.S. came from abroad. You can buy barbed wire from abroad in Ohio, in Dayton and Columbus, for \$40 a ton less than you can buy it in Cleveland where they make it. The same thing is true of reinforcing rods or of nails. Go on down a long list of them. Your various corporations here are screaming for protective tariffs, for bounties, discriminatory legislation, and, of course, they are getting very sentimental about the American worker. They ought to with nearly 7,000,000 unemployed.

But that isn't what they are really screaming about. The exports of the U.S. are declining and the imports are increasing; and our press and our so-called leaders are screaming that the lower wage costs of these underfed, undeveloped parts of the world are undermining the American way of life. Are they? Well, remember it is the same technology of India, or of China, or Japan, Russia, Czechoslovakia or East Germany -- same technology. The expansion in these United States is less than 3% per annum -- expansion of physical equipment. In East Germany, it is 18.2% a

year. No wonder it is moving up. China is even worse. Well, after all, where did all this technology come from? Aren't we the great progenitors of production, assembly lines, and everything else? Haven't we boasted of it for the last 50 years? We have.

Last year -- for the first time in history -- another country surpassed us in cotton production -- Red China. Red China, in its Great Leap Forward, produced over 4-1/4 billion bushels of rice, 1.4 billion bushels of wheat, and over 14 million bales of cotton, and for the first time became an exporter, not only of soybeans but of peanuts, potatoes, and tobacco.

Coffee production in Africa is going up by leaps and bounds. So is tobacco production. You know African coffee here, but you don't know it under that label. All of the powdered coffee -- what has happened? Powdered coffee in the U.S. is made from African coffee. Why? Because it comes through better than your Brazilian Santos and other South American. From the exploitative side in Africa, you can get good coffee land in Angola, Portuguese West Africa, for \$1 and \$2 an acre; and if you hang onto it for five years, it's yours. What better break could you have, except you're a little light colored and a little late. Remember what this organization has said: "That the day is going to come when you had better get out. You had better get out now before you have to get out with shoeblack on your face in the dark of the night, because it is moving and moving fast."

Now, in foreign production, the steel worker of India is -- excluding the United States -- higher paid in dollar wages per hour than the steel worker in Great Britain, France, Belgium, or West Germany. The steel worker of the Indian steel plant. Our high paid steel workers in the U.S. are \$3.05 per hour. The highest paid, of course, are the United coal miners. They top that slightly.

Your African copper miner of the Rhodesian Magambo, Antelope, and others get \$6,400 and \$6,200 U.S. a year. We haven't any copper miners that get that, and yet that copper can be mined, smelted, and refined and laid down at a port in the U.S. cheaper than we can ship it to the port.

Well, what is wrong? Haven't we got just as good brains

here? Yes, and we have just as big corporations and bigger, but the copper we are mining is less than .8 of copper content. The copper they are mining is from 4% to 8 and a fraction percent. Theirs are new integrated plants, so they can pay their high wages. The Indian steel plant can lay pig iron down in the ports of the United States cheaper than we can ship the pig iron. They have high-grade ore, coking coal, and we have to go farther and farther afield for ore that is 50%. Bethlehem Steel is spending millions at Marmora in Ontario just north of Lake Ontario midway between Toronto and Kingston. That ore is 3,000 feet down, and they are developing it, shipping it to the port, but that ore is only 30%. I am quoting you this to show you how desperate they are.

Same way we are drilling oil wells in Somaliland. We are starting to drill wells in the far north -- way up in Elsmiraland in the Arctic. We will drill wells wherever we think there is any sedimentary formation in the hope of finding oil. Why? Because our oil is only 11 barrels per well per day, and our ratio is better than 9 dry holes to every 10 we drill. Oil in Kuwait in Iran is 8,000 to 10,000 barrels per well per day compared to our less than 11. There was a day when we had spindletop great gushers, but spindletop was when? In the early 1900s. The spindletops aren't here anymore.

Now, nothing is more suicidal than the 58 million to 60 million automobiles that we have in the U.S., most of them going down the highway with one person in them. Whoopee! It is all right so long as they can pull up to the gas station and "fill 'er up." Public transportation has gone to hell in the United States. Nobody gives a damn, but there comes a day! That day isn't very far off in petroleum, copper, lead, zinc, iron ore; go on down the line. We haven't got it anymore and you can't keep on squandering it, because you will have to conquer the rest of the world to do it.

Stating it another way: there are only 175 million people more-or-less in the United States. The rest of the world would consider it cheap if they lost 500 million dead to eliminate this system on this continent. Why? Because it is consuming over 50% of the resources of the globe with only slightly more than 1% of its population. They could afford to lose that much human life to extinguish such a cancer. I am trying to present their viewpoint

for a moment and our complacency, and nothing is more complacent than the Christian hypocrisy that we have here, but the Christian hypocrisy is the same as the Mohammedan hypocrisy, the Shinto, the Hindu, and the Buddhistic. All of those, down the centuries, have preached to all the people that the concern was the hereafter and not this world they live on. Well, brother, you damn well better change it, because if you're not going to change this here and now, you are not going to be anywheres hereafter!

Do you think you can run in this country? Do you think you are going anywhere with gasoline at 50 cents a gallon seaboard? Oh, yes, they sold you homes -- 25 and 30 years. Now they have raised the rates so that the total amount you pay over the whole contract period is double and better the purchase price of the home. Now what are they adding to it? Brown University, Harvard, Yale, and MIT are proposing the minimum tuition for those institutions at \$2,000 a year, and they are just issuing the new proposal for education where you can attend the university four years or six on a promoted loan basis, and you will not start paying until after you graduate, and you will have 25 years to pay for it. But wait a minute! It costs \$6,000 a year. A four-year B.A. would be \$24,000; a Masters degree would be \$36,000. Sucker, how dumb can we be? They sell you the home and then they sell you an education which takes 30 years to pay for. Well, you're frozen.

You talk about dictatorship or totalitarianism. My heavens, here you've got something that Hitler never even could conceive of! It's got you coming and going.

New homes in suburbia -- you pay ten years. Have you any equity? None whatsoever, because all you are paying is the interest. You don't begin to pay in equity until after ten years, and yet this is the country that boasts of the highest standard of living, the greatest technological equipment, and that we ought to be leaders of the world!

Well, you have had an awful lot of examples lately in our press. You have had a burst of photographs of the backyard iron furnaces of the Chinese and a free-for-all laugh, you know, on the part of the periodicals, but they didn't show you any of the photographs of the four million ton capacity steel plant of Paotou on the Ho-Hwang Ho or the Wuhan on the Yangtze or several

others of that size. They didn't show you photographs nearing completion on 2,600-ton blast furnaces, 500-ton open hearths. How many blast furnaces have we got in U.S. that are 2,600-ton blast furnaces without oxygen beneficiation? How many open hearths have we in the U.S. of 500-ton capacity? How many? Not many, have we? I doubt that we have a round dozen. I am safe in saying that. Furthermore, all those steel plants are not built of steel. They are built of precast reinforced concrete. How do you like it? No maintenance, no paint, no corrosion -- nothing. They are doing the same thing at Teschen, Czechoslovakia, and Poland, The Teschen plant will be twice as big as Morrisville, Pennsylvania, and it will be newer and more integrated.

What are we doing? After all, the St. Lawrence Seaway, which is opening very shortly in its official opening -- we didn't even get into that until the Canadians started to build their own seaway, did we? And then we make an abortion of it. We design it 27 feet over sill for the buoyancy of freshwater -- remember, freshwater hasn't the buoyancy of salt; therefore, you have only about 25 feet draught, but you have a bottleneck in the Welland Canal. In other words, we couldn't even build that correctly. It takes about 9 to 12 hours to go through the Welland Canal, Ontario to Erie. You could make that difference of level in 15 minutes if you had the proper design. But, no, we will not venture anything that doesn't enrich or doesn't enhance the privileged private enterprisers. For instance, last year the amount spent on missiles and war materials was \$21.8 billion. Seventy-five percent of that \$21.8 billion was received by less than 100 corporations. If any of you got it, you got a damn slight trickle. You can go down the line in anything and the same trends are visible.

Yes, your cars are souped up. They've got a nice house-of-ill-repute décor -- you know, those two-color jobs. That was taken from the maison tout le pays, those beautiful triangular colors. You don't know what that is? Well, that is one of the oldest established houses of ill repute owned by one of the nobility of Europe, and, incidentally, that color decor was designed by a Technocrat. Oh, yes, a member of the Continental Board; A foreign expert for the Electrical Bond and Share and

Services. You see, they can't even keep us out of those places, and that was 23 or 24 years ago. Since then, it has spread all over into stores, houses, and everything else, and now

to automobiles.

Are we going to design an automobile? No. We are going to think up another mock-up gadget for the advertising promotion boys that, "Well, we can put this over on the public." Your six-cylinder, car engine of Plymouth or Ford -- that design is over 40 years old. Four-wheel brakes were way back in 1909. You can go on with any number of things. The dial telephone, that is, the Stroeger system which you have, is 1893. Well, what? You mean to say we haven't moved since? We have multiplied in wealth, yes, but in new ideas? Just try having a new idea. To have intelligence of long-range perspective, strategic intelligence that involves any long-range concept.

Do you realize how serious this all is? Technocracy has been trying to tell this country and continent for years that as you kept on increasing the energy-consuming devices of this country and installing more high-speed technological equipment that the day would come when the physical wealth of U.S. and Canada would be produced and distributed by a minority of the able-bodied adult working population. Well, that has happened, because for the first time in the history of man, 52% of the adult working population are no longer engaged in the production and distribution of physical wealth; and, furthermore, I have pointed out time and time again that you are going to find the situation where the U.S. will have a gross national product in excess of \$500 billion a year, which will mean greater profits, more goods, greater inventories, but an unemployed of 7 to 8 million a year. What are we going to do with them?

Now, the population in United States are living longer. The total number of aged is increasing and increasing rapidly. They constitute an ever-increasing social load on this complex of ours. In order to preserve any kind of stability in this Price System, we would have to have a per annum expansion not of 2-3/4 to 2-7/8% -- no, you couldn't do it; but sufficient new expansion to create between 1-1/2 million and 2 million new jobs a year in order to provide jobs for the oncoming youth of the high birth rate of the last 15 years. Are we creating new jobs a year? No. We are eliminating them. How are you going to reduce costs when your steel worker is \$3.05 an hour? The answer is, get rid of the steel worker. What did we do with the old steel roller? Remember, in Cleveland there used to be quite a few thousand when you hand

rolled sheet in the mill. I think the total figure was around 4,200. You haven't got more than about 14 per shift on your controls today.

No matter what field you turn to, the same thing has happened. Now, if you think you're funny -- for instance, Toledo has a big glass industry. Years ago, in 1920-21, there was a group of younger men that had a few million dollars in idle funds, and I wanted them to buy Colburn's Glass Company, known as The Toledo Glass Company, out of bankruptcy for \$480,000. That's the glass company that held the control of all the strip glass patents. They turned it down. So you have the Libby-Owens-Ford around Toledo, haven't you? Well, you have the Pittsburgh Plate Glass and the Corning -- these are all big producers. But, now just to give you a little tidbit of what is going to happen. General Motors is going to make its own plate glass for its own cars in its own plant and where is it going to get the personnel? It is going to steal them from the existing personnel, with higher wage-salary inducements. Oh, yes, what is that Italian saying? It is really going to be funny.

Now, in 1959 and 1960, there will be four giant plants, brand new steel plants, roll into production in India, plus two additions in India of the Tata and East Bengal. There will be even bigger steel plants in Red China and in Russia, There will be fertilizer plants, chemical plants, and machine tool plants. An illustration of what is happening; The American and British oil companies brought the squeeze pressure on France for participation in the Sahara. Up until DeGaulle got in, there was no U.S. participation. They brought the squeeze on. They built modern oil refineries in France, refined the imported oil, and made the French pay for it because the Sahara wasn't sufficiently developed, and therefore they forced the French Government, and DeGaulle was the fascist type that agreed to it; therefore, he is just our boy. Well, but even the DeGaulle government doesn't like being kicked that much, so they made a deal with the Russians to import 1,400,000 tons of petroleum a year for three years. That is just the same amount of petroleum that the American-British oil companies were bringing in through their refineries. Get it? Well, would the Russians accept payment in francs, dollars, or pounds? Oh, no. You had to pay for it in machinery. Now I am giving you information from French sources, not from Russian.

France is shipping two 20-foot diameter, 574-foot long cement mill tubes, the longest in the world, each capable of producing 17,250 tons of cement a day, for Siberia. There are other cement mills of that size under construction to pay for the order.

Of course, you all have read in the past few months about the deal of the Dow Chemical buying 30 million gallons of benzene under the market? Well, the Russians offered Canada a nice deal -- 300,000 barrels of petroleum a day on the East Atlantic seaboard, sold to the Canadian Government at 50 cents a barrel under the market price, and the Canadian Government could sell the 300,000 barrels a day to the private oil companies, and the Russians would take 300,000 barrels a day from the pipeline on the Pacific Coast of Canadian oil; thereby, the Russians would be subsidizing the Canadian Government's exploitation of its resources and making the American corporations pay for it at the rate of \$50,000 a day. Well, why not? You're a rat -- brother rat eats rat. The Canadian Government had to turn it down because of the protest of the American oil companies, but this is only bringing it out.

So, the Russians are offering fabricated asbestos, as well as lumber, as well as champagne, canned fish, canned goods. Cement? Well, the Chinese are going to start offering it pretty soon. The Chinese have chased the Japanese out of Hong Kong, Singapore, and other markets of Burma, and the textiles have gone from 47% to less than 3%, The Chinese are beating the pants off the Japanese with those Keds (crepe-soled shoes), wrist watches, cotton goods. The Datsun, which is the Japanese car, looks all right, but it hasn't got the construction of a Volkswagen or Volvo, but the new Chinese car is a much heavier job. Now, they are capable of building plants. They are capable of building all these things, and when from now on the world's surplus .... we no longer will be in the dominant position in world cotton. For the first time in history, last year the rest of the world produced more automobiles than United States. That short staple cotton that we produce, you know, is only about 5, 6, or 7 million bales of cotton more on the world's international markets outside of the United States. That's all the increase there has to be for you to pile this junk on the curbs down in the southern cities. You can have integration on the cotton bales, because there isn't any place to put it. Tobacco in Africa has gone up 760-780%. All

the statistics of increases in other parts .... remember, we are only expanding at 2 and a fraction, less than 3% a year.

They are moving at high speed. They are throwing it into expansion production, but they are not stupid enough to throw it into the gadgets that we are throwing it in. We are dumping metal into 40 billion tin cans a year and we throw it on the dump. Well, that was all right when we had the hematite ore, but now when you have to bring ore from Venezuela, from Labrador, Quebec, and eight other countries of the world, we no longer have it. Now, combined with the rising taxation and the rising inflation, the pressures are going to increase. They are going to take more and more of it away from you. You can go to church and pray, because that is just about all you will be able to do about it unless you organize to do something about it here and not hereafter. I think that's fair enough. I am going to pause a minute and let you ask questions. Thank you.

---

Somebody the other night asked me about leadership in this country. Franklin Delano Roosevelt couldn't use his legs, Harry couldn't use his head, Ikie swallowed Nixon and gets ileitis and can't make a decision, and now what do we have? We have the White House moved over to the Walter Reed Hospital. Old George C. Marshall is over there, Dulles is over there, Ikie goes over for examination, Macmillan is practically in the same boat. The NEW STATESMAN of Britain has a beautiful editorial, and it points out that Macmillan is so stumbling and incoherent that his proper name is Macflutter, addressing members of the House of Commons by the wrong name, and while we're at it, it might interest you to know that the British contingent landed by plane in Lebanon -- their tanks brought in, the weapons carriers, and the ammunition didn't fit. The latest expose in the British House of Commons. They landed the equipment in Lebanon, and the tank ammunition didn't fit the guns.

IN TALKING ABOUT OUR NATURAL RESOURCES BEING EXPLOITED, IN THE LONG-TERM RANGE, WHAT ARE WE GOING TO DO IN A TECHNATE?

We'll be self-sufficient, but you'll probably not have some of the types of things that you have now. WE PROBABLY WOULDN'T NEED THEM. Certainly not. You see, we have made this great

accumulation of capital on manufacturing millions of gadgets that you use only slightly. If there wasn't this giant turnover, you wouldn't be able to accumulate it. For instance, engineers and technologists can design today an automobile -- no valves, no sparkplugs, no water cooling, about an 18-20 compression, supercharged, drive on all four wheels -- there's only one thing wrong with it: there would be about 1,200 parts less in the car than there are now, and all the engines in all the cars, in all the trucks, in all the boats would all have the same size piston, connecting rods, cylinders, etc., but it would have 500,000-mile life before overhaul.

Now, if you want to go on consuming stuff at this rate and dumping it into the Atlantic or the Pacific, remember the Greeks of Laurion. They conquered the trade of the Mediterranean with the silver-lead ores of Laurion and they used child labor to get down into the narrow veins hundreds of feet below ground. They exhausted the rich ores, and they lost control of the Mediterranean trade. They also ate up the timber of Attica, of Sicily, and South Italy, and what have you got since? It never came back. All you've got to do is drive through Ohio here or any state and look at it -- something to be proud of, isn't it? It isn't only Ohio -- it's clean across the whole damn country.

In the old days when you had farms -- one farm per quarter section, 160 acres to the quarter section -- you had one well and one latrine a quarter section -- four to a square mile. Now you have 4,200 to a square mile and you wonder what the hell's happening to the polluted water. Because you've all got swept wings and picture windows, you think that the water is going to be purified?

Stop and think what it would be if you had vertical housing instead of this terrific using up of land. We are running out of land near urban centers. Land cost today is 25% in your purchase price in allotments most places. The reason for that is because you are running out of land adjacent to urban centers. The land cost for 60 years in a house sale was only 8%. The only people that have any chance of beating this system living under it are those Hutterites.

They don't have a deep freeze, a refrigerator, a gas stove or an electric stove for every family, no, but you could have

heating -- a proper heating system, you could run off waste power plants, all kinds of things. What kind of heating system is it? 365° 150-lb. water pressure. You will find that water pressure at that temperature will transmit 50 times as many BTUs per physical volume as steam at that pressure. You'll find that I'm correct. SAY THAT AGAIN, WILL YOU? Hot water at 150 pounds pressure, 365° heat, will transmit in the same volume of pipe 50 times the BTU per hour or per minute that steam does at the same pressure. If you want to see a beautiful installation that they are all crowing about, you know the Behr-Manning Abrasives -- it's up at Troy, New York, they used to have a flock of steam boilers, and now they are running the thing automatically all water, 150 pounds pressure at 365° heat -- plant heat, process heat, everything. But wait a minute! Have you got any heating radiators or pipes that would operate at 150 pounds water pressure? You wouldn't try it on these radiators, would you? The ones you have in your house? Go to 50 and something happens, doesn't it?

Well, now, voltage, do you need all these .... yes, at 110 volts, you need big cables. I would like to recall to you that I happened to be one of those screwballs years ago that insisted on designing a motor to run that generator voltage 12,500. The first one ever installed is still running. Suppose you try to put 5,000 horsepower in that 220 volts -- you'd have some size conductors, wouldn't you? At 12,500, you don't need very large conductors, do you?

If you have 50,000 telephones in a building and you use the present system, you have to have a pair for each telephone. That's 50,000 pairs, correct? Your cables -- a big cable is 2,000 pairs a cable, correct? That would be 25 2,000-pair cables to supply 50 telephones, check? Well, but you can do that. All of the conversation of 50,000 telephones can carry over 50 pairs. All there is is a frequency changer, that's all, because out of that building, one 50-pair cable instead of 25 2,000-pair, but then you'd have to have a standard wiring diagram for all structures for telephones. You haven't got that now, have you? In other words, you could move the telephone anyplace you wanted to and plug it in, and you'd change all your wire transmissions.

You can go all the way down the line on this. There isn't a damn thing that Technocracy hasn't touched! And yet, none of them can be used to any extent under this system.

## INAUDIBLE QUESTION

Will the present conference of Macmillan and Eisenhower bring any settlement in the world? Do you mean will it solve the crisis in Europe? THAT'S PART OF IT. SHOULD THERE BE A SETTLEMENT AND A LESSENING OF SPENDING IN WAR PRODUCTION IN AMERICA, WHAT EFFECT WOULD THAT HAVE ON OUR ECONOMY? Well, if you haven't the threat of war in United States, you see this country today, with its present capacity, is \$150 billion short in purchasing power. You are spending over \$40 billion a year in war materiel. If you stop that, you'd go to hell fester than you are going now. If you think that a conference of Macmillan and Eisenhower going to the Summit -- what have Macmillan and Eisenhower, what power have they got, what cards have they got. The Russians can withdraw their troops from East Germany. Cablegrams, and they propose meeting places of Alexandria, Naples, Athens, Capri, almost everywhere -- well Stalin was like old Henry Ford: that you could have a Ford any color you want, provided it was black, and there would be a meeting, yes, provided it was on the Black Sea. Anyplace on the Black Sea. Now, one of the ironies, if you look up the record. United States and Great Britain notified the Russians that they would take personnel of 75 each to the Yalta Conference. If the Russians had believed United States, they would have been in an awful pickle, because Britain and United States took 1,500 each. What kind of a game was it? When they landed at Simferopol Airport, which is on the north side, you have a high mountain range in the Crimea, Simferopol Airport is 81 miles from Yalta up over the mountains, the Russians knew we were a bunch of SOBs, and their bands played the respective national anthems and the cars took out. The moment they went off the airport, the road for 81 miles on both sides was lined solid with troops. Fifteen hundred? why, gentlemen, you could have brought 15,000 each with you, why didn't you?

Mikoyan comes over here, and just on the outskirts of Cleveland, without mentioning his name, there are a number of prominent people, Mikoyan was asked if the Russian Government was contemplating any large orders here and were they prepared to offer? He said, why, yes, particularly of importance to the steel industry. He would like to place an order for 1,500 miles -- 1,560 miles to be correct -- of 36-inch pipeline for 880 pounds pressure. They said, well, would you expect long-term credits?

No, they wouldn't expect any credits at all. It would be 30% with order, 70% upon delivery. Would they be paid in rubles or U.S. dollars? No, he said he thought it would be more appropriate to pay them in gold. He said that would be more viable for you in the international market. Do you know what he meant? He meant that the corporations could sell the gold in the international market at a higher price than you could get from the United States Treasury, correct? WHAT DO THEY NEED THAT PIPE FOR? That's to carry that gas to that cement mill I was telling you about. Now if you want to figure out something, just figure out the thickness of the wall of that pipe and how many tons it would take. You will find that the thickness is nearer to two inches than it is to one. AND A GOOD GRADE OF STEEL, Oh, yes, high grade, and that runs into a few thousand tons. DO YOU KNOW WHO WAS MAKING THE STEEL BEFORE US. Well, West Germany has some orders and so has Britain, but don't forget that Russia and China are turning out steel tubing. China is turning out thick wall steel tubing, pierced from a solid, 9-1/2" ID, up to 40 feet in length, alloy analysis. You do not do that by hand, do you? INCIDENTALLY, DIDN'T WEST GERMANY FINALLY GET THAT ORDER? Not this order yet. And Mikoyan was asked how about the compressor plants. He said we wouldn't have to bother with that, because (we) have sufficient capacity to make the compressor plant. That takes a lot of compressors for 880 pounds pressure for 1,560 miles.

Where are we going to go with population control? The population of the world today is 2,800,000,000. There was only slightly over 800,000,000 in the year 1800, around 400,000,000 in the Middle Ages, and about 200,000,000 BC. The population is going up 90 million in what period? South America is one of the fastest growths. Japan has reduced its birthrate from 32.34 to less than 17. It isn't a question of its being a century or five centuries off or a question of being 50 years from now. It isn't even a question of being 10 years from now. Population additions in Great Britain, France, Italy, all of South America are moving up. Mexico an addition of 500,000 a year, and it can't even provide jobs for what it's got now. We can't provide the jobs for our oncoming youth, but what? You have more babies, don't you? Blessed little devils! That great Englishman who came over here years ago, and one of the famous hostesses in United States, said, "Your Lordship, you like babies, don't you?" He said, "Yes, my dear, hard-boiled, hard-boiled, if you please!"

Your churches won't touch it, your political figures won't touch it, and your financial things won't touch it. But, it's going to be here; in fact, the scientists have discovered it. Never mind this cockeyed nonsense of Margaret Sanger. That's only voluntary parenthood. If you're going to leave it up to the individual, you'll never get anyplace. It has to be done as a collective action. So, it's odorless, tasteless, colorless, and its cost is next to nothing, and the percentage is approximately the same percentage as the active ingredient in Warfarin -- you know Warfarin, the rat poison -- well look down at the bottom and you will see it's .0004 something, well, it's approximately that percentage, and you drop that liquid compound in the metropolitan water supply of any large city, and no mammal -- cats, dogs, female human beings -- will conceive. Stop it for 60 days, and there is no deleterious action, and the female can conceive. Now, I suppose they are going to raise hell because it is interfering with their God-given right to make jackasses out of themselves. But it's here, and the amazing thing is that the scientists in New York and Baltimore and a few other places are still a little bit leery. They say we can't shove it out here, we can only go abroad to do it.

Now, what is it? It's a chemical compound that triggers a natural reaction. It's been known for centuries that the female of the human species did and has the power to dissolve the fetus without any deleterious action to the organs of reproduction in the female human being or to her general metabolism. They were not able to discover what triggered it until just shortly ago. They have discovered the trigger; so, if any of you males think you're going to go someplace in the next decade by handing out cigars .... I mean, after all, you have to stop this and a control has to be instituted. When Technocracy pointed out years ago that you have to control the rate of growth of all energy-consuming devices in time on any given area, what were we talking about, just motors? No, the human being is an energy-consuming device. Spiro bacteria is one of the most minute bacteria observable, that's a microorganism, it's .0000025-mm. diameter -- it has an amazing rate of growth. If its rate of growth were unrestricted by any limiting factors except this rate of reproduction, it would cover the surface of this globe four inches deep in no time at all, and in ten days, it would cover the universe to the distance now transversed by the greatest

telescope, but there are limiting factors. Just because the human jackass thinks he's producing in God's image -- it would be better if he was producing in the devil's image, just look at him.

WHAT ABOUT THIS SEVEN-YEAR PROGRAM THE RUSSIANS ARE INSTITUTING? THERE'S BEEN A LOT OF PROS AND CONS, I'VE READ ABOUT THAT, IN RELATION TO WHETHER THEY CAN OR CAN'T DO A GREAT JOB OF IT AND WHETHER THEY CAN REACH THEIR GOALS IN THE TIME SPECIFIED, BUT WHAT I'M INTERESTED IN IS SUPPOSE THEY CAN COME EVEN HALF WAY TO REACHING THOSE GOALS, WHAT WOULD BE THE EFFECT ON US?

They have the land, the resources, and the population. Now, kindly bear in mind that it isn't their Marxian socialism or communism. They would have been driven back of Lake Baikal by Hitler and his European fascist armies if it hadn't been for their technology. What are they doing? They're using technology, they're educating for it, they really run schools. Now, you propose to the people of United States that your schools in United States run 24 hours a day, every day in the year, and that all students have to pass, besides scholastic examinations of a standard curriculum continent-wide, they have to pass physical and psychiatric examinations before puberty and after puberty in high school. If they haven't the receptivity, they are moved out. Why, no, can you imagine our little Johnny and our little Nellie not passing examinations? Why, tsk, tsk, tsk! No wonder you have a jackass like Harry Truman or an educated one like Franklin Delano Roosevelt or a smoothie like Ike. Well, but that's what you are paying lip service to. What's-his-name Cummings, isn't he an actor, that takes 300 vitamin pills a day. What? Isn't it 300 a day? Well, he signs it with his own name. SOME OF THOSE ARE TRANQUILIZERS, AREN'T THEY?

No, he's trying to raise something!

I'VE NOTICED SOME SNIPING AT THE LUCE PUBLICATIONS WHERE IN 1946 WHEN HENRY LUCE PREDICTED A CENTURY OF PROGRESS AND PROSPERITY. WHAT HAS HAPPENED?

That American Century that Henry Luce predicted has been the shortest century in all history -- less than ten years. After all, Luce publications and our State Department are hand-in-

glove. The State Department distributed 1,800,000 copies of LIFE alone to the U.S. Information offices abroad. TIME has a nice, snide what do-you-call-it locally, but when it comes on the international scene, that's where it makes its mistake. TIME reporters were mobbed in Africa in the last three days. Started this trouble in Bolivia, and, oh yes, you're responsible for it in Venezuela -- not the Communists. The fact that Jiminez was put in as a coup d'état by our oil companies and our State Department, and he was in there for ten years. Lo and behold, we turn out the red carpet when Jiminez and his Chief-of-Police have to flee Venezuela with \$250 million U.S. deposited that day in the banks in Florida, and the Venezuelans threw rocks and other items at Dickie Nixon. Well, naturally. In TIME we gave the great build-up to Jiminez, and then ....

DON'T YOU THINK THAT BILLY GRAHAM COULD KIND OF SETTLE

Well, you have a sense of humor anyway. No, you see the situation is very much similar to His Holiness in the Vatican; of course, he only represents part of the Christian faith, but His Holiness in the Vatican may have claimed that he was the Vicar of Christ and talked directly to God. Well, without disputing his claim in prior times that he might have had direct communication, but in these days, the communication has been cut off, because God only speaks Russian.

INAUDIBLE QUESTION

Strontium 90? Well, strontium 90 and carbon 12 and 14 are practically reaching it now. You'll find the report will be out in the next couple of weeks. Make a note of it and see if it's not correct. You see, it is an amazing thing when you want to spend billions to develop nuclear weapons to where you achieve a parity in mutual national suicide. That's all, but the only reason you are doing this is to maintain private enterprise. If private enterprise didn't have the stimulation every week from your withholding tax and all the other taxes and the war materiel, pull that out of American business and they wouldn't even wait until receivership. They'd leave. All right, what are you going to do? You've got states like Michigan, California, Pennsylvania, and others that are practically bankrupt. Their relief load is rising in their cities. Pennsylvania has 528,000 unemployment. It has 6 cities in which the percentage of

unemployed is greater than 12-1/2% of the labor force. It has 8 other cities, not counting the 6, where the percentage is between 6% and 12-1/2% of the labor force, and there is nothing in sight. Neither is there in California or Michigan or Ohio or Massachusetts and New York that those are going back to work. Huh, uh. You're going to have a lot of homes -- in Toronto up here, you've just taken over a big building and put cots in and soup kitchens. You had almost a thousand unemployed march into the Parliament Building in Victoria, and you put it on TV across Canada. Canada has a higher percentage of unemployed than here.

The unemployed is growing in West Germany. Something is happening, isn't it? Yes. You've got 7 million tons of coal in Belgium at pithead, over 14 million in West Germany, over 4 million tons of coke in West Germany, 30 million tons of coal at pithead in Great Britain, the biggest amount, and you haven't a market.

CHIEF, TELL US WHAT'S GOING ON IN THE ORGANIZATION AROUND THE COUNTRY.

Well, Colton, California, bought itself a property running through two streets, completed its own Section headquarters bigger than this, very nice with its own parking lot. They moved in the other day, and had a grand opening, Bellingham, Washington, will burn the mortgage on its three-story building in May. We have brought back Spokane and Lewiston, Idaho, on its feet, and if this keeps up, we'll have a Section in Anchorage, Alaska. Now there must be something -- I don't know what does it. The only thing they ever tell me is that they join Technocracy to prove me wrong.

COULDN'T WE EXPECT A CONSTANT RISE IN THE UNEMPLOYMENT ON A PERCENTAGE BASIS?

Not necessarily a constant rise. You could have fluctuations, but you see, the production capacity is rising. The more billions they throw into capital goods, even if they don't come up to the expansion ratio per capita of population, every darn thing they add to it from now on is only going to make it funnier, and the more billions they add, the quicker it does it. If you increase your armed forces a couple of million, you might stall it for a little while, that is, on the surface, but you

haven't any place to put men in a modern industrial plant. You haven't any place to put men in a modern fighting armed force.

## INAUDIBLE QUESTION

That would be hard to say, because Washington has some of the most agile people in the world. I mean they are like the monkey on the flying trapeze. It isn't depending on them. It's depending on your local situation; in other words, down in Bucks County where we are, three pages every week of sheriff foreclosure sales of houses -- the richest county in Eastern Pennsylvania -- almost a hundred a month.

I SEE THERE'S A NEW BOOK OUT, "THE DEVIL IN BUCKS COUNTY."  
DO YOU HAVE ANY IDEA WHO THAT WOULD BE?

You didn't have to go tell on me! IT'S PROBABLY THAT SAME SON-OF-A-GUN WHO GOT HIS MITTS ON THE PEARL HARBOR DIARY, WASN'T IT? I don't know anything about what you are talking about. I could quote from it, but I don't know anything about it.

No, you can't get into specific time or specific amount, because there are rates of growth in acceleration, and this thing is moving very fast. Now, of course, you have the banks with so much liquid capital, and the Diner's Club kind of stole a march on them, and then that is followed by American Express and Hilton Hotels. Now your banks have come out with ready credit all the way from Boston to New Orleans and everything from \$100 to \$6,000; so, you can go in and buy anything in any store with this card -- no money now -- it's kind of ironic, isn't it? Don't need any money -- just need this card. The store, the hotel, the resort, or whatever it is -- it was very difficult to buy panties, bras, and other things on time, but this way you can buy all kinds of things on time, and the bank charges the store, or the seller, 6%, and that, of course, enables them to charge the so-called loaner/borrower less. There's only one billing. The bank pays the seller right away -- they get their money -- and then the bank bills the individual. So, here is a rising game of the consolidation of all credit power in the United States; in other words, the loan for your education -- you're sewed up for 25 years. All you need is the card. Of course, they don't have it to where it's a different color for the blonde or brunette yet. The reason for that is, they're not all blondes or brunettes.

WITH REFERENCE TO THIS EASY CREDIT APPLICATION, ETC., CREDIT IS A PROMISE TO PAY. IS NOT OUR AMERICAN DOLLAR A PROMISE TO PAY? HOW FAR CAN IT GO BEFORE IT BECOMES EVEN WORSE .... ?

It's declining at slightly over 3% per annum -- the value. Well, look back. You don't have to go very far ahead. Remember when you used to buy a Ford or Chevrolet for \$680 or \$700, and you used to buy a home for \$2,500? Now, what is it they want to do? They want to build \$50,000 homes to \$100,000 and 50-year mortgages. It's only just and meet that the next generation should help pay for this beautiful American way of life.

WE JUST TALKED TO THEM IN HAWAII, THOUGH, WASHINGTON DID. THEY SAID THAT \$66,000 WAS TOO MUCH MONEY FOR THE GOVERNMENT TO SPEND TO BUILD A COUPLE OF GOVERNMENT EMPLOYEES HOUSES OVER THERE AND THEY CUT IT DOWN TO \$18,000. THEY SAID THEY COULD BUILD A GOOD ENOUGH HOUSE FOR \$18,000 APIECE.

That isn't it. You see, the American public, they aid and abet this nonsense. You take 99,9% of the females in United States, let alone the male -- the males are stupid, they didn't marry the females, the females married them, you know that -- now the females what? They want a house, don't they? And they want picture windows in it, they want this, and they want that. Now it's reached the point where it's a downright double jeopardy hazard for any young American male to go in for monogamous marriage. The only way he can get by is marry three of them and have them work, because right now, any community that you're in -- you'll observe it -- the married woman can't live on one husband's income, can they? Come on, they're working, aren't they? Sucker! Take any community in which they have resided for some time, not where there is any split differences of religion or anything, but they all know each other. You think that you can get the women in that community to organize a collective nursery to take care of all the babies with graduate nurses? Oh, no, their little dear couldn't be in such a thing like that! How in hell do you think most of you got here anyway? Now you're going to be forced to it because of the rising costs. Only the wealthy or down here at the bottom can get any decent health care, you know that, except, of course, unless somebody gives you a Niagara massage.

WOULD OHIO BEING AS INDUSTRIAL AS IT IS BE THE MOST LIKELY PLACE TO START A ....?

Well, not necessarily. You see, wherever you have certain size cities in which the support of that city is vested in two or three industries, that is, 80% of the working force is working, and that shuts down -- now, there have been some indications in New England in moderate size cities -- no work, they have exhausted their unemployment compensation, and the public utilities, the Narraganset Light, Heat & Power, and your gas, and your water -- well, they were going to shut off the water, the gas, and the electric power. The mayor and the chief of police notified the Narraganset Power that the police would take over the power plant, the water plant, and gas. "Well, they're not going to pay for it." That doesn't make any difference whether it's paid for or not. There are so many thousand children in this community, and the hospitals have to run.

Now, you will find that the American sentiment, when it boils down to it, any time that any woman tells you that she doesn't like this system and she wants social change, you just look at her and she appears to be young enough, you say, "Do you have any babies?" "Oh, yes." "Well, you're the ones that are going to decide it." "What do you mean?" "Well, the women who have babies in this country, when they don't like it any more, just take your babies in and give them to the government." You haven't got a major city in United States in which every doctor, every nurse, vehicle, and everything else won't be conscripted right then and there in less than 24 hours flat. You know it's correct. I said that in Canada, and they put a banner across the widest street in the world: HOWARD SCOTT SAYS GIVE YOUR BABIES TO YOUR COUNTRY. YOUR COUNTRY NEEDS THEM. The damn vote in the election dropped to practically nothing, and if it had gone on, they would have had to do it. After all, you belong to the country, don't you. I'm stating the old Indian phrase. These Europeans came in here and said, "This is my country." The Indian never said that. He said, "I belong to the continent."

Come on, you can have some fun if you'll get started back there. There are some nonmembers here. I'd like to have some questions from them. I'll deal very gently with you. With these Technocrats, I'll throw anything at them, even the kitchen sink. Come on, there are some nonmembers here. THEY DON'T WANT TO BE

PUT ON THE SPOT. I won't put you on the spot. You don't even have to stand up if you'll ask the question. Is that fair enough? I just want to get your reaction. What do you think you are attending? We're not socialists, communists, or fascists. Republicans, Democrats, conservatives, or liberals. We're a new type of radical. We're so damned radical that we think Communism is so far to the right that it's bourgeois. Communism is revolutionary enough for the underdeveloped parts of the world, yes, it's radical enough, but it wouldn't do any good here. You've got to have something way out here -- way left -- left of anything that has ever been heard of in history.

The American railroads are all going bankrupt hauling passengers. We once had the Erie Railroad with a wide gauge. You once had the railroads in the south with a wide gauge. They weren't changed until after the Civil War. There haven't been any ideas or any innovation come out of the railroad industry in practically a hundred years. If you run into a city, you deadend at the station. No communication between the stations. You can't get the passengers out of the city, and you can't get them in there fast enough. The cost of running them is too much. So now you want to dispose of all the commuting railroads to the community and have them subsidized by the municipality, the state and the federal government, and let the railroad company get the cream. Well, you won't tolerate that very much longer.

You've got a railway station up in Cleveland, haven't you, a great big pile of nonsense. They've got two big piles in New York, the Pennsylvania and the New York Central, and you can't get from one to the other. The trains have to back out. Chicago is worse, though, it has seven. There's a great big beautiful edifice out in Los Angeles, the Union Station, you run in there and bang! deadend. In Seattle, you have two railroads run side by side like that -- two beautiful stations -- deadend smack up against each other! Talk about idiots. Even the Chinese aren't that crazy, but it's made multimillionaires, and now it won't run any more.

You could have railroads in this country, but they'll have to be 3 meter gauge, 200 miles an hour -- that's only five hours between New York and Chicago. You couldn't afford to take a plane from New York to Chicago if you could take a train in five hours. It takes you the better part of an hour to go to the airfield

each place, takes you 25 minutes to get your baggage out of the claim after you've landed; some places it takes you longer to get your baggage out of the plane than to fly the distance. No, I'm not kidding. I can name you the places. As an example, if I'm on tour with 10 pieces of baggage -- equipment, only two pieces of personal baggage -- to go in and out of a city, not the hotel bill, just the handling of baggage exceeds \$20 -- 30 to 40 cents apiece for each of these redcaps from the train to the taxicab. It's got to the point where the only way you can really travel would be in a bikini, and it's slightly chilly for that. THEN WE WOULD WANT ALL WOMEN SPEAKERS. All women speakers? Well, then, we'd insist on specifications. After all, I'm an expert on figures.

HOW CAN WE GET THESE WOMEN TO PUT THE PRESSURE ON?

It's coming on them, but don't think you are going to go to church and get it or to lodge. Let's face it, after all, the Knights Templar were the most efficient fighting organization in the Crusades. They also acquired the biggest amount of property and wealth, and those were the days when there were no heretics except the hated infidels. There was no schism in the western church, and the Knights Templar arose to where they were the wealthiest organization in Christendom, correct, outside of the church itself; and then the King of France and the Pope combined to pull the rug out and it grabbed all the assets of the Knights Templar, that beautiful catholic organization of the Crusades, and DeMolay, what happened to him? HE WAS BURNED AT THE STAKE. Correct. So now you have the Knights Templar as part of the Masonic; in other words, they're following the catholic organization. You know how dumb the bastards are?

All right, you have York Rite and Scottish Rite in this country. There are a number of Masons in this audience. Can you tell me what the Continental Rite is? Come on. We have a number of Grand Masters and 33rd degree Masons -- some of them didn't know. One of them comes in, the captain of a 20,000-ton boat, and they see his diamond pin, but when he gets up there in the lodge in the capital of a foreign country, it isn't Scottish Rite, it isn't York Rite, it's Continental Rite. When Hitler and Mussolini and all the rest of them were slaughtering the Continental Rite Masons, the Scottish Rite and the York Rite sat on their God damned fannies and never issued a single protest. That's the time

when I addressed the Masonic Order out here in a state just west of here in the State Consistory, and I said, "You ought to take those damn diapers from around your waists and wrap them around your necks unless you can get some militant action!"

Now, it isn't that they weren't something once -- they were. So were other organizations, but what have they become? They have reached the point today where, my God, the admission to certain fraternal orders has to be on a Dun & Bradstreet's rating. And when you reach that point, you haven't any vitality or militancy left. You are going to conform, and when you reach that point of conformity, you might just as well shoot yourself as a collective body. I don't mean to say that I have any enmity against the Masons or any other fraternity -- I am just pointing out the historical part of it. After all, you turn the dollar bill on the other side, and you have the circle and the unfinished pyramid and the all-seeing eye, ANNUIT COEPTIS NOVUS ORDO SECLORUM -- it's legal, it's the other side of the Great Seal: Time Makes Way for a New Order of the Ages. Why in hell don't they turn the Great Seal over? You're all set for it.

INAUDIBLE QUESTION OR REMARK

Your insurance companies, you see, are expanding at 7.1% per annum, and they only have to go a few years more before they own 55% or more of all that's ownable on this continent; so it's a race between your women and the insurance companies. But the number of women who own that wealth you are talking about, how many is it? How many would you think percentage-wise? TWO TO THREE PERCENT. You wouldn't say it was 25% of the women of this country, would you? No. ABOUT 9%. No, less than that, it's only a couple percent, so those are the favored femmes.

WILL THE ADDITION OF HAWAII AND ALASKA AFFECT OUR CONTINENT SUCH AS MAKING IT VULNERABLE TO WAR?

No, it won't alter it. Might raise a little more coffee in Hawaii. There's a great boom in raising coffee out there. They're bulldozing the lava soil, you know; it grows coffee fast. You've got Hollywood stars, you've got retired generals and everybody all investing in lava rock bulldozed into coffee fields.

WHAT WAS THE ARMAMENT ON THE FLYING WING?

Rockets, 1937. ARE THEY OBSOLETE? Are the rockets obsolete? NO, THE FLYING WING. No. What are you doing? Here's your Boeing 707. Here's your Hustler. Your Hustler, you look at it front on, and it looks like a thin wing with a collection of big sewerpipes down here. Looks exactly like a lot of big sewerpipes hung out here. You fly it across the continent, you make record speed, but it's got to be refueled four times. How many thousand gallons do you put aboard a Boeing 707? It's got a great big one like this -- short. Look at the Russian TU-104 and the opening is only about this big around, isn't it, and it's 40 feet long. WHAT'S THE ECONOMY RATIO BETWEEN THEM? Well, figure out the  $T_1T_2$  on that. You can't get much differential in a short run .... INAUDIBLE REMARK [SOMETHING ABOUT A COEFFICIENT ENGINE! You'd have to get that temperature differential. It means that the longer one has to operate at a higher temperature with an afterburner in its tail. ARE THEY USING A COMBINATION ALUMINUM AND .. Well, just say ceramics.

WHAT WAS THE MAXIMUM PAYLOAD OF THE FLYING WING?

Well, that depends on how big you want to build them. A couple of hundred tons. It's all flying surface. You take your planes now and you've got a big long fuselage, haven't you? What percentage of the total surface is flying surface? Very, very small, isn't it? Has it any gliding ratio? Would you dare take a plane of that design and at 20,000 feet cut it and come in to a deadstick landing? Do you know flying? Well, it's been quite a few years since I flew personally, but you can build planes. You take a glider or a Storch design -- did you ever see Odett some years ago come like this with a Storch and run the tip of his wing along the grandstand like this or turn it up like this and run his landing wheels on the face of the grandstand or go down the landing field and pick up a handkerchief in an umbrella? That was a Storch -- STORCH. The principles of it are well known. It's not new. You can design planes that will come in and land in a field of wheat. You can take that Mercedes Benz you've got, you can take an MG, and she's designed for it.

Now, it's like the Pennsylvania Station in New York. When they completed the structure -- not the finish inside, but the structure, and they loaded up the typical bays in the floor with pig iron up to and beyond the floor level, with their

instruments, no deflection. They increased the floor loading 100% and still no deflection, and the engineers said, "Hmm, some floors!" Well, they cut through it. They cut down through it and they had enough steel in that floor to hold a locomotive on it. Cost plus 10 percent. Is that design? No, but it's darned swell business.

Take our original gray cloth. Can you get it today? No, any big textile company will tell you you're crazy. We can take that 72 merino and use 10% of it and make what? Ten times the yardage in women's suits, beautiful finish to it, why should we put it in one man's suit?

MR. SCOTT, I'M A NON-MEMBER. WE HAVE PARTICIPATED IN TWO WORLD WARS IN THE LAST THIRTY-FIVE YEARS, THE UPSURGE IN BUSINESS OF ALL KINDS HAS KEPT THE ECONOMY GOING TO THE EXTENT OR WE WOULD HAVE BEEN IN THIS TROUBLE LONG BEFORE THIS. THE EAST AND WEST ARE BOTH WELL AWARE THAT INVOLVEMENT IN A NUCLEAR WAR WILL DESTROY THE WORLD. WHAT DO THEY DO NOW?

You've reached the end of an era, and I would like to give the answer that Mao Tse-tung gave to the foreign correspondents when they asked him would not a nuclear war destroy civilization. He said it wouldn't. Well, what would be the position of Red China then? He said there would be 300 million Chinese left out of 640 million. You see the irony of that? In other words, we built World War I -- we had the first great impetus expansion. Then you gave your foreign loans, your increase in credit, and you brought it up, and then we went so far that the banks of United States--national frigidity set in -- it froze, and we only unfroze it by federal signatory currency of the United States Treasury under Franklin Delano Roosevelt. Now we're drowning in our own liquidity, and even a nuclear war would not save the system. But there's so damned much junk in this country that maybe a war might have its effect, because for the first time in the history of this country, Americans wouldn't have to go abroad to die. They'd die right here at home.

When our armies reached the Elbe, our intelligence -- I'm not talking of division or corps but army -- were asked to estimate the cost of fighting the Russians, and the estimate was 2,500,000 Americans dead and 8 million in casualties, and you

wouldn't win! Because the Russians had 3,700 guns to a mile of front. THEY GOT THEM ALL FROM THE UNITED STATES TO HEAR SOME PEOPLE TELL IT. Those kinds of guns? Oh, no. The Russian 76, the Russian 152 -- our test on it, the ordnance, shows the Russian 152 outranges our 155. Your Buick plant, during the war, built the Hellcat, didn't it? The Hellcat was a tank destroyer, and the Hellcat had a 76-mm. gun in it, a copy of the Russian. The Russian 240 -- that's the one with automatic firing, automatic loading, long-range barrel, Snyder compensator on the muzzle, constant temperature barrel control -- they and the 498 and the 300s -- that's the one that knocked the Mannerheim forts all to pieces, just turn them over like this. Don't forget that the Russians have the second-oldest artillery school in the world.

Talking about rockets -- the forts outside of Baltimore weren't hit by the guns of the British Fleet, they were hit by rockets, were they not? What's our song? Come on -- in the rockets' red glare. And that was Congreve with the British Fleet, and Congreve was only copying only almost a hundred years before the reduction of fortifications of the cities in India by rockets, and their rocket missiles have lain dormant from the 1700s until now. You could have developed them before. But the Russians were the great launchers of rockets in World War II. The number of rockets in the Neisse-Berlin Battle were so great that at three o'clock in the morning, you could read a newspaper. That's when they flung 480,000 shells of large diameter in 2-1/2 hours, launched 7,000 planes and 6,000 Stalin tanks, and there were 155,000 German dead, or more German dead than all the allies had killed in all the war.

AS AN ENGINEER YOURSELF TODAY, WHAT WOULD YOU THINK OF AN ENGINEER WHEN YOU ARE TRYING TO CARRY ON AN INTELLIGENT CONVERSATION WITH HIM CONCERNING A COMPARISON BETWEEN THE RUSSIAN DEVELOPMENT AND OUR SITUATION HERE AT HOME TODAY -- THE GENERAL ECONOMIES OF THE TWO, WHO WOULD MAKE THE REMARK THAT IT WOULD TAKE THE RUSSIANS FIFTY YEARS TO CATCH UP TO US?

Well, that's just too bad. You'd better be careful or the Chinese will be launching a couple of Sputniks. WELL, I HAD THAT HAPPEN TO ME. Well, but you have got a blockade the moment that you try to make any critical analysis of anything in this "bourzooie" way of living. You can notice these

"bourzooies", you know, they're always fat in the neck, fat in the behind, and they all belong to country clubs. After all, physiological syphilis is cured quickly and simply today, but the social syphilis of golf and the country club is going to take nothing short of a drastic complete physical revolution from coast-to-coast. You can't treat it by any medicinal treatment.

HOW IS EISENHOWER GOING TO GET ADVICE IF DULLES KICKS THE BUCKET?

Ike, you know, has a pipe line to God. Poor Dulles, here he is a great churchman. He was an honor student. He's also a multimillionaire. His son is a Jesuit priest stationed in Rome. A PIPE LINE TO ROME, AT LEAST. Now, are you saying that because there's a "John" in the Vatican? I know it's corny, but I couldn't help it after that. HE'S ALSO INTO THE KRUPP MUNITIONS SETUP, TOO, ISN'T HE? No, Krupp von Bolen YES, BUT HE MARRIED INTO IT, DIDN'T HE? Who? DULLES AND HIS WIFE. No, you see, Allen Dulles is head of CIA, his sister is commissioner in West Berlin, Chris Vollen, Allen Dulles' son-in-law, is in the CIA in Vienna, He got to Budapest in the [foreign aide], and then he dived into the basement of the U.S. Embassy along with Mindszenty. So they have a nice coterie -- Central Intelligence, the State Department ....

WHAT'S HOLDING UP CLARE BOOTH LUCE FROM BEING OK'd FOR SOUTH AMERICA?

She'll be OK'd. She's got absolution. [SOMETHING ABOUT WILLKIE] Now, don't bring up anything that's unkind. After all, a lady's emotional troubles are personal, and you should leave them there. They make mistakes just like the males. The only trouble is they're just like males you see, because they're practical people. Practical people are those who recommit the mistakes of their ancestors.

CHIEF, DO YOU CARE TO REVIEW SOMETHING THAT YOU TOUCHED ON, I BELIEVE IN ONE OF YOUR AKRON TALKS ABOUT A YEAR AND A HALF AGO, WHEN YOU WERE TALKING ABOUT THE DIFFERENCE IN THE PERIODS OF TIME IN THE AMORTIZATION FROM -- I THINK YOU WENT BACK TO THE TIME OF CHRIST AND SHOWED HOW MUCH CLOSER AND SHORTER THESE PERIODS OF AMORTIZATION ARE DOWN TO THE PRESENT. WOULD YOU CARE TO TOUCH ON THAT?

Under human toil and hand tools, you see, even at Hammurabi's time, 1300 BC, your torts, titles, leases, and so on were identical in substance to what they are now, but your annual increment of growth under human toil and hand tools, it took a century to amortize out principal and interest of any major debt. That wasn't because of any duplicity or any immorality on the part of the monied interests. That was because the productive processes were so slow. We have a few illustrations in United States where the investment of capital per employee is almost \$4 million. Modern technology has reached the point to where we have examples of equipment costing millions that, if operated at 75% or more capacity, will amortize out their principal and interest in 5-1/4 weeks. For thousands of years, mankind had to work like hell -- slavery -- to amortize out something once in a century; in other words, you could reinvest your capital only once in a century. At 5-1/4 weeks, you will find that that's an increase from one in a century to 900 and something in a century.

So the more of this high-speed equipment, now Kerney and Truckner in the M.I.T., you've got a nice frontispiece on the BUSINESS WEEK where they are all watching the thing running, and tape selects the tools, does the thing and corrects its mistakes, inspects it -- nobody's doing anything. They're all there just to fill in the photograph -- it runs by itself. Modern corporate enterprise is finding out that when you have a huge number of employees with unemployment compensation, with social security, with health benefits, sick this and the other, all that paperwork -- the easiest thing is to eliminate these. Now you look up a thousand corporations in United States and you will find what trend? That the employees are declining and the stockholders are increasing; so that you have a whole raft of corporations today totally different in their structure than they were thirty or forty years ago, where the stockholders are five to seven times that of the employees. The employees are continuing to decline, and the stockholders are continuing to increase as they increase their stock dividends. Hartford and family, that had sole control of the A & P, that's now selling out to the public, just as Ford was disposing. Now there are a few less things yet to be had, like the holding corporation of the du Ponts and the Superior Oil -- one is \$1,900 -- and the other is something like \$4,000 a share -- those are the beautiful lemons, aren't they, to cut with the public? But that is going on, and will continue. The only

trouble is that they are designing that equipment with less and less to manufacture this junk, when the same automaticity and controls in precision can be used to manufacture something that would be a continental investment instead of a turnover every couple of weeks.

IS IT LIKELY THAT CANADA WOULD EXCEED US IN TIME IN REACHING A CRISIS?

In certain things, yes, but in other things, no. Canada is part of the continent, but you are not going to have population in the majority of Canadian areas. Population is just in a little band like this and then goes up a little.

JUST HOW BAD WAS IT FOR THE PEOPLE IN HAWAII AND ALASKA BEFORE THEY CAME INTO THE UNION?

What do you mean bad? I don't understand you. WELL, DID THEY HAVE THE INCOME TAX TO PAY THAT WE HAVE TO PAY UNTIL NOW? Now you can nick them all better. It's like Rockefeller in New York, you know, he's really going to save it. There is some advocacy in Cleveland, isn't there, of a city income tax? YES. Well, Philadelphia has it, you know, but you can only have a city income tax provided there is no state income tax. Your taxes generally are going to rise. Townships, counties, states, municipalities, and federal. You have 52,000 educational districts in United States. There are about 104,000 governments in this U.S.A. of ours that are empowered to levy and collect taxes and issue debentures. You think you are going to have an educational system with 52,000 different districts, all with their respective Boards of Trustees, and they never agree on any national curriculum? It's the same way with police forces -- you have thousands of police forces. You've got over 16,000 municipalities, over 17,000 townships, over 3,000 counties if you had one police force -- a continental constabulary -- clean across this country, where there's guarantees; in other words, he puts in his service and he's retired. He can't do that now. He's liable to step on somebody's toes and be shot the way the hell and gone out to the 29th precinct in the suburbs to hit the pavement, if he makes a mistake. Like the boys that looted the safe up there in the police property custodian of thousands of dollars -- well, nobody was using it! They didn't even lock the safe up at night, what are you talking about? Don't blame them --

HOWARD SCOTT, KENT MEMBERSHIP

3-21-59

it's the system.

Well, I started out with a terrific headache, and I've battled myself out of it. I wasn't in the best of form tonight, but I tried to hand you something, and in case you don't know it, it's a quarter after eleven. If I may .... thank you.

\* \* \* \*

HOWARD SCOTT  
DETROIT, MICHIGAN  
APRIL 23, 1960  
DECADE OF DECISION"

On December 31, 1959, one decade came to an end, and a new one began. The Filthy, Fabulous Fifties passed into history. Remember, we had the Dirty Thirties and now we are in a new decade, a decade in which lies ahead problems the order of magnitude of which this country and no other country ever faced in history. How we are going to meet them and what we are going to do about them is a matter for the people of this country. Up until now, they have all had a wonderful time. True, they had World War II, but then it really wasn't much of a war when you stop to think about it. We fought one war in the Pacific, a kind of one in Burma, and not very much of one in Europe. For instance, if you read the reports of Schaaf on D-day plus 34 -- that's 34 days plus one after landing on the Normandy Beach, you'll find that there is less than 5,000 dead and 34,000 German prisoners. It is the first time in history that that kind of action was called a war. Never before had that many miles of front ever had so few deceased. You'll get it in a moment. The German Army was in retreat. If you figure out the number of dead per mile of front per day. they would have killed that many in peacetime maneuvers. Facts speak for themselves, in spite of the ballyhoo of our armed forces and our press. Never before in history had you had such an action where so few died after the greatest naval bombardment in history, after the greatest aerial bombardment in history. It figures out to only a fraction -- one and something -- dead per day per mile of front. That isn't war.

Just let's review a few things. In Africa, Rommel only had six German divisions and not fully equipped at that. He was stopped at El Alamein. The El Alamein front was 18 and a fraction miles long from the Mediterranean to the Kutara Depression. If Rommel had had four more divisions, he would have gone through to the Persian Gulf. He ran out of ammunition, and the Allies chased him from El Alamein to Bizerte, 1,400 miles and more on a single road -- the only road there is -- and never caught him.

The Allies in Italy permitted the Germans to occupy the Apennines, which is the second strongest, most defensive position in all Europe. The first, of course, is the Alps. Ten and 12 German divisions held the Allied forces at the Apennines for over 20 months.

The longer you go on with this, the more fishy it smells. Of all the German divisions, 85% to 90% of the German casualties were not the result of the Allied forces. They occurred in Russia. We never had any tank attacks on the Western Front of 200, 400, or 600 tanks in a single grouping. Ten to twenty tanks, yes. The only time there were mass tank attacks on the Western Front was on the British left flank at Caen, when they tried to close out the Panzer Corps and failed. That's the only time. Yet on the other front to the east, there were mass tank attacks of 200, 400, and 600 in the same day. Stop and think what it means. You've been kidded into the idea that you had a victory, but you didn't do it. You won one in the Pacific, yes, island hopping, but you didn't win it over there.

In the meantime, your war prosperity and your postwar prosperity piled up an enormous complex of technological equipment. Technocracy has been pointing out for thirty years or more that when the extraneous energy consumption of this country rose to a certain amount, it would compel the people of this country and this continent to realize, because an expenditure of a certain amount of extraneous energy per capita per day would result in a majority of the adult population of United States being no longer required in the production and distribution of physical wealth. We've been laughed at, we've been called names. Remember over the last 15 years and more, you've been subjected to the propaganda that machines made jobs. It's been hammered into you every day in your press, your radio, and your television, but now they have suddenly gone still, haven't they?

Back in 1920, John L. Lewis had 780,000 coal miners. True, John L. Lewis and the United Mine Workers and the coal operators succeeded in raising the coal mining rate to the highest in the world for the American miner -- 8 tons per man per day. Today John L. Lewis and his United Mine Workers only have 235,000 miners. Is he going to have those long? Oh, no, because the newest equipment mines 8 tons of coal a minute -- not a day -- 8 tons a minute. He won't have room for the miners.

Of course, this city here has an analogous condition to Chicago. Chicago once was hog butcher to the world, the great slaughtering center. They shoved their meat and their lard around the globe. Well, the Big Five have left Chicago, ladies and

gentlemen. I don't know whether that is going to happen in Detroit or not with the automobiles, but it could. Remember United States used to produce so many automobiles that the rest of the world didn't have a chance. Now the rest of the world is producing more automobiles than United States, and what's funnier yet, you boast about the high-speed assembly lines of Detroit producing a car every 31 to 40 seconds -- yes, that never was challenged. Today in Europe, it's rolling off one every 19 seconds. Well, Mr. Detroit, you're going like Chicago, aren't you? And that automation in Europe is not a direct copy of American -- they developed their own.

Your steel industry, your chemicals, agriculture -- farms are being deserted every year. Thirty years ago, Technocracy pointed out that the number of farms in United States would decline in every year, and that the farming population would grow less and less. Your new census this year will show that the farming population of United States may be less than 16 million, a big drop from 30 some million 20 years ago. Now the irony of it is that the more they leave the farms, the more we increase the agricultural production. What are you going to do with 1.7 million farmers a year? They're deserting farms in Iowa today, selling out, 328 acres, 260, selling them at sheriff's sales. Look up your records. Your sheriff's auction sales are 50 to 60% higher this year than last in Iowa. It no longer pays. They want to go into the city to get jobs.

Technocracy has photographs of one piece of equipment fertilizing, seeding, and planting 70 acres of wheat an hour. It is in operation in Texas. Well, why not? There never was any sense in work, was there? You never got rich doing it. It was only the smart boy that got you to work for him. But you have that delusion still. Labor organizations in this country have gone completely astray. They are in favor of greater armaments, more atomic missiles, more bombs, more planes, more aircraft carriers, any damn thing in military weaponry, on the basis that it will provide more jobs for the labor unions. Will it? It did for a little while. Read the official magazine of Boeing Aircraft just out. They are notifying their employees and personnel that in the change -- over from aircraft to missiles, Boeing will reduce its total personnel over 40% by this coming summer. That's slightly over 40,000 employees aren't going to work there any more. Douglas has laid off 1,800 engineers this year, a lot of

them with 22-25 years' seniority.

Any field you like, that is, actual production, and the same trends are visible, evident, and obvious.

Turn around and view our national economy and realize that our expansion is only 2.7% per annum growth. The BUSINESS WEEK, WALL ST. JOURNAL, and other financial publications hold forth about the amount that we are going to spend on capital goods, that that will increase expansion, and they mention \$30 some billion with a peak of \$37 billion, but it would take a lot more than that, because they are leaving out the fact that you have had population increase, and the only correct way to measure expenditure on capital goods is capital goods expenditure per capita. That reached its peak, ladies and gentlemen, in 1954 and has been declining ever since. What does it mean? Russia is expanding at 11%, East Germany at 18%, Red China at more than that.

Now this very little, lovely Price System of ours is wonderful, so long as you continue this inflation, but the inflation requires a continuous expansion of the national economy in order to validate. If it cannot have that expansion, it cannot validate the outstanding instruments. Of course, it has led to the most gigantic amplification of credit the world has ever known, and in that amplification, we've put in new equipment and new plants, with the result that we cannot run our plants in our major industries wide open for more than seven to eight months. We'd drown in it.

The National Cash Register -- look in their Annual Report, and you will find that over 50% of their gross no longer comes from United States and Canada. It comes from business abroad, and they give the very nice explanation in there that one of the reasons why it no longer comes from United States is that there is one cash register for every 34 Americans. The only way to increase it is put one in every "john". In other words, you've reached saturation. We have the technological capacity here to produce so damn much that it drowns us. We have a war budget of over \$40 billion. Our installment buying is almost \$50 billion a year. When you reach \$500 billion a year gross national product, examine the figures; you're \$115 billion short in national purchasing power to buy that production, and you're approximately

\$50 billion in hock for installment buying; so that puts it \$160 billion short -- because you've got to pay that \$50 billion, you know -- a year. The sucker public of this country thought it was going someplace when it bought a house out in the suburbs -- they thought they had moved to the promised land. Talk about Paradise Alley in Detroit, it was all paradise in every suburb. Now it's not so good. You can only pile it up so high before it starts to slide down on you from all sides.

The question is: what are the public going to do about it? Going to vote in a Democrat or a Republican or a Hottentot? It doesn't make a damn bit of difference -- not the slightest. Internally, we haven't done anything to develop any national perspective or national leadership. Look at the mess the railroads are in. They do not want to carry passengers. They want the states and municipalities to subsidize the passenger service and raise the money. Practically in every big city in United States, the railroad stations are in the wrong place. Pennsylvania Station in New York is on one side, New York Central is uptown, no connection between them. Your trains from the north and northeast can't go through. Those from the west can't go through. Chicago is even worse. We won't talk about Detroit. Seattle you have two railroads running side-by-side dead-ending in two beautiful stations that go nowhere. Los Angeles builds a beautiful Union Station with a great big patio, you know. It really takes a scooter to get off the platform to get out to the taxis, and it dead-ends. You've got to back out the Super Chief or the City of Los Angeles. What kind of nonsense is it? But this has been going on for 60 years and more, and now it has become cumulative, where you cannot avoid it much longer.

Take a look at ourselves. We claim we're going to produce 115 million tons of steel this year, but it's doubtful if we're going to use more than 50% of that amount in Lake Superior ore. Does that mean anything to you? In 1950, the steel industry of this country imported 9 million tons of iron ore. Last year, they imported 39,900,000; If the figures are correct for this year, it will mean over 50 million from 12 countries. The great Mesabi Range -- that iron ore is mostly gone, and it's around 50% and they have to struggle getting it at that. It costs \$3.75 to \$4.00 a ton to bring ore down the lakes. You can bring ore from Africa for \$2.75 or Venezuela; in other words, you can bring it 2,500 miles instead of the 800 miles for a fraction of what it costs

for the 800 miles in the Great Lakes. The costs are too high. Everybody's been scalping it to their heart's content. Well, the steel boys and the ore boys own the railroads that took the iron ore from the mines to the dockfront. They owned the boats that took the iron ore down the lakes and then the railroads that hauled the ore from Ashtabula and other points down to Pittsburgh; so, they collected on it three times. The cost of hauling a ton of iron ore down the lakes is the same from the mine to Superior and identically the same all the way down the lakes by water, and then from Ashtabula to Pittsburgh. The long haul on the lakes is 1/3 of the cost, the other 2/3 are rail.

Well, every time in history when the people won't change, they pass out. The dinosaur couldn't change, and he left his bones to posterity. The people of this country have to make up their minds. The change is here, and they've got to change with it, or something is going to happen to them.

I think you produce Ked rubber shoes here in Detroit, do you not? The United States Rubber, correct? What's the largest producer in the world of Ked rubber shoes? Red China today. Are we laughing? The greatest producer of bituminous coal is U.S.S.R., followed by United States. Red China is closing the gap on us in bituminous coal. It was only a few years ago that we said it couldn't be done. Now we don't know what the devil to say. We have built one integrated steel plant in United States in the last ten years -- twelve years -- Morrisville, Pennsylvania, opposite Trenton on the Delaware, not quite 2 million tons. All right, let me review a few steel plants for you that are in construction and nearing completion.

Cashisch in Eastern Czechoslovakia is 3,900,000 tons. Teschenostarva in Czechoslovakia in the north is 4 million tons. There are several one million tons nearing completion in India. The Russian and British plants are already completed and in operation. The Russian plant is the only one running of the new ones at full capacity. The British are at only about 55% of capacity. In China, there are six plants under construction, over 3 million tons' capacity each. They are building steel plants with 2,600-ton blast furnaces, and 500 to 600 ton open hearths. You don't have to take my word for it. You can get the latest booklet from United States Department of Foreign Commerce, and in there it will show you in photographs, writing, and in tables.

One steel plant in Red China has completed its 25th open hearth of 600 tons' capacity. Have you got a steel plant in United States that has 25 open hearths of 500 to 600 tons each? You have not. Well, what is it, that we lack the brains or ability to build them? Hell, no. We have it. We've got the brains, the know-how, and the capacity, but the trouble is those brains are all brand new -- they've never been used.

This is happening around the world. You've got automobile plants in Australia, truck plants in India; an automobile engine plant in Brazil has just passed its 100,000th automobile engine, and the Volkswagen plant in Brazil has achieved such an efficiency that it is making the Volkswagen buses -- microbuses -- cheaper than they are made in Germany, and they have applied for permission to ship 3,000 micro Volkswagen buses made in Brazil a month into United States. Who's cuckoo? The Brazilians? No, we are.

You can go on down a long list. There was a day when visitors came from all over the world to see the Tennessee Valley, the Boulder Dam, and the Grand Coulee. Are they going to come to see those anymore? Oh, no, why go to see something that small? Russia has completed two and has three more under construction; of course, the Kuibyshev on the Volga is the most publicized. That's transmitting 400,000 volts, 3-phase AC, 600 miles into Moscow, and is over 2 million kW. Bratsk on the Angara is 3,700,000. Krasnoyarsk on the Elbe is 4 million kW. Well, that's pretty good size, but 60,000 Chinese and 1,800 engineers, Russian and Chinese, have started work on the Achang on the Yangtze, and the turbine plants have started work on the turbines. According to the latest information, those hydraulic turbines will be 500,000 kW in a single unit. Why? Because the Achang Gorge on the Yangtze will be 25 million kW in a single installation! Well, you think that's something, do you? Well, yes, that's got quite a flow of water. So has the Congo at the Inga Rapids, and if you built a giant dam at the Inga Rapids on the Congo below Leopoldville some 16,000 feet and more in length and 380 in height, you could develop 20 million kW, because that's close to a million second feet. Well, but there's another larger -- the world's largest potential power plant is on the San-Po. You may have heard of it under the name of the Brahmaputra. The Brahmaputra comes all the way across Tibet, and just before the Indian boundary, it does a nice U-curve in the

gorge. That gorge is 10-1/2 miles wide. There are 70,000 and more second feet run of flow in the San-Po. You tunnel that 10-1/2 miles, and you drop that 70,000 second feet 7,500 feet and it's 30 million kW without a dam or a reservoir. If you build dams large enough for reservoir and peak-load capacity, according to Dr. Hanstring of Austria and the consulting engineers in London, England, it would be 52 million kW. Come on, where are you? You're nowhere. You haven't had a concept here by private enterprise that's later than 1648. Admit it. Big shots? Oh, yes, as far as being members of the country club and playing golf. Well, that's all Ikie can do. After all, Hazardous Harry was welcome in the best houses even if he was slightly old, because he could still play a piano; but nobody wants a golf player trying to break 90.

We're in a unique condition. We've got railroads that should have been junked long ago and rebuilt and redesigned. If they'd had the concept -- let's look at the history of the Erie Railroad. It once was six feet wide. The railroads of the south were wide gauge and didn't change to standard gauge until some years after the Civil War. Lincoln, you know, was a great railroad attorney, and he had such boundless knowledge of railroads that you will find over his own signature the advocacy of building the Union Pacific Railroad three feet wide. Are you proud of anybody with that kind of a picayune complex? Yes, you made a legend out of him. That's how little he knew. Our present gauge is 4 feet 8-1/2 inches; of course, there are three countries that have slightly wider gauge. But if you designed railroads to really handle traffic at high speed, they would be 3-meter gauge -- 9 feet 10-1/10 inches from inside of rail to inside of rail. Then your cars, instead of the center of gravity being way in the air and when they hit any speed they whip like this today, no, they would be down squat and your cars would be 16-17 feet wide and the bottom of the car would be smooth like a boat four inches above the rail, and it could hit 200 miles an hour comfortably. Then you couldn't even afford to fly from New York to Detroit or New York to Chicago, could you? The railroad would beat you, correct? Certainly it's correct.

But no, you built the railroads for profit, you built the airlines for profit, and now the damn things won't work right anymore.

So, we're going to hold a national election this year, and we're going to elect a new president and vice president. Is that going to solve anything?

Let's take a look at some of these things. The St. Lawrence Seaway has been advocated for over a century, and when the Canadians got the idea that they were going to put in their own canal, Washington and our administration jumped in to spoil it. After all, Washington could have said to Canada: Look, throw in your few hundred millions and we'll make a real job of it. Now, instead of this 27 feet over sills and one-way canals -- that's what you've got -- it's an abortion, and bear in mind that there wasn't a damn Russian involved in it! Who did this abortion? Ninety-five percent United States and five percent Canada. Try to put a boat up through the one-way St. Lawrence locks, and then you come to the Welland -- eight locks, and it takes you 11 to 12 hours. Well, over in Russia, the politicians did the same damn thing as you did here. They built the Don-Volga Canal. The water control was excellent. The canal was a lousy abortion. Was there a single American involved? No. I'm bringing this up to show the same moronity, the same stupidity is in U.S.S.R. as there is here. There were no Americans involved in the Don Canal and no Russians involved in the St. Lawrence Seaway, and the Russians and United States made a mess out of both.

Well, what should you have? Forty-nine feet over sills, two-way, only a couple of locks from Montreal to Ontario level -- hydraulic lift lock from Ontario to Lake Erie, 326-foot lift, 60,000 tons up and 60,000 tons down in 15 minutes, instead of 11 hours. Well, why not? It's been designed.

Now you have Spohn of the American Gas & Electric coming out with a big ballyhoo that they are going to build a high tension line down here on the Ohio River of 750,000 volts so as to get ahead of the Russians. I'd like to recall to you, ladies and gentlemen, that in 1923-24, when I was consulting engineer to the State of New York, we drew up a continental power program, and that called for a million volts DC. Technically, is it correct? Yes. Your engineering societies have had it, your Westinghouse, General Electric, Allis-Chalmers, and all the rest of them. Recognition? Well, you got more recognition abroad than you got here. We're having our smiles, because the U.S.S.R. has announced that it is going to build two 4,000-mile grids of a million-volt

DC. It isn't Russian; after all, it belongs to Technocracy -- 1924. I'm glad Stalin isn't alive, because he might award me the Stalin Prize, and I'd be out of luck.

Right now the Bucyrus-Erie is completing a new shovel. It's 115 cubic yard capacity in its bucket. It stands higher than the Golden Gate Bridge -- 460 feet in the air. It has thousands of horsepower -- one man in a nice little cab up there, and a swing every 47 seconds -- 115 cubic yards. It weighs more than a ton to the cubic yard, doesn't it? It will be owned by the Peabody Coal, St. Louis, and it will take 300 cars to ship the entire equipment and a year-and-a-half to assemble it in the field, but there will be a lot of Johnnies won't work at open-pit coal mining. Not with something that size running. That's the trend. They're faster, they're bigger, they're better.

The women in this audience who sit in front of TVs, you know, and those Playtex Living Bras, 3-way stretch, 7-way stretch, and all the others -- well, where does the greatest volume of the American-sold bras come from today? United States? Oh, no -- Hong Kong, China. So you have to have a Chinese stretch in them, huh?

Machine tools -- we've lost our position in machine tools. Czechoslovakia, East Germany, and Russia are taking the lead. You can buy flashlight batteries now in Baltimore, Philadelphia, and New York, waterproof, look the same, made the same, 8 cents apiece. Made in United States? No. Made automatically? Yes. Made by the same equipment? Yes. All the same Chinaman. What are you going to do?

Here's canned pineapple -- used to be solely from Hawaii, didn't it? Then, of course, you've got Isle of Pines, Cuba; now you have Mexico, Formosa, and Red China is coming into the market with frozen pineapple and canned pineapple. The answer is very simple. Up until last year, the Japanese had over 40% of the textile market of Hong Kong, Singapore, Rangoon, and other points in the Far East. The Indians' textile industry was giving them a stiff competition, but Red China has come in and chased them down from over 40% to 4%. Going, going, gone. Red Chinese bicycles are being sold in Burma and other points in the Far East for less than the British can ship them there.

What's that nice drink that you make out of the powder? What's the name of it -- British? You mix it up at night. Don't you know it? Well, the Chinese are making it, same label, same size glass container, and they're selling it for 40% less than the British. Well, why not? This is happening, China used to have to import 30% of her rice. Now, the Chinese reorganized agriculture, plus the Great Red River Valley of North Vietnam. They are not only able to supply have sufficient rice to meet their own needs, but they can export rice. They dominate the rice market of the world today. China is producing as much wheat as we are, and when the Kansu Canal with its giant irrigation goes in, Chinese cotton will exceed our cotton production. India's cotton and Russia's cotton are coming up. When the world's cotton production passes 40 million bales, the increase will be abroad, then the United States can pile the cotton on the streets of Memphis, Dallas, and other southern cities, because it will be swell to create a shade to sit in. It's short fiber, low tensile strength cotton. Right now we are loaning money to foreigners to buy the damn stuff with. Peru, Brazil, and other cotton-producing countries -- Mexico -- are complaining that we're not trading legitimately in the world market. Well, we aren't, but a few more million bales a year, and the world cotton market will come down around our ears.

Well, what won't? We produce 330 million barrels of cement in United States, but the rest of the world is moving up fast. One of our members of Technocracy has completed the sixth plant since the war in the Philippines, and the second in Indonesia. We have Technocrats in a lot of funny places, you know. Yes, they put in the mine equipment up in the top end of Norway, you know, only two miles from the Russian frontier. The Russians are building cement plants, the Indians are, the Chinese, Pakistan, South America. Fertilizer is catching up. Pretty soon, there will be plenty of fertilizer. Pretty soon, there will be plenty of cement.

Just as today -- let's stop and think. It was only a few years back that the amount of foreign steel coming into United States was insignificant. Now when it goes over 4 million tons, we're screaming. You can buy barbed wire in Ohio from abroad for \$40 a ton less than it is made in Cleveland. There's the report of ARMC0 out this week complaining that it had to shut its steel plant down in Texas. What for? Because of the import of foreign

reinforcing bars was too much. Fencing, barbed wire, and reinforcing bars are coming in. On the Pacific Coast, you can buy Japanese-made nails in beautiful little kegs all moistureproof and everything else. Can they make nails? Sure, why not? Automatic nail machines -- nobody in the damn plants, you know. Nobody wants to stay in there, there's too much noise anyway. Besides, it's automatic. The Japanese can shove their foot on the hydraulic trip the same as the big American. The effect is the same. It doesn't make any difference whether they're white, black, brown, or green, tall, short, broad, or lean. If you have the technological equipment, can do. If you haven't, you can't do.

Stop and think what the great difference is. The Mediterranean civilization -- if everyone in the Mediterranean civilization had been 100% Christian, you'd never have altered the standard of living one iota. If all of North Africa and the Near East had been 100% Mohammedan, you wouldn't have altered the standard of living one iota. And the same thing goes for Hinduism, Buddhism, or anything else. It wasn't until the advent of technological equipment, and without technological equipment, you can't alter it; but this technological equipment is going in and is altering it. It's a precursor of social revolution whether anyone likes it or not. The Bolsheviks in Russia with their Marxian Communism -- if all they had had was Marxian Communism when Hitler's divisions marched in, they would have been annihilated. What defeated the Fascist armies of Europe wasn't the Marxian Communism, but the technological equipment. And we're under this grand illusion that you can defeat something with bayonets, bombs, and nuclear weapons. Well, you cannot destroy an idea or a mores that way. The only way it can be done is supersede it with a more efficient, faster mechanism. Your Christianity isn't going to do it, your Mohammedanism isn't going to do it, your Hinduism, your Shintoism; and if they fail to adjust themselves to the marching tempo, then the bulldozers of social progress will snow them under.

Black Africa is on the move. The European nations have divided Africa and split it up into 41 pieces. What you hear most of here is South Africa. Most of the south African negroes -- nine million -- that includes the Colorad and the East Indian, are Bantus. Those Bantus came from the jungle. Well, who brought them there? The big corporations, Rand, DeBeers Consolidated. And

who was one of the great importers of Indian labor? Who? Herbert Clark Hoover brought in the first to Africa -- nice Quaker, Christian Hoover. Yes. If you want to place a bet on it anytime, bet your head off you'll win.. And Ghandi, who is dead now, was one of those originals who was brought to Africa by the Hoover-controlled organization. The Bantus in South Africa, well, they're not on a par mentally or physically with the Masai, the Matabelia, and others.

You don't hear anything very much; for instance, this week, there were 27 killed in the Cameroons and 150 some wounded by gunfire -- that's up north of the Congo River -- there was just a little item like that. The political opposition in South Africa backs the Afrikander Government, and previous to the Afrikander Government, the British controlled South Africa and backed the big corporations to bring in the Bantus. Let's be frank and face it. They were the ones who dug the gold, the diamonds, and the rest. The gold mines are so damn far down -- 9,000 feet -- and you can't work there if the ventilation system goes off. You've got to get out. But it's running out.

As you move north in Africa -- if you think the disparity in South Africa is something -- nine million to three -- in Nigeria, there are 40 million blacks and 12,000 whites, but the blacks have been running Nigeria. They have an army, they have administration, and bear it in mind that if Nigeria had the arms, she could lick South Africa and Egypt combined. If you want to see a nice picture of a Nigerian army, view the color pictures of Queen Elizabeth reviewing the Nigerian Army. Too bad for the little girl -- they should have put her on stilts -- those giant Nigerians going by and she was down like this. Shouldn't have subjected the poor girl to that. Those Nigerians went by and there is no parade at Sandhurst or at West Point was ever any better than that. Brother, they were good.

Now, you have problems like this. Here's Egypt, about 580 miles in length, it only has six million acres of arable land, 23 million population, going up at 3% per annum. If you build the new Aswan Dam four miles north of the Aswan, it will take about 15 years and throw in about 1.8 million acres, but the land:population ratio will be worse when you complete it than it is today. To give you some comparison in the Near East, Iraq has less than six million population and over ten million

acres of arable land and twenty times the land:population ratio of Egypt. With Iraq, you could do something; with Egypt, very little. Population is exploding all over the globe. Our prosperity boys -- Wall Street, Madison Avenue, and Washington hail four million babies in United States as indications of future prosperity, don't they? More diapers, more bottles, more baby carriages -- go on.

The world only had about 800 million population in 1800, and now the estimate is 2.7 billion. It's increasing every minute. Population -- you won't have to wait fifty years, a hundred years, twenty-five, or ten -- the next five will do it. If you think Japan, China, and so on are the danger spots, let's correct you. South America has the fastest growth rates in population. Venezuela's birthrate is 47.4 per thousand; deathrate, 10.2 -- bound for the wild blue yonder. South America has neither the land nor the resources, and you will have to face .... (OMISSION BECAUSE OF CHANGING TAPE) Population growth is serious in many parts of the world, and we have to face the proposition that population growth has to be stopped regardless of your beliefs, your morals, or your religion. Someone asked me the other day was I in favor of Senator Kennedy. I said, yes, I would be in favor of him if he'd come out for a collective birth control. They didn't think that was quite fair.

Collective birth control is not Margaret Sanger's voluntary parenthood. Get rid of any of that kind of nonsense. You cannot do it by individual, voluntary action. It has to be done collectively. Can it be done? Yes, and let's explain. The female of the human species has been known for a long time that it had and did dissolve the fetus without any deleterious effects on the reproductive mechanism of the human female. What triggered it wasn't known until lately. They have found the trigger. It's low-cost, odorless, colorless, tasteless, and if any of you have ever bought any of that rat poison Warfarin, down on the bottom it states the percentage of active ingredients in the total volume. Well, you look at it, because it is almost the approximation of that active ingredient in minute percentage, .0004 of 1%, get it? You put it in the drinking water of any metropolitan water system, and no mammals -- cats, dogs, humans, or so on -- will reproduce. You see, we Technocrats are going to get you sooner or later. And it won't differentiate regarding religion, color, race, or size, will it? And yet, all you have to do is stop it

and in six weeks, the female is just as good as she ever was -- of course, the male might not be. They will really have to be good, those men, won't they? But population growth has to be stopped. That you have to face.

Well, let's see what else has to stop. The pollution of our rivers, our underground waters, well, we've had a wonderful time. When we divided up the farmland of this country into quarter sections, we had one well and one Chick Sales Emporium per 160 acres -- four to a square mile. That was all right, but now we sell that whole square mile -- four quarter sections -- a subdivision, and we put down 4,600 cesspools and 4,600 wells, and then we think we're all right. Down in Florida on the Keys, what have they been doing? They've had a boom over all Florida and down there, too. Well, you built your house. How did you take care of your sewerage? You took a stick of dynamite, shoved it down in the coral, and blew a hole in the coral. Whoopee! That's all you needed. The argument was that the sea would come in through the interstices of the coral and relieve you of any further responsibility. The only difficulty about that is that these modern detergents -- some of which are sulfonated glycerides and some of them other compounds -- are really wetting agents as well as being detergent in other ways, and, of course, with the sewerage, they go down into the interstices of the coral and they cling to it and they do not break down chemically, Pretty soon your crustaceans and your fish are coming up on the beach, and then it gets that peculiar odor -- you know that a politician and a real estate speculator were there. The only place this side of heaven you'll smell it -- you know, where they have been selling you lots in the hereafter.

It's happening in Canada, United States, and Mexico. Have we got any pollution controls? Oh, after a fashion, they make a stab at it here and there, but. we have to do it continentwide. If you take water out of the ground, you have to put it back into the ground. The City of Los Angeles spends millions to build a giant outflow sewer from its sewerage disposal plant several miles out in the ocean, the Pacific. What for? To carry away the effluent, because if it processed the effluent, it would produce fertilizer and become competitive with private enterprise; so you build something for \$20 some million to take it out and kill the fishes off. What manner of men are we?

No matter which way you turn, it's the same kind of thing. There was a day when you never had to worry about these problems, because you didn't have the population, you didn't have the facility. Is the Detroit River nice? You dump things into it, don't you? But then you do that in the Hudson, the Susquehanna, the Delaware, and every other body of water you can dump it in. That has to be faced, because the volume that we are dumping in is increasing, is it not? There used to be fish runs, oysters, and crabs in the Chesapeake, the Delaware, and the Hudson; now, don't do it because they'll poison you. In the Passaic River, you don't drown if you fall into it; you become asphyxiated.

These are problems which are the responsibility of the people of this country, and what do we do? We gloss it over because we've got a home in the suburbs, we've got two cars instead of one. Whoopee! As long as this continues, we don't have to worry, do we, George? No. The unfortunate part about it is that you are not correct about it, because it is going to hit you and hit you fast. Now, because the Russians sent up a few Sputniks and Luniks, we got all excited here for a few months on education, and the cry is to provide more dollars for more teachers, and we'll catch up to the Russians, provided the Russians stand still. What's the trouble with that? Now, you can buy a nice volume from Washington, D.C. regarding all the governments in these United States, without the two new states, Hawaii and Alaska. They're not yet included in that. They probably will be in the next issue a year or so from now, but there are 104,000 governments in these United States: 48 states, 3,027 counties, 17,000 municipalities, approximately the same number of townships, and 52,000 educational districts, all empowered to levy taxes, collect them, and issue debentures. Do you think you are going to have any reform, revision, or revolution in education when there are 52,000 Boards of Trustees -- Honorable Jackasses -- that are important? Do you think that you can get a national curriculum installed that will meet the requirements of this power age when you are dealing with men and women who are an anachronism in themselves and were educated what? For business chiselling procedures. Now, it cannot be done until you have a unified, continentwide educational system, not with 52,000 separate anarchic bodies, but under one direction with continental cohesion, one set of standards, and a curriculum from coast-to-coast, with the emphasis on science and technology and not on business management and liberal arts.

What are our candidates that are going to run for nomination? Most of them are lawyers, aren't they? Isn't that correct? Humphrey hollers this, Kennedy that; Nixon -- he gets out and screams. Would they know how to solve any technological problem? They would not. They haven't the slightest concept of what the problems are, except some advisor tells them there is some kind of problem. Somebody forgot to advise Rocky in New York State about the bombshelters. He's very inept, you see. Then, of course, they want to make out there is religious bigotry. Well, if there's religious bigotry to vote against someone for religion, it's just as bigoted to vote for them for religion, isn't it? Certainly, After all, it isn't the fact that Kennedy is a Roman Catholic or that his father's got between \$600 and \$700 million, and he's a reactionary. Being a Roman Catholic only makes him a little more reactionary. Rockefeller has several billion, so, therefore, he's several times more reactionary than Kennedy. Stevenson is a millionaire. Even Wallace, when he ran, he was the only multimillionaire running. Are they going to have any perspective? No. They're going to take a course that will enhance those vested interests, correct?

So, we face problems we've never faced before, and the solution cannot be delayed. We can't put it off. We've been putting it off since the Constitutionals sabotaged the Declaration of Independence; the Mexican War; the Civil War; we still did not resolve or solve anything. And now, it is up to where we'll have to maintain our position, because at the present time, our national and foreign policies, the United States has passed its peak in its world position and will never regain it under the business leadership of private enterprise of these United States. Bear that in mind. You can keep on slipping down or you can face the reality that you will have to reorganize this country and this continent and do a damn good job of it, because in five years, less than five years, you'll have 20 million people in United States over 65. Your cities in the north here will have more negroes. Chicago will shortly reach one million colored population, followed by New York and Philadelphia. After all, this organization, Technocracy, you know, we were the chief ones responsible for the introduction of the cotton picker south of the Mason-Dixon line; therefore, we are more responsible than any other organization for the migration of the negro north. You had it coming to you, you white babies! It's your own damn fault,

A question of votes -- that isn't it. It's the question of economic equality for everybody on this continent, black, white, brown, or green; and unless you turn around and design this productive mechanism and this society to do it, then you're headed for trouble.

Technocracy places it before you, and if you're sincere, you'll try and face it. If you're looking for an individual, anarchic way out, you'll duck it. Thank you.

---

EXPLAIN YOUR VERSION OF RELIGIOUS FREEDOM IN THE TECHNATE. I AM INTERESTED ESPECIALLY FROM THE CATHOLIC ANGLE.

I suppose you mean the Roman Catholic angle. The Orthodox Catholic, of course, was the first church, correct? And the Bishop of Rome, of Athens, of Alexandria were all part of the Orthodox Catholic Church. Only the Bishop of Rome, being Italian, got smart, and they finally excommunicated him about 1054, so you had the Roman Catholic Church formulated as a result of that schismatic break. You still have the two churches. In a Technate on this continent, you would be free to worship as you please; of course, there would be no collection box. All ecclesiastics, all property of any and every church, would be maintained by the Technate. There would be no mortgage on the outside of the church, and no collection plate on the inside. For the first time in history, all ecclesiastics would be free to preach their version of the gospel, and I don't think they would like it, would they? They couldn't collect off you. You see, for centuries, you know, just remember that just a short distance from the Cathedral of Cologne, you have the Frowen houses. My father, in explaining to me that on the auspicious occasion when Charles V visited Cologne, he was given the freedom of the Frown houses. He said, "General," -- he always called me different names at different times; he demoted you if you'd quit , he said, "it's one thing, you know, there were 738 women in the Frowen houses." He said, "now, if there's four or five, you can accept it, but 738, you know he's a cockeyed liar." Do you know what I'm talking about? Evidently a lot of you do not. If you want to look up the Council of Trent -- the official records -- there was a famous conference, you know, in Trent -- and the bishops brought so many prostitutes to Trent that the City of

Trent had to provide the extra housing. You will find the account in the official historical records. So they used to provide you the places to sin in, and they soaked you in the confession for having sinned in their own institution.

The Christian church is no different from the other churches in that. All of them in their infancy were militant bodies, but when they became successful, they became defenders of the status quo. That is correct today whether it is Hinduism, Shintoism, Buddhism, Muslims (which is the correct name of Mohammedan), and the so-called Christian faith. Under a Technate, there would be absolute religious freedom, but no ecclesiastic could collect from you, because the Technate would support them. It would be very funny, wouldn't it? Of course, there is a little item here. No church, you see, would then have the power to transmit any funds of the purchasing power of the Technate to anyplace. Do you get it? He'd be maintained on the same basis as every other citizen, full and equal purchasing power, but he couldn't invest it abroad.

SOMEBODY WANTS TO KNOW HOW FREE IS FREE ENTERPRISE IN UNITED STATES.

What do you mean? How free are you? Let's define a first-class citizen. If you have \$30 million, it is only just and meet that all other citizens should go out and die to protect your interests, because if you haven't got \$30 million, you're a sap anyway. So it should be a joy for you to die for someone who isn't a sap. You don't like that, do you? But if you want to be important in Wall Street or anyplace else, just try being important for your ideas, or your character, or your integrity. They don't count.

SOMEONE'S TRYING TO GET NASTY! IF ALL LABOR WERE MERGED AND ALL RELIGIONS AMALGAMATE AND WORSHIP ONE GOD, ALL POLITICAL PARTIES UNITE, THEN PRODUCE FOR YOUTH, FIRST, ELIMINATE ALL ARMIES, WHAT WOULD THE AVERAGE PERSON DO?

Well, you'd have a hell of a time, wouldn't you? Just think if they took all these things away from him -- he doesn't know what the devil to do now, does he? He sits and looks at television, his kids look at it, and they get goggle-eyed like this, and you look at all those funny little figures going across

it, and so on, and they tell you this thing is better for the teeth, this is for regularity. Well, how regular can you be? Quit let's being subjective about it.

WHERE DOES THE POPE IN ROME FIT INTO THE SOCIAL SYSTEM?

You mean the Italian social system or as head of the Vatican State and a world power? After all, the Vatican is rather obsolete in construction. There isn't a good plumbing system in it, even if there is a "John" in there. Well, you will ask me funny questions like that.

WILL YOU PLEASE TELL, IF POSSIBLE, THE PART THE INTERNATIONAL BANKERS PLAY IN OUR DECLINING ECONOMY WHICH YOU SPEAK OF?

International bankers are only part of it. Remember, they couldn't make the play they do if the citizens of this country were conscious of it. The only reason they can do what they do is because 99% of the citizens are so damned dumb that they want to emulate the chisellers. They don't hate them -- they want to emulate them. They want to be like him, correct? So, don't blame the banker or the big money man. He's only that way because you helped him do it. If you were cognizant and had sufficient knowledge of the structure of this system, it wouldn't survive sunrise tomorrow. I've had audiences of thousands, and some women object to this. I've said, well, any time you want to change it, all you have to do is move your babies down to the city hall and leave them, that's all. It won't survive sunrise. They belong to the country, don't they? It's their country. Well, just give your babies to the country. That'll finish it.

LOCAL CRIME SEEMS TO INDICATE EXPLOSION. DO YOU WISH TO COMMENT?

What do you mean by crime? Technocracy defines a criminal on this continent to be a human being with predatory instincts without sufficient capital to start a corporation. Certainly, so-called "crime" is on the increase, and it will continue to increase as the economic tensions and pressures increase. What are you going to do with your youth? Can you offer them opportunity? Have they got a place to play? Have they got a place to develop their potentialities? No, and the educational

institutions only have them for a small portion of the time. They do not retain them long enough to recondition them in opposition to the time of the streets, the business, and the homes; so the time outside the educational institutions is much greater and more forceful in its conditioning than the time spent inside, is it not? Right, so you have all these examples, and it's going to increase. The increase is amongst the youth. The old are too tired and too gutless, except to embezzle or defraud.

HOW SERIOUS IS THE FOREIGN IMPORT PROBLEM AFFECTING AMERICAN JOBS? ALSO THE SHIFTING OF AMERICAN MANUFACTURE TO OTHER COUNTRIES?

You have a whole printing press being made in West Germany. You have the new Burroughs adding machine being made in Scotland. You have the \$35.00 wool suits being brought in now -- the equivalent of \$75 and \$80 wool suits being made in Japan by whom? By American manufacturers who went to Japan, set up the organization with Japanese labor to compete with themselves! How crazy can you be! That type of thing is going on all the time. You are getting valves, pipefittings, all kinds of forgings, diecastings, and so on coming into Baltimore, Philadelphia, and New York, and they're made abroad, coming in in great big barrels and boxes, then they're repackaged in little cartons like this with American firms' names on them, but you look inside, it's Belgium, West Germany, Luxembourg, France, Italy, Britain -- well, why not? You've put in the automatic machinery whether it's Japan or Africa or where. They can operate the technological equipment, and their social costs are lower. They haven't got the load, so, naturally, the spread, when that article is sold here, is greater. So the American firm has to take it, because his competitors will take it if he doesn't and in order to survive, he has to take the foreign imports. Now, it's eating into our jobs here, yes, but it will eat into them more. Of course, you have statements from big business saying that we have to import more from Japan and we have to raise the quality of American goods or we have to buy more from abroad. The answer is they're going to buy more from abroad. Why do they want to buy more from Japan? So as to prevent Japan from trading with China. In order to control Japan, they want to bring it in here so as to make a sap out of you and control Japan. The same applies to other countries. You can take their trade -- a certain percentage -- just as they get you in debt, they control you. You're not free

with a 25-year mortgage.

SOMEBODY ELSE WANTS TO KNOW ABOUT LOCAL CRIME, THAT IT SEEMS TO INDICATE EXPLOSION.

It isn't only local crime; it's all over.

WHAT IS TECHNOCRACY'S PURPOSE FOR DISTRIBUTING GOODS AND SERVICES WITHOUT JOBS? EXACTLY WHAT POINT WERE YOU LEADING UP TO, MR, SCOTT, IN REFERRING TO THE MILDNESS OF THE FIRST THIRTY-SOME DAYS AFTER D-DAY OF AFRICA, ETC.? ARE YOU IMPLYING IT WAS A PHONY WAR? IF SO, HAVE YOU SOLD ANY ARTICLES TO POLICE GAZETTES LATELY? YOU PEOPLE HAVE, BY THE WAY, A FANTASTIC PASSION FOR QUANTITATIVE ANALYSIS. YOUR CONCERN WITH NUMBERS IS INTERESTING. f

I'll answer it very simply. Was it a phony war? Yes. I think I made that specific and clear, did I not? I gave you the figures. If you want figures on specific miles of front, Russian or western, I can give them, whether of this war or any other war. Fair enough? And in comparison, we've had controversial battles with several British generals and writers on the thing. They don't like it, but they cannot deny the evidence. Very simple. We had a name for this war, that is, the war in Europe, during the war. We called it the Hesscapade, and it still is. When you pull something like was pulled in this European war, it was pulled only for a purpose. And you want to know how stinking rotten it got "when the Allies -- British and United States -- reached the Elbe, there was the agreement -- the only agreement that was signed between United States, Britain, and Russia -- was the zoning of Germany and stopping at the Elbe. Then the American tanks and weapons carriers and troops crossed the Elbe and got to the suburbs of Berlin with the Germans fighting the Russians in Berlin, and U.S. planes started shooting down the Russian planes fighting the Germans. Come on, this is a fact. And what happened? Marshal Tedder in command of the R.A.F. placed his Hurricanes and Spitfires and Mosquitos under Russian command, and they shot the American planes out of the skies over Berlin. This has been printed. It's the greatest hush-hush of the war. And the American troops hightailed it back out of Potsdam to the Elbe.

The generals in command what? Broke the treaty United States signed with the other powers. When any general of any country

does that in war, what is it? There's a name for it. Don't you know it? I'll leave it to you. Anytime you question me on this, you know, you'll get it.

CAN YOU TELL US WHAT CASTRO IS TRYING TO DO IN CUBA?

Batista was put in with the United States' assistance and the assistance of the Roman Catholic Church, and the Reondos and the Lobos and the Bicardis -- Batista was; but so were other Presidentes de Cuba. Now, Castro didn't have a real revolution. He didn't fight anything. There wasn't any real battle. The interests pulled the rug out from in under Batista for certain reasons, the church, of course, because of divorce--you can't have a Roman Catholic head of country or city in divorce, oh, no--that was one thing; and then he was getting a little sloppy. Now, Castro was educated with the Jesuits, you know -- you know that, or don't you? Well, he was brought in very simply in a hoopla of ways. Of course, there are 12 American companies who own over twelve million hectares of Cuban land, that's five million acres. Well, what's Castro trying to do? Chop up the land in little pieces to give to the landless colonials. Is there any sense in it? No, it will be more inefficient operation than if you chased them all off the land and did it in large-scale units. What's the pattern of fascism? You chop it up into little units and get the peasantry stuck on the soil, subservient to the status quo, correct? You don't see it yet, do you?

What's Castro got to go collective on? It's a squeeze play. We also want to get Betancourt of Venezuela out of there for entirely different reasons, because United States and United States interests put in Jimenez, overthrew a duly-elected government of Venezuela, then when the thing blew up in our face and Jimenez and his Chief-of-Police were chased out and got to Miami with \$260 million, of course, then we screamed when Nixon got rocks thrown at him. And we claimed they were Communists. No, they weren't; they were just Venezuelans sore because United States turned out the red carpet for Jimenez, the Chief-of-Police, and \$260 million. That's what they were sore about.

A few years ago, one of the prominent men in the State Department said, "Well, wish us luck. We're off to Bogota." I said, "yes, how many?" "Two hundred-seventy of us." I said, "What?" He said, "yes, 270. We're flying down." I said, "My God,

the thing is going to blow up." He said, "Are you being funny?" I said, "No, I'm not being funny. Just think of some 270 Americans in Bogota, all wearing shoes, all with enough money, you're going to take over all the tables in the sidewalk cafes. You're going to prevent the Colombian from exercising his daily routine. They're going to be sorer than hell. Besides, you all wear shoes." He said, "What's the matter?" I said, "Most of them don't wear shoes." Well, what happened? The machine guns and everything else broke out, didn't they? And they had to move the 270-some Americans outside Bogota to a college. How dumb can we get? We misinterpret it.

Brazil, Chile, are suffering from inflation, but here's Brazil celebrating a new capital -- Brasilia -- but it's planting more coffee trees every year. It's coming in with a big coffee crop, and the 68 million bags of 132-pounds each overhanging the world coffee market; and Brasilia is planting more coffee every week. Well, that's like our turning out cars here in Detroit, isn't it? When there gets to be about 1-1/4 million or 1-1/2 million in dealers' hands, they get constipated, but there's no form of national Ex-Lax that will cure it.

Castro is going to be in trouble, because he cannot industrialize Cuba and provide an income -- you see, most of our sugar comes into United States at an agreed price higher than the world price, but what have you got in Cuba? Sugar, rum, tobacco -- the two-nickel proposition that Karo and the other one have on the other end of the island, well, they are shut down. There hasn't been enough oil to justify any great boom, while gambling and tourism was, but there's not enough to supply opportunity to the great number of young Cubans coming of age. They're not like the Puerto Ricans; they can't migrate to United States. Puerto Rico has a cinch, you see; they migrate up to New York and go on relief.

HERE'S ONE OF THOSE HUMOROUS: HOW WOULD THE CHANGEOVER TAKE PLACE? HOW WOULD WE MOVE INTO THE TECHNATE?

I suppose whoever wrote this question thinks we Technocrats are all right, and that Technocrats are going to do it. Oh, no, we aren't going to do a damn thing. We're consulting engineers. We'll draw the design -- tentatively, they're not complete in every detail, nothing as vast as this could be, but the people of

this country have to do it. They're going to do it -- not the Technocrats. They can say, well, you turn left out here and then turn right, but that's about the extent of our participation. If it gets tough enough, you'll do it, the public of this country, and no society has ever moved from foresight. It's always been by compulsion after the roof fell in. If they had that much sense, it would have been done long before us Technocrats went across this continent trying to tell you what to do. In other words, you would have beaten us to it. The fact that you haven't -- the people of this country haven't -- proves how far down they really are.

IF RUSSIA AND CHINA SEEM TO BE CATCHING UP AND SURPASSING THE U.S.A., WOULD NOT ONE OR ALL OF THESE BE READY FOR TECHNOCRACY?

Well, why? They still have a long way to go in their energy conversion, but if they throw in sufficient energy-consuming devices, they, too, will arrive at the point where the arrivation of social decision can no longer be made by counting noses, but will have to be made on the probabilities of the operation of your energy-consuming devices. I don't know whether you understood what I said -- an entirely new forum on the arrivation of social decisions. After all, what devil difference does it make if you count one nose in an autocracy or 200 million noses in a democracy? They're still noses. It's a little more messy when you have 200 million than one; it takes more Kleenex, but it doesn't solve anything. When you elect anybody in United States, what are you deciding? You are only deciding that the individual of that political party will occupy a particular office. There are no specifications in use or abuse. There are no specifications for the design of anything involved in your voting. Now, it's not that we object to your voting if you've got the time and get at least \$10.00 and transportation for it, then you ought to do it, but we don't think you are going to get anything much outside of that.

When Russia and China -- when their energy consumption gets up, for instance, what do you think the installed horsepower of United States is? Outside of a few Technocrats, the public doesn't know. It's between 6 and 7 billion, and over 93% of that installed horsepower is in automobiles; only 1% in powerhouses and industry. Isn't that amazing? So, all right, we sell you cars

on time; we sell you outboard motors on time, and there are almost 7 million small boats. There are over 5-1/2 million outboard motors in United States today. So we're selling you more boats, we're increasing the installation of prime movers, but it's on the negative side, not the positive side of production and distribution of physical wealth.

As you raise any country -- it throws in more energy generation, whether it is from the atom, gas, coal, hydroelectric or what or sunshine -- it doesn't make the slightest bit of difference, it's all the same energy -- and once that generation passes a certain amount, then it, the generation and consumption of that energy, is going to determine the next most probable state of that society, whether it is communist, Hottentot, or southern democrat.

HOW DOES ONE GO ABOUT GETTING READY TO DO SOMETHING ABOUT OUR PROBLEM?

You cannot do it by yourself, no matter how conscientious you are as an individual. You can only do it as a collective organization, and a collective organization that is aware of the problem, and a collective organization whose strategy is such that it conforms to the parallelism of historic events. It may make mistakes in minor omissions, but it must not make mistakes in major commission. We have a tremendous number of competent people in United States, competent individuals, they're tacticians, they're smart as hell, but when it comes to any long-range and any strategic thought, they have no knowledge of it whatsoever, for the simple reason that they think they are smarter than George and the next-door neighbor, and they'll get by no matter what these happen to like. Well, that doesn't happen in any historical crisis. We try to bring that home to every audience in this country. We are operating in Canada; we're away up in Anchorage and Fairbanks. We're out in Nova Scotia and Newfoundland, and we're south of Panama.

The fact that we have no subsidizers, no advertising, and we don't run for political office. The fact that we have maintained our organization and our position, bear in mind, through the greatest war and the greatest depression in history, and we're here and we're still fighting, and we know how to fight. Our attitude is that if you are interested in political parties, then

stay out of Technocracy, because Technocracy is not for you. If you think political parties have the solution, go to it, and vote anything you like in; but if you've had enough experience, enough knowledge to realize that they haven't, then quit being a little individual anarchic outsider on your own, intelligent though you may be. You can't be anything by yourself. Then you'll have to join with others to make a collective stand, a collective representation, and that's what Technocracy is inviting you to do. If you're interested to that extent, you've got enough people in this room tonight to move the whole State of Michigan, if you have the gumption to do it; but don't move into this organization if you spend the major portion of your time looking at TV or playing golf, because if you do that, you haven't any spare time -- and if you've done that for any length of time, you haven't any interest in anything and you haven't any gumption left. After all, let's face it: physiological syphilis of the individual citizen can be cured very simply today. We have the drug and the know-how. But the social syphilis that pervades this country of the country club and golf, nothing short of a continental, nationwide, physical revolution can ever cure it. You have to face that, and bear in mind that no leader of any ancien régime has ever become the leader of a new era in history yet and never will. And don't ask me to run for political office.

Now, if you have had enough, if you've got an interest in this organization, come on in and join us and get your other interested parties in -- set up your own Section. You need us and we need you. We can go on without you. The question is whether you can go on very much longer without some direction. So, we put it to you squarely: if you are interested in doing something regarding where you will be in this decade, just a few years hence, you may be forced to make your decision then -- not by Technocracy -- and you may not like it. We're asking anybody who has ability, has the time, the will, and the energy to join this organization and do something about it. Is that fair? Thank you.

\* \* \* \* \*

HOWARD SCOTT  
AKRON, OHIO  
APRIL 26, 1960  
"DECADE OF DECISION"

At midnight on December 31, 1959, the decade of the Filthy, Fabulous Fifties came to an end, and a new one began. The last two decades have moved this country and its people along a peculiar highway. We spent the greatest amount of billions ever spent in World War II, and since World War II, we have had greater peacetime budgets and deficits than we ever had before in all our history. True, our corporations became larger and greater. We had more and more corporations admitted to the billion-class club. We're merged, combined, and this year alone, there will be over 1,100 mergers of corporations.

It's a very nice picture if you see it from some angles. In United States, we have moved approximately 47 million people out into the suburbs. We built them homes, and now, of course, it's nothing down and thirty years to pay for them. The unfortunate trouble with all of that is that it has led the recipient into that fixation belief that he has arrived in the Promised Land. True, the individual has more material wealth than any citizen at any time in history, but at the same time, this civilization -- these of United States -- is the most profligate and most spendthrift civilization the world has ever known 58 million passenger automobiles, 11 million trucks additional, and of the 58 million passenger cars, 11 million are owned and operated by corporations.

Chicago used to be the great meat-packing center. They were hog butchers to the world, in the words of Sandburg. Well, what's happened? The Big Five have left Chicago. Annie doesn't get slaughtered there any more. There's a little lesson in this. Detroit, of course, was the automobile center of the world, and up until a little while ago, this country never was concerned about automobiles abroad; now the rest of the world produces more automobiles than the United States. The great assembly lines of the automobile industry in Detroit, Michigan, the best we can do is one car every 31 seconds to 40 seconds. Cars are rolling off the lines abroad in three countries one every 19 seconds. Is Detroit going to follow Chicago? Interesting question.

Now, of course, Akron has been known as the tire and rubber center, and you all know crepe-soled Ked shoes -- everybody knows

them. Well, who do you suppose is the largest producer in the world of crepe, rubber-soled Ked shoes? Red China.

John L. Lewis, in 1920, he and his United Mine workers, had 780,000 coal miners. Today, there is only 235,000. John L. Lewis and the mine owners combined and raised the productivity of the American miner from around a ton to a ton-and-a-half to 8 tons per man per day -- the highest in the world. But where is John L. and his 235,000 going, because the new machines mine 8 tons a minute -- not a day. Those of you who remember the Technocracy Magazine -- the time we printed the giant shovel across the entire back cover -- the Marion is shipping a new shovel. Its bucket takes 115 cubic yards. It stands higher than Golden Gate Bridge -- 460 feet, and makes a swing every 47 seconds, is operated by one man in an air-conditioned cab high above the ground. It is owned by the Peabody Coal. It will take a year-and-a-half to two years to erect it in the field, because the entire shovel equipment requires 300 freight cars to ship it.

Yes, we have ability in this country of ours, but where is this development -- is it due to the technological ability and its direction, which we haven't got. Who is directing it? Planning? Planning in these United States is frowned on -- any long-range planning, any direction. Ikie refers to it as galloping socialism. To a person who has no other future than that of playing golf, that is probably all he can say.

Our railroads -- we had the greatest railroad mileage, and fortunes have been made out of railroading; but the greatest ton mileage is no longer carried by American railroads. The most powerful railway locomotive is not in United States, and the fastest train is not in United States. The French electric locomotives are over 14,000 horsepower, and they hit 204 miles an hour on the Paris-Lyons run. The great ton mileage -- that is Russia.

In coal mining, Russia produces more coal than United States, and Red China is coming up fast.

All these things have a meaning. If you pick up the Toronto papers, Ottawa, Hamilton, what have they got on their front page the last few weeks? Nice big black headlines or big red headlines. The unemployment situation in Canada. The increase per

week and per month is the greatest in Canadian history. Today the latest news dispatches from Canada, unemployment in Canada has passed 9% of its working force. Don't give up hope -- Venezuela is 11%.

This thing is moving. Remember, they have laughed at Technocracy for a good many years. They have been banging the propaganda out every day and every hour that machines made jobs, and the more babies you had, the more prosperity you would be assured of in the future. The babies have arrived, and the prosperity is doubtful. Let's see where we are going.

After the war, we went in for a foreign policy of encirclement and containment -- at home of credit amplification and installment buying. Those of you who own stock in Sears Roebuck can probably get a complete stockholder report. Thirty years ago, Sears Roebuck issued reports then. This report shows that Sears Roebuck for the first time in its history has passed a \$4 billion gross. Thirty years ago, 4% of their gross was installment buying. Today it is 50.7%, and they have over a billion dollars out on open installment accounts; and what is worse, their installment accounts run to over 7 million accounts. The future for any corporation of that kind -- it has no future on a cash basis, has it? Only on extending more credit over a longer period. Sears Roebuck is not alone. Remember that the leadership of Sears Roebuck, General Electric, Standard Oil, General Motors, or United States Steel -- that's supposed to be the intelligence, the all-wise; they're supposed to have the brains and the ability. What a hell of a mess they have landed you in, because every time you go in debt, you go in that much deeper. If you are in debt, you aren't free. You aren't a first-class citizen -- you're just a second-class bum. The easy way to control you is get you all in debt, and they have damn near succeeded. Our foreign policy of encirclement and containment is coming to a pretty stinking mess. We have built bases all over the world, and we poured out billions. We sent officers and experts to Britain, to France, to Greece, to Turkey, Pakistan, Philippines, everywhere -- even little Laos, on the theory that if we build up an armed force we protect United States from something. Of course, the threat was supposed to be Communism. Well, let's take a look at a few things.

United States and Great Britain have just completed the St.

Lawrence Seaway -- single one-way locks, 27 feet over sill. It's a lousy, stinking abortion, and there wasn't a damned Russian involved in it! Was there? Not a single Russian involved in it. All right, let's go over to Russia. They completed the Don-Volga Canal, the water storage of which is excellent. The canal part of it is another lousy, stinking abortion, and there wasn't a damned American involved in it. Just to show you that politicians -- Russian or American -- stink alike.

On the United States side of our Great Lakes, there is only one set of docks at which you could dock a foreign boat coming up the Seaway loaded to capacity. That's the Nickleson Dock in Detroit. Chicago, Cleveland, Milwaukee, and other places haven't got it. There are some natural harbors in Georgian Bay on the Canadian side, yes, but not on the U.S. side. The St. Lawrence Seaway should have been 49 feet over sills. There would have been less locks on the St. Lawrence, and hydraulic lift locks. Now you are bringing in the foreign shipping and the ore, and you have to buck the Welland Canal -- 8 locks larger than Panama, 11 to 12 hours. Hydraulic lift locks would lift 60,000 tons up and 60,000 tons down the 326 feet between Lake Erie and Lake Ontario in 15 minutes. It's not a dream. It's technically merely a matter of executing it. Are the public of United States and Canada interested? No. Well, what the hell are they interested in? They don't know, outside of looking at television and the little gimmicks that go across there and the squeaky voices, you know, that's all. They don't know what they're interested in, and they're scared to death.

What's the latest news tonight right in this area? What Ford plant is going to shut down to four hours a day? Didn't you hear it? In Canada, the oldest rubber company, Gutta Percha Ltd. of Canada, has folded for the last time forever. Your greatest exploration company in Canada folds the end of this month -- the same way with the Gutta Percha. Their severance pay is issued. They're finished. They're not coming back.

All of this has a bearing, because where are the people of United States and Canada going? This is a national election year, and, of course, you are naturally going to be ballyhooed that it would be better to vote for one than for the other. You may have the choice between Tricky Dickie and Kennedy, and that's a hell of a choice, isn't it? People ask me in Detroit whether they

should vote for somebody else besides Kennedy because he was a Roman Catholic. I said, hooley, that isn't the important point. His father is worth \$700 million. He's reactionary as hell without being a Roman Catholic, and that only makes him a little more so. Well, Rockefeller isn't a Roman Catholic and he has billions, so that makes him a damn sight more reactionary than Kennedy. Unfortunately, we should put Nixon and Kennedy both in, because the country deserves it. They are both lawyers, and they both have no idea of what it is all about except to get elected into office. So, it doesn't make the slightest bit of difference whether you vote or whether you don't vote, and if you do vote, it doesn't make any difference who you vote for, because the national problems that are facing this country and this continent of water pollution, of the aged, and of the color proposition, and of employment -- they are not going to be solved by any Democratic Party or Republican Party. There will be 20 million in the next year or so of adults over 65 in these United States. Chicago will shortly have over one million negroes, and New York 800,000. New York or Chicago have three times as many negroes as any city in the south, and there are more coming everyday, and all this ballyhooed nonsense of voting rights for the negro in the south is sheer idiocy. It isn't voting rights anyplace. It's a question of economic equality and what you are going to do about it. So you raise a storm about so-called voting rights. What the devil difference does it make whether they vote or not? Is it going to alter the fundamental problems of river control, of agricultural production? Wait and see this census coming out. We're going to have under 4 million farms and 16 million farm population -- down 16 million, 50%, of what it was in '32. They are leaving the farms. Take a look at the record of the sheriff's sales in Illinois and in Iowa in the last 3 months. They're up 50%, and who is selling out? Why, the farmer that's farming 200 acres, 328 acres, 416. He's selling out lock, stock, and barrel to get a job at \$90 a week in the city, because what are they making a week net after they pay their taxes? \$32 to \$34, running a 328-acre farm. Who prints this? Farm journals, Wall Street Journal, and others. Just read it. They'll tell you.

This thing is moving up. What direction is it moving? We have a steel capacity in the United States -- the largest steel capacity in the world, but most of the capacity is antique and obsolete. We have only built one complete integrated modern plant in the last 10-12 years: Morrisville, Pennsylvania, opposite

Trenton on the Delaware. How about the rest of the world? At Kochiche, in Eastern Czechoslovakia, they are completing one that is 3,900,000 tons capacity. At Teschenostrava, they are completing one that is 4 million tons capacity. China has six steel plants, each over 3 million tons. I can show you photographs of over 25 open hearths being placed in operation -- 25 of them, each open hearth 500 to 600 tons in the heat. Have you got any steel plants in United States that's got 25 600-ton open hearths, have you? The hell you have! I mean, let's face this thing. The blast furnaces of those plants are 2,600 tons, every damn one of them. Now if you think I'm quoting from some Russian literature, you're cockeyed. You know where you can get this? It's just out: The United States Department of Foreign Commerce publishes a nice booklet with photographs of the steel resource potential of Red China. Would you believe it! Isn't it utterly amazing? In other words, they're telling you what the Technocrats have been telling you for 30 years, and they are just catching up now. For instance, the Russians made a deal with France, and they wanted machinery built and it shipped. Did you ever hear of a cement plant where the tubes are 20 feet in diameter and 570 feet long? They're going into operation in Russia. Where do you get the information? The Russians, no. From the French, who are boasting about building the biggest damn cement tube mills in the world -- the Russian design.

We talk about visitors coming to our TVA, our Boulder Dam, and our Grand Coulee. Is the rest of the world going to come to see it anymore? Why should they? They're nothing worth seeing. You can visit other countries where they are far bigger and a more magnificent concept than what we have. Grand Coulee -- even the new Niagara is only about 2 million kW. They've got four nearing completion in Russia now. They're not only over 2 million kW capacity, Bratsk on the Angara is 3.7 million, Krasnoyarsk on the Elbe is 4 million kW. The Chinese have started work on the Achang Gorge of the Yangtze. They announced 60,000 men and 1,800 engineers -- 1/3 of the 1,800 are Russians. Do you know what the Achang Gorge is? Well, that's the Yangtze River. It's over 600 miles inland, farther inland than Wuhan. You can put ocean-going boats beyond Wuhan.

We sent Savage out. Savage was Chief Engineer of the United States Bureau of Reclamation, and when Chiang Kai-chek was still in China, we sent him out to make a survey of the possibilities

of India and China. He came out with a 10 million kW for the Achang Gorge. Now, if you place the dam at the head of the rapids and run the tunnels long enough, which the Russians and the Chinese are going to do, what's the announced capacity of the new Achang project on the Yangtze? Twenty-five million kW in a single installation, and the hydraulic turbines which are now being manufactured are 500,000 in one single unit. You think that's something, and you talk about, say, the Congo. The Inga Rapids on the Congo -- Belgian Congo -- just downriver below Leopoldville, if you build a giant dam several miles long, you could get about 20 million kW, but I haven't mentioned the world's greatest potential yet. That's at the San-Po. The San-Po normally has about 70,000 second feet. The Congo at the Inga Rapids has darned near a million second feet, but just before the San-Po enters India, it does a complete U-turn practically -- a giant gorge. It's 10-1/2 miles across that gorge. If you tunnel across that gorge and drop that water, you'll drop it 7,500 feet, and a one-mil whiskey glass full of water will do one kW when it hits the bottom. And what's the capacity? That San-Po without a dam -- 30 million kW. You put in dams, there would be 52 million kW. Whose figures are these -- Russian? No. Dr. Hans Sving, the great physicist of Austria and one of the greatest firms of consulting engineers of London, England. This is getting sad, isn't it?

It's only a couple of years ago that the textile market of Hong Kong, Singapore, Rangoon, Jakarta, and others -- the Japanese had 42% of that market. The Indians started to give them the squeeze; the Red Chinese have come in now, and the Japanese part of that textile market today is down to 4% and lower. It's moving.

Now it doesn't make any difference, you know, what color you are or what size, whether you're tall or broad, whether you're moral or immoral, good or bad, if you can put in the technological equipment, it will produce results, provided you have the resources and the energy to maintain it at any high state of operation. Just bear in mind that if all the population of the Mediterranean had been 100% Christians, they wouldn't have altered the standard of livelihood 1/10th of 1%. If they had been Mohammedans, the result would have been the same, or Hindu, or Shinto; that you had no capacity in the human society to alter the standard of living until you introduced extraneous energy and technological equipment. And today your Christianity, your

Mohammedanism, Buddhism, Hinduism, and Shintoism are all up against the same thing, because the introduction of modern technology is knocking the old traditions to pieces, and the population of the Far East or or Africa isn't concerned about you hereafter. They're concerned about today and the world they live in. They have seen it happen.

We here in United States have a know-how. We've done all this, but we have no direction. We don't have any conflict. We don't have any standards. We don't hate the chiseler. We want to emulate him and do likewise. You haven't got any guts nationally. In other words, a Catholic Fascist like McCarthy scared hell out of you. The slightest little threat in your community to your job or your neighbors and you ran into the nearest hole and pulled it in after you. Now the only thing that all of you who retired on pensions and those of you who are going to shortly, it's going to catch you, too, because your dollar is worth less and less and less.

This is happening to us. We've got to acquire direction in these United States -- long-term, long-plan objectives, and we cannot do it under the present so-called business leadership of private enterprise or our political leadership. They haven't got it; they never had, and time is running out. We'll have to abandon our foreign policy of encirclement and containment. South Korea is blowing up on us. South Vietnam may be next. We can't even envisage on the standard policy of what's going to happen. Why? Because we have been bribing every nation on the face of the globe that we had anything to do with. You poured in more dollars -- you could acquire a solution. Well, we poured it in? and we haven't got it. It's going to be very painful for us to face the reality of where we are.

In 1950, the steel industry of United States imported 9 million tons of foreign ore. Last year, it brought in 59,900,000 tons. This year, the estimates of steel production -- of course, it may not reach that -- are 115 million tons, and they estimate that 51 to 52% of that steel will be produced by foreign ore. That's over 50 million tons, isn't it?

We are bringing in oil, and we'll bring in more of it.

Foreign imports of steel -- Armco just announced this week

that it is shutting down the unit in Texas because of the import of foreign steel. You can buy barbed wire in this area here for \$40 a ton less than it's made right in the Republic (Steel) in Cleveland. I mean, how long does it take to get an idea into the heads of the so-called American? Have you got to beat it into them with a club?

Now, it's tough. We've been lied to, we've been framed, and we've been kidded, and when you come down to where you have to face the reality that we weren't, and aren't, the big shots and that we'll have to do things differently, it's going to be very, very painful. I'd like you to consider these things and come back and ask me questions. Thank you.

---

WHO IS FURNISHING THE CAPITAL FOR THE ENGINEERING FEATS ABROAD IN RUSSIA, CZECHOSLOVAKIA, CHINA, AND OTHER COUNTRIES?

They are. Where did China get the capital? China has 640 million population. Most of its population are young and dynamic. Their area is larger than the United States, so they capitalized the only two real things they have: their land and their population. There's more construction work under way in China today than has occurred in China and Asia in all history. Do you realize that? And in all history -- the last known history of over 5,000 years -- we talk about the St. Lawrence Seaway. They just completed the Kansu Canal. That's 260 some miles in length, 420 feet wide on the bottom, 1-1/2 to 2:1 slopes, and 8 meters deep. Why, the St. Lawrence Seaway is a ditch compared to that. I mean, let's wake up and face it. Other human beings can do something; what's the matter with us? Are we hogtied? Well, they produced their own capital, and they're going to produce more. Russian steel right now is in excess of 68 million tons a year. The six new plants of China will put China over 30 million tons. The Chinese are offering for export diesel engines up to 2,000 horsepower, and if any of you have been worried about the payola in pharmaceuticals and drugs, wait a while. The Red Chinese are building plants for the production of penicillin, sulfa, and a lot of other drugs, hormones -- hormones that are bought here for 15 cents a gram and sold to the public for \$15 a gram. Look out for those Chinese. They're going to sock it down to 3 cents, and

may the Lord have mercy on your soul, because they won't. Sure. Ovaltine -- you know Ovaltine. It was originally a British development; of course, you have an American company out here in Illinois. The British are protesting because the Red Chinese are shoving Ovaltine over the Far East for a fraction of what the British could ship it there.

Same way with bicycles. They're putting down bicycles in Burma and India for less than the British can ship them. Why not? Technology isn't limited by race, creed, kind, or color, and remember that if those countries put in the automated technology, they have lower social costs than you have here; and unless you wake up, you're going to have a headache and something else.

#### WHAT'S THE TROUBLE IN AFRICA?

What part of Africa? Africa is a large continent. Of course, most people get all excited about South Africa, and they say, "Oh, it's awful." Well on the same day that you have shot down in South Africa, you also have 27 or 36 more killed in the Cameroons and other places, and it's only a little line like this, with 167 wounded in one place -- over 100 wounded in another. Why the play on South Africa? It's on across Black Africa -- not only South Africa. In South Africa, you've got about 7 and a fraction million Bantus; the rest of the 9 million are Kolorads and Asiatics. Are the Bantus South African negroes? Are they? No, they come a long way -- they're not the Matabilia, the Zulu, and the Kaffir -- they're Bantu from the jungle. Who brought them to South Africa? Come on, let's face it. Who brought them there? The lis Fonteyn Rand, deBeers Consolidated, go on down the list. They were the ones who brought them there. Why, one farm in the [Dilberg] District -- one farm of 43 acres -- underneath that 43 acres, they have taken out more than half a billion and still going, and they're down around 9,000 feet. You can only work at that depth provided the huge, powerful air conditioning system is on. You wouldn't live more than a few minutes if it were off.

So, the nice, kind, Christian white man brings down the jungle negro to mine the wealth. There's billions of gold produced every year and diamonds. The Afrikaner, yes, they're a narrow-minded Dutch reform, but the English and others who were in the opposition party concur with the Afrikaners. Why, when it was British, they did the same thing. Your large corporations

were the ones who did it, and they're all in on it, are they not? I just want to explain this to you. They're not going to solve it the way they are going, but they're not going to solve it by a lot of sloppy sentimentality. The Bantus are a much lower type mentally.

Now, if you want a situation where they really do something, take Nigeria. Nigeria is 40 million blacks, not 9 million, and there are only 12,000 whites. Those blacks are slightly different. They have been running that area. They have an army, police force, they have mechanics, and if you gave Nigeria the arms, it could lick South Africa and Egypt combined simultaneously. Poor little Queen Elizabeth, you know, she stood up to review the Nigerian Army going by. They should have put her on stilts. It was really a crime. Six foot six, a thousand of them going by, and poor Elizabeth -- and if you have seen the colored movies of that march, West Point or Sandhurst or Sans Cyr never did anything better than that. Brother, it was out of this world!

What has France, Great Britain, Belgium, Portugal done in Africa now? They've divided Africa up into 41 pieces, so as to create the most amount of anarchy possible, and we, United States, is agreeing with it. It is really sad. Africa, yes -- all you'd have to do in Africa today is give the Nigerian something else -- automatic machine gun, pistols, hand grenades, and a few bazookas. Nigeria gets its independence this year. The Cameroons have got theirs. The Congo is going to get it. So you may witness the amazing thing of the biggest and the best in Africa declaring war on South Africa. Are you going to use the United Nations to stop it? Honey chile, you just better keep those the hell out of there!

We put Syngman Rhee in Korea, didn't we? Just to review a little history. The Japanese armies were in Korea. To whom did the Japanese armies in Korea surrender? Can you tell me? Right. The Russians came in from the north by land, by air, and by sea, and the protestant Korea set up a government in Seoul. It was months before United States forces landed in Korea, and then they divided up Korea, the Russians taking north of 38 and we taking the south. Then they bring in Syngman Rhee, who had been 35 years out of Korea, married to an Austrian Roman Catholic. They bring him back, and they bump off the partisan government in Seoul, and

we have maintained that rat ever since.

Just the same thing as our press and newspapers here. Nixon gets thrown a few things at him down in Venezuela, and we say it was Communists. It was like hell! After all, what coup d'état put Jiminez in in the first place? It was United States companies and United States military and State Department aided and abetted it. Jiminez became so damned rotten that they died by the hundreds, and Jiminez and his Chief-of-Police left Venezuela and they land in Miami with \$260 million, and we turned out the red carpet for them and gave it to them beautifully. No wonder the Venezuelans were trying to spit on Nixon.

We don't like to hear it. Ikie goes down there -- did you see the picture where they cut in the what-you-callum out of Wall Street to fake the picture of Buenos Aires and then admit it? Down in the Senate Committee. Talk about payola -- when they admitted putting in the cheers and audience in that never were there. Well, if you do it for one thing, it's all right to do it for the President, isn't it? Pretty pathetic. Like when he goes to India, they take him out to a village. That village is one of the 500,000 villages in India, but it has had American experts working on it for the last couple of years; therefore, it is totally different from the typical village of the 500,000 Indian villages. It has no relationship. There are seven wells drilled in that village -- three of those wells are out-of-bounds for the untouchables. It: didn't mention that, did it?

Down in Chile, they take him out to another village, which is not typical of the villages in Chile or their towns -- totally untypical, and it's ballyhooed up here. How much of a fake and a fraud have you got to be? Madison Avenue, you know -- the old story on Madison Avenue is pull any gimmick you like, provided you can get it over; but listen, brother, don't believe in it, because if you do, you'll be up behind bars in Connecticut talking to yourself and the squirrels. Well, Washington and Wall Street have got to the point where they believe in it, and they're damn well worried.

Where are you going to get the ore and where are you going to get the oil and where are you going to put the taxes to take care of the increasing social load in United States? More taxes, yes. The other day a certain technologist and his wife were moved

east from across the country. They went out looking for a house. After looking a number of them over, they finally found one which was at least better than the rest. The price? \$26,995. Well, that was late in the afternoon, and they said, well, we'll go tomorrow morning and take a look at it and see if it still looks as good. They did, and they went down to the bank and got a certified check and went back to buy it. Couldn't do it. You could only buy the homes in that division on a 30-year mortgage contract. To hell with the cash! The French, you know, would say it was "marvelieu," the Germans, "wunderbar." Well, in American, I think it ought to be some kind of a four-letter word. I don't know what.

It's reached that kind of a state. Eventually -- take Morocco, we have four giant bases there and one port. We have troops in Iceland, a base in Libya, Saudi Arabia; we're in Taiwan (Formosa), the Philippines, Okinawa, South Korea, South Vietnam -- most of the military forces of United States are abroad. They're not on United States soil; they're scattered all over, but we're going to have to abandon the bases in Morocco, in Iceland, in Libya, and we'll have to get out of South Korea and South Vietnam and a few other places. It would be nicer to get out -- same way in Africa. Get out now when the going is good before you have to put burnt cork and shoeblack on your face and go out in high gear in the dark of the moon. Well, that's what we're headed to.

There's enough of you here to organize this part of Ohio, but if you're going to spend your spare time in the Ladies Aid, the bowling alley, and lapping up the beer, and sitting in front of television because you're incapable of doing anything else, then you're not going to organize anything. You're just going to have to take it when it comes along, and Technocracy's design would be nice compared to what you will have to take if it isn't organized for. Did you ever stop to think of that? If you're pushed into it, you won't have time. It's going to come hard.

Well, what do you think of it? Have I been too nasty to you tonight? Does anybody feel that there is any question that I haven't covered? If you have, just say so and I'll try to cover it for you.

INAUDIBLE QUESTION FROM FLOOR (SOMETHING ABOUT WHETHER CHINA

HAS ENGINEERS)

Well, they are building more schools and universities all the time. The Russians have come up to where they are graduating more scientists and engineers than we are. The Chinese are putting in the institutions and the training. Naturally they're getting Czechs, Poles, and East Germans, Russians, and so on, to help them train, and they're on their way. It doesn't take many engineers to direct if you can lay down the specifications and the operating schedules. If the human beings who are working at it have got enough intelligence and enough knowledge to be able to read the specifications and the prints, they'll make some mistakes, but, by God, they'll carry it through. That's what you mean, isn't it?

I FEEL THAT WE'RE GOING INTO CHAOS AND WE'RE GOING INTO IT FAST. I'M A SALESMAN. I WORK AMONG THE PEOPLE. I FEEL THAT ONE OUT OF EVERY FIVE FAMILIES IN AKRON HAS BEEN LAID OFF OR IS GOING TO BE LAID OFF. GOODYEAR AIRCRAFT HAS OVER 10,000 EMPLOYEES AND THEY HAVE OVER 4,000 OFF NOW, AND THEY'RE TALKING ABOUT FOLDING THAT WHOLE COMPANY UP. I GO INTO HOMES AND FIND THAT THEIR GAS AND WATER ARE TURNED OFF AND WE ARE GIVING RELIEF OVERSEAS. I FIND THAT WE HAVE MALNUTRITION AMONG OUR BABIES AND THE GROWN MEN WHO STAND THERE AND LET THAT HAPPEN TO THEIR FAMILIES. ARE WE GOING THE WAY THE CHINESE DID 10,000 YEARS AGO OR ARE WE GOING TO GO OUT AND WORK AND DO SOMETHING ABOUT IT? THE QUESTION IN MY MIND IS WHAT ARE WE GOING TO DO IN THE UNITED STATES AND NOT OVERSEAS?

Thank you. I think you have summed it up, and that same thing you are talking about is in Detroit, is in Chicago, Pittsburgh, New York, Philadelphia, any large city -- or fair-sized cities -- you are finding the same circumstances, and yet the so-called prominent people, the so-called top, are not doing a damn thing about it. THEY ALL GO TO CHURCH ON SUNDAY, DON'T THEY? Well, you know on big construction jobs, we engineers used to paint the big long explosive buildings a bright, firehouse red. You didn't put "DANGER!" on it except on one end. Do you know what they used to paint in great big white letters six feet high? "GOOD MORNIN', JESUS!" In other words, if 10,000 tons went up, it would be GOOD MORNIN', JESUS! Big letters -- six feet high. Well, that is what you are facing here.

They are turning off the gas and water. Jersey tried paying the monthly mortgage, keeping them in the home rather than foreclosing on it. Well, that's all right until the number of homes goes up, and then the state hasn't got enough money. Soapy Williams, the great Governor of Michigan, isn't going to run this year. He isn't going to run any year. He's had it! He can't figure out where to go. But remember Technocracy has been pounding this home -- not last year or five years, but for years. "Machines make jobs!" "The Technocrats are nuts!" O.K. We'll see who is nuts.

Akron and Cleveland and all the Great Lakes cities of any size are going to see the squeeze -- anything that is dependent on industry, and you're loaded with debt. Bear this in mind: if a certain percentage of your mortgages on homes reach the point where they cannot meet their mortgage payment, and I don't mean any diving 74-76% of the Dirty Thirties -- it doesn't have to do that -- it only has to have a drop of 20% in the national income, that's all, and you'll have more of them hanging on the roof than you ever had in the thirties. When she goes over 10%, look out. You can't foreclose on them, and you'll have to what? Guarantee that the public utilities; namely, water, sewerage, gas, electric light, continue, and then your power companies are going to scream bloody murder like the Narrangansett up in Rhode Island. When it served public notice that it was going to cut off the power, what happened? The mayor and the chief-of-police seized the power plant with tommy guns. Why? Because it was a matter of public health -- you've got to run the hospitals, you've got to run the sewerage disposal, and you've got to run the waterworks whether anybody gets a profit out of it or not. Now if it goes to that extent in three or four urban centers in any state, that state will be compelled to declare a moratorium, and get this clear, if any state outside of a border state like Maine -- a state like Ohio, Michigan, Illinois, Pennsylvania, New Jersey, industrial states -- they're forced to declare a moratorium, every state bordering on that state will be compelled to declare a moratorium within 24 hours.

You once heard of Total Conscription, didn't you? You'd have to move fast and damn fast. Whether it comes to that -- you can delay it, yes. What this country needs is not more jobs. Let's get out of that nonsense. What you need is income! Who in the

hell wants to work. You don't want to own a home -- you want someplace to live in. You want sufficient to enjoy this. You came into life with nothing on this earth and you leave it with nothing. You know that, and all you want is enough to live comfortably, to be healthy, while you're here. You'll have to straighten out your concepts, ladies and gentlemen, and it's going to be painful.

Anybody else feel like anything?

INAUDIBLE QUESTION

What do you mean run out? INAUDIBLE. Well, did he leave the country? He had better get out by American plane before somebody bumps him off. You know, in Asia, it's quite different. Remember before the Japanese occupied Manchuria, Sheng T'soleng in Manchuria had an excellently trained army, and they made the mistake of attacking the Russians. The Russians could have simply slaughtered them. The Russians didn't do it; they stopped them, but they didn't slaughter them. They just flew their big planes over Sheng T'soleng's retreating, beautiful army and dropped all the rotten vegetables from a hundred feet. The half a million army of Sheng T'soleng trained by foreigners in excellent equipment. They flung away their arms and they flung away their uniforms. They didn't want anybody to know they had ever been associated with it. If they had shot them, it would have been all right, but to dump rotten vegetables on them, by God, that's too much!

When your tide turns in Korea, look out. All of them that have any prominence, what did they do? They tore the home of the Vice President to pieces, didn't they? Remember what I said before -- that if we kept this up abroad -- I told the Society of Broadcasters -- you keep on broadcasting this hypocrisy and nonsense, the day will come when the only place that will be left for you to broadcast from will be your own backyard, and that will be so full of international dead cats, the stink will asphyxiate you. Well, it's coming. It's tough.

How printing presses have been made here for years, haven't they? They're making them in West Germany. Burroughs is making their new adding machine in Scotland. You can go on down the line. Here's wool suits made in Japan, excellent quality, brought

here to retail at \$35.00, comparable to \$75 to \$85 suits. Who's making them? U.S. manufacturers go on over to Japan and set it up. You've heard of competition, but do you realize that when they start to compete against themselves, they must be cuckoo. Now, that's what's happening.

A QUESTION SOMEWHAT INAUDIBLE BUT APPARENTLY ABOUT THE FACT THAT SOCIETY BRANDS ANYONE WITH AN IDEA OF CHANGING SOCIETY AS A COMMUNIST, AND THAT THE QUESTIONER FEELS THAT SOCIETY DESERVES TO BE STUCK WITH WHAT THEY'VE GOT.

Oh, it's not as bad as all that. We have some stinkers here, but they don't all smell alike. I have an abounding faith in the ability of the population of this continent that when they get kicked hard enough, they'll move.

DO YOU THINK THAT WHEN ALL OF THIS HAPPENS THAT SOMEONE WILL COME ALONG AND START ANOTHER PARTY?

What will happen in any crisis, a really critical stage, in this country will be that there is going to be a half dozen or more attempts, and each attempt, you see, is going to move in our direction. Remember, we hung the thing up on the top of the board, didn't we? And if they're going to go anyplace, they're going to have to offer the public more and more, haven't they? Who in hell wants a Model A Ford -- you can't bribe them with that, can you? Each attempt -- the only thing you've got to watch is the people who try it have got to make good, fast, because when it gets desperate here, they're not going to take the defaulters and the failures downstairs to try them. They're just going to open a 40th story window and say, "Look out below." They're not going to waste time. It's going to be tough, really tough.

Any time the women of United States or Canada do not like this system, it's very simple. All you've got to do is take all the babies under two years of age down to City Hall and give them to your country. They'll have to make a decision fast. They'll have to conscript every doctor, nurse, dentist, orderly, all the equipment from soup to nuts, and every politician -- you won't be able to find them between hell and breakfast. Why? They're going to duck that responsibility right then and there; so, any time the women of this country don't like it, all they have to do is

give their children to their country. Very nice, isn't it? Very simple. No violence. In case some mother, of course, says how will I know my baby? Oh, phooey, take their footprints. If it gets really tough, what difference does it make if it's your baby or the next, because they are all in the same boat if it gets tough.

So, here's this poor devil goes berserk because he loses his job, takes up a claw hammer, what? But they're going nuts every day across the country. All you have to do is get the police record. You only get what is here locally or some phenomenal messy case someplace else, but the average case, no. You've got freedom of the press, understand -- freedom to be misinformed.

WHAT DO YOU THINK OF THE CUBAN SITUATION?

What's Cuba got in the way of resources? Sugar, tobacco, rum, and, in deficit, Cubans. Too many Cubans, aren't there? Castro was no real revolution. There was no real armed fighting. The forces of Batista were not defeated. After all, we approved of Batista the same as we approved of Peron, and the church approved of Batista. So did the Reondos, so did the Lobos, so did the Bicardis approve of Batista, and then Batista gets a divorce and he is no longer approved of by the church -- what are you laughing at? -- then, of course, the payments go haywire. Any time that the giant naval base of Guantanamo permits a guerilla force to come up right to the gates of Guantanamo and capture a whole busload of Marines -- sweetie, something's awful queer. It stinks.

Twelve American firms own 2 and a fraction million hectares of Cuban land -- that's over five million acres. I don't know whether you realize it, but you're talking to the person that had the patent applications for a new process of extracting sucrose from cane. I know the Cent riles in Cuba and the whole sugar setup. Producing raw sugar from cane takes about 47 to 49 hours. This process would do it in 27 minutes, but it wouldn't produce raw sugar. It would produce colloidal sucrose, and you would have the bagasse as by-products; and, by the way, several foreign countries, along with the National Gas Cylinder Company -- that's the new Chemtron, you know -- have put in a test unit on this process. Unfortunately, the patents have run out some years ago. I think I ought to protest it anyway. But to divide up the land

into half acre, one acre, two acre plots, that's your old middle Europe, Latin concept: keep the peasant on the soil with a little bit of soil. That isn't the way to grow sugarcane. Remember that they threw the Faulkner sugarcane harvester overboard in the Tansis Bay. Any of you know Cuba? You know what I'm talking about.

Outside of gambling -- now if Cuba were part of United States like Puerto Rico, they could all come up here, couldn't they and go on relief in New York, and then they wouldn't have to bother about it. Now, to industrialize Cuba, that would mean large areas, mechanized production, and a different sugar process. That would mean a by-product -- sugar would become a by-product. Is Cuba going to do it? No. Who are the companies in Cuba? National City Bank, Cubacane, Royal Bank of Canada -- you can go on down the line -- they cooperated with every regime since they took over after the Spanish-American War. They're like the big corporations in South Africa. They're responsible for the condition in Cuba. The Cubans don't know what the hell to do. We sent an ambassador down there named Bonsell. Well, who's Bonsell? Bonsell was Director of the Cuban Telephone and other American concerns before he became ambassador. Holy hell, what nonsense is this? You send down a chiseler. They know who he is. It's sad, because Castro isn't going to cure it -- he has no constructive program. Don't get the idea he's Communist; after all, twelve years with the Jesuits and he's nearer a Fascist, isn't he? And the policy of subdividing the land into little pieces is Fascist, not Communist, not collective organization. Is that straight enough for you?

YOU BROUGHT ONE THING OUT ABOUT CUBA. WHAT CHANCE DOES UNITED STATES HAVE OF GOING FASCIST BEFORE THEY DO ANYTHING ELSE?

The only trouble here is that you have a vastly different situation; for instance, to operate the State of New Jersey under a Fascist control, the rate of flow into the productive processes in the State of New Jersey are such that it would require 36 states in United States, 5-1/2 provinces in Canada, 6 in Mexico, and several in South America and Central America; in other words, the rate of flow is so fast that you can't handle it by a Fascist control. You'd have to seize all those other places, too, wouldn't you? In other words, you'd be making the same mistake

the Russians made in reverse. When the Russians bought the Duberhampton Watch, lock, stock, and barrel, soups to nuts, and a superintendent's contract and all the spare parts and moved it over to Russia, what was wrong with it? To operate the Duberhampton Watch here, when the Duberhampton Watch had to have a rate of flow of 4,361 pieces every day and you move it over into a retarded complex -- Russia in a few years more, yes, but then, no -- so you could only run the plant in Russia for so many months before it had to shut down to let the slow-moving Russian industrial complex catch up, and after nine months, you could run it for another three months.

Your Fascist control, if you tried that on New Jersey, it wouldn't run, you see -- the same thing in reverse. Do you think you could stop Ohio or any other big state and shut it down for nine months and not do a damn thing? It would blow higher than hell, wouldn't it. Fascist or no Fascist. Am I making my point clear? You see, Fascism is a series of roadblocks to maintain an antique status quo, and Fascism only occurs when you have a combination of a clerical oligarchy, an economic oligarchy, and a political oligarchy into a triumvirate. You had Fascism under the late Mongol Empire, a Lamaistic Buddhism Fascism. You had a Muslim Fascism under the Kharismatic Empire, and you had the late Roman Catholic Fascism of Spain, Portugal, Italy, Germany, etc. under Franco, Hitler, Mussolini, et al., and if Hitler had won, he would have consolidated everything from Lisbon and bumped off Mussolini and you would have had the restoration of the old Holy Roman Empire. He didn't make it -- very difficult to do. McCarthy tried to move in that direction, and he scared hell out of .... don't join an organization -- it might be declared subversive. Wasn't it? How many of you have that record, The Investigator? Anybody here? Played over the Canadian network. Do you know of it? Well, for heaven's sake send and get it and play it to your Section and your members. You'll hear McCarthy's voice reproduced just the way McCarthy said it, word for word. We can give you the name and address; write in to CHQ. Those of you who have been to CHQ, we've played it for you. It's good. Get hold of it, voiced by some of the best actors in the world, and it's the neatest form of political irony ever put over the air -- satire.

WHAT DO YOU THINK OF THE LABOR UNION MOVEMENT IN THE UNITED STATES?

What do you mean by that -- what's my thinking? Be a little more specific. WELL, WHAT DO YOU THINK OF IT? Not very much. Now I am in sympathy for a fighting labor organization, yes, but where have you got one? I mean they have absolutely no political concepts or realization of the political impact of the entire arms deal of the world. Here's your unions hollering for more bombs, more planes, more submarines, more battleships, more guns on the basis that they'll have more jobs, aren't they? And they have no realization at all of the political and social impact of that kind of reasoning. When they have reached the point, they will sell out anything so that they can have more members on their rolls. It's pretty low. It's reached the point where anyone in a labor organization, I suppose, that anyone who has any idea, they're liable to throw him out. I have spoken to a considerable number of labor organizations, and there are a number of them that will never invite me to speak again. They had that quadriennial railroad labor convention in that big auditorium in Cleveland. They always accorded the President of United States a suspension of 15 minutes if he addressed them or the Governor of a State -- well, they gave me time unlimited. Did they get back in session? No, they never resumed the session that day; they were finished. Twenty-six labor organizations, and they had all their vice presidents lined up on the platform. I asked them who in hell they thought they were -- they had more vice presidents than the Chase National Bank. Am I going to be invited to speak there again? Uh, huh. Do I want to speak to them again? No, because there's no sense in it. You go to a labor union meeting today -- a big one, I'm talking about, national -- what do they have? They have stock tickers, and they have nice individual bottles of whiskey to hand out to everybody, and cigars. That's the time I warned them about golf playing. I said what did Rickberg do to you -- why, he trimmed you because he was out playing golf. Don't you know better than to have a lawyer that's a golf player? No, they've got to conform. Well, they've conformed all this time, and stock tickers right in the suites. They're big shots. They're playing with the others.

In other words, the steel strike -- if you had run it for another six months at the rate it was running in June, what would have happened? What would have happened if you would have run the steel industry three months more last year at the same rate? It would have shut down, and the boys would have gotten unemployment compensation, wouldn't they? Their inventories were jammed; they

could only run about three months more. The steel industry would have closed themselves and thrown the employees out, but no, you've got to make it a strike to help out the steel industry. Who the hell are you working for? They should have been paid to go out. I mean some of this doesn't sound very nice, because realize what I am accusing them of. PAYOLA. Payola? There are a lot of countries in the world today if you did that, they'd shoot you. Here they give you a banquet, a loving cup.

INAUDIBLE QUESTION.

Now that's a personal question. You see, what difference does it make whether the individual human being is on the level or not? The Sherman Antitrust Act -- well, Sherman was from Ohio, wasn't he? The Standard Oil was just one organization -- Standard Oil of New Jersey across the United States. Teddy Roosevelt had a big stick, he was going to bust up the monopolies, bust the trusts, you know. So you get the Sherman Antitrust Act through. Sherman, by the way, was a friend of the boys who used to live out there in that part of Cleveland -- you wouldn't know anything about it, would you, Mark? That was before your time, but the oil gang lived out there. Well, what did that happen? You break up the Standard Oil of New Jersey into 27 different parts, and each part can create debt just as fast as the original. Now, was Sherman crooked? Did Sherman receive any bribes? It doesn't make a damn bit of difference whether he did or he didn't. He behaved as if he did. That is the main thing. Am I making my point clear? He could be honest as hell and still do this. Take Abe Lincoln -- Honest Abe -- what did he say, that he couldn't lose the election, because he would give every soldier in the Union Army 160 acres, and he flung open the federal lands of the west for exploitation -- Honest Abe! You think he was honest? Well, maybe he was, but look what honesty did.

That's the trouble today, you see, that the enemy's lies are propaganda; and truth is our lies. It's kind of bitter, I'll admit, but that's what it has boiled down to.

AN INAUDIBLE QUESTION ABOUT PERCENTAGE OF WORKERS IN ORGANIZED UNIONS,

What do you want me to do, indict them? NO, I JUST WANTED TO SEE IF YOU COULD RUN OFF THEIR FIGURES. After all, you've got 25

million in this country that aren't covered by unemployment compensation, INAUDIBLE. Well, you've got so many having two jobs. I mean, you've got to face the issues. Today a woman can't live on one husband's income, and for a young man to get married, he's crazier than hell unless he marries three of them; then he can have the three work and he can afford to pay for gadgets in the kitchen. Then if they start an argument, he can walk out and the three of them can continue the argument. Do you want some straight, cold stuff? It doesn't make any difference whether you're Christians or what you are. If the preponderance of marriageable females in any civilization exceeds the males by a certain percentage, you have polygamy -- no matter what their morals or anything else, and females are an increasing preponderance in these United States, are they not? Oh, you admit it. They are, and there's going to be more females in relation to the males, and there's going to be less coal miners, less steel, less farmers, less so-and-so, go on down the line. Interesting future, isn't it?

DO YOU THINK THERE WILL BE A WPA?

WPA? YES. Well, what have you got here in Akron or any city? What's General Motors or Curtiss Wright or Douglas Aircraft -- what are they? WPA with a roof on. They have been right along. By the way, Curtiss Wright is folding up in all its operations. Its five plants in New Jersey will soon be down. Going, going, gone, and remember the old herpicide ad in the barber shop? The three figures -- going, going, gone. WPA wouldn't work. Where are you going to put them to work? It's an income they've got to have. What are you up against in the question of providing income? You're up against that [slavin] morality of Christianity, that it isn't right to receive something without working for it; in other words, that would be a sinful approach. You'd be consorting with the devil, wouldn't you? It's an amazing thing, you know, when the educated or uneducated foreigner can't understand this Christian nonsense: God created everything? Yes. And he created the devil, too. Well, what the hell did he create the devil for? You have to realize this, so the foreigner can't understand that. It's only us confused Americans that understand that. You see, you take the devil out of the picture, and God is unimportant. If there were no devil, there would be no sin, and you wouldn't require salvation, would you? This all goes back to a nice old thing by Lewis Carroll, and I'm going to sum it up for you. Most

of you have read it as a fairy story if you have read it at all -- Alice in Wonderland -- but it was written by a mathematician to explain to some of the moppets. "And the Red Queen said to Alice, 'You must come from a very slow country.' And Alice -- what did she mean? "Well, here, you have to go faster and faster to stay where you are, and you have to go twice as fast to go anyplace at all." Well, we're in that boat. We better move and we had better get off the spot. And don't kid yourselves with the election -- Democrats, Republican, or Hottentot -- it's not going to solve the basic problems facing this country.

It only takes less than 10% of the homes, and then the fun begins.

Well, did I give you anything to interest you or make you think? Are you going to leave here with more questions in your mind than when you entered? You don't have to agree with me, but if you leave here with more questions on your mind than when you entered, Technocracy is a success, realize that. Thank you.

\* \* \* \*

HOWARD SCOTT  
SHAKER-LEE HALL  
CLEVELAND, OHIO  
MAY 1, 1960

I wouldn't be too disappointed, those of you who have read the little, misinformed report in The Plain Dealer. I want you to realize this. Out in Los Angeles, a few years ago, there were 22,800 in the Hollywood Bowl paid admissions. There wasn't a single line or photograph in any newspaper in Los Angeles. Mary Pickford out at her estate had a little gathering of a couple of hundred people -- under three hundred. They had two pages of photographs of that. One of the commentators went on the air for 30 minutes, and he said I was in the Hollywood Bowl, along with 24,000 other Americans. He said we just didn't exist. You see what they can do to you. They've done it before; they'll do it again. So don't let that worry you, because they're beautiful in handling that kind of -- I don't know what you would call it -- you simply don't exist. As that commentator said, there were 24,000 Americans who weren't there, and yet Mary gets two big full pages of photographs for about 290 people. That's the kind of treatment that you get, and you'll only get a change when sufficient pressure, sufficient force majeure -- then they're willing to play it straight, but otherwise, this system doesn't play anything straight the moment it deals with an idea that might, somehow or other, affect their status. That's what they're all frightened of -- they're jittery, they're shaky, and they're scared to death to even contemplate anything, because their status might cave in on them. Remember that if it does occur too drastically, you will have probably the worst psychotic conditions of any people in the world, because this country is the most unprepared country on the face of the earth for any change. You have more people who have arrived in the Promised Land and have more material wealth; therefore, if that status is threatened, they are going to turn vicious. Do you realize that? Now, any of you who think that you are making a success out of this system, that you are better than anybody else, you're a cockeyed, damn fool. That's exactly what you are. I don't care how much money you make, because you're not going anywhere, but you're still trying to kid yourself that you have done a little bit better than anybody else. Cut it out before it happens.

Now, I'm not going to deliver you any long lectures. I'm going to see if I can get you to work. What have you got on your mind? Just stand up and ask the question. Let's see if we can

have some fun.

AN INAUDIBLE QUESTION BUT APPARENTLY ABOUT ELECTRONICS ON THE STOCK MARKET.

The stock market isn't the indicator, and doesn't have the indices, that it did some years ago, so that a moderate rise and fall -- I mean, what are the shares sold in a day, can you remember? Two-and-a-half, occasionally it gets up to 3 -- remember when it hit 16 million shares in one day and the bottom went out of it. Now if it gets up to 4 million, it takes a nosedive at 3-1/2. Of course, you have all kinds of mutual funds, pension funds, and other things of that kind that have billions in the market, and, of course, they invested in stocks as a hedge against the inflation. They thought they were clever. If you calculate our invested wealth -- monetary wealth I am talking about -- in terms of the 1940 dollar, the smart boys aren't so smart at all, because if you hadn't inflation, they'd be \$183 billion more than they have right now. How smart is Wall Street? Just that dumb. Clever as hell as far as the individual is concerned, but in the overall, they are \$183 billion out from where they would have been if they hadn't permitted this upward spiral of inflation to get the dollar fast and quick in their hands. If you want to get all the figures on it, write to the Economic Institute of Massachusetts and get their nice little leaflet entitled, "Stand Still, Little Lamb, to be Shorn." They've got all the figures, a nice table, and you can digest it to your heart's content. So, the stock market isn't the indices, isn't the indicator that it once was in this country.

A QUESTION ON CHINESE PRODUCTION [MOSTLY INAUDIBLE SO CANNOT BE SPECIFIC!

Well, they are producing now, but considering the amount of effort they are throwing into it -- I wish you would try to realize the number of construction projects under way in Red China today is greater than the total construction of the last 4,000 years. You can't even contemplate it, because you haven't done enough research and study as to how much construction there was in the last 4,000 years.

ANOTHER INAUDIBLE STATEMENT -- SOMETHING ABOUT A PICTURE

Well, there are a lot of things you didn't get in that picture. MORE INAUDIBLE COMMENTS. What? You mean there's some Republican back there? INAUDIBLE What? Is Nixon in the "John"? INAUDIBLE Wait a minute just touching on Tibet. There are 5,000 monasteries in Tibet, and 26% of your able-bodied manhood are in the monasteries. Tibet -- if it wasn't for the high altitude and the cold, you'd have quite an epidemic proposition, but as it stands, the other usual epidemics in other countries do not hold, but they have a high venereal. As Red China has new plants making penicillin and sulfa and DDT, they will probably delouse the Tibetans, as well as fix their venereal proposition.

In Mongolia, the Russians ran into the same thing. They found most of the able-bodied young men in the monasteries, so they clamped down on that, and now they are out working outside the monasteries. In Tibet, you know, the tea -- the bricks -- that's the way they get the tea -- the bricks -- come from China. Well, if they can't drink the tea with the rancid butter .... YAK BUTTER .... the rancid butter, Yak butter, but they also mix a little Yak dung in it (laughter). Well, I'm not kidding, it's a fact. That gives little sweeteners. The average living quarters of the Tibetan are filthy. True, some of the great monasteries pile up like this, but then they dump the refuse, down, down, down -- fourteen layers down, and it all accumulates at the bottom. They do the same thing in the near East. So, don't have any of this Lowell Thomas damn nonsense about the sentimentality of the poor Tibetans being overrun. They should have been overrun five centuries ago. Time is merely catching up.

LIFE MAGAZINE and FORTUNE here last year came out and said the Chinese were trying to do so and so in Tibet, but it was going to take years and years before anything like that was accomplished, and then, my God, they didn't have the courage to admit it, because about a month or so afterwards, they showed 600 Russian diesel trucks in Lhasa, Tibet. How did they get there? Over the highway from Sinkiang, a highway that has more tunnels and more bridges than any highway in the world. It crosses the Karokorum Pass, two-lane, with a dividing line down the center, in an area that has closed for traffic for centuries nine months in a year. For the first time in history, you can roll the trucks all the way from Yarkand to Lhasa and beyond. By the way, if any of you come to CHQ, you can look at the geographical map with the lines drawn in 18 years ago. They built them exactly where we

drew them. They might vary a mile, but we knew where they were going to build them before they knew they were going to build it.

Well, that's .changing the complexion. Whatever one thinks about the Chinese -- that's neither here nor there. The point is that transportation and modern technology are introducing factors that they never had before.

The Indian -- population, that's a different question. India did not have a revolution. It had a secession from British rule. There are 40 million human beings of adult age in India, but even if there were work for them, they couldn't work. They haven't got the vitality. The Chinese are different. They have been accustomed to really putting out, so look out. You'll be hearing more from them in the next two years,

#### CAN AMERICANS VISIT CHINA?

No. China is not in this world. You can't get a United States passport to Red China. It's not permitted. The British can, and the Dutch and Swedes, Czechs, Norwegians, and so on, they can all get them. Canadians can, but not these bloody Americans, because 460 million human beings do not exist -- just the same as our meeting in Hollywood Bowl -- they weren't there.

THERE IS A TRUISM: ALWAYS PREPARE FOR THE WORST AND HOPE FOR THE BEST. IN REGARDS TO THE POTENTIAL PSYCHOSES WHEN CHAOS STARTS, IS THERE ANYTHING YOU CAN SUGGEST THAT TECHNOCRATS CAN DO IN RELATION TO PREPARING FOR THAT?

Well, just go out and do more symbolization and gather more people in. A nice little question for any Technocrat with children that have passed their early teens is how many in their family are Technocrats in that generation. In other words, how successful have you been at home? What's your daughter and your son doing -- hotrodding? Or are they just the usual delinquents attending college?

Come on, we can have a lot of fun in this. You haven't got me warmed up yet. If someone could find me a nice pitcher of water someplace with a glass, I would appreciate it. Oh, it's here. It's a brown jug -- no wonder I didn't recognize it.

IN A LECTURE, YOU STATED THAT THE POLITICIANS WHEN THINGS GOT BAD WERE GOING TO NJCLEAR WAR. WHAT WOULD THEY HOPE TO GAIN BY IT, AND WHAT WOULD BE THE STATE OF THE WORLD AFTER THAT?

When any status reaches a critical stage, you always have the tendency to go into psychotic hysteria. You even have the Vatican proclaiming that a nuclear war and the devastation of civilization would be preferable to surrender to what? Materialism, and in Europe, they've got Technocracy worse than Communism. Yes, Communism is a kind of minor thing. Materialism -- and Technocracy is the worst. So a nuclear war and nuclear devastation of civilization would be preferable to having the sheep surrender to an idea. So you have your choice. Remember what I said some years ago: Join us or join your ancestors!

WHAT COUNTRIES IN EUROPE ARE LEANING MORE TOWARDS TECHNOCRACY?

There isn't anybody leaning. What's driving people is the technological impact in their area. As you get more energy-consuming devices in that area, you speed it up, then you have more change. It doesn't make any difference where it is. How many countries are you making automobiles in today? How many countries are you making automobile tires in? How many countries are there making radios and televisions? This isn't the world of even ten years ago. South American has had a terrific industrial expansion. It isn't the South America of World War II. It's an entirely different one. You have Sears Roebuck stores in how many countries in South America? Do you know? Big ones, and they have Sears Roebuck plants making stoves, refrigerators, and all the rest of the so-called white ware. Every time you look at a television, you know, and you see that Living Bra stuff, well, just get a laugh out of it, because most of the bras come from Hong Kong. In other words, the Chinese are providing most of the uplift in this country.

SOMETHING ABOUT U.S. COMPANIES BUILDING ROADS IN COMMUNIST CHINA.

Who's building roads? The American Government isn't building roads. ADDITIONAL INAUDIBLE COMMENTS QUITE LENGTHY ABOUT SOMEONE TELLING THE QUESTIONER ABOUT BUILDING ROADS IN CHINA BY AMERICAN

COMPANIES. No, sir, that's absolutely incorrect. He's either a cockeyed liar or he is an escapee from one of your state institutions in Ohio -- on leave. There are no U.S. construction firms, there are no U.S. employees, and there are no U.S. sponsored projects of any kind whatsoever. That's another -- that must have been delusions of grandeur. It couldn't happen, because there isn't any. It might have been Pakistan. We have a number of firms in there and in India. Oh, no, he was wrong. You can't even get a passport to go there. You can't even get a passage. It's absolutely absurd. The man was either an escapee from an institution or he was fabricating it for some reason. INAUDIBLE COMMENT. That's impossible. There must be some other reason. He was drinking the wrong whiskey. That's what you get from drinking that rice ...

WOULD YOU CARE TO MAKE A REMARK ON SOUTH AFRICA?

What is it you want to know? You ask a direct question.

WHEN WILL THE WHITE MAN GET CHASED OUT OF THERE?

Not only South Africa. Why do you pick on South Africa?

BECAUSE OF THE COLORED, I GUESS.

Ah, there you go again. How many blacks are there in South Africa? Come on, I want to find out if you know. There are over 200 million. How many whites are there in all Africa? It's doubtful if there's 6 million, and approximately 3 million -- not quite -- in South Africa. South Africa has most of the whites of all Africa. But they have quite a white population, but the ratio of white to black -- Nigeria is 40 million blacks and only 12,000 whites. Why isn't the publicity on Kenya, Uganda, Tanganyika, Congo, and other parts of Africa, where the ratio is many times greater than South Africa? Well, then let me ask you the question. How many Indians are in South Africa? Only a couple hundred thousand, and one of the first Indian peonize labor contracts was negotiated by one Herbert Clark Hoover, still living. Yes. So you have quite a few hundred thousand, and Ghandi was one of the young men that came over in that contingent, and he got his training in South Africa before he went back to India.

Now, the big problem in South Africa is the Bantu. Is the

Bantu a South African negro? What do you think? No. Zulus, Matabilia, Kaffirs -- those are South African. The Bantu is not a South African, and who brought the Bantus to South Africa? [Come on, express your opinion. I want to know what you think.] ENGLISH. No, not necessarily English. BOERS? No, the Boers didn't bring them. The Africaners didn't bring them. The deBeers Consolidated, the IIs Fonteyn, the big corporations. They brought them. You don't hear a word in our press here as to who was responsible. When it comes to physiological standards, the Bantus are only slightly above the Hottentots. They're not in it with the Watusis in structure or anything else. Nigeria, when Queen Elizabeth was reviewing on the tour in Africa -- the poor little girl, you know, they stood her up like this, and these giant Africans went by, and West Point, San Cyr, or Sandhurst never did it any better. I think the line that passed was 6-6. Poor little girl -- they should have put her up on stilts; it was really a crime, but they have been running and administering that part of Africa. They're trained. The Bantu has just been brought down there, lives in slave quarters, as he runs the mines, does the work on the farms, and the other stuff, and they did it themselves. The whites, same old story: Take out the wealth, cash in on it, do it fast, and they don't care what the devil they use to do it with, and now it's exploding in their face, but it's exploding all over Africa. It isn't just one place. You've got the Belgian paratroopers, sand bags around the Catholic Church in Leopoldville and other places. You have to protect the priests because the Catholic Church and the priests in the Congo are associated with what? The Belgian imperialism. But you also have the sandbags around the swimming pools of the better class residents, and the machine guns hooked on top.

You had them fire on the natives in South Africa, and the same day you had 27 killed in Central Africa in one place, 139 wounded, and what do you get? Three lines in your press. The big ballyhoo is on South Africa. I am not saying this to excuse the conduct of South Africa. I am merely explaining the misrepresentation so that the American here thinks that South Africa is the only thing in Africa where this goes on. It isn't, and the situation in South Africa is 90% the fault of big business.

WHAT ABOUT THE ALGERIAN SITUATION? [REST OF QUESTION INAUDIBLE]

Oh, well, the Algerian situation is complicated, and, of course, DeGaulle is the cushycushy boy of big interest in United States today, because he opened the French exploitation of oil in the Sahara to American capital. DeGaulle has become persona grata as the savior of France. Even Adlai Stevenson went to Algiers with his son to invest in Saharan oil. Didn't you read it? After all, Adlai Stevenson is a millionaire.

INAUDIBLE

No, that was the Moroccans. The Moroccan gangsters got the stuff from the American bases. It was sold as scrap and refuse, and they mixed it with the olive oil. You cook with oil over there, you know that. I think you were there once, weren't you? So they sold it all over and a lot of people died -- too much Americanism! About one part olive oil and about three parts American gun recoil liquid. Now, of course, Morocco is executing a few of them and sentencing a whole lot more to prison under the Law of the Koran, which is the law in any Mohammedan country; in other words, they haven't moved in centuries.

Here's an interesting proposition: Your Americans in Saudi Arabia and Kuwait -- trained men -- are asked every week to come over and witness the beating to death of prisoners. And how do you treat the special ones in Saudi Arabia? Take a pair of pliers and some wire and wire up their genitals, shove the water in them, and hang them upside down until their bladder bursts. There are photographs of it, and the Americans see it, and they are invited over to see it; in other words, Saudi Arabia and Kuwait are back in 800 and 900 A.D. But because there's oil coming out, we're buddy-buddies. That's about how low we are.

Of course, there aren't any flies in North Africa, are there? Show you movies of Baghdad, what is downtown Baghdad, of a few modern buildings and an airport, but the mud proposition with the narrow streets where they are not wide enough between the walls of the buildings for me to walk straight. I would have to turn at an angle like that. Now, if you see movies of that, and they're damned hard to get, because they have to be taken surreptitiously. These are the realities that we are refusing to face.

## ANOTHER INAUDIBLE QUESTION

Oh, well, they are cancelling all kinds of projects. They're going to cancel all the 52 series, too -- yes, nuclear power. Well, there's a little difficulty in it. By the way, the latest information from out in space, you know, is that your bombardment in the van Allen belt, you'd have to have four inches of lead. Figure it out. It would be a hell of a lot of weight to shove up there for one astronaut and one nut. You can build nuclear projects for a lot of things, but what's the sense? When you have a nuclear reactor on a 50:50 or a 60:40 basis, you've got rods that go down the reactor. Those rods are encased. Do you realize what percentage of energy in those rods is used up before you have to pull the rod? A fraction of 1% of the energy in that rod, and then you've got to pull it because it's contaminated. Then you've got to strip it, reprocess its core, recase it, and put it back. There were 46,000 nice big stainless steel barrels with an inch thick of lead dumped in the ocean, and a lot of those nice big stainless steel drums, and real stainless steel -- none of the cheap imitations, the 28, made right here, some of them, by the Republic and others. So, contamination in the laboratory is not much of a problem, but if you get 250,000 kW generating or half a million, then the problem of contamination -- you've got to have a terrific supply of rods going in and a terrific supply coming out, and a terrific supply being decontaminated and reprocessed; in other words, about ten supplies of rods, ten times the rod capacity of the reactor.

## LONG INAUDIBLE QUESTION ABOUT OPERATING THE NUCLEAR REACTORS.

Oh, yes, you can operate them. You are operating here, but it's a much higher cost. You see, what you are doing here is you're covering it because the government supplies the U-238 and the U-235 and then takes the plutonium, and then the private companies would have the gravy of the power. How are you going to get costs on that basis? You won't get costs; you'll get a lot of juggled figures. In other words, the comparable costs of generating atomic power and your most efficient station, atomic power is still away above the most efficient generation by other means; but, of course, the concept that you have to have atomic fission because of security. Well, what security is there when there's enough atomic and nuclear weapons lying around in several

places on the globe to annihilate us. If you think the nuclear weapon is efficient, get over it. It isn't efficient. Your new chemical warfare is far more efficient and at less cost and more deadly than the atomic fission and nuclear device. You don't have to breathe it, all you have to do is walk through it. It's heavy, lays on the ground, and nothing grows there for some years. There's an island down on Long Island Sound -- Chemical Warfare Division -- they have a little hoof-and-mouth disease laboratory on one end and they publicize that. Other countries have research on chemical warfare. We have it. Well, how do you wish to be eliminated, and how dead is dead? Do you have to be dead once or 200 times? Let's quit kidding ourselves on this nonsense.

QUESTION ABOUT THE FEASIBILITY OF ATOMIC ENERGY.

Yes, there's atomic fission or ultimately fusion. It has its place in remote sites where the transport of fuel would be a high-cost proposition and in certain types of shipping -- the only trouble is that when you come to large-scale ships, there is the question of shielding for contamination for your cargo and your passengers. They haven't got it figured out on the SAVANNAH yet. Your atomic submarines from United States are barred from a good many ports of the world, do you realize that? They are not permitted to enter the harbor. Swedes, Norwegians, Danes, and others won't even let them in. Probably will have to wait until the Norwegians develop lead casings for the herrings!

HOW ABOUT A SOURCE OF POWER FROM SOLAR ENERGY?

Just bear in mind that the solar energy falling on about 6,000 square miles -- that's less than the State of New Jersey -- if it were converted at 50% conversion factor, it would be greater than all the energy converted on the face of the globe by all other means. You've got a lot of territory in United States and other parts of the world where the sun shines for a considerable period. The only trouble is that nobody owns the sun. You can't issue stocks, bonds, or other items of debt on it, and so far, thank goodness, no fictitious personality known as a corporation can control it or you'd all be out of luck. INAUDIBLE Not necessarily, but petroleum has a good many uses besides heat for homes or energy for automotive vehicles and other vehicles. The question is it would introduce a lot of changes. After all, we had one individual last night that said we were going to get

iron ore from the moon. You know, they've been reading those what-do-you-call them where they're going to have these spaceships fly to Mars and load up with iron ore and come back. Well, but wait a minute, this is what the American public -- they love it if they get things like this, because then what? They don't have to face the reality of existence right here, do they? They can avoid it. Those scientists, those space boys, they'll fix it! I can get really dirty on some of this stuff.

HOW DO THE OIL COMPANIES FEEL ABOUT THE TREND TOWARD COMPACT CARS?

I don't know what you mean the trend toward compact cars. INAUDIBLE They don't use much gasoline? Now, if you're interested in gasoline, why don't you go to work and figure out the energy in the petroleum and the amount of energy that it takes to break that down and produce gasoline. It will surprise you. What do you think? You think you're getting something when you get gasoline. Well, you are as a commodity that you buy at the pump. Go through a big oil refinery and see what the energy balance of that oil refinery is, and if you don't get mad, you ought to be shot.

That isn't the problem -- the problem is producing an automotive vehicle that will run on anything that burns, not gasoline; then you will avoid the terrific waste of energy in cracking up your petroleum. Of course, if you get caught short, you can always go into the A & P and buy six pounds of margarine and throw that in. And that Mazola, you know, that your wife used to fry the fish in -- well, it's a little smelly, so you can throw that in, too. You think I'm being funny? No. 20-20:1 compression and better, opposed piston, no valves, air cooled, solid injection. Well, if you built it to stand up, you'd have approximately minimum overhaul at half a million miles. It would average nearer a million. You people from Detroit -- Detroit would be one of these ghost towns. YOUR TENSE IS WRONG. Oh, it is? I stand corrected, sir.

One of the greatest uranium booms in the world -- where is it? Blind River. Where is Blind River? Oh, they've got big movies, hotels. Don't you know what's happening with Blind River? It's all been built within the last couple of years. Well, but you've also closed down the original Eldorado, haven't you? You've got so much uranium ore you don't know what the devil to

do with it. You see, the Chinese have a big uranium deposit in the Khingan Range. The Russians have several uranium deposits. Everybody got it -- all God's chillen got it! Of course, we are short on thorium -- we haven't any thorium worth talking of. India has the largest deposit of the free world, and Brazil is next, but there's a very interesting thing: The Indian Government and the Brazilian Government won't permit the export of thorium nitrate, only the raw thorium phosphate and then in limited quantity; in other words, go ride your own hobbyhorse.

INAUDIBLE

From the first of the year, 15,000 laid off in the Pittsburgh area? [SOUNDS LIKE: FIRMS WHO HAVE NEVER LAID OFF BEFORE] Yes, that's quite general. You can find it in Nova Scotia, you can find it in New England, you can find it all over the west coast. After all, Douglas shut down the big El Segundo plant, and then it's laid off some 1,800 engineers -- laid off engineers with 22-24 years seniority, and you got two weeks' notice. Boeing is transferring from planes to missiles, and, of course, if Boeing goes, Seattle will be in a curious state. Seattle, you know, that once had some vitality -- why, they were shocked when I kidded them about skid row. They haven't a skid row anymore, they have nice suburban homes, you know, stretching. Just like San Francisco -- it used to have that wonderful area. What was its name? Barbary Coast down Pacific Street. No Barbary Coast anymore. The taxicab drivers have nothing to do Friday night and Saturday. Why? Because all those with ready cash get into their cars Friday afternoon and beat it for Reno. The Los Angelinos -- they go to Las Vegas. These are changing times. I remember Barbary Coast when I was eleven years of age. It was going very nicely in 1901. Now, of course, the amateur has cut in on the professional. The abundance has ruined the scarcity.

INAUDIBLE QUESTION

You see the way this Price System conditioning works? What you really need to devise is one that runs on hot air from the human jackass. Do you know anything about proteins? Well, proteins are highly explosive in certain form. There's several Technocrats some years back had cars running on oat hulls and wheat. You can do it. You see, Rudolph Diesel originally developed the diesel engine -- he tried to run on coal dust, and

the (I'm trying to think of the double name now) -- they have a big diesel operating now on coal dust direct. Well, you have to make certain adaptations -- of course, that of Diesel blew up when he tried it; but you can run on a whole lot of things. Why don't you have some sense? The farmer chews up the corncobs, throws them around to the pigs, or spreads them out -- well, 25% by weight of corncobs is furfural. You know what furfural is? Furfural is an organic, as great an intermediate as  $C_6H_6$ ; in other words, two to three hundred thousand products can be taken from furfural. You simply macerate it up, put it in tanks, put in your sulfuric acid solution and digest it with heat, and then it splits. You decant the other off for wallboard and mucilage and get your furfural. From furfural, you can get anything from synthetic vanilla, anesthetics, on down the line -- several hundred thousand. You can also use waste oat hulls, wheat hulls, and others.

Go a step further, your modern processes -- at least the latest ones -- fermentation of wheat and of corn -- in wheat, you can produce by fermentation about 25% greater production of  $C_2H_5OH$  than you ever did before, and you do not break down the protein. The protein is left in the mash. The same thing in the fermentation of corn, only you get isobutyl instead of  $C_2H_5OH$ , and the protein is left. Then all you have to do is add salt, a slight addition of salt, and minerals, and you have a complete cattle food. So you start your animal out here, and you end him out here; he never sees anything but the food. He doesn't get the food direct; you take the other out, and you feed him on the waste and the by-products. One organization -- an industrial organization -- offered to produce beef on that basis for one cent a pound! Well, you take my process for producing colloidal sucrose from cane instead of raw sugar. If you used it, sugar as you know it would be down in mils per pound, not cents.

CAN YOU TELL US SOMETHING ABOUT HOW CONSTRUCTION AT CHQ IS PROGRESSING?

There is no construction at CHQ at the present moment. We are all ready as soon as we can get some superintendents -- how do you like that? We've got three dogs down there now, and the youngest one, he's got a little bit of the qualities of both of the others. He's too damn big, and he's too damned smart. The others can jump. He not only can jump -- he can climb with all

four legs, ladders or fences. That's what comes from giving him an education. The other day the big fuel truck driver came in -- well, he's been coming in there, plays with Tina. I heard the barking, went out, here were the pup and Tina -- Tina was standing there, but the pup was barking at him. He waited until we got the pup in; so , we put Poppa and the pup inside and left Tina out. He got the hose in the opening and filled the tank. Now, what I didn't know was that Tina was growling at him out at the gate, because the pup was barking, you see. She's got a prolonged sense of maternity -- very definite. He had high rubber boots on with the tops turned down. He dragged the hose out -- bang! Right through the rubber boot. In other words, he hadn't done right by her boy. She went right through that big, tough rubber boot. It stopped him, and he weighs 200 or more pounds. She just nailed him right to the ground. Of course, the moment I hollered -- that's what you've got to expect. I wouldn't have minded if it had been a businessman.

DID YOU GET YOUR INFORMATION THROUGH THE KIPLINGER LETTER "CHANGING TIMES"?

No, why bother about Kiplinger? He's only a Washington gossip column on the financial side. He wouldn't tell what I want to know, I want to know what type of lock the Russians are having in Krasnoyarsk -- about 290 feet in a single lift. Well, when Kiplinger gets to where he can tell that kind of information, he won't be Kiplinger.

ASKING SOMETHING ABOUT THE FLOOR WAX BUSINESS THE CHIEF HAD.

The floor wax manufacture? Yes, we had the Duron Chemical Products Corporation. We took over the old city pumping plant of Pompton Lakes [New Jersey]. We had a laboratory in there. Dr. Max von Rechlinghausen, Dr. Schaul and myself -- well, in case you don't recall any of those names, the mercury vapor lamp -- you've all heard of that, well, Dr. Max von Rechlinghausen was coinventor with Cooper Hewitt on the mercury vapor. Both of them were physicists for Westinghouse for 25 years. Schaul was the developer of the Lebronn condenser for all turbines in power plants. Max's father was Chancellor of Heidelberg, famous in the medical world; for instance, elephantiasis von Rechlinghausen was named after his father. In order to have a little interesting thing, we came out with some developments in wax. It was, and

still is, the best wax compound that ever was put on a floor. I'm still getting orders for it. Jihat was the trouble with it? You put it down, polished it, and you could spill food and any darn thing and you could mop it with hot water and Gold Dust and you didn't take it off. You just polished it and up it came, but you didn't use enough in a year to give you any business. The Neurological Institute in New York was finished from top to bottom with it. It won the Hospital Association award for United States eight years in succession. Anything else you want to know about floor wax? APPARENTLY ASKED IF HE COULD MAKE IT NOW. No, I would have to have some autoclaves and other equipment. It has to be done under high pressure, and it is an interesting reaction. Johnson's Wax tried to duplicate it with 80,000 gallons. It's a very critical difference, and when they kicked it over, they had the equivalent of ground up crystals in liquid. If you miss it, you can't do anything with it, and chemical analysis won't tell you a damn thing. We used to run the plant four days a month.

Do you think I'm funny? Well, some of you may be at CHQ when Charles Gormley is there. He's a member of Technocracy, Chief Inspector of jet engines for Curtiss Wright. He worked there. He also worked on the assemblage of the prefabricated structure on top of the Thompson Starrett giant warehouse that FORTUNE MAGAZINE tried to photograph with a telephoto lens at a distance of three miles.

We managed to live and it wasn't very hard work. You just turned it on and it ran, kicked itself off, and you shipped the product. I've got a bunch of checks that have never been cashed from different corporations. It was sold at sheriff's auction -- I was too busy with Technocracy. If you had about half a million dollars to promote it on a wide basis, you could have made a nice commercial enterprise out of it. We also had compounds where you turn a nice concrete floor into a beautiful vermilion, a beautiful blue, or a green. You could run food trucks over it night and day, spill it, mop it up, and it was just like a mirror. \$12.00 a gallon enamel only used to last a couple of weeks. The only trouble with this was that it only took one coat in about nine months. That's no good.

We had some other things; for instance, we were working on azosulfanilamide -- that's a dye, you know. We were working on it for other reasons, and when we found out accidentally what it

would do, one day several of the kids that were working there, I said, "Charlie, what the hell's the matter with him?" He said, "I don't know." "Well, I said, "what is it? "Well, he doesn't feel so hot." I said, "What's wrong?" "He just got fooling around and got a dose, and he's been going to the doctor. It doesn't do any good." So, I called him over, and, yes, one of them went to this doctor, another one to that; the treatment the doctor was giving them -- different doctors: zinc oxide in a capsule. You wouldn't cure gonorrhea with that -- alleviate it, yes. So, we gave him a bottle of solution -- it wasn't stabilized in the form that you have it now, but it was the first time sulfa was ever used in the treatment of gonorrhea. It fixed him up in less than 72 hours, and then they go back and tell the doctor "what a bunch of chisellers you are," and told them what happened, and the Jersey Medical Association comes up to charge us with practicing medicine without a license. All right, do you know what the date was? 1924-25. Were you using sulfas then? No. The only thing we had developed -- we warned them, don't spill it on the enamel of the basin or the bathtub because it will dye the enamel -- it would. We just worked on the wrong thing.

A QUESTION (INAUDIBLE) ABOUT CYRUS EATON.

Cyrus Eaton is a damn competent financier and organizer; of course, he has quite an income in Canada which is free from any influence of our State Department. Naturally, he wanted to be a figure on the public scene. You see, he's a grandfather (I think a little more than that by now), so financially he hasn't anything to gain -- he's got more than he can handle. Well, the first conference at Pugwash, that really was a deal, he really had something; then all the private enterprise boys came in on the next one, and it goes nowhere. Of course, he went over to Russia and was well-received over there, and then when Mikoyan comes over here, Krushchev sends over three of those troika as a gift -- Cyrus, Mikoyan, and Mrs. Eaton ride in the troika, don't they -- had it in the paper. Then he had the big dinner party for all the big shots out at his home out here -- then is when the funny thing happened. When the big boys asked if Russia was prepared to place orders that would mean something -- sizable orders for the steel-industry, Mikoyan said, yes, they were. Well, what, for instance? Well, we are prepared to place orders for pipeline 1,680 miles, 880 pounds pressure -- that means approximately one inch or better in thickness -- 36 inches in

diameter. Nice pipeline, isn't it? Well, and then they asked if Russia wanted credit. He said, no, cash. Well, do you expect to pay us in rubles or dollars? Oh, no, he said, gentlemen, Russia will pay in gold. In the international market, I think you would prefer it that way. In other words, they would make money on the gold abroad. It would bring more than \$35.00 an ounce.

One of the other questions they asked was what about the pumping station. He said, oh, no, we have sufficient capacity in Russia to produce all the pumping stations. That was a tipoff right then and there. If they had that capacity, they were only giving the order as a gesture. There was the Russian proposal not so long ago where they proposed to sell the Canadian Government 300,000 or more barrels of Russian petroleum a day delivered to Eastern Canada at 50 cents a barrel under the world market, and they would take 300,000 or more barrels a day from Vancouver of western Canadian oil. And what would that do? That would give the Canadian Government \$50 million a year for development of their resources, but it would be sold to the Canadian Government and not the private oil companies, and, therefore, the private oil companies brought pressure, and the Canadian Government daren't touch it. Why were they doing it? Because it would be cheaper to do it that way in transport to take oil to the Russian Far East than it would to take it all around the seas. That's simpler. They can make such offers.

#### A QUESTION ABOUT TRANSPORTING GOLD (APPARENTLY) TO FORT KNOX

You can read that in the ordinary magazine. They might even take it by go-carts. What difference does it make? Scooters; I mean, what difference does it make how they get it to Fort Knox? After all, the currency of this country is not on the gold basis; gold is on the dollar basis. Your deficiency in the international balance of payments went over \$4 billion last year. The foreigners, instead of taking that payment in gold, they only took 25% in gold. What did they do with the rest of it? They bought the high interest-bearing short-term securities. They had no place to use the gold immediately, so they bought the short-term securities -- 90 days or 120 days, which still called for gold, and the 75% of that in U.S. short-term which they can, at maturity, still call for gold. Smart, huh, or dumb? Of course, we can't buy gold from certain parts of the world. We can't buy gold, for instance, that has the hammer and sickle on it, but if

the Russians ship the gold to Switzerland or Sweden or Britain or France and they take off the hammer and sickle and put a crown on it, we can buy it. In other words, what? No olive oil on our sardines.

#### INAUDIBLE QUESTION

What's the matter with your Technocrats? You've got Technocrats who pay their dues, belong to the organization, but they've got reservations -- they still think they're going to make a success out here in the Price System. They think they know more than the organization. Well, we've seen damn fools before, in and out of the organization. Until people realize -- where do you think you are going under this system? The only time you have any security is if you've got \$10, \$20, or \$30 million, but if you're engaged in an ordinary profession or working for a living, it's sheer nonsense. You still want to preserve status among your relatives, friends, and neighbors. In case any of you get funny with me, I'll give you the names of a lot of you who do it. I mean, we know you. What do you do with your spare time? Yes, you have Technocrats, what? My God, you open it up, and they belong to 18-20 organizations, and they spend money belonging to them. Those organizations are important. What does it cost to maintain a 32nd Degree in the Masonic Order, plus an equivalent status in four other fraternal orders? You don't have to answer. It wouldn't make any difference if it were the Knights of Columbus or what.

Now, if you think it's important climbing up the chairs in the Masonic Order, you're nuts. Masonic Order once was something. That was a long time ago. It was a militant organization, and now, by God, in order to get into it, you have to show your rating in Dun & Bradstreet. Don't forget when I addressed the giant Consistory, when I told several thousand Masons unless they changed their attitude, the march of events would take those God-damned diapers off from around their waists and wrap them around their necks. A bunch of juvenile delinquents kidding themselves.

Now, Americans are an amazing group of people. In the State of New York, you have registered organizations with letterheads, paper, officers, and they distribute literature and they have meetings. They are concerned with constitutional reform, with taxes, local this and that; there are 19,000 of those

organizations in the State of New York. And you think that's amazing, do you? Well, Illinois has 31,000. You come in the Middle West and it's worse. And you're going to go somewhere? Advance an idea when 9/10 of your spare time is spent boondoggling? The hell you are! The unfortunate thing in United States -- the regrettable thing -- is that we haven't had a real guerilla warfare for four or five years. What do you deserve? You deserve nuclear devastation. Let's face it.

If the idea is correct, then have guts enough to stand for it, but this kind of participation where you pay your dues and then you spend most of your time what? Doing something else, because psychologically and emotionally, you're assured that you've got your ticket to Jesus and security. Don't kid yourself if you have \$20,000 or \$30,000 a year -- you're not any better. Here's the Electric Bond & Share has just wiped out its major technical staff from 800 some down to 204, and these men are what? \$6,000, \$8,000, \$9,000, or \$10,000 a year men? Oh, no, none of those got less than \$12,000, most of them considerably more. They had it, they were secure.

This is going to move in on all of you. Well, the one who thinks he has the best niche in this is liable to find himself on a greased slide.

IF A STUDENT IS ENTERING COLLEGE, WHAT COURSES COULD YOU RECOMMEND THAT HE TAKE?

Outside of science and engineering, the best thing to do with your son is send him out and put him under a good racketeer. All depends on what your fantasy concepts are. If you think this system is going to last, why waste time putting him through a university. Just put him under a good racketeer. To make good technologist or a good scientist takes about 8-10 years, and then he isn't going to get the return that a good advertising man would get, is he? No. So, his brothers at college and so on, he's not going to feel equal to them.

SUPPOSING THE DEFENSE BUDGET IS CUT FROM THAT \$40 BILLION FIGURE. WHAT HAPPENS TO THE ECONOMY?

Well, what's been keeping the economy going? The threat of war. How many people are engaged in the military -- civilian

employees in the production of war materiel? If you had total peace, you'd add over 11 million unemployment to what you've got. Do you think your nice home in the suburbs or wherever it is ....? It's like the multimillionaire who took me down into the beautiful reinforced concrete air-conditioned .... it was stacked with everything -- five years' supply. I took out my little notebook and started making a few notes. "Oh, he said, "I can show you all the plans." I said, "I'm just making some notes so the mobile squad can pick it up." And he got quite upset. I said what the devil is the sense. If one car drives in here without your permission, it's trespassing. If 500 drive in here, you give or else.

WHAT WOULD HAPPEN TO HIS MONEY WHEN A TECHNATE COMES IN?

Well, if you have a home in the country -- now, Rex Stout, the author, you've heard of him -- Rex Stout, dramatist and author, and his sister have a book on gardening called, "The Green Thumb." I have known them for years, and he has a place out in the country -- nothing very fancy, but he has a nice, beautiful Chick Sales Emporium there, a 6-holer, and the entire inside of Rex Stout's Chick Sales is covered with stocks, bonds, and divorce papers, stuck on and lacquered over. Now you can sit there and read the whole darn thing, and there's a lot of confederate money -- so you can paste the money up on your 2-holer. Of course, if you have any great volume, they'll repulp it to a finer tissue which would be of some use. I don't mean Kleenex!

Now, you've watched the development of your various electronic computing machines. Have you ever stopped to think that the continental accounting system of Technocracy was all figured out for electronic machines before they ever developed electronic machines? Remember those coded numbers? They're all Dewey .... All you have to do is make out your masters and kick the switch and let them run.

HOW MUCH RESOURCES HAVE WE LEFT IN UNITED STATES AND HOW MUCH IN THE REST OF THE TECHNATE?

Well, you've got enough. You've got resources that private enterprise can't handle, and you've got a lot in the rest of the Technate that's not even touched. The greatest lead deposit known

the world over -- they've got samples -- the great big one is up in Edmonton -- 86% lead. It's on Coronation Gulf. Now the conference of western mayors of Canada wants the Dominion of Canada to build a railroad to Coronation Gulf. If you don't know where it is, get out a map of the Arctic and look at it, because the great copper deposit lies to the west on Coronation Gulf and the great lead deposit lies east and the silver deposit in there, the only one they are working -- 2,000 ounces of silver to the ton. How do you like it? INAUDIBLE COMMENT. Large diamond? No, you've had diamonds down in that Arkansas area, there's still a few but they are mostly mined out. The latest diamond field, which has more pipes than South Africa, is in Yakutia, producing both gems and industrial diamonds, and Russia has signed the contract with DeBeers Consolidated for DeBeers to market the Russian diamonds in the rest of the world.

## ANOTHER INAUDIBLE QUESTION

Well, what difference whether you call it printing press or what? It doesn't make any difference. You can have a \$10,000 counterfeit bill going around -- nobody knows it's counterfeit, and everybody accepts it. A year later, they discover it's counterfeit. INAUDIBLE COMMENT. Well, that's a term, and it's doubtful whether a term of that kind should be used, because printing press money is usually done when you have a gigantic inflation like Germany had -- billions to one -- and you overprint the currency or print new ones; so, it's not advisable to use that term.

## INAUDIBLE (SOMETHING ABOUT DATA PROCESSING EQUIPMENT)

No, but it doesn't make any difference whether electronic data processing is consciously -- all you have to do is devise faster and more accurate and you'll ultimately get there. They have noplac else to go but thataway. It doesn't matter whether they're Technocrats or what the devil they are, provided they design it so it does it faster with less.

CAN YOU RELATE WHAT YOU ENVISION AS AN EMOTIONAL APPEAL IF IT WERE TO BE USED ?

Come on, no, quit getting personal. I'd like to have some private life of my own. I know places where an emotional appeal

is .... I think I still have some left. You can't get me to talk about emotional appeal. That's individual.

INAUDIBLE

You've got enough people here to organize this state. What are they doing? What do they do with their spare time?

Of course, I know it's rather complicated, because today one woman can't live on one husband's income. A young man starting out today -- he shouldn't engage in Christian monogamy -- it's too hazardous. He should marry three of them and put the three of them to work, and then he has sufficient income to pay for any gadgets in the kitchen; and if any arguments start, he could always walk out and let the three of them fight it out. It's about what it amounts to, isn't it? John says it's a matter of changing concepts. SOMETHING ABOUT GETTING A COPY OF THE TAPE. Well, we'll edit it and see what it sounds like. You see, after all, you have to view it from the standpoint that if you're going to play a tape without the visible personality and you're going to play it to non-Technocrats, you don't want to disturb them too much. After all, the druggists are doing this big business today in aspirin and tranquilizers; you know, we're not out to increase their tranquilizer trade. I know what you meant -- I'm just teasing.

WHAT IS YOUR RELATIONSHIP TO THE RUSK COTTON PICKER?

The Rusk cotton picker? Merely that I was the guest at the home of John and Mac Rusk -- their home and a few other things. That's a long time ago. They set up the Rusk Foundation; of course, they were rather naive. They were going to hold back on the Rusk cotton picker because it would displace so many people. You know, nice Christian .... Well, I said if you are damn fool enough to do that, they'll take it away from you. Get into production, no matter what it is, because if you don't, the big ones will steal it off you. So, they changed their minds a little. Now you've got four-row cotton pickers, but you have to have a real technical planning program to handle that. When it goes down and goes over, close to 100,000 pounds of cotton in seven hours. So, there's more of those black boys come north] Why not? WHAT PERCENTAGE OF COTTON DO THEY CATCH WITH A MECHANICAL PICKER? Well, most of your cotton in California and Arizona is

mechanically picked, and it's increasing in the Delta. If you pick cotton by hand, it costs around \$27-\$28 a bale. Pick it by machine, and it costs \$4.31. So, even if the white or the negro gave their labor for nothing, they couldn't compete. WHAT I MEANT WAS WHAT PERCENTAGE OF THE COTTON DOES THE MACHINE ACTUALLY GET. All your good cotton in your big producing, where you have Ocala 442, it runs three bales to the acre -- you can't pick it by hand. Even the Russians have got a cotton picker. It's mounting, but you've got a lot of low-grade stuff in Texas by the mile which is only about 18 inches to two feet high. That's not for cotton pickers. It's only 3/4 or 7/8 staple anyway. When it comes to the long staple, high tensile strength Ocala 442 and the new type that's coming in on the Delta, yes, your cotton picker. Your little fellow all over the south is going out. He can't pick it by hand. Ocala 442, you know, is the biggest thing in California. It brings in more money per year than their citrus fruit or their tourists. The greatest Californian -- most Californians don't know who he is -- lives out there on a few acres. His name is George Harrison.

Well, come on, make it hot. A lot of questions you could ask that would really start something, you know. What do you do when you are out with your friends, do this? Do you sit there like that? You don't? Well, come on and sound off like you do to them.

#### A LONG INAUDIBLE QUESTION

It isn't the church property so much as the investments they have in others. Of course, the Catholic Church's richest parishes and richest dioceses are in United States. Those hard-shelled bastards down south -- they're different, aren't they? They don't drink, they don't dance, and -- come on, you can't even encourage me. No, they don't even go in for love -- it's fornication down there. No wonder you get senators like Eastland of Mississippi.

#### HOW IS PEACE GOING TO BE FORCED ON UNITED STATES?

Peace? Well, if you've got to fight, you'll find out fairly soon. United States will have to get out of Iceland, Morocco, Algiers. It will have to get out of South Vietnam, South Korea. Trouble is brewing in South Vietnam just as dangerous. We have 4,000 Americans over in Turkey, mostly military personnel. The Menderes government in Turkey is the same lousy, reactionary

thing as the Syngman Rhee in Korea; in other words, we're associated with every damn reactionary from hell to breakfast. We'll have to get out, and you'll have to pull it back, and you'll have to face the reality of what the rest of the world is and that you can't throw your weight around. It's going to hurt. What are all your generals and admirals going to do when you do that? Play golf? IS CHANG KAI-SHEK JUST AS BAD AS THE REST OF THEM? Certainly. How many Formosans did he slaughter after he was transported to Formosa by the United States fleet? 200,000 WASN'T IT? More than that. United States is using its fleet and its air corps on Formosa for an act of belligerency to maintain a blockade of the China coast. It's an act of war. When the Chinese get ready to move -- [kumsha], they'll squeeze. Then what? In other words, you'll have to come home, won't you. Remember what I said to the Society of American Broadcasters years ago, that the day would come when the only place they'd have left to broadcast from would be their own back yard, and that would be so full of international dead cats that they would be asphyxiated. Well, it's coming.

Most of our armed forces are not in United States. They're abroad, scattered all around the globe. What for? On the idiotic nonsense of the policy of encirclement and containment; in other words, a modern version of the Cordon Sanitaire of World War I. Any country that attempts to predicate its foreign policy on anti-Communism or anti anything else is stupid, because that's a negative proposition. You do not destroy an ideology by bombs, bullets, or bayonets. You only supersede it with a better one. Sailing ships didn't go out because there were anti-sailing ships. They went out because they were superseded by a more efficient transportation. So, our whole foreign policy has been one colossal blunder -- one after another. Truman, when he annunciated the Truman Doctrine, didn't know what the devil he was talking about. He doesn't yet. Poor Marshall was over in Moscow -- he should have resigned as Secretary of State, because he was justly entitled to resign. They pulled the rug out from under him so that he couldn't reach any entente cordiale. INAUDIBLE Truman's speech when? INAUDIBLE Oh, Kennan, Byrnes, all that gang. No, Churchill was an accessory after the fact. No, Bernard Baruch was a clever stock operator in Wall Street, but he's old and decrepit; in other words, he walks around, but he's got enough sense that he doesn't try to play golf. HE CHASES SQUIRRELS. Chases squirrels? In other words, nuts to you.

HOW MANY KILOGRAM CALORIES PER CAPITA PER DAY NOW?

It's only around 160,000. INAUDIBLE COMMENT. Well, but you've had a vast increase in population, you know. Your total energy has increased, yes, but your population has increased. The same in capital goods. Your total in capital goods expenditures went up. It reached the peak around \$37 or \$38 billions, didn't it? Well, but when was the peak per capita in United States? 1954 and it's declined every year since, due to your increasing population, plus a terrific amount going into atomic plants and atomic explosions.

IS THAT WHY THEY WANT TO INCREASE IMMIGRATION -- LOOSEN THE BARS ON IMMIGRATION?

There's all kinds of reasons for that. You're playing politics abroad, you're making out you're a big noble person. You can't maintain this population here. You've approximately six million unemployed, about 4.2 million that are on the lists, about 2 million that are off the list that never were on, because you have approximately 25 million jobs in United States on which unemployment compensation does not apply. The Canadian Government has much better statistics, and they are straighter than ours.

IS AUTOMATION GOING TO AFFECT CANADA FASTER THAN IT WILL THE UNITED STATES?

In some ways, yes. Canada is newer in its industrial development, and therefore you are going to put in more complete integrated units when you put them in. Here we've got a lot of old stuff, old junk, so that's a little slower in its mass impact. Just the same as you put in technological equipment in foreign countries that hasn't got much; the impact is terrific. So, any brand new stuff -- you feel it quicker. SOMETHING ABOUT UNEMPLOYMENT IN CANADA. Well, Canada last Friday was 9.1%. Venezuela is 11%. Canada is climbing. Cheer up, it won't be long.

AMERICAN ENTERPRISE IS BUILDING AND HAS BEEN BUILDING A LOT OF PLANTS ALL OVER THE WORLD. ISN'T THAT PART OF THE JAMMING UP?

Part of it, but the foreigners are building plants. They're

doing it on their own. Renault in France has done a beautiful job, and it's not any copy of United States. Same way with the Czechs. Same way with the Russians. The Russians are building steel plants out of precast, reinforced concrete. Can you imagine the Bethlehem or Republic Steel building a steel plant without using all the steel that they can throw in there? Tops in reinforced concrete design is not in this country; it's Venezuela and Brazil. You have a beautiful 58-story magnificent apartment in Caracas, no steel structure, reinforced concrete. Your walls are bearing-load walls. Beautiful roof garden restaurant on top, stores down below, and apartments in between. They were forced into learning how to design in reinforced concrete because of the high cost of steel, and they have the world's best. The top one in Brazil, you know, was asked to come to Harvard as a guest lecturer. United States State Department barred him because he had radical ideas. So he goes to Europe and gets twice as much.

APPARENTLY SOMETHING ABOUT BEING ABLE TO BUILD FASTER, ETC.  
WITH STEEL STRUCTURES.

Faster in a way, yes, but then you don't have to do the job of designing. Take the Pennsylvania Station -- when they built that, the engineers went out to test the floor loading. They got it up to the maximum load and no deflection. So they doubled it and still no deflection on the floor span. So they decided to cut a hole in the floor to find out what the devil was holding it up. There was enough steel in there to hold up a Pennsylvania locomotive. Is that designing? No. It's damn good business and lousy designing. This curtain wall stuff, if you've got glass and a thin metal -- take a winter in New York, the secretaries and stenographers all have to have electric heaters under their desks if it's on the west side of the building. You can't heat it. They're shoving the BTUs out in the outside air. Take these people, you know, who have nice big ranch houses with picture windows, single plate glass, and then they wonder what's wrong with the heating system, and in summer they wonder why they can't cool it -- 120 feet of roof. You've got enough piping in that building to go up 10 stories, do you realize that? Oh, this is wonderful. We got away with it. What kind of heating system should you have? Forced hot water, 150 pounds pressure and up, 350° and up, and take out your air and use nitrogen for your pressure, so that you have no free oxygen in your water. Get it? Well, you can shove that kind of high pressure, high temperature

water five miles in either direction. What's the advantage in it? Water at 150 pounds pressure will deliver how many more BTUs than steam at 150 pounds? Fifty times. Have you got any heating plants sold to the public that could take 150 pounds water pressure? Don't try it on your heating system. Now, you could have industrial plants that are big consumers of energy and heat. To give you an example: The Behr-Manning up in Troy, New York, had half a dozen big steam plants. They've been big manufacturers, one of the biggest in their field. They've torn out all the steam plants and now they shove it all over 150 pounds pressure. Is it foresight? No, it was hindsight, but they had to wait until they got smacked with it. This stuff had been known for years, and now they are sticking out their chest -- look what a wonderful job we're doing!

Come on, do you want any more questions on what you should design?

YES, THE AUTOMOBILE.

The automobile or sewers. You've got water closets, basins, and bathtubs up through your building, haven't you? How do you bring them down -- the waste products? You bring them down and dump them in an open sewer, correct? Well, is that the way it should be? You bring it down and pump it in under pressure, and it's pumped in the other end by float pumps pumping it away, so you've got a continuous flow. Instead of the methane gas going up and lifting the manhole covers, going off in the air, you don't lose any of it. Then you can do something. We have sewerage disposal plants in United States where over 50% of the energy generated in that sewerage plant goes back in electric power to the city system. It takes less than 50% to operate the sewerage disposal plant. If you had closed sewer systems, you'd only have to do one thing: add a fraction -- just a couple of percent -- of corn flour or cornmeal -- that's all -- to all the pies, cakes, and cookies, etc., and when that goes down the alimentary canal and into the digestive system of the human being and comes out, it creates 150% more methane gas. So the human being would be worth more for his waste products than he would be for his effort or his intelligence.

These Christians and others have been preaching that you're going to reach paradise with a pair of wings. This is a new way

you'll reach it.

CHIEF, TELL US ABOUT THE DESIGN OF AN URBANATE. Oh, no, you'd have to have big blackboards and drawings. WELL, I MEAN WITH THE URBANATE BEING ENDEMIC ALL OVER THE CONTINENT, WOULD THERE BE ANY DEVIATION? What do you mean by deviation? I MEAN IN THE STANDARDS, APPEARANCE The fundamentals are standard, but if you were going to put it at 8,000 feet in the air, it would be slightly different than if it were at sea level, but as far as the fundamental factors, it would be the same. In other words, conductivity on sound transmission would have to be 7 decibels and less, no matter where it is. Just try it in your house. John just made a remark; he said, "The silence would scare hell out of them." You'd have privacy for the first time. You wouldn't know what the hell to do with it.

WOULD THERE BE ANY AREAS WHERE THERE WOULD BE SINGLE HOMES?

What would you want a single home for? There would probably be lodges in the woods and that kind of thing, but then, they would have no energy-consuming devices in them. In other words, you could carry the commode upstairs or down.

INAUDIBLE

To cook with? No, that's too slow. All you have to do is have a little travelling stainless steel and ceramic, and you just slam it in here, and bacon -- do you know how long it takes to cook it? [APPARENTLY A SNAP OF THE FINGERS] Just that long. Years ago with the crude equipment, when I cooked the porkchops and the lambchops inside the cake of ice, we were nuts. Now we're not so nuts. So Raytheon hooks up with Tappan -- well, but it's \$1,500 to \$3,000 for a unit. You have to have a browning unit with it, and you cook it from the inside out -- not from the outside in. But you can cook it inside a towel, a dish. All the utensils you've got around your kitchen stove, you can contribute to relief or the junk collector, Of course, you couldn't have it happen overnight, but if you did housing and space heating on a technically efficient basis, there would be a terrific savings. Most of your waste in energy is in the space heating of your ordinary manufacturing plant. That doesn't include central stations or oil refineries, steel plants, or aluminum that are large users of energy, but the ordinary manufacturing plant north

HOWARD SCOTT, SHAKER-LEE HALL, CLEVELAND

5-1-60

of Ste Louis in your winter months uses 12 times as much energy in its space heating as it does in its manufacture internally. We're smart peoples!

WOULD YOU CARE TO COMMENT ON THE PROGRESS OF TECHNOCRACY IN THE COUNTRY?

After all, we've brought back Sections where there haven't been Sections for several years. You have spots where it's just holding its own, and spots where it's growing. Right here in Cleveland, these people out on the west side are moving. You've got enough people around here to reorganize Ohio. After all, I can't do it all.

TIME OUT FOR PICTURES.

\* \* \* \* \*

TELECONFERENCE IN 1961  
HOWARD SCOTT AND BELLINGHAM

What I would like the Technocrats to realize is that in forty years of our battle, we are finally arriving to where the admission is being made publicly -- I think probably a number of you have seen the article by Arnold Toynbee published in the Canadian Press, "A July Fourth Message for the United States: Where will the Coming Social Revolution Stop?" Have any of you seen that there? Well, it's published in Toronto, Hamilton, Winnipeg, and other places, and undoubtedly has been published, because we got one clipping from British Columbia. You have similar things happening here in United States, and what's it all about? It's the final recognition that technology is reaching a point in the production to where the technological complex in United States, and, incidentally, in Canada, is and can produce a prolific abundance, but the more it produces, the less it will employ. We're headed towards a minority of the able-bodied working population of United States being gainfully employed. The majority, as is being predicted in these editorials, will soon be unemployed. In other words, the technological complex of United States is revolutionary and radical to the extreme, while the social United States -- the social system -- is reactionary, obsolete, and antiquated; and the struggle is between the technological complex and the social system on this continent. The odds are that the technological complex will win, devastatingly and overwhelmingly.

It's only a question of time, and a very short time at that, because every new advance in the technical field is producing more and more with less and less, and how are you going to distribute the great abundance of this technological complex to a social system that is back in the days of George Washington? That's the problem, and they cannot meet it under this system. They are beginning to realize it, and they say so. The reports are now coming out that in a few years, we will be unable to employ in United States more than 30 million, and that 50 million will have to be provided for in some other way than working for wages.

We Technocrats, of course, have been fighting and explaining this for some decades. Remember that we stated years ago that when the producing mechanism in United States on or before the consumption of extraneous energy reached 200,000 kilogram calories per capita per day -- that when it reached that, the

majority of healthy, able-bodied citizens would no longer be required to produce and distribute the physical wealth of this continent. That statement was made a good many years ago, and the interesting part of it is that a great many Technocrats thought our timing was out, that it wouldn't occur in our lifetime -- sometime, yes, maybe, but not just in our lifetime. Our children might live to see it, you know, but now, unfortunately, if they are in good health and, say, younger than 85, they will live to see it, because it's due in here in short order, not 25 years from now, not 15 years from now, and with less than 10, and nearer 5. It's going to be very hard to take, because the socialists and communists, you see, have eulogized the worker and they have advocated the dispossession of the capitalist class, and they wanted the worker to take over. Technocracy has never quite been understood, because we have pointed out that there was no sense in toil, and that if you adopted Technocracy, which you would be forced to do if you continued to increase the rate of growth of energy consumption, it was only a question of time; and that time has arrived. When it does, it is no longer a question of expropriating the capitalist class; you will liquidate the bourgeoisie and you will liquidate the worker along with all of the unnecessary occupations that have been the burden of a human toil, hand tool, exploitative economy for these thousands of years.

We Technocrats are in on it. The wave of the future is ours -- not somebody else's, but do not expect a Prime Minister of Canada, or a President of United States, or a Governor of a state, or any other political leader to be anywhere but behind four eight balls in the coming social revolution in this country and this continent.

Now, if you would like to ask me questions, I will glad to entertain them.

You say the Kennedy Administration has issued many confusing statements regarding the policy and does it want war over Berlin? If you will notice and observe, they have asked for an additional \$5 billion. That would shove the national budget of United States over \$90 billion, and the war budget would be well over \$40, or practically \$45 billion, or half the national budget. Now, what is necessary is the controls that could be acquired by war powers. This system of ours is pretty shaky, and we need it. We

have been operating this economy under the threat of war for the last 15-16 years. Of course, Truman, you might say, was the savior for a while in 1950 with the Korean police episode. Now we would like to start something in Laos or Berlin, but it's so flimsy that it's doubtful whether our allies will support us, and it's doubtful whether we have, unilaterally, let's say, the stupidity to engage in it ourselves all alone. Is that an answer to you? We would like to and we will promote it if we can, but the question is can we?

The organization is progressing very well; of course, you know our growth is spotty here and there, dormant here and there; holding its own here and there; but we are finding that the public is coming in and it is beginning to admit for the first time that machines don't make jobs and there isn't any future for their youth. With 17 million people in United States over 65 and an oncoming youth of 1.7 to 2 million a year, there will be no jobs for them. So, dad will have a lot to answer for, because he will be a square, a sucker, and a sap for having brought them into the world if he cannot guarantee their status future under this Price System, and he will not be able to.

Give my regards and a salute to everyone.

HOWARD SCOTT  
KENT, OHIO  
APRIL 9, 1961  
MEMBERSHIP MEETING

CHAIRMAN: This, you know, is a time for predictions. Everybody is predicting prosperity right now under the wise and capable leadership of Jack Kennedy. They're predicting there will be 22 million more jobs by 1970; at the same time, Sylvia Porter is calling for 5 million new jobs right now. It reminds me of the old days: Prosperity just around the corner and all that sort of thing. Well, we had some predictions made about that time by a man who was for some time out at Columbia University heading the old Technical Alliance. He predicted, for instance, in 1920, that there would be a major depression in North America not later than the spring of 1930. Well, it happened in 1929. He predicted in 1934 that the scrap metal we were sending to Japan would come back to us, and it wouldn't be bouquets, and on December 7, 1941, the prediction came true. He has been making predictions ever since, and those predictions have a peculiar way of being fulfilled. He still has a few things to say in that line, and without further parlay, I want to introduce to you our Director-in-Chief, Howard Scott.

# # #

It's interesting to be here and to see you. You have groups here, but you have groups all across the continent in Canada and United States. You know what your own groups are composed of around here -- diversified -- all kinds of types, sizes, and conditions of servitude. Technocrats across the continent are similar.

This economy of ours is partly laissez-faire and partly managerial, but the chief and important thing that makes the distinction and the difference between the economy of United States and all others -- it's really a corporate status economy. Very few people realize that. If you attempt to acquire political preeminence or social preeminence in United States today in variance of that of your forefathers, today you have to have corporate status to get social significance or political importance. If you haven't got corporate status, you really aren't anywhere at all.

Averill Harriman only has a few hundred million. Adlai

4-9-61

Stevenson is a millionaire. The Kennedys have, reportedly, over 600 million, and the Rockefellers are up in the billions. Now the fact that Kennedy is a Roman Catholic, that makes him reactionary, and that they have \$600 million -- that makes him 600 million times more reactionary than in being a Roman Catholic. Rockefeller, having \$2 billion and being a Baptist -- that makes him reactionary; so at \$2 billion, he is 20 times more reactionary than the Kennedys. It really doesn't make the slightest bit of difference what their religion is; their dominant interests stem from their corporate status. Of course, you vote them in -- the public does -- on the naive belief that a change is going to do something. Well, it's only a change in name. This administration is not going to achieve anything more except to vote in a little more money than the previous one. You'll dispense more free food, spend more on armaments, more on schools, and nuclear submarines; but that is not what is fundamentally wrong in this economy,

Back in 1920, the railroads of the United States employed 2,040,000. In the report just out, railroad employment has fallen to the lowest in 69 years, below 800,000. The total figures for railroads, terminals, Express, and Pullman is only 832,000, and with the present mergers coming up in railroads, it is estimated by the RAILROAD AGE, WALL STREET JOURNAL, and others that that will clip 200,000 out of the railroad employment.

John L. Lewis had 780,000 coal miners in 1920. He only has 235,000 today in bituminous coal. True, he and coal operators have raised the productivity of the American coal miner to the highest in the world: 8 tons per man per day. That's wonderful; but the new machines coming in mine 8 tons a minute. So John L. Lewis and his bituminous coal miners aren't going to be around very long.

Your steel unions have lost in the last six years about 200,000. Your automotive has dropped almost twice that amount, and it is happening in every field of manufacturing and repetitive service. When Secretary of Labor Goldberg states that we will have to have 26 million new jobs in these United States before 1970, now he has raised it to 30 million in his latest quotation. It isn't jobs we need; it's income. Very few people stop to think of that.

So this economy can be bolstered a little here and a little there, but bring it up and it will level out, and it will go deeper in the next one and come up with more unemployed. You have to face that kind of situation, where none of the ameliorative and other measures that are being taken will be fundamentally effective. Anything that is done politically and economically in United States in the old order is merely going to be soporific and palliative -- it won't touch the fundamentals.

So, what are we headed for? We're headed for higher wages, higher prices, higher taxes, and more of the same. To put it mildly, United States has finally arrived at that point that Technocracy has pointed out some thirty years ago -- the point of no return. It doesn't matter what you do from now on; you're not going to fix it. You're just going to put more patches on the hull of the ship, and if you keep it up, you'll have so many patches on it, you'll sink it.

I'm not going to spend any great length of time giving you a lot of stuff on our internal economy. Abroad, we are continuing the same foreign policy that the Eisenhower Administration had and the Truman: a continuation of the Cold War. When General Marshall, as Secretary of State, went to Moscow, he did so with the expectation of effecting a working arrangement with the Russians. After two days and a little more in Moscow. Truman made his declaration of the Truman Doctrine, which promptly pulled the rug out from under Secretary Marshall and the trouble has been on. One of the big formulators of that doctrine of containment and encirclement was George F. Kennan. He was in the State Department and then got out, and now Kennedy has reappointed him Ambassador to Yugoslavia. Dean, who is over in Geneva right now, is now the senior partner of Cromwell, etc. etc., previously occupied by John Foster Dulles. So you see it's the old gang -- McCloy is back in the administration -- the same old gang doing the same old things.

Now you're not going to go anywhere except more trouble when you try to encircle what? Practically one-third of the population of the globe and two continents. Bear in mind that an ideology cannot be defeated by bombs, bullets, and bayonets. There is only one way to proceed against any ideology, and you defeat it by superseding it with a superior ideology, which, of course, there is only one in United States or the world, and that one you

4-9-61

happen to be members of that organization.

So, we're headed for more trouble in Asia, Africa, the Near East, and Europe. The trouble in Laos is a minor one. In South Vietnam, the casualties are ten times that of Laos. The Vietcong, one of the seven guerilla groups in South Vietnam, has destroyed 224 bridges in the last sixty days, captured hospital ships, radio communications, and, in spite of the fact that we have poured over three-quarters of a billion dollars into South Vietnam, trained, uniformed, and equipped an army of 150,000 and a police force of 60,000 additional. What we are trying to do is get into South Vietnam to pacify it, as well as to stop the Pathet Lao guerillas in Laos.

It's the same stupid action in the Congo. We have had great purchases by leading financial interests in United States in the last few years of a stock known as Le Societe de Union Miniere d'hote de Katanga. If you haven't heard about it, look it up. It's only a few years ago that that stock was paying \$8.00 a share. Last year, it paid \$54 a share. That's after a number of prominent Americans and British bought shares from the Belgians at high prices. So we have an interest in the Congo more than that of the United Nations.

Africa is divided into 41 pieces. It's a fine anarchic mess of separatism. You can't solve Africa with 41 divisions. There will have to be consolidation, and United States, Britain, and West Europe are opposed to consolidation. They want to keep it in the pieces.

So we're going to face a continuation of the Cold War, and hot if we can get it, with this administration similar to what we had with the previous administration. Well, I am not going to continue. I'm just going to ask the man with the microphone to get you to ask questions, because if you aren't going to do some work out here, I'm going to quit on you. How about it?

---

WHAT IS BEHIND THIS IDEOLOGICAL OFFENSIVE? WHO'S BEHIND IT AND WHAT IS IT FOR? IT'S BEEN IN THE NEWSPAPERS IN FULL PAGE ADS. What ideological offensive? Where? SPONSORED BY SOME ORGANIZATION IN NEW YORK, I THINK. I don't know what you are talking about. Be

more explicit. What ideological offensive, by whom, and where? I DON'T KNOW WHO IT IS. Well, how do you expect me to answer your question unless you know where it is and what. IT WAS IN FULL PAGE ADS IN ALL THE LEADING NEWSPAPER. Well, what is it you are talking about? I THINK IT'S COMMUNISM--SOME RELIGIOUS GROUP. MORAL REARMAMENT. Now, why didn't you say Buckman's Moral Rearmament? Don't you see. That's not a way to ask questions. State Moral Rearmament. Yes, there are full page ads in the NEW YORK TIMES, HERALD TRIBUNE, and other papers across the country. They've got money. They are a fascist outfit. There have been more and more fascists every day. There were fascists before World War II; of course, Buckman once was a foreign missionary in China. If you look up the record, the Chinese Mission Board had to get him out of there. I won't state the charges, because some of you are still a little prudish.

WHAT IS THE JOHN BIRCH SOCIETY?

John Birch Society is another one. That started by Welsh, an ex-candy manufacturer up in Massachusetts. It took the name of Birch who was killed in China about ten days to two weeks after the surrender, but they are against government and taxes and they're against Communism. They're against anything that appears different. They're approved of by a Cardinal, although Welsh is not a Roman Catholic. But you have a number of other organizations. You have Colonel Rockwell and you have beautiful, nice, thick pamphlets on glossy paper explaining how you can join the Blue Army in United States and set up cells in your community wherever they are, and to get tape recorders, to get organized, and the Blue Army -- you report to headquarters to fight Communism. What are the headquarters of the Blue Army? Our Lady of Fatima, Washington, New Jersey. So you have them Catholic, non-Catholic, and no doubt you could dig up some Baptists around, too, who are just as stupid.

WHAT ABOUT THIS PEACE CORPS? DO YOU THINK THIS WLLL SOLVE ANY OF THE COMMUNISM FROM SPREADING? AND WHAT ABOUT THE OUTFLOW OF GOLD?

After all, the outflow of gold -- the foreigners who have gold coming to them have only taken about 25-30%, and they invested the rest of it in short-term United States securities, which are payable in gold. If they took it all out, we would be

MEMBERSHIP MEETING  
HOWARD SCOTT, KENT, OHIO

4-9-61

below our currency reserve quota in gold. They can take it out, but they are being paid interest for the short-term treasury notes; of course, Russia is a big producer of gold and she doesn't use gold for that purpose, so maybe she could loan us the gold, seeing that we put so much store in it.

As for the Peace Corps -- what is the Peace Corps going to do? They're not trained to do anything, and the concept -- what? Going out and swat a few flies in Haiti or gather up a little sewerage someplace else. Oh, nonsense -- let's quit kidding ourselves.

Come on here. We can have a lot of fun if you ask me the right kind of questions.

WHAT ARE THE EARLY PROSPECTS OF CHINA BEING ADMITTED TO THE UNITED NATIONS AND WHAT CHANGE WOULD THERE BE AS A RESULT OF THIS?

Chang Kai-shek would have to vacate the so-called representation of the 640 million Chinese people and represent only Formosa. Now in the Olympics, the so-called Taiwan are not permitted to represent the Peoples Republic of China; they can only represent Formosa on the International Olympics. So it would come to that.

WHAT DO YOU THINK OF THE NEW COMPACT? WILL IT COMPETE WITH THE IMPORTS?

What new compact? COMPACT CAR. Well, but there are slews of them. ALL OF THEM. WITH BETTER GAS MILEAGE? THEY'RE SUPPOSED TO BE THE ANSWER TO .... Look, you haven't got an automobile in this country, let alone a compact. For heaven's sakes, what are you trying to do. Are you kidding yourself that you are buying an automotive transportation vehicle?

WHAT DO YOU THINK OF FLUORIDATION IN THE PUBLIC WATER?

What's wrong with fluoridation? DO YOU THINK IT WILL PREVENT TOOTH DECAY WITHOUT ANY ILL EFFECTS? Why, certainly. Where are the best teeth in United States. What state has the best teeth? Arkansas. Why do they have the best teeth? All right, let's go on with it. What states have the highest appendectomy rate? Mountain

states, and even after they are out of United States for five years in the armed forces, those from the mountain states still have the highest incidence of appendectomy. How do you like that? What is it you want? A discussion on public health? There are technical and scientific reasons why that is. It's not psychosomatic. You don't fix it or improve it by diet either. You can modify it to a slight degree. Fundamentally, it is due to geography and minerals. You've got maps today with disease incidence areas of the world, not only here. Fluoridation in the water -- well, that can reduce the cavities, but you've got this individual worked up that those who are advocating fluoridation are sponsored by the Reds from Russia to undermine the United States by introducing fluoridation. I mean, how stupid can you get?

HOW DEEP IS THIS PRESENT RECESSION GOING TO WORSEN OR IS IT GOING TO GET BETTER. GOLDBERG SAID IN THE NEXT YEAR, WE HAVE TO HAVE SEVEN MILLION NEW JOBS WITH \$60 BILLION ADDED TO THE NATIONAL PRODUCT TO GET OUR UNEMPLOYMENT DOWN TO 4 PERCENT.

Let him go ahead. Where are you going to get the new jobs? Railroads, coal, steel, automobiles, or babysitting?

WHAT ARE THE POSSIBILITIES OF FURTHER REVOLUTIONS IN LATIN AMERICA?

Plenty. Bear in mind that in Havana, Cuba, you have the beautiful Tourist Alley. That Tourist Alley in Havana had the finest nightclubs, hotels, gambling joints, and then out , you had those beautiful beach clubs, and yet only more than a stone's throw from Tourist Alley, were the [barrios]. There was no water, no sewerage, no pavement; and you could smell it before you got to it. The excreta and the urine for the last century arid' a half, at least, had kind of permeated it.

Now, remember that in Buenos Aires, just a short distance from the Square of the Republic or the Avenue of the Ninth of July, there are a million of them living under the same filth and unsanitary conditions. You have the same thing in Rio, and they are climbing up and down the hills in Caracas and Lima. They're the hungry ones of Latin America. We, of United States, have been sixty years in Cuba. We've made fortunes and a few Cubans have gone up with us; but the great majority of Cubans will have their

MEMBERSHIP MEETING  
HOWARD SCOTT, KENT, OHIO

4-9-61

chance in this revolution if the CIA cannot succeed in instigating a counterrevolution and overthrowing it in blood.

For instance, the top political man of the LOS ANGELES TIMES went down to Guatemala months ago. Forces down there hacked out 14,000-foot runways. It wouldn't be Guatemalans, would it? Guatemala doesn't have a jet plane, so they put in training, barracks, for what? For counterrevolutionary invasion of Cuba via Guatemala. You have it in Louisiana and Florida. Who is paying for it? You've got one guess.

So there's going to be more of it in Latin America whether Castro succeeds or not, but Castro's revolution in Cuba is the only social revolution in Latin America. Mexico had one but it stalled on dead center. If Castro goes through with it, all Latin America will take its hint from that, and if we want to land sufficient arms and troops, we will fight Cubans -- hundreds of thousands -- it will be a slaughter. Otherwise, we couldn't succeed, while the American sits complacently at home. How many of you here have read C. Wright Mills, "Listen Yankee." Well, do you remember that beautiful thing in the last of it and his advice to these Yankees up here, that it's up to you, up to you to do it in your country. In Cuba, we retired to Sierra Maestra Mountain, to our "Rocky Mountain," but when you take to your Rocky Mountains, and, oh, what mountains they are, we Cubans will be there to help you. It sounds as though the Cubans have more social sense than the Americans.

WHAT WOULD BE THE FIRST MAJOR CHANGES MADE UNDER A TECHNATE SYSTEM?

Don't ask me to tell you what would be the first changes. I'm speaking here under this system. It would take a transition period, probably, of three decades to remove the debris we have around us and get it straightened out. So, don't ask me what would be the first thing.

WHAT CAN WE AS INDIVIDUALS DO TO AVOID THIS COUNTERREVOLUTION ABOUT TO TAKE PLACE IN CUBA?

Well, when I drove in here, I observed a lot of cars out here. How many cars of Technocrats aren't painted? That's on your own conscience. In other words, you drive an ordinary car, nobody

MEMBERSHIP MEETING  
HOWARD SCOTT, KENT, OHIO

4-9-61

knows who in hell you are -- you may be a Democrat and a holy roller.

IS THERE NO FREE PRESS AT ALL IN CANADA AND UNITED STATES, BECAUSE EVEN IN OUR SMALL TOWN, WE HAVE AN INDIVIDUALLY-OWNED NEWSPAPER, BUT THEY'RE AFRAID, DEATHLY AFRAID, TO PRINT ANYTHING ABOUT TECHNOCRACY. IS THIS TRUE ALL OVER THE UNITED STATES AND HAS IT ALWAYS BEEN TRUE? YOU HAVE ALL THIS TO FIGHT. WHAT WAYS HAVE WE TO GET TECHNOCRACY KNOWN TO MORE PEOPLE?

Some years ago, I spoke to 24,000 paid admissions in Hollywood Bowl, and the same day Mary Pickford had a couple of hundred out to her estate, Pickfair, and there were two pages of photographs in the Los Angeles papers of the doings at Pickfair, and there wasn't a single mention anyplace -- 24,000 people simply disappeared in the blue. A commentator went on the air and held forth on it for 30 minutes; he said, "I was there." But there wasn't a line in the press. That's what you've got to expect. For heaven's sakes, don't be disappointed. Castro played it by ear, left Mexico in a boat that no marine inspector would have permitted, with 82 on it, and then their clutch wouldn't work. They finally were ambushed, and only four got to the Sierra Maestra, that's all. Are you downhearted? He only had four.

WITH PRESIDENT KENNEDY IN THE SADDLE, CAN WE EXPECT SOME MORE MCCARTHYISM OF THE TYPE WE HAD IN '48-'49?

Kennedy was never in the Senate when any action against McCarthy was started, you know. He was always conveniently absent. I don't suppose that would mean that there was any connection, but you're going to have more of it. You have more of it. The petits bourgeois of United States are going to have hysteria. Do you realize that if you can't cure this and you can't pick it up, they're going to have nervous breakdowns. They're going to go for fascist organizations, they're going to go for types that are far worse than McCarthy. In your own communities, wherever you live, how about your next-door neighbor? What's he do? If he has a fair job and a car and a little better than a shack, he thinks he's arrived in the promised land, doesn't he? And he's going to resent anything that even has a suspicion that it might disturb that residence of his in the promised land; so, he's going to be reactionary as all

get-out.

IN EUROPE, THEY ARE CONNECTING ALL DIFFERENT PARTS OF EUROPE WITH PIPELINES, BOTH OIL AND GAS, AND ALSO THEY ARE NOW BUILDING A TRANSMISSION LINE ACROSS THE CHANNEL. WOULD YOU CARE TO COMMENT ON WHAT WILL HAPPEN, WHAT THE EFFECTS WILL BE?

The transmission line is underneath the Channel. The cable is being made in Britain today. Of course, what is it going to be? Three-phase, AC 60-cycle? Huh, uh. Come on, you've got one guess, what's it going to be? Tell me. A million volt DC. Great Britain is one frequency; France is another frequency. Then there's the difference in time of one hour, and a difference of about two hours fifteen minutes in load on top of that. So, you'd have to run a flock of cables over, and you'd have to have frequency changers at both ends if you did it in 3-phase, 60-cycle AC, but this way you can convert it to anything and shift your load. The Russians are proposing high voltage DC. Their two largest plants in operation are 2,530,000 kW and one just a little bit higher. Bratsk on the Angara, which they are proceeding 24 hours a day on it, that's 4.5 million kW. Krasnoyarsk is 5 million kW. So you can get an idea of what that means -- Grand Coulee is only 1,890,000 kW, and if you want a real job, the Ichang power plant on the Yangtze will be 25 million kW in a single power plant or over 12 times greater than Grand Coulee. Do you know what the kids say? In your hat; in other words, the world isn't our oyster any more. We had better wake up. The Ichang Gorge is China. They are working on it. The Electasilia Machine Works in Leningrad is making the turbines for Krasnoyarsk and for the Ichang. They are 500,000 kW hydroturbines in a single unit, twice as large as anything in the world. Don't blame the Russians for it.

COULD YOU DEFINE THE WORD "ENTROPY" FOR US?

You want entropy? What good would that definition do?

ENTROPY IS MENTIONED IN THE STUDY COURSE BOOK. SHE WANTS TO GET A CLEAR DEFINITION OF IT, I THINK.

I won't even try it. There are plenty of textbooks that will give it to you written.

WE HAVE NOTICED IN CANADA QUITE A CHANGE IN OUR ATTITUDE -- THE CANADIAN ATTITUDE TOWARD THE RUSSIANS IS DEFINITELY CHANGING. A FEW YEARS BACK, WE GOT VERY DEFINITE ARTICLES DEROGATORY TO THE COUNTRY; NOW WE'RE PALSY-WALSY WITH THEM AND THEY ARE PRINTING ARTICLES ABOUT PEOPLE WHO VISITED RUSSIA, AND THEY ARE VERY, VERY AMAZED TO FIND THE PEOPLE HUMAN AND THEY'RE GOING ABOUT THEIR BUSINESS EFFICIENTLY. WHAT IS THE REASON FOR THIS CHANGE?

That's just progress. When jackasses find out there are other jackasses in the world just like themselves. I'll give you an example. The Russians built the Volga-Don Canal. The water control and impounding was excellent; the canal is a stinking, lousy job. Now, remember there were no Americans over there; the Russians did it all by themselves, and it was a lousy abortion, as big an abortion as we did on the St. Lawrence Seaway, and there weren't any Russians in the St. Lawrence Seaway and no Americans on the Don-Volga. So don't let's get too smart either way.

THERE ARE ACTIVE DEMONSTRATIONS IN BRITAIN AGAINST THE A-BOMB. DO YOU HAVE SIMILAR DEMONSTRATIONS IN THE STATES?

No, there aren't. Of course, that has achieved quite a public following with Lord Russell being one of the outstanding figures, and they lay down on the pavement, block the traffic, and get hauled off by the Bobbies, but they ran up 20,000 to 40,000 there in London; but we haven't anything of that nature here in the United States yet. We simply haven't got that much cohesiveness to get that many people together for anything except a baseball series or a football game.

WHAT HAPPENED TO THE -- I THINK IT WAS A NUCLEAR PHYSICIST WHO WAS BEING ASKED TO TESTIFY AND WAS THREATENED WITH A PRISON SENTENCE?

What nuclear physicist?

LINUS PAULING

Oh, Linus Pauling, the California Institute of Technology. He's a Professor of Chemistry out there. They won't even let him give an

MEMBERSHIP MEETING  
HOWARD SCOTT, KENT, OHIO

4-9-61

interview on the campus -- the university -- he has to give it off the campus. Stop and think of your university in this country. The only time they ever marched out was at the beginning of the war between the states. There were a number in West Point who were permitted to ride out and join the Confederacy. The Via Maya marched out in a solid body -- that's the Brazilian Military Institute -- to join the Confederacy. But outside of that, there has been practically nothing in a cohesive sense. We have no university in the United States that has been under artillery and machine gun fire for days and where the students in armed rebellion fought the Army and finally forced the government and the Army to permit them to march out with honors of war -- we have no university in the United States that has ever had guts enough to protest anything beyond a panty raid on the girls' dormitory.

IN CANADA, THE UNEMPLOYED HAVE FORMED THEMSELVES INTO AN UNEMPLOYED WORKERS UNION AND THEY HAVE BEEN MARCHING ON OTTAWA, AND THEY HAVE BEEN GENERALLY TRYING TO ORGANIZE THEMSELVES AND HAVE BEEN FINDING IT VERY DIFFICULT BECAUSE THEY DON'T GET ANY MONEY. I WAS WONDERING IF THERE ARE ANY SIGNS OF ANYTHING LIKE THAT HAPPENING IN AMERICA.

Not yet. Of course, Canada is higher in its unemployment. You have passed 11.3 percent of your total workforce unemployed the other day -- 716,000. That will be over 800,000 right now. The Venezuelans are a little higher, but so few Americans have so little realization because we're far better experts down here in juggling statistical figures than they are in Canada. We juggle them so good that the public in the street that reads the newspaper -- he just gives up and wants a computer to do the job for him. No, it's not really tough yet, but some years ago one of our members was the chief assistant to Colonel Summerville then in charge of the WPA projects of New England and New York. I went over and spoke to 3,000 and 4,000 audiences of the WPA. They didn't want their brother or their sister or their relatives or the next door neighbor to know they worked on WPA. You never have seen such a bunch of gutless wonders. I said, "Why don't you put an armband on?" Oh, no, then the people would know that they were on the WPA. Identify themselves -- no, they didn't want to, because they all thought they were smarter than the others. Now until you get the pressure where they do, then they will just have to take it.

YOU MENTIONED ABOUT KATANGA. COULD YOU GIVE US A SOMEWHAT BROADER OUTLINE OF ACTUALLY WHAT IS HAPPENING IN THE CONGO REGARDING ... I UNDERSTAND IT IS MORE OF A BATTLE BETWEEN THE PROTESTANT FACTIONS AND THE ROMAN CATHOLIC FACTIONS. IS THAT CORRECT?

Well, no, that's only part of it. You see, Kasavubu and Mobutu are Roman Catholic. Lumumba wasn't, but Lumumba came from a higher altitude. You see, when you come down below Stanley Falls in the Lower Congo, that's low level. They are a different breed of cats, and up in Orientelle and Stanleyville, you've got a huge cotton production and other agriculture, and, of course, Katanga itself did about 330,000 tons of copper, about 97 percent of the world's cobalt, and zinc and lead. Then, of course, you've got the uranium mine there at Coquilhatville. It's getting down there pretty deep. There's a tremendous amount of money has been made, and, of course, all that mineral thing didn't go out through the Congo; it went out through the railroad to Angola and the ports. The reactionaries can come in through Angola and get down to Elizabethville very easily without going through the rest of the Congo. Chambi was wealthy and Chambi is a stooge setup the same way as Kasavubu and Mobutu were, and that deal was arranged. So you want to split the Congo into a number of parts so as to make an easy take and keep it divided, so that the big income is still going abroad. Is that the type of thing you want to know?

Of course, Chambi has brought in -- he has a palace guard, you know. I don't know whether you have seen pictures of it or not. Do you know the nice breastplates and the helmets of the of Paris, remember? He bought them, and they've got the same complete outfit, all polished up and everything else. Screamingly funny. Then he's got a lot of foreign mercenaries, Belgians and others, Germans and so on, plus a few Americans in there to help him out. We don't want any solution of a real basis; we only want to see it go on and operate so the take continues. By the way, all of South America is declining to pay the expenses in the Congo in the United Nations; so is France, so is the Russian group of nations. It runs around \$12-14 million a month and its authority is extended only until the 21st of this month. Then they will have to decide again how to go on.

Now foreign service is wonderful; for instance, a United

MEMBERSHIP MEETING  
HOWARD SCOTT, KENT, OHIO

4-9-61

States Army Captain in South Vietnam on duty over there gets \$780 a month, free completely air-conditioned house, commissary and medical attention for his wife and children, and three servants. Even a general over here can't touch it.

NOW THAT THERE IS SO MUCH STRENGTH OVER THERE IN THAT EURASIAN AREA WITH THE UNITED ARAB NATIONS, WHAT IS NEHRU UP TO?

Nehru isn't up to anything. He just wants to steer a neutralist course. You never had a social revolution in India. You have a compromise between usurpation on the part of the Indian moguls taking over from the British and substituting Indian exploitation for British exploitation. That's what it means. So with your high birthrate, you're in a jam. Of course, there is only one way to do it, and that is a little difficult in India, but wherever population explosion occurs, you haven't got time to educate any public -- you've only got time to stop it! Never mind about your planned parenthood and that kind of nonsense or the rhythm method. It won't do it. Dump it in the drinking water of any metropolitan center and it will stop it. The human females, your kitty cats and your dogs and everything else -- none of them will conceive. Stop it cold!

If you think India's population is travelling, just stop and think that South America's exceeds India or China. Venezuela's birthrate is 47.4; its deathrate 10.4 -- three times that of Japan. Latin America takes the cake for expanding population, and it is going to be the problem of America, so you don't have to go to China or India. We are going to have it right on our own doorstep.

WHAT IS THE POTENTIAL OF THIS 'FAIR PLAY FOR CUBA' MOVEMENT?

What's the potential of any organization that sets itself up to be fair play. That's utter nonsense. Who ever heard of fair play in love or war? You never went in for it yourself, did you? That's sloppy maudlin sentimentalism. Anybody calls for fair play -- well, the other side isn't going to indulge in fair play. Look at the counterrevolutionary activities: training with arms in Florida and Louisiana, Guatemala. Is that fair play? What chance has any group based on fair play for Castro's Cuba got? Damned little!

HOWARD SCOTT, KENT, OHIO

4-9-61

THE GREAT U.S. MILITARY STACKUP WITH CHINA RIGHT NOW. I KNOW  
RUSSIA IS BETTER, BUT HOW ABOUT CHINA?

What-do you mean military stackup? THE MILITARY POWER. Don't use these words out of the newspaper or LIFE. That sounds like Paul Harvey, doesn't it? HEAVEN FORBID. Paul Harvey was broadcasting the other night and pointed out that the unemployment in United States really wasn't due to the Americans but to this influx of foreigners. How do you like that? Yes. Well, as far as military things are concerned, what kind of a war are you going to fight? We have built warning tations 100 miles out in the Atlantic, put DEW Lines up across Canada. Well, that was all predicated on erecting warning defenses based on planes taking off from someplace 6,000 miles away. Then we erected gigantic civilian defense organization in the United States, poured in huge amounts of money, and now it is just so much utter nonsense.

Do you remember the Russians put that satellite up there that went around the earth, and then when they got ready, they pressed the button and off took one for Venus, didn't they? Well, that satellite is orbiting the earth at 150 to about 200 miles from the earth -- not 6,000 miles away, just 150 or 180 average, and that's less than three minutes. You could put hundreds of them up there -- let them go around and you could press the button when you felt like it. And you've got less than three minutes to say, "Good mornin', Jesus!" So your DEW warning system and your civilian defense, what are they? Stupid, and it is also stupid of what are you going to fight a war for. You don't know. You want to fight a war that would be catastrophic, not only to the enemy but to yourselves. Well, are you going to take over anything and operate it? Oh, no. Some of your top generals in the war got into quite an argument with me in the famous restaurant in New York, and I was teasing them by saying that the United States had the most marvelous aerial bombs. They came down from 15,000-20,000 feet, and 50 feet from the ground they turned at right angles. They said, "What do you mean?" I said, "Look at all the holes in those photographs in Berlin. Those bombs turned at right angles, 30 or 40 feet from the ground. Wonderful bombs you have!" Of course, what I was kidding about was that the destruction wasn't due to the U.S. bombs at all but was due to the 240-mm. belonging to another country. We won't mention it.

4-9-61

So, you've got nuclear devices, yes, they're more destructive, but is it armies going to fight armies or just the so-called military portion of the population is going out to fire at some geographical area in some other part of the world? Well, but the bombs will not be able to distinguish between those in uniform and those not in uniform, and when the radioactive cloud comes up and the airwaves carry it, it will come right back to you. Just stop and figure just where most of the prevailing winds in China -- what direction are they in -- China and Japan? [INAUDIBLE REMARK FROM AUDIENCE] Yeah, coming this way, honey chile. That's why the Japanese were able to send those balloons over, remember? They even landed up here in the Great Lakes, didn't they?

THERE ARE A LOT OF RUMORS ABOUT CHINA WANTING TO INVADE RUSSIA BECAUSE OF THE POPULATION PRESSURES OF THE CHINESE. WOULD YOU CARE TO COMMENT ON THAT?

China wanting to invade Russia because of population pressures of China? I hardly think so. In other words, there are better areas they could invade than Russia. It's like trying to build up this nonsense that the Russians would take Italy. Why in God's name should they? There's nothing in Italy. The same thing applies to India. The Russians wouldn't want India. Of course, the Italians don't want Italy anyway; they want to come over here. And if there wasn't a Communist Party in Italy, the Vatican would see to it that there were a Communist Party, because that's the only way you'd get aid, isn't it?

IS THE UNITED STATES LIKELY TO GO TO A COMPLETELY METRIC MEASURING SYSTEM IN THEIR MANUFACTURING SYSTEM?

It will eventually, yes. NOT UNTIL THE TECHNATE, YOU MEAN? Part of it is now done in metric.

WHAT I WAS DIRECTLY REFERRING TO IS THAT I WAS AMAZED TO FIND NOT SO LONG AGO THAT BRITAIN IS GOING TO GET RID OF THAT LOUSY MONEY SYSTEM EVENTUALLY.

Eventually, after all these years. Of course, the metric system is legal in the United States. You can draw up plans or specifications, or anything for government work, and it's legal,

MEMBERSHIP MEETING  
HOWARD SCOTT, KENT, OHIO

4-9-61

but it. is not adopted and it is not taught in the schools until you get to that advanced education where you are taking higher science or something. Then you are dealing in the metric system.

WHAT ARE THE POSSIBILITIES FOR SOCIAL CHANGE IN SOUTH AFRICA?

Social change in South Africa -- why? You tell me.

THEY HAVE QUITE A NUMBER OF COLORED PEOPLE IN THAT TERRITORY. ARE THEY ABLE TO MAKE ANY CHANGES?

Well, they haven't been so far. It isn't that. They were brought in there as contract laborers, and who brought them in? The so-called Dutch. Who brought in the first contract labor in South Africa? Who brought in the Hindu? Herbert Clark Hoover. The de Beers Consolidated and other big corporations have been bringing in the Bantu type from Central Africa for generations. The negro in South Africa wasn't used, and here you have about 10 million to 3 ratio. Of course, you could trade the Boers and move them out of South Africa. That would be a little upsetting, just as you could trade the Puerto Ricans and send them out to the Philippines because the Puerto Ricans speak Spanish and so do the Philippines, but then the Filipinos would probably cut the Puerto Ricans throats, so that would be two ways of doing it.

Now if you are going to envision social change coming out of either the whites or blacks in South Africa, it is hardly likely at the present moment for some time to come. Does that answer your question?

A FEW WEEKS AGO IN The (Los Angeles) Technocrat, IN YOUR MESSAGE ON THE BACK COVER, IT MENTIONED THAT THERE WILL BE A GREAT CONFLICT BETWEEN ALL THE POLITICAL AND RELIGIOUS HERESIES THAT HAVE EVER BEEN ACCUMULATED IN PAST HISTORY. HOW WILL THAT AFFECT US AS TECHNOCRATS? WHAT DO WE HAVE TO LOOK FORWARD TO?

Change and trouble. You haven't seen anything yet, as the boy said. Wait until it gets underway. But you're not going to be bothered. You weren't bothered all during the war, were you? We've never been on any subversive list, have we? Amazing. Talk to me in private sometime and I'll tell you how it was done. I

MEMBERSHIP MEETING  
HOWARD SCOTT, KENT, OHIO

4-9-61

wouldn't worry about that. You're thinking of an individual answer to that question, and there isn't any.

COULD YOU ESTIMATE THE NUMBER OF PEOPLE WHO WILL BE UNEMPLOYED WITHIN THE NEXT YEAR OR TWO DUE TO THE INCREASED AUTOMATION AND POPULATION, INCREASED IMPORTS AND DECREASED EXPORTS?

Your population -- you would have to increase almost 2 million new jobs a year to keep up with it. This year and next year will feel the full impact of your teenagers that are arriving as the result of a 4-million-a-year baby crop, and they have no jobs to go to. How are you going to increase the total long-term jobs, and let's get specific about this. Our employment figure -- we say 64 million employed -- employed for how long, because if you are employed one hour a week, you're counted. Now that doesn't mean there are 64-65 million in United States employed 40 hours a week. Oh, no. So you have part-time employment. You have several million holding two jobs, and you have more millions who are working part-time.

WHY DON'T OUR LABOR LEADERS PROMOTE THE TECHNOCRATIC IDEA?

Well, why don't our bankers -- that's a relevant question -- or our politicians? You don't expect anybody is going to advocate their own annihilation, do you? The march of circumstances is going to liquidate a lot of labor leaders. They didn't have to advocate Technocracy. What did they go in for? They sold the corporation retirement plan, fringe benefits, and all the rest which are non-transferable, aren't they? And as the big corporation seeks to lower its cost further and further and as labor costs are the chief component in your cost picture, there will be less and less for the labor union to worry about, and it was smart, it was clever some years back, but it was strategically stupid, because it is going to hang them.

WILL YOU BRING INTO FOCUS THE IMPACT OF INTEGRATED DATA PROCESSING EQUIPMENT ON THE CONTINENT?

What do you mean by "focus"?

WILL YOU MAKE SOME REFERENCE TO THE EFFECT THAT IT IS HAVING AND WILL HAVE IN THE NEXT MAYBE YEAR AND TWO-YEAR PERIOD ON

THE CONTINENTAL OPERATIONS AND UNEMPLOYMENT OR EMPLOYMENT?

You Technocrats have looked at one of those copies of an Energy Certificate. That isn't an IBM punch system. That's a carbon code on there. On your IBM punch, you can only put so many holes in the card before you have no card, correct? But if you use a carbon code -- the carbon being a conductor -- you can cover both sides of the card and have a million times that of a punch card. Your IBM, Burroughs, Sperry Rand, and all the others -- they're only a few installations so far, relatively few. One of the big troubles with all of this is that your computer is going to do away with your accountants and your engineers, and it is also going to do away with your executives, as well as the blue collar and the white collar, so more power to all of the computer and control mechanisms.

We're manufacturing machine tools in the United States today for the first time. There are no manual controls on lathes or milling machines, boring, and other types of machine -- no manual controls whatsoever. You cannot operate them individually. You can only operate them by remote, centralized control. Now a little bit more of that and you could really do something. There is no reason why you should have any men employed in an automotive plant or a steel plant -- no reason at all, except the stupidity of the Board of Directors wanting to make a profit out of the obsolescent procedure of manufacturing automobiles by hand or steel by a batch process. Anything that is repetitive, you can do on a continuous process; of course, your car wouldn't be the same. It would only have a minimum life before overhaul of about 500,000 to 600,000 miles, and you wouldn't like that either. Why? Because you have been conditioned to different models, haven't you? Let me ask you a personal question. How many of you have picture windows in your house? Come on, tell me. Oh, a whole lot of you. Well, do you keep the blind up -- the shade? And you've got a couple of so-called lamps that do not shed much light but from the outside. So you keep the shade up. What the hell for? Is a picture window something for you to look out of or something for the outside to look in to see that you've got the same as they've got? You used to play with blocks when you were a kid, didn't you? Well, it isn't blocks; it's picture windows and all the rest of the junk, but it's exactly the same idea. You haven't gotten beyond the blocks yet.

MEMBERSHIP MEETING  
HOWARD SCOTT, KENT, OHIO

4-9-61

A FEW BOOKS HAVE COME OUT -- '59 AND '60 MODELS. YOU SPOKE OF "Listen, Yankee!" THERE ARE TWO OTHERS I PICKED UP -- DRUGSTORE TYPES -- "The Ugly American" AND "How Wide We Stray".

Oh, yes, but "The Ugly American" is full of moral -- it's about the American abroad, but it doesn't carry the dynamite of a "Listen, Yankee!"

ONE OTHER QUESTION: READING WALTER LIPPMAN, 1943 EDITION, "American Diplomacy," HE SPEAKS OF THE COMMITMENT FROM THE SPANISH-AMERICAN WAR MADE BY EXTENSION OF OUR SUPPLY LINES TO THE PHILIPPINES AND CUBA AND WHY ENGLAND AND THE PACT AND HOW THE MONROE DOCTRINE WILL HAVE TO WORK OUT WITH BRITAIN. I WOULD LIKE TO ASK IN CONJUNCTION WITH TECHNOCRACY, WILL THERE ALWAYS BE AN ENGLAND? HOW MUCH DOPE ON THIS?

Well, there's lots of dope on it, but Walter Lippmann isn't important. He did write a couple of books some years ago, but he's forgotten it. He wrote an excellent book on the question of North Africa and the participation of the Banca de Roma and the Banc Italia and the Italian-Tripolitan War, He doesn't like to be reminded of it. He doesn't want to see a copy of it anymore.

WHAT IS THE RESOURCE SITUATION AND THE WATER SITUATION ON THIS CONTINENT NOW?

The water situation hasn't changed much, except it is more polluted. The resource situation -- are you talking about Continental United States or the continent? The continent is one thing and Continental United States is another. Are you going to have the same number of ore boats pull out of Cleveland this year for iron ore as you did last year? No. Your lump hematite in United States is practically gone, and you are going down to deeper depths to find it. Up in Ontario, that's 3,000 feet there -- not in Western Ontario -- just east of Toronto -- Marmora, isn't it? You're going down 3,000 feet for 30 percent or less Fe. Of course, Canada has Labrador, Ungava, and the foreign ore, and you get over in Venezuela -- but iron ore in United States is magnetite, lean ores. In copper, you are running less than .8 of 1 percent. All the copper ore mined in United States is getting less and less. Lead -- one of the world's greatest lead deposits was on this continent, and one of the world's greatest copper

MEMBERSHIP MEETING  
HOWARD SCOTT, KENT, OHIO

4-9-61

deposits, and a bygone Hudson Bay official -- I think he was Scotch rather than British, just to be correct -- he took the samples over in the 1700s, and they reposed in the South Kensington Museum all that time -- 46 percent copper bornite. That's the way to get ore. They haven't touched it yet. It's on Coronation Gulf in the Arctic. So we have resources on the continent, although our corporate enterprise has sadly depleted some of those resources in the United States. I think that sums up the answer you want, doesn't it?

JUST A SHORT TIME AGO, IN ONE OF THE CLEVELAND NEWSPAPERS, THERE WAS A SMALL ARTICLE, HARDLY NOTICEABLE, STATING THAT JOHN FOSTER DULLES WAS IN A DEFINITE PLOT TO ASSASSINATE INDIA'S NEHRU, AND THAT'S ALL THERE WAS.

Wait a minute! That John Foster Dulles was where?

INVOLVED IN A DEFINITE PLOT TO ASSASSINATE NEHRU. IT DIDN'T SAY ANYTHING ELSE, WHERE, OR WHY.

What difference does it make? They are all involved in plots. That's somebody's pipe dream to make a headline. Foster Dulles is dead. You were talking of when he was alive.

COULD YOU TELL US ABOUT THE INDUSTRIAL DEVELOPMENTS IN AUSTRALIA OR WHAT'S GOING ON THERE?

What do you mean "industrial developments"?

ARE THEY BUILDING ANY ALUMINUM PLANTS OR STEEL PLANTS OR WHAT RESOURCES ARE THEY PROCESSING THAT WILL HAVE AN EFFECT ON BUSINESS HERE?

They are producing automobiles, trucks, airplanes, tractors, and other equipment, and they've got shipyards that will build up to 20,000 tons. They have one of the big bauxite deposits in the world. They have good iron ore and coking coal; of course, their iron ore is about 1,100 miles west of the Broken Hill Proprietary, but it's close to the sea, so it's water travel. Water is a problem in Australia. It is the flattest continent on earth, and it's the most leached-out continent. You couldn't build a one million kW steam station or two million in Australia in one place. Why? Because the combined water flow of the Murray-

MEMBERSHIP MEETING  
HOWARD SCOTT, KENT, OHIO

4-9-61

Darling system is only a fraction of the Ohio River, and it would take the Ohio River to do it.

I READ RECENTLY THAT THE PRESENT ADMINISTRATION WILL HAVE TO REFINANCE THE DEBT OF WORLD WAR II. WHAT DOES THAT CONSIST OF AND V'HAT ARE SOME OF THE WAYS THEY MUST TRY?

Oh, they have all kinds of ways they can refinance it and juggle it. Your total federal debt is going up, and the total taxes in United States last year -- federal, state, county, township, municipal, school district -- amounted to \$161 billion. It will continue to rise, and those of you who were foolish enough to buy nice ranch houses in the suburbs that didn't have their sewerage disposal, water, storm sewers, hospitals, and schools already in, you will feel it when they put it in. In other words, your taxes will rise. Some of them are now are going over \$500, and some of them are paying over \$700 a year on an ordinary half decent house. You wanted to move to the promised land? You did, so you've got to pay for it. You will.

WASN'T IT AGREED AT YALTA THAT AT THE END OF THE WAR FORMOSA GOES BACK TO CHINA?

Well, that was before Yalta. That was agreed before Yalta. Formosa was a part of China and became the Republic of China, but then when Chiang Kai-shek and his armies were transported out of China by American transport, we set up this fiction that Formosa was something different than Chinese. Formosans had suddenly become yellow hottentots. It's a fiction we can't long maintain.

WHAT'S GOING TO HAPPEN WHEN RED CHINA BECOMES INDUSTRIALIZED WITH ALL THE POTENTIAL ELECTRICAL POWER IT CAN GENERATE FROM HYDROPOWER, ALONG WITH THE MASSIVE STUFF SHE CAN THROW ON THE REST OF THE WORLD MARKETS? WHAT'S GOING TO HAPPEN TO OURS?

She doesn't have to throw it on the world market. You have six steel plants in China today, modern, integrated, brand new. Now that's not your backyard furnaces. The capacity of each one of those steel plants is over 3 million tons -- 3 to 3-1/2 million tons each. The blast furnaces are 2,600 tons capacity. The open hearths are 600 tons each -- not with side feed -- the whole top moves hydraulically like that and you feed from the

4-9-61

top. You can get photographs showing the installation of the 25th 600-ton open hearth furnace in a single steel plant in China, and it's published by the United States Bureau of Foreign Commerce, believe it or not, and there isn't one businessman in half a million that has seen it. So, China is moving up. When it passes 30 million tons, as it probably will next year, steel capacity, we have no steel plant in United States with 25 600-ton open hearths in that same plant. It doesn't exist. They have coke ovens and oxygen beneficiation plants. They are really modern. The biggest steel plant we have and the latest and most integrated is the Fairless Works of Morrisville, Pennsylvania. That's only just a few miles downriver from CHQ, and that's not very big.

The Chinese -- at the Chiang Gorge that I was speaking of, the 25 million kW, that's in China on the Yangtze River.

Then the Chinese have the world's largest power installation potential in a single place. That's San-Po. A 10-1/2 mile tunnel across the gorge, and you drop the water 7,500 feet -- 30 million kW in a single installation without a dam, and according to Collough & Co. Consulting Engineers Ltd. of London, England, you put in the dams for control, and you'll generate 52 million kW in a single installation. Beautiful, isn't it?

So you want to put your boy through to learn business administration? Ho, ho, ho. Let's have a laugh at it.

MR. KENNEDY IS NOW RUSHING HIS NEW FRONTIER PROGRAM THROUGH CONGRESS. WILL ANY OF THESE MEASURES, SUCH AS AID TO EDUCATION, SOME SORT OF MEDICAL AID FOR OLDER PEOPLE, AND OTHER SUBSIDIES PROVIDE AN IMPETUS FOR A SLIGHT INCREASE IN BUSINESS AND ELIMINATION OF SOME OF OUR UNEMPLOYMENT WITHIN THE NEXT 3 OR 4 MONTHS?

No, not the next 3 or 4 months. It takes months longer than that to get any program through and out to the area. But none of those things are more than just temporary palliatives. It's not aid for education; it's education for everybody. What are you going to educate them for? More of the same? Well, if you do, there's no sense in it. Are you going to graduate them from "Havard" are you? What the devil's the sense of going to "Havard" for business administration or Princeton or Yale or Cal Tech or

4-9-61

anything else, when the crying need on this continent is the technological redesign of every darn thing that functions. Are you going to do it with a liberal arts? Huh, I suppose you're going to write a higher criticism of it. Well, you'd better learn to design that "privy on wheels." If you can't do it with wheels, brother, take the wheels off it, but you'd better get busy.

WOULD YOU CARE TO COMMENT ON THE SO-CALLED LEFT-WING GROUPS WHO SAY THAT TECHNOCRACY IS TOO PASSIVE JUST BECAUSE OF THE REASON THAT THEY HAVE NO IMPACT ON THE PUBLIC?

Technocracy is too what? PASSIVE. Passive? YES. That depends on definition. What do you mean "passive"? AS I UNDERSTAND IT FROM SO-CALLED LEFT-WING LEADERS, THEY "FEEL THAT BECAUSE WE WON'T PARTICIPATE IN POLITICS THAT THE TECHNOCRATIC IDEA WILL NOT GET OVER TO THE PUBLIC. Oh, I see, if you aren't a political party and don't run candidates, you're too passive -- don't try to take over anything. Well, anybody who has any sense doesn't want to take over anything in this system. He's an idiot if he tries it. No, we've had that argument before. It's like the Communists when we went down south years ago with the cotton picker -- they were taking exactly the same line that Henry Luce in FORTUNE MAGAZINE took. Henry Luce published photographs, you know, of the front cover of our magazine and below it it said, "Howard Scott is using the cotton picker to frighten the American bourgeoisie with." And then it went on to explain that there had been about 30 attempts to invent and develop a cotton picker and mentioned a number of them by name -- well, they had all fallen by the wayside, it really wasn't worth the effort. Of course, Henry Luce's publications today are accepting full page color advertisements from six firms manufacturing cotton pickers, but outside of that, the Communist argument and a lot of the Socialists was more or less the same thing. When I got down in Louisiana, Mississippi, there were hundreds of white southerners with guns in their belts. They weren't going to have no damn Yankee bring a contraption like that down there.

The Faulkner sugar cane harvester and the Rusk cotton picker, what's happened? It's moved more of the colored people out of the south than anything in the history of this country; and Technocracy was the greatest contributor to doing it, I don't know whether that's passive or not. Is it? Because the movement of that population is going to raise hell. Never mind the south;

MEMBERSHIP MEETING  
HOWARD SCOTT, KENT, OHIO

4-9-61

it's going to raise hell up north, not because they're colored but because they add to the economic impact. Am I making myself clear? I don't know whether I answered your question or not, sir.

I WOULD SAY THAT YOUR ANSWER DID HAVE MERIT.

Thank you. No, there is no sense in trying to form a political party in this country to elect people to office. You have 104,000 governments in United States, that is, in the 48. The government hasn't printed the latest one about 50 states -- 104,000 governments: 53,000 educational districts, 17,000 municipalities, over 16,000 townships, over 3,000 counties -- over 104,000 all told, all empowered to levy and collect taxes and issue debentures. If you are a political party, they elect everything from the sheriff to the dogcatcher, don't they? Correct? We're not a democracy; we're an elective republic, and we elect every moron that we can get into office. Do you want to degrade anybody with intelligence by electing them into that? That's not being militant. That's just putting him where he gets infected, and he succumbs to the same virus as all the rest of them.

Are you going to take over a township? Are you going to take over a school district -- one of the 53,000? That's been the trouble with liberals and radical parties for generations; in fact, for the last 100 years, they spent 9/10 of their time arguing and debating on how they were going to assume power -- not of what to do and what the design was, but of the theory of assumption of power. That's like Trotsky trying to say that when he was editor of NOVA MIR in East Side New York. It's silly. Here in these United States and North America, it's going to be done slightly different. It isn't going to be a proletariat at the barricades. It's going to be the collapse of the bourgeoisie. Get out from under the roof, brother!

CHIEF, THAT KIND OF REMINDS ME OF THAT LITTLE QUOTE YOU HAD AT OUR SECTION THE OTHER EVENING ABOUT LEWIS CARROLL HAD THE RED QUEEN TELL ALICE.

I think it was that the Red Queen said to Alice that you must come from a very slow country, is that the one? because here you have to go faster and faster to stay where you are and you have to go twice as fast to go anyplace at all. Well, we're at

4-9-61

the stage where we will have to go four times as fast.

You see, our rate of growth in United States had been barely 2.75% -- a little less. Now, all your financial magazines ballyhoo up the amount of capital goods expenditure as evidence of expansion and progress -- so many billions -- BUSINESS WEEK, WALL STREET JOURNAL, JOURNAL OF COMMERCE, and all the others. Now the only accurate way to express that is in terms of population. Remember that from 1930 to 1940, the population in United States only increased 9 million, while from 1950 to 1960, a decade, it increased 28 million -- 3 and a fraction times. When you check the capital goods investment per capita, you will find that the peak was reached prior to 1954 in United States, and it has declined ever since. So when Kennedy talks about the New Frontier and a new rate of growth, what kind of a rate of growth? Are you going to get 11% or 8% rate of growth? If you are going to keep the 2 and a fraction percent, you are not going anywhere. The Russians are already 11% and the Chinese darn near 18%; so, the Red Queen is correct.

WILL IT BE POSSIBLE FOR US TO UNPOLLUTE OUR WATER SUPPLY. I HAVE BEEN WONDERING ABOUT THAT FOR A WHILE.

Water can be handled, but it takes a complete water system. You don't even know where the waters out of your septic tanks, your sewer systems, and your industrial wastes go to these days. In the Passaic and Hackensack Rivers, which are just across the Hudson, you know, the joke is that nobody ever drowns in them, because if you fall in, you're asphyxiated or poisoned. You don't drown. But if you can visualize any community with a water system--now, if you take water out of wells, pump it out, whatever use it is, then you drill Rainey wells, R-A-I-N-E-Y, that's the engineer who devised it. They are about 12 feet in diameter, and they would project above ground some 30 or more feet, depending upon the contours, and down at the bottom, by hydraulic pressure, you would shove out perforated pipe several hundred feet, like the spokes of a wheel radiating from the bottom. Then you either let the surface river water or the water from your recovery plant go back in the Rainey well, and they provide your "savings account" of usable, potable water. Is that done anyplace? And when you build your city, build it so it collects all the rain water that falls. Do you do it? No. Of course, over in Germany in industrial things, the director and so

on have to come down publicly with the mayor and drink the water from the recovery plants -- publicly -- once a year. That might help in United States.

Stop and think that in the days of farm on your one quarter section -- four to a square mile -- there was one well and one privy minimum per quarter section. Occasionally, there was an additional well. When you put a modern housing development in suburbia, there's 4,200 to 4,500 septic tanks, and there are more "johns" than that. If there are wells and you pull the water out and put that back in septic tanks, what are you doing? We have certain cities in the United States that are practically floating. On a nice, humid, hot night, when you are coming down the highway, you can tell what city you're coming to.

It's quite possible. You can rectify water fairly easily, but it takes a job of doing, and there isn't any community in United States that is advocating it, because in order to do it, you would have to go far beyond the confines of the township or the municipality. Besides, nobody is really interested unless the children get typhoid, are they?

ALSO, IS THERE A SERIOUS DISRUPTION IN THE BALANCE OF OUR CARBON DIOXIDE-OXYGEN CYCLE? I THINK I HAVE HEARD THIS.

Well, that could be, Los Angeles has got so much smog at times when a high or low fog rolls in that you've got to put gas masks on the motorcycle boys acting as couriers for the missile plant. I'm not kidding you. You can get photographs of them -- look like space helmets for the kids -- it's so bad. Of course, if you're going to vomit it all out into the atmosphere, that isn't any worse than what you have done with the water. This is a nice, kind, Christian country, don't you realize that? You always do your neighbor good before they do you good.

YOU MENTIONED 52 MILLION KILOWATTS ON THE DAM IN CHINA. WHERE ON THIS CONTINENT DO WE HAVE SUCH A POTENTIAL?

There isn't that potential any place on this continent. The potential hydroelectric on this continent on the Moran side on the Fraser is slightly over 4 million. If you put three dams on the Findley, the Parsnip, and the Peace, you could hit almost 4 million. If you dam the Yukon at the Rampart Canyon, which I

4-9-61

think is mile 7.64964, that's below where the Tanana comes in, you could hit 5 million. On the Big Hamilton River in Labrador, in 38 miles there's 10 million kW, but there isn't anything, brother, anywhere in the world -- the Inga Rapids on the Congo where the gigantic dam, because it has a million second feet, could hit 20 million kW, but the head .is not there. You start figuring when you go home and figure how much water falling 7,500 feet does it take to produce one kW. How many atmospheres would it be? I think you will find a little whiskey glass will do it. Have I answered your question? YES, SIR. We only have the Moran, the Findley-Parsnip-Peace and the Yukon and the Hamilton -- that's all we have on the countinent as big potentials, understand. Japan has practically nothing left. It has developed almost 98 and a fraction percent.

AS A TOTAL OF HYDROELECTRIC CAPACITY, THE NORTH AMERICAN CONTINENT WOULD LEAD EVENTUALLY?

Not necessarily at all. The Congo has more, that is, Central Africa. So has Asia. Let me ask you: What's the stream flow on the Mekong River that runs up through Laos as a boundary line? Let me ask you another question: What is the stream flow of the Mississippi? Of the great rivers of the world -- the Columbia River -- where does it stand? Do you know? Don't your kids get it in school? You bet your life they don't. The Columbia River is the 19th river and a poor 19th. The Mekong Falls -- it's over 1,300,000 second feet, and your Mississippi will only do that in peak flood.

CHINA HAS BEEN RELATIVELY DORMANT FOR A LONG PERIOD OF TIME, WHAT CAUSED THE SUDDEN TECHNOLOGICAL EXPANSION?

Because Mao Tse-tung's government was able to create capital out of the huge surplus population and land. When asked how many Chinese they could put to work on projects full time -- apart from raising food and all the other old Chinese -- Mao Tse-tung said 64 million. Some labor force, huh?

AT THIS PRESENT RATE OF EXPANSION, HOW LONG WILL IT TAKE RED CHINA TO REACH A STATE OF ABUNDANCE.

You are using terms that are applicable here that are not applicable there. In other words, China can reach one state. You

MEMBERSHIP MEETING  
HOWARD SCOTT, KENT, OHIO

4-9-61

can apply Technocracy on any continent in the world, but the social resultants will be entirely different. Why? Because the arable soil, the water, mineral resources, and so on are different; therefore, the resultants will be different. Is that clear to you? In other words, the results don't come about by faith or morals; they come about by technological application of physical science to the area resources. The only thing you can say is that if God didn't put it there, you can't do a damn thing with it.

Well, I just want to tell you that it's 5:00, and I'd like you to realize that Technocracy has groups like this across the country and you've done what you have done against the counterflow of prosperity and an apathetic social system. In other words, you maintained an organization from Newfoundland and New Brunswick clean across to the coast, and you've done it not on the crest of a wave as far as the organization is concerned, no, in face of the apathy and the opposition. If you've done this on the downward side, what could you do on the other side of the wave? Stop and think. There's no reason to be anything but exhilarated, because this is our wave coming in. Of course, you'll really hit about 1963 with a bang, and you had better get ready for it, because she may start coming in in '62.

Thank you.

RADIO STATION KYW INTERVIEW  
OF HOWARD SCOTT  
CLEVELAND, OHIO

APRIL 11, 1961

I DON'T KNOW HOW MANY TIMES YOU HAVE DRIVEN ALONG THE HIGHWAY HERE IN CLEVELAND OR IN OHIO OR PRACTICALLY ANY STATE OF THE UNION AND SEEN A LITTLE SIGN ALONG THE SIDE OF THE ROAD WHICH READ, "TECHNOCRACY INC." AND A SMALL EMBLEM UNDERNEATH WHICH WAS DIVIDED BY SORT OF AN "S". IT'S ROUND, AND ONE SIDE OF THE S-SHAPE IS RED, THE OTHER SIDE IS CLEAR. THIS IS THE EMBLEM OF TECHNOCRACY INC. WITH ME IS HOWARD SCOTT, THE DIRECTOR-IN-CHIEF. WHAT ACTUALLY IS THIS SIGN OR WHAT IS THIS EMBLEM, WHAT DOES IT MEAN?

The chromium and Chinese red emblem of Technocracy is an ancient generic symbol. The Chinese for thousands of years -- they call it the yin and the yang, the two parts representing the male and the female part of all living. PUT IT TOGETHER AND IT REPRESENTS LIFE. Yes, it represents life; and in the science of biology, the symbol is called a Monad, and it represents the basic cell of every living thing.

WHAT IS TECHNOCRACY INC. ITSELF? NOW, IT HAS THIS -CRACY ENDING. WE THINK OF DEMOCRACY, PLUTOCRACY, OR AUTOCRACY -- IT ALWAYS REFERS TO A FORM OF GOVERNMENT. That's correct. WHAT IS TECHNOCRACY? WOULD THIS BE THE RULE OF SCIENCE?

Yes, Technocracy comes from the same root of Greek origins as plutocracy -- meaning the rule of money, autocracy -- meaning the rule of one, and Democracy -- meaning the rule of many. Technocracy, therefore, means the rule of science.

OF COURSE, THIS IS SOMETHING THAT HAS BEEN DEBATED DOWN THROUGH THE AGES, WHETHER THOSE WHO DEAL IN SCIENCE, WHO SOME CONSIDER MERELY TECHNICIANS, SHOULD HAVE A POLICY ROLE. NOW IS THAT THE IDEA BEHIND TECHNOCRACY INC.?

Well, it's a redesign. You treat the continent as an operational area, and the use of resources, energy, and technological equipment in that operational area. It has reached the point where the total consumption of energy in United States is approximately 170,000 kilogram calories per capita per day. As and when it reaches 200,000, or approaches it, then the

4-11-61

productivity will be so great that you will not be able to employ the majority of adult human beings in the production and distribution of physical wealth. It will be done by extraneous energy and technological equipment.

THIS IS ONE WAY OF SAYING THAT OUR CULTURE, OUR SOCIETY, OUR NATION IS BUILT AROUND SCIENCE.

Science and technology -- the technological application of physical science.

BUT DO THOSE WHO CREATE THIS TECHNICAL CULTURE -- DO THEY HAVE A PRIVILEGE OF LAYING DOWN POLICY ON ITS USE? THIS AGAIN IS THE OLD DEBATE.

No, they have not. The question of policy decision has been closely held within the Board of Directors and others of corporate wealth, and social standing today in United States, or political standing, is really predicated on corporate standing, and it is the decision of the corporate board. Back in the old days when it was human toil and hand tools, they could make decisions because there was relatively no change, but today the decisions are fast and accelerating -- acceleration is increasing; therefore, the decisions which they are making in national and world policy -- the decision is obsolete before they even make it, because they did not design, construct, and have no knowledge of the major equipment that is operating the social mechanism. They merely are the owner-directors.

THE ROLE OF SCIENCE IN POLICY, I DON'T THINK, HAS BEEN AS CLEARLY DEFINED OR AS CLEARLY ARGUED IN MANY YEARS AS WAS THE CASE OF J. ROBERT OPPENHEIMER, WHO REFERRED QUITE OPENLY TO WHAT HE CALLED THE CONSCIENCE OF THE SCIENTIST, FEELING THAT, ALTHOUGH THE SCIENTIST WAS CALLED UPON TO DEVELOP PERHAPS THE MOST DESTRUCTIVE POSSIBLE WEAPONS, HE WAS NOT BEING CONSULTED ON HOW THEY WERE TO BE USED OR UNDER WHAT CONDITIONS OR WHAT POLICY WAS TO BE IMPLEMENTED AROUND THEM.

That's correct, because the nuclear scientists were the ones that developed both nuclear fission and are working on nuclear fusion, and they know what the cataclysmic destructive effects of a world order are.

STATION KYW, CLEVELAND, OHIO  
INTERVIEW OF HOWARD SCOTT

4-11-61

NOW LET ME ASK YOU THIS. IS TECHNOCRACY MADE UP OF SCIENTISTS IN VARIOUS PARTS OF THE U.S.A. WHO GATHER TOGETHER TO DISCUSS ....

Technocracy membership is not solely scientists. It started out that way. WHEN WAS THAT? 1918. ON WHAT CIRCUMSTANCES WAS IT FOUNDED, HOWARD? That came about because a number of us scientists, technologists, and engineers in the war industries realized that the terrific amount of equipment going in was a wild rush, and they didn't know what it was for. When various technically-trained men protested, we were quietly told to mind our own business, in fact, in 1917. So we got interested in what would be the resultants, and, hence, Technocracy.

WHAT IS YOUR PROFESSION ACTUALLY, HOWARD?

I started out to be a physical chemist, but I wound up being a construction, inventor, and a designer, and Director-in-Chief of Technocracy.

I'M TOLD, AND YOU CAN TELL ME IF I'M WRONG, THAT MANY SCIENTISTS LIVE IN A RATHER ABSOLUTE VACUUM. THEY WORK IN THEIR OWN FIELD OF DEVELOPMENT OR SCIENCE OR WHATEVER IT MIGHT BE AND DON'T REALLY CARE VERY MUCH ABOUT WHAT'S GOING ON IN THE WORLD OUTSIDE THEM. NOW, THOSE WHO ARE PRIVILEGED TO MAKE POLICY, WE REQUIRE OF THEM THAT THEY HAVE A VERY BROAD KNOWLEDGE OF THE THINGS THAT ARE GOING ON IN THE WORLD, AND MANY SCIENTISTS INSULATE THEMSELVES FROM THIS. NOW, OBVIOUSLY, THIS IS SOMETHING YOU WOULD DISCOURAGE.

Well, there is a tendency on the part of this present Price System of ours to force people with special knowledge to isolate themselves, because the general public and those who, let's say, are the trustees of the present order, compel that kind of obedience, and, therefore, they withdraw because otherwise it would be a conflict. But they are realizing today that catastrophe lies ahead unless there is planned, designed, directional operation. AND THEY MUST PARTICIPATE IN THAT? They must participate as an entirety, regardless of their personal likes and dislikes.

WELL, YOU MIGHT CALL THIS PROGRAM, "THE SCIENTIST FACES THE PHILOSOPHER," BECAUSE I'M GOING TO THROW OUT ONE OTHER

4-11-61

PHILOSOPHIC POINT TO YOU. FOR AS LONG AS I THINK MACHINES OR MECHANICAL METHODS OF DOING THINGS HAVE EXISTED, HUMAN BEINGS HAVE DEBATED THE PROBLEM OF WHETHER ONE DAY THE MACHINES WOULD RULE THE MEN RATHER THAN HAVING MACHINES MERELY SERVE THEM. NOW, THIS IS A DIFFICULT PROBLEM. AS WE BECOME MORE AND MORE MECHANIZED, AS MORE AND MORE MACHINES ARE IMPORTANT IN OUR WAY OF LIFE, PRETTY SOON MUCH OF OUR EFFORT HAS TO BE CONCERNED WITH SERVING THEM, WITH DOING IT THE MACHINE WAY. THIS IS A PROBLEM THAT HAS CONCERNED PEOPLE FOR A LONG TIME. ARE WE STILL MASTER OVER THE MACHINE?

In the days of Athens, there were approximately only 26,000 Athenians, and 420,000 Helot slaves. As you study in your Roman history, the main business of the Roman Forum became involved on orders of where to send the Roman Legions to capture more slaves. That was what they were using in those social systems of that time to operate their economy.

WHAT ABOUT OUR ECONOMY TODAY? CAN MACHINES REALLY GIVE US -- I SOMETIMES WONDER IF WE FOOL OURSELVES. WE TALK SO BROADLY TODAY THAT THE MACHINE AGE -- WHICH IS HERE -- AND OUR PRESENT MECHANICAL SOCIETY IS GOING TO GIVE TO THE REST OF THE WORLD THE WEALTH AND THE MATERIAL WELL BEING THAT WE HAVE BEEN ABLE TO GAIN AND GATHER HERE IN THE U.S.A. ARE WE FOOLING OURSELVES? IS IT POSSIBLE TO BELIEVE THAT IN THE DARKEST PARTS OF, LET'S SAY, AFRICA, THAT SOMEDAY THERE CAN BE AN INDUSTRIAL SOCIETY CAPABLE OF PRODUCING WHAT WE HAVE BEEN ABLE TO PRODUCE FOR OURSELVES HERE?

If the civilization of Africa is designed on the technological premises of its resources and capacity, they can operate a social mechanism many times beyond what they have, and the fact that they are black doesn't make the slightest bit of difference or yellow or brown, or even green, provided that the technological application of science is carried out.

BUT THE UNFORTUNATE PROBLEM THOUGH -- AND CORRECT ME IF I'M WRONG, HOWARD -- IS TODAY TO ESTABLISH ANY SORT OF AN INDUSTRIAL SOCIETY, THE AMOUNT OF CAPITAL THAT IS REQUIRED YOU CAN'T EVEN CALCULATE. NOW WE KNOW THAT WE PROBABLY GOT OUR INDUSTRIAL CIVILIZATION TODAY IN AMERICA BECAUSE THERE WAS A TIME WHEN COUNTRIES SUCH AS GREAT BRITAIN PUT A GREAT MANY DOLLARS INTO DEVELOPING INDUSTRY HERE. NOW, OUR CAPITAL

STATION KYW, CLEVELAND, OHIO  
INTERVIEW OF HOWARD SCOTT

4-11-61

IS NO LONGER WELCOME IN THIS WAY IN MANY PARTS OF THE WORLD.  
WITHOUT THIS, IS IT EVER CONCEIVABLE THAT THEY CAN GAIN  
INDUSTRIAL SOCIETIES?

Yes, they can. They are doing it in various parts of the world,  
because they are creating social capital by a surplus of social  
labor.

THIS IS WHAT THE COMMUNISTS ARE DOING

Well, they're doing it.

THIS IS A DIFFICULT WAY OF INDUSTRIALIZING.

It is. It's unfortunate. Now, some years ago, we sent Savage out  
to China. Savage was Chief Engineer of the United States Bureau  
of Information, and he also visited India, and he proposed  
certain dams and projects in India and China. Well, on the Ichang  
Gorge on the Yangtze River, which is over 600 miles in the  
interior of China, he proposed a ten million kW power plant.  
Well, but Savage never had to go in for any water transportation.  
All his reclamation projects were power and water for irrigation.  
So, therefore, he was rather deficient, but the Russians today,  
with the Chinese, are building the Ichang Gorge Project on the  
Yangtze River -- 600 Russians and 60,000 Chinese, and how many  
Chinese engineers we do not know. But the Electrocilia Works --  
machine works -- in Leningrad are building the 500,000 kW  
turbogenerators, twice as large as anything in the world, and  
that station will be 25 million kW, or practically 12 times that  
of Grand Coulee.

WHILE YOU CLAIM TO BE SCIENTISTS AND NOT PHILOSOPHERS,  
NEVERTHELESS TECHNOCRACY BY DEFINITION IS THE RULE OF  
SCIENCE, AND I KNOW THAT YOU ARE NOT THINKING OF IT IN A  
POLITICAL SENSE, YOU'RE NOT FORMING A GOVERNMENT, YOU'RE NOT  
TRAINING TROOPS OUT IN THE FIELD, YOU DON'T WANT A COUP  
D'ETAT TO ESTABLISH A GOVERNMENT OF ENGINEERS AND  
SCIENTISTS. WHAT, THEN, IS YOUR METHOD OF APPROACH?

Educational and the march of events, the strategy of organization  
so long as it conforms to the historic parallelism of events.

WOULD I BE CORRECT IN SUCCINCTLY PHRASING THE GOALS OF

4-11-61

TECHNOCRACY MERELY TO SAY THAT THE SCIENTIST IS TO HAVE A GREATER ROLE, A GREATER VOICE, IN WHAT IS THE DIRECTION OF THE AMERICAN CULTURE?

Yes, but he'll have to design the system which operates it, because he has designed everything of the chief components within that that is now accelerating it, to a point of no return, where he will have to design the entirety instead of the little bits and pieces within it. For instance, we have beautiful computing machines today of all kinds, and the trouble is not designing and constructing computing machines, but of finding the human being who can ask the machine an intelligent question.

THE MACHINES ARE GETTING A LITTLE MORE ADVANCED THAN THE MEN IN THE AGE IN WHICH WE LIVE,

Well, we haven't changed our concepts, Carl, most people, since 1648. There are very few new concepts.

OF COURSE, I SUPPOSE YOU CAN'T STATE ANY SCIENTIFIC TRUTH. YOU HAVE TO PUT IT ALL ON A RELATIVE SCALE, BECAUSE WHAT IS TRUTH TO US TODAY MIGHT NOT BE TOMORROW.

Truth is a philosophical absolute, but in science, it is all relative, and our definition of science is: That science is the methodology of the determination of the most probable. There's nothing absolute or fixed. It changes.

IF WE CAN GO FROM A PHILOSOPHIC QUESTION TO ABOUT THE MOST MUNDANE, I HAVE BEEN SITTING HERE IN MY OWN MIND TRYING TO THINK WHAT MIGHT HAPPEN, WHAT DOES HAPPEN, AT A MEETING, LET'S SAY, ON WEST SIDE CLEVELAND, OF MEMBERS OF A TECHNOCRACY CHAPTER. WHAT DO THEY TALK ABOUT?

They get periodicals from different parts of the world, they discuss the advances in steel or social engineering, public health, power production, railroads, almost anything anyplace in the world.

AND THEN YOU HOPE THAT THEY WILL CARRY THIS INFORMATION, THIS KNOWLEDGE, BACK TO THEIR OWN COMMUNITY AFFAIRS?

Yes, Technocracy is in reality an organization really of social

4-11-61

engineers proposing design that if we continue to install these energy-consuming devices, it will be imperative that we change. Just as Russia, regardless of its system, if it continues putting in sufficient energy-consuming devices to equal the kilogram calories of United States today, it will have similar problems such as United States has at the present moment, except it will be more fortunate in that it will have less debris to clear away to go ahead.

HOWARD, YOU SPEAK WITH A VERY GREAT KNOWLEDGE AND INTENSITY, AND I'D FEEL I WOULD BE CHEATING MY LISTENERS IF I DIDN'T ASK AS MY FINAL QUESTION THIS QUESTION: MANY OF US WHO ARE NOT INVOLVED IN SCIENCE AND CAN'T REALLY FULLY COMPREHEND WHAT IT IS ALL ABOUT, MANY ARE DEATHLY AFRAID TODAY THAT SCIENCE MAY HAVE GONE TOO FAR, THAT PERHAPS WE ARE CREATING A WORLD IN WHICH WE CAN'T FULLY CONTROL ALL THE FORCES TO WHICH WE ARE GIVING BIRTH, TO-WIT: THE NUCLEAR AGE. ARE YOU AN OPTIMIST OR PESSIMIST? WHAT'S THE FUTURE?

You'll pardon my becoming personal. My definition of an optimist is one who proclaims this to be the best of all possible worlds, Carl, and that a pessimist is one who concurs in that proclamation, if I may.

I'LL TAKE THAT AS YOUR PERSONAL OBSERVATION. AS THAT OF TECHNOCRACY INC., I TAKE IT, THOUGH, THAT YOU ARE NOT FRIGHTENED OF THE NEW TECHNOCULTURAL WORLD WE ARE CREATING.

Not a bit, but as you advance, it requires more and more precision and more and more control. Let's go back as an example; When Boulton and Watt built the first steam engine, it was considered as a matter of accuracy if a shilling dropped between the piston and the cylinder, it passed not too easily. Now in this day of high-energy releases and controls, you have to have precision control. You are dealing in millionths of inches and fractions of seconds. You have to have a control millions of times more accurate than Boulton and Watt ever dreamed of. So, the more energy-consuming devices are installed, the more it will compel precision control and, what is furthermore, direction.

THIS IS A CHALLENGE YOU ARE LOOKING FORWARD TO?

That's a challenge. It is the knowledge of a technological

STATION KYW, CLEVELAND, OHIO  
INTERVIEW OF HOWARD SCOTT

4-11-61

macrocosm and not of the old order of the microcosm, the minutiae; in other words, we're concerned for the future of young Americans. AND A MUCH BIGGER WORLD. And a much bigger world -- not at the present moment, yes, but in a greater sense tomorrow.

INTERVIEW OF HOWARD SCOTT BY PHILADELPHIA INQUIRER  
JULY 7, 1961

YOU ARE MR. HOWARD SCOTT. DO YOU USE A MIDDLE INITIAL, HOWARD?

No.

SUPPOSE YOU JUST TELL ME ABOUT TECHNOCRACY AND HOW YOU GOT STARTED WITH IT.

I hope you don't have an interview in mind where you want to play this up as something in Bucks County.

I'VE GOT TO TIE INTO BUCKS COUNTY. I THINK AS FAR AS THE IDEA -- HERE'S SOMETHING THAT'S NATIONAL OR INTERNATIONAL, AND HALF THE PEOPLE IN BUCKS COUNTY -- MORE THAN THAT -- MOST PEOPLE IN BUCKS COUNTRY DON'T KNOW THAT IT'S HERE.

Well, we've been here almost ten years. WELL, THAT'S OUR FAULT, NOT YOURS. Eight years here, and we moved out from New York in 1950.

YOU MENTIONED THAT THIS WAS A BARN. WHAT SIZE WERE SOME OF THESE ROOMS?

The main thing is 50 x 60. AND YOU HAVE THREE FULL FLOORS? Yes, and this is 32 x 24, I think. LOOKS LIKE YOU HAVE AN AUDITORIUM THAT HAS 40 CHAIRS BUT COULD SEAT 75 OR MORE. Oh, yes. It's 16 feet high. AMONG THE EQUIPMENT, I COUNT SOMETHING LIKE 13 DESKS. THERE'S PROBABLY MORE THAN THAT. Yes, there's more than that around. CLOSE TO A SCORE OF THEM, WOULDN'T YOU SAY, MAKING A DESK COUNT? Right. WHAT IS AN EXAMPLE OF SOME OF THE BUSINESS EQUIPMENT YOU HAVE HERE, I MEAN, OFFICE EQUIPMENT? We have an automatic postage meter. We have a big mimeograph. Electric typewriter, recorders, projectors, cameras.

WHAT LED YOU TO MOVE FROM NEW YORK DOWN TO BUCKS COUNTY?

Well, our location in Bucks Country is really a matter of access. There is approximately 109 acres in this farm here.

DO YOU DO ANYTHING IN PARTICULAR WITH THE ACREAGE?

No, that's farmed. YOU'RE NOT PARTICULARLY CONCERNED WITH

7-7-61

THAT PART OF IT? No, we did have fifty sheep this year, but just got rid of those. There's corn and wheat and clover, alfalfa being raised on the rest of it.

I WOULD APPRECIATE IT IF YOU COULD GO BACK AND FILL ME IN ON WHAT TECHNOCRACY IS AND YOUR PART IN IT, ETC.

This goes back to World War I. I was one of the, say, younger technologists and engineers of the War Industries of the United States, and a number of engineers and scientists met in the course of the war work in designing and constructing plants and processes. We became somewhat interested in the overall physical picture of the country and the continent. So, we formed a group known as The Technical Alliance. [John, can you find that book of Parrish's that's got The Technical Alliance folder? It's right here someplace.] This was done in 1918. There's the original organizing committee.

Ackerman was an architect of Cornell University and big apartment houses. Dr. Carl L. Alsberg was Chief Chemist in the Department of Agriculture. Dr. Allen Carpenter was a noted doctor in New York. L.K. Comstock -- the Comstock firm is still the biggest electrical contractors in New York; they are the ones who did all the lighting at the World's Fair. Stuart Chase was an accountant in the Federal Trade Commission at this time. That was before he wrote books, and, of course, he started to write in this organization. Alice Barrows Fernandez was Deputy Chief in the United States Department of Education. Bassett Jones was a member of the firm Myers, Strong, and Jones, consulting engineers, and he was the co-developer of frosted foods, along with Clarence Birdseye. THERE REALLY WAS A BIRDSEYE? Yes. YOU SEE BIRDSEYE ADS GOING WAY BACK WHEN THEY STARTED FROZEN FISH ADS, BUT I DIDN'T KNOW THERE WAS A CLARENCE BIRDSEYE. Bob Kohn was president of the American Institute of Architects. Benton Mackaye -- by the way, he is still living, Bassett Jones just died a couple of months ago -- was the United States Department of Forestry, but you probably know him better as the one who organized and fought for the Appalachian Trail. LELAND OLDS, THAT'S A FAMILIAR NAME. He was made secretary of the New York State Power Authority, and then Roosevelt made him Power Administrator of the United States. Charles P. Steinmetz -- of course, he is no longer living -- he was the electrical genius of the General Electric. DIDN'T HE HAVE SOMETHING TO DO WITH POWER

7-7-61

BRAKES? Oh, all kinds of power. Dr. Richard C. Tolman was the Dean of Physics at California Institute of Technology and was United States Atomic Representative on the Combined Chiefs of Staff in World War II.

John Carol Vaughn was one of the famous surgeons, head of the Vanderbilt Clinic, etc., and I'll tell you something that just happened Saturday. THORSTEIN VEBLEN WAS IN IT. Yes, well, you know who he is. Whitaker was Editor in Chief of the American Institute of Architects Journal.

That was the origin in 1918. In 1919, there was full-page publicity in the different periodicals. Charles H. Wood brought interview in the famous old SUNDAY WORLD. We have it upstairs in our scrap books. We had the first office -- I equipped it -- just off Washington Square, that was in August, 1918; and then we moved to 23 West 35th Street, which, some years later, one of our New York Sections occupied the same floor just as kind of a nostalgic memory to say that they had.

We kind of died down a little after 1923, and we hung on. Then in the '30s, with all of the unemployment, we opened up research projects and we called it Technocracy. We called it Technocracy back then. WHERE DOES THE NAME COME FROM -- TECHNOCRACY? Well, it comes from the same Greek root words -- I MEAN, WHO THOUGHT IT UP? Well, I'm responsible for that. Democracy is the rule of the many, autocracy is the rule of one, plutocracy is the rule of wealth, and Technocracy is the rule of science. That's a good way to remember it with the same root letter words. AUTOCRACY IS THE RULE OF WHAT? One. PLUTOCRACY IS THE RULE OF WEALTH AND TECHNOCRACY IS THE RULE OF SCIENCE.

You just go ahead and ask me questions.

GO AHEAD WITH THE 1930s.

The engineering societies, the chemical, architects, and so on, had all these unemployed engineers. There were too many people trying to sell apples on the corner; you couldn't give that to them -- there was too much competition, you see. So, they had built up an emergency fund to help them out and were paid \$15.00 a week. They wanted to know wasn't there something to be done, couldn't we put them to work and maintain the morale, and

7-7-61

so on. We said, certainly we can give them research jobs to do, and well what? Digging up all the facts and statistical analysis of an energy survey of North America. That started in 1930. It got under way, and various firms, for instance, had big office space, and when the depression hit them, they still had the lease, you see, but no employees. So, they offered us their big drafting rooms -- gratis, of course, and then Dr. Walter Rautenstrauch, who was Professor of Industrial Engineering up at Columbia University, there were practically no students in that and we already had a couple of people on the staff at Columbia, and he suggested two floors in the Engineering Building weren't being used, and we took them over. Now, I had no connection with Columbia University. It filled up to where we had 260 -- not the same 260 all the time -- but we overlapped them. ROTATED? Rotated, that's it. We were the largest consumers of metric cross-section paper in the country.

Well, that went on until 1932, when Dr. Nicholas Murray Butler's political campaign manager discovered that there was this project running at Columbia University which was termed the biggest research project, you see, of any university. They were the ones that notified the press with a release on a Saturday -- Friday, published Saturday -- and Monday morning, the thing broke wide open. Well, that was done without any consultation with us. THIS IS STILL in 1932? Yes, that was in the summer of 1932. Well, from that time on, it was a headache. Then they discovered it was loaded with social dynamite, and we had to get out of Columbia University.

Since that time, of course, the press has buried us a number of times. The trouble with anyone burying anyone in absentia is that the zombies get up and walk around. Today, our organization has Sections -- there has to be 50 members to get a Section charter -- and each Section has a Board of eleven officers that are elected annually. We have Sections in United States and Canada coast-to-coast, and smaller units that are on their way to becoming Sections, and Members-at-Large. We do not go off this continent.

DO YOU GO TO SOUTH AMERICA AT ALL?

Central America, and there are some down in Venezuela, Colombia, Costa Rica. Of course, it became quite an international

7-7-61

thing before ....

AS I UNDERSTAND, IN THE THIRTIES WHEN TECHNOCRACY WAS VERY  
MUCH OF A HOUSEHOLD WORD ....

Well, you had a terrific ballyhoo; for instance, Robert Coomey, the publisher of the VANCOUVER SUN, ran it 34 consecutive days on the front page and 2 and 3 whole pages on the inside -- 34 consecutive. Manchester Bogey of the LOS ANGELES DAILY NEWS did the same stunt. WHAT WOULD THEY RUN ON THE FRONT PAGE FOR 34 CONSECUTIVE DAYS? The news of Technocracy. EVERYTHING YOU WERE DOING? Well, what they thought we were doing, and excerpts -- they went hogwild. That's one of the reasons we were forced to incorporate as a membership organization in the State of New York, to protect ourselves. I DON'T QUITE FOLLOW THAT. As an incorporation, you can't copy The Standard Oil today, can you? NO, NO. TO PROTECT TECHNOCRACY FROM IMITATORS? And all kinds of inroads.

I GATHER THERE WAS A GREAT DEAL OF MISREPRESENTATION OF WHAT YOU WERE DOING AT THE TIME. Slightly. WOULD YOU MIND TELLING ME IN SIMPLE LANGUAGE I CAN UNDERSTAND WHAT YOU WERE DOING AND WHAT THEY SAID YOU WERE DOING. Of course, there was so much of what they said we were doing that you could cover volumes. What we were doing is the same thing we are doing today: We publish magazines, pamphlets, books, maps, charts, and we hold study courses in our Sections, discussion meetings; we serve lunches and dinners, social recreation. We conduct tours of industrial plants. We show films -- technical and scientific films of all kinds whether it's Cleveland, Detroit, Los Angeles, Vancouver, Canada, Toronto, Hamilton -- it doesn't make any difference, the procedure is the same. We, Technocracy Inc., are a research organization, nonsectarian, nonprofit, and nonpolitical. The only requirements for membership are that you be a citizen and not be an elected political officer or a responsible officer of any political party. We don't want to be involved in any party politics. So, if you are a member of the Republican, Democratic, or any other political party, you'd have to resign in order to join Technocracy. We do not enter any election that holds or supports any political party candidate.

Is this the type of thing you want? FINE, FINE. WHAT WOULD YOU SAY SOME OF THE BASIC PRINCIPLES OF TECHNOCRACY ARE. I

7-7-61

KNOW IT'S A COMPLICATED THING, DIFFICULT TO ....

There is no other organization in the world like it. We're not subsidized, we haven't any angels, and it's out and beyond -- it's an entirely new approach. We treat a continental area the same way a technologist, scientist, or engineer treats it; namely, as an area of physical operation. Our approach is not philosophical, moral, or ethical; it's based on the physical analysis of what you have in resources, land, water, and technological equipment and what could be done with it.

In other words, what we contend is that all social phenomena are metrical and measurable, that is, not individual human beings but your collective operation of a large area. So, here's an entirely new approach to social problems. You see, our basic contentions are now being proven correct. That's what makes it so interesting. You've had this campaign on by all the financial powers for the last 16 years that "machines make jobs." Well, they've even abandoned that now; that was one of the anti-Technocracy propositions -- trying to prove that technological equipment and machines really made jobs, when the resultants are totally different.

We pointed out years ago that as the extraneous energy increased in volume in this social system, or any other social system, it would finally reach the point as it approached 200,000 kilgram calories per capita per day -- United States has not reached that; it's really under 170,000 -- but then you would produce more and more with less and less human beings and less man-hours to where the production of abundance would be here; but it would require a minority of the healthy, able-bodied adults of United States. The majority would not be required in the production and distribution of physical wealth, that is, at 200,000 kg cals per capita per day. We haven't got there yet.

I GATHER WE'RE GETTING THERE WITH 200,000 CLOSE TO 170,000.  
IN GENERAL, HOW ARE THE KILOGRAM CALORIES PER DAY MEASURED?  
That's energy. IS THAT IN TERMS OF MACHINERY AND KNOWLEDGE.  
I MEAN, IS THERE AN EQUATION INVOLVING EVERYTHING?

Where do you get the energy from? Oil, gas, coal, hydroelectric power, atomic power.

7-7-61

I GATHER TO MAKE THOSE MEASUREMENTS, YOU DON'T JUST COUNT THE NUMBER OF MACHINES IN THE COUNTRY OR THE NUMBER OF PEOPLE.

It's extraneous energy; it has nothing to do with human energy. It's the energy generated.

THERE IS NO ONE MEASURING STICK FOR THAT. I MEAN, AM I CORRECT IN ASSUMING IT IS A COMPLEX FORMULA?

It's all energy -- it's energy that is measurable. We have instruments today to determine the energy, whether it's fuel oil, gasoline, gas, coal ....

WHAT WOULD BE SOME OF THE FACTORS OR COMPONENTS OF THIS EXTRANEOUS ENERGY; IN OTHER WORDS, DO YOU TAKE THE MACHINERY AND THE FUEL ....?

The machinery is only something that is operated by extraneous energy.

WELL, WOULDN'T YOUR KILOGRAM CALORIES INCREASE AS THE AMOUNT OF MACHINERY YOU USED ....?

As you consume more energy, you put in more equipment. For instance, the total installed horsepower in United States, according to the latest census figures, are around 11 billion, of which almost 10 billion of those prime movers are in automotive vehicles. Do you realize how much that leaves you for all industry and central stations? I can give you a breakdown on it, but then that's too technical,

WHAT WOULD HAPPEN IF WE HAD IN ADDITION TO THE 10 BILLION OF AUTOMOTIVE, AND YOU HAD 10 BILLION FOR THE OTHER NEEDS? WOULD WE BE PAST ....

There wouldn't be anybody working at all, but long before you got that -- you wouldn't need the 10 billion. All you would need is another 10 percent.

IF THERE IS ONE BILLION NOW BEING ROUGHLY USED FOR INDUSTRY AND ALL KINDS OF MISCELLANEOUS POWER BESIDES AUTOMOTIVE .... Well, central stations, steel plants, manufacturing

7-7-61

plants .... IF THIS ONE BILLION WERE INCREASED BY TEN PERCENT, WE'D BE AT THE .... of the total, that would be another billion. That would be double the amount. OH, I SEE WHAT YOU MEAN, A 10% INCREASE OF THE OVERALL TOTAL. Total installed horsepower. That would be another billion or 100% of what is going into industry. AND THAT WOULD BRING US TO THAT SURPLUS, SO TO SPEAK, OF WORKERS. Workers? There wouldn't be any workers. All the vice presidents SURPLUS ISN'T THE WORD I'M LOOKING FOR. You see, Socialism and Communism eulogize the worker, don't they? YES. And they want to eliminate the so-called capital. What we're pointing out is that if you continue to install energy-consuming devices, you're not only going to eliminate the so-called owning interests; you'll eliminate the bourgeoisie and you'll eliminate the worker, too.

Now, Khrushchev contends that communism is the logical successor to capitalism, doesn't he? YES. Well, there might be some validity for that statement in the undeveloped sections of the world, but in a technologically developed section, Technocracy is the logical successor to both private corporate capitalism and communism, because it won't make the slightest bit of difference what you call the political structure, if you install sufficient energy-consuming devices, you will get to that regardless of the political philosophy. Am I making myself clear?

I THINK SO, NOW WHAT HAPPENS? I GATHER INEVITABLY, UNLESS WE HAVE AN ATOMIC WAR OR SOMETHING, AMERICA AND SOME OF THE OTHER COUNTRIES WILL REACH THIS LEVEL OF KILOGRAM CALORIES. THEN WHAT WILL WE DO? WHEN WE'RE ALL SITTING AROUND LOOKING FOR SOMETHING TO DO, WHAT DO WE DO THEN? WHAT ANSWER DOES TECHNOCRACY PROVIDE?

Well, what has the majority of human beings been doing for thousands of years? WORKING. Yes, trying to get enough to live, to get by. Now that they have an abundance, they'll have to learn how to live. They'll have plenty of time to do. You see, the problem in United States today is not more jobs; the problem is 75 million incomes. You can't give them jobs, and all you have to do is look at the record, because you have 16 million human beings that are over 65 and inside of five years, you'll have 20 million. That increases your social load. Now, that's on the top side of the picture. The baby crop of the 4-million-a-year

7-7-61

babies, the teenagers are just coming in and hitting the labor market last year and this. The real smack will be next year or in '63 when they'll hit 1.8 million a year; in other words, we would have to create around 1.8 to 2 million new jobs a year.

I GATHER WE CAN'T KEEP THAT UP FOREVER,

Well, our expansion of the total economy is only about 2-1/2 percent. Just to maintain stability, not advance, we'd have to increase it 3-1/2% to 4%, So the question remains: Can you spend yourself into this kind of prosperity with government credit, private capital, and the answer is no, because you are trying to finance the absurdity of more jobs. Of course, this isn't very pleasing for your conservative of all political parties.

I THINK A LOT OF PEOPLE ARE STARTING TO THINK ABOUT WHERE THESE ROADS WE'RE RUNNING DOWN ARE GOING TO TAKE US AND OUR CHILDREN.

We're going down a national highway, and we've got all kinds of power, but we don't have any brakes. It might be somewhat analogous to a big ship where the men on the bridge -- the financial -- are speaking in a fiscal or financial hindustani, and they are trying to tell the engineers down in the engine room who speak an engineering malay to reverse the ship; and the engineers in the engine room are trying to tell them in their engineering malay that when the ship was built, it didn't have any reversing mechanism; so, the difficulty in understanding the situation is more and more impossible as the amount of technological equipment increases.

I'M STILL NOT CLEAR, RECOGNIZING THE PROBLEM, WHAT CAN WE DO ABOUT IT TO PREVENT JUST GETTING TO THE STAGE WHERE WE'VE GOT MILLIONS OF PEOPLE SITTING AROUND TRYING TO OCCUPY THEMSELVES AND NOT BEING EMOTIONALLY OR EDUCATIONALLY EQUIPPED TO DO IT ....

What's your educational system? How many governments have you in United States that are empowered to levy taxes and collect them and issue debentures? I GUESS ABOUT SIX LEVELS. Without the two new states, there are 104,000. There are now 50 states, which will increase the number. There are 3,000 some counties, 17,000 municipalities, about the same of townships, and 53,000

7-7-61

educational districts -- that's without the two new states, you understand. The latest has not been published by Washington. You can buy it. It's about this thick. Well, now, there's absolutely no direction or coordination between 53,000 educational districts. There's no national curriculum, no national standards, and it's extremely doubtful that 53,000 Boards of Trustees are going to resign and reorganize the educational system in United States voluntarily. We can't conceive of that. They are important, you know, and they are going to preserve their importance to the last. So, it takes an entire reorganization of your educational system in order to train the human beings to be scientists, technologists, engineers, technicians -- in other words, experts in physical knowledge.

You see, there are three types of knowledge which have dominated the affairs of the world. The earliest was, of course, theology, or spiritual knowledge. Then philosophy, or metaphysical knowledge. They are the two dominants up until now. Your third order of knowledge is science, or physical knowledge, and that has to come into its own if you are going to orientate the social well-being of human beings on any large continental area. In other words, the concepts that man has in all the literature has been the conduct of human affairs. Well, if most of them were in slavery, filth, and disease, it was a justification; but what you have to learn now is that it has to be a change from a government of human conduct to a governance of things, because it is the "things", the technological equipment, that produce the social life and well-being of millions. It's the operation of that equipment that determines the next most probable state of that social organization.

Any social system that hasn't got the natural resources, the energy, and the technological equipment is due to lose out. Western Europe is never going to come back to its preeminence in world domination, simply that it hasn't got it, regardless of its cultural and historical background. That's not because they were moral or immoral; that's because they haven't got it to proceed on. Because in order to be up in the sun in today's world, you have to have resources, energy, and technological equipment. There's first position, but there's no second, third, and fourth gears. When you pass out of the first position, you are of the gear train entirely.

PHILADELPHIA INQUIRER INTERVIEW  
OF HOWARD SCOTT AT CHQ

7-7-61

WHAT DOES TECHNOCRACY SAY WE SHOULD DO? WHAT SHOULD WE BE DOING TO GET READY FOR THIS INCREASE?

You have to inform the people of this country on what is actually happening both here and abroad, and such is not the case, I regret to say.

WHAT WOULD HAPPEN SUPPOSING X NUMBER OF YEARS FROM NOW, EVERYBODY IN AMERICA WAS FIGURATIVELY A MEMBER OF TECHNOCRACY INC. WHAT KIND OF A SETUP WOULD WE HAVE? Technocracy has no assumption of power theory. We're in the nature of ....

I MEAN, IF EVERYBODY WAS CONVINCED THAT TECHNOCRACY WAS THE ANSWER, IN OTHER WORDS. Well, that is up to the public. WELL, WHAT SHOULD THE PUBLIC DO? I'm not an expert. We are in the nature of consulting engineers. Now, a firm of consulting engineers designs a suspension bridge, a tunnel, or a power plant; it doesn't fabricate the material and it doesn't construct it. There are construction firms that install it, and there are fabricating concerns that follow the designs and fabricate the equipment and structural material necessary.

AM I CORRECT IN ASSUMING THAT TECHNOCRACY IS PRIMARILY EDUCATIONAL?

A research, educational organization. What we are saying is that if you continue to do thus and so, you will arrive at such-and-such a position, and when you do, you will have to do certain things just the same as when traffic reaches

CHANGE TO A NEW TAPE

WELL, THAT'S ALL RIGHT. IT WAS REALLY IN THE NATURE OF A PERSONAL ....

No, I haven't -- I don't know as I have any hobbies that way, have I, John?

JUST WORK, IS IT?

Well, I move around. I swim if I can get it. I'm not a physical hobbyist. You burn up too much energy if you worry about

7-7-61

diet. I haven't high blood pressure and my pulse is normal,

WOULD YOU MIND SAYING WHETHER YOU'RE A BACHELOR OR MARRIED?

Well, right now I'm not married. I'm a widower, if you want to put it that way. But that's personal.

WHAT EDUCATION DID YOU START OUT IN? DID YOU WANT TO BE AN ENGINEER ALL YOUR LIFE?

Oh, I started out to be a chemist, but forget that. I don't want anything personal.

YES, I UNDERSTAND THAT, BUT A READER DOES WANT TO KNOW SOMETHING ABOUT YOU.

Oh, I had processes and patent applications, and so on, but with the the economic situation, that got interrupted.

I GATHER THAT YOU WERE STARTING OUT AS A YOUNG ENGINEER ABOUT THE TIME THE DEPRESSION HIT.

Before that.

I THINK YOU MENTIONED THAT WHEN THIS FIRST GROUP WAS FOUNDED, WHAT WAS YOUR GENERAL LINE OF WORK AT THAT TIME WHEN YOU WERE WITH MR. CHASE ....?

I had just come off Muscle Shoals.

WERE YOU WORKING FOR THE GOVERNMENT? HOW DID YOU COME IN CONTACT OR HOW DID EVERYONE, INCLUDING THESE VARIOUS MEN, GET TOGETHER?

It was war work, you see. MOST OF THEM WERE WORKING .... In chemical plants, explosive plants .... YOU WERE WORKING FOR OR WITH THE GOVERNMENT? Yes, although I wasn't directly .... it wasn't in any military, I was a war-necessary technologist. YES, BUT I MEAN ON GOVERNMENTAL-TYPE PROJECTS. Yes, USMP No. 2 -- Muscle Shoals, Cincinnati, Toledo, Kanawha River -- that's now the plant of the Carbide & Chemicals down in Charleston, West Virginia.

7-7-61

I BELIEVE THAT COVERS THE GROUND.

Well, but there's so much more, you see, that has nothing to do with it.

WELL, IT'S A FASCINATING SUBJECT. WHEN I SEE THE STAFF CAR THAT DRIVES AROUND AND I RECALL READING ....

Well, you see, outside of CHQ, the individuals have their Section number. The Section number is composed of the latitude and longitude of the lower righthand corner of the quadrangle in which they live. YOU'VE LOST ME THERE. If you'll look at a map, how do you tell where people are? What's every radio station got in its license? Its latitude and longitude, hasn't it? Well, we've merely devised a system -- and by the way, it's being used in biology and geology today -- of where you don't say St. Louis, you say 9038. WHAT IS 90 AND 38? That's the combination of the latitude and longitude of the lower righthand corner of the quadrangle when you're looking at the map. So right away you know where the location is any place on the globe, without any further description. SORT OF A METRIC SYSTEM OF LOCATIONS. That's what it is. So. you'll find cars across the country with numbers on them. Those numbers are Section numbers. The Section number may precede that, but they will have there -- New York would be 7340, you see.

I HAVE ONE MORE QUESTION, JUST PERSONAL CURIOSITY. WHAT DO YOU THINK FROM A TECHNOLOGICAL STANDPOINT OF AMERICA'S CIVIL DEFENSE PROGRAM?

What do you mean by civil defense? SO-CALLED CIVIL DEFENSE. Oh, this air raid warnings, all the rest, and bomb shelters? YES. Now you start into something. We've spent terrific sums of money, haven't we; for instance, Texas towers out in the Atlantic, putting DEW lines and other lines across the Arctic. They were installed on the assumption that the attacking nation would launch the attack by plane and carry the deadly missiles in the planes, and therefore provide some hours of preparatory warning. Even missiles launched from 6,000 miles away have to go on up to a peak and then come on down. Well, the Russians have demonstrated, when they flung that 10,000 pound thing into orbit, and then at a particular point in the orbit, they launched one for Venus, didn't they? YES. Well, it was only 140 miles up to

7-7-61

200 miles. But you can do the same thing. SO IT WOULDN'T NECESSARILY HAVE TO COME FROM 6,000 MILES? Oh, no, only 140 to 180 miles. THAT'S RIGHT OVER YOUR HEAD. And the speed would be what? I HATE TO THINK .... The time interval would be less than two minutes. So, you can, of course, build buildings to withstand atomic blasts, but it would take 32-inch concrete walls. We will not go in for that. Sweden has gone in for underground plants, hospitals, and everything else, but not this country. We want to do it by private enterprise. The whole thing is part-and-parcel of this propaganda of what to do to catch up to the Russians. Well, we have an answer to that. Let's give the Russians all that we've got, and the Russians will be 2-1/2 years behind us. That's just how silly we are. You haven't any defense.

Of course, you have to realize that we are keeping our economy alive by the threat of war, and we couldn't stand peace, that is, meaning peace to where you'd cut down on your terrific war budget, and so on. Do you understand that? YES. We're now trying to get the defense budget up closer to \$100 billion than \$50 billion. That total budget this year will be close to \$86 billion, won't it? Correct? I DON'T KNOW THE FIGURE. It will be one of the largest peacetime budgets in the history of the country, but that still won't solve anything or rectify anything. It will stall it, just temporarily.

Now, you go on and ask any questions you want to.

O.K. I'VE GOT ENOUGH NOW FOR TWO ARTICLES. ONE THING I'VE NOTICED IS THE GRAY. IS THAT SOME SORT OF UNIFORM?

No, YOU JUST LIKE THE COLOR, HUH? Yes, you see it's gray enough so that south of the Mason-Dixon Line, it's remembered; and it's blue enough that north of the Mason-Dixon Line, nobody knows what it is. That started off when the vice president of a textile company -- we proposed making a cloth, and he did produce the best cloth that has ever been done in men's suiting. But he and that giant textile company, after the war prosperity no longer existed -- he's dead. They are out of existence. That's a 72 Merino, and that was a gabardine.

HAVE YOU GOT ANY IDEA OF HOW MANY SQUARE FEET YOU'VE GOT HERE?

7-7-61

That's a tough question; about 14,000.

DOES THE ORGANIZATION ANYWHERE HAVE A PHOTOGRAPH OF YOU?

I guess it has, hasn't it, John. [One of the magazines on the cover.] Can you find one? Get him THE TECHNOCRAT, and the DIGEST, and NORTHWEST TECHNOCRAT. Might as well give him Power for a Continent.

I THINK IT'S AMAZING TO STEP INTO A BUCKS COUNTY BARN IN WARWICK TOWNSHIP AND FIND THIS KIND OF A SETUP. I'D PICTURED A LITTLE OFFICE ABOUT THE SIZE OF THIS. IT'S ABOUT THE BIGGEST OFFICE YOU'LL FIND OUT IN THIS PART OF BUCKS COUNTY ANYWHERE.

Well, we'll get the other building built and then we'll build a machine shop.

WHERE IS THIS OTHER BUILDING GOING TO BE BUILT? YOU TOLD ME, BUT I DON'T ....

Well, that's where this frame building is. WILL IT JOIN THIS? No, we'll tear that down. It will be longer, wider, and higher. WHAT WOULD BE THE SIZE OF THE PROPOSED NEW BUILDING? 36 feet by 64, three stories high, a fireproof structure. YOU'D STILL KEEP THIS? Oh, yes. That's just for housing. THE BASIC PURPOSE OF THAT WOULD BE TO INCREASE THE SIZE OF THE STAFF?

I HAVE ONE DELICATE QUESTION I SHOULD HAVE ASKED A LONG TIME AGO. AS FAR AS SUPPORTING THIS, IS THIS SUPPORTED THROUGH MEMBERSHIP DUES?

That's all.

HOW MUCH DOES IT COST TO JOIN?

Nine dollars a year.

AND FOR THAT YOU'RE A MEMBER AND YOU GET THE PUBLICATIONS?

No, the publications are extra. They're by subscriptions.

I RESPECT YOUR WISHES ABOUT THE NUMBER OF THE MEMBERS, BUT I

7-7-61

GATHER THAT YOU MUST HAVE THOUSANDS OF MEMBERS. WOULD THAT BE A SAFE ASSUMPTION.

It's in the thousands.

BECAUSE WITH RELATIVELY LOW DUES LIKE THAT, YOU COULDN'T GET VERY FAR WITH DOZENS.

I know. We have some small offices, and we have some sizable headquarters. In Vancouver, Canada, we've bought the Canadian Officers Club -- that's just down the street from the biggest hotel. We just sold that because the price went to \$1,600 ....

DO YOU HAVE ANY IDEA HOW MANY BUILDINGS TECHNOCRACY HAS THROUGHOUT THE COUNTRY?

It's increasing all the time, because they're building new ones themselves.

WOULD THAT BE IN THE DOZENS?

Oh, yes, and then they rent places, lease them.

IS THERE ANYWHERE THAT YOU HAVE A PHOTOGRAPH SOMETIMES CUT TO REPRODUCE EVEN FROM GLOSSY STOCK?

Off hand, I don't know where the devil they are right now.

IF YOU DON'T MIND, I'D LIKE TO TAKE A QUICK LOOK AROUND AT THESE IMPRESSIVE PHYSICAL FACILITIES YOU HAVE.

It's all right with us. What is your name? MY NAME IS FRED SELBY. I WORK FOR THE PHILADELPHIA BULLETIN OUT OF DOYLESTOWN. I LIVE IN DOYLESTOWN.

\* \* \* \*

HOWARD SCOTT TELECONFERENCE  
LOS ANGELES AND CHQ  
DECEMBER 31, 1961

LA: CHIEF, THIS IS SECTION 2 IN LOS ANGELES

HS: Right. Section 2.

LA: WE'VE GOT A CROWD OF PEOPLE HERE WAITING TO HEAR SOMETHING FROM YOU. THEY'D ALL LIKE TO WISH YOU RIGHT NOW HAPPY LANDING IN 1962.

HS: Well, thank you. CHQ wishes the same. What's on your mind?

LA: WE'RE WONDERING HOW THINGS ARE GOING ON AROUND CHQ RIGHT NOW.

HS: Well, there's snow on the around here with a crust. The crust will not support a fair-sized adult. The cat can walk on the crust.

LA: HOW ABOUT TINA -- CAN SHE WALK ON IT?

HS: No. only in places. The dogs are a little heavy and they break through. Well, we have a temperature of down to 4 above zero night before last. 6 this morning, and there was just a light little sprinkle of snow here an hour ago. Some of them have just left to go home, those in the Philadelphia area.

LA: IS CHQ CONTEMPLATING ANY FURTHER CONSTRUCTION NEXT YEAR?

HS: Well, we always contemplate it. The question is whether it can be achieved or not. There is the question of organizing the work force.

LA: DO YOU NEED ANY HELP FROM THE WEST COAST?

HS: Well, now help from the west coast is quite a ways to come. So far. we've been able to operate with the help from New York. New Jersey, Pennsylvania. Ohio. Michigan, and occasional other isolated points.

LA: WHAT EVENT IN 1961 COULD BE PICKED TO SINGLE OUT. WOULD YOU SAY. WAS PERHAPS THE MOST IMPORTANT THING THAT OCCURRED FROM

## TECHNOCRACY'S STANDPOINT?

HS: I would say there's an awakened interest due to economic pressures, an awareness that didn't exist several years ago: and now there's the admission that automation doesn't and machines don't make jobs, which they have been claiming for the last 15 years. Now they're willing to admit that it doesn't do it anymore. You have a number of things of like categories, but it is still not... this Irish-Eisenhower -- juvenile Irish Eisenhower down in Washington -- of course, they pumped in enough money to pull it up by its bootstraps temporarily.

The budget for 1962, they claim., is going to be \$109 billion. This is in the hopes that if they pump more in they will be able to keep this boom going; but the hard care of unemployment is still there, and the oncoming youth coming out of high school and colleges will be greater than ever and will be three times this amount in 1970; and we're not taking any measures to meet those issues in the years to come.

As to significance, what do you mean by significance?

LA: WELL. JUST ABOUT WHAT YOU SAID: FOR EXAMPLE. LABOR TRYING TO GAIN A FOUR-HOUR DAY IN THE ELECTRICAL WORKERS AND COMING UP IN STEEL.

HS: Your steel wants a four-day week and your assembly workers, bus drivers in New York want a four-day week; and the electrical workers want a four-hour day. Of course, that's just -- that will be temporary because if they got it for five days, they'd soon cut it down to four.

See, they're all going to come to what we said it would come to: in other words. 20 years. 30 years ago. it wouldn't happen in our lifetime. Now who's advocating it? You've got all kinds of people advocating it because they want to put more purchasing power in the hands of the undeserving working class -- spread the purchasing power. Then they want to employ more people, but also they want more leisure so they can spend more money for gadgets and have the time to spend it -- consume it.

LA: WELL. HAS ANYONE ELSE BESIDES Life Magazine SAID THAT TECHNOCRACY IS INEVITABLE?

HS: Yes. that's been said abroad in the last few months by several publications. Now, after all. we didn't say that; that is. LIFE Magazine said that.

LA: THAT'S RIGHT. WE'VE NEVER SAID IT.

HS: No. but we know that no matter what economy it is, whether it's a state-owned economy like Russia or a privately-owned one like United States, if you increase the energy-consuming devices in any large-scale economy beyond a certain point, any economy will have to take on a similar pattern. So. you face the unique and interesting proposition that Communism may succeed Capitalism, but if it increases its energy-consuming devices, it, too, will have to adopt a technological control regardless of the political philosophy of the formal ownership: in other words, Technocracy will supersede both of them.

LA: RIGHT. DO THE RUSSIANS KNOW THIS YET?

HS: Oh, no. They're too busy arguing with the Americans and the Chinese.

LA: O.K. ALONG THAT SAME LINE ON THE PRICE SYSTEM: HOW LONG CAN THEY KEEP UP THIS CREDIT AMPLIFICATION?

HS: Well, right now the only sales market in United States and Canada -- the only market left with any volume expectancy -- are those that can't afford to buy. The ones that have had the wherewithal to buy, they have all the durable goods; so, the only way Sears Roebuck and others can do -- now, you can go in and buy \$300 or \$400 -- is to pay \$3.00 down. Well, that's deliberately set up that way to accomodate those that can't afford to buy; in other words, you haven't been able to put them in debt up until now. They haven't had the money to go into debt.

So now you are asking the only market available -- volume availability -- you have to tend them money in the credit

form to those that haven't got it in order to keep the market operating. Is that clear?

LA: RIGHT! IN OTHER WORDS, WE CAN PUT OUR CHILDREN IN BONDAGE. WE CAN GUARANTEE TODAY'S DEBT BY OUR CHILDREN PAYING OFF TOMORROW, RIGHT?

HS: Yes, and the total debt of United States is past one trillion dollars, public and private. Back in Roosevelt's days, you know, it was next to nothing. Well, after 30 years of the leadership we have had, what do you expect?

Franklin Delano Roosevelt couldn't use his legs, Hazardous Harry couldn't use his head, and Ike gets a section taken out of his intestines and doesn't have any guts: and Fitzgerald Kennedy, he tries to plant a tree and puts a kink in his spine and has no backbone. Somebody in that bunch are laughing, are they?

LA: YES. SOMEBODY CAUGHT ON. CHIEF, ALONG THAT LINE OF TECHNOCRACY'S PROPOSALS. HAVE YOU ANY INFORMATION ON THIS DC TRANSMISSION LINE THEY'RE TALKING ABOUT FROM GRAND COULEE TO LOS ANGELES?

HS: Well, that's Udall, but Udall got that from the chief administrator of the Bonneville Power Administration. Bonneville Power is the one who originated that and shoved it at Udall. Well, there are a lot of interesting complications. You see. Canada is talking about a national million volt DC arid from Yukon to Newfoundland.

LA: WAIT A MINUTE. THE PAPERS ARE REPORTING THIS AS 375 KV OVERHEAD.

HS: Oh well, they're making a mess of it.

LA: BUT CANADA IS PROPOSING THE OTHER?

HS: Yes. Well, of course, the provincial government of B.C. wants to export 1-1/2 million kW of firm power to United States, and Bonneville Power Administration would like to receive that 1,500,000. Well, then they have the surplus power, you see, which they would like to dispose of down the

coast but be able to have refusal on it. You could use it as a peak proposition. They'd like to have their refusal if they run into power consumption problems -- they could withdraw from it: in other words, no long-term contract.

I didn't see the 375.000?

LA: RIGHT. TWO-WIRE OVERHEAD. AND THEY THOUGHT THEY WOULD SAVE MONEY BECAUSE THEY WOULDN'T HAVE TO USE THREE WIRES FOR THE AC.

HS: What are they going to do?

LA: THEY ARE TALKING IN THE PAPERS FROM THE ANGLE THEY WOULD SAVE MONEY WITH THEIR TRANSMISSION LINE. BY USING DC. THEY WOULD USE FEWER TOWERS. AND THEY WOULD USE SWISS IMPORTED CONVERTERS TO CONVERT THE DC TO AC AND BACK AGAIN.

HS: Well, that wouldn't be hard to do. out why do it at 375.000? Why not a million or better?

LA: CAN YOU PUT A MILLION VOLTS OVERHEAD?

HS: Oh, you could, but you'd have to have a triangular insulator to hold the cable from swaying on your tower proposition, and it would be a long string of petticoat insulators with a million volts.

LA: IS THERE ANY MORE INFORMATION ON HOW THE RUSSIANS ARE DOING ON THEIR MILLION VOLTS?

HS: I don't know; of course, the British are building the cable to put the -- they've practically completed the cable now to go on the bottom of the English Channel to cross to France, you know; and north and south New Zealand want to connect themselves up with it -- high voltage DC. But just how the 70-some-mile test line in Russia or the 26-mile in Sweden, how they're doing, we don't know yet.

LA: IS ANYTHING COMING OUT OF THIS DENVER SCIENCE SYMPOSIUM?

HS: Not that I know of. We haven't received a complete report on it.

LA: HARRISON BROWN HAS MADE THE STATEMENT THAT WE MUST FORM SOME AGREEMENT WITH RUSSIA TO PREVENT WORLD WAR.

HS: Harrison Brown?

LA: OF UCLA.

HS: Well, he's the one that lifted so much from our study course on biologic equilibrium in his book.

LA: WHAT BOOK WAS THAT?

HS: Sure -- look it up. We've got it here. He's got practically copies of our charts. We have it here but I can't remember the title. It's practically lifted direct from our study course.

LA: WHAT DID YOU USED TO TELL US YEARS AGO? HE WHO CREATES AN IDEA ...

HS: How does it go? You tell me.

LA: DOES SO WITH THE KNOWLEDGE IT WILL BE STOLEN. AND LEAVE IT UP TO THE RUSSIANS.

HS: After all. I devised that power system in 1924, and I just got a Christmas card from Captain Lord, who has retired.

LA: FROM WHO?

HS: Captain Lord -- Frank Lord. He was one of my assistant engineers working on that in 1924.

LA: DID HE SAY ANYTHING ABOUT IT?

HS: Well, he entered the Navy, you see, in the mechanical department, and he's retired to a full captain.

LA: WELL. GETTING INTO THE WORLD SCENE, HOW MANY MORE INSULTS WOULD THE RUSSIANS TAKE BEFORE THEY WOULD BE FORCED TO START SOMETHING?

HS: The Russians don't have to start anything. Take West Berlin -- all they have to do is build the wall higher and change the railroad gauge and currency and block off the Spree River where it leaves East Berlin into West Berlin and the north end where it leaves West Berlin and comes into East Berlin. Block it at both ends, and it won't take so very long for it to smell. We'll have to ship Chanel No. 5 in there by tankship -- make it smell good. So, the Russians can't be insulted.

Remember, if you're in the correct position, insults don't matter. You have to realize who insults you. You can only be insulted by equals.

LA: YOU'VE GOT SOMETHING THERE. ARE THE CHINESE MAKING TECHNOLOGICAL PROGRESS?

HS: Well, the Chinese have problems, but they're different problems from the Russians or the Americans: so, they'll come in with a whole slew of new plants probably around the end of 1962. Then what? Have any of you out there seen the nice big advertisement of the Ideal Cement Co. of United States?

LA: WHAT WAS IT IN?

HS: Oh. FORTUNE MAGAZINE and others -- big, beautiful new plants, and they're showing the public that they can provide cement to accurate specifications, and the technological modernity is made full use of by the Ideal Cement Corp. for the benefit of the public of United States. And they also show the nice panel control, and the entire plant is run by tape by one man. They give this as evidence as how advanced they are.

LA: DO THEY HAVE ONE SET UP YET?

HS: Oh. yes, it's operating. By the way, you'll have a new Libby-McNeil and Libby plant in California before long. There's a new one just west of Chicago.

LA: A CANNERY?

HS: Yes. The one west of Chicago does chile con carne and corned beef hash and all that kind of thing, and the speed is so high that you have to have the can plant right there to make the cans for it. It does over 800,000 cans in a shift or 2,500,000 cans in 24 hours with 3 operators. Completely automatic temperature, chemical analysis, volume, pressure, heat control speed -- everything else -- all tape. You don't even need accountants, bookkeepers, and you don't need any workers, and who do you need?

LA: CONSUMERS.

HS: Consumers and consultants. You get a few more plants like that and the only way you could get the consumption high enough is to give it away.

LA: IS THERE ANY PROGRESS AROUND THE WORLD IN POPULATION CONTROL? ARE ANY OF THE COUNTRIES INDULGING IN THIS YET?

HS: Yes, The British government has just passed the legislation to provide the -- what brand of pill is it? -- 20 of them a month to females in Great Britain for the cost of 2 shillings 6 pence a month. That, of course, is done on that basis, but the big cost will be borne by direct subsidy in payment of the British government to the chemical industry -- Imperial British Chemical -- and that prevents conception. Can you hear that clearly?

LA: O.K., CHIEF.

HS: Well, the only trouble with that is the Episcopalians or the Lutherans or the Roman Catholics or the Hottentots could decide not to take the pill. It's voluntary parenthood, and in an economy such as ours where everybody is equal and some are more equal than others, then those that didn't take the pill would outbreed the others; so, it raises the interesting problem of a national force majeure to where individual voluntary parenthood is not the answer to where you dump it in the metropolitan water system, and the dogs, cats, and human beings -- all mammals -- receiving water from that system -- no female conceives; and it would be cheaper than trying to dispense individual pills to the individual females.

But Britain has started it. India and Pakistan have asked for the same thing. The pills are being sold in Canada at the present time both by Swiss manufacturers and British pharmaceutical manufacturers, but the cost is much higher than 2 shillings 6 pence a month.

LA: I'M SURPRISED THE ROMANS DON'T SUBSIDIZE THIS, BUT THEY WOULD HAVE A CHANCE TO INCREASE THEIR OWN WHILE THE OTHERS DIDN'T.

HS: Well, any group on a voluntary basis could decide not to go in for it because it's purely voluntary on the part of the individual: therefore, the social control is negligible. First thing that has to be done is to stop your population growth before you can go anyplace. Is that clear?

LA: YES. IS THERE A CHANCE OF YOU PAYING US A VISIT HERE IN THE NEAR FUTURE?

HS: Well, that depends if I can get more staff here at CHQ so I can leave here.

LA: WELL, WE'RE TALKING NOW -- THINKING ABOUT THE POSSIBILITY OF A MOTORCADE TO THE WORLD'S FAIR IN SEATTLE. HAS CHQ THOUGHT ABOUT ANYTHING LIKE THIS?

HS: No. we haven't, but I don't know whether it's worth it or not.

LA: A LOT OF PEOPLE SEEM TO LIKE THE IDEA WE'VE MENTIONED IT TO. WE'LL GET SOMETHING IN WRITING ON IT AND SEE WHAT IT LOOKS LIKE. IF A GROUP CAME FROM THE EAST. I THOUGHT YOU COULD COME OUT WITH THEM TO SEATTLE.

HS: I made that trip once in Operation Columbia, you know. That was a headache. I know, that's a pretty grueling proposition as far as I was concerned and a lot of the others. I don't mean any slave-driving thing. It's something you can contemplate,

LA: WE'LL GET SOMETHING IN WRITING ON IT AND SEE WHAT IT LOOKS LIKE.

HS: Well, do that and give me a written memo on it.

LA: WELL, CHIEF, THAT'S ALL THE QUESTIONS WE HAVE ORGANIZATION-WISE. WHAT SUGGESTIONS DO YOU HAVE FOR US?

HS: How about more gray cars? Give me a report on that and we'll see what we can do.

LA: THE MOTORCADE?

HS: And other things. Give my regards and best wishes for 1962 to everybody. Happy landings.

TELECONFERENCE  
CHQ AND 12247-1  
MARCH 24, 1962

WE POSED SEVERAL QUESTIONS ON SUBJECTS FOR DISCUSSION IN OUR LETTER WE SENT TO YOU IN CONNECTION WITH THIS INTERVIEW. Well, you don't have to ask those questions, you can ask any questions you like, but I have your questions here in front of me. WELL, TO START OUT WITH, HOW DO YOU ASSESS THE ADMINISTRATION AND ITS POLICIES AT THE PRESENT TIME?

The Kennedy Administration? YES, SIR. Well, Kennedy was elected by what? The minority of the votes of the United States -- I think that's correct -- not the majority. They have been in politics quite a while, you know -- the Kennedy dynasty up in Massachusetts, and John Fitzgerald Kennedy -- well, he's now President of the United States, but in actuality, he's a juvenile Irish Eisenhower. Did that come over loud and clear? IT CERTAINLY DID -- IT GOT A RIPPLE. The Kennedy Administration isn't going to do much more than the Eisenhower -- the previous Republican Administration -- did; namely, they're going to try to spend more money in various ways in order to achieve a possible "apparent" prosperity, but that will mean more taxes and more increased budget. What does that do? That's only a temporary measure.

From a political side of the picture, you will notice that the governorships, the National Democratic Party local setups, that the personnel now being placed in control of the state organizations and the large city organizations bear a peculiar stem. It is no longer the old Democratic Party with its great residue of political power in the south. It is an entirely new political setup. They have moved into the old Democratic Party and taken over without changing the name. They have left the facade the same but have changed the substance; in other words, the old Democratic Party has now become, under the Kennedy leadership, the Christian Democrats of the U.S.A., the Catholic Centrist Party of North America. THOSE ARE STRONG WORDS. Well, I think the future events will bear it out. They are going to realize it. It may take a year or two, but time is going to bring it home to them -- that while Nixon and the Republicans lost out, in fact, the Republicans could have won the election with almost anybody except Nixon, Karl Mundt or Barry Goldwater. They could have won with somebody like Morton of Kentucky that could have carried votes, but they didn't have enough vision for that; so, they're going to trail along and what? Be a subsidiary to this

general action. Don't expect any great changes except a continuation of more of the Cold War and more embroilment to save the world from Communism and more military expenditures, which, of course, means more taxes here and they'll hope for prosperity. Does that answer your question.

YES. IN THIS CONNECTION, HOW DO YOU ASSESS THE SO-CALLED RIGHT WING POLITICAL ACTIVITY IN UNITED STATES?

If any of those out there have read anything about World War I and the period after World War I, you can recall plenty of works of literature reporting that you had a growth of all kinds of organizations in Europe -- reactionary organizations of all kinds sprang up in Portugal, Spain, France, Belgium, Holland, Italy, Hungary, Romania, Poland, Germany -- they were finally consolidated -- Germany by Hitler, Mussolini in Italy, Franco in Spain, Salazar in Portugal, Horthy in Hungary, and the Beck-Pudulski setup in Poland; in other words, whatever their origins were to begin with, they finally consolidated on a real fascist basis, and if you examine these so-called rightist organizations, The Birch Society, the Christian anti-Communists, Reverend Billy Hartges, the Minute Men, the Blue Army of our Lady of Fatima, and there are a dozen more scattered across the country, some of them very well subsidized. What are they? They aren't the radical right -- that's a misnomer. No right has ever been radical -- they're the reactionary right -- that's the proper name for them, and when they become reactionary enough, they become fascists. Britain -- your leaders of Britain, Lord Simon, Lord Bertenham, Churchill, Eden, Lord Baldwin, Lord Halifax, and all of those -- the entire upper class of Britain -- were reactionaries, and they really sold out their country to the reactionary fascism in Europe. They were quite content to start World War II provided that it went east. Well, now, these reactionary organizations are motivated by the same thing: they want to go back to "the good old days" to our forefathers. In other words, even if they don't know it, they are semi-fascists at the present moment, and if they could be consolidated under a definite fascism, they would, and we could look forward to more and greater right reactionarism in this country as things get tougher. Is that clear? YES. HOW ABOUT THE OTHER SIDE OF THE COIN, CHIEF? The other side of the coin? YES. Well, where has there ever been any left of center in United States in the last forty years? Nothing to amount to a row of pins except a foreign-oriented socialist party or communist

party, which never had any widespread contact with the grass roots of the people of this continent -- Canada or United States. They had strength in some of the large eastern urban centers, mostly amongst foreign-born population.

But the so-called up-and-coming American population -- they have been too successful. True, they were bruised in the depression in the Dirty Thirties, but World War II prosperity and the postwar prosperity raised them what? Why, to the highest level of the world; therefore, their children have been coming out of the universities for the last 10-15 years, falling into the gravy trough. The day after they graduated, they became elite the moment they got their sheepskins. So, anything left of center? Oh, that was horrible to contemplate. They had in them, by their very conditioning, what? The seeds of reactionarism -- but wait a minute! When they come out of the university tomorrow, the year after, and so on, when there isn't the opportunity for them, then it's going to be different.

We have no real left thinking in the sense -- I don't mean of any political party, but in the question of social thinking away from the reactionary right. It hasn't existed to any extent in United States. There is no historical record of it. Do you follow me in this? YES. Technocracy, of course, stands all by itself, and we're so left of center that communism is bourgeois. IT BOTHERS PEOPLE ONCE IN A WHILE WHEN YOU SAY THAT. I know it does. Well communism is all right for an undeveloped, backward area, and communism will undoubtedly supersede capitalism in certain parts of the world, but any large-scale national entity that has the land, the resources, the water, and the technology, if it installs sufficient energy-consuming devices, then Technocracy will supersede both communism and capitalism. That's another way of putting it. Do you think that answers that question for you?

YES IT DOES. THEN FOLLOWING ALONG THIS SAME LINE OF DISCUSSION, HOW DOES CHQ ANALYZE THE PERSISTENT MENTION OF TECHNOCRACY IN CERTAIN PUBLICATIONS, "LIFE," AND LATELY "LOOK," AND A REFERENCE IN "THE NATION."

Technocracy has been mentioned here and abroad in various numbers of publications, sometimes with a capital T and sometimes with lower case, and in many cases, the author, the writer, or

the editorials do not know what they are talking about. They are confusing technology with Technocracy, but in other cases, they are aware of the significance and the structure of Technocracy and its import. You have the same thing in that Institute of Democratic Studies, you know, "Caught on the Horns of a Dilemma." They're using material and ideas that we have put out for thirty years, but then what? At the end of it, they swing right over and indulge in the nonsense of you're going to achieve this under law and under the present economic system and social order. Well, no such thing is possible. Implicit in all that is the quite obvious hope that they are either trying to jump in front of a procession, a parade that is about to be formed, or if they cannot succeed in that, then they want to create a right deviation to offset it.

FOLLOWING ALONG THE SAME LINE OF DISCUSSION, WHAT DO YOU CONSIDER AS OF THIS MOMENT WHAT SHOULD BE OF PARTICULAR INTEREST TO THE MEMBERS OF TECHNOCRACY ON THE ECONOMIC AND TECHNOLOGICAL FRONT?

The way that question is put .... PRETTY BROAD. Well, suppose you ask it in another form and see if I can ascertain what you mean by that.

WHAT OUTSTANDING THINGS IN THE PRICE SYSTEM TODAY, WHAT MOST SIGNIFICANT TRENDS, SHOULD WE BE LOOKING AT?

The trends are all over the place. More and more consolidations, more and more advanced technological equipment and controls, computers, not only here in United States and Canada but also abroad all around the world. Look where new steel plants are going in. Ceylon has steel plants, Burma, Colombia, Venezuela, New Zealand -- they're all going to have steel plants. The same way with cement plants -- they're putting them in, margarine. Well, pretty soon all God's chillen will have steel wings. Do you know that Peru is exporting steel, believe it or not. STEEL? Yes, at a lower price for reinforcing bars than Belgium is shipping them. Funny, isn't it? YES, IT CERTAINLY IS IN VIEW OF THE POLITICAL SITUATION IN SOUTH AMERICA. South America -- Argentina, Brazil, Venezuela, Chile, Peru, Bolivia, Colombia -- they've been ruled by a Latin, Catholic Mediterranean culture for four hundred years, and in the last twenty-some years, the technological invasion has come in and there's been a

terrific transition. The population is jumping, and there has been an industrialization in various parts, and the old South America is disappearing but it is dying hard. Well, you're not going to cure it with any program -- what is Kennedy's program called? The Alliance for Progress? Well, millions of dollars won't cure it, because it requires a physical reorientation of the processes of production and distribution in South America. Argentina has shown a little left in the elections, which were only a couple of days ago, but so has Colombia. The leftists gained in Colombia with elections held at the same time. What's happening? It's going to be difficult for the United States to pull the old tricks of putting in a Hebenes or Raphael Trujillo or Somoza. We won't be able to do it. and if one major power in South America goes overboard for social revolution, the jig is up. Yankee Go Home!

DO YOU THINK THE CHANCES ARE INCREASING FOR A NUCLEAR WAR, CHIEF?

On the part of the United States, can we afford to have peace? Put it that way. This is a warfare state, and we require a continuation of the Cold War and a continual amplification of our arms program. Now, without the production of war materiel in United States, there would be over 16 million unemployed; so no matter what we profess about peace, we daren't have it under this system.

DO YOU SEE ANYTHING SIGNIFICANT OUTSIDE OF TECHNOCRACY IN THE AWAKENING OF PUBLIC INTEREST IN SOCIAL AFFAIRS?

Oh, yes, it's evident. They're worrying about nuclear war, they're worrying about their security, and they're finding out that even if they are a vice president or have had thirty years' seniority that they haven't got it. Some of them are like the Quakers -- they want to lead protests against nuclear war, and, of course, Bertrand Russell's statement that he would rather be Red than dead, the Catholic Church comes back and says they would rather be dead than Red. Well, the hell with either of those things. Better live than die! No one proposes anything constructive. They're just playing on the fears. We're going to have bigger devices, yes. The Russians have already proven that they can put something in orbit around the globe and launch it from there any time about 200 miles out. Well, how long does it

take to come down from 200 miles at, say, 15,000 miles an hour? It wouldn't take very long, would it? So you've only got about a minute and a half before, as the boys used to say on the construction work years ago -- they didn't paint DANGER on the side of the big dynamite storage buildings. What did you paint on there on the red-painted building? I DON'T KNOW. Well, instead of painting big white six-foot high letters of DANGER on the fire red explosives building, you painted, GOOD MORNIN', JESUS! On the basis that if it blew, it would be GOOD MORNIN'. We've got to have a laugh out of it, Irving.

No, this stupidity is going to go on until the squeeze becomes greater.

WHAT CAN THE TECHNOCRATS DO OUT HERE IN THE FIELD TO IMPROVE THEIR EFFECTIVENESS, CHIEF?

They've got to get more members, they've got to get bigger fleets of painted cars; after all, a painted car advertises anytime they drive it anyplace. Right? RIGHT. They can drive a painted car and be deaf-and-dumb. They don't even have to talk to anybody. DO WE HAVE TO WORRY ABOUT DRIVING A GRAY CAR? Worry about it? YES, WE'VE HEARD THIS ONCE IN A WHILE. Who worries, some of the wives, or some of the people who think they might be afraid of their jobs if they had a painted car? VARIOUS THINGS. Oh, yes, that happens, but you know it always comes as a sudden shock when they have been driving their unpainted car into the big corporation parking lot to drive in one day and to see over in the executive parking lot a nice official Technocracy gray car, and here for ten years they have been hiding their light under a bushel. VERY GOOD. Oh, no, there's no sense in being scared. They're not going anywhere anyway. They think they're going to obtain security -- personal security at the expense of the people of the continent, and they're not going to do anything of the kind.

ANYTHING ELSE YOU WOULD LIKE TO CONVEY TO THE MEMBERSHIP HERE, CHIEF?

After all, the Pacific Northwest is your baby out there, you know. You have enough Technocrats out there if you're properly organized and have the will to go out and do a real job. You're only living once, so you might just as well have some fun at it.

What the devil's wrong with a lot of them out there, do they want to live forever? You people seem to be laughing at this. WELL, THEY ARE. Oh, they are? Have you got any members there from Canada? YES, WE HAVE. From where in Canada? FROM VANCOUVER, VICTORIA, AND FROM SEVERAL OTHER POINTS -- LANGLEY. Is Trail in yet? NO TRAIL THIS EVENING, They're coming this evening? NO, THEY WON'T BE OVER. WE HAD A LETTER SAYING THEY WOULD HAVE NO REPRESENTATION THIS TIME. Any come in from Idaho? YES, WE HAVE THE McCAYS FROM IDAHO. I just wanted to know about that. Well, give all your visitors my regards and all the members present. I'd like to remind you that it is 30 years ago this year since the great big publicity break on Technocracy. THIRTY YEARS AGO. Yes. WE'RE ABOUT DUE AGAIN. Due almost any time. You're like that fault up there in Seattle, you know. You're increasing earth pressures. She's liable to slide almost any time. WE SHOOK THEM UP AROUND HERE TODAY, CHIEF -- THE LAST FEW DAYS. You did? HALF A PAGE AD IN LAST NIGHT'S PAPER ON THE MEETING -- NICE AD, GOOD PLACEMENT. You think you'll get a good reaction? WE THINK SO. WE HAVE REASON TO THINK IT WILL BE ONE OF THE BEST MEETINGS WE'VE HELD IN EVERETT IN SOME YEARS. Good, that's the way to go at it. Have you got good advance ticket sales? YES, IT'S BEEN, WE UNDERSTAND, REASONABLY GOOD. I DON'T HAVE DETAILS ON THIS, BUT THEY HAVE BEEN WORKING ON IT. THAT'S THE THING THAT MAKES IT. Good, push it. WE'VE GOTTEN A LOT OF ASSISTANCE FROM THE VARIOUS SECTIONS OF THE AREA HERE HELPING TO DO VARIOUS PARTS OF THE JOB. Fine. DOES THIS MEET WITH CHQ'S APPROVAL, THIS KIND OF AN APPROACH TO ACTIVITIES? Certainly, the more people you can involve in promotion, the better. That's what you wanted to know, isn't it? YES, SIR.

Well, I'd like for you to do me a favor. After you have completed your meeting tomorrow, give me a ring. I'd like to get the report on it. I WILL DO THAT, AND I WAS THINKING ABOUT DOING IT BEFORE YOU ASKED.

I HAVE A MAN HERE FROM NEW YORK, AND HE'S VERY MUCH INTERESTED IN MAKING CONTACTS IN THE NEW YORK AREA IMMEDIATELY ON TECHNOCRACY. HIS NAME IS WILLIAM STREET. His name is what? WOODFORD C. CUSHMAN, FISHKILL, NEW YORK. I don't know -- he wants to contact us? WELL, SOMEONE IN NEW YORK CITY OR THE NEW YORK AREA, AND HE LIVES AT WILLIAM STREET, THAT'S THE ONLY ADDRESS WE HAVE. Drop us that in the mail and we'll try to contact him. ALL RIGHT.

TELECON, CHQ AND 12247-1

3-24-62

WELL, THIS COVERS OUR PART OF IT, CHIEF. IS THERE ANYTHING FURTHER? No, I could go on talking .... I KNOW YOU COULD .... but this is expensive on this line. WE EXPECT THE MEMBERSHIP HERE WILL COVER IT. All right. Well, best regards and salute to you all. THANKS, CHIEF, AND SALUTE TO YOU. Goodbye and good luck.

\* \* \* \* \*

EXCERPTS FROM AN INTERVIEW OF HOWARD SCOTT  
BY WILLIAM SWANBURG

MAY-JUNE, 1962

NOTE: This interview was apparently conducted by Swanburg because of his interest in what Howard Scott knew about Theodore Dreiser. These excerpts, however, touch on many other subjects.

WS: Would you clear up for me ... Your introduction of Technocracy, as I recall it -- when was it, about 1930, '31, '32?

HS: No. You see, I took this floor at 107 Waverly Place and set up -- I had all these engineers, chemists, and so on that had been in the war industries during the war. Well, the war was over and done, so I said you can park here -- even put in three-tier bunks in there. There was a lot of space, you see a big, long building -- and we formed The Technical Alliance. Here's one published in 1920. There's the names of the original committee.

WS: Ah, Thorstein Veblen was one of them.

HS: Yes. Now, if you want to know who the other names are, just read them off and I'll tell you.

WS: Stuart Chase, I know. I've met him.

HS: Yes. Well, Stuart Chase was an accountant in the Federal Trade Commission in Washington, and I got him out of that into the office of the TA. He wasn't at 107 Waverly Place, but when we moved to 23 West 35th Street, he was in that office.

WS: And you had a fellow named Steinmetz with you. WOW! What a group you had; and this, I take it, was the beginning of Technocracy.

HS: Yes, we called it Technocracy then as an idea, in contradistinction to autocracy, the rule of one, plutocracy, the rule of wealth, and democracy, supposedly the rule of the many. Technocracy would be the rule of science. Well, besides this, I had almost every scientist in the Bureau of

MAY-JUNE, 1962

Standards signed up except the political director. We never tried that.

Ackerman was the architect for Cornell University.

Dr. Alsberg was Chief Chemist of the Department of Agriculture.

Allen Carpenter was a doctor. He and his brother were quite famous at the time.

L.K. Comstock -- that's the great firm of electrical contractors; they are still the biggest firm of electrical contractors in New York.

Stuart Chase you know.

Alice Barrows Fernandez was Deputy Chief of the U.S. Department of Education in Washington.

Bassett Jones was a member of the firm of Myers, Strong & Jones, Consulting Engineers, 101 Park Avenue. He died last year. His brother was Sullivan Jones, who became State Architect in the State of New York, and his father was the architect who built the brick church on Fifth Avenue. The firm were consultants to Otis Elevator and General Electric, and the Chief Engineer of the Otis Elevator was on this.

HS: Robert Kohn was President of the American Institute of Architects.

Benton Mackaye -- I got him out of the Department of Forestry, and his brother was Percy Mackaye -- the dramatist and the poet. Then later, Benton formulated and advocated and set up the Appalachian Trail, He's the father of the Appalachian Trail. This is after this.

Leland Olds -- he graduated from Amherst, if I remember -- and he became Secretary of the New York State Power Authority, which never amounted to anything until just now, and Roosevelt moved him to Washington to become Federal Power Administrator in the New Deal.

Steinmetz, you know -- General Electric.

Richard C. Tolman was Dean of Physics at Cal Tech.

WS: He's a well-known name, yes.

HS: Well, he's the one that Oppenheimer and all these young physicists studied under and had the bull sessions out there at Dick's house. Dick was with -- when Vandermeer Busch was in charge of the scientific security of the National Council -- they were head of it, and then Dick was Atomic Representative on the Combined Chiefs of Staff of Great Britain and United States.

John Carol Vaughan was head of the Vanderbilt Clinic and another hospital and was one of the top surgeons. He was a brother-in-law of Jesse Lynch Williams, the dramatist -- they married sisters, I think; and Jesse Lynch Williams was a member of this back then, John Carol Vaughan -- one of his daughters lives out here, she's married for the second time to a professor of architecture of the University of Pennsylvania -- just over here about 12 miles.

Thorstein Veblen, you know of.

Charles H. Whitaker was editor and chief of the American Institute of                      Journal, a publication.

That gives you some idea of what it was.

WS: You had quite a group there.

HS: Yes, there were others -- not that Theo was in on all of this, but he knew that something was going on, he knew something of it,

WS: He became greatly interested in it in the early thirties, though, did he not?

HS: He never was a member.

WS: I mean, he was interested as an outsider, as a man with a social conscience trying to cure the ills of the country,

MAY-JUNE, 1962

was he not?

HS: That's right, and because he had known me, and as the young upstart, you might put it, and battled with everybody over ideas, he had to a large extent taken -- or appeared to take -- my side, and I think he was sincere. Theo's point was, well, they may succeed in going somewhere, which we were willing to grant them if they could put in the technology and develop Russia, and then it would be something. [There apparently was an omission on the tape connecting these two thoughts,] But the argument would always come with these others as to the philosophic acceptance, but doesn't have to happen. You can have socialization -- technological socialization -- without Marxian socialization. In Marxian socialization, it doesn't axiomatically follow that you are going to get anything but expropriation legally, but you're not necessarily going to change the load factor; and that therefore, if they don't put in the technology, it will remain basically the same as it was under the other ownership; in other words, Marx thought that the estrangement and division between the proletariat and the capitalist class was ever going to widen and become a deeper and deeper chasm, and that would lead to barricades in the streets and armed conflict. We contended that no such thing would necessarily follow at all; that if you put in the energy-consuming devices, the proletariat would tend to disappear, while the profits would get greater, you would eventually get abundance; and then what would happen is that the proletariat would be *nan est* and there would be the end of toil. Then the elimination of the bourgeoisie would follow that, which would be quite contrary to anything Marx brought up.

You're speaking to somebody that's been in the midst of it -- kind of a battle -- for fifty years.

So, Theo was interested in seeing what we would do when he brought in these others.

WS: He wanted to stimulate the conversation in the give-and-take ...

HS: Well, it was much like having a prize bulldog and bringing

the others in and saying, "Sic 'em!"

\* \* \*

HS: ... we went out to preach on the street corner. Browder or somebody else in the Communist Party wrote a pamphlet attacking Technocracy -- that we went out and tried to teach workers in an industrial plant Technocracy. That's quite a nonsense, you see; and the Communist's SUNDAY WORKER attacked us in a big issue of several pages -- two issues -- photographs and everything else. Well, the amusing part of that is the Catholic heirarchy picks that up and publishes it word-for-word, comma-for-comma, in 47 Diocesan papers simultaneously, without ever mentioning that it was taken in toto from THE COMMUNIST DAILY WORKER.

WS: The Catholics copying the Communists, huh? WOW!

HS: They were siding with the Communists, because trying to make out that we were this awful thing.

WS: What were the Communists beefing about -- did they fear that Technocracy was something which would eventually put people out of work. It would make everything so efficient that ... ?

HS: Well, you see, we didn't acknowledge that we had anything to learn from Marx or any political economist. We were ironic, sarcastic -- we said a liberal is an intellectual individual that spends most of his time making up his mind to decide to decide not to decide; and that a philosophic approach is very nice as a mental exercise in an escape from reality. Of course, the ultimate is dementia praecox; and that the next 15 minutes of technological acceleration invalidates all the philosophic propositions of all history. This, you see, is too much of a change for them.

WS: The Communist wouldn't go for that. I can understand that.

HS: No, neither would your liberal nor your intellectual.

WS: Yes, intellectuals -- many of them -- would, I suppose, frown on this attitude.

MAY-JUNE, 1962

HS: They said, all right, tell us what the problem is.

Well, now, Planned Parenthood, Birth Control League, and all that -- well, I knew Margaret Sanger -- (WS: You did?) Yeah, way back. Oh, it was an old English Tea Room, 40th Street or someplace like that, there was a gravestone company next to it -- there weren't many buildings in there -- and you got crumpets and muffins, and nice little things. I remember Bill Williams and a whole bunch more, and Margaret Sanger, and I said, "To you it's a cause celebre, but it isn't birth control that you're preaching. It's voluntary parenthood." (WS: There's a distinction there; you're right.) And I said, "You may have been driven into this because you had eight children," (I think it was eight -- I've forgotten -- some number of children, she had), "but as a collective measure, you have to have a collective means of doing it."

Well, we have advocated "the hell with all this -- voluntary parenthood," That is not going to stop reproduction; and we have stated this on the public platform time and time again that the female of the human species has had the power and the facility to dissolve the fetus without any deleterious results to her reproductive or to her general metabolism. That's been known for generations. We didn't know what triggered it, but several biochemists have found out.

WS: They have found out?

HS: Oh, yes. It's tasteless, colorless, odorless. It's cheap to manufacture, and put in the drinking water of a metropolitan water system, it -- this Warfarin rat poison -- (WS: Yes?) -- well, it's about the same percentage of effectiveness as the poison is in Warfarin, which is about .00041 percent, and no mammal will conceive while that percentage is in the water. (WS: Is that so?) Yes -- dogs, cats, cows, anything, and the human being.

WS: No deleterious results whatever?

HS: No, and you stop it for 6-7 weeks, bang.

WS: Fertile again.

MAY-JUNE, 1962

HS: Now, if you haven't got a metropolitan water supply, you can put it in candy or soft drinks.

WS: Use an eyedropper?

HS: You could, but it is much simpler to put it in something like that. Just the same as the Sabin live vaccine. Here we wouldn't touch the Sabin vaccine; we wouldn't even run tests on it. Look at what the Russians did. They proved up on 1, 2, and 3 Sabin vaccines, and they ran 79 million one year. They put it in candy.

WS: They were ahead of us on that?

HS: Yes. They did it by the millions.

\* \* \*

HS: ... all electric furnaces and one thing and another, he had contact with a lot of electrical Swedes, you see, and the (Berklian?) iron process of iron fixation, that was arc -- oh, there's another one (Rennefeld?) electric furnace, that's Swedish. We were working on a high frequency -- if you pass air under pressure to electric arc, the heat will create nitrous oxide, but that will take a whole battery of big towers to convert your nitrous oxide into a very dilute solution of nitric acid, and it will absorb the nitrous oxide and become concentrated as it goes down through the towers; but if you put it through a double tube with a (carona?) discharge high frequency with a slight excess of ozone, it comes out nitrous pentoxide -- that's  $O_5$ . Well, pentoxide --  $O_5$  -- all you have to do is put the tube in a dishpan full of water and you've got nitric acid to the bottom. Well, we didn't have the high frequency equipment that you have to have today, you see. That was crude back then. Today you could knock it right off the spot.

Well, Swedes and Germans and everybody else were interested -- everybody except Americans, I regret to say. Just as when Dr. Gustav Goerling -- the great Dutch -- he was Director General of the Nederlandse something or other of the sugar thing out in Java and the big research laboratories.

MAY-JUNE, 1962

We had produced colloidal sucrose, about 5800 fineness, and had a big jar with a double-ground glass top, rubber wrapped around that to keep the moisture out because it's hygroscopic to the extreme, and this is in the boardroom of a Wall Street banking firm. They wanted to know what colloidal sucrose was, and the great Gustav Goerling -- with his magnificent beard and his silver chain -- he pulled his glasses out like that, and he asked them three questions. Nobody could answer. He said, "In that case, if you do not know the answer to those three questions, any explanation that would be given to you on the nature and structure of colloidal sucrose would be irrelevant, incompetent, and immaterial." He said, "You simply do not know, and information of this character to you would fall on barren ground. I'm sorry, gentlemen," A little bit later when he said I think it's time for us to go to lunch, he asked for a sheet of notepaper, and he turned to me and said, "May I?" He took some out and poured it onto the sheet of notepaper and rolled it up like that and then just blew it and it went into a cloud. He said, "When we come back, everything in this room will be sticky, and then you will have an appreciation of the hygroscopic in nature of something that is 5800 fineness and will absorb so many times its own weight in moisture." And everything in that boardroom was sticky -- panelled walls and everything.

Well, you see, Dreiser -- I wish I had known him earlier.

William, might I ask you how many automotive vehicles are licensed and on the roads in this country -- approximately -- do you know the order of magnitude?

WS: No, I wouldn't know.

HS: Well, there's over 56 million passenger cars.

WS: Are there?

HS: Yes, there's darn near 73 million cars, buses, and trucks (WS: WOW!) HS: The installed prime movers -- horsepower of prime movers -- in the United States exceeds 11 billion horsepower.

WS: Eleven billion?

HS: Not million -- billion.

WS: that's a lot of horses.

HS: Yes, and only 5.89 percent of that 11 billion is in all manufacturing, mining, and central stations, and that has almost doubled in the last 25 years. The big amount is out here in automotive vehicles.

WS: Almost 95 percent is in automotive vehicles? That's staggering.

HS: Yes, 92 or 93 percent -- certainly 93 percent.

WS: You might almost say that is wasted horsepower or pleasure horsepower or ...

HS: Yes, but if you would double the percentage in prime movers in industry, you'll have an addition of around 16 million to the present unemployment. You aren't going to operate.

Now, it's the same attitude we have towards peace. I know many of these Quakers and others that are in SANE; for instance, there's a pamphlet done on nuclear devices by SANE that's pretty excellent, technically, but they're for complete disarmament, complete destruction of all nuclear devices -- all bombers, planes, missiles, bases, everything else -- and they want peace. Well, they say, "Are you in favor of peace?" We say, "Yes." Oh, and then they're all interested. We say, "We like your program, but we're for it on an entirely different basis than we think you are for it." They say, "Well, what do you mean? If you're for disarmament, complete disarmament, and against nuclear warfare, then you should be with us." "Well, that's very interesting. Do you realize that if you got this peace that you're advocating, it would mean the total elimination from the budget of the United States of your war materiel and all dependent ...? We'll take the United States and leave the rest of it out. There would be an addition of somewhere between 14 and 16 million to your existing unemployed. That's why we're for your program. Are you prepared to face

MAY-JUNE, 1962

the consequences?" "Oh, no, no." "Oh, you want this system and you want that peace and have this system the way it is. Well, you're crazier than hell!"

We're hard-boiled realists. We'll back it up with facts, and we know what we're talking about, and nobody ever gives us a battle, do they -- anyplace, universities, Canada, United States, no.

WS: Do you feel, then, that there's no possible way of gradually dismantling the war machine without ruining the economy?

HS: When you get into a process of gradualism, sir, will the process of gradualism equal an acceleration of the technological acceleration which is also accelerating -- may I ask you that?

WS: You're way over my head now.

HS: Wait a minute! This technological process -- any philosophic, moral, or subjective statement that is made today by anyone is invalidated and rendered obsolescent and stupid by the next 15 minutes of technological acceleration -- completely out in the void.

WS: Yes, so that technologically there is no question but that the thing has to go on exactly as it is going on now or primarily as ...?

HS: No, but the people who are advocating peace are not prepared; they want the same status quo as you have now -- economic status quo. Well, but you won't have it, and you won't have it if you go on producing the war equipment either. If you were to suddenly abolish all the missiles, nuclear devices, planes, bases and everything around the world and destroy all the conventional arms, this country couldn't run. This country is a warfare state with certain welfare emoluments dispensed and very much filtered -- in fact almost completely filtered out -- before it reaches the lower 50-60 million.

WS: And you feel technologically this is a condition which is bound to be maintained or if it is not maintained, it would

mean economic ruin?

HS: You mean the war thing?

WS: The war production, the war economy, that we have.

HS: Well, what are they going to substitute? You see, we're losing jobs at the rate of about 35,000 a week from technological advancement -- every week in the year. Besides that, you've got your youth coming out of high school. You have 1,300,000 that graduated last year that the Department of Labor, Goldberg, and President Kennedy admit, and publicly acclaim, have never been employed. They are not on the unemployed list now, you understand. They never had a job; therefore, they're not employed. They've never had a job. You've got 1,700,000 to 1,800,000 -- there are only a few days left in June, and they'll be here.

Now we've been talking about technological processes and we've devised a lot ourselves and we've got a lot of help from almost anybody who ever designed a piece of equipment or process, whether they agreed with us or not. If they did, much of it they came to the same conclusion as we did, because the very nature of the work forced them to the same conclusion; so, there could be a political peace, but who would do the political peace? That would take a peace treaty and a fait accompli between the United States and the U.S.S.R. Now, let's face it. They are the only two that count. We won't see it. Have you read D.F. Fleming's "Origins of the Cold War"?

WS: No, I've heard about that but haven't read it.

HS: It's the best breakthrough that's been made in 20 years.

WS: Is that so? I've read review of that and they say it's very good.

HS: There are a whole lot of things we wish we could have added in there, but then it would have taken three more volumes. He does be discreet once in a while and smooth things over, but it starts in 1917. What he should have started out with was Le Agreement du Partition del Russe signed in Paris on

MAY-JUNE, 1962

September 23, 1917. That's what he should have started with, but he wanted to get it published and he naturally had to ...

WS: Had to make concessions.

HS: Yes.

WS: Popular taste, I suppose, and space.

HS: Well, they didn't think it would sell for \$15.00. That darned edition was sold out before they got it off the presses.

WS: Is that the price -- \$15.00?

HS: Yes. There's 1,200 some pages in it -- fine print, too.

WS: That is a big tome.

HS: Shirer's book, you know, is an abortion.

WS: I've never read that book.

HS: Well, get hold of It. It's a falsification and a distortion. Oh, he has it full of a lot of minutiae, but his thesis is that Hitler is a demented person, a Pied Piper that hypnotized all of Germans, first, and then Europe. Well, that's utter nonsense. Hitler didn't produce Fascism; Fascism produced Hitler.

WS: A question of the cart coming before the horse.

HS: Fascism was in power in Italy and other places before Hitler came into power.

WS: The movement was waiting for the man?

HS: He was a creation. True, he and Eichmann came from the same small town in Austria. Like Knight used to say about the Italians from Calabria -- Knight\* was Italian. There were

---

\* William Knight, member of the Continental Board of Directors, Technocracy Inc., 1930s-40s

more idiots and defectors from Calabria than any other province in Italy in history. I'll never forget him. They had a big social function. They said -- some social personage, a woman and her husband -- he had a sash across his shirtfront, "You were born in the British Embassy in Rome?" "Yes." "Your mother was Princess of the Italian Royal Family?" "Yes." "Oh, that's one of the oldest families." He said, "Yes, it's one of the Black Nobility." "Black Nobility?" "Yes, all the Black Nobility in Italy are the descendants of the illegitimate children of the popes. That's why they are called the Black Nobility. I'm one of them." -- which was correct.

WS: I hadn't heard that one.

HS: Oh, yes; and, of course, they would get all upset, and he'd say, "Oh, no, don't let it bother you. My cousin is Confessor to the Pope." -- which was also correct.

WS: Speaking of Catholicism, did you ever get Dreiser going on that subject?

HS: Oh, yes.

WS: What did he have to say about it, do you recall?

HS: Well, he didn't have much use for it and clericalism in general. I used to kid him and say that the only trouble with these people who leave the church -- it's like one who turns atheist or agnostic, they're as catholic in their atheism as they were in their previous catholicism, and that used to amuse him, you know, and he'd have something to say about that, and the others would join in. Well, I was too ruthless, I was too ... "Well, no, there was something to it."

LAPSE IN TAPE

HS: Well, maybe I appreciate Dreiser's position, because I have had certain things happen to me -- not necessarily for the same reasons -- don't misunderstand me, but I was over 6'4" in height and weighed 186 pounds before I was 15.

MAY-JUNE, 1962

WS: Before you were 15? WOW!

HS: Yes. Now if you know what that meant, that meant that you were protested at practically any school game of football, baseball, basketball, or anything else -- in boxing. swimming, or any event -- you were a ringer -- with the result that you didn't go with the youth of your own age from nine years of age on; six, seven or eight years older than you were.

This is the kind of thing that would happen: Instructor or teacher would say such-and-such happened. "Did you do it?" "No, sir." "Do you know who did?" "Yes, sir." "Well, who did it?" "I'm sorry, sir. I have that knowledge, but it is not my code to inform on anybody. That is in your province." Did they like you? Draw your own conclusion. You'd have a few, but most of them resented ...

I was invited to other student's homes over holidays, and what did I find? Well, "the poor boy hasn't any mother." My mother died when I was young. "But he gets a lot of these books from all over, and oh, he was interesting." I'd be invited out to their homes -- for what? For the influence of a nice Christian home. They'd get their son to invite me out -- that that was going to do things to me.

To top it all off, I never was caught for anything I did do, but if anything happened that was out of the ordinary -- completely extraordinary -- and this is actually taken down in testimony at a hearing -- who did it? There's a whole bunch of students up there. Howard Scott. "That is utter nonsense. Howard Scott is 360-some miles from here and could not possibly have done it." That didn't make any difference -- Howard Scott did it. He's the only one that could have thought that out. Now, you got cursed with that kind of stuff, you see. You were damned if you did and you were damned if you didn't. Because you were oversize, because you were interested in all kinds of things that they weren't interested in, you were looked on with suspicion.

WS: You were different.

HS: Well, it wasn't because you wanted to be different; that is,

SWANBURG INTERVIEW OF  
HOWARD SCOTT

MAY-JUNE, 1962

you didn't dress outlandishly or come in like a Tahitian  
Bushman or something -- nothing like that.

WS: You feel that Dreiser was under this same sort of shadow?

HS: In a sense, yes, but in entirely different surroundings.

END OF TAPE

INTERVIEW OF HOWARD SCOTT AT CHQ  
BY SUE HALL, A COLLEGE STUDENT  
JUNE 13, 1962

We'll show you we have a lot of space here. In the first place, look at this; it will give you some idea. This is the area of the farm here. Here's the bridge across here, here's the lane, here's the buildings, here's the pond you can see out the windows -- it's all this area, here, this side of the river. It's a fraction of an acre larger than Vatican State.

Part of this area in here is diabase and metamorphic rocks. Then you come over to Buckingham Mountain and the diabase comes right up to the like this. Those are very old, hard rocks, and the limestone comes right up to the top like that and goes right down on that side of Buckingham Mountain. THERE WAS SOME KIND OF THRUSTING. Well, this is faulted in here. There are several faults on the other side of the river and continue over here. Over here at Rushland, there's diabase and metamorphic faulted intrusion. IS THAT WHERE THEY HAVE QUARRIED? Yes, but there's very little what you call real limestone sedimentary in here, but there are places.

Then there's, let's see, uranium on this place. ON THIS PLACE? Yes, and Buckingham Mountain, of course. DO YOU MINE IT? No, but the U.S. Navy and Air Corps have flown magnetometer surveys every 200 feet this way, that way, regular squares. It was front page news in the TIMES about nine years ago, and there was quite a uranium boom in here. Of course, any number of people accuse us of buying this place with prior knowledge, you see, only the Technocrats would know that. Of course, they formed half a dozen companies from around here to sell stock. We kind of upset that, because they had a dozen pieces or more, some from around here, some from over on the Delaware, of rock and other material on the Geiger counter. Around Doylestown and New Hope, there used to be this old pottery and tile industry; in fact, the museum up there -- Mercer made a few millions in tile -- is completely built out of mosaic tile. It's a madhouse up there. Now they also did these big dinner plates, and I took one of the dinner plates like that and put it under the Geiger counter, and my God, it went way up. We have a deposit of clay down here on the river which probably has a low percentage of U-238, but there is U-238 in various places, but not in sufficient quantities ....

When did you meet Harold Ward? A WEEK AGO. Did you meet

6-13-62

Stuart Chase? I'VE WRITTEN TO HIM. I HAVEN'T HEARD FROM HIM YET. Bassett Jones is dead. I KNOW. I WROTE TO HIS WIFE, AND ACKERMAN -- IS ACKERMAN DEAD, TOO? Yes. A MAN NAMED FREDERICK ACKERMAN WAS JUST APPOINTED -- DID YOU SEE THAT IN THE TIMES? Who? FREDERICK ACKERMAN, BUT YOURS WAS FRANK ACKERMAN, NOT FREDERICK. Ours was Frederick. YOURS WAS FREDERICK? I WONDER IF THIS WAS .... Now, Mary Ackerman used to have an office on 33rd Street West from 33rd to 34th -- it goes through .... WAS SHE AN ARCHITECT, TOO? She was an architect. I have a New York phone book here; we can look it up later.

AND HAROLD LOEB I'VE TRIED TO GET IN TOUCH WITH. Harold Loeb never was a Technocrat. NO, BUT HE WROTE A GREAT DEAL ... HE WAS INVOLVED IN THE CONTINENTAL COMMITTEE FOR TECHNOCRACY, WHICH IS ONE THING I HAVEN'T QUITE STRAIGHTENED OUT IN MY MIND, WHETHER THEY WERE EVER PART OF YOUR GROUP. No. NO, LOEB WAS NEVER ASSOCIATED WITH YOU. LANGDON POST Langdon Post married the daughter of this famous cartoonist that made a million -- what was his name -- lived on Park Avenue. I DON'T KNOW. She was the only daughter of this millionaire cartoonist: -- what was one of the early strip comics? She was the only child, and Langdon Post married her. Well, Langdon Post was in on the Roosevelt, and you have to understand the combination.

WHAT I THOUGHT MIGHT HAVE HAPPENED WAS THAT ROOSEVELT GOT INTERESTED IN THIS HIMSELF. SEVERAL PEOPLE HAVE SAID TO ME THAT HE WAS MORE THAT INTERESTED IN IT. Oh, yes, he sent officials up to see me, and he wanted all the charts of the energy survey -- several thousand of them -- WHO DID HE SENT UP TO SEE YOU -- FARLEY? No, not Farley, I'll think of it in a minute. He wanted them reduced to two sheets of notepaper. ROOSEVELT HATED TO READ. Well, Roosevelt, of course, was the first President of the United States in a hundred years who spoke excellent French. He graduated from Groton, Harvard, but he never had any real interest in being a student .... OF TECHNOCRACY? .... of anything. Of course, he really was a remittance man for a number of years, Roosevelt. WHAT DO YOU MEAN BY THAT? Well, he had no income. Momma supplied the income, and he and Eleanor and the kids lived in Momma's house in New York at Hyde Park. They set him up in a legal office -- he being a 32nd degree Mason -- and they had Hugh O'Connor, Knights of Columbus and Holy Name Roman Catholic, as his partner. This is just to show what strange bedfellows politics makes. Of course, Roosevelt responded to that

6-13-62

by, of course, Farley and the gang, Cardinal Munderlein, Cardinal Hayes, and what-do-you-callum from Boston made the arrangement for the Catholic vote for Roosevelt. Roosevelt, of course, had the first mass said in the White House in history. I don't know whether you know that or not. I DIDN'T KNOW THAT. Yes, it's a matter of record; you can check on it. Cardinal [what-do-you-callum] came down and stayed overnight in the White House and said mass. I'm not stating this as an anti-religious thing, but as historical proposition to show the sequence of events.

Now, I don't know whether you have run into it in your investigations or not, but you see back in -- this is a little old document that might interest you. I HAVEN'T SEEN THIS. Never mind the material in it -- turn over on the back. HOW WELL DID YOU KNOW VEBLEN? Veblen? Well, let's see. YOU MET HIM FIRST IN ABOUT 1919 WHEN HE WAS AT THE NEW SCHOOL? No. Montgomery Schuyler, who comes from an old St. Louis family, was a graduate engineer. He had been head of the City of St. Louis Testing Laboratories, and he came to New York; and Merrill Rogers was Advertising Manager of THE NEW REPUBLIC at that time. Merrill Rogers was probably equally well known by being the husband of Joy Young, the suffragette, you see. I took this place at 107 Waverly Place, which is just off Washington Square -- two floors in there. Of course, it is all remade into swank apartments today, but they were the high ceilings, big long rooms, and great French mirrors that ran from the floor to the ceiling, and on one of the mirrors it had the girl's name in 1842 scratched on there. Well, it was built by one of the merchant tycoons for his two mistresses -- there were two places, and this was one of them. Well, I took that in August, 1918, and when the war was over, you had these engineers, technologists, chemists, draftsman, and so on, in the war industries that we knew. Well, of course, you had the slump and they came into New York, and I said, there's lots of space here, a big kitchen, so they even put up three-tiered bunks. They would write letters and go around looking for openings, and that drafting table up against the wall was one of the drafting tables in 107 Waverly Place in 1918. AND THEY WOULD DO THEIR WORK ON THAT? Yes, that one against the wall is a Keuffel-Esser. We had three of them, and then we had long plan tables, filing cabinets, and we located a big director's table and a set of chairs in some office of a corporation that was folding up, and we put that in there.

6-13-62

All kinds of people came in and said, what is it, what are you doing? Well, you didn't have to have more than, say, a dozen before they went out and, I don't know what you would call it, where they talked about it in one way or another, for or against didn't make any difference, they really didn't know what it was we were doing. NOW, THIS WAS THE TECHNICAL ALLIANCE? Yes, we called it Technocracy then. YOU DID -- AFTER SMYTHE? No; now wait a minute until I tell you about this Smythe. There is a restaurant on the south side of Washington Square run by a southern woman, and her husband was quite a famous artist, and she had a big round table. She wanted to do entertaining, and she was quite a personable character. So, she would invite people to sit at this big round table. Now, it was a big place, and she did a booming business, and later opened another place uptown and it did a rip-roaring business. Then they sold out for quite a lot of money. This Smythe came in there before he wrote this article that's in THE INDUSTRIAL ENGINEERING. Now, his use of the word "Technocracy" has nothing to do with our use, and there are four or five others back in 1880 .... SOMEONE BACK IN CLEVELAND, OHIO, STARTED SCREAMING AND SAYING .... That's an utter lot of nonsense, because we weren't copying them, AND THE MEANING OF THE WORD WAS SO VERY DIFFERENT TO THE DIFFERENT PEOPLE THAT USED IT. IT SEEMED THAT SOMEONE LIKE SMYTHE CAME IN AND CAPITALIZED ON THE PUBLICITY WHICH YOU HAD ACHIEVED AND SAID, "I WAS THE ONE WHO ORIGINATED THE WORD, YOU SEE."

Yes, but he was a guest at that table and heard the discussion. This is only explaining a background.

Well, Montgomery Schuyler comes into the picture later apropos this Harold Loeb. He and Merrill Rogers said they had both read Veblen, and said, well, have you read Veblen? I said, no, I haven't. Well, but you should meet Veblen. They went up to the old Faculty Club, old dirty brick building at Columbia University, and arranged a meeting. Well, there was Ardzrooni -- he was Armenian .... HE SUBSEQUENTLY EDITED SOME OF VEBLEN'S WORK. Yes. THE ESSAYS IN THE DIAL You have to know who Ardzrooni is. The two Ardzrooni boys were the raisin kings of Fresno California -- they had made millions -- and Ardzrooni came here to get a university degree at 40-some years of age from Columbia and was subsidizing Veblen as one of his social avenues into the academic circle. I DIDN'T KNOW THAT. Oh, yes, I remember all of this.

6-13-62

Well, the upshot of that was .... you see, the New School for Social Research hadn't been organized as yet -- I can't think of their names right now -- John, you remember when we went in to that anniversary of The New School -- you see, Agnes Delima was my secretary when we had the office at 23 West 35th Street in 1920. She became secretary of The New School -- not an office secretary but secretary of the corporation. She has just retired, and her daughter is an author, so if you want to put her on the list, Mrs. Delima, she worked in our office. You'll have history if you keep this up.

FOSTER AND BROWDER, IN THEIR COMMUNIST CRITIQUE OF TECHNOCRACY, SAID THAT ABOUT THAT TIME IN '20 AND '21, YOU WENT OUT INTO A FACTORY AND TRIED TO INDUCT THE WORKERS IN TECHNOCRATIC PRINCIPLES. NOW WHY FOSTER AND BROWDER SAID THIS, I DON'T KNOW. They said what? THAT YOU HAD GONE OUT INTO SOME FACTORY -- THEY DIDN'T SPECIFY THE FACTORY -- AND TRIED TO TEACH WORKERS TECHNOCRACY AND YOU HAD FAILED. I never went into any factory to teach anybody. I may have designed equipment and machinery or something like that, but nothing like that. I JUST WONDERED. I've never seen that particular piece of literature. IT'S A LITTLE PAMPHLET. Oh, I wouldn't doubt it. They attacked us, the Fascists attacked us. THE SOCIALIST ATTACKED YOU. Yes. Browder I never met, but to go on with this. Veblen -- I'm trying to think of some of these other names. What was the one in The New School that was head and retired? He was to be there that night, but probably his health wasn't any too good. There was a half dozen at Columbia and other places and more, DOES RAUTENSTRAUD HAVE AN INDUSTRIAL ENGINEERING MANAGEMENT FIRM NOW, DO YOU KNOW? Well, he did have. He was consultant to Spittdorff, Magneto, and several others, and he was drawing more money from his consulting fees than he was from Columbia University, but that comes in later.

But this was a group -- they conceived the idea that Meyer and who was it wrote "The Mind in the Making"? Robinson. Now, there were four or five that went into The New School -- I can't think of their names right now -- if I could get started on one, I'll get the whole lot of them. Well, Mrs. Whitney, you see, offered to put up \$5,000 a year, a chair in The New School, to pay Veblen, and the group got together and said, well, Veblen, Meyer, and I can't think -- there's a half dozen others -- they

6-13-62

would bring the economists and sociologists if I would bring scientists and engineers to a series of dinner and luncheon seminars at the Columbia University Club on West 43rd. THIS IS FOR THE SPECIFIC PURPOSE OF SPEAKING ABOUT TECHNOCRACY? Well, of developing the ideas, you see. There were three, four, or five of them, and Dr. Robinson would come and sit in the corner and take notes. He wrote "The Mind in the Making" from the discussions.

Now this Schuyler -- Harold Loeb, of course, went to Europe, and he was running around Europe in a little car, was mixed up with Hemingway and the expatriate Americans on the Dome and the West Bank, and Hemingway has him in his book, "The Sun also Rises," as the Jew Strauss. I DIDN'T KNOW THAT. Oh, yes, put it down -- you'll get it interesting. Now Marjorie, his first wife, lives right out here just a few miles away -- Marjorie Contemp was her name --

Now, Montgomery Schuyler and Loeb both married after that -- Loeb came back, you see, when the depression hit, and he hears the stuff going on about Technocracy. Well, he knew me personally -- he wasn't a member of Technocracy, he didn't work in it at all, but he had a Princeton education, you understand -- and he rushed in and wrote this, "Life in a Technocracy." WHICH IS A DERIVATIVE OF BELLAMY'S, "LOOKING BACKWARD." He just dreamed this up without any consultation with us. He took it to several big publishers, and they checked with us and we said, "No, we have nothing to do with it," and they wouldn't touch it, you see.

Well, when Roosevelt tried to take this thing over, the national potential product capacity survey was set up, and put under the national housing, and Langdon Post was put in charge of it .... WAS HE WITH THE CONTINENTAL COMMITTEE ON TECHNOCRACY? There is no Continental Committee on Technocracy. WELL, IT'S CALLED THE CONTINENTAL COMMITTEE THEN. No, we had the continental committee and they tried to take the name, you see. WELL, POST BECAME CHAIRMAN OF THAT COMMITTEE, I READ IN THE NEW YORK TIMES, ON FEBRUARY 1, 1933. Yes, that is correct but that was not Technocracy. NO, IT WASN'T TECHNOCRACY. IT WAS THE CONTINENTAL COMMITTEE ON .... THIS IS WHERE I GET CONFUSED. That was formed in an attempt to subvert Technocracy. But you see, the national potential product capacity survey was a federal government payroll, and Felix Frazer, Montgomery Schuyler, and Loeb all were put on the payroll of the potential product capacity, the federal

6-13-62

government payroll, and they went out across the country talking and trying to organize the Continental Committee on Technocracy while on the federal government payroll. They reached Canada, but they got stopped, because we published their federal government payroll numbers, and you can't talk in another country on a United States Government payroll about something which you are not.

WAS FDR INTERESTED IN HAVING THESE PEOPLE GO OUT AND DO THIS? WAS THIS IN DIRECT RESPONSE TO HIS REQUEST? WAS HE SCARED OF YOU? Well, you have to get a whole picture of this first. You see, Roosevelt grabbed a whole slew of Technocrats and ex-Technocrats -- there were about 18 of them that were associated with us, either as members or one way or another, going back to -- look on the back of that -- now, you'll find the name of Leland Olds. WAS HE A TECHNOCRAT? Well, he was a member of this committee, you see. HE JUST DIED TWO YEARS AGO. HE WAS A GREAT MAN. HE'S ONE OF THE FEW PEOPLE IN GOVERNMENT SERVICE WHO HAS REALLY DONE A GOOD JOB AND HE'S JUST BEEN BEATEN DOWN FOR YEARS AND YEARS AND YEARS. All right, now, you see I was asked to do consulting in the State of New York, and this -- we haven't got a power map here -- and that's when I brought out this million volt DC power transmission grid for a whole continent. Well, that was too much for Al Smith, you see, but they did form the New York State Power Authority. Now, this occurred after Leland Olds' name was on there, you see, four years later, and Leland Olds was pulled in to be Secretary of the New York State Power Authority. Do you get the chronological sequence? And he still was there when Roosevelt became Governor, and Roosevelt moved him to Washington to become Federal Power Administrator.

Now, Otto Byers, who worked with the T.A. -- we did this big report, the Technical Alliance, an analysis of the American railroads operating for the Railroad Brotherhoods. Stuart Chase and Otto Byers -- Otto Byers was a maintenance (what the devil was his title?) -- he was an engineer, and we turned in the report, and it broke the front pages of THE NEW YORK TIMES back then. WHEN WAS THIS? This was when the talk was on about the Plumb Plan. Well, Otto Byers in World War II was dragged in by Roosevelt to become Deputy Administrator of ODT, Office of Defense Transportation.

You look down that list, and you'll see the name of Richard

6-13-62

Tolman. HE'S THE ONE WHOSE NAME IS ALWAYS IN PARENTHESIS THAT HE WAS A FRIEND OF EINSTEIN. Dick Tolman, of course, his people are up in Boston -- they're the famous Plymouth or what-do-you-callum Cortage -- one of the other big Cortage -- then he went abroad and came back here -- he was in thermodynamics -- and he became Professor of Physics at the University of Illinois. He was thrown out of that at the start of World War I because of some of the statements he made which were about war and so on. At the same time that I was in air nitrates in World War I, Dick was appointed head of the Fixed Nitrogen Research Laboratories in Washington, D.C., and that's when we met and he became on the Committee of the Technical Alliance. During World War II, he and Vandermeer Bush, Dr. Bush, were co-heads of the National Science Fund -- whatever the name of it is now, the remnants of it are still in existence -- he also became Atomic Representative on the Combined Chiefs-of-Staff of Britain and United States -- Dr. Tolman. Well, Tolman also appears in history, although there's very little said about it. Oppenheimer and all these young physicists went to Cal Tech, and he was Dean of Physics at Cal Tech, and they would go out to Dick's house and have these bull sessions every weekend. In the investigation, they didn't bring that out.

Leon Henderson was in the Sage Foundation, and you will find his resignation from Technocracy printed in THE NEW YORK HERALD TRIBUNE, if you will look up the files. WHEN WAS THAT? Now, the reason for that resignation was that they were accepting positions in the Roosevelt Administration and that we forced them to take that action. YOU FORCED THEM TO RESIGN? YOU FORCED THEM TO TAKE POSITIONS? Because they were going to accept it.

A MAN LIKE RAUTENSTRAUD ARGUED THAT THIS WOULD BE ONE OF THE WAYS OF ACHIEVING TECHNOCRACY; IN OTHER WORDS, YOU WOULD GO INTO THE GOVERNMENT AND ATTEMPT TO MAKE TECHNOCRATS .... Rautenstrauch was offered a quarter of a million research endowment if he could take over our project. WHEN YOU WERE AT COLUMBIA? Yes. We had no connection with Columbia University. YES, I UNDERSTAND THAT. We had space at 101 Park Avenue -- big drafting rooms there. We had space at another building outside of Columbia University. AT THE SAME TIME THAT YOU WERE OPERATING AT COLUMBIA? Yes. WHO PAID FOR THE ENGINEERS? Pardon. THERE WERE SEVERAL -- I THINK ABOUT FIFTY -- ENGINEERS WHO WERE BROUGHT INTO COLUMBIA AT THAT TIME, REPORTS IN THE PAPERS SAID, UNEMPLOYED ENGINEERS. DID COLUMBIA PAY FOR

6-13-62

THOSE OR DID TECHNOCRACY PAY? No, we didn't pay for them. They were paid by the Emergency Fund of the United Engineering Society.

Over at the Engineers Club and the Architects Club, they were telling me about the problems they had of paying the engineers something to eat on, you see, but they couldn't have them sell apples -- there were so many people selling apples -- what could one do? I said we could put them to work. Oh, you can, when? Well, we had 268 at the time.

Fritz Weitzel, who was on the energy survey, is now one of your top engineers, installing cement plants and mining plants all around the world -- he's in New York right now. There are a few of them around, you know. I'M VERY AWARE OF THAT. He's a member of Technocracy. STILL? Oh, yes. .

Stollard printed a leaflet and so on in Portland, Oregon, and had some kind of a program of his own, but he never was a member of Technocracy. I'VE WONDERED ABOUT THIS. I HAVE READ A BOOK BY A MAN NAMED JOHN JONES, FOR INSTANCE, CALLED, "TECH UP," WHICH WAS PUBLISHED IN CHICAGO IN 1933, AND IT'S VERY HARD FOR ME TO TELL HOW LEGITIMATE THESE PEOPLE WERE. NOW, THIS IS A SIMPLIFIED TECHNOCRACY -- A BEAUTIFULLY PRINTED BOOK, LOVELY PAPER, AND ESSENTIALLY THE IDEAS OF TECHNOCRACY GOT ACROSS, BUT IT WAS VASTLY SIMPLIFIED, AND HE HAD TABLES AT THE END OF HOW HE PROPOSED TO .... HE HAD A DIFFERENT ARRANGEMENT OF SOCIETY THAN WHAT I UNDERSTAND YOURS TO BE. HE WAS GOING TO HAVE SEVEN GREAT INDUSTRIAL COMBINES, ONE REPRESENTING HOUSING, ONE YOU KNOW, WITH A TECHNATE AT THE HEAD. INNUMERABLE PEOPLE MUST HAVE BECOME FASCINATED WITH THIS IDEA AND NEVER BOTHERED TO CONTACT YOU AND JUST GONE AHEAD ....

You see, what you have to realize was that we held a convention in the Morrison Hotel in June, 1932. There were a couple of hundred groups and organizations in United States that had no connection. There was a political party founded -- an actual legal incorporation in the State of Illinois. The Guersback Publications in New York came out with a big magazine with three or four colors. The big printing thing in Minneapolis that does all the calendars -- they came out with a color print job. Then you had the Technocracy Institute in Los Angeles, and another Technocracy. You had one down in Alabama. Oh, they were

6-13-62

all over. Well, we had no control of them. Everybody from soup to nuts jumped in on this, and that's what made it difficult. We had no publicity staff in 1932, and, of course, what caused it was Nicholas Murray Butler's political campaign manager finding out that the lights were on at night over in the Engineering Building and Nicholas Murray Butler had run for political office and been defeated, and here they discover a research project on the grounds in the buildings of Columbia University, and what? Without consulting us, they wrote up a publicity Saturday and sent it to the papers for release on Monday, and when we arrived up there Monday morning, there were 40-some photographers, there were newsreel trucks, and everything; well, we only had one typewriter. We didn't have any office staff to take care of publicity. THIS WAS IN AUGUST OF 1933 WHEN IT WAS FIRST PICKED UP? Yes. AND IT WAS THE RESULT OF BUTLER'S CAMPAIGN MANAGER? -- BECAUSE I COULDN'T FIGURE OUT WHY IT HAPPENED. Well, he went to Nicholas Murray Butler and said do you know that they've got the world's largest research project under way in Columbia University? No, he didn't know anything about it. Well, we didn't either; we didn't discover this until later as to actually what happened. Well, that's what happened.

Well, they didn't buy anything. We provided the metric cross-section paper and all the supplies, looseleaf notebooks and supervision. None of Columbia's people were doing anything except coming over to look at it. You see, they didn't have any students at all. The student thing went to pot in '32. OF COURSE, BECAUSE NO ONE COULD AFFORD TO GO TO SCHOOL. So, Rautenstrauch offers us two floors in the building. He said we might as well have it. So that's how it broke over our heads. AND THEN YOU HAD .... I MEAN, ALLEN RAYMOND OF THE TRIBUNE WROTE A SERIES ON YOU .... He was commissioned to write it. WHO COMMISSIONED HIM? Some business gang. He wanted to do an expose. He had sheets of questions, and he wanted answers to all these questions right away. Dr. Julien Huxley was there at the time and several more, and I said, well, Raymond, I haven't got time to sit down and answer all of these immediately. Oh, no, he wanted it immediately, said he was commissioned to write an expose of Technocracy. I said I'm bigger than you are, and you go right ahead, but if you don't write two columns a day, I'll beat hell out of you, laughingly like this, see. I wasn't sore. Well, he never did write less than two columns a day. Of course, he was all haywire about some things, but he was not bad about others.

6-13-62

FOREST DAVIS DID A TERRIBLE JOB. I never met him.

Now, Wayne Parrish was on THE TRIBUNE. OH, HE DID THE NEW OUTLOOK ARTICLES. Oh, yes, afterwards, but he never had had a by-line. He was married and was getting only \$27.00 a week. So, he and, oh, there was the AP, the UP, the INS, Reuters, everything, and he was assigned by the managing editor. They said they'd come back after they wrote it up and have me criticize and review it. There was a whole group of us -- what's the big, tall, half-deaf designer on Park Avenue? -- Edmond Ah'rens -- he's still a big designer on cans, radios, and everything else -- a commercial designer -- he's from New York, he was at the dinner table in the Algonquin when Wayne Parrish came in, and he had this and it was all jumbled up. I said, "Wayne, this will never do." He was worried because he was assigned by the managing editor -- not by the city editor -- and he had never had a by-line, and if he flunked this, you see. I said, well, for heaven's sakes, sit down and we'll see what we do; so I dictated it and he set it down. And what would we do? Well, Edmond Ahrens or somebody else said there's a public stenographer out here in the lobby. Go on out there. Well, there was a little item of cash. I said, don't worry about that. They went out with him and fixed up the question of what it would cost. He comes back with it written up and said what would he put as a title. I said, well, you're a newspaperman. You generally take something significant down in the article like that and put it up on the head, don't you? Remember there were 8 or 9 people at the table with me. So, they started laughing. So, all right, he puts it up, and I said you're from the managing editor on direct assignment? He said yes. When's your deadline? This was Saturday. Well, I said, wait until 15 minutes before the deadline and then go right in to the managing editor and lay this down. You've got four copies. He said, well, what's that for? I said they always keep the lefthand front page open for the last thing. He does -- in he goes with it. Bang! They slam it on the front page of THE HERALD TRIBUNE. The first by-line he ever had, and they send the whole 4,000 words by cable abroad, and THE HERALD TRIBUNE Paris edition prints it in full, and Wayne Parrish was made.

After that, Tishner, who was a Roman Catholic publisher with money, bought the old OUTLOOK MAGAZINE. It was dying on its feet, and only had about 40,000 so-called subscribers. Then he gets Al

6-13-62

Smith to be Honorary Editor-in-Chief, and they bring over one of the editors from THE HERALD TRIBUNE, and the editor from THE HERALD TRIBUNE said to Wayne, can you do a series of articles? He did. Well, of course, the short and sad story to that is, the new OUTLOOK became a premium and went to 600,000 circulation, and the Catholic publishers had to pull the rug out from under the OUTLOOK corporation because otherwise you had to go on -- you were paying premium prices. They were bought off the newsstand lower. It was an interesting experiment. They pulled it up from nothing, and then they had to kill it, because they couldn't condone a Catholic magazine being the forerunner of social change, you know. Oh, no. I NOTICED THAT THOSE ARTICLES APPEARED IN NOVEMBER AND DECEMBER AND AFTER THAT NOTHING. Bang! It died; they pulled it right out.

Don't forget, you have another example of that. John Carmody was Editor-in-Chief of the McGraw-Hill publication, INDUSTRIAL ENGINEERING, and he wrote a two-page editorial in defense of Technocracy. But they couldn't kill his contract so long as you had the publishing corporation; so, they dissolved the corporation in order to void John Carmody's contract. John Carmody, of course, was pulled in by Roosevelt and he became head of Rural Electrification first and then the Maritime Commission, and then he was sent to Europe to head the European Advisory Commission that had charge of the disposal of all the funds of the Marshall Plan.

Now, while we're at it, we had a telephone call here a few months ago, and this man was out this way and he'd just like to drop in to see me. So he stayed overnight in Doylestown, and you'd think, of course, he had met me or that we had had lunch together the week before; well, the last time I saw him was in 1933. If you recall the structure of the Roosevelt Administration, Harry Hopkins was one Assistant President and Jake Baker was the other. Jake Baker handled the finances and the appointments, and Harry did the running around -- he was the front man. Well, Jake Baker drives in here in an Ambassador Rolls Royce lined in Russian leather, with his wife. They were only going to stay and take a look. Instead of that, they got a few cocktails and they stayed for several hours. WAS HE A TECHNOCRAT AT THAT TIME? No, but he knew me and was associated, and Roosevelt grabbed him. You see, we formed a club in New York -- I didn't, but some others did -- ostensibly for the promotion of

6-13-62

Technocracy. WHAT CLUB WAS THIS? The Meeting Place -- Oh, it's just a little club up over a very good restaurant. WHERE? In the Village. [Someone in the background: Wasn't it on 8th Street first?] No, it was over Lee Chumney's first. CHUMNEY'S. YES, I'VE HEARD THAT YOU USED TO GO THERE AND MEET THERE, TOO, AT CHUMNEY'S ITSELF. Yes. Then it moved up onto 15th Street and then moved to 12th Street East, just a little bit east of 5th. It was there in '34, but it disappeared very shortly afterwards. WAS THIS SUPPOSED TO ATTRACT PEOPLE TO COME AND TALK ABOUT TECHNOCRACY? Well, the purpose was they had all kinds of authors; in fact, you go into Lee Chumney's and they had all these book covers around the walls -- that's where Jake Baker and a whole lot more -- oh, they were interested but they were not members. Jake Baker took me up to dinner at Lazard Freres, bankers, you know, up on Fifth Avenue; and he asked the question when he was here, well, you apparently didn't give a damn the way you spoke. Well, I said, explaining something like this to a social group in a Park Avenue penthouse -- what did you expect me to do, treat it seriously? I didn't.

The people associated with and the actual members -- we had just a small group -- we had a larger group back in the twenties. Some of them fell off, and others hung on, and then this thing came about. We had a meeting in Ackerman's house in March 1932 and I'll show you an editorial that was written by Dick Walsh, who was editor of ASIA MAGAZINE and head of John Day Publishing, and husband of Pearl Buck. Pearl Buck lives up here. Dick died a year or so ago. Margaret Mead lives up here. I knew Margaret Mead and all that gang. All of those people, while you had slews of contacts -- they did not make Technocracy, and the ballyhoo that was on in the press, 98% of it was not Technocracy and was not done by Technocrats. That's the astounding part of it. That we have survived is not because of it but in spite of it. As Jake Baker said, this thing of Harold Loeb, Felix Frazer, and so on, the national potential product capacity survey, didn't it help any? I said, no, it didn't help any. It was a darn nuisance. (It served to confuse people.) Certainly, and you had to stop it. What stopped the Continental Committee was the Secret Service of the United States Postal Service. WHY? Our incorporation came out. You can't call yourself a Standard Oil, you know; there is a Standard Oil. Well, you can't send mail through the United States mail if there is a legitimate, legal organization by the same name. I SEE. So they went around and investigated them, and they

6-13-62

closed them up. They said you've got so many hours -- 72 hours or something -- and that's that.

IN THE '20s AND '30s, ESPECIALLY THE EARLY '30s, THE ORGANIZATION BASICALLY GREW JUST BY PEOPLE HEARING ABOUT IT AND COMING INTO IT? DO YOU SOLICIT SUPPORT NOW? DO YOU HAVE ANY SORT OF CAMPAIGN TO EDUCATE PEOPLE TO BRING THEM INTO THE MOVEMENT?

We have Sections, you see. I'll show you some photographs; they're in the dining room over there. You'd better stay for dinner, because you've got more to see than just this. OBVIOUSLY I COULD STAY FOR DAYS .... Well, we'll give you a place to sleep. You don't have to run tonight, do you? I SHOULD. Well, never mind whether you should or not. DO YOU HAVE A CAMPAIGN NOW TO MASS .... We print literature, we have study courses. I READ ONLY ONE STUDY COURSE BOOK. (We have public meetings at these Sections where members bring in contacts. They talk to people and they bring in contacts to the meetings.) We have speakers on tour. ARE YOU AWAY A GREAT DEAL? DO YOU SPEAK A GREAT DEAL? Sometimes, sometimes not. I have been more so than I am now. Now you've got a younger breed of pups, you know, that are out there doing a job, and they've gotten fairly competent. They can handle that job. ARE MOST OF THEM ENGINEERS THEMSELVES OR TECHNOLOGISTS? IT'S JUST THE IDEA THAT INTERESTS THEM. Well, for instance, we have a Director in one Section. He graduated in law from the University of Tennessee. He went out to California in '28 or '29, somewhere in there, passed his examinations for the California Bar, and then, bang, the depression hit. He wasn't a native son (of California). Well, do you get a job in a law office? No, you didn't. The whole Pacific Coast was loaded with unemployment. What job could he get? The only job was driving a Borden's milk wagon. Well, he did, and he rose to be Public Relations Director of the whole Borden Milk for the Pacific Coast. He speaks all over Canada and United States. HE GAVE UP THE BORDEN'S JOB? Oh, no, they give him five weeks' vacation, and he goes on tour. There's a photograph of him, right here. That's his wife. AND HE TOURS MOSTLY IN THE WEST? West Coast and Canada, and he'll probably be in here Labor Day, (We just had Harry Briggs.) He was in here over Decoration Day, and then he flew back there -- he's from Everett and Seattle -- well, he had to speak at six places in Los Angeles, so he had a nonstop plane out of Idlewild.

DO YOU HAVE MUCH OF A GROUP IN THIS AREA ITSELF, OR HAVE YOU

6-13-62

MADE NO REAL ATTEMPT TO DO THAT? (We have made no attempt.) YOU CAME HERE IN '53? Yes. (Because we have so much work, which consists mostly of correspondence with the field and so forth. We came out of New York. We just have so much more when we came out here in the way of living quarters and that sort of thing, because when we were in the Commerce Building -- I forget how much we were paying, I think \$1.00 a foot, but now rents are about \$8 to \$10 a square foot -- so you even have Price System organizations are moving out of the city.) IBM .... (and the pharmaceutical houses)

Well, you have men like that; you also have engineers. One of our Continental Board is a graduate of Princeton. His father was Vice President of Carnegie Steel. He was head of the hockey team, and organized several corporations. He's retired. One is a graduate of BMI and MIT. He's an engineer. Another one graduated from the University of Illinois in electrical. He became top electrical expert of the Electric Bond & Share and American Foreign Power. He was in here the other day. (As a class, though, the engineers are no more socially conscious than other people.)

LAPSE IN TAPE

(This is Gertrude Dennis speaking now) .... here in the State of Pennsylvania, there is a sliding rate that they have for corporations, depending on the history of the people they have unemployed, and when the fund gets too low, they have to push the rate up, in spite of the fact that you have a good rating and could have a lower rating, they will have to push it up to 3% or 4% or something like that for all the corporations. As long as they can hold it up, they will. There isn't any doubt of that; as long as we keep shooting rockets, there is employment. But if we have a depression again, it could top the 30s. It could be very sad with 185 million people. The last time we had 141 million -- offhand, I don't know what the population was.) Well, the population of United States from 1930 to 1940 went up 9 million in the decade. From 1950 to 1960, it went up 28 million -- three times. What we have pointed out is this: in any civilization, you'll have to have land, water, soil, and resources, and if they had all been 100% Christians at the time of Christ, it wouldn't have altered the standard of living 1/10 of 1 percent; or if they had all been Mohammedans, or Buddhists, Hindus, Shintos, the same would hold. Why? Because you were dealing with human toil and

6-13-62

hand tools applied to your natural resources. Back in Hammurabi's time, which was about 1350 BC, if you go back and study the laws of leases, torts, and titles, and so on, they are practically the same legal language as they are today -- 1350 BC. Well, bond issues for centuries were a hundred years or more. Why were they 100 years? Because the increment was so small that it took a hundred years to amortize out the principal and interest of any major debt; therefore, your capital reinvestment was only once in a century. Do you follow me? YES. Modern technology comes along and does what philosophy, morals, ethics, good intentions, and all the rest of them never could do, because it altered the rate of doing work. The conversion of extraneous energy -- human energy was never enough. Unless you could convert extraneous energy, you were licked.

So, today we have in United States equipment process, that if operated at 15% or more capacity, will amortize out principal and interest cost in 5-1/4 weeks or a reinvestment rate of 964 times in a century instead of one. Now, Marx never thought of that. He had no realization of it, nor did any other so-called political philosopher. They had no concept of it. They simply couldn't think in those terms.

What attracts people to us -- oh, in the beginning there were all kinds of individuals tried to join Technocracy. THERE WERE A LOT OF BUSINESS PEOPLE, TOO, WHO WERE INTERESTED IN IT, WEREN'T THERE? To some extent. You see, they were interested in our analyses, and they would go down into the stock market or the commodity market and act on us and make money, and then come back and tell us how much they had made on us. GD here can remember that, too well. (They would come up and ask him questions, you know; he would give -- it was a discussion as far as he was concerned, and they would go downtown and use the information that he had given them, and they cleaned up in the market. Thanks a lot!)

The chief statistician of Lehman Brothers is on our incorporation papers. I mean, the ramifications of this, where it extends to in the contacts, it is utterly amazing. This has been done without any money. We never had any subsidies. COMPLETELY SUPPORTED IT YOURSELVES? (Our membership supports us with donations and dues, but as far as having any large support, we have never had.) Of course, there's that Center for Democratic

6-13-62

Institution. (There is a \$14 million ....) \$15 million (is it \$15 million?) They got their money from the Ford Foundation -- the Fund for the Republic. Then they went out and bought this beautiful place on Eucalyptus Hill in Santa Barbara, and it costs them \$1,400,000 a year to run it. Well, Ford got incensed -- Henry Ford III -- over some of the stuff they issued -- it was too radical, you see, and he disowned them. So, they won't get any money from the Ford Foundation, and they have tried to solicit support, and they have got 42 individuals to give \$1,000 a year. That's only \$42,000 and they need \$1,400,000, so they say they may have to suspend in another two years. If we had \$15 million .... BUT YOU'VE NEVER TRIED TO SOLICIT FOR FUNDS AT ALL? You can't try, you see. I've had top flight bankers -- well, I'll give you an example. We're in this magnificent place -- one in California and one up here in New York State -- multimillionaires, and 30 to 40 guests. Well, Mr. Scott, if it really came to a point where Technocracy had to come in, wouldn't this be one of the first places they would seize? I said I don't quite understand you -- seize what? Well, wouldn't they take this over right away? I said you've had a cocktail, and you just finished elaborating that it took 1,264 tons of coal to heat this place last winter. Why should anyone take over an inefficient piece of junk like this? The one out in California had its own golf course, cabanas down on the beach, 27 servants. Well, he asked the same question. I said, don't you realize that there are problems on this continent that occupy people? They wouldn't bother about anything like this. Why, he was hurt! Why, his importance went down like this. If I had been a hypocrite and a liar and had said, why, yes, this is one of the first places we would take over ....

DO YOU STILL PROPOSE OR PERHAPS I'M NOT CLEAR ON THIS -- 20,000 ENERGY DOLLARS A YEAR FOR EACH INDIVIDUAL OR IS THAT NOT YOURS? No, it's the income equivalent. Now remember your energy certificates are a medium of distribution. They are not a medium of exchange. YES. It is a continental accounting system, and that was devised before you had the computing machines. Now you have them to do that, so that you would know every hour the continuous inventory of everything produced and distributed in United States. You could tell who purchased it, who consumed it, male or female, what age, what occupation, and what regional division, and it gives you your totals every hour on everything from toothbrushes, shoes, to locomotives. It's nontransferable. AND AT

6-13-62

THE END OF EACH YEAR ....? No, balanced load period -- a balanced load period on this continent would take two years -- some of your industries take two years to run through the cycle, sugar cane, for instance, and others. You can't save it beyond that, but if you have abundance, why do you want to save it? EXACTLY.

HOW ABOUT NUMBER OF WORKING HOURS IN A WEEK AND AGES AT WHICH PEOPLE WOULD WORK? It would be reduced to down around 16 -- 4 hours a day, 4 consecutive days, but it's around the clock. Do you know our calendar? I'VE SEEN ONE OF THEM IN A 1933 PUBLICATION. What it is, you are operating everything on a 24-hour basis, so every day is Sunday to some group. Now, of course, you are coming close to it. Your electricians are 20 hours in New York. We're laughing at that. (I thought it was 25.) No, 20 and 5 hours overtime. ON THE OTHER HAND, THIS IS BEING DONE NOW IN A HAPHAZARD FASHION, AND IT'S ONLY THE ELECTRICIANS. All of that working time is based on extraneous energy consumption of approximately 200,000 kilogram calories per capita per day. Well, we're not there yet. We have over 11 billion horsepower of prime movers in United States. Only 5.8% is in all industry, manufacturing, mining, railroads, and central stations -- only 5.8%. The rest of it is in automotive vehicles. Now that has almost doubled in the last 25 years -- that small percentage, and your kW hour consumption is now up over 16 billion for the first time in history. If you double your percentage of horsepower in your prime movers again, you'll have 16 to 18 million that you can't work, because today we can produce anything. We're just publicizing the Orthomat which does drafting at the rate of 200 inches per minute with no draftsmen. It's finally arrived. It does it in India ink on vellum or anything you want. DOES IBM DO MOST OF THESE MACHINES? Oh, no. You see, it's not only here; it's all around the world.

DO YOU HAVE TECHNOCRATIC GROUPS IN EUROPE, LATIN AMERICA? No. YOU' RE BASICALLY CONCERNED WITH THE NORTH AMERICAN CONTINENT THEN? We only accept citizens on this continent. There was quite a wave started in Europe. I KNOW. There was the Nederlandische Technocratische er Verbonde in Holland. It had some outstanding, adept scientists, engineers, and technologists. They had offices in The Hague. They published a magazine. Then there was the Deutsche Technocratisch und Geselchaft in Germany, and that did an excellent magazine. We could show you some of the copies. Of course, when Hitler's Vermacht bombed The Hague and so on and

6-13-62

took over Holland -- that ended that. When he took over in Germany, it ended the Deutsche Technocratisch und Geselchaft. The Czechoslovakisha Technocratisch Svolensk, with their headquarters in the Engineering Institute in Prague, did an excellent 7-volume -- not so thick -- but an excellent mathematical and engineering interpretation of the world energy balance. They, of course, were bust all to pieces when Hitler took over, and they fled here and there.

We had 27 engineers who were graduates of the University of Milano and a couple of other universities in Italy. The son of the Italian Consul-General for Switzerland was one of them, plus another notable, and they were all arrested and sentenced to ten years on Le Pari -- that's a prison island in the Mediterranean -- they were only liberated when the Allies captured Le Pari, and they took them to Africa. Well, they had no standing as military prisoners -- they weren't soldiers, they were prisoners -- and they damned near starved to death. WERE THEY WORKING WITH EUROPE AS A CONTINENTAL UNIT ....? They were trying the same thing, and you had this -- oh, I've forgotten what his name was -- in Belgium who ran as a political candidate, and he scored a greater number of votes than the Fascist Rexus Degravelle.

You have a Duboin in France today -- they have two organizations -- Soci  t   L'Abondance is one -- one is political and the other isn't, and they publish a weekly newspaper and they have programs on the air, but they are not affiliated with us and they are using our stuff. And there's a bunch in Norway -- they have a small setup of engineers. There have been books written in Spanish, Portuguese, and Chinese, and so on, but we never furthered any of those groups at all; they sprang up on their own. Of course, the Fascist boys suppressed them quick -- any Technocracy activities.

THERE WAS A STATEMENT BY MUSSOLINI IN '32 THAT WAS QUOTED IN "THE TIMES," SAYING THAT HE APPROVED OF THE TECHNOCRATIC SYSTEM. CLEARLY, HE DIDN'T UNDERSTAND IT. Hah, hah, hah. He didn't approve of it; he's the one who ordered the arrest of the 27.

WHAT'S HAPPENED TO DAL HITCHCOCK? That I don't know. He went to work in Washington for the Department of Labor at \$70,000 a year, and I haven't heard what's ..... WAS HE PRETTY MUCH THE SECOND IN COMMAND FOR A WHILE? (More of a secretary) He was

6-13-62

really doing secretarial work when he was working for the Union Carbide.

HOW ABOUT A MAN NAMED IVIE? Well, he's out in Idaho right now. He writes for us -- Wilton Ivie. He used to be a biologist with the University of Utah. His articles appear regularly. He has been here. He was here a few months ago, and went out there. But Dal Hitchcock accepted a position in Washington, too. IN 1933, 1934? Yes. WAS HE EVER A TECHNOCRAT OFFICIALLY? Hitchcock was, yes. Loeb wasn't.

HOW ABOUT HAROLD RUGG? Dr. Harold Rugg? No, you see, there was Dr. Harold Rugg, there was Dr. Counts. WAS COUNTS INVOLVED IN THIS, TOO? WAS COUNTS INTERESTED IN THE SAME WAY THAT RUGG WAS -- THE WHOLE TEACHERS COLLEGE CREW? The first report that Technocracy published was the photostats -- this size -- of the charts? YES, YES. Oh, you ran across it? Well, that was printed and mimeographed at Teachers College by Dr. Counts and Dr. Rugg. Now, let me elucidate.

I think it was last year or the year before, I was over in the Co-op in New Hope, and there were 7 or 8 men, and the manager of the store when I came in -- one gray-haired man looked up and said hello to me. He said the last time I had dinner with you was at Harvey O'Connor's. He said you wouldn't recognize me since my hair has turned practically white, and the manager started to introduce me to him, and Counts was there and I said hello. Counts said you know I'm living in Bucks County now, as you are. I said, you know I was your guest at your home in Bucks County on July first, and so on, in 1932, when I issued the statement that the banks of United States would close on or before April, 1933. He didn't want to admit he knew me, see.

You see, they can't figure it out. I've never been a Socialist, a Communist, or a Fascist, and yet you're accused of being everything from soup to nuts. THAT'S BECAUSE PEOPLE DON'T KNOW WHAT CATEGORY TO PUT THIS IN, I GUESS. THEY WANT TO PIGEONHOLE IT. Well, we're quite frank in saying that we are so far left on the political scene that Communism is bourgeois. It really is, Marxian Communism is all right for an undeveloped country that hasn't caught up with private enterprise capitalism. AND IT'S A WAY TO PULL YOURSELF UP BY YOUR BOOTSTRAPS. It may supersede capitalism under those conditions, but if you keep on

6-13-62

installing energy-consuming devices in any major social entity, Technocracy will supersede both Communism and capitalism. Making statements like this, you see, will .... Now, what's difficult for people to understand is that you had all kinds of people, either in the organization or associated out here on the fringes, all talking about it, your Harold Loeb, Jake Baker, Harry Hopkins, Dr. Rugg, Dr. Counts -- all of them rushed in like this, and Dr. Rugg introduced me on the platform -- he wrote a book, by the way .... THE GREAT TECHNOLOGY ... Yes. Just as he doesn't admit that most of the stuff in there he's written -- he should have it in quotes. DID YOU SPEAK WITH HIM AT GREAT EXTENT? Yes, he was around every other night. He introduced me on two or three platforms.

HOW ABOUT THE HOTEL PIERRE SPEECH -- DO YOU REMEMBER THAT? Oh, yes. NOW THERE YOU WERE GETTING UP AND SPEAKING TO A LARGE RADIO AUDIENCE, I GATHER. That was coast-to-coast, United States and Canada, shortwave to the world. HOW DID THEY GET YOU TO DO THAT? That was the annual National Arts & Sciences, and the General Electric was the one that paid for the broadcast, and the export division of the General Motors tried to sabotage it. I was sick with internal hemorrhages. YOU MEAN THE DAY OF THAT SPEECH? Before it. Someone put amoebic dysentary bacteria in the drinking water the day before, and they strapped me up, got me into dinner clothes -- I had no assistants, I had no time to write anything -- so I spoke off the cuff. They got to Dr. Rautenstrauch and put pressure on him. He wanted 20 minutes to state his position on the air, and they said, oh, no, you've only got 3 minutes to introduce him -- that's the contract. Go ahead or step down and let somebody else introduce him. That's when we found out a lot of things. So I finished that up and went back to bed for a week or so.

WERE YOU GIVING THAT TO INTRODUCE TECHNOCRACY TO THE COUNTRY? No. They give a dinner to some outstanding person every year. I didn't seek it; they came to me. Just as I was offered the trusteeship of the Carnegie Foundation. WHEN WERE YOU OFFERED THAT? In '32 or '33 -- the same thing they gave Alger Hiss, if you remember. I didn't know anything about it. I declined. WHY? Why would I want to be a trustee of the Carnegie Foundation to turn out three or four times a year for \$20,000 a year? DO YOU THINK THEY WERE TRYING TO SUBVERT YOU? No, but it doesn't smell right. I had no interest in the Carnegie Foundation then or now,

6-13-62

and they didn't consult you -- they just come in and say, sign here. That was in the Player's Club that happened. I've forgotten who all were at the table, but I remember Tom Chalmers. THE ACTOR? Now, Tom Chalmers was head of the Pathe News. He also voiced the film, "The River." HE'S MARRIED TO AN ITALIAN WOMAN, I THINK. He's dead, isn't he? NO, HE'S STILL ALIVE. Is he? Well, that's more than I know. Well, he was at the table when the thing was made, and we just dismissed it -- never thought any more about it.

It gets more complicated and more complicated. YES. IT'S FUNNY, YOU KNOW, AS SOON AS THE ELECTION WAS OVER IN NOVEMBER -- WELL, EVEN THROUGH THE LAME DUCK CONGRESS UP UNTIL FEBRUARY AND MARCH 4TH WHEN ROOSEVELT WAS INAUGURATED -- THE PRESS WAS STILL GIVING YOU A GREAT DEAL OF COVERAGE EVERY DAY -- NEW YORK TIMES PUBLISHING .... Now, here's several examples. Manchester Bodie out in Los Angeles had THE L.A. DAILY NEWS. I never met the man, but his paper was slipping, and he ran Technocracy full front page and pages inside for 34 consecutive days -- it never left the front page and 3 or 4 pages inside, drawings, photographs, and everything. He went out making speeches on Technocracy. THIS IS SOMEONE YOU DIDN'T KNOW AT ALL. He was publisher of THE DAILY NEWS. Well, Bob Crombie, who was publisher of THE VANCOUVER SUN, saw this DAILY NEWS -- he started in and did the same thing. Well, but Bob Crombie flew down to New York, and he ran it 30-some days. Also, he sent 100,000 copies into the high schools in British Columbia and he set up a scholarship, and he had me speak in Vancouver, Canada, for the first time. He used to come down twice a year to get material. He told Patterson (he's dead), he headed the NEW YORK DAILY NEWS, and Henry Luce -- he won the editorial gold what-you-callum award from the British Empire 4 or 5 years in succession. They asked him how he did it, and he said well, I come down to New York and get it in shorthand. He said you only have to take a short walk and an elevator to do the same thing -- what's the matter with you?

THERE'S A FUNNY ARTICLE IN FORTUNE IN OCTOBER OF 1932 ON MEN AND MACHINES. DO YOU KNOW OF IT? I'm glad you brought it up. How that came about was this: Frank E. Vanderlipp., who had been Chairman of the Board of National City Bank -- that's one of the men I was telling you about whose home was up there on the Hudson -- he thought it would be a good idea -- he had a swank apartment in the Pierre, I think, at that time -- and he called in Henry

6-13-62

and some more -- of course, Henry and I had had a little brush before that, which was over the prefabricated house we did over on the roof of a big warehouse on the Hudson River -- that was in 1928-29, and Henry's organization was in the Chrysler Building. They had used a telephoto lens to try to photograph that, and there is a little photograph in FORTUNE this big of what we were trying to do, but they never got any closer than that, Vanderlipp said, here, FORTUNE ought to play this up, so there was Henry Luce and 4 or 5 more. Henry offered 12 articles at \$1,000 a year, and we drew up the synopsis of "Men and Machines", the photographs, and so on, but then he said that they had never offered anybody 12 articles at \$1,000 a year before. You see, it was only because of their interest in the subject, and he got a little personal. He knew we didn't have any money, and he made a remark -- I'm not quoting exactly -- he said, "Well, you would like to live in Lloyd's Neck on Long Island and have a Packard car, wouldn't you?" I said, well, Henry, I wouldn't mind if in acquiring the Packard and a place on Lloyd's Neck that I also didn't have to look like you! Well, of course, he immediately became indignant, and said I had insulted him. Frank Vanderlipp said just a moment -- you became personal first. You are my guest and Howard Scott is my guest, too. He said kindly apologize and withdraw your remarks -- it was your fault; and he did. And then they said, well, we Technocrats could write the articles, and so on, but they, the TIME-FORTUNE publication, would edit them. We said, oh, no; if we write them, you publish them as is, or we don't write them. So they took the title, "Men and Machines," plus the synopsis of the article, and that's the last contact we had.

WELL, THEY INTERESTED ME, BECAUSE YOU COULD NEVER TELL IN FORTUNE, DURING THAT PERIOD, YOU COULD NOT TELL WHO HAD WRITTEN THE ARTICLES. THEY NEVER GAVE CREDIT TO ANYONE, AND THERE WERE PARTS OF THE ARTICLE THAT WERE SO CLOSE TO YOUR ARGUMENTS AND YOUR WAY OF EXPRESSING YOURSELF THAT I LOOKED TWICE AT THEM, AS I WAS SURPRISED TO FIND THEM; AND HERE, THIS WOULD EXPLAIN IT IN ONE SENSE IF THEY HAD TAKEN .... Well, now that's the background, and that extended over a period of, oh, some months -- several meetings; and, of course, Henry has had his photographers photograph, for instance, OPERATION COLUMBIA and other operations we have had -- take thousands of feet of film and then never publish one. I'll show you OPERATION COLUMBIA upstairs. HIS PEOPLE DID THAT -- OPERATION COLUMBIA? No, we did it. We'll show

6-13-62

you a film on it; but they had their cameramen cover the thing completely. They covered OPERATION GOLDEN GATE, other things. Thousands of feet of film -- they had 5 and 6 cameramen following us. WHY DIDN'T THEY? You see, it's just the same -- you'll also find in FORTUNE a photograph of the front cover of the first issue of THE TECHNOCRAT with a cotton picker on it -- that Howard Scott was using the cotton picker to frighten the American bourgeoisie, wasn't that what he said? That's what it said underneath.

Well, now I spoke with the introduction of the cotton picker down in Mississippi and Louisiana. He lists a whole number of attempts to invent cotton pickers over the years. He gives the names, dates, and so on, but it was too complicated -- they had all failed. Of course, it was only a few years from that that he was accepting full page color ads from six firms manufacturing cotton pickers, that is, Henry. HE'S ALWAYS A MAN FOR .... He arrived on the scene -- he and the other Yale boys that started TIME -- he went to school up in Cleveland. Dempsey was the personal attorney for John D. Rockefeller, Sr. Now, Mrs. Dempsey, Sr. -- the big place in Bratenahl -- she was a Technocrat. The son over here that went with Henry, he wasn't. You had all those kind of complications, and John would call up and ask me if he could bring Henry over for cocktails because I was over here. Well, you understand, he's my guest, he's got all the privileges, meaning me. He wasn't quite so sure whether he wanted to come or not. That gives you some idea of the background. It's been mixed up here and there with almost everything in the economic and political scene.

Now, the Rusk brothers -- yes, I spoke from one end of Mississippi to the other. The audience didn't want any damn Yankee coming down there and introducing a contraption like that. Well, you've got two brothers from Clarksdale, you've got one woman, a wealthy plantation owner, and a big Scottish land company -- that did it. The Scottish land company only had around 7,100 negroes. So this organization, Technocracy, is really more responsible for the migration of the negro north than all the other organizations put together. It's ironic, you see. We didn't have anything against the negro -- it's just that we told the whites that down there. They didn't like it either.

DO YOU STILL HAVE LISTS OF PRODUCTS LIKE RAMIE, COTTON, AND

6-13-62

THE RAZORBLADE THAT WOULD NEVER WEAR OUT. Those were only things we pointed out that .... ramie, yes. They were merely examples. OF THE WITHHOLDING OF ....? Examples of what technology could do, you see. Well, here's a transmission line for Boulder Dam. That's for AC current, but AC will not transmit in a solid cable -- only in a periphery. That's why you make it hollow. Well, we devised a million volt DC transmission, you see. We brought that out in 1924. Now, Russia, Sweden, and Canada all are going to put in high voltage DC transmission. DO YOU HAVE EXPERIMENTAL LABORATORIES? No, we did it by mathematical projection, and we did it before anybody was experimenting. We were like that in that sense; we really roamed all over the lot. Commodity terminals, three-point suspension hulls -- it's quite an involvement over quite a field. You see the fact that we advocated all kinds of technological advances -- automation long before they developed the term, "automation." Now it's coming in, and some of it is yet to come in. The only way you can hook up the energy of a continent is with a million volt DC. It's a good thing Stalin didn't live. He would probably award me the Stalin Prize because they're copying what we proposed, and we did that when Lenin was trying to figure out electrical development in '23 and '24.

DO YOU HAVE ANYONE WHO IS DIRECTLY RESPONSIBLE FOR KEEPING UP WITH ALL THESE ADVANCES? YOU OBVIOUSLY WORK YOURSELF IN READING MAGAZINES. We have Section offices in various points of the Continent -- Canada and United States. We publish in three or four places. We have our own printing presses. We own our own buildings in some places -- some of them good sized, some of them small sized. We've come up from nothing. We never had any endowment arrangement from anybody. We're like Topsy.

If you will tell me what impressions you have gotten of Technocracy, and there are a whole lot of angles I could steer you on to -- I've given you some -- where you may find paydirt or you may run into a dead end. I don't know, because it's quite a while since I've seen or heard of some of the people. This thing has gone on regardless. You see, Stuart Chase -- HOW ABOUT STUART CHASE? Well, he was in the Federal Trade Commission in 1919, and I pulled him out of that. When he started writing in our office, he discovered all this data, and he wrote an article, I think, for THE NATION or THE NEW REPUBLIC first, and then his first book, "The Tragedy of Waste." We didn't have enough money to

6-13-62

continue that office. We would have liked to. So we closed that down, and I had to make a living, so we started a little laboratory out in Jersey, and we kept kind of a select group operating until 1930, when Stuart went on it. He and Otto Byers, after they worked on that railroad report -- the railroad union wanted us to do more reports -- and the more we charged, the better they liked it, because Jeff Luft was the one who was handling -- he was the economist in Washington and he was on a percentage basis, you see, so the more we charged, the more he'd get. I said, no, I wasn't interested in that kind of money making, because then we'd be more concerned about getting money out of it than doing it. Stuart and Otto Byers decided that this was a good field, so they went up and organized The Labor Research and had offices at West 43rd between 5th and 6th, along with several others, and they did wage analysis and hours and that for a number of years. That severed his connection with us; of course, when the Technocracy boom started in the '30s, he came out with a book. He never came to see me, and he spoke on Technocracy on a lecture tour across the continent without ever coming. I don't bear him any ill will, don't misunderstand me. I think it was MacMillan that published his book, and they came to us -- Dittenwall was Secretary of Technocracy at the time -- he had been Chairman of the Board of Pet Milk or the Carnation, one of those big milk companies. He wrote MacMillan Publishing and they withdrew two or three chapters from the book. We would have let him publish it if he had come to us and said, "Here," but, no, all these people were jumping in, writing articles, making speeches, doing tours -- he was charging \$2.50 admittance. Well, what can you expect? That's the way life is. We didn't blame them. As I said before: you create an idea and you do so .... There are two types of diplomacy -- one is to have an excellent memory, and you only tell a partial .... you see, to where you are not giving the facts; you are really misinforming but doing it so well, they believe it. There's a rarer kind where you give them the facts -- all of them -- and you do it in such a way that they refuse to believe it, and that's a damn sight more deadly than the other method. Well, that's the type of thing that we worked on -- here it is; take it or leave it. We never sought political office. We never tried to make political hay out of it. Then you're accused -- the Communists came out and attacked us, and they wrote big full page articles with photographs and everything else, in the SUNDAY WORKER. The Catholic Diocese reproduces that in 47 Diocesan papers at the same time, but never

6-13-62

mentioned that they took it from the Communist paper -- printed it word for word, not a comma missing. That type of thing.

THIS PARTICULARLY HAPPENED IN THE EARLY '30s? Well, what you found is is that you have very few real friends. Any number of people wanted to use it or to get on the bandwagon, so they thought. We weren't the bandwagon that they thought, we weren't going where they thought they wanted to go. We knew where we were going, but they didn't. They refused to believe it. We were going this-away. They thought we were going that-away.

Who else have you dug up?

THE New Republic AND The Nation BOTH PUBLISHED SEVERAL ARTICLES, SOME IN CRITICISM OF TECHNOCRACY, SOME OF THEM LIKE ARCHIBALD MacLEISH, FOR INSTANCE, WROTE AN ARTICLE THAT WAS VERY FAVORABLE TOWARDS TECHNOCRACY. Archibald MacLeish was on FORTUNE. AT THAT TIME? He became Librarian of the Library of Congress under Roosevelt. Archibald MacLeish was a poet. THE NATION or THE NEW REPUBLIC never came to us. BUT THEY WOULD PUBLISH WARD'S LETTERS. WARD WROTE A LOT OF LETTERS. What's-his-name had this -- Bingham, published that magazine -- Senator Bingham's son -- YES -- and they did a woodcut of me -- have you seen anything? NO, I HAVEN'T.

DID LIPPMANN EVER COME TO YOU? No, I met Lippmann at a luncheon at Langdon Post's, He gave a luncheon on Park Avenue, and Ken Cooper, head of the Associated Press, Roy Howard, and a whole gang was there, and Walter Lippmann. I met Walter Lippmann some years before that. You see, Woodrow Wilson in 1919 took over a lot of bright young men to Paris on the Versailles Treaty thing, and the oldest was John Foster Dulles, his brother Allen Dulles; the youngest was Christian Herter. Walter Lippmann was one of them. Bill Bullitt of Philadelphia was another, and ten or twelve more. They came back from Paris about this time or maybe a little before -- late spring, 1919, and Lippmann, Herter, and Bullitt, and 8-10 more, had a luncheon that I was invited to over at THE NEW REPUBLIC. THE NEW REPUBLIC had a building over on the west side. WELL, GEORGE SOULE DID TALK TO YOU? Soule never talked to me as much as you talked to me the first five minutes you came in here in all the time I knew him. He'd say hello to me in a restaurant or something. AND THEN GO BACK AND SAY, "I HAD AN INTERVIEW WITH MR. SCOTT." That's about the size of it. Now, he

6-13-62

may be a perfectly decent individual, but we never had a serious discussion or anything but just a hello and so on, and that's that. It never was five minutes or two minutes. But they proposed a series of seminars, that is at the luncheon, but they wanted to support Hoover for President, and John Foster Dulles had gotten the U.S. Government corporation with a Connecticut charter for \$5 million, and they were going to finance a war of intervention in Russia. This is 1919. Well, not that I was pro-Russian or anything else -- it was just how crazy can you get? What about here? Well, finally with an examination of what we were interested in ended up to where they considered I was worse than the Bolsheviks. THAT PARTICULAR GROUP OF PEOPLE? Yes. YOU MET WITH THEM MORE THAN ONCE THEN? Not all together; some were there at one time, some were there at another. Bill Bullitt, of course, he had \$20 million left to him. Jack Reed -- John Reed, he's at Harvard, you know -- he married Louise Bryant. Jack was over in Russia and the second time he was back here, he's another one of these that came in to 107 Waverly Place and heard about what we were doing. He had been in Russia, you see; then, he looked at all the stuff and said, "Do you have to know all this?" I said, "Yes, you have to know all this and more, too." "Oh, the hell with that stuff. All you have is a Soviet." And we laughed at him. It might be all right over in Soviet Russia -- Bolshevik Russia -- but it wouldn't go here. Louise Bryant was very pulchritudinous and very provocative and much superior. Of course, Bill Bullitt devised the idea that if he -- after Reed's death, he now lies buried in the Kremlin -- if he married Louise Bryant, he'd have an "in" in Moscow, and he was ambitious to become the first U.S. Ambassador to Moscow, which he did become. He took this Kennan and Chips Bolen with him; of course, the Russians knew Louise. That didn't cut any ice with them. It didn't give him any lift at all. They got divorced, and their daughter married the son of somebody in Washington. Louise, of course, went queer for Gwen LeGalliene in Paris, and was going around in the uniform of the French Air Corps and suddenly was hit with a brain hemorrhage and died over there. I knew all kinds of these people. After around 1921, that stuff kind of died out, but I lost contact, and it wasn't until Park Avenue that I ran into Lippmann again. My contact with Lippmann was more or less cursory. I remember a luncheon at THE NEW REPUBLIC, but he never had much to say. I always admired Lippmann for writing one book. WHICH WAS WHAT? THE GOOD SOCIETY? No, it's an analysis on the Italians are hot on war. I'VE NEVER SEEN IT. It's the only thing

he wrote that's any good.

JUST TELL ME ONE THING BEFORE WE GO UPSTAIRS. HOW DID THE IDEA COME ABOUT. HAD YOU READ FREDERICK SODDY AND PEOPLE LIKE THIS? No. HAD YOU READ BELLAMY? Oh, I read Bellamy years ago. Bear this in mind, that Jules Verne wrote, "Twenty thousand Leagues under the Sea," as an artistic presentation, but you do not design submarines from Jules Verne's description. Now, Edward Bellamy did a magnificent job, but you don't design the geomechanics of operating a continent from an artistic written description of Edward Bellamy's "Looking Backward." I'M NOT SAYING YOU DO, BUT I JUST WANT TO KNOW WHAT YOU HAD READ. WHAT THINGS WOULD BE AVAILABLE FOR YOU TO PUT TOGETHER AND COME UP WITH THESE IDEAS. Well, the point is that you didn't get it from any one thing. NO, BUT YOU MUST HAVE FED YOURSELF SO THAT .... It's a matter of design. Under the Socialist concept, if you expropriated, you see, then you made it virtuous. Well, but wait a minute! If you expropriate all the automobiles in United States tonight, you do not change the load factor one iota of operating those automobiles. That's a legal thing. Expropriation is a legal problem and political. The technological one out here of operating all of the motor vehicles -- now if you change the load factor on all of the motor vehicles, you'd axiomatically eliminate all the ownership and all the political, but if you merely expropriate it, you do not axiomatically change the load factor. I don't know whether you follow me or not. YES.

If you eliminate the job completely by a change of design in process -- not to where they are unemployed but where there is no job to go back to -- that's an entirely different thing than merely throwing them out of work.

Our basic thinking comes out of Willard Gibbs and his thermodynamics in Yale. THIS IS IN THE LIST OF BOOKS THAT YOU PROPOSE. Yes, Willard Gibbs. Now Rautenstrauch -- the reason he joined Technocracy was that he was a student of Willard Gibbs. So were 8 or 10 others. He only had about 14 students, you know, and he walked up and down like this with a pencil. He held a pencil in front of him because he didn't want to bother looking where he was going; so, he'd go with a pencil and hit the wall. When he'd hit the wall, he would turn around and go this way. The result was he had a hole in this wall and a hole in that wall. HE WAS SO PRECISE THAT HE ALWAYS HIT IT AT THE SAME PLACE. Any power

6-13-62

diagram today of any kind of a motor or anything else is a Gibbsian energy diagram. He was a great thermodynamicist. Even Yale didn't know where he was when the Europeans came over here to confer honors on him. They didn't know he was in the University even. He was relegated to a little room. They haven't got a statue to him yet. He was the only thing that Yale turned out that was worth while. I mean as a matter of real achievement, because every distillation oil refinery and plant runs on Gibbsian phase vapor relations. In modern physics, he did vector analysis.

BUT WHAT'S REALLY HAPPENED IS THAT THESE PEOPLE DO NOT GET THEIR DUE MERIT AT ALL; IN OTHER WORDS, UNDER THE GOING SYSTEM, IF YOU APPLY YOUR SCIENTIFIC KNOWLEDGE TO SUCH THINGS AS ROCKETS, THE FUTURE OF OUR DEFENSE SYSTEM, YOU ARE GIVEN YOUR DUE REWARD, BUT IF YOU ARE OPERATING JUST ON THE DAY-TO-DAY ESSENTIALS OF THE ADVANCEMENT OF MECHANICS, YOU SIMPLY AREN'T RECOGNIZED.

Well, you see there's so much of this stuff to explain its origin, and there was such a wide range of people that were marginal. Now, for instance, the people who were marginal like Stuart Chase -- although he was in it, he was marginal -- he just couldn't understand what this organization has come to today. HE'S OUT OF IT COMPLETELY NOW? Oh, yes, he wasn't in it since the days of the T.A. By the way, that's the only copy I've got of this. You might want to know who some of these others are. THERE ARE A FEW THAT I DIDN'T RECOGNIZE THERE.

This is Frederick L. Ackerman. YES, I KNOW. Now, Carl Alsberg -- you can copy this down later -- was Chief Chemist with the Department of Agriculture. Al Carpenter -- he and a couple of other doctors were all together. L.K. Comstock -- that's the big Comstock engineering firm in New York. They did all the lighting in the World's Fair, the biggest electrical contractors in New York City.

TAPE ENDED HERE

Notes: Remarks in parenthesis were made by Gertrude Dennis, who was on the staff at CHQ during this period.

verify the spelling of various foreign entities, and  
the spelling is merely guessed at.

HOWARD SCOTT TELECONFERENCE  
LOS ANGELES AND CHQ  
OCTOBER 28, 1962

LA: HELLO, CHIEF. THIS IS CLOUSE IN LOS ANGELES.

HS: Right.

LA: WE'VE GOT A PRETTY FAIR GROUP HERE CONSIDERING THE SHORT TIME WE HAD TO ORGANIZE IT. MOST OF THE SECTIONS ARE REPRESENTED. AND WE'RE ALL WONDERING WHAT THE HELL IS GOING ON.

HS: Well, you read the newspapers, don't you?

LA: WE DON'T BELIEVE THEM ANYMORE AFTER WHAT YOU TOLD US.

HS: Well, apparently Kennedy -- Krushchev's letter officially has been printed in the NEW YORK TIMES but not Kennedy's answer. Do you understand me?

LA: RIGHT.

HS: But the radio from Moscow announces that as President Kennedy has agreed not to invade Cuba, Krushchev has ordered so-and-so.

LA: HAS ORDERED WHAT?

HS: Has ordered the elimination of the weapons you object to.

LA: THOSE OFFENSIVE WEAPONS?

HS: Well, that you call offensive. Of course, this puts us in a very peculiar predicament, because United States is opposed to the Castro regime and is pledged to its downfall. Does that give you some idea of the shennanigans going on?

LA: WELL. WE HAVE A FEW QUESTIONS HERE THAT BORDER ON THE SAME CONDITION. IF THE CUBAN CRISIS WASN'T INSTIGATED BY THE LACK OF -- AS A STIMULUS TO THE ECONOMY -- IF THAT WASN'T THE WHOLE REASON FOR IT?

HS: Oh. no, the Cuban crisis was being used as a lever to trigger something bigger. Kennedy's original message wasn't

really Cuba; it was a pretext to start something with the USSR. Do you remember reading it -- Kennedy's message? That if Cuba retaliated, it wouldn't be Cuba: that the United States would retaliate on the USSR. That was in Kennedy's message. Well, therefore, the USSR was the important thing and not Cuba.

LA: STEVENSON MADE THAT QUITE CLEAR IN HIS OPENING ATTACK, TOO, DIDN'T HE?

HS: Yes. Well. Kennedy stated that in his radio broadcast. The main emphasis was on the USSR and that Cuba was really a side issue.

LA: IS IT POSSIBLE THAT RUSSIA MIGHT BE INVITED TO INSTALL THESE SAME MISSILES ON SOME OTHER AREA -- SOUTH AND CENTRAL AMERICA?

HS: Oh, no. it isn't that at all: in other words, there are no ICBMs in Cuba. They wouldn't transport their secret stuff that far from home where they could be subject to sabotage and anybody else acquiring a full knowledge on it.

LA: THEN THIS TENDS TO PROVE ALSO THAT RUSSIA DOESN'T NEED THIS TYPE OF MISSILE.

HS: She doesn't need offensive stuff over here at all. That's obvious. If she can throw 17,000 pounds in orbit, what do you need any other place for?

LA: ANY MORE INFORMATION ON THE PIGGYBACK SATELLITES?

HS: No. but they can put them up. That would be no trouble at all with the thrust engines they have: in other words, the cosmonauts got up and walked around in their capsule. They weren't like our astronauts.

LA: COULD THE CUBAN CRISIS BE A TURNING POINT IN THE COLD WAR?

HS: Well, it could be. That all depends whether we're going to use this as an excuse and then renege or whether we're going to go on and do something. See. the United States of America has 143 bases abroad in 25 countries. Well, that's all

nonsense today in the modern missile system, and the accuracy and the power that they have, and you don't need bases of that kind except as a definite threat and a definite provocation.

LA: THEN THE MONROE DOCTRINE HAS NO SIGNIFICANCE AT ALL IN THIS SITUATION?

HS: Not any more. That only applied back in 1823. What else have you got?

LA: WHY CAN'T WE MAKE CUBA THE FIFTY-FIRST STATE?

HS: After all. the joke down in Havana is that they want to trade Havana for Guantanamo -- I mean Miami. Let the Cubans have Miami. There are enough of them down there already..

LA: I THOUGHT MOST OF THEM WERE IN NEW YORK.

HS: Oh, no, the big bulk of them are down in Florida.

LA: ON THESE BASES OVERSEAS, THE ONLY PLACE WE HAVE MISSILES IS IN TURKEY. IS THIS CORRECT?

HS: Oh, that's absolutely incorrect. We have them in all major ones. See. we have pretty sizable forces in West Germany, Italy, France, Britain, Libya. We have 8,700 military personnel in Turkey, 14,000 in Libya. 265,000 in West Germany, and 6,700 in West Berlin.

LA: HOW CLOSE IS THE CONFLICT. GENERALLY SPEAKING. TIED UP WITH THE ROME-MOSCOW CONFLICT FROM THE STANDPOINT OF THE COMMON MARKET AND THE RELIGIOUS IDEOLOGIES?

HS: After all, Western Europe is still after the reestablishment of the Holy Roman Empire, of which the Common Market is the incognito or disguise. That's all it is.

LA: THERE'S USUALLY SOME UNDERLYING ECONOMIC CHANGES THAT ARE OCCURRING TO THROW THE THING OUT OF BALANCE. WHAT IS RUSSIA DOING ECONOMICALLY THAT SEEMS TO BE UPSETTING THIS?

HS: Well of course, the energy system in Russia: her gas and

pipelines -- oil lines -- that's two different systems you know, one oil and one gas and your high-tension transmission lines. According to the British Petroleum Association analysis, Russia will be able to deliver million BTUs to East Germany. Czechoslovakia, Poland, Hungary, etc, for 40 percent of what West Europe can get a million BTUs, and the oil pipelines are delivering their first million tons of petroleum in Czechoslovakia right now.

LA: FORTY PERCENT LESS?

HS: Well, the total energy cost will be less -- 40 percent -- when the Russians have the whole thing completed. They've already built them into Eastern Europe, but they haven't completed them as yet. It's only going to be a question of time.

LA: JUST WHAT EFFECT WILL THIS HAVE ON THE COMMON MARKET THEN?

HS: How can the Common Market compete with something else in the same part of the world when the competitor gets its energy for only 40 percent of what you pay for it?

LA: AND THEY'RE AS HIGHLY AUTOMATED AS WE ARE -- PROBABLY MORE SO IN SOME AREAS.

HS: Well, if it isn't, it's only a question of time.

LA: IS THERE ANY CONNECTION BETWEEN THE INDIAN-CHINESE CONFLICT AND THE CUBAN AFFAIR? WERE THEY TIMED TO GO TOGETHER?

HS: Well, they don't have to be: that's one of the battles. After all. the so-called Allied Western Powers interfered in Afghanistan to prevent the signing of the treaty regarding the development of the Amu Darya River which forms the boundary line between Afghanistan and Russia for 760 miles. Well, the McMahon Line, which originated at the Simla Conference in 1914. took an area of Tibet 100 miles deep and 150 miles long. Well, they -- the Chinese -- would like to ensure the return of that territory because of protection of the hydroelectric development.

LA: HAS THERE BEEN MUCH REACTION AROUND THE COUNTRY FROM OTHER

SECTIONS AND GROUPS OF TECHNOCRATS ON THIS SITUATION?

HS: Oh. yes. a couple of places in Canada. Out in the midwest. I've had phone calls -- half a dozen places, and there's more public interest than ever from people that said. 'Oh. well, they've known about Technocracy, but they were too busy, too occupied, and so on. but now the way this is going, it proves we're correct.'

Well, it's a hell of a thing to have to admit -- that it takes a world crisis to knock an idea into people's heads.

LA: ESPECIALLY ONE THIS CLOSE TO SOMETHING ELSE.

HS: Yes. What kind of weather have you got out there?

LA: A LITTLE SMOGGY TODAY MOSTLY -- THE SUN TRYING TO SHINE THROUGH IT.

HS: It's beautiful here and warm.

LA: I UNDERSTAND CHQ IS PRETTY WELL BUILT UP NOW OUTSIDE OF THE NEW HOUSING. THE OFFICE BUILDING IS ABOUT OPEN FOR BUSINESS. RIGHT?

HS: Oh, yeah, we're showing motion pictures, you know, the first and third Sundays in each month -- scientific and technological and production films of all the big laboratories, corporations, color and sound; and we invite the neighbors around here to come in. and they come in.

LA: SOME OF THE FARMERS?

HS: Oh. not only farmers, others. They've got nothing to do Sunday night.

LA: HOW DID IT HAPPEN THAT THE REPORTER FROM PHILADELPHIA FOUND CHQ? IS THERE A STORY BEHIND THAT?

HS: No. He's seen the cars around. Oh. there are lots of angles to it. but Philadelphia wanted us to go on the air on the Red Benson Show. Nothing doing. This week.

LA: THIS WEEK -- IN THE MIDDLE OF ALL THIS? NEXT WEEK THEY DON'T WANT US.

HS: Oh. I don't know about that. Now, don't make any statements like that. They didn't say this week, they called up this week.

LA: THE ONE YOU MENTIONED IN CLEVELAND OR WAS IT DETROIT?

HS: That's another one.

LA: SIMILAR TO THE JACK PAAR SHOW?

HS: Yes. They want a Technocrat to go on to give a buildup to their program. Well, you had the same thing out there in Los Angeles with this Irishman.

LA: JOE DOLAN.

HS: Yeah.

LA: AND WE GOT ANOTHER BUZZ OUT OF THIS FM STATION, KPFK, THE OTHER DAY AS A RESULT OF THE PEACE MARCH. PEOPLE INTERESTED IN TECHNOCRACY WERE AT THE PEACE MARCH. AND THEY RAN INTO SOME PEOPLE FROM KPFK AND NOW THEY'RE ALL EXCITED AND WANT SOME MORE TECHNOCRACY OVER THERE. IT'S A SUBSCRIPTION STATION. THE ONE McCASLIN SPOKE ON IN SAN FRANCISCO OR HAD A TAPE ON.

HS: Yes, from his last tour. Anything now on the LOS ANGELES TIMES?

LA: ONLY WHAT I REPORTED THERE LAST WEEK. THERE'S NOTHING SINCE THEN.

HS: Well, anything else on your mind out there?

LA: SOME OF THE MEMBERS ARE ASKING THE SAME OLD QUESTION: WHAT CAN WE DO ABOUT IT? AND WE SPENT THE FIRST HALF HOUR GOING OVER CHQ'S PAST MATERIAL. 'STAMPEDING TO DISASTER.' 'PRESCRIPTION FOR SURVIVAL.' ETC. DO YOU HAVE ANY NEW ANGLES?

HS: There's a lot you can do about it. but it takes organized effort. After all. the size of Technocracy, you can only fight a guerrilla action. You can't make frontal attacks, except it costs a lot of money; and we've done very well. We've just bought a new headquarters up in Ashtabula -- a Section headquarters in Ashtabula. Ohio. So. you've got two Sections out there moving into new headquarters, haven't you?

LA: YES, 34-16 AND 34-1.

HS: We'll have photographs on this one shortly. A very nice place.

LA: HOW DID THAT XKE JAGUAR HAPPEN TO GET PAINTED IN SEATTLE?

HS: I don't know.

LA: IS THERE A STORY BEHIND THAT?

HS: There is. Those things are incidental. They happen: and after all, we've got Citroens and we have Porsches and Ghias here -- no Rolls Royces yet, but we have Cadillacs. Big ones.

LA: HAVE YOU HEARD THE LATEST NEWS ON THE DESTRUCTION OF ONE-SIXTH OF VENEZUELA'S OIL PRODUCTION?

HS: Yes. I heard it tonight on the air.

LA: HOW WOULD THAT AFFECT US IF THEY WERE TO SHUT THAT OFF?

HS: Well, we don't know. We have to wait for full reports on that. We have a man down there now. a Technocrat. We'll get a full report on it. He's right in Maricaibo. One of the top engineers of the world. He's electric power. So. we'll know. It will take a few days.

Best luck to everybody and Salute.

HOWARD SCOTT TELECONFERENCE  
LOS ANGELES AND CHQ  
DECEMBER 31, 1962

LA: HELLO. CHIEF

HS: Right

LA: WE'VE GOT QUITE A BUNCH OF PEOPLE HERE IN LOS ANGELES WHO WOULD LIKE TO WISH YOU AND THE CHQ STAFF THE VERY BEST FOR 1963.

HS: Well, that's fine. I'm delighted, and it's completely and fully returned from CHQ to everyone out there. I might say that it went down to one below zero this morning, and it's now about 9-10 above zero, but the winds have been terrific. We were snowed in up to about an hour ago.

LA: I WISH YOU HAD SOME OF OUR GOOD WEATHER OUT THERE.

HS: Well, this is pretty good weather, too.

LA: WHAT WE'RE WONDERING, OF COURSE -- 1962 SEEMED TO BE QUITE AN IMPROVEMENT FOR TECHNOCRACY. WHAT DOES CHQ THINK ABOUT 1963?

HS: Well, I wouldn't worry; after all, the Kennedy Administration has pumped in more billions in '62 to pull them up by their bootstraps, and there will be, of course, a much large defense budget in '63. Automobiles in '62, of course, you had the best year since '55. True, steel is kind of dragging its feet, but then we have so much capacity in steel, aluminum, cement, fertilizer, and chemicals that we don't quite know what to do with it; so, unless we grant longer credits to automobiles, we may find the automotive industry in difficulties in '63.

In Europe, of course, the unemployment is growing in Great Britain, the largest it has been in years, and will probably be 3/4 of a million and more by late next spring. Japan is running into difficulties and so are the other countries in Western Europe; namely, that their capacity has been increased, of course, many times. Italy's steel capacity at the end of the war was only two million tons. Now it's ten million tons or five times -- 500 percent; and they're

proposing to build a two to six million-ton plant in addition to that down in the middle of the boot.

Well, Italy hasn't the coal or the iron ore, but she's going to get the coking coal from Newport News and the iron ore from Liberia and Labrador; in other words, they'll have to haul their raw material from halfway around the world. Well, then, comes the question: They have a Common Market but have they got any common source of raw materials? So, 1963 is going to witness some very interesting surprises for people here at home and quite a few million abroad.

LA: THAT SOUNDS REAL EXCITING FOR A CHANGE. MAYBE MORE SO THAN 1962.

HS: Well, after all, the White House is occupied by JFK -- jobs for Kennedys.

LA: SOME MEMBERS ARE ASKING ABOUT THE SO-CALLED OIL WAR THAT MAY DEVELOP WITH THE RUSSIANS AND THEIR NEW PIPELINES INTO THE ...

HS: Well, the pipelines -- the 36- and 40-inch pipelines -- one comes up the Danube, the other goes up by Moscow and hits the Baltic around Tallinn just across from Finland and then comes on down the Baltic. They're completed into Czechoslovakia and have been delivering a million tons. Some weeks ago they started delivering their first million tons of petroleum. The gas lines are 880 pounds pressure pure methane. The towers are being built for the high-tension transmission lines 90 feet high. American engineers have photographed them and brought the photographs back here. They have reached the Dvina crossing just below Riga in Latvia going west.

Now, when your power lines and your gas lines and your petroleum are completed in a complete grid, they will be able to deliver a million or a billion BTU to the satellite countries back of the Iron Curtain for a fraction of what a billion or million BTU are delivered in Western Europe.

LA: IS THIS THE PIPELINE WE ARE TRYING TO STOP THE JAPANESE FROM SELLING TO THE RUSSIANS RIGHT NOW?

HS: Oh. they might; after all, France has a brand new pipeline plant, and they've been getting pipelines from there. They will take pipeline material from anyplace.

LA: YOU MEAN THE COMMON MARKET IS SELLING PIPELINES TO THE RUSSIANS?

HS: Well, how about West Germany and Italy? After all, Italy's been buying 25 percent of her petroleum requirements from Russia -- West Germany, 18 percent. France and Greece have been buying. Russia today is the world's second largest petroleum producer. She has passed Venezuela, and she's the number one bituminous coal producer of the world; and China is pushing United States for second place in world coal production. That's Red China, that is, not Chiang Kai-shek.

LA: WELL. HOW ABOUT THAT OTHER LITTLE PRODUCT THEY'VE JUST DELIVERED NON-STOP FROM MOSCOW TO HAVANA THE OTHER DAY -- THE TU-114 NON-STOP?

HS: Well, the Tu-114. that's the one that has two elevators in it. It's a turboprop. They tried to open negotiations -- the State Department and Moscow -- Pan Am asked, acting for our State Department, and they. Pan Am, wanted to stop in Prague and Warsaw for a New York-to-Moscow airline, and the Russians counteracted that with ... they would fly to New York if they could fly on from New York to points in Central and South America: and United States wouldn't agree to that, and the Russians said they had to be non-stop from New York to Moscow. Well, can you imagine the Boeing 707 making the non-stop from New York to Moscow?

LA: REFUEL ABOUT THREE TIMES?

HS: Oh, they could hang a couple of Standard Oil stations up with skyhooks.

LA: THEY'LL PROBABLY TRY IT NEXT.

HS: That won't do they any good, but the Tu-114 can do it.

LA: WHAT IS THE SIGNIFICANCE OF THE IRISH-CUBAN PARTY JUST HELD

IN FLORIDA -- THE JFK PARTY?

HS: Oh, you mean the Kennedys welcoming the brigade in the stadium? Well, that's typical of the smart immediate political gesture. You have to remember that the real cabinet of the United States is in Georgetown: of course, the Cubans that are here are -- now that most of the Spanish priests have been -- : in fact;, all of them have been sent home to Spain. Naturally it would be good politics on the part of JFK to be quite sympathetic. Also, it's really the intention somehow or other we're going to get rid of Castro in a few years if we have to send the Cuban brigades to Guatemala, Nicaragua, and start all over again.

LA: WHAT IS THE PROBABILITY OF A REPETITION OF THE PAST CUBAN BAY OF PIGS?

HS: The mistake we're making is that we think there are sufficient numbers in Cuba; in other words, there's a Cuban bourgeoisie sufficiently numerous to be able to fight the 99 percent majority or 90 percent majority of Cuba; and the Cubans have arms today -- all kinds of arms -- more arms per capita probably than any country in the world has had. So, it would be extremely difficult to organize anything inside of Cuba via the CIA policy of infiltration, let's say. It's very doubtful -- not that they are not so egotistical they may not try it, but the chances of success are rather nil.

LA: WHAT REASONS ARE BEHIND CASTRO ALLOWING SO MANY CUBANS TO LEAVE CUBA?

HS: Why, that's very simple: He's going to have the Cubans migrate, and then he's going to trade Havana for Miami. He'd be free of the headache. What good are lawyers, advertising men, commission merchants, pimps, and pickpockets in rebuilding an island of 42,000 square miles? So, it will cost less to assist them to emigrate, but it'll be an awful headache for United States.

LA: WHAT ARE THE REASONS UNITED STATES DOES NOT RECOGNIZE THE PEKING GOVERNMENT?

HS: Give it the Chinese: Peking. That's the Chinese name. The

Peiping thing came from the Japanese. We can't afford to recognize 700 million. You can't afford to admit you're wrong -- 700 million people do not exist; so, therefore, we'll keep up the farce until Red China explodes a nuclear device, and then we'll have to admit her to the most select club in the world. That's about the way the process will work.

Red China has six atomic reactors operating, and there's a considerable -- sizable -- deposit of U-238 in the Tien Shan Range mountains in the north which have been mined, and separation plants have been built -- power plants have been built in there. This is according to a Japanese report. I haven't any firsthand Red Chinese reports on it.

LA: WHAT SHAPE IS THE CANADIAN ECONOMY IN?

HS: Canada is more prosperous in certain things -- it has been: but there are the same problems arising in Canada: What are they going to do with the youth coming out of the schools? What are they going to do with their unemployed and their excess capacity? They haven't any solution to it. Neither has United States. That will begin to show up.

Diefenbaker, of course, he's only hanging on politically by a couple of threads. That could fall in '63, and you'll have a new Quebec Party, more reactionary than ever.

LA: WHAT MAJOR COMPROMISE DO YOU EXPECT OUR GOVERNMENT TO MAKE SOON BESIDES THE SKYBOLT MISSILE PROGRAM?

HS: Well. I don't know. It's a compromise. You get the British to cancel their program, and then you say you'll provide them with Skybolt, and then you pull the rug out from under them. Is that a compromise or a double-cross? In other words, it reduces the British potential on the European scene, and to reduce the British potential on the European scene is also the common purpose of the instigators of the reestablishment of the Holy Roman Empire. It's that obvious.

LA: DID YOU GET A CHANCE TO GO DOWN TO PHILADELPHIA TO HEAR JOHN WARING SPEAK?

HS: Oh, no, we wouldn't touch that.

LA: ARE THERE ANY CHANGES IN THE MOTIVES -- PERHAPS IN THE CONGO -- SINCE THE RECENT ACTIVITY OF THE LAST FEW DAYS?

HS: Well, they've got to end the shambles they had before.

LA: IS IT A CLEANUP OPERATION?

HS: Well, yes, certainly; of course, the old Cecil Rhodes Selective Trust falls around 16 to 20 percent, and the Union Miniere, and they've got to have the income from the Katanga to handle the rest of the Congo -- that or else: but that doesn't say they're going to solve anything.

LA: IT LOOKS LIKE THEY WILL UNITE THE TWO FACTIONS BY FORCE.

HS: It'll be a squeeze play. They'll get an apparent establishment of stability.

LA: WHERE DO THE ROCKEFELLER INTERESTS FIT INTO THIS OR DO THEY?

HS: No, they're not particularly involved in that. You see, approximately 85 percent of the copper that goes out of the Katanga goes to France, Belgium, West Germany, and Italy. What does that mean? In other words. Catholic Western Europe is dependent for its copper supply. About 90-some percent of the cobalt goes to Great Britain and United States, mostly United States, but the big tonnage and the big value goes to Catholic Europe.

LA: ARE THERE ANY NEW FIGURES ON THE TOTAL DEBT PER PERSON IN THE U.S. NOW?

HS: Well, it wouldn't make much difference. The total debt all told is over a trillion dollars. You have reached the point where it really doesn't matter how big it is per capita; of course, your taxes in Southern California are increasing very nicely. When this Irish Mafia gets through with you. you'll be trimmed. They'll make spaghetti out of it in an Irish stew.

LA: WHAT SCIENTIFIC DEVELOPMENT COMING UP FOR 1963 WILL HAVE A

LARGE IMPACT?

HS: There are a lot of things. Whether they will come in 1963 or not is -- that's something that's very hard to say. They're in the immediate offing, yes, but you can't say with -- to be that accurate.

LA: IF ANY OF THE SCIENTISTS AND ENGINEERING GROUPS ARE BECOMING ANY MORE INTERESTED IN TECHNOCRACY'S DESIGN. ARE THEY LOOKING OUR WAY?

HS: I wouldn't say. nominally, any of the large ones are, but there might be individuals here and there; but, after all, they're just as much seekers after status in this Price System as any other favored group.

LA: IS THERE ANY NEW FIGURES ON THE RELATIONSHIP BETWEEN THE ATOMIC AND SOLAR ENERGY AS A SUPPLEMENT TO OUR CONTINENTAL HYDROLOGY?

HS: No. but you would use solar energy, use atomic energy, and use magnetohydrodynamic, fuel cells, and bacteria. You'd use all of those. Now, the extract of that letter I wrote to Urquhart, the significant thing in there is that there is 200 million developable potential in Russia, and Russia has 11 time zones; and with a million-volt DC transmission grid, she could shift if she had 100 million -- she could shift it clean across the 11 time zones. You'd really have some load factor if you were able to do anything like that. You could shift that much -- why the technological development would be out of this world.

LA: DOES ANYONE KNOW YET WHY TECHNOCRACY WAS GIVEN SO MUCH FAIRLY GOOD PUBLICITY IN 1962? HAS ANYTHING COME TO LIGHT YET?

HS: No. After all. you get itchy, you know. They don't know what to do with it. You see, they buried us -- the press of United States. The only trouble is that we are zombies: we got up and walked around.

LA: WE'VE PAINTED OUR 50TH CAR TODAY -- ONE OF THE NEW MEMBERS. IT GIVES US 50 CARS AND ONE MOTORCYCLE ACCORDING TO OUR

FLEET OFFICER, TOM BURT.

HS: Tom Burt on the line? My compliments to you, Tom, You've been at it a long time. You've always had a pretty fair crew out there. Keep it together and keep it going. Well, all you need is another 200. How about it?

LA: CONTINENT-WIDE. THIS LITTLE DEAL UP IN ONTARIO -- ALBERTA. WAS IT. WHERE THIS FELLOW WAS TRYING TO START THE CHRISTIAN TECHNOCRACY?

HS: Yeah. Well, you've got this paranoiac in Oakland, you know. He's got a Christian Technocracy, too.

LA: YOU MEAN THERE'S ONE IN UNITED STATES. TOO?

HS: He was on the air out there -- San Francisco-Oakland Bay area, and he turned out a big volume for \$25.00 on Christian Technocracy. It's worse than Hitler-Goebbels ever were,

LA: WE FINALLY GOT A COPY OF YOUR LETTER TO THE PAPER IN ALBERTA.

HS: Well, we're catching anything like that that comes along.

LA: THAT SEEMS TO BE ALL THE QUESTIONS, CHIEF. 1963, FROM WHAT YOU SAY. CERTAINLY LOOKS LIKE MORE ACTION THAN EVEN 1962.

HS: I think it will.

LA: WE WISH YOU AND ALL THE CREW ALL THE BEST FOR 1963.

HS: Give ray regards to all the officers and members out there and wish them the best of the new year for 1963, We appreciate the regards for everybody here at CHQ. Happy landings and salute.

HOWARD SCOTT  
ASHTABULA, OHIO  
SOMETIME DURING 1963

This century of ours, in the last 63 years, has been the most significant 63 years in history in the sense of change. In other words, this 63 years have consumed more resources than all the rest of history put together. The underlying factors and components that constitute the continuing crisis, we'll try to examine a few of them: resources, energy, land, soil, water, and population growth.

We have approximately a world population today in excess of 3 billion people. In the year 1800, it was only slightly over 800 million. In the Middle Ages, it wasn't much over 400 million, and in BC, it has been estimated that it was between 200 and 300 million. So, it is a vastly different order of magnitude when we are talking of the world population today than it was 60 years ago, a century ago, or 3,000 years ago.

For centuries, it was human toil and hand tools that produced the materials, the food, the shelter, and everything else in human beings. Now, it is only a short while back in United States that there was close to 7 million farms in these 48 states. Technocracy, 40 years ago, pointed out that farms would continue to decline in numbers and increase in size. They have. There are now 3.4 million farms in United States, and it represents that farm population only 8% of the total. One active person on the soil today is feeding 26 to 27 people off the land. The farms have grown larger, but let's look a little closer. Twenty-six percent of the farms in United States produce 14% of the food and fiber; therefore, it is quite obvious that 3/4 of the existing farms can be dispensed with and will be. It is only a question of time -- 26% could produce everything and are producing most of it now. Our productivity has risen, -of course, due to chemicals, seed breeding, equipment, and organization. But the farmer is disappearing because of economic attrition, and not because of foresight and long-range planning.

Equipment today can travel six miles an hour. I'm talking of agricultural equipment. Back in the 30s, this speaker introduced the cotton picker in Mississippi and Louisiana. They thought we were crazy, and even Henry Luce in FORTUNE MAGAZINE published a little photograph about this large of the cotton picker on the front cover of Technocracy's Magazine, and underneath it he

stated that Howard Scott and the Technocrats were using the cotton picker to frighten the American bourgeoisie, and that there had been over 20 attempts -- mice long article explaining all the attempts that had been made to develop a cotton picker and that they had all failed. Well, of course, Henry Luce and FORTUNE MAGAZINE today are accepting full color, full-page ads from 7 firms producing cotton pickers. Henry Luce is just as stupid as any of the other tycoons when it comes to a long-range basis -- clever as all get-out on the immediate tactics. So, this organization of Technocracy is more responsible for the negro coming north in the last 30 years than all the other organizations put together. It eliminated them from the arduous cotton picking and others and made it impossible, because it can pick cotton for \$4.51 a bale compared to about \$26 to \$27 a bale by hand. In other words, you couldn't pick cotton by hand if you gave the labor for nothing.

Another factor is that in other fields of agriculture the same progression is on. Technocracy has photographs of one piece of equipment in United States seeding and fertilizing 70 acres of wheat an hour -- not a day -- one hour, one man. That is the direction you are headed in in agriculture.

The progression is on in the other fields. John L. Lewis, in 1920, had 780,000 coal miners, bituminous coal miners, in United States. True, he and the mine owners and the operators have increased the productivity of the American coal miner to over 8 tons per man per day. He only has 235,000 bituminous coal miners today, but those 8 tons per man per day, the new machines coming out do 8 tons a minute! Goodbye, Mr. coal miner.

The railroads of United States in 1920 had 2,140,000 employees. Today the railroads of United States employ less than 800,000, and that includes station employees and Railway Express. When the present mergers that are on the board are consummated, the total employment of American railroads will be less than 600,000. In other words, there isn't any future prospect of expansion in railroad employment, coal mining, potash mining, iron mining, or almost any kind of mining.

McDonald and the steelworkers union have lost 182,000 members since 1955. A lot of them are working part-time. The automotive union has lost over 400,000. The surplus has

temporarily been taken up by increases in federal employment, municipal, county, state -- federal employment is approximately 2,400,000, and municipal and state are almost 7,500,000, the last figures -- it's probably over that by now, or a total of 10 million. That does not include the 3,200,000 in the armed forces of U.S.A. Services, sales, promotion, advertising, all those have expanded, but your unemployment figures are pretty much of a sham because they only register those who are still drawing unemployment compensation. When you examine the farm and labor figures and the United States Census, you find that 54% of the working force of the United States -- only 54% -- work 50 weeks in the year. There are 22 million women working, and 36% of all married women -- this does not include divorcees or widows -- are working and their husbands are working. An entirely different picture than people are led to believe.

Which direction is it moving? to more human effort? No, it's moving to less human effort and more technological equipment and ever-greater consumption of extraneous energy. Extraneous energy is energy from oil, coal, gas, the sun, the atom -- no matter where it comes from, it is non-human energy. In United States, we have in excess of 12 billion horsepower of prime movers -- not million, billion -- and over 11 billions of those are in automotive vehicles. Less than 4% of that horsepower prime movers is in manufacturing, central stations, mining, and railroads. If we double the percentage that we have, there would be 20 million unemployed. Of course, your schools and your universities, along with our other media of public misinformation, are trying to kid the public that you have a future working. So did the labor union. Well, they haven't. Not that the American labor union isn't sincere -- they are, but there's no future in work. You are beginning to find it out, but you still don't want to admit it. That's from that old moral cliché from centuries back that the devil would find evil for idle hands to do. So, you still believe in the nonsense of working for a living, and yet technology is displacing more and more of you all the time.

Let's see what a really modern plant does. Libby, McNeil & Libby just completed and put in operation a plant west of Chicago. You know about chile con carne and corned beef hash, other products like that. It is tape controlled; the volume is so great that they have to have a can plant right there. Nice administration building, beautiful grounds, one line does 800,000

cans in a little over 7 hours -- 2,500,000 cans in 24 hours; that is, it controls the chemistry, the chemical analysis, the heat, the volume, the weight, the pressure, and the counting, the canning, and the cans into the cartons, and the cartons on the pallet, and the pallets stored either 20 feet high or directly into the railway car or the truck. It's a lovely, clean plant. You can look down the long lines and there isn't a single human being in sight in 1,100 feet. It only requires 3 employees per shift, and they do not work in the sense of manual work. They are going to build more.

The modern automatic powerhouse is here; so is the integrated oil fields. You don't know it, but the Life Savers and things you buy, that's very high speed, completely controlled like the cigarettes. American Foundry & Machine developed the present cigarette machine. Many of you have probably seen them running in exhibition -- well, that's rather slow. It only does 1,500 cigarettes a minute. They've had the other ones built and in the warehouses for years. These do not wear out fast enough. The ones in the warehouse do 3,600 a minute. When these wear out, they'll put in the faster ones.

Macy's and your insurance companies are putting in inventory controls where you can handle, for instance, 80,000 insurance policies a day with one girl. You'll soon have it to where you won't need the girl. The sales girl will not even write out the sales ticket. You merely show the object and it will write out the ticket. Why not? No sense in toil. If it's repetitive, it can be done technologically better than a human being could do it. That's the direction we are moving. Of course, we are going to elect politicians to office, and we're going to hand out an awful lot of nonsense in our periodicals about creating new jobs, and in trying to stop juvenile delinquency, crime, and all the other nonsense, but it is going to be a hypocritical approach; because we are still believing in that other nonsense that if you pour more dollars in, you can cure something, when this is a physical problem.

United States steel industry is very backward, for instance. We haven't got a continuous ingot casting process in United States. Koppers is putting in the first one, but they have been operating for eight years abroad, although it is a development of American engineers. For instance, this organization brought out a

continental power design in 1924 of a million volt DC power transmission. It was presented to the engineering societies and to the large technical corporations. They said, yes, it's technically correct, but that's as far as it went. The Swedes have a 28-mile line. The Russians are putting in two 4,000-mile lines. It's a good thing Stalin isn't living. We'd be in one hell of a pickle, because we'd probably be awarded the Stalin Prize. The patents have run out; we can't prevent the Russians from using them or anybody else. It's free to the world. The British have completed the big cable that will connect Britain and France together under the waters of the Channel. The headworks are being completed, and they will shortly run the cable under the British Channel. That will be high voltage DC because Great Britain has one frequency, France has another, and there's a difference in time of one hour between France and Britain, and a difference of 2 hours and 21 minutes in their load peak. So, they will be able to shift power from Britain to France automatically.

We have a much bigger continent here than the British. We have time zones, and if we had that kind of a system, we could shift 100 million or 200 million kW or larger from one time zone to the other as the load demanded. We cannot do it now. The Russians, of course, have more time zones, because of the greater distance. Bear in mind that New York is closer to Moscow than Moscow is to Vladivostok.

Once upon a time, United States, as Carl Sandburg said, Chicago were the meat packers to the world. We produced the same way in automobiles. The rest of the world's production in cars really didn't matter. The rest of the world now is producing practically as many automobiles as the United States. High-speed automobile assembly -- about the best we do is one car in every 31 seconds. There are three countries in Europe that are rolling them off at one every 19 seconds, and that is not American equipment; that is a development partly from U.S. equipment but mostly a development of their own. The Big Five packers are moving out of Chicago, and Chicago will no longer be the butchers to the world.

United States last year produced 98 million tons of steel, but we have a capacity in excess of 140 million tons of steel. The Russians, whose steel production was nothing some years ago, did 84 million tons last year. Europe did 80 million tons --

Western Europe. Russia and her satellite group did 127 million.

In coal -- United States led the world in coal production. United States is not first in world coal production, she is not second, she's third. Production of bituminous coal in 1962 -- 568 million tons (that's Russian). Red China passed United States in 1962 -- over 400-some million tons of bituminous coal.

This isn't a question of whether you or I like it -- these are the facts. These figures are from United States Department of Agriculture, United States Department of Foreign Commerce. We're not accepting any Russian figures; we're just giving you steps that comes out of our own that most of you do not know.

Venezuela used to be second in world oil production. Russia passed Venezuela last year.

This is happening. Very shortly the Chinese will have their Kansu irrigation project completed, and they will have a million or more acres as flat as that floor in long staple, high tensile strength cotton. The Russians are doing a similar thing down on the [Anudarian] in Turkestan, and as and when they do, they will not produce 7/8, 3/4 low-grade cotton the way we do in Texas. We do produce some good cotton in United States. The greatest Californian is probably somebody you never heard of. He's greater than all the gold rush and all the writers in California and all the bankers. His name is George Harrison. He lives in a little house -- not pretentious -- a few flowers around it, but he's the developer of Ocala 442. That's long staple, high tensile strength cotton, and it brings in more hundreds of millions today than the citrus fruit in California. It is the only cotton permitted. You try to plant anything else in California today, they'll rip it up with a bulldozer. I'm giving you this to show that it can be done -- that Americans have the ability.

We have 1,300,000 high school and college graduates from last year that have never had a job. You're going to have more this year. You have 17 million human beings in these United States of ours who are 65 years and over, and they are increasing at approximately a million a year. There will be 20 million in 1965. That means a greater social load, greater taxes, and what? The cost will be higher. None of this is going to be achieved by cheap legislative proposal. It has to be a redesign -- physical

redesign in your operating order. Railroads the way they are belong in yesterday. Without a single new quota of knowledge in railroad transportation, we can design a railroad system 3 meters wide in gauge instead of the 4'8" -- that's the gauge between the rails, rail to rail, inside. Standard gauge is 4" 8-1/2". It should be 3 meters or 9' 10-1/10". Your cars should be pedestal suspended instead of bolster. Your passenger train speed should be 200 miles an hour, and then, of course, it wouldn't pay anybody to take a plane from New York to Chicago, because you'd go from the center of New York to the center of Chicago in a little over 4 hours.

You can go on -- automobiles -- Detroit turns out cars, but it hasn't -- not yet -- designed an automotive vehicle. It's well known what it should be; not any longer than the existing standard car, a little wider, yes. There's no axle, no sparkplugs, no carburator, no radiator, no water pump, no clutch, no transmission, and no differential. There are 1,100 less parts than in the existing car. It will run on anything that burns, and its estimated life -- 750,000 miles before a major overhaul. That wouldn't be good for the automobile industry, would it?

Now, how have you kidded yourself? It's only a few decades ago that Sears Roebuck only had 4% of their total gross business in installment buying. Today, installment buying is crowding up to 50%. Sears Roebuck is doing over \$4 billion a year gross and sells \$1.3 billion of accounts receivable to a banking consortium. That's very nice. Thirty-year mortgages are now legal in the State of New York, Forty years are legal in some other states, and you can buy the home for nothing down, because the bank will make an auxiliary loan to you so that they can hook you up for 30 years.

In bygone ages, the first form of slavery was slavery by capture. you went out and captured them by force of arms. When you no longer could feed them or no longer handle them, you chopped their head off. Then you had chattel slavery, and we only got rid of that a century ago. But now you have a more insidious slavery than all the other kinds of slavery put together: debt slavery. They tie you up on installment buying and long-term mortgages. You bought a house for \$20,000 on a 30-year basis at 6%; ladies and gentlemen, what would you pay in the total 30-year period? Well over \$50,000, wouldn't you? Well, if a builder got

\$4,000 net out of \$20,000, he'd be doing good, but here's the loan company, the bank, and so on making many times what the builder does and contributing nothing to the house. That's what's happening to all of you. It's not your fault -- it's just the fault of the system. It's a nice, kind Christian world, and you know what a nice, kind Christian world is: you do your neighbors good before they do you good. In other words, you create debt against them faster than they can create it against you, because that's the only way you'll get ahead.

It used to be that the legal profession was the high paid of all the professions, but the legal profession has gone down because of the merger of corporations, the amalgamation of big business, and the young lawyer can only get going as a member of a firm that handles big corporate business accounts. On the other hand, the doctors, the dentists, and the veterinarian have come up to where they are really the elite of the so-called professional world. The tool and die maker that gets \$6 to \$7 an hour -- yes, but they don't work a full year. Certain unions, like the electrical and others, are trying to shorten the work week. You can't blame them; they're all trying to stay afloat in a cockeyed system. It's a rat race and a jungle.

Now, I'm going to hurt some of your feelings. Morals or ethics in this system are something that are only engaged in by a damn fool at the bottom if you wish to climb to the top, and they are a luxury that can only be indulged in when you reach the top. Kind of hard to take, isn't it? In other words, old John D. Rockefeller, Sr. could give out dimes after he'd made billions, but he and his gang instituted the shotgun bump-offs and the dynamite blastings -- that was at the bottom.

Are you going to do it by electing something locally? No, because water locally -- you can't handle water on a township or a county basis or a state basis, nor can you handle sewerage or pollution on that basis. It's got to be handled on the basis of watersheds. The Mississippi-Missouri-Ohio watershed occupies 43.6% of continental United States; so, therefore, you'd have to control the entire watershed in order to control the pollution and the runoff. The same way in disease -- you have to have an area ecology in order to handle it. We are trying to institute little township or little municipal water purification or sewerage. Now it's getting so bad in some of your lakes --

remember you dumped your detergents in and the detergents do not break down -- sulfonated glycerol and the more complicated alkyl types get in the underground water or the limestone or the coral, and they fill up the interstices. It's just like plaster -- it goes solid, not hard, solid; so, therefore, when the dead crabs start to come up on the shore or the dead fish, then you'll know you've had your day, because the coral will be plugged for miles. You are getting that kind of problem in the limestone and amorphous formations all around in Ohio, Pennsylvania, New York, Connecticut, Illinois, and all over. We can show you photographs and movies of the big "ice cakes" -- they look like ice cakes -- along the riverbanks and coming over the falls -- they're not ice, they're nice big cakes of detergent. Detergents are wonderful, but they also have their complications.

All of this leads up to where do you think we are going? Quite a few of you are old enough to have voted in the last election. It doesn't matter who you voted for -- you got what you voted for. No political party is proposing any physical change, and don't expect this Irish Mafia from Boston to do any more than that beautiful public relations officer, General Eisenhower did. They'll kid you just the same.

It's going to be tougher. Of course, back in the thirties, you could advise your son to be a gangster or in the twenties. Now it isn't worth even trying that.

Of course, one of the fastest expanding things we have in the country is the welfare, the relief, and the state unemployment compensation. If you can get jobs in there, you are assured of an expanding, steady growing future, because there's going to be more of them and you are going to have more of them with you.

It's difficult -- realize our position. Technocracy Inc. is a nonprofit, nonsectarian, nonpolitical, membership organization, incorporated under the laws of the State of New York. It started out originally in August, 1918, and we've been going ever since. Of course, we also have a technical side. Some of our members developed frosted foods. You wouldn't have heard of that, would you? Bassett Jones and Clarence Birdseye. It has kind of altered food distribution. A number of our members have contributed to other technical and scientific developments. Maybe a number of

you here in this city, this area, are interested in peace, a sane nuclear policy, and planned parenthood. Well, if you are, your planned parenthood is an individualistic approach. It's a voluntary thing. The way to control population is to control it on a collective basis, and the biochemists and others have found out how to do it. You can drop a percentage in the metropolitan water supply -- .0004 of 1% -- that's all the percentage you need in the water supply, and no mammal female will conceive so long as that percentage is consumed in the water. It is not deleterious to the female mammal, whether it is human or pussycat, horses, or dogs. Withdraw that, and in 28 days plus 14, that's 42, isn't it, the mammal can conceive. The cost is insignificant. It is odorless, tasteless, colorless, and it is non-toxic. Now, let's get over the nonsense that you are going to do it voluntarily. It will have to be done collectively. The population explosion is here. Venezuela has a birthrate of 47 per 1,000. Japan reduces its birthrate by making abortions legal, and abortions exceed the live births. Our airline traffic to Japan is jammed up with American females -- bound to Japan for a weekend and an \$8.00 abortion in a Japanese hospital. That's not the best way to do it, but this other way is. That's a little too frightening to most of you but if it gets tough enough, that's what you'll have to do. Now, Technocracy isn't going to do it. We're telling you what has happened, what can happen, and until you create a climate of opinion in this country that has some realization of the direction and the design, then you are headed for trouble. That is the purpose of this organization -- to acquaint the public. We have all kinds of members in Technocracy from miners and farmers to scientists from the far south to the far north. We have Section offices across Canada; we have members from Venezuela to Alaska, from Newfoundland to Hawaii. None of them are members because of any hope that they will be elected to political office so they'll ever get rich. Just those who realize, as Victor Hugo said, "That more powerful than armies is an idea whose time has come." Thank you, ladies and gentlemen.

---

SOMEBODY IS TRYING TO BE FUNNY HERE. I'VE HEARD OF BLACK AND BROWN SHIRTS. WHAT'S THE MEANING OF THE GRAY SHIRT?

It's just gray enough so that south of the Mason-Dixon Line, they all remember what it is; and it's blue enough, so that north

of the Mason-Dixon Line, nobody knows what it is. Otherwise, there is no significance. We only picked the color gray just for fun, just as we did this emblem. This emblem, of course, is an ancient generic symbol, and you know it in the Korean flag, Chinese, as the yin and the yang. It is also the symbol in biology of the basic cell, the monad, isn't it? Look it up in the Encyclopedia Britannica. At 10,000 feet in the air, on the ground it is still clearly visible. The stars and stripes are not or the Union Jack -- they blur out. We just had interesting reasons. The gray or the gray shirt isn't compulsory or anything. We just do it as an organization, just as we paint our automobiles, put the insignia on the side. We do the same with planes and boats. They are not owned by the organization; they are owned by the individuals in all walks of life. This organization is not fascist. It is anti-fascist. It has always been. Probably no other organization knows as much about fascism in Europe or Asia than we do; in other words, McCarthy in this country was a fascist. Let's face it. We've got a lot more. There isn't any Left in the United States. There was a Socialist Party once -- Socialist Labor party -- they've practically disappeared. So all we have in the way of climatic organization is the conservative Right, the reactionary Right, and the fascist Far Right in United States. What would you call a Goldwater?

As far as Technocracy's ideas are concerned, we are so far Left that we make communism look bourgeois. Left in the sense that our concepts and designs are radical and revolutionary.

THANKS FOR THE GLOOMY PICTURE.

Stick around a couple of years -- you'll have gray streaks on that picture window of yours.

HOW ARE PEOPLE COMPENSATED FOR WORK THAT IS NOT NEEDED--TAKE SPORTS AND ENTERTAINMENT, FOR INSTANCE?

Under a Technate, in the production and distribution of abundance, you would all get the same. It's a continental accounting system of a continuous inventory. In other words, you know every hour what is being consumed by whom, by sex, by occupation, where, and what is being produced. It is a medium of distribution and not a medium of exchange. In other words, you can't steal it from anybody, you can't lose it, and you can't

give it away. It is your income. For the first time in history, the female has an income independent of any male, and vice versa, so for the first time, the male will really have to be good, brother, in more ways than one. Therefore, if you can't bribe anybody, you can't gamble with it, you can't lose it, steal it, or give it away, but you have guaranteed security with it, and yet you know every hour in the country -- whether it's tomatoes, shoes, nuts and bolts, whatever it is -- how much is produced where and where it is consumed. You don't overproduce or underproduce. It was designed before the computing machine; in other words, it was a carbon coding before there was a computer machine with a carbon coding development.

THE MOST COMMON FEAR OF THE AMERICAN PEOPLE IS LOSING THEIR FREEDOM. HOW WILL TECHNOCRACY [COMPENSATE, IS IT?] INDIVIDUAL LIBERTY?

What freedom have you got if you don't have the economic wherewithal to go with it? It's like making all the big splurge about civil rights for the negro. If the negro doesn't have economic rights, those civil rights aren't worth a hoot in hell. Let's be frank about it. Go back a few years, and you remember when women didn't have the vote, and we had parades, riots, and everything else for women suffrage; and when women got the vote, there was going to be clean politics, and the politicians were all going to be statesmen, and you were all going to have good government. Well, women got the vote, and it stinks just as bad as it did before they got the vote. Now, we are not opposed, do not misunderstand me -- there's no racial, religious, or color bars in Technocracy. If you are here, living and working on this continent, and you are not a member of a political party, you can join Technocracy. We do not accept those elected to political office, because we are a nonpolitical organization.

Now, as far as liberty is concerned, you haven't much liberty if you cannot travel or you cannot obtain the best health services. The poor Chinese had a radius of only four miles a year. Ours runs 5,000 a year, but that's due chiefly to the automobile and the airplane and other means of transportation, but, bear in mind, that may not be maintained too long, because our oil wells are only averaging -- those that are operating -- less than 11 barrels per well per day. There are no major oil fields been discovered in United States for years, and the

percentage of dry holes is high. In Iran, there are only 82 wells operating, but their average is 10,000 barrels per well per day compared to our ten and a fraction barrels -- a thousand times. Saudi Arabia is over 6,000. So if we do not discover more oil nationally -- and there's very little prospect of it -- we'll have to import more and more petroleum products to run all these little buggies we have, and it will cost more. There will come a point where it will cost so much that we cannot maintain them. Right then will start a deletion of one of the liberties you enjoy, but not one of the liberties that is being sung about. If gasoline reaches 55 cents a gallon seaboard in the United States, the ranch house which you have fifty miles from an urban center won't be worth a plugged nickel. Figure it out yourself.

HOW WOULD RAILROADS FINANCE A NEW SYSTEM WHEN THEY ARE LOSING MONEY NOW?

That's correct. The railroads wouldn't finance it. How does the Union Pacific or the Southern Pacific -- how did they get financed? They got allotted every alternate section of land five miles deep along their entire right-of-way; in other words, the people of United States actually financed it. You could save money, save costs, by redoing the railroads. Now we're going to consolidate them. That will only stall, that's all, it won't cure.

WOULD YOU ELABORATE ON THE STATEMENT THAT ONLY 54% OF OUR WORK FORCE IS EMPLOYED FIFTY WEEKS IN THE YEAR? DOES THAT INCLUDE VACATION TIME? ARE SCHOOL TEACHERS AND CONGRESSMEN CONSIDERED FULL-TIME?

Well, I wouldn't know about Congressmen. They work in the gashouses, don't they, state or national? And the population of this country elects them. United States Senate is the most exclusive club in the world. They get a nice retirement, don't they? I don't know what you mean "elucidate" on that statement. That comes from the United States Census. Technocracy didn't make the 54%. You can dig it out of the United States Census Labor Report yourself. People employed a full 50 weeks in the year constitute slightly over 54% of the total work force; in other words, others in the United States are unemployed part of the year.

SOMEBODY APPARENTLY WANTS TO KNOW -- TELL US WHAT WILL HAPPEN, BUT WHAT WILL YOUR ORGANIZATION, WHAT WILL IT CHANGE, OR BY WHAT MEANS?

Evidently what you mean is, how does Technocracy propose to bring it about? We're not going in for either bullets or ballots. We're pointing out that this is the economic and physical direction that is being taken, and the populace of this country had better become cognizant of that direction and realize it. Social change can come easily in this country. We have the technological equipment. It also can come chaotically and catastrophically, depending on whether the fascist forces in the United States attempt to clamp the lid on it. If they do, there will be explosions. Technocracy are consulting engineers .

IS TECHNOCRACY'S PROGRAM NECESSARY AT THIS TIME?

If that's the way you feel, then you're in the Promised Land. You're like the -- what's that division in the Presbyterian Church? They'd got salvation, so they didn't have to bother about anybody else. They had theirs, and the hell with all the others! In other words, everything is lovely and we do not need to change anything. It would be very nice if that were so.

APPARENTLY THERE ARE TWO ON FREEDOMS HERE, THE MOST COMMON FEAR OF THE AMERICAN PEOPLE IS LOSING THEIR FREEDOM. HOW WILL TECHNOCRACY COMPENSATE INDIVIDUAL LIBERTY?

Well, if you have a guaranteed income, guaranteed health, we think everybody will have enough liberty. Spend it the way you like, worship what you like, if you want to stand on your head, you can, provided you don't try to do it in the center of the railway tracks with an oncoming train, of course. That occurs now.

WE ARE LED TO BELIEVE THE SYSTEM IN RUSSIA IS INFERIOR TO OURS. IF SO, HOW COME THEY ARE INCREASING THEIR PRODUCTION?

The Russians have come up in their technology. They are not equal to this country in some things, but they are ahead of us in others. The same way with the Chinese. They have come up, but they still have a way to go to reach our level of technological development, but they are also ahead of us in some things. If we

keep on the sloppy way we are going, we will be in difficulties. People ask, how can we catch up to the Russians? And our answer is this -- it is very simple to catch up with the Russians. Just let's give the Russians all that we've got, and the Russians will be three years behind us. Don't forget that rockets were introduced by the Russians in World War II on the Smolensk Highway and the Drina River -- the biggest battle fought in all history -- not Stalingrad. That's the one that held up the German advance for 23 days.

HOW OLD DOES ONE HAVE TO BE TO RETIRE AND HOW ABOUT YOURSELF, SIR?

Well, on that basis, I should have retired some time ago, but under a Technate, you could retire at 45 while you still have a little real life left and you weren't all worn out. As for myself, I wouldn't worry about that, except the air in here is a little close, and I'm dripping. If any of you have to travel a long distance, it's coming up close to 10:00. Do you want to continue this? I'm willing to go on.

Thank you very much for coming here. We could show you medical systems, railway systems, power systems, design of urban centers, housing, sewerage, water, and everything. If we had money enough, we would build working models, haul them across the country, and show them to you. We're not the General Motors, the U.S. Steel, or the Standard Oil. We'd love to have their facilities. We've fought this battle. No one is making any money out of it, and the Director-in-Chief doesn't get any more than the stenographer. Everybody in Technocracy who is full time gets the same amount. You don't know any other organization where that holds. Thank you, one and all.

\* \* \* \*

HOWARD SCOTT INTERVIEW  
WITH RADCLIFFE STUDENT  
CHQ, RUSHLAND, PA  
SOMETIME DURING 1963

You start back where you started before.

YOU MEAN ABOUT THE FIRST TECHNICAL ALLIANCE OFFICE?

Yes, what's this -- what's the name of it?

OH, IT'S CALLED, "THORSTEIN VEBLEN AND HIS AMERICA," AND IT'S THE ONLY BIOGRAPHY THAT'S BEEN WRITTEN ABOUT VEBLEN.

"Thorstein Veblen and his America," by whom? BY JOSEPH DORFMAN, No, I haven't read it, and what does he contend?

WHEN HE TALKED ABOUT VEBLEN'S ACTIVITIES IN NEW SCHOOL, HE SAID THAT AFTER VEBLEN WROTE THE ARTICLES THAT WERE LATER PUBLISHED AS "ENGINEERS AND THE PRICE SYSTEM", WHICH WAS IN 1919, I GUESS THAT HE PUBLISHED THOSE ARTICLES, HE STARTED A GROUP AT THE NEW SCHOOL WITH A FEW PEOPLE SORT OF ON THE SIDE. HE WAS GIVING A COURSE, I GUESS, OR A COUPLE OF COURSES, AND THIS GROUP WAS SUPPOSED TO DISCUSS THE PROBLEMS THAT HE HAD BROUGHT UP IN "THE ENGINEERS AND THE PRICE SYSTEM," THE PROBLEM OF PLANNED CONTROL.

It's not correct in substance or in fact. The Technical Alliance was in existence before the New School and before I ever met Veblen, and the articles in THE DIAL MAGAZINE -- and that was edited at the time by Helen Marach -- it later became a poetry magazine -- those articles were later published in book form as, "The Engineers and the Price System," but those articles were written in THE DIAL as a result of dinner and luncheon conferences with myself and several others, and had nothing to do with The New School whatsoever. In fact, I met Veblen at the old Faculty Club at Columbia University, and I was taken up there and introduced to Veblen, Ardzrooni, and a whole lot more, by Montgomery Schuyler and Merrill Rogers. Merrill Rogers at that time was Advertising Manager of THE NEW REPUBLIC and the husband of Joy Young, the suffragette. We were engaged in this before The New School existed, you see.

WHAT WERE YOU DOING WHEN YOU FIRST STARTED THAT .... WHAT KIND OF PROJECTS WERE YOU DOING?

DURING 1963

Research on resources and areas, and so on. WAS IT AN INDEPENDENT THING? Purely independent; in other words, I bought the furniture and equipped two floors at 107 Waverly Place with my own money, and then the engineers, scientists, and technologists that I had had associated with me in World War I -- they were out of work, you see -- and a whole lot of them bunked in there and worked a day or two, and go look for work or write letters the rest of the time.

WHAT ABOUT THE ASSOCIATION WITH THE I.W.W. -- WAS THAT LATER?

Oh, that was way later as the Technical Alliance. Our association was simply that we undertook to provide them information on several industries, but our bigger job was with the Railroad Brotherhood. They don't say anything about that. NO, I HAVEN'T COME ACROSS THAT AT ALL. Oh, yes, that's typical when they want to mess up something. Now, I was never a member of the I.W.W. NO, I GUESS IT WAS MENTIONED IN NEWSPAPER ARTICLES THAT YOU DID A RESEARCH PROJECT FOR THE I.W.W. We did for Jeff Lout, the economist in Washington, D.C., and the Railroad Brotherhoods. What we supplied was information on the structure of the meat-packing industry, the copper, and the agricultural. You see, what was pointed out to them in the report is that they were attempting to organize the migratory worker, and there were about 1,200 combines in Kansas at the time. We pointed out that the migratory worker wouldn't exist in a few years when you got 15,000 combines. The combines went to about 27,000, and there were no migratory workers. Now, up until that meeting in the Faculty Club -- that's long before The New School -- WAS THAT IN 1918? That was in the winter of 1918 -- the fall of 1918. I had never met Veblen, and I had never read him. Veblen's association with The New School was, Mrs. Whitney put up the \$5,000 a year simply to keep Veblen.

DO YOU KNOW WHAT KIND OF COURSE HE WAS GIVING AT THAT TIME? Somewhat similar to what are in his books. I THINK DORFMAN SAID THAT VEBLEN GAVE A COURSE IN WHICH HE TREATED THE IDEAS THAT HE USED IN THOSE "DIAL" ARTICLES. Oh, no, not at all. And then he wrote this cockeyed thing about the Soviet of technicians, which we jumped him for. He had no more idea -- Veblen -- of a technological structure than Suzy Q on Broadway did. He had an

inquiring mind and he had an interesting sense of humor, but he wasn't trained from the technical side. I think I'm the only person who ever kept Veblen up until after 3:00 in the morning. He stayed at my place, along with all the others, until after 3:00 in the morning. DID YOU DISCUSS THE IDEA OF We had a series of dinners and luncheons somewhere at the Columbia Club -- that's downtown on 43rd Street, and, oh, what was the name of Robinson -- he came and sat in the corner -- he was a professor, and he wrote, "The Mind in the Making," from taking notes at these meetings. ROBINSON. Yes, I can't think of his first name. "The Mind in the Making" is the name of the book.

WAS THE TECHNICAL ALLIANCE IN EXISTENCE ALL "THE WAY THROUGH THE TWENTIES? Oh, yes. AND IT WAS DOING ACTIVE RESEARCH? It went up and down in its activities -- nothing spectacular.

HOW DID YOU COME TO BE ASSOCIATED WITH COLUMBIA UNIVERSITY? We never were associated with Columbia. WHAT ABOUT THE ENERGY SURVEY? Oh, yes, we had other space besides Columbia University. We had a big drafting room, the huge ones, of Voorhees, Camill, and Walker at 101 Park Avenue. Well, then Dr. Rautenstrauch, who was Dean of Industrial Engineering -- they didn't have any students in that whole building -- said, well, they're empty, we've got drafting tables, we've got some calculating machines, and I had all these engineers and draftsman, and so on, that were on relief. The engineering societies asked me: what could you do with them? You couldn't get them out to sell apples. I said we can give them a research job, and they said, "You can?" and I said, "Yes," and we wound up with 250 of them. Rautenstrauch did it on his own. IT WAS INDEPENDENT OF THE UNIVERSITY THEN? I don't know how he did it. He said you can have the floors here in the Industrial Engineering Building. He had an office.

Dr. King Hubbert, who was one of our men, was teaching geophysics at Columbia -- maybe you've heard of him? YES, I HAVE. Well, he had lunch with Rautenstrauch and was telling Rautenstrauch about the project, and Rautenstrauch suggested that I come up and look the place over, and I could have the floor or two floors, and that's what started it, but we had other space besides Columbia. Columbia University never had anything to do with either supplies or the direction of it. They were interested. What have you found out about the reason that Columbia University -- do they claim ....? IT'S VERY CONFUSING.

THEY CLAIM THAT WHEN THE BIG PUBLICITY FIRST BROKE IN AUGUST, 1932, THAT WAS ANNOUNCED BY COLUMBIA, WASN'T IT? Well, that's what I want to get, to see what you have done in your research. Nicholas Murray Butler's campaign manager and the head of the School of Journalism or one of them suddenly found out that Columbia had a big research project under way, that is, in Columbia University; so, without consulting with us at all, they drew up a release to the press and sent it out apparently on Saturday for release on Monday -- they knew how to do it, you see, because Monday is your bad day if you can really hand the press anything, they'll give it front page. We knew nothing about it until we arrived up there at the Engineering Building and you had 40 reporters, sound trucks, Movietone Sound News, and all the rest. That's what started it. They didn't consult us at all. We didn't have any publicity staff to handle it.

WERE YOU PLANNING ANY SPECIFIC PUBLICITY FOR ANY TIME IN THE FUTURE? No, we weren't interested in publicity; we were interested in doing a job, which was an analysis of the energy determinants of the continent. Our approach was an entirely different one; certainly, it's radical and revolutionary. THIS JUST FORCED YOU TO .... It landed us in the midst of this publicity, which we didn't originate, and we couldn't at the time control. We called it a body of thought way back in the Technical Alliance; we called it Technocracy, way back in 1919.

WHAT ABOUT SMYTHE'S CONTENTION THAT HE INVENTED THE WORD "TECHNOCRACY"? Technocracy has been invented at least by 7 or 8, but never in the sense that we use it. He also was in New York, and he used to come into a restaurant in Greenwich Village where he heard the discussions on it, and he wrote an article in an engineering magazine and using the word "Technocracy" as an efficiency system. HE USED IT IN A COMPLETELY DIFFERENT SENSE THEN? Yes, but it's been used way back in 1884, 1889, and 1860 something, but never in the sense in which we used it.

THERE WAS ALSO A LOT OF DISCUSSION IN THE THIRTIES ABOUT THE INFLUENCE OF SODDY'S WORK. HAD YOU READ THAT BEFORE? Soddy hasn't anything to do with it. Soddy, of course, gave a very nice newsreel interview that they had hoped to bring out Technocracy in Britain, but that he was glad that it was done in United States -- Fox Movietone News. I'll give you a lead so that you can look that up if you want to. I'M NOT SURE THEY WOULD HAVE

THOSE IN THE LIBRARIES. I DON'T KNOW WHERE YOU WOULD GET THAT, DO YOU? That would be in the newsreel library; they have them way back. We did have a copy of it, but in moving out here, we don't know what happened to it.

DID YOU HAVE ANY FURTHER RELATIONS WITH VEBLEN DURING THE TWENTIES OR WAS HE JUST IN THIS BUSINESS? No, in that period. He personally became interested in what we were doing, yes, but I'm just trying to clear up -- clarify -- the original situation. Montgomery Schuyler, you see, he had been head of the testing laboratories for the City of St. Louis. He later, oh, he did some work for several organizations in the Encyclopedia Britannica, and then in 1933, the Roosevelt Administration gathered up, you know, all the Technocrats and ex-Technocrats they could lay their hands on. YOU MEAN TO WORK IN THE GOVERNMENT? Yes. Leon Henderson was Price Administrator; Leland Olds was Federal Power Administrator. Now, have you ever seen the Technical Alliance bulletin? NO, I COULDN'T GET HOLD OF ANYTHING. Our Sections across the country have one in every Section. I HAVEN'T BEEN ABLE TO FIND ANY OF THEM BEFORE 1935 OR SOMETHING LIKE THAT.

CAN I FIND OUT FROM YOU WHETHER THERE IS A SECTION IN BOSTON OR AROUND BOSTON? No, there isn't. We have some members in Rhode Island and New Hampshire. We have a Unit in St. Johns, New Brunswick. We have members in Newfoundland, I'll take you over to the house later and show you some photographs we have of Sections up on the wall. We're strongest in the central manufacturing areas of United States and out on the Pacific Coast and in Western Canada. I spoke in Boston several times.

Take a look at those names. That was the original committee of the T.A. in 1919. Ackerman was the architect of Cornell University and other big buildings. Dr. Alsberg was Chief Chemist of the Bureau of Agriculture. Allen Carpenter was a doctor and surgeon in New York. Comstock was head of the Comstock Engineering, still the biggest electrical contractors in New York, They did all the electrical work at the World's Fair. Stuart Chase, you know. YES. Stuart Chase, when I met him first, was an accountant in the Federal Trade Commission in Washington. I pulled him out of that, and he wrote his first article in the office of The Technical Alliance, and he worked on the Railroad Brotherhood Report. Alice Barrows Fernandez -- Dr. Barrows was Deputy Commissioner of Education of United States in the

Department of Education in Washington. Bassett Jones, an electrical engineer, was a member of the firm Myers, Strong and Jones, consulting to General Electric, Otis Elevator, and co-inventor and developer with Clarence Birdseye of frosted foods. REALLY? Robert H. Kohn -- what was the official name was it? The American Institute of Architects -- anyway, he was president of the Institute of Architects. Benton Mackaye, when I first met him, was in the Department of Forestry. I pulled him out of that. His brother was Percy Mackaye, the dramatist and the poet. Benton Mackaye later went on to lay out and publicize, he's the creator of the Appalachian Trail. Leland Olds, a statistician, became Secretary of the New York State Power Authority, and Roosevelt made him Federal Power Administrator. Charles P. Steinmetz, of course, was General Electric. Tolman, Dr. Tolman, at this time, was head of the Fixed Nitrogen Research Laboratories in Washington, D.C. He became Dean of Physics at Cal Tech. He's the one who taught Oppenheimer and all the rest of them, and in the war he was Atomic Representative of the Combined Chiefs-of-Staff for United States and Great Britain and co-Administrator Vanderbush in all your science. John Carroll Vaughn was a great surgeon, head of the Vanderbilt Clinic. Thorstein Veblen you know. Whitaker was editor of the Architects Institute's Journal. So, you had quite a collection started.

Now, while we're at it -- you've got it right there -- you see what Roosevelt did was he grabbed off anybody that had any association with Technocracy in some way or other. Leon Henderson was made Price Administrator. Leland Olds was made Power Administrator. Oh, what's his name? He and Stuart Chase did most of the work on our report to the Railroad Brotherhoods. I can't get his name out when I want it. He became Deputy Chief of ODT, Office of Defense Transportation, during the war.

WHO WAS THE PERSON WHO TOOK THE NAME OF FRANK ARKWRIGHT TO WRITE THE BOOK?

Oh, I can't think of his name. He was in Harper & Co.

I READ SOMEWHERE THAT HE WAS A WELL-KNOWN JOURNALIST, BUT NO ONE EVER SAID WHO HE WAS.

He was one of the top men in Harper Publishers. We lent him books, and we spent \$92.00 additional to buy him additional books

to read up on it. I didn't have time to write.

NOW, WHAT HAPPENED IN 1933 WHEN YOU LEFT COLUMBIA? I GUESS YOU JUST WENT BACK TO THE OFFICES OR USED THE OFFICES ON PARK AVENUE THEN.

Yes, we were using that, and we had an office on Madison Avenue, and we had an office on third Avenue, and then we moved into the Commerce Building, where we stayed from 1937 to 1950. How many years is that? THIRTEEN. Yes, 13 or 14 years, and we left the Commerce Building and came out here and bought this farm.

WAS THERE, AS THE NEWSPAPERS PLAYED IT, THERE WAS A BIG FEUD OR A BIG SPLIT BETWEEN YOU AND THE PEOPLE AT COLUMBIA.

No, what happened was that the Society of Arts and Sciences gave this annual dinner which they usually give, and the dinner was held at the Hotel' Pierre with a radio hook-up clean across Canada and United States and in shortwave to the rest of the world. Well, the pressure was on, and Rautenstrauch had agreed to introduce me with five minutes of introduction. Then he wanted, that is, they arranged that two months before, and then he comes through and wants twenty minutes to explain what his position was. You'll find it in the Herald Tribune where Leon Henderson and a couple more -- we asked them to resign -- and they resigned; of course, they thought they were going to take the research away from Technocracy. Well, they didn't do any such thing, and one group offered Rautenstrauch a quarter-of-a-million dollar endowment to continue the research, and they also offered him the position of being head of the Industrial Conference Board, but then he declined that when he found out that he would sacrifice his University pension if he took it. Besides being Dean of Industrial Engineering at Columbia, he had three or four very nice industrial consulting accounts, which as a University professor he could hold, but as head of the Industrial Conference Board, he would have to relinquish those; and his income from the consulting accounts was higher than that of his salary at Columbia University. It's all very complicated, you see. HE STAYED AT COLUMBIA? Oh, yes. So, he resigned. The only one at Columbia that still remained with us was King Hubbert and one or two lesser individuals.

DURING 1963

WHAT DID YOU THINK OF THE REACTION OF THE BANKERS AND THE PEOPLE WHO BECAME VERY INTERESTED IN IT?

That was very typical. They didn't know what it was, and the press broke it. Then they went for it. When they discovered that it was really radical and revolutionary -- in other words, we consider Communism so far to the right that it's bourgeois -- instinctively, they were correct. Their instincts were; they didn't know what it was, but when it dawned on them what we were designing was far more revolutionary than Socialism or Communism or Fascism, then they flipped right over. You see, they proposed to us that they would set up a committee of one hundred and would endow us with plenty of money if they could edit anything we turned out. We declined the platinum handcuffs. Maybe we should have taken the money. I wouldn't say we were necessarily correct in one sense. Does that answer your question? YES.

THERE WAS MENTION IN SOME OF THE ARTICLES I READ OF A SPECIFIC SORT OF PROPAGANDA CAMPAIGN AFTER THE PUBLICITY BROKE IN JANUARY. Whose campaign? BY TECHNOCRACY INC. No, we went on a speaking tour across the country, and we organized Sections. That was 1934. THAT WAS MUCH LATER THEN. Yes, but you have to get the picture straight: The Roosevelt Administration set up this national potential product capacity survey, and they grabbed off Montgomery Schuyler, Felix Fraser, and some more, and they started to write deviations known as the Continental Committee on Technocracy. THAT WAS A SEPARATE ORGANIZATION? Yes, we had a continental committee, but they grabbed the name. We applied for incorporation in 1932, but the political interference delayed the issuing of the charter until 1933, and that was only done because the firm of attorneys threatened to issue a writ of mandamus on the Secretary of State in Albany, New York, to show just cause as to why it shouldn't be, and it came forthwith in a hurry. Our attorneys were Cadwallader, Wickersham and Taft. Strange bedfellows. It really is -- there's a lot of interesting stuff involved in all of this.

WHAT WAS THE NAME OF THAT ROOSEVELT ADMINISTRATION THING THAT YOU JUST MENTIONED?

The national potential product capacity survey. Now they were put on the federal payroll to make this survey, and they went out across the country speaking on the Continental Committee

of Technocracy. They had some financial backing besides the federal government. We stopped it because Harold Loeb was also on this national potential product capacity survey -- he never was a member of Technocracy -- he wrote "Life under Technocracy," and we refused to approve it, and three or four big publishers turned it down because we did; but he was employed on the federal payroll. He and Felix Fraser went out speaking across the country, and they got a professor out at Marquette University and somebody out in Denver and a woman up in Seattle -- woman lawyer -- and when they got to Canada, we found out what their federal payroll numbers were and sent their federal payroll numbers to Canada. They had crossed the boundary line, and you can't cross the boundary line as a federal employee of either Canada or United States or vice versa and speak on another subject. That's contrary to law. So they were stopped, and the Continental Committee was closed up by the postal department -- U.S. Post Office. That was in 1933 that they did this, right after Roosevelt took office, and that national potential product capacity survey was under the chairmanship of Langdon Post, and Langdon Post married -- who was the millionaire cartoonist -- he only had one child, a daughter, and Langdon Post married the daughter. HERSHFELD, THE ONE WHO DOES THE NEW YORK TIMES CARTOONS? No, he was one of the first cartoonists of strip comic things. He made a million or so out of it, a couple million. Langdon Post gave me a dinner at this apartment on Park Avenue, which was attended by Walter Lippmann, Roy Howard, Ken Cooper of the Associated Press, and a whole slew more. You see, we were naive. We didn't know who the political hucksters were, you know. It's very interesting, because we had to get educated, too, not in what we were doing but in what we had to battle. We could design any kind of scientific, technical or engineering apparatus, but our contacts were not with the political or financial.

DID YOU HAVE ANY TROUBLE WITH THE SOCIALIST OR COMMUNIST ORGANIZATIONS AT THAT TIME?

Very, very little. They later attacked us. The two chief attacks were the Communist party, some Socialists, and the Roman Catholic Church; in fact, the Roman Catholic Church lifted -- there was a series in the WORKER in which they had photographs when they attacked us, trying to make out we were fascists, you see. Well, the Catholic press reprinted that thing, comma for

comma, never once admitting that they had taken it from the Communist Press, and published it simultaneously in 47 Diocesan papers. And yet a year before, the Jesuit Catholic America had advised every Catholic engineer to join Technocracy -- that's before the flip-over, but there aren't many Catholic engineers or scientists. Relatively few; in fact, the smallest percentage. The Jewish have quite a high percentage of mathematicians and so on, but the Catholics go in for law.

DO YOU THINK IT'S BECAUSE A LOT OF THEM GO TO CATHOLIC UNIVERSITIES?

Yes. Your old university in Europe was what? They went in for the arts, history, law, or logic, but not science, and you have the same way here. They tried to pick it up and modernize it here, but it isn't comparable to a modern engineering scholar.

WHAT DO YOU THINK WAS THE TOTAL EFFECT OF ALL THE PUBLICITY IN 1932 AND 1933. DO YOU THINK IT WAS BAD FOR YOUR ORGANIZATION?

Bad and good, depending on how you view it. If we had had a big office staff and a publicity thing, we could have handled it all, but we only had one typewriter; and when mail poured in by the thousands and telegrams by the thousands, we simply didn't have the facilities to handle such a mass impact. The press was running wild. So was every writer and everything else. You see, Stuart Chase wrote a book right at that time. He didn't come to us, but he had three chapters or more on Technocracy, and the publishing company called us up and he had to take the three chapters out. HE DID WRITE A SHORT PAMPHLET ON IT? Oh, yes, and he went on a speaking tour across the country, and the big speaking tour agency publicized it at \$2.50. THAT ACTIVITY WAS APPROVED? Oh, no, these people -- everybody stepped into the act to get aboard the gravy train, and we had nothing to do with it. They had a wonderful time for about a couple of years. You see, when they flipped over to the attack side, then they tried to bury us. You see, Technocracy has really been dead -- we're zombies.

I REMEMBER READING -- I THINK IT WAS A BOOK BY A COUPLE OF COMMUNISTS WHO CLAIMED THAT THE COMMUNIST PRESS WAS WHAT STAMPED IT OUT.

They all claimed that. They never stamped it out. In other words, we didn't have any endowments or rich angels. We didn't have subsidies from foreign governments like the Communist Party. So we have existed on our own -- membership dues and our literature. At the time of the publicity, we were only a relatively small group. Today, we are spread out across the continent.

HOW MANY MEMBERS DO YOU HAVE NOW?

We never make a statement on membership -- never have and never will. It's just the same as when we introduce anybody on the platform, we do not engage in eulogy of who he or she is, just that they are an officer or a Director or so on of Technocracy. We have our own printing plant. We own some nice Section buildings. We have some little Section headquarters. We have some that are as large as a supermarket -- all depending on where it is. You have to have 50 members to be chartered as a Section, with eleven on the Board of Governors. They are elected every year. On the Continental Board of Governors, there's twelve," and three are elected every year, so there is a four-year term.

YOU ARE NOT STILL ENGAGED IN THE SAME SURVEY THAT YOU WERE ENGAGED IN IN THE ENERGY SURVEY?

It's all energy determinants, you see. In other words, what was the picture? Not a financial picture, but the physical picture. Well, we've been proven correct. We came out forty years ago, and we stated that the farms of United States would decline in number and increase in size. We also wrote a report on the iron ore, hematite ore, in the Mesabi, that the viable, economic feasible ore of the Mesabi, that the Fe content would decline as a function of depth -- I'm quoting now -- and that the Si, silicon, would increase as a function of depth, and that the economic feasible ore would be exhausted by 1950 if there were the same continuous growth of consumption in the steel industry of United States. Well, of course, the depression held it down, and she didn't kick off until World War II again, but Mesabi is gone right now. And copper -- we're in a sad way, because practically all the copper mined in United States is .8 of 1% or less. Our lead and zinc, petroleum are only doing 11 barrels per

well per day, and we've been kidding ourselves that we find new reserves; but Iran, for instance, their barrels are 10,000 barrels per well per day -- not eleven. You see, what we contended then was that machines made jobs for machines, and only machines could produce machines, and if you kept on installing energy-consuming devices, you would finally arrive at the point where you would not require the services of the majority of the able-bodied adults in United States to produce and distribute the physical wealth. It would be done by a minority. That statement is decades old. This is fundamental stuff which they don't want to deal with in the propaganda against us. Now, of course, they are announcing from Moscow that the new administration in Moscow are Technocrats. Yes, Marvin Kalb on CBS from Moscow -- the Technocrats have taken over Moscow. It's nonsense. The idea did go abroad in the thirties with no help from us and no affiliation. You had the Deutsche Technocratic formed in Germany by a number of prominent German scientists and engineers, and they published the TECHNOCRATIE Magazine -- good paper, good photographs. You had the Czechoslovakish Technocratic of Smolensk published in the Engineering Institute in Prague, and the in the Hague in Holland. The Norska something or other in Norway and Sweden. In Belgium you had this chap ran as a Technocrat and he scored more votes than the Fascist, Rexus Degrelle.

Now, in Italy, Mussolini started out first he arrested 27 engineers and scientists and threw them into prison in Le [Pari] -- that's a prison island. One of them was the son of the Italian Consul-General of Switzerland, to give you an idea. Well, when the Allies liberated Le Pari, they took them over to North Africa, and, lo and behold, they weren't soldiers; so, they didn't receive the status of military prisoners. There they were starving to death in North Africa in Allied hands. They weren't soldiers; they were political prisoners. Well, when Hitler came into power, he promptly squashed the Deutsche Technocratie, and when he took over Czechoslovakia, the Technocratie Smolensk in Czechoslovakia was .... some of them escaped, some of them died, and right now in France, you have the -- I'm trying to think of the name -- you have this organization that even carries our literature on their list in France, and they broadcast every once in a while, and they publish -- there are two organizations, one is political and the other isn't, Le L'Abondance, movement for abundance, and Jacques DuBoin is the head of it. So, it survived even the war. But please understand

that we had no part in setting up any of that -- it just mushroomed, that's part of it. We never had any contact with the Russians, and so we don't know anything about that, but to say that there are Technocrats in Russia or in France under DeGaulle is nonsense.

WELL, DID THEY MEAN IT SPECIFICALLY IN REFERENCE TO THIS MOVEMENT?

They're using the term, you see, for planning and design. Anything that is national design now is synonymous with Technocrats and Technocracy, you see. Of course, it's incorrect to use it that way, but that is partly done to confuse it, especially when they are French Catholic writers.

DO YOU HAVE ANY IDEAS ON HOW SOON THE TECHNOLOGICAL UNEMPLOYMENT WILL REALLY REACH .... It isn't only unemployment, you see. Let's see if I can give you a picture. In 1920, John L. Lewis had 780,000 bituminous coal miners. Today he has only 235,000. True, John L. Lewis and the coal operators have raised the coal mining per man to the highest in the world -- 8 to 14 tons per man, but the new machines coming in do 8 tons a minute. In other words, John L. Lewis isn't going to have 235,000 very much longer. Your American railroads had 2,140,000 in 1920. It's now down to less than 800,000, including station employees.

WHAT ABOUT THE FEDERAL PROGRAM TO RETRAIN PEOPLE LIKE IN THE COAL MINE DISTRICTS IN VIRGINIA? Look, my dear, the trouble with all of this is that any philosophical approach, any moral approach, any humanitarian approach is invalidated utterly and completely by the technological progression of the next 30 minutes! That is what they cannot see. They are thinking in terms of dollars, economics, and balance sheets when it's a physical problem. Now the consolidation of railroads that is coming up will trim another 200,000 employees out. Well, there will be no future for the youth of America in railroading, coal mining, chemicals, cement -- you can go on down the line. Your Ideal Cement Company today has beautiful new plants, which are operated by tape, and there's only one man per shift required to operate the giant cement plant.

Now, the same thing is hitting your white collar workers. The steelworkers have lost 200,000 employees in the last ten

years, and they are now firing 5,000 to 8,000 white collar -- they're no longer required. This is the kind of material you're looking for, is it? You see, we brought this out years ago, and we were considered a little crazy, you see; oh, it will never happen in our time, maybe sometime, but not in our time. Well, it's happening,

WHAT ABOUT THE IDEA THAT PEOPLE WHO WERE PUT OUT OF WORK COMPLETELY BY TECHNOLOGICAL IMPROVEMENTS WOULD BE ABSORBED IN NEW INDUSTRIES WHICH ARE JUST DEVELOPING?

No, you did it temporarily in the services in the last fifteen years, commission selling, advertising, publicity, welfare, all the services did increase several times; and that glossed the real situation over because it appeared to be a factor of stabilization by absorbing them, but that has stopped. Your new industry today has technological equipment never dreamed of twenty years ago. The Russians are running into the same thing. You are running into it in Britain. British unemployment is rising, and it will be 3/4 of a million to a million by June.

BUT HAS THE UNEMPLOYMENT RATE REALLY RISEN SUBSTANTIALLY IN THIS COUNTRY? IT FLUCTUATES.

It's risen, but only unemployment figures matter. Only those who are registered as unemployed are drawing unemployment compensation. All those who came out of school and never had a job aren't registered, and those who have run out of their compensation. We have several million people holding two and three jobs, and that's recorded -- each job is recorded -- well, but you've got 2-1/2 million people. Now that's a misnomer. It gives a fictitious total. The Canadian and British statistics are much more reliable than those of United States.

DO YOU HAVE INFORMATION ON THE DIFFERENCE BETWEEN THE FIGURE THAT'S DRAWN UP FROM THE UNEMPLOYMENT ROLLS AND THE REAL FIGURE OF UNEMPLOYMENT?

The real figure would run near 8% in United States, if you are including those who are washed out and those who are looking for work but never had a job.

CAN'T THEY ACCOUNT FOR THEM BY PEOPLE WHO ARE ON RELIEF?

WOULDN'T THEY BE COUNTED THAT WAY?

Well, that cushions the effect, but then they're not getting sufficient money to purchase the increasing production. You see, your physical output is rising with less and less man-hours all the time and less and less employment. Take this last year, '62, what happened? The production went up, but your manufacturing employment in United States did not increase. Steel production for 1962 is barely 400,000 tons more than 1961, in spite of all the money pumped into the economy. Now, we didn't make these figures.

DO YOU HAVE ANY SPECIFIC IDEAS ON WHAT WILL HAPPEN, SAY, IN THE NEXT TEN YEARS?

Oh, yes. The moment that your energy consumed per capita rises to a certain figure, then you can no longer employ the majority of working adults; in other words, you can produce abundance and distribute it with a minority of your working population. Well, then you'll have to pay everybody whether they work or not the same amount. It's going to be rather complicated under this social system, isn't it?

DID YOU FORESEE THE CRASH IN 1929? Oh, yes. DO YOU THINK THERE WILL BE ANOTHER .... ? Not of the same kind. In July, 1932, I predicted that the banks of United States would close on or before April, 1933, and the Attorney-General of the United States under Hoover wanted to move for my indictment on the basis that I was making statements inimical to the safety of public institutions. In the last of February, 1933, I was speaking -- I was the first speaker on the platform of the National Education Convention in the big auditorium in Minneapolis, and Dr. Glen Frank, who was then President of the University of Wisconsin, was to follow me on the platform. Well, I made the same statement, and when I got back to the Curtiss Hotel, the Mayor of Minneapolis and the District Attorney and Attorney-General were all there. Here I'd made statements, because people started going out of that auditorium like this. I asked them if they had return tickets and if they had any money in the bank to wire home to withdraw the money. They really came up with intentions of arresting me. The only thing that stopped them was that the manager of the hotel called up the suite and said, "Mr. Scott, the extras have just hit the street. The Governor of Ohio has

HOWARD SCOTT INTERVIEW  
WITH RADCLIFF STUDENT

DURING 1963

closed all the banks in Ohio!" The difference in time between Columbus, Ohio, and Minneapolis was one hour. That did it. I said, "Send up 100 copies."

When you get the picture of the Roosevelt Administration with all these people in it -- I'm still trying to think of what's-his-name in the ODT. He was Engineer for the Baltimore & Ohio Railroad when we got him

APRIL 4, 1963

"THE CONTINUING CRISIS"

What are the fundamental components and the dominant characteristics of the continuing crisis, both here in United States and around the world? Let's see if we can bring a few of those into perspective.

In the last sixty years, this country and this world of ours has experienced more social change than all previous history. It has consumed, especially this country, more mineral resources than the previous 5,000 years of social history -- in 60 years. Well, you'd hardly recognize it. Back in the '90s and 1900, the transition was just getting under way. After World War I, yes, it started to become a little visible. Then you had less than 5 million automobiles, and 12 million telephones, 13 million kW installed capacity. What did you have last year? Instead of 12 million telephones, you had 77 million in United States. You had practically 198 million kW. Horses? There were practically 23 million in 1918. Last year, there were under 3 million. The horse that had been with the human being for thousands of years is fading out. Automobiles, power, trucks, installed horsepower of prime movers have reached prodigious numbers.

Farms, yes, they once were close to 7 million in United States. There are now 3.4 million farms, and the farming population today represents only 8% of the total. One person working on the land today feeds 26 to 27 off the land, but in case you think that has reached something, just wait a while, because 26% of the farms in United States according to the United States Department of Agriculture produce 74% of all the agricultural and fiber production of this country. Therefore, 3/4 of the farms now operating could be done away with, and we could still produce more than we are producing now. So the cities are due to receive more farmers from off the land. Remember there never was any sense of the farmer on the land anyway. You never got anyplace until you got them off the land.

The same thing with coal mining. There never was any sense in the human being mining coal. You never got them to go anywhere until you got them out of the coal mine. Back in 1920, John L. Lewis had 780,000 coal miners mining bituminous coal alone. He

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

and the coal mine owner and operator did raise the productivity of the American coal' miner to the highest in the world: 8 tons per man per day. Well, that's fairly sad, because the new machines coming out mine 8 tons a minute, and John L. Lewis only has 235,000 coal miners left and has reached the sad position where the. Presbyterian Church in the State of Kentucky is taking over ten of his hospitals because the United Mineworkers of America can no longer handle the operational costs of those ten hospitals.

Railroading -- railroads in 1920 had 2,140,000 employees. Remember when it was the thing to do to go down to the railroad station and watch the express go through? All the kids wanted to run one of those iron choochoos, that or be a fireman. Today, the employment in the American railroads is less than 800,000, from 2,140,000 to 800,000, and when the mergers that are now on the boards are consummated, there will be less than 500,000 total railroad employees in U.S.A.

The steel union had a peak year in 1955. Since that time, it has lost 182,000.

The United Auto Workers are losing them fast.

We once had militant, organized labor in United States, and now what have you got? They are just as dumb as the Board of Directors of the General Electric or, more appropriately here in Cleveland, the Hanna Corporation, the Republic Steel, and all the others. They are tactically smart but strategically stupid. Why not? American labor built up big funds, big organization, but they predicated their actions and their policy upon everybody having a job in their particular union -- not everybody in United States. They went in for job benefits and retirement for the particular steel industry or automobile or something else. It was nontransferable -- you know that -- with the result what? Modern technology coming in, employment today is a continual declining proposition from now on out. So that union strength will decline proportionately. Has organized labor a future in United States? The answer is no, not because the leadership is crooked -- not a bit, but because they failed to recognize strategic objectives cannot be obtained with that kind of organization. You can protect the retirement fund, yes. You can give a little security to those who have a job now, but as death and retirement and

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

other reasons reduce the working force, the working force is going to get less and less and less. It's not the fault of the labor leader. It's the fault of the structure and the concepts of 99.9% of Americans. You are advocating a job for everybody. How damn dumb do you have to be? Nobody ever made a financial success working, did you? It wasn't until you got a lot of slobs to work for you that you succeeded or got elected to political office.

The progression in the near future is going to be faster and greater than it has been in the past. Outside of Chicago, Libby McNeil & Libby have erected a brand new plant, a beautiful administration building, nice grounds, a beautiful little lake in there, the speed is so fast that that plant has to have its own can plant. They bring in the big bundles of strip steel and they make the cans right there. Why? Because the speed of any one line there is 800,000 cans in 7 and a fraction hours -- 2,500,000 cans per line per day. The entire process of measuring, weighing, cooking, sterilizing, canning, and everything else, into the cartons, the cartons into the railway car or the truck or stacked 20 feet high on the pallets. What is the employment? Three persons per shift, that's all, baby, three.

Oh, well, let's move up to the next one. One of the biggest cement companies in this country is carrying full-page ads of the beautiful cement plant. Right there in the middle of the next full-page ad is the same plant, but inset is the control. The advertisement of that big cement company is that they have achieved a technological breakthrough and that they are now able to reproduce any type of cement specification a billion times over with accuracy and no miss. It's all on tape; it's push button. Twenty-four hours a day -- how many people run it? One man per shift. Remember the old herpicide ad in the old barber shop where you had the three figures with little hair and a comb? Going, going, gone.

Since the war, the United States has covered it up pretty well, because this economy of ours is a warfare-welfare economy, part laissez-faire and part managerial. We have used the Cold War as an excuse to vote funds in the billions. The budget is up to almost \$98 billion. We have produced so many bombs and missiles that we could overkill certain parts of the world 4,000 times. This is printed and admitted; in fact, it is getting so tenuous that we don't know where in the devil we're going to store all

this stuff if we keep on producing it. All of this has been made possible by the propaganda of the Cold War. We've poured in money -- \$104 billion since the war not counting military expenditures. If we'd pumped that amount of money or half of it into this country and this continent, we could have rebuilt the country and the continent. And what have we gotten for it? The United States is being compelled to withdraw this year from Iceland, from the five bases in Morocco, and the Jupiter missiles will be withdrawn from Turkey and Italy. Even the wops don't want us any more. They've gotten their belly full.

Now, those five bases in Morocco cost us a terrific sum. So did the bases in Turkey. We have engaged in adventures, both military and economic, that are without parallel in history. We've dumped money down more damn ratholes around the globe than all other civilizations combined, and yet, this country complacently goes out and votes in the national elections just the same. Bear in mind that it was the Republican Party and the Baptists down in the southern states that elected Kennedy. Kennedy never would have had a chance if the Republicans hadn't ran that rat Nixon. So, you can pride yourself that the Republican Party and the Southern Baptists are responsible for that Irish Mafia from Boston moving into the White House. I've had two press interviews, one yesterday and one today, and when things like this were said -- remember, we record it on tape -- the reporter and the photographer, they didn't know about this, said it was political dynamite, and they couldn't put anything like that in a Cleveland newspaper. Well, certainly not, you couldn't put in a newspaper anywhere in United States, except TIME MAGAZINE has used the term, "the Irish Mafia." So, it's in print, ladies and gentlemen.

What is the rate of growth in United States? It's 2-1/2 percent per annum. The rate of growth is not great enough to take care of our population, let alone the liquidation of employment by technological advance. You know Lewis Carroll, the great mathematician, wrote Alice in Wonderland and a couple of other things. He wrote them mainly to explain mathematics to children, and if you'll remember: The Red Queen said to Alice, "You must come from a very slow country, because here you have to go faster and faster to stay where you are, and twice as fast to go anyplace at all." Now, we're exactly in that position. The United States, forty years ago, 60 years ago, yes, no one thought that

the petroleum resources of this country, the copper, the lead, the zinc, the iron ore, no one even questioned it except a few Technocrats back in 1920 -- that's all. Well, where is it? Where are we? Have we got illimitable petroleum resources or copper or lead or zinc, iron ore? No, we have not. The great Mesabi iron ore which was 51? Fe is gone. We couldn't fight a World War III that consumed as much iron ore as World War II from Mesabi. It just is not there. We are importing iron ore from a dozen to eighteen countries. We are importing petroleum -- almost 2 million barrels a day. We have drilled a lot of wells in United States. We're not discovering any new oil fields. We are living on borrowed time. The yield of oil wells in United States is less than 11 barrels per well per day. Bear in mind, those are operating wells. All the other wells are dead. In Iran, there are 82 wells operating, and they do 10,000 barrels of petroleum per well per day. Just a thousand times per well of United States.

We here in this country have been living in a fool's paradise. We thought when we moved out into the suburbs, we had arrived in the promised land. Well, brother, it was promised all right -- only you didn't get the No. 8 halo and the No. 9 harp. That's the only thing you didn't get. You got everything else. So, we pile it up with 30-year mortgages, installment buying. You can now buy automobiles on 4 and 5 years, and the loaning company will loan you the money to make the down payment. You go out and build -- a builder -- a ranch house for \$20,000. Well, he won't net much more than \$4,000 on the sale of that house, but sold on a 30-year basis at 6%, how much will the total payments be? In excess of \$50,000, am I not correct? Therefore, the finance company -- that does nothing in the building of a house -- will make many times what the builder who builds it will make. The same thing in financing a car. Your loans are on the basis of 16%. So it's become more profitable to finance the damn thing than it is to build it. I mean, what kind of dupes are we?

The young couple today -- the bride wants a house with everything in it, from picture windows to dishwashers. She says, "All right, Jimmy, you get it. We've got 30 years to pay for it." Her grandmother says, "We didn't have anything like that. All we had was a wooden wash bucket or a galvanized one or a washboard." She says, "Grandma, quit kidding yourself. That was your time. This is our time, and we're going to ride in on it." The young one is correct, but where does it go? It isn't going where they think it

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

is.

Now, here's Washington, your press, your radio, and your TV advocating a greater expenditure on capital goods. They are advocating reducing the total expenditures on war materiel so that they can have more billions available to throw into the modernization of American industry. Well, that's wonderful. The more billions and the more equipment you throw in, the less and less it will employ to make more and more. So the youth of today and tomorrow can look forward to what?

There are 17 million human beings in United States that are over 65. It's increasing at a million a year. In 1965, the total number is going to exceed 20 million. There are 22 million women working in United States -- almost 23 million. Thirty-six percent of the married women in United States are working, along with their husbands. Now comes the interesting thing: according to the United States Department of Labor and U.S. Census, only 54% of the total employed in United States off the farms work 50 weeks in the year -- only 54% are fully employed. This in the most affluent country in history and the most affluent on earth; yes, the affluence is for about 6 million on the top, and there are 77 million at the bottom that have less than nothing. Welfare and relief are increasing in the various big cities. They will continue to increase. Right now your time is taken up with the so-called battle for political rights for the negro in the south. It doesn't make a damn bit of difference whether you give him political right and freedom unless he has the economic rights. Remember when women didn't vote and you advocated women suffrage, and when the women got the vote, it was going to clean up the political parties, the local government, and you were going to have just and honest government in United States? Well, the women got the vote. Did you get any different kind of government? The hell you did!

I'm not in any way opposed to the negro getting the vote, no, don't misunderstand me; but we're creating all this ballyhoo over rights, freedom, and give them the vote. The vote to do what? The vote to remain the same as they are? Until you grant economic equality, regardless of color, there is no sense in talking about it. You can give them the vote, and they will vote themselves into the same stupid nonsense they do now regardless of whether they are black or white.

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

Just to be funny about this -- how many people in this audience voted in the last federal election? Come on, put your hands up. You see what I mean? You got what you voted for, didn't you? Don't tell me you voted for the other one. It doesn't make a damn bit of difference who you voted for. You voted and you got what you voted for.

Of course, you have labor organizations and the communists hollering about jobs, eulogizing the worker. Technocracy doesn't eulogize the worker. It wants to eliminate toil. Any repetitive work is stupid. What do you suppose the machines are for and technological processes? The only reason they came in is because they reduced the costs, and when more machines go in, they'll lower the costs more. Eventually, of course, it isn't far away, we'll produce abundance in this country with a minority of the healthy, able-bodied American worker, black, white, brown, and green; and the majority of the workers will not be employed. Well, then comes the problem: you'll have to pay the majority of unemployed as much as you pay the minority of the employed. That's going to get complicated, isn't it? These people who talk about giving workers a job, Technocracy says to hell with that! Let's give everybody a guaranteed standard of living. Let's eliminate the toil. There's no sense in it anyway.

Now comes the interesting part in this economy, or any other large economy. If toil is eliminated, the bourgeoisie go down the drain, too, with the Fascists and the Communists. They all go down the drain. Didn't you ever think of it that way? It's a new way of looking at it, isn't it? In other words, under a Technocracy, there would be no second-class citizens. They would all be first-class. You wouldn't have an affluent society with 6 million at the top and 77 million at the bottom with less than nothing.

Where is all of this driving? Yes, we have missiles, we have atom bombs. I was asked yesterday and today by the newspaper reporters how United States could catch up to Russia. I said, "that's very simple. All we have to do to catch up to Russia is for United States to give Russia everything that we have, and the Russians would be three years behind us." Some people can't appreciate our sense of humor. [Applause] Thank you.

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

United States, as you know, has been the great steel producer of the world, the great oil producer, and, as Carl Sandburg said, "We were hogbutchers to the world." The Big Five packing plants have moved out of Chicago. We're losing out even in being hogbutchers to the world. There was a time, only a few years back, when United States exported 1.5 billion square yards of cotton goods. No more. We don't export; we import it. You know those blouses and the shirtwaists you get from Japan? Where do you suppose most of the bras are made that are brought in here? They are made in Hong Kong, ladies, and Japan. That uplift, you know, that I'm talking about, has to come from abroad now. We haven't got any homemade any more.

United States Rubber was the company that developed the crepe-soled Ked shoes and advertised it around the world. It may surprise you to know that the world's largest producer of Keds is not in United States -- it's in Red China.

The U.S. led the world in a number of things. She's slipping. True, we have a steel capacity in United States in excess of 140 million tons annually. Last year, we did 98 million tons. The Russians are coming up. They did 84 million tons, and the Russian bloc did 127 million tons, and Western "free" Europe only did 80 million. Their rate of growth -- the Russians -- is between 8 and 11%.

The Chinese are building things bigger and larger. They are building 3,000-ton blast furnaces and they are even proposing 5,000-ton blast furnaces.

A few years back, nobody ever thought of coal production anywhere outside of United States amounting to anything. European coal production is shrinking and will continue to shrink. Your French and Belgian mines are thin-seamed and steep-angled. Your British are out under the sea. Now remember. Technocracy has been hammering this at you for over 30 years. The whole of Western Europe is only a little over 200 million. Who is the world's greatest producer of bituminous coal? The U.S.S.R. -- 568 million tons last year. Is United States second? Well, who is second? Why, those lousy Red Chinese now produce more bituminous coal per annum than United States. Something's wrong, isn't it? We only did a little over 400 million, and the Red Chinese beat us.

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

Last year, Russia became the world's second largest petroleum producer, passing Venezuela. They are moving up. They are going to move up in pineapples and wheat and other things -- cotton. In case you are interested, you can get the Department of Agriculture figures, and you will find that last year the Russians produced over 2 billion -- not million -- over 2 billion bushels of wheat. That's a little more than we did, isn't it? Correct. And the Chinese are going to hit around a billion bushels of wheat a year if they have any rain. Of course, if they were starving the way everybody says they are, the Chinese wouldn't have to put in birth control. You'd just starve them off.

Those great factors, those components, that are the imperatives in the continuing crisis here and abroad are water, arable soil, mineral resources, energy, technological equipment, the population explosion, and social revolution. Social revolution is with us for the first time in history -- Russia, China, and, to a small extent, in Cuba. United States had a political revolution. It never went beyond that. The French Revolution was sabotaged by that great counter-revolutionist Napoleon Bonaparte, one of the most vicious bastards in history. Yes -- he started it way back in his career -- he slaughtered the 8,000 Turkish prisoners at Acre in cold blood. We know it -- we have all the facts. He delayed the coming of the metric system over 50 years. He was going to consolidate Europe into the Holy Roman Empire the same as Felipe Segundo, Charles V, Louis XIV, and Hitler. We'll hit you with it. Napoleon marched 600,000 into Russia along the Smolensk Highway. They were the best trained, best led, fighting army that Europe had in all history. The Russians were unorganized. They didn't even get a chief command appointed except a few days before the Battle of Borodino when Kutuzov was appointed commander-in-chief. But in spite of all that, the Russians had enough sense to fight and leave the city and keep their armed forces intact. Quoting from Napoleon, "On September 12, 1812, ma cher amie, it is as warm here today as a day in Fontainebleau." There was no snow. Of that 600,000 that he took into Russia, there was about only 140,000 French. Coming back, his engineer corps stood in the water and held up the plank bridge -- in Poland, not in Russia -- for Napoleon to drive across in his carriage. When Napoleon got back, there was only 60,000 left. Napoleon was defeated in Russia and not in Waterloo. He had nothing left with which to fight. But remember that the

Napoleon plan was the Code Napoleon to consolidate all Europe under one church, one flag, and one rule. The reestablishment of the Holy Roman Empire has been the psychotic dream of more idiots in Europe than anything else. Hitler went down the same Smolensk Highway, didn't he? Hitler had divisions where? 2-1/2 million Romanians, 1-1/2 million Italians, 140,000 Spanish in Spanish uniforms -- the Blue Division, the Division, he had 280,000 French, he had 600,000 Poles. What does this sound like? It sounds like the same thing as Napoleon all over again. Only this time, it was 300 divisions and many times the number of Napoleon. Napoleon only had 600,000. This was more like 6 million.

Remember the Western Allies, so-called, Britain, United States, did not defeat European Fascism. That's a gesture. Ninety percent of the casualties of the Deutsche Wermacht and its Fascist Allies occurred on Russian soil. I regret to say this. The Russians killed more Fascists in the Berlin-Neisse River line than the United States, Britain, and France did in the whole operations of all Europe in one single battle -- 155,000 dead.

Unless the powers-that-be can get the United States and the world involved in a third world war, there is only one way out. You're headed towards a redesign and a reorientation of the productive processes in United States, Canada, and Mexico. You are going to have social revolution, at first by default, and then by intention. You can't turn back the tide. You don't have to imitate Russia or China or anyplace else. Americans have brains. The only trouble is that this system doesn't use them. To give you an idea, years ago I rode in a contraption in Jersey. It jumped ditches at 50 miles an hour. It was a heavy armored vehicle. The man who developed it was kind of an oddball, you might say, or that is what the public would call him. He was an inventor and designer. He died of starvation, ladies and gentlemen, in these United States years later. In World War II, Washington wanted to know how the Germans and the Russians got the tank designs of one Dave Christie. They copied -- the Russians and the Germans -- and when certain officials of so-called intelligence asked me during the war if it was possible that the Russians had gotten Technocracy's tank design. I said, "Why, it's quite possible." "Well, how did they get it?" I said, "We gave them to you!" Do you know why they asked that? Because the specifications for our main automatic gun was 120-mm. The

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

Stalin tank is 122-mm. -- a little bit different, huh? Only we had a rocket slot on the back, hydraulic drive -- I'm not talking about clutch, now, hydraulic drive, not geared, transmission. So the German Mark VII and the Stalin tank what? Anybody could have copied it. Where did it come from originally? From the basic perspective of one Dave Christie. Let's give him honor!

You had an American leave these shores years and years ago, couldn't get anywhere. He had an explosive and he had something else. The British make him a multimillionaire and a Knight Baronet. What was his name? Hiram Maxim -- the Maxim machine gun and cordite explosive.

Major Armstrong, the inventor of FM, committed suicide. So did DeGrolier, one of the greatest geologists this country has ever seen. Lee DeForest batters his head against a stonewall for 40 years and drinks himself to death. Oh, we've got some record of achievement in these United States! We can reward any pimple of a gangster or a politician, but somebody who does something, designs something, discovers it, bah! This is what we're facing.

Very nice. Our county government or our municipal government are going to take care of it, aren't they? Well, are they taking care of it? Yes. How are they doing it? Well, they draw the water out of the river and out of the lake, pollute it, and then put it back in the lake, don't they? We're doing that all over the country. There are 104,000 governments, ladies and gentlemen, in these 48 states. The additional two states -- Washington hasn't published the documents yet. But those 104,000 governments have the power to assess, levy, and collect taxes and issue debentures. There are 48 states, 3,027 counties, approximately 17,000 townships, over 16,000 municipalities, and around 52-54,000 educational districts. Did you ever hear of such a jackass setup in your life? Do you expect to coordinate and have some direction with that collection? Every little local gang of nincompoops from hell to breakfast is all being important going nowhere! Only now they do it in a Cadillac -- at your expense.

Well, it's moving, and it's moving fast. Technocracy brought out its million volt DC power transmission system in 1924. Next year, we will have a little anniversary. Russia today is building two 4,000-mile high voltage DC grids. Sweden is also building. The new transmission to interconnect between Britain and France

with power -- there is a difference, remember, in frequency cycles between Britain and France. There is also a difference of one hour in time, and approximately 2 hours 21 minutes in their load peak. You couldn't possibly do it efficiently by having 3-phase AC different cycles running in both directions across the Channel. But one set of DC cables, high voltage, will do it, and you can shift the load from Britain to France or vice versa or from the Continent to Britain. North and South New Zealand are proposing to do the same thing. When we proposed it years ago, your big electrical companies and your engineering societies said, yes, it's technically correct, but we won't need anything like that. Well, if you're going to handle the power of a continent, you have to have the means to distribute it and to control it. A million volt DC will transmit the power from the Big Hamilton River Canyon in Labrador or the Rampart Canyon in the Yukon down below Fairbanks downriver to Los Angeles for less power loss than it now takes to transmit from Boulder Dam into Los Angeles. It's a good thing Stalin isn't alive, because then I'd be in a hell of a spot. He'd probably award me the Stalin Prize for the million volt DC transmission. Then I would be in a pickle, wouldn't I? Well, you can't prevent the Russians from taking it. All your registrations and everything else have all run out. Anybody can do it.

You can go on down the line in everything. The Seaway in Canada is an abortion. The Eisenhower Administration jumped into it because the Canadian Government started to build a seaway on its side. Bear in mind that there weren't any Russians involved in building the seaway in the St. Lawrence. There wasn't a Russian anywhere near it. It was the U.S. and Canada, and what an unholy mess they made of it. And over in Russia, they built a canal from the Don to the Volga. Their water storage was excellent. The canal was a lousy abortion like our seaway, and there wasn't a damn American within thousands of miles of it. This is just to show you that the Communist Government of the U.S.S.R. was just as stupid as the one we have here, and that's some stupid. It takes nearly 11 hours to go through the 8 gigantic locks of the Welland Canal. Those locks are larger than Panama. If that were correctly designed, the 326-foot difference between Lake Ontario and Lake Erie would be done with a hydraulic lift lock, 60,000 tons up and 60,000 tons down simultaneously in 15 minutes.

All right -- is Ohio or any other state that borders the Great Lakes going to clean up all the sewerage and all the pollution that goes into the rivers and into Lake Erie, or are you just going to add more chlorine to your drinking water? You dump in the detergent; you sell detergents. Well, why do they let you? It's easier -- does a cleaner job. You have several types of detergents, that's true. You have sulfonated glycerides to your hard alkyls, but the old soap, you know, broke down chemically, but they do not break down. So, you have nice cakes of ice 3 or 4 feet thick lying along the banks or coming over the waterfalls -- they look like ice cakes. It's just detergent. Does it break down? No. You shove it into the ground down in Florida. They depended on the sea, you see, coming in through the interstices of the coral and, with the bacterial action, breaking down the sewerage. You put in the detergents, and it plugs all the interstices of the coral, and one of these days, you're going to find a dead crab out here and a dead fish. By that time it's going to stink to high heaven, and you had better move to hell out of there.

Down in Pennsylvania, at our place, we had a dishwashing machine and two other sinks, and we noticed some moisture coming up in the drive. We've got the sewer system and the system from the basins --that doesn't go into the septic tank. We dug it up and here it was the -- it looked as if it was full of gray plaster. It was out in the field 200 feet in the dispersal lines. Every darn line was full. It wouldn't wash out. We had to dig it up in sections and plug it out with a big steel band like that with a rotating knob, and then wash it out. That was detergents that were in there -- no sewerage. Well, that's what it does to the underground water system. So, in order to be so Christian cleanly, you just screw up the whole damn works, don't you? And even then, you don't take a bath once a day. Remember the argument I got into years ago with Western Reserve and Case here on the amount of water -- that if everybody in Cleveland took a bath every day, the water consumption would be many times more. Well, that still holds. The water consumption is less, because you are not taking a bath every day.

Now when it comes to population explosion -- I just want to finish this off for you -- population on the globe is 3 billion and over. In 1800, it was slightly over 800 million. In the Middle Ages, 1200-1400, it was 400 million. In BC, it was only a

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

little over 200 million. There used to be waste places on the globe that the human population could migrate to. It cannot migrate today except to the Antarctic and the Arctic. There isn't any livable space really left.

You have the Planned Parenthood League and the birth control and you have others now advocating that something be done about controlling population, but they are all such a namby-pamby group; they want to have it voluntary, don't they? They want to make up their minds to decide to decide not to decide. Well, the human female, you see, has been known for decades -- and there are plenty of cases of it -- where she had, without the addition of drugs or anything else -- had the power to dissolve the fetus -- not induced, no manipulation, no drugs, no deleterious aftereffects; and there is any number of these reported. The biochemists and scientists were puzzled. They finally found out what triggered it. It's odorless, colorless, and tasteless. It is cheap. It has no toxic, cumulative, or side effects. It only requires a minute proportion in the drinking water -- approximately .0004 of 1% in solution, and the four-legged pussycat or the two-legged one -- none of them will conceive. I told you we would fix you. That's the only way to do it -- do it on a collective basis. You stop it, and then you make a decision. If you put it on a voluntary basis, the Hottentots, the Roman Catholics, the Southern Baptists, the Lutherans, the Holy Rollers, or somebody else is going to say, we're not going to do it; so, what? This way it doesn't matter whether you like it or you don't like it. Now, don't get us wrong. If you haven't got drinking water, we can get you anyway, because we can put it in the Coca Cola, the Pepsi Cola, the candy, and all the packaged biscuit, flour, and cake foods. You don't like it? It isn't Christian, is it? No, but it's damned effective. We're not joking. Sweden has offered the technological know-how, but it hasn't the technological capacity. The first thing you know, these damn Chinese are going to build the capacity if this keeps up. I'm talking about the technological capacity.

We haven't got gumption enough to take a position on anything. We have to have the TV turned on in all the restaurants and all the bars. Why do we have to have it on? Because we want to talk, and we don't want the person at the next table or down the bar to hear what we are saying. We're so scared of our own damn shadow that we have become gutless wonders, developing a

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

derriere as a spectator to TV or some of the other games. We're not participants in the games. It would be far better to have 5 to 10 million of the youth in this country who could do a mile in 5 minutes than 5 who could do a mile in 4 minutes, wouldn't it? It would be evidence of a more capable physical setup, but, no, that's the kind of nonsense we go in for.

Is the Republican Party going to move in these directions or the Democratic Party? Oh, no.

LAPSE IN TAPE, APPARENTLY WHILE CHANGING FROM ONE TO ANOTHER.

.... to defeat the slave world, and the Vatican, of course, has deliberately encouraged the propaganda of "Better be Dead than Red!" That's nothing but a tantamount admission to a declaration of a third world war. You don't have to be dead, and you don't have to be Red. You can design a damn sight better system on this continent than either the European Common Market or Russia or China. We have it here. We have the components. All we lack is guts.

---

WHAT WILL BE THE CONSEQUENCE OF RED CHINA GETTING THE ATOMIC BOMB?

One of the sizable deposits of U-238, otherwise uranium, in the world is in the Kinghan Range discovered some years ago. According to the reports of the Japanese technical and government officials, the Russians and the Red Chinese have a 1.2 million kW power plant in the Kinghan Range, and they have been mining and separating U-238. Of course, bear in mind that we've spent billions here in our atomic plants. U-238 is seldom over 1 or 2% of the ore, and U-235 is about 140:1 of U-238. Now we do it by gaseous diffusion. Well, that took enormous plants and enormous equipment; of course, we could have done it by having a series of valves, same thing you use as cream separators; all you would need is a battery in series not any longer than this building, and it would accomplish a greater production than the giant gaseous diffusion at Oak Ridge. Our State Department asked the firms in West Germany not to manufacture those high-speed separators, because it would make it easier for other people to

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

acquire U-235.

Now, of course, the moment China explodes an atomic device, it will be like being elected to the United States Senate. The United States Senate is the most exclusive club in the world. Once you get an atomic missile, then, as a nation, you're admitted to real exclusive club of nations. Well, I doubt whether the Chinese really give a damn. Mao Tse-tung was correct in an interview by foreign correspondents when they said, do you realize that if there is a nuclear war that the world and civilization will be devastated? He said, yes, he did; there would be 300 million Chinese left. You don't get it yet, do you? That's all there would be left of the 650 million Chinese -- there would be 300 million Chinese left.

Don't worry -- China will probably have one within a year or so.

WHAT WAS WRONG WITH THE RUSSIAN WATERWAY SYSTEM YOU REFERRED TO?

That Russian waterway system is the Volga-Don Canal. It's not wide enough, it's not deep enough, and the locks are water locks, the same as you have in the Welland Canal. Technocracy has designs for hydraulic lift locks. Anything that attempts to raise boats or other weights fifty feet or higher, the energy cost is less on a hydraulic lift than it is to pump the water into the empty lock. So, let's have it an energy hydraulic lift. There are two hydraulic lift locks in the world, one on the Trent Canal in Canada, and a much larger one in Germany, The Germans are building more, I don't wish to go into all the other things wrong with the Volga-Don Canal, but there's plenty.

IN THE COURSE OF YOUR LECTURE, DID YOU INFER THAT MILLIONS OF CHINESE ARE NOT STARVING?

The latest reports are that there is no starvation seen in Red China. Canadian scientists, Swedes, French, and, if any of you want to read a book on it, get Edgar Snow's, "The Other Side of the River." He just returned some months ago from Red China. There's no famine, but the China that used to be where the dead bodies were on the streets, where the rats were eating them, where the Soochow Canal in Shanghai was full of babies' bodies,

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

where you had the honey barrel boys who carried the barrel on the back and the curved scoop, and you scooped up the excreta and put it in the honey barrel, where they had the flies -- well, that China, ladies and gentlemen, is gone, never to return. Maybe they don't have as much, but they will have to curtail their population, true; and when they do, they'll do it on a collective basis, and none of this damn voluntary nonsense. They now can buy diaphragms on the coast in China for 22 cents and in the interior for 27 cents apiece.

THESE ARE REALISTIC PROBLEMS WHICH YOU MENTIONED TONIGHT AND TECHNOCRACY MUST HAVE SOLUTIONS FOR THEM. YET IN UNITED STATES, CHANGE CANNOT COME ABOUT WITHOUT POLITICAL POWER. DOES TECHNOCRACY HAVE A POLITICAL PROGRAM?

If you mean a political party program, no. After all, our members were involved in the original frosted foods, Clarence Birdseye and Bassett Jones. The frosted foods process alone rather altered the food industry of this country and Canada, has it not? Your present speaker introduced the cotton picker and spoke in Mississippi and Louisiana in the early thirties. There were several hundred men sitting down in front of me with guns in their belts. They weren't going to allow any damn Yankee to come down there and introduce no such contraption as that -- no, suh! Well, we did. We told them what would happen. You can pick a bale of cotton for \$4.21 by machine or less. To pick it by hand, it will cost \$27 a bale. They wouldn't believe it, and if many of you are upset about the negro coming north, bear in mind that Technocracy is more responsible than all the other organizations in United States for the migration of the negro north. If you don't like it, you're going to have more of it; so, quit kidding yourself.

These people who talk about political parties -- where in hell is the Socialist Party? The Townsend movement -- \$20 every Tuesday, \$30 every Thursday? The farmer-labor movement? Let's go on down the line. Upton Sinclair's epic, "End Poverty in California"? Why, the idiot couldn't end poverty in one state and have the other 47 go to hell, could you? He didn't realize that. Those are political attempts. Now, when the squeeze comes on here, when is it going to come on? We'll tell you: When your first son and daughter graduate from the university and comes home, which is happening now, and you say, well, Jim, don't

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

worry, you've got your doctor's degree, your master's, you can live here at home and just keep on trying -- you know, we're full of hope and everything. Well, that's swell, but in two years, Bobby comes out with his master's degree or his doctor's and he comes home. Well, the parents aren't quite so hopeful, but they still have that fortitude that goes with that Christian tolerance, you know. Oh, yes, they bear up bravely under the load, and they tell Bobby, well, we'll make out somehow, But the next year, when their third one comes back, look out, because the American momma is proud of her kids, and, by God, no one is going to do that to her brat! Then look out for trouble -- these males won't do it. It's when you get the American female really backed up; then she'll clobber hell out of that male of hers if he doesn't do something.

IF WE HAVE COMPULSORY BIRTH CONTROL, WHO WILL DECIDE WHICH PEOPLE WILL PRODUCE THE DESIRED AMOUNT OF PEOPLE FOR FUTURE GENERATIONS?

There's always some idiot wants it all planned out. You better stop it before you get all the data on type line breeding. You haven't got it yet. You breed dogs, horses, animals, and plants that way, but you never got around to breeding human beings like that; and you can get a marriage license to marry a cross between a wooden shutter and a fire escape, and whether it produces a set of wooden dishes or a mental defective, it doesn't matter, does it, under any state or municipal law in this country? The church says even if it is syphilitic, it's a soul. So you have to carry it. Now, don't let's talk about the further refinements. Science can do it, but you've got to stop the other first.

THERE'S SOMEONE HERE WHO IS IN A HURRY. THEY WANT TO KNOW WHAT THE CHEMICAL IS, HOW MUCH IT COSTS, AND WHERE CAN YOU GET IT.

It looks like a male's writing, and I can understand his dilemma, because if it were in use, he would have no fear of the consequences, and he wouldn't accumulate gastric ulcers, headaches, because he really could sin for the first time without any reservations, that is, if he were a competent mechanic. But the trouble with most of them is that they have been so frustrated for most of the years of their lives that they are an

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

incompetent mechanic. They're not a first-grade one. Let's get it through your heads that poor mechanics have raised more hell in human relationships than all the immorality; so, don't anybody say anything or I'll tell you your right names.

IN THE SPACE AGE OF TOMORROW, HOW CAN TECHNOCRACY ISOLATE ITSELF ON THE NORTH AMERICAN CONTINENT?

I haven't the slightest idea what that questioner means. If he means social and political isolation of this continent, no; Technocracy never proposed any such thing. There wouldn't be any. What would our policy be? I'll give you one part of our policy toward the world: We'd invite qualified students from the rest of the world to the tune of 250,000 a year -- free -- for four years. It would be the damnest, dirtiest trick anybody ever played on the rest of the world. We'd bring them in here, house them and train them and send them back. Oh, brother! What would it do? Well, as the old-time boys would say -- it would raise hell and put props under it, wouldn't it? Would that be isolation? Certainly not.

WHAT WOULD THE BOYS IN WASHINGTON DO IF THERE WERE NO CRISES?

Well, they'd think up one. As Voltaire said, "If there were no God, the human animal would manufacture one. He has to have a crutch." Well, the Washington boys are the same way. This is a welfare-warfare state, and your Cold War started on December 23, 1917, in the signing of "L'Agreement de Partition de la Russie," in Paris by Great Britain and France. That's when the Cold War started. If you want a little difficulty, look up that agreement and see if you can find a copy of it, along with the Treaty of Westphalia and the Treaty of Rome.

IF TECHNOCRACY IS THE IDEAL WAY OUT, WHY DO WE GO ON YEAR AFTER YEAR WITHOUT IT BEING ADOPTED? A SECOND QUESTION FOLLOWING: HOW WOULD TECHNOCRACY ADVOCATE HANDLING THE INTEGRATION PROBLEM?

I don't know what you mean by integration. What's the matter with you? Ninety-nine percent of you don't even know who lives in the next apartment regardless of color, and you don't know who lives on the next street and you don't give a damn; but if your

backyards back up together -- none of them that backs up against yours is any good -- you know that; he's a neighbor of yours. You wouldn't elect him to anything. You know he's a moron just like the average person that talks to him. Do you want him? Do you want it integrated? No. Where do you want to go? You want to go someplace where the neighbors aren't the same as they are now. Well, how are they now? They're lousy. Well, the next place you go, they'll be lousy, too; and that doesn't involve any color. The negro what? Just try to integrate a neighborhood for what? For a common viewpoint, decency, or anything else. No, they don't care.

Now they want to make a big hullabaloo about bringing the negro in. The negro isn't any different than you are. You're making a mess of it; you don't have to blame it on the negro -- You've already made a mess of it.

#### COULD CEMENT TAKE THE PLACE OF STEEL?

Concrete can be precast, prestressed, and the Red Chinese are building steel plants out of concrete today. They won't need any repainting, they won't suffer from corrosion, and they're fireproof; but no steel company in United States would permit its steel plant to be built out of concrete, now would it? No, sir! Yes, concrete can be used for many things, but then we've got to have all these diversification of products in order to collect more prices upon more occasions, haven't we? That's the reason why.

#### THERE ARE QUITE A FEW QUESTIONS HERE THAT ASK HOW MUCH LONGER THIS SYSTEM CAN LAST AND HOW TECHNOCRACY PLANS TO BRING A NEW SYSTEM ABOUT.

Technocracy told you thirty years ago that we would never require you to use ballots or bullets, didn't we? That's in our original statement, and it still stands. Technocracy isn't going to bring about anything. Who is going to bring it about? The population of this country; in other words, when the pressure gets tight enough, you and all your associates in every community are going to demand it. First, the politician will make all kinds of liberal reforms and gestures and that won't be enough. When it gets really serious, he'll go out in high gear with his face done up in burnt cork.

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

I've been asked in some large cities what would facilitate it and what women could do. Any time the women of this country do not like this system, all those with babies four years and under, all they have to do is take their babies down to the city hall and leave them there, and there isn't any large-scale municipality that will survive for 72 hours. You'd have to draft every doctor, dentist, nurse, drugstore and hospital in the whole community. And every politician would be on his way out. Now, don't ask me how would I know my baby if I left it there with a thousand other babies. Oh, get out, how is your baby any different from any other; we'll just footprint all of them.

In other words, when you get really serious, you can do it; so don't ask me how to do it. You've got the means to do it.

YOU HAVE STATED THAT IMPORTS HAVE CAUSED SOME DISRUPTION IN OUR ECONOMIC PICTURE. IF SO, HOW DO YOU EXPLAIN THAT WE ARE ONE OF THE FEW NATIONS OF THE WORLD ENJOYING A FAVORABLE BALANCE OF TRADE? IN 1962, \$22 BILLION EXPORTS, \$17 BILLION IMPORTS?

Oh, yeah? Well, what's happening to our gold supply then? If the foreigners demanded payment in gold for which they have the chits, would the United States have sufficient gold to meet their claims, let alone sufficient gold to guarantee our currency? No, if we gave all the foreigners the gold we owe, we'd still be in the hole. Balance of trade -- well, let's see. Italy had a steel capacity of 2 million tons when the war ended. Is there any iron ore in Italy or coking coal? No, there is not. The present steel capacity of Italy is 10 million tons -- 500% increase, and they are building a 4-million-ton additional steel plant down right in the instep of the boot in Southern Italy, where there isn't a damn thing, and they're running pipelines -- gas -- down there to fuel that steel plant. In that case, there will be 14 million tons or 700% from what it was when the war ended. Where is Italy going to get its coal from? United States lends them the money to build the ships to come over to Newport News and lends them the money to have the coal loaded into the ships which they borrowed the money to build to take it back to make steel. Now, is that export trade? It's export all right, but it's some gimmick. I'm only just giving you Italy; it's done other places.

"THE CONTINUING CRISIS"  
HOWARD SCOTT, CLEVELAND, OHIO

4-4-63

Last year, we subsidized cotton 8 cents a pound abroad.

END OF TAPE

HOWARD SCOTT  
DETROIT INSTITUTE OF ARTS  
APRIL 27, 1963

"THE CONTINUING CRISIS"

This century -- a bare 63 years -- has given evidence of more cumulative factors and more rapidity of growth than any five centuries of human history. When it comes to crises today, let's go back and take a look at some of the major components underlying these crises. What are they?

The population of the globe today is approximately around 3 billion. In 1800, it had just passed 800 million. In the Middle Ages, it was just over 400 million. And back BC, it was slightly over 200 million. The population explosion has only really gotten under way in the last sixty years, and now it is really travelling. Here in United States, along with the other appurtenances of our affluent society, that is, affluent for the six million at the top, four million babies, of course, is viewed by General Motors, Standard Oil, and all the other large corporations as a contribution to prosperity. More diapers, more bottles, more potential teenagers, and the more you have, the more you can sell to. Well, that is very nice. Here it is just starting to squeeze.

In other parts of the world, it is travelling at high speed. Venezuela has a birth rate of 47 -- three times that of Japan. Japan has had to limit its population by making abortions at a nominal charge, and its total abortions equal its live births. It didn't reach that situation because of foresight or intelligence. The force majeure of its area compelled it to take these drastic measures.

Europe, Africa, and the rest of the world are all galloping on the increase in population. What has made the increase of population possible? Could it have been done in the time of Christ? No, it could not have. If all of the citizens of the world at that time had been 100 percent Christians, it would not have altered the standard of living 1/10 of 1%. The same could also be said if they had all been Mohammedans or Hindus. There are reasons -- physical reasons. Centuries ago, all the human being had was human toil and hand tools. Transportation was slow. People could only move food a short distance. They were limited in the growth of food. The life expectancy was short, and, of

course, they put their surplus babies outside the city walls to be eaten by the dogs. That way, it was self-limiting.

As other means developed, the capacity to produce was increased, but that capacity was very slow in its increase until the 19th century. The last sixty years, it's galloped. In 1919, for instance, there were only about 12 million telephones in United States. In 1961, there were 77 million. In 1918-19, there was only 13 million kW installed in your power plants. In 1961, there was practically 199 million. Here in this City of Detroit, automobiles in 1918 were only around 5 million. In '61, it was 63 million. In 1919, you had 22 million horses on the farms. Last year, there were less than 3 million horses in United States. I am giving you these figures to show the rate of change.

Under human toil and hand tools, those on the land could only feed a very small number in addition to those off the land. Today, it is quite different. Forty-some years ago, there were over 6 million farms in United States. Today, there are 3.4 million, and the farm population is less than 8%, and one worker on the farm in United States today feeds 26 to 27 people off the land. There used to be a farm vote which was considered significant in the U.S.A. The farm vote in U.S.A. today is negligible. It's scattered. Modern technology, yes, has come in on the farm, but you haven't seen anything yet. We're still playing around with small farms.

Technocracy, forty-some years ago, predicted that the total number of farms would decline in numbers, and the size of the farm would increase. They have. They will continue to do so. In case you cannot envisage how fast it will go, if we had a screen here and the slides, we could show you equipment that right now is planting and fertilizing 70 acres of wheat an hour -- not a day -- one hour with one man. What's wrong with it? Not a thing wrong with it except the stupidity of the public in this country, that's all. You want to commiserate, don't you? the poor farmer. Well, the farmer is no good as long as he's on the farm. You have to get him off the farm, and we go in for hypocritical nonsense for land reform in South America or other places, where you want to give them a couple of acres and a hoe. What do you want to do -- sentence the human being to the same kind of human toil, hand tool slavery that we are just leaving? In other words, we're getting out of it, and you want to impose it on other human

"THE CONTINUING CRISIS"  
HOWARD SCOTT, DETROIT

4-27-63

beings? It's not very nice of you, is it?

Farms will grow larger, but they will grow larger because of the technological impact and because of economic attrition, and not because of intelligent foresight and design. If there was sufficient perspective and technological foresight on this continent today, we would design the farms to be technological units 25 miles by 25 miles. Why that size? Because equipment today can handle 82 to 100 bottoms and do six miles an hour; therefore, two hours out and two hours back would constitute a four-hour day. As your 25 miles would be divided into four 12-mile blocks for crop rotation, the minimum of any crop would be one trip down and one trip back -- 12 miles out and 12 miles back. What's wrong with it? Simply that they cannot understand that the technological equipment and the energy determinants are the most important things in social living today, whether it's in United States, Europe, Russia, or where. Your morals, your theology, your ethics, and your liberal arts -- just leave them in the ashcan. They're not really important at all, because unless you have the available energy, the raw materials, and the technological know-how, you're a second or third rate component on the social scene.

Try to understand what you're facing. John L. Lewis and his United Mine Workers, this week, are facing the prospect that the ten hospitals which they have built are going to be taken over by the Presbetyrian Church and the State of Kentucky. John L. Lewis had 780,000 bituminous coal miners in 1920. He has 235,000 left. Lewis and the United Mine Workers and the coal operators raised the productivity of the American coal miner to the highest in the world -- 8 tons per man per day. But, ladies and gentlemen, the new machines coming out do 8 tons a minute -- not a day. Are you going to have any miners left? Is there any sense in having a human being mine coal? There never was. No coal miner ever got anyplace until he got out of the coal mine and either got the coal miners to elect him to political office or he chiseled on everybody else, but he never got anywhere as a coal miner. We don't like to admit that, do we?

Railroads in United States had 2,140,000 employees in 1920. They have 800,000 today, and that includes station employees. Express, and everything else. When the present mergers on the boards are consummated, the American railroads will have less

"THE CONTINUING CRISIS"

HOWARD SCOTT, DETROIT

4-27-63

than 600,000 employees. You don't notice any of your children wanting to drive railway locomotives anymore? There used to be the day when they would go down and watch the choochoo trains come in, didn't they? Remember? Not any more. There won't be many jobs left. We could run the railroads of United States automatically on an energy block transfer system. You wouldn't need any operating crew. Why not? It's safer, cheaper, and simpler.

We can go on down the line in every single thing. You are faced with it here, and you are faced with it abroad. You remember a few years ago that "technological equipment and automation made jobs." BUSINESS WEEK, THE WALL STREET JOURNAL, and all the other publications, your radio, your television, banged it into you every day. Now, nobody wants to say anything about machinery making jobs any more, do they? Suddenly they've quit.

Let me give you an example: You can find nice, beautiful photographs of a modern cement plant, control panels, and one man per shift operating the entire cement plant, and he can select any one of 90 different variation types of cement by pushing the buttons and bringing in the proper reel of tape. Annie doesn't work here any more!

Libby McNeil & Libby, west of Chicago, have completed a very nice plant. It occupies quite an extensive acreage -- nice flowers, landscaping, and a pool out there -- an artificial lake -- and the capacity is so great that they have to have a can plant right there. They produce corned beef hash, chili con carne, and all the other things. What does it do? It has measurement control, chemical control, heat, sterilization, volume, weight, energy, everything else. It does 800,000 cans in the cartons and stacked in the warehouse, in the railway car, or in the truck every 7 hours and 20-some minutes. 2,500,000 cans a day with 3 nonworking employees, and yet your friends and your business associates, and those of you in labor unions, and those of you who still attend church -- your ecclesiastics, your business leaders, and your labor leaders are all talking about full employment. Well, what's the sense of full employment? You're not going to get it in spite of John "Fitzgeraldi" Kennedy in Washington. That Irish Mafia from Boston is pretty good, but not that good.

Labor organizations once were militant. They once had programs that would have been a benediction to everybody in this country and this continent. Now they are restricted to a continuance of contract for those that have the jobs; and as retirement, death, and departure take place, no additions are added. In other words, it's a continuing diminishing quantity from now on out, and as your taxes and costs rise, they will put in more technological equipment to reduce the costs still further. In other words, the only way to get any sense into most of these people is to kick them so hard in "le derriere" that it drives it up back of the ears.

Have we collectively been gifted with great vision in this land of ours? Let's see, have we? One of the other components of change that has come up in the last 60 years has been land. Another has been water. Another has been energy, And the last, but not least, social revolution. We like to talk about the American Revolution. Well, that was really only a usurpation. It was not a social revolution. The French Revolution started out to be a social revolution, but then that was sabotaged by the great counterrevolutionist, Napoleon Bonaparte. He sunk the revolution, and he stopped the metric system for fifty years. He, too, had the same concept that Felipe Segundo had, Charles V, and Louis XIV -- the restoration of the Holy Roman Empire under one law, one church, and one set of national setup. He invaded Russia with the greatest fighting force that the world had ever seen up to that time -- 600,000. The Russians were disorganized and had no supreme commander until Kutuzov was appointed before the Battle of Borodino. Napoleon got to Moscow. Kutuzov elected not to defend Moscow, but to keep his armies intact and go beyond it. If you look at Napoleon's notes and memoirs, you will find in his own handwriting, "Ma cher amie, September 12, 1812, it was as warm here today as a day in Fontainebleau." I am only bringing this out to contradict that fallacious nonsense that Russian snows and Russians winters blocked Napoleon from getting to Moscow. Napoleon got back with 60,000 out of the 600,000. Napoleon's dreams were not defeated at Waterloo -- there was nothing left at Waterloo -- it was in Russia.

Bear in mind that there was only 140,000 French in Napoleon's army in the invasion of Russia. Hitler and his European Fascists threw 300 divisions -- the same concept, for

"THE CONTINUING CRISIS"

HOWARD SCOTT, DETROIT

4-27-63

the same purpose; namely, a consolidation of Europe into a Holy Roman Empire. Hitler's forces -- he had Romanians, Slovaks, Austrians, Polish, French -- he had 140,000 Spanish in the Blue Division -- it had quite a number. It had soldiers from every country in Europe, and yet they went down to defeat. One of the things which is surging today is the concept of social revolution. The Russian Revolution was first -- the first social revolution in history. The Chinese was second, and now we have a little one on this continent down in Cuba.

We are on our way to social change because we are putting in more technology here and more technology around the world. Bear in mind that it was the technology that was the precursor of social change and social revolution. If there hadn't been that technology, it would not have occurred.

In the short period of time since World War I, the acceleration has been terrific. That mention of John L. Lewis and his coal miners -- United States used to be the number one bituminous coal producer of the world. Soviet Russia produced 568 million tons of bituminous coal last year, over 150 million more than United States. United States is not even in second place in bituminous coal production. Red China has moved in ahead of us. You don't like it? You have United States Rubber here in Detroit, haven't you? I think the United States Rubber was the original developer of the Keds footwear, was it not? In other words, they developed it. But the greatest producer of crepe-soled Keds shoes today is where -- U.S.A? Huh-uh -- Red China. Yes, we're still good producers of a lot of things. I'm just giving you these figures to show you how fast things have changed and moved. We're not the number one wheat producer in the world, in spite of all the stories that you get in the press of the Russians starving to death. They are number one producer of the world of wheat -- 2 billion bushels. Now in case you think I'm quoting Russian figures, I'm not. They are taken from the United States Department of Agriculture, and any of you can write Washington and get it.

China hit close to a billion bushels of wheat, and if there isn't a drought, she'll pass a billion bushels.

Russia has moved up to be the second greatest producer of petroleum in the world, passing Venezuela. Russia has just

"THE CONTINUING CRISIS"

HOWARD SCOTT, DETROIT

4-27-63

discovered a new oil field on the Lena River east of Lake Baikal. It's the highest pressure oil and gas field in all Russia and in half the world. The Russians have just completed pipe lines -- one alone is 3,200 miles straightaway, not including branches. They are building a pipe line grid in Western Russia and satellite countries of 36" and 40" diameter oil and gas. They are pumping the gas at 880 pounds pressure per square inch. That requires 1-inch thick of high tensile strength steel. Figure it out if any of you have engineering training. You will find it is approximately correct. The giant gas field is practically pure methane. It's sweet -- it's not sour; in other words, there is no hydrogen sulfide. The calorific value is so high, it has to be diluted to be put in city mains or to be used in a gas stove. Those pipe lines are already delivering petroleum in Czechoslovakia.

Russia did a lot of petroleum to Finland, but it went by tanker. This year, Russian petroleum will be delivered in Finland by pipe line.

One hundred American engineers on the reciprocal trade basis arranged by our State Department took photographs of the high voltage 3-phase AC 60-cycle transmission lines already in operation, yes; but at the same time they took those photographs, there appeared in the photographs the 90-foot towers of the new yet-to-be-strung one million volt DC. We, of course, in Technocracy can smile, because we came out with a million volt DC-power transmission for a continental power system in 1924, before the Russians ever thought of it. It's a good thing Stalin is dead, or we'd get into trouble, because he'd award us the Stalin Prize. We'd have a hell of a time trying to explain it, wouldn't we? Of course, the patents have run out and anybody can use it. United States hasn't started at it yet. The new transmission between Britain and France -- the cable is already made. The end works are being completed. The cable will be laid across the bottom of the English Channel, and, as the frequency is different between each country and there's a difference of one hour in time and two hours and some 20 minutes in load, therefore it would be a complicated job to try to shift two frequencies both ways across the Channel. They are making it high voltage DC.

Are we going to stop revolution -- social revolution, I mean -- by dropping CIA agents into a particular country or a

"THE CONTINUING CRISIS"  
HOWARD SCOTT, DETROIT

4-27-63

particular part of the world to sabotage their operations? Remember the prisoners just brought back from Cuba -- three of them -- our CIA agents captured by the Cubans -- which we denied there ever was any? I wonder if the Canadians that are here tonight realize how much United States interfered in their recent election? It did, don't kid yourself. Diefenbaker, of course, it was unfortunate that he couldn't make a decision, but that Lester Pearson is worse -- not that we are in favor of either. The present one is a complete stooge. If you don't believe it, look at his cabinet. Go down the list of it, and what are they? Well, everything we're doing, we're playing monkeyshines. We're going in for hypocritical nonsense, whether it is in South Vietnam, South Korea, Africa, here, or any part of the world.

It's only a little while ago that there was a British Empire, a French Empire, and a Dutch Empire, and they've all gone down the drain. We in United States had better stop and do a job of thinking, or we will be in a has-been position very shortly. United States used to export 1.5 billion square yards of cotton goods a year. Does it -- does it export any more? We used to export steel. We have a steel capacity in excess of 140 million tons. Last year, we did 98 million tons. The Russians did 84 million tons, but then, they didn't have 140 million tons' capacity. The British did 4 million tons less than they did two years ago. Western Europe all told did 80 million tons. West Germany, 37. Japan did 28. Russia and her satellites, 127 million tons. Her rate of increase -- two more years, that's all. Remember the old herpicide ad of the three figures that used to be in the old barber shop? -- going, going, gone. Well, we're just in that position of the herpicide ad -- we'll be gone, too, long gone, brother, if we don't change our national policies and our international policy. International policy can only be a reflection of our internal physical operating policy. We don't know where we're going internally, and we don't know and don't care where we are going abroad.

Oh, you want to send missionaries to South Vietnam, do you, where we drop napalm on the natives? We dropped napalm in Korea, didn't we? We burned every damned thing we could see, and then we wondered why Mr. America isn't liked. Well, he's going to be less liked. Name any field you're in, and you have the same thing happening; namely, the press, the radio, and TV are continually misinforming the people of this country, continually falsifying

"THE CONTINUING CRISIS"  
HOWARD SCOTT, DETROIT

4-27-63

it, and then your political leaders are handing you soft soap and fancy colored liquids into believing everything is all right, provided you can get your vacation time and few bottles of beer at the weekend. That's what it has boiled down to. If you think that you've security, stop kidding yourself, the only security you can have in this system temporarily is when you have \$30 million invested abroad in a numbered account. If you haven't got a numbered account in Switzerland or Bierut, then quit kidding yourself; because you're facing social change in United States and the world, and you'll have to face up to the fact that you are going to face more social revolution than ever before.

---

HAS TECHNOCRACY TRIED TO LOOK INTO THE UNEMPLOYMENT PROBLEM?  
WHAT IDEAS CAN WE DEVELOP THIS PROBLEM?

Unemployment you have, There is only 54% of the working population of United States, according to the census and the Internal Revenue statistics, that are employed fifty weeks in the year -- only 54% of your entire working force. There are 22 million women plus almost 23 million -- working in United States; 36 and a fraction percent of all married women are working, and their husbands are working. You have several million of them holding two jobs -- I'm talking of the women, as well as the men. I mean, how crazy can you be? Do you think you can work your way to the Promised Land? Nobody but a damn fool ever tried to get there by work.

When it comes to employment, what are you going to do -- make work? You tried that under the WPA, didn't you? Kennedy wants to put in the CCC again and the local batallions to see if he can't keep the juvenile delinquency down. Industry, manufacturing, are going to have less and less employment. So is agriculture. The United States Federal Government employs 2.4 million civilian employees. The municipalities and the states employ over 7.4 million more, or a total of approximately 10 million are employed by federal, state, and municipal governments. That is on the increase. Your services are on the increase. What's wrong with it? You cannot put them all to work. Modern technology and the energy determinants on the one hand are putting them out of work, and as your costs rise, your corporations that have sufficient funds for capital goods

"THE CONTINUING CRISIS"  
HOWARD SCOTT, DETROIT

4-27-63

investment will throw in more technological equipment in order to reduce their costs. So, employment? What do you want employment for? What you need is a guaranteed standard of living -- an income whether you work or not, because very shortly the physical wealth of this country is going to be produced and distributed by a minority of the able-bodied working population of U.S.A. The majority will no longer be needed. What in hell are you talking employment for? That's the idiocy of your labor unions, your churches, your political organizations -- they're trying to kid you. They are doing it in Britain, too, aren't they? The British situation is so bad they've got to take orders for Russian ships and Russian pipe lines.

HERE ARE THREE THAT FALL IN THE SAME CATEGORY, AND I THINK THEY CAN ALL BE ANSWERED AT THE SAME TIME: IS THE BIBLE TRUE HISTORY? WHO ARE THE FEW AT THE TOP WHO ARE PLANNING OUR DESTRUCTION? ISN'T THE BEST ANSWER TO BRINGING ON AN IMPROVEMENT IN WORLD AFFAIRS THE INTRODUCTION OF THE RIGHT SPIRIT AND MOTIVE BEHIND THE ACTIVATION OF THE INDIVIDUAL? THERE IS A RIGHT SPIRIT OR CHRIST SPENT .... WHAT HAPPENS TO RELIGION IN TECHNOCRACY?

It's really pathetic when somebody writes questions like that. What kind of a civilization is this? How many kilogram calories per capita per day do you consume as food? A very small amount -- 1,750 to 3,000 will keep the average citizen alive in good condition. Well, what is spent by the social mechanism per capita? Around 170,000 per capita per day. Now, it's a technological civilization, and your very life, your very future, depends on the operation of the energy-consuming devices that operate this entirety. There are over 12 billion horsepower of prime movers in United States -- not millions -- 12 billion. Of that amount, 97% is in automotive vehicles, and the remainder is in central stations, railroads, and all manufacturing. Now, if you double the amount in central stations, manufacturing, mining, etc., how many would you have on your relief rolls? How many would you have unemployed? Do you want the answer? Approximately 22 million.

Now, there are thousands, hundreds of thousands, of sincere people who are advocating peace. The Quakers, for instance, is one group. Sane Nuclear Policy is another. Disarmament is another. There's nothing wrong with them, except they are

"THE CONTINUING CRISIS"  
HOWARD SCOTT, DETROIT

4-27-63

slightly deluded. If you have complete disarmament, are you prepared for the social revolution that would follow in United States. No, they are not. When they ask us: Aren't you Technocrats for peace? We say, yes, certainly we're for peace. Aren't you for disarmament? Yes. Well, then, why don't you agree with us? Because you're not prepared to face the consequences, we tell them, because you'd have social revolution and you don't want social revolution. You want peace with the same kind of gutter filth that you've got now. Figure it out.

Now, don't ask us about some subjective nonsense. It doesn't make the slightest bit of difference in this power age whether your spiritual theology is Christian, Moslem, Shinto, Hindu, they're all the same; namely, that this is a veil of tears, a period of travail, and you're to prepare for that beautiful world beyond. Pie in the sky, kid! But a modern bulldozer and construction equipment will do more than all the philosophy that's ever written. Let's get this clear once and once for all: That the technological progression of the next thirty minutes invalidates and abrogates all of the social wisdom of history. Can you compete with a computing machine? No, you can't, but you glory -- just as the Communists do -- glory in work. Workers of the world unite! What for? To be more of the same? To be dumb and stupid. You never got anywhere. Why glorify and eulogize work? There's no sense in it. There might be some sense if you glorified sin, but then most of you are so damn incompetent, you couldn't even go in for it.

WHO WOULD BE BETTER THAN PEARSON?

I think, ladies and gentlemen, that that question is unfair. After all, I have spoken, I think, over more places in Canada than any Premier of Canada, from mining towns to agriculture, from hockey rinks to the biggest auditorium. There are Canadians, yes, that have the ability, but from the examination of McLean's Magazine, The Financial Post, and other periodicals in Canada, they are not in the political life of present-day Canada. You will have to look deeper than any of the political parties. You are going to have a series of compromises and Pearson is going to be a stooge aided by the CIA in Washington. You don't like it? How many jobs do you have to have in Canada a year just to keep level? 70,000 new jobs a year. Is Canada going to get them? Not under this system, any more than you are going to get it in

"THE CONTINUING CRISIS"  
HOWARD SCOTT, DETROIT

4-27-63

United States under this system. So, when you say who would be in Canada, if I named him, you wouldn't know who he was, because he's not on the TV, the radio, or in the press, but there are Canadians who can handle it.

HERE'S A COUPLE ON LABOR. TO WHAT EXTENT DO YOU ANTICIPATE COOPERATION FROM LABOR LEADERS SUCH AS LEWIS, REUTHER, AND HOFFA, OR WILL THEY BE BY-PASSED IN YOUR PROGRAM? WHERE DO THE LABOR UNIONS FIT IN THE FUTURE OF AMERICA?

Well, can you imagine labor leaders like Meany in Washington? Have they got any vision, any more than the Congressmen down there? We have gas houses, you know, capitals in every state in the 50 states. We elect representatives. Well, they elect them in labor unions. About the only labor leaders that are still militant are Jimmy Hoffa of the Teamsters Union -- he has guts enough to fight, and that's a damn sight more than has been demonstrated by the AFL-CIO. The Kennedys tried to annihilate him because they wanted to take over control of the biggest labor union in United States before they got elected. They wanted to put in an Irish Catholic crowd from Boston -- that's why we say the Irish Mafia from Boston.

HERE'S TWO QUESTIONS ON THE SAME CARD: DO THESE GREAT RESOURCE EXPLORATIONS OF RUSSIA AND CHINA NOT SHOW THEM AS BAD AS WE -- OIL, COAL, WHEAT, GAS? WHAT GOOD HAS THEIR SOCIAL REVOLUTION DONE THEM? WILL THEY NOT IN THEIR TIME ALSO EXHAUST THEMSELVES AND BECOME SECOND-RATE, TOO? IS THERE ANY DIFFERENCE BY YOUR DEFINITION BETWEEN SOCIAL AND TECHNOLOGICAL REVOLUTION? IF SO, WHAT?

That isn't one question -- that's a whole book! Social revolution, unless there is a technological revolution, you merely change title. It doesn't axiomatically follow that when you dispossess a particular class or an estate that you are going to alter the load factor of operations one iota, but if you install a technological design to where the load factor is different, it axiomatically occurs that there is no ownership. Do you follow me? To divide up the land in Brazil or Venezuela or anyplace else and to give the compensino so many acres and hoes and put him on the soil -- that isn't what you want. You want them off the soil.

"THE CONTINUING CRISIS"  
HOWARD SCOTT, DETROIT

4-27-63

As for China and Russia, they have vast coal, iron, and other resources. We cannot say that if in the future they are going to have the necessary foresight and the perspective to be wise about it. So far, they haven't committed the strategic errors, and it is more likely that they will continue on their present course. In United States today, we have practically no hematite ore left. It's gone. All the copper ore-mined in U.S.A. today is less than .8 of 1% Cu. Our zinc and lead have likewise gone down the drain. Our oil resources -- all the oil wells in United States that are active are averaging less than 11 barrels per well per day. That's a long way from the peak. In Iran, there are only 82 wells operating. They average 10,000 barrels per oil well rig per day compared to our less than 11.

We have reached the point where we are running out. If the Russians and Chinese limit their population and put in adequate controls can run a long time. We can't run a long time -- that's the difference, unless we bring it in from someplace else and we'll pay through the nose for it.

TWO QUESTIONS ON THE EUROPEAN COMMON MARKET: WHAT EFFECT WILL THE COMMON MARKET HAVE ON OUR ECONOMY AND HOW ABOUT THE EXCLUSION OF THE UNITED KINGDOM?

Unfortunately, 99.9% of the people in United States have never read the Treaty of Rome. You've read all kinds of articles in magazines, newspapers, and other periodicals, TV, and radio. The European community and the so-called Common Market are merely a part of the Treaty of Rome. The Treaty of Rome calls for a political confederation; in other words, let's use the term "Common Market" so you won't be confused by the Treaty of Rome, and Common Market is simply an economic maneuver to establish a fascist setup in Western Europe, because you must be under a political hegemony if you join the Common Market. The reason Britain was refused was because she couldn't surrender her sovereignty to the sovereignty of what? Rome -- come on, say it. That's the real reason. Now, the only thing that Western Europe has outside of the equipment and population is a market. It has not got the resources. Germany has some coal, yes. France has the ilmenite ores of Alsace Lorraine, but they are in the 30% Fe. French and Belgian coal are thin seam and steep angle. Holland has lately discovered a gas field on its eastern border, which will help it out for a little, but they are going to export most

"THE CONTINUING CRISIS"

HOWARD SCOTT, DETROIT

4-27-63

of the gas. Otherwise, Western Europe has not the iron ore, the copper, the lead, the zinc, or the petroleum, and when the Russians complete this pipe line grid, according to the report of the British Petroleum Association, they will be able to deliver a billion BTU in their eastern satellites and Russia for 40% of what a billion BTU can be delivered in Western Europe.

United States is all in favor of a Common Market. France, last year, did 510 million bushels of wheat. United States has been exporting wheat to Europe. Our fixed price is \$1.82 a bushel. The French, I think, is \$2.26 and the German is \$3.15. As the French only consume about 230 million bushels, therefore France can sell wheat to the rest of Europe at the German price of \$3.15 and eliminate \$1.2 billion of U.S. agricultural grain exports to Europe. Now, if the Common Market could achieve the economic hegemony and the political confederation, it would be looking for the immediate propagation of World War III.

HOW ACCURATE ARE THE UNEMPLOYMENT STATISTICS?

Not very accurate, I am sad to say, but then a lot of statistics in this country aren't very accurate; they're padded. The Canadians or the British or the Swedes are far superior to us in their statistical accounting. To give you an example: How many suicides do we have in United States? Oh, you don't know, but you're more acquainted with how many people are killed every year with automobiles, aren't you? They publish those in papers. Just bear in mind that the report just out that the number of suicides in Los Angeles county in one year exceeds those killed by automobiles. Do you find it printed in your press or circulated on your TV? Hardly.

You only count those unemployed who are still drawing unemployment compensation. The 1.3 million high school and college that have never had a job aren't even mentioned, because they never had a job, and if you work one hour a week, you're employed, sucker! That's how accurate it is.

WOULD YOU GIVE A BRIEF EXPLANATION OF YOUR THEORY OF ENERGY DETERMINANTS WHICH I BELIEVE WAS YOUR BASIS FOR THE COLLAPSE OF THE PRICE SYSTEM THEORY? IS IT NOT POSSIBLE UNDER PRICE SYSTEM OPERATION FOR THE NEXT TEN YEARS THAT THE BALANCE OF RESOURCES AND ENERGY SUPPLIES WOULD BE DISSIPATED, THEREFORE

"THE CONTINUING CRISIS"  
HOWARD SCOTT, DETROIT

4-27-63

ALLOWING THE CONTINUANCE OF THE PRICE SYSTEM OPERATIONS AND  
SCARCITY CONDITIONS?

THEN THERE'S ANOTHER ONE ON WHAT IS THE ENERGY DETERMINANT.

I don't think that this audience is the place for a mathematical discussion and the presentation of equations. I can ask you if you know three mathematical equations which have been originated by me, and if you do not know them, then there would be no sense in presenting the mathematics of energy determinants to you. I'm being quite frank and hard-boiled. How many mathematicians in United States can competently handle vector analysis or the theory of probability or Schrodinger's Theory of Uncertainty? How many people are there? An infinitesimal number. Why should I waste your time and you waste mine engaging in a highly technical mathematical discussion of which one of you in this audience might have some glimmer? And you wouldn't be out there.

WITH WHAT KIND OF LABOR DID RUSSIA PRODUCE ALL THIS STEEL --  
FORCED LABOR?

All labor is forced -- what the hell are you trying to do? [APPLAUSE] My God, how naïve can you get? You never heard of the nobility ever working, did you? Certainly not. They had enough sense to know that as long as you can keep these suckers working -- they were nobility! It may interest you to know that you can purchase from the Government Printing Office in Washington -- it's about this thick -- a report published by the Bureau of Foreign Commerce on the Chinese Coal and Steel Industry. It has full page photographs, and in there you will find modern coal processing plants. There are no Chinese -- in spite of the millions of Chinese -- picking coal. The Chinese aren't so dumb either, are they? It is all continuous, straight line automatic. New sugar plants in China -- sugar cane, and with all the millions of Chinese, there isn't a single Chinaman handling a bag of sugar -- all done by equipment, and they don't burn the bagasse. They convert the bagasse and extract furfural, that great organic intermediate, as great as the  $C_6H_6$  benzol ring.

So, is there virtue -- why ask if the labor is forced? That's because it's Communist over there? The only trouble is that the Communists are just as dumb as these capitalists over

"THE CONTINUING CRISIS"  
HOWARD SCOTT, DETROIT

4-27-63

here.

WHAT BECOMES OF OUR PRESENT HOLDINGS IN OTHER NATIONS?

You want to know? In Mexico, the Mexican Government has bought control of private power, the Mexican Light, Heat and Power, and others, and at this moment, over 98% of all power generated in Mexico is now owned by the Republica de Mexico. The Brazilian Government has just signed the agreement with the American Foreign Power and the Electric Bond & Share in which \$162 million of American foreign power properties in Brazil have finally been sold to the Republic of Brazil for \$135 million, \$10 million down and 20 years to pay at 6-1/4, but the Electric Bond & Share has to invest \$101 million of that \$135 in Brazil in nonutility investment. What happens to our investments abroad? Well, that is what's going to happen to a great many of them. Why shouldn't it? We've built it up to take it out of the country, and they are only taking it back, aren't they?

One of the big troubles in United States today is that the game that we played -- we were clever at it, yes -- we had the cards all marked and we had the dice loaded. Heads, I win and tails, you lose. The only trouble now is when we roll the dice, they come out on the floor and there's not a damn spot on them. The cards are dealt and there's no pictures and no spots. How can you use your brains to be crooked? You're smart if there isn't any spots on the cards or pictures.

IF NO WORK WOULD BE LEFT, WHAT ARE PEOPLE GOING TO DO?

It's going to be tough, isn't it? When every citizen, male and female, has an income by virtue of their citizenship; in other words, the female's income is independent of the male's, the male's income is independent from the female's. In other words, for the first time in history, males will really have to be good, brother, in more ways than one, because she can say, "I'm going out and I'm going to be long gone!"

If you don't have to endure toil and there isn't the tension and economic pressures that come from insecurity, nobody can take that income away from you -- they can't beg, borrow, or steal it -- it's nontransferable, you cannot be fined for any misdemeanor; in other words, there is no profession that can exist in a

"THE CONTINUING CRISIS"

HOWARD SCOTT, DETROIT

4-27-63

Technate that will make its livelihood out of the mistakes of the citizens, misdemeanor or otherwise, any more than there would be any profession permitted to exist which would make its livelihood out of the ills of the citizenry. Now, given that kind of a condition, over 96% of your crime would have no basis. Oh, you could steal salt cellars -- almost anything -- but what would you do with them? You couldn't sell them. Are you just going to accumulate them, and are you going to rent warehouse space to put them in? You couldn't convert them into coin of the realm, and if you've gotten any of them, the inventory boys would soon catch up with you. Where would you put them -- store them out in the open? In big holes in the ground? Do you mean you would imitate the ants and the moles? No, they won't do that if there isn't any immediate return -- they give up. So, outside of the pathological and the psychiatric defectives, economic crime would disappear.

What are you going to do? Do you mean to say that you couldn't enjoy yourself? And when we're at it, we might as well hit you with something else. It may disturb you a little. It's been known for many decades that the female human being possessed the power to dissolve the fetus without any deleterious effects to her general structure or to her reproductive mechanism. Biochemists and scientists have known about it and have wondered what has triggered it. They found it. It is colorless, tasteless, odorless, it is nontoxic and only requires .0004 of 1% in the metropolitan water supply to prevent the conception on the part of any female mammal -- even pussycats won't have kittens. You can also put it in candy, Coca-Cola, or all those packages, you know, of the different kind of biscuits, pies, and cakes that you have down in the shopping center, well, you can also put it in those, but we won't bother about that right now.

Withdraw it, and in one menstrual period plus a half -- that's 28 plus 14 -- the pussycat and the female is all ready to go and have more kids. Well, what? Can you figure out what's going to happen to you? Hell, if you don't know what to do with yourself, jump off the cliff!

HOW DOES OUR AUTOMOBILE PRODUCTION COMPARE WITH THE REST OF THE WORLD?

Well, of course, the automobile production of the rest of the world used to be insignificant, but now the rest of the world

is generally producing more automobiles or the same as United States. We think we're pretty good here when we roll one off every 31 seconds, don't we? You have three countries in Europe that are rolling them off one every 19 seconds. Who's so hot -- Detroit? Don't say they did it with our technology. That's like saying the Russians developed the corn and so on from American hybrids; well, they didn't. They took the hybrids over there from here, but they wouldn't work. They had to develop their own hybrids. Well, Europe has had to develop its own technology. True, they had American technology to start with, but then they went it a couple better.

They're producing cars in Australia, Brazil, Mexico, South Africa, China, Japan, and trucks. Producing cars is no trick today, that is, cars for sale. Of course, we haven't produced a real automotive transportation vehicle. You have the brains here to do it, but you don't do it. In other words, no axles, four-wheel drive, no shoe brakes, no carburetor, no sparkplugs, no water pump, no clutch, no transmission, no differential rear end -- not any longer than your standard car but wider -- drive on all four wheels. Have you got one like that? No, there are two, but they're in storage in a museum in a private estate in Connecticut.

BEAUMARK -- IS THIS A RELIABLE, MODERN DETERRENT WEAPON?

What is a deterrent weapon anyway? How dead do you have to be to be dead? I mean, how many times do you have to be killed? What's all the nonsense about? This last week, our new Polaris A-3 was fired twice, and they both failed in ten seconds. Deterrent? Do you mean that you have so many missiles here that you can blot out the rest of the world, and that's going to deter somebody from being as stupid as you are? The stupidity is too much alike. It doesn't have to be American, you know. So the Beaumark or any other weapon -- your emphasis today in United States in science and technology and your billions are all on destruction. You'd think the only scientists in United States were space scientists and your missile scientists. All of the boys out of college want to get into the high-priced missile game. Well, even that is filled up.

But any particular missile -- what's the use in talking about it? You can do poison gas, you can do germs, you can do

"THE CONTINUING CRISIS"

HOWARD SCOTT, DETROIT

4-27-63

different types of bombs. Well, what is it you want to do after you drop the bombs? Do you want to take over the territory and run it and redesign it or do you just want to annihilate customers? The funny thing is that the people who are advocating this are always such nice, kind Christians, aren't they? Well, the Pope has pulled the stuff "Better be dead than Red!", hasn't he? Of course, he's getting a little more cautious now, because that Vatican City is only two minutes from ground zero; and as there are now two "Johns" in Vatican City, there is only time enough to pull the chain on one.

ONE OF YOUR RECENT MAGAZINES QUOTED AN INCREASE OF MILLIONAIRES AS OVER 300% IN TEN YEARS. WHAT IS YOUR COMMENTS ON THIS?

I don't think any comment is necessary. That only proves how stupid the average American is, doesn't it? If you're dumb enough to permit it -- what is it? Are you like the louse -- you only want to emulate him? You don't hate him, you envy him. Come on, admit it. What is it the young man wants today? One house in the suburbs, one wife, two cars, three kids, four pets, seven credit cards -- and he hasn't got 8 cents in his pocket. The big increase was in multimillionaires. It was bigger than in just ordinary millionaires. So what? You want to be a millionaire and go out and play golf? That's because you're not good enough at home?

EXPLAIN THE NEW TYPE OF COTTON CHINA PRODUCES, WHY IT IS SUPERIOR TO OURS.

On the Kansu irrigation, they will be putting in one million acres steep alluvial soil that is flat as a billiard table of a total of around six million -- one million acres, not in small plots, will be in high tensile strength long fiber cotton. The only real improvement that we have made in cotton in United States was made by George Harrison, the greatest Californian whom no Californian knows, who is bringing in more money to the State of California than all the gold rush and all the citrus industry. George Harrison, the father of Ocala 442, long fiber, high tensile strength. Most of the cotton grown in United States is 7/8 low tensile strength. The new areas in South Russia on the Amu Darya and in China will likely be Ocala 442, 2 to 2-1/2 high tensile strength. When you start growing another 10-15 million

"THE CONTINUING CRISIS"  
HOWARD SCOTT, DETROIT

4-27-63

bales of that in the world, you think you're going to be able to give 7/8 American cotton away? You can pile it up on the streets in the southern cities, brothuh, 'cause it's goin' provide an awful lot of shade to sit in.

Last year, we had a subsidy of 8 cents a pound on cotton -- U.S. cotton. What happened? We sold less abroad with an 8-cent subsidy than we did before we didn't have any subsidy.

BRAZIL IS HAVING A DIFFICULT TIME GETTING PEOPLE TO MOVE INTO THE INTERIOR EVEN WITH THE PROMISE OF A HIGHER STANDARD OF LIVING. HOW CAN THIS DIFFICULTY BE OVERCOME IN NORTH AMERICA WHERE HUMAN BEHAVIOR IS NO DIFFERENT? PLEASE RELATE THIS SITUATION TO NORTH AMERICANS WHEN THE NEED FOR DEVELOPING A TECHNATE IS NECESSARY.

Well, I don't know -- that's kind of a complicated question. In Brazil, Venezuela, and other parts of South America, they're moving into the-large cities. Why? Well, if they are going to be on relief and are going to have hard circumstances, they would rather suffer those circumstances in the gregariousness of the large urban center where you have all the facilities than out in the jungle or the [aldo piano]. Besides, what do they want to do in the interior of Brazil? The Portuguese haven't done anything in the interior in 400 years. You haven't got a university in all South America that is a technological institution. They're still replicas of the Catholic universities of Europe teaching law, philosophy, ethics, logic, in this day and age. There really aren't enough firing squads in South America -- there should be more.

WHAT ARE YOUR THOUGHTS ABOUT OUR SURPLUSES -- WHEAT AND SO FORTH?

We have 704 million pounds of tobacco, and we're growing more tobacco. So is Africa; so is Asia. How many million bags of coffee hang over the world's coffee market, even after destroying several million coffee trees? And who is growing coffee? Africa is growing more coffee. Tobacco production in Africa has gone up 700% in the last half dozen years. Most of the powdered coffee that you use is made with African coffee. And if United States was only a minor producer of cocoa, United States would put a world floor under cocoa -- more properly speaking co-co-a --

"THE CONTINUING CRISIS"  
HOWARD SCOTT, DETROIT

4-27-63

wouldn't it? And in that case, every Ghanaian would be a millionaire. Who said that? Nkrumah of Ghana. He's correct, they would.

We have surplus wheat. We also have a huge surplus mineral storage of close to \$9 billion, and we're attempting to dispose of that -- so much tin a month, so much this a month, in order to feed strategic missiles to the Holy Roman Empire, the Common Market. See if I'm not correct in the near future.

IS THERE A POSSIBILITY OF CANADA TAKING OVER U.S. INDUSTRY  
AS IN OTHER PLACES AROUND THE GLOBE.

British Columbia has taken over the British Columbia Electric, and the Wintergren interests in the British Columbia Development. That means the end of private power in the Province of British Columbia. The Quebec Hydroelectric Power Commission is offering \$604 million for all of the private power development and organization in the Province of Quebec. Of course, you know Ontario is and has been for some time the Ontario Hydroelectric Power Commission. In Saskatchewan, they are proceeding with the building of the dam of the Saskatchewan Power Corporation. Private power will not have a chance. Alberta still has a few left, but the Manitoba Hydroelectric is building plants in the north to supply power for the new nickel and other developments. It is interesting to note here in passing that the dam on the elbow in the South Saskatchewan -- its elevation is within .1 of a foot of the elevation specified by Technocracy in its Continental Hydrology. We are delighted and appreciative of the Canadian Government engineers for coming that close to it. What does it mean? It means that at that elevation, when the time comes, you can dump the water into the Qu'Appelle Valley. If you don't know what Qu'Appelle Valley means, go look it up on the map in an encyclopedia.

PLEASE EXPLAIN THE SYMBOL USED BY TECHNOCRACY.

How many of you in this audience have read Edgar Snow's, "The Other Side of the River"? Put up your hands. What did you see on the cover? This, didn't you? It's an ancient generic symbol. It's as old or older than the swastika. The Chinese, of course, and the Koreans know it. So does every biologist, because this is the symbol of the simple cell -- the basic cell of all

"THE CONTINUING CRISIS"

HOWARD SCOTT, DETROIT

4-27-63

living things, called a Monad. The Chinese call the parts the yin and the yen, so you know where the "yen" comes from. It's distinctive, and if you put it on the ground -- the banner -- and get up 10,000 feet, it is still distinguishable. Let me ask you: are the stars and stripes distinguishable from 10,000 feet in the air on the ground or the Unionjack? Oh, no, they're not; they fade out. This doesn't. Of course, the Northern Pacific has it in red and black. The United States Army had the 29th Division in blue and gray. The United States Air Corps adopted this in the same colors as we have. Then they tried to say that we were using their insignia! The only thing about that is that we had prior rights of some twenty years before that. It's like the Navy publishing a copy of our North American defense map on the inside of their front cover and the flyleaf of the back, and then coming to tell us that we were plagiarizing their map. We said, well, you'd better look it up in the Library of Congress, because it was registered there before the war. Don't you think you should know your own institutions before you come and tell us something like that?

HOW MUCH LONGER CAN OUR WATER REMAIN POLLUTED BEFORE WE RUN INTO REAL TROUBLE?

You're in real trouble now, aren't you? Go on out and examine the rivers, and it looks like cakes of ice along the banks and coming over the falls. Yes, real thick ones. What is it -- ice? No, detergents. Big slabs up on the banks -- all across the country; but, no, nobody wants to do anything about it until it comes up on your dining room floor, and then you're going to shriek bloody murder. Remember there are sulfonated glycerides and alkylides. When they go into the sewerage system, they do not break down, ladies and gentlemen. You don't run them into the septic tank, because you'll knock the fermentation and the bacterial action of the septic tank all to pieces, so you run them out in tiles into the fields. And what happens? They plug right up solid. It looks like plaster.

Down in Florida, they think they are so wonderful. What do they do, put in a septic tank? No. They blow a hole in the coral and run it in there. Well, the old theory was that the sea would come in through the interstices of the coral, the sewerage and other things would break down, and it would be clean water again. But now your detergents plug up the interstices, and very shortly

"THE CONTINUING CRISIS"

HOWARD SCOTT, DETROIT

4-27-63

there's a dead crab out there and a dead fish some morning, and then you move, because it stinks like hell! And it's going to stink more.

The Mississippi, the Detroit River out here, Lake St. Clair, Lake Erie, Lake Michigan -- is it potable water? Is it? At the Bethlehem Steel a couple of months ago, somebody dumped the whole cyaniding solution from the plant into the river. They don't know what happened. Well, that's quick -- cyanide is pretty fast. It just knocked one off -- a kid walked through it with a scratch on his leg. Too bad they didn't catch all the Directors, but nobody in Bethlehem Steel knows how it happened.

I can give you case after case, state after state, clean across the country, but what's the use? The underground waters are polluted; the surface waters are polluted. You take water out of wells, lakes, and rivers. Do you put it back in as potable water? You do not. You dump it in the lake, the river, the ground water, and she goes for miles. The detergent does not break down. A case in point is an old mine, and my heaven's, it's filled full of sewerage, but the detergents came in lately, laid a layer on top of that, and the rain water came in on top of that; and the engineers thought it was just pure rain water until they started to pump it out. Phew!

END OF TAPE

HOWARD SCOTT

MAY 2, 1963

"THE CONTINUING CRISIS"

It would be well today to examine the chief components and the major factors of what constitute this continuing crisis of ours, both here in United States and in various other parts of the world. Sixty-three years of this century have introduced more factors of change, more components in acceleration, and have consumed more resources than all the rest of social history put together.

It's only a few years ago that we in United States had between 22 and 23 million horses on the farms. Last year, we had less than 3 million.

Back in 1918-19, we had less than 5 million automobiles, slightly more than 5 million when you consider trucks and busses. In 1961, there were 63 million automobiles.

In telephones, in 1919, there were 12 million. There were 77 million last year.

In kW hours, in 1919, there were a little over 13 million. There was practically 198 million kW last year.

I am only presenting these figures to show the terrific rate of change. Like rates have never been known before. There will be further increases in the near future.

There are several components to the continuing crisis and major change -- soil, water, energy, technology, population explosion, and social revolution. There have been political overthrows, conquests, coups d'état, and so-called political revolutions at various times in history. The so-called American Revolution was a political one. It was not a social revolution. The French Revolution started out to be a social revolution, and it was sabotaged by that counterrevolutionist. Napoleon Bonaparte, so it never became a social revolution. In this century, we have three social revolutions: two major ones -- Russia and China -- and one minor -- Cuba. Mexico started out to have a social revolution, but it stalled on dead center and became a modified political abortion.

Population: there are approximately 3 billion world population today. There were slightly over 800 million in the year 1800; a little over 400 million in the Middle Ages; and between 200 and 300 million in the centuries before 1 AD. The terrific growth in population has only been possible since the advent of some other tools besides human toil and hand tools.

We here today in United States -- this affluent economy of ours -- it's affluent all right for about six million at the top of the system, and there are 77 million at the bottom who have less than nothing. There are 22 million women working, and 36% of the married women in United States are working, and their husbands are working. That figure does not include widows or divorcees. The United States Census and the Internal Revenue show that only 54% of our working force is employed 50 weeks in the year. You don't realize that. This economy of ours is a warfare-welfare state that has been kept going by the continual intrusions of tax money into your large corporate ventures, the withholding tax that took it from the citizens and shoved in ever-greater amounts, subsidizing the major enterprise part of the economy.

If you wish to read the first interesting volume on the Origins of the Cold War -- that's the name of it -- Dr. Fleming, Professor of History, Emeritus, at Vanderbilt University, is the first serious, honest attempt to give an analysis of the factors of the Cold War. He starts from 1917, but unfortunately, he doesn't name the real origin. The real origin occurred when the "L'Agreement de Partition de Russie" was signed in Paris on December 23, 1917, by His Majesty's Government of Great Britain and the Republic of France. That was the agreement that proposed to divide up Russia after they had defeated the Germans, and after the Armistice with Germany, the German Armies would march east with the French and British to divide up Russia. That was the beginning of the Cold War, and we have been continuing it ever since.

After World War I, the Cordon Sanitaire was erected, and the Cordon Sanitaire around the western boundaries of Russia provided the fertile seed ground in which fascism was sown to create World War II. Now those of you who are still uninformed realize that the fascism -- the Falangista of Spain, the Sinarquista of

"THE CONTINUING CRISIS"  
HOWARD SCOTT, AKRON YWCA

5-2-63

Portugal, the Croix de Feu and Cagoulards of France and Belgium, the Knights of St. Michael and the Iron Guard of Romania, the Fascists of Italy, the Nazis of Germany, the Ustaschi of Yugoslavia, and the Arrow Cross of Hungary -- they were all fascist organizations. There is no difference.

It cost billions and there were 30 million died, at least, in the conflict of World War II.

The civil wars after World War I were conducted to prevent social change, and the Fascist war in Europe -- World War II -- was undertaken to delay and prevent social change. But social change is on its way because more and more technology is being introduced, and as costs rise, every attempt will be made to reduce costs still further by the introduction of more technology. We have pointed this out to you consistently over the years. Technocracy is the only organization in this country -- in fact, in this hemisphere or the world -- that has taken this position.

Over 40 years ago, we pointed out that the farms of United States would continue to decline in number and increase in size. Since that time, farms have declined from nearly 7 million to now when there are only 3.4 million farms left in United States. One man working on the land today can feed 26 to 27 people off the land, and the total farm population of United States is at present only 8%. What's the future for agriculture? Well, let's quote the United States Department of Agriculture figures, that 26% of the farms in United States produce 74% of the total agricultural and fiber production of this country; therefore, it is quite obvious that three-quarters of the now existing farms could be done away with without any decline in production. Of course, we know what we're faced with. We won't go into the total amount of products in storage, such as your 704 million pounds of tobacco, your huge amounts of cotton, corn, wheat. The productivity has been raised, yes. There was a time when 10 or 11 bushels per acre was considered quite a crop in the arid midwest. Now they can even hit 26 bushels per acre on that kind of land.

To give you some idea of where it's going in agriculture, we have photographs of one piece of equipment that will fertilize and plant 70 acres of wheat an hour -- 70, with one man driving the equipment. We've pointed out continuously over the years that

the only way to solve the farm problem is to get the farmer the hell off the land. We are getting them off the land, but we're getting them off the land by economic attrition. We're liquidating them in pieces. We're not doing it by long-range area planning as it should be. The farms of this country should be 25 miles by 25 miles square, and you divide those into four sections, due to crop rotation. The speed of your equipment is 6 miles an hour, so you only have one quarter of that area -- 12 miles by 12 miles; therefore, at six miles an hour, your day would be two hours out and two hours back -- a four-hour day. That's your minimum with any crop -- two hours out and two hours back. Well, then you can have crop control and then you can have production.

John L. Lewis had 780,000 coal miners in 1920 -- bituminous. Today, that grand old man of the labor world, his hospitals are being taken over by the Presbyterian Church in the State of Kentucky. His bituminous coal miners have fallen to 235,000. It's not John L. Lewis's fault. True, he and the coal operators and the coal mine owners have raised the productivity of the American coal miner to the highest in the world: 8 tons per man per day. But the new machines coming out do 8 tons a minute. Annie won't work there very long.

The railroads of United States, in 1920, had 2,140,000 employees. They have dropped to where last year they were just under 800,000, including station employees and Railway Express. When the mergers that are at present on the board are consummated, there will only be 500,000 some employees on the railroads of U.S.A.

The steel workers union of this country has lost 182,000 members since 1955. The automobile workers have lost over twice that amount. Has organized labor any future in this country? Not as an organized labor -- only as a dwindling bargaining agency for those jobs still remaining, and those jobs remaining will continue to decline as death, retirement, and severances decrease the number. In other words, you have no place to go but up -- you're so far down.

You are loaded with 20 to 30-year mortgages, installment buying. New York State today, 30-years mortgages are legal. In buying cars, they are loaning you now for cars on 4- and 5-year

bases. Why, that buggy you buy won't last that long. You know that. So the sucker consumer will pay. You know this is a recurrence of a few centuries ago. Back in the Middle Ages, you built the cathedral and you built the [frouen] house. This is going to bother some of you. The frouen was what? The frouen house was where you kept those naughty women, women of ill repute. If you speak quite frankly, in the modern sense, it was a house of prostitution. The barons and the bishops controlled it. So, all right, they socked you when you went into confession, and they made you pay for it when you went into the frouen house -- they got you coming and going.

We're in much the same circumstances today. The only real market we have left in United States, that is, bulk market, are those that cannot afford to buy. Whom am I quoting? He's President and Chairman of the Board of one of the largest mail order houses, the one that's had the most phenomenal growth in the last ten years. That is his statement just thirty days ago -- the only mass market left: those in United States who cannot afford to buy.

Where do you think you're going? Do you think you can alter this by voting in a political party? How many of you voted in the last federal election? Come on, tell me; put your hands up. You did? Well, you got what you voted for, didn't you? It didn't matter which side you voted, whether you voted for that rat Nixon, you got the Irish Mafia from Boston. It didn't make the slightest bit of difference which side you voted for, you got what you voted for. The candidate promises are quite different from the presidential responses, aren't they? They always have been, but you go on kidding yourself that maybe someday there will be a miracle and someone will turn up with some brains in that White House. Don't worry, he won't turn up, because he's being elected by the same old gang.

West of Chicago, Libby McNeil & Libby -- you all know their canned goods: chili con carne, hash, fruits, vegetables -- have completed and have in operation a very nice plant. That plant is so fast that it has to have its own can plant right there to make its own cans. It has complete chemicals, heat, pressure, weight, speed, chemical analysis, testing, all kinds of controls, completely automatic. It cooks, measures, fills, sterilizes 800,000 cans in slightly over 7 hours -- 2,500,000 cans in 24 --

untouched by human hands. They're canned, labeled, put in the cartons, the cartons are all stamped and labeled, and they are either put in the truck or the railway car or stacked on the pallet boards 20 feet high. How many employees? Three -- that's all. Remember the old barber shop in years back where you had the three faces on that nice sign of herpicide? Going, going, gone.

The Ideal Cement does even better than that. Beautiful big new cement plants, and they only have one person per shift. When they send him home, you'll all be home.

Now, that's the way it's moving. That's the trend that we've been pointing out to you. To advocate that everybody should have a job is sheer stupidity today and sheer hypocrisy, because you are moving into that position where the minority of healthy, able-bodied working force of this country can produce and distribute the entire physical wealth of this abundance. There will be no room to employ the majority. What's the sense of talking about giving them a job? It's a guaranteed standard of living that you have to provide for everybody, whether they work or not. Isn't that going to be tough? It's going to be tough on some of those religious organizations that fine you for certain things, because the parishoner is going to say, hey, what the devil is this? I don't have to work; I've got a guaranteed living. Nobody can take it away from me -- phooey to you! You are headed that way.

But, after all, a Meany -- what vision has a Meany? Meany hasn't any more vision than Hazardous Harry. You know who I'm talking of? I named him that, and it still sticks. I notice that now TIME MAGAZINE has picked up the Irish Mafia and is using it. If they keep on copying us, you know, they are really going to get somewhere.

The way this is moving -- not only here but abroad -- where is United States in all this? Last year, United States produced 98 million tons of steel. Soviet Russia produced 84 million tons. Germany, 37, Go on down the line. Western Europe produced 80 million tons. The Soviet group did 127 million tons. United States used to be the world's greatest producer of bituminous coal. Is she today -- is she even second place? No. Where is she? She's third place in the world. Top production of bituminous coal last year was 568 million tons -- the U.S.S.R. Who is in second

"THE CONTINUING CRISIS"  
HOWARD SCOTT, AKRON YWCA

5-2-63

place? Red China. Whose figures are they? The United States Department of Foreign Commerce and other U.S. agencies. The United States came third in the production of bituminous coal.

In steel, the rate of growth and expansion in Russia and her satellites is 8 to 11%. The rate of growth in our economy is 2-1/2%. Our rate of growth is not great enough to take care of oncoming babies and teenagers at 4 million babies a year, let alone the technological destruction of employment. That would require a growth greater than 5% per annum; therefore, foreign countries with a growth of 8 to 11% will pass us in the next couple of years in several more things.

Russia passed Venezuela last year and became the world's second largest producer of petroleum. It may be interesting here in the rubber city -- after all, who was it that originated and developed your crepe-soled Ked shoes? Come on, tell me. It was an American rubber company wasn't it? Wasn't it United States Rubber? Am I correct? Well, who is the world's largest producer of crepe-soled Keds today? The U.S.A.? Huh-uh -- Red China. Hot diggety dog!

All right, you get all these false reports in your press about the starving Russians and the starving Chinese. Who is the major wheat producer of the world -- United States? No. Well, who produced over 2 billion bushels of wheat last year, according to the United States Department of Agriculture? The U.S.S.R. Do they hand this stuff out to you on your radio or your TV? Do you hear anything like this? No.

Both China and the U.S.S.R., Sudan, and other places around the world are increasing their cotton. The Chinese have completed their Kansu Canal project, and there will be six million acres in that. They will plant one million acres of that in high tensile strength 2-1/4 to 2-1/2 inch staple. That will yield three bales to the acre -- 1,500 to 1,600 pounds to the acre. The Russians will also copy on their great Amu Darya irrigation projects. So is the Sudan. We only have part of our cotton here -- the Ocala 442 in California and Arizona, but as and when world cotton increases another 8-10 million bales of long fiber, high tensile strength, then United States will have to pile that 7/8 -- get the difference: 7/8 to 2-1/2 -- and its low tensile strength -- we can pile that kind of cotton on the streets of Memphis, Baton

Rouge, and other cities of the south, because it will be necessary to create shade to sit in. Last year, we subsidized cotton abroad at 8 cents a pound, and the foreigners even with an 8-cent-a-pound bribery bought less than when there was no subsidy. Funny, isn't it?

Now, this is happening all over. We once exported from the United States 1.5 billion square yards of cotton goods. Honey chile, we isn't shipping that no more! Same way in steel. We were great exporters in steel. Now we import more than we export. This is happening in every single field, and American corporate enterprise money goes abroad and earns 15 to 30% on its money over there. And according to preliminary estimates, it employs 4.8 million foreigners on American foreign invested capital. How do you like it, sucker? That's what you voted for in any and every election. Pretty tough, isn't it? Well, it's going to be tougher, because there's 1.3 million high school and college from last year that haven't gotten a job, and there's going to be more this year. There will be more each year from then on.

There are over 17 million people in United States that are 65 years and older. It is increasing at approximately a million a year, and there will be 20 million over 65 in 1965. That is just simply adding to the social load -- a greater and greater social load, more and more taxes. You can console yourself that this veil of tears might have been tough, but it will be better in the great by-and-by, where you'll get a No. 7-1/2 harp and a No. 6 halo.

Simply because this has been kept running and you get more new cars, more picture windows, more TV sets, and all the rest, you're kidding yourself. Are those automobiles out there running on American oil? They did once, but not any more. That's as bad as the Italians. The Italians are buying -- only 20% of their total petroleum consumption is Russian, but the big expansion in Italy has been the thermal power stations. Now comes the joker: 58% of the fuel that drives the thermal power stations of Italy is Russian. That's even more significant than their percentage of their total petroleum products.

Two big steel organizations have just signed big contracts for pipe lines for Russia. We sent the Undersecretary of State over from here to try to persuade the British not to accept the

"THE CONTINUING CRISIS"  
HOWARD SCOTT, AKRON YWCA

5-2-63

contracts, and the British said they could not in the face of conditions of a million unemployed turn down such offers. So, they are going to build ships, they have accepted and signed the contracts last week to build three polyethylene plants, one of \$53 million size, two giant pipe line contracts, and shipping.

Well, do you know what the latest news today is? The entire metal industry in West Germany has locked out all its employees. There are 600,000 some in the first lockout, and tomorrow they expect to lock out an additional 1.2 million. This is not a strike -- this is a lockout. Did you hear it over the radio? Have any of you heard it on the radio or TV today? Tell me. You haven't? Well, it's on. It's not a strike, understand. It's a complete shutdown and a lockout. They wanted an 8% increase in their wages. They earn \$135 a month U.S. They wanted 8%. What a bunch of pikers. The Volkswagen expects to shut down tomorrow or Monday. It won't have the material. You'll probably be seeing it on TV, but get . it clear, Technocracy gets it before you do. It's not a strike. What would happen in United States if industry in this country suddenly decided to lock out 1.9 million employees in 24 hours? What do you think would happen with this high cost of living? Would you go down to the church and do a little praying? Would it do you any good if you did? Or you'd probably write letters to your Congressman, wouldn't you? Well, that would do you a hell of a lot of good, too, but it would produce an economic impact. It's going to produce one in Europe.

The coal miners struck in France, and de Gaulle threatened to conscript them into the armed forces, and then the power and transportation backed up the coal miners, and what? There hasn't been anything said about the great Charlie de Gaulle conscripting the coal miners.

You had your unemployed march all the way from Scotland into London in Britain, followed the next day by 10,000 school teachers. This last one, 70,000 in Hyde Park, and the police couldn't hold them. The BBC in Britain is getting very ironic, very satiric. I wish I could read you the poem they put over about France. It's very nice. I'll give you the last of it:

You can keep your darned old Adenauer.  
We're glad of what we did to you at  
Agincourt and Waterloo

And we're all for a Franco-Prussian War.  
You can keep your males, your dames, your  
vines, and your twisted loaves,  
And you can stick them up your Eiffel Tower.

Now that went over the entire television system of Great Britain, and they're pulling stuff like that. Would you dare say anything as delicate as that in television in United States? No, you couldn't, could you? You couldn't really say something. Well, you will some of these days, but it will be tougher than that.

I'm just trying to point out the way things are moving. Those pipe line contracts that were let are for 36" and 40" pipe line. The gas line at 36" is for 880 pounds pressure. That means that that will be in excess of 1" thick of high tensile strength steel. The Russians have proposed 40,000 miles of pipe line. They just completed one 3,200 miles straightaway without branch lines -- over 4,000 with branch lines. They are delivering oil in Czechoslovakia, Finland has been notified that there will no longer be any deliveries by tanker. They will deliver in Finland by pipe line. As and when the grid is completed, that is, one up by the Baltic and one up the Danube, then the report of the British Petroleum Association's Committee of Experts -- and they state that as and when both an electrical grid and a pipe line grid are completed in like manner, the U.S.S.R. will be able to deliver one billion BTUs to any part of its western territories for 40 percent of what the west could deliver a billion BTUs to France, Belgium, Holland, Germany, or Italy. Do you understand the significance of that? In that case, not only the cards are down, but there's not a single face card, there's not a single spot on the cards -- they're all gone. You can't operate a national economy if the other fellow has a 60% over you on the energy cost. He'll beat you to death on that any time.

This is the direction we're headed. It isn't that we haven't brains in this country, intelligence, we have; we just do not use them. The hundred American engineers that went to Russia as an exchange proposition of our State Department, yes, they were permitted to photograph everything. They photographed the 3-phase 60-cycle high tension AC transmission line, and alongside of them were the 90-foot towers of the new million volt DC transmission. Bear in mind that this organization brought out million volt DC transmission in 1924. My God, how long have you got to wait for

"THE CONTINUING CRISIS"  
HOWARD SCOTT, AKRON YWCA

5-2-63

your countrymen to get up off their fanny and get some initiative? 1924 -- before the Russians ever dreamed of it. Lenin never thought of it. We had it here.

Back in the early twenties, I rode with a man in an overpowered contraption. It jumped ditches in Jersey at 50 miles an hour. He died of starvation, ladies and gentlemen, in these United States. There were two of his contraptions remaining extant in the United States Department of Ordnance in two different places. What was his name? His name was Dave Christie. When the Germans built their Mark VII Tiger Tank and the Russians their Stalin Tank, they were copying Dave Christie. We paid for it -- we paid for it in blood, as well as money. That is the type of thing that we do here. We will do more of it, because 9/10ths of you -- I'm speaking of the body politic, the citizens in general -- are afraid of your own damn shadow. Since that Fascist McCarthy started intimidation in this country, you're afraid to say your right name, except when the radio or the television are on loud enough so that nobody can hear you. That's about it. It's pretty sad.

There used to be some people in United States, some organizations, that had ideas that were left of center. You had the Socialist Party, the Socialist Labor Party, and a whole number of others -- publications, books, pamphlets -- at least they took exception to something.

Now, Norman Thomas is as bourgeois as the Bank of America. There isn't any Left left. The only thing in United States today is your conservative right, your reactionary right, and the far Fascist right, of which they are all currying favor from Barry Goldwater, Schwartz, and all the rest of them.

We've given you names and figures down over the years as to who was what in Fascist organizations here and abroad, and yet out in your own community, your poor school teacher in the educational profession in these United States -- the only way they can live is under an assumed name in another town.

Social change and social revolution are coming. It won't do any good to give the peasant in South America a couple acres of land and a hoe. That's hypocrisy, and those who propose it should be executed, because it's suicide. You can't raise sugar cane or

bananas or anything else on that basis. It has to be large-scale operation.

Where do people think this is going here? They'll tell you that .... here's what's his name -- head of Ford -- the other day made the public statement that United States was going to produce 7 million automobiles a year from now on out. We'd like to see them do it. They're going to run into saturated inventories pretty soon, and then what? Are you going to make more missiles? You've got enough missiles now. You've got enough atomic bombs to dead the world. What do you want to be -- be deaded four times? I mean it's the most stupid idiocy.

Yes, we want members in this organization, but we want them dedicated to an idea. We don't want you wasting your time in a whole lot of other organizations. If you don't want to come into this organization and give it your time and your support and your loyalty, stay out. We don't want you. But if you are willing to go to work and be dedicated to an idea that Technocracy is the only planned survival possible for this country and this continent. Thank you.

---

WILL 1964 BE A BETTER YEAR FOR BUSINESS THAN 1963?

What do you mean a better year? More on relief, more welfare, more profits, more production, less man-hours, and less employees? That would be a better year, wouldn't it? You're talking of a better year for corporate enterprise, are you not? You weren't speaking of a better year for everybody in United States and the North American Continent, were you? Well, you'll have a better year, all right, but it won't be for everybody. Get it clear that there are 77 million Americans who have less than nothing. A nice, kind, Christian world you've got! But if it's In the next block, or the next county, it's too far away for you to be concerned about, isn't it?

THIS HAS TO DO WITH POPULATION INCREASING. WHAT AND HOW ARE WE TO TAKE CARE OF THE POPULATION INCREASING (JOBS) FOR ALL UNDER OUR SETUP?

Well, I don't know what they mean by that. Venezuela has a

"THE CONTINUING CRISIS"  
HOWARD SCOTT, AKRON YWCA

5-2-63

birthrate of 47 -- three times that of Japan. Japan had to bring down its birthrate and it did. How did it do it? By legalizing abortions, and the abortions exceed the live births. That's not the scientific and technical way to do it. Your airlines going to Japan have reservations booked ahead for American females. There's a particular name applied by the airline personnel. They go over for the weekend, and they can get an abortion for \$8.00 -- legal -- in a hospital in Japan, and you can be back to go to work on Monday.

Population explosion is hitting, whether it is Britain, France, West Germany, Italy, Africa, this country, or South America. The South American countries exceed the Asiatic countries. You didn't realize that -- you didn't know that -- but they do. You have a lot of sincere people in United States that want birth control clinics and voluntary parenthood. Voluntary parenthood is stupid. You're going to allow the individual to choose, are you? Oh, then the Catholic Church says, no, you can't choose. The Lutheran Church says you can't choose. The Hottentots say they can't choose. Well what is it? You only want certain people to indulge in voluntary parenthood? Do you think you can control the population explosion by that kind of anarchic guesswork? You cannot. You'll have to stop it by collective scientific measures. We know how to do it, ladies and gentleman, today. It's odorless, tasteless, and colorless. Its cost is infinitesimal. It is not toxic or deleterious to the human female or the female of any mammal. It has been known to science for generations that the human female had the power to dissolve the fetus and did on a number of occasions, but exactly what triggered the reaction we didn't know. But that reaction has been found out by research. Five scientists in United States have developed it. If you place an amount of this in the metropolitan water supply of any large urban center, how much would you have to put in? We'll tell you: .0004 of 1% 4/10.000ths of 1%, and no mammal from the four-legged pussycat to the two-legged human female will conceive. You stop it and allow 28 days for the menstrual period plus 14 for another half period and the pussycat can conceive and the two-legged pussycat can go to work, too.

Don't kid yourself. I'm not saying this out of thin air. It will even stop a pregnancy at 5-1/2 months. We know. We're talking from the book, and the majority of those men who developed it are Technocrats. I told you we'd get you sooner or

later, and, by God, we will!

You're trying to sell pills -- look what happened in Chicago. The man that recommended birth control measures be dispensed by Chicago in Cook County has just been dismissed, hasn't he? Correct? That's only the beginning. Pakistan is asking, and Pakistan states quite frankly, that United States has the technological knowledge, has it available, and has the technological capacity to produce it, and they are asking us to supply it. The Swedish Government says it will supply the technological know-how any place in the world, but that it hasn't the technological plant capacity to produce it in that volume. But do you think an Irish Mafia from Boston in the White House is going to be more advanced than his church or his background? Oh, no, he won't. He'll make another television speech.

Now that's the only way you have to stop your population growth, and that is a collective control. In case you think it is only applicable in water, get over it. We can put it in the Coca-cola, the Pepsi-Cola, or the candy, and every one of your darned packaged biscuit foods, piecrusts, and everything else. We'll get you no matter how you try it!

WE'LL DOUBLE UP HERE AND TAKE TWO QUESTIONS; THEY PARALLEL EACH OTHER. WHAT DO YOU THINK OF THE EUROPEAN COMMON MARKET? IS AMERICA ANY WORSE OFF THAN EUROPE IN THIS WORLD UPHEAVAL?

The European Common Market, of course, arose out of the European community. Well, what you hear in the press, the TV, and the radio here is economic trade agreements, economic matters, between France, Belgium, Holland, Luxembourg, West Germany, and Italy; but the fundamental agreement underlying all that is what is known as the Treaty of Rome. You go out in your library in the next week or so and go to your university and see if you can secure a copy of the Treaty of Rome -- just try it, you dumb cluck, try it, and see what you run into!

Why was Great Britain turned down on entrance into the Common Market? Because of the Treaty of Rome. The Treaty of Rome stipulates that it has to be every component part of that political thing -- a confederation -- with the domination in Europe. Britain could not relinquish her sovereignty and therefore de Gaulle turned it down. What is this Common Market a

front for? It's a front for the Holy Roman Catholic Empire. Let's face it. Charlemagne tried it once, you know, but he went south of the Pyrenees once and licked the Berbers, and then they cut his best generals to pieces coming back through the Pyrenees. He went across the Danube to loot the Huns, but he never took in all of Christian Europe. Felipe Segundo, Charles V, Louis XIV, Napoleon -- what was Napoleon's program? To consolidate all of Europe under one church and the Code Napoleon. What does it sound like? He had the finest and best trained army in the world. He led 600,000 men into Russia. He marched up the Smolensk Highway, and if you'll look up the records, you'll find that he wrote back to Paris on September 12, 1812, "Ma cher amie, it is as beautiful and warm here today as a day in Fontainebleau." The Russians were disorganized until shortly before the Battle of Borodino, when they appointed Kutuzov the Commander-in-chief. The losses were so great in the various battles at Nieman, Vilna, and Borodino, that Napoleon's marshals begged him at the Battle of Borodino to throw in the only reserves he had left, the 22,000 of his famous guards, and Napoleon refused. There were only 140,000 French in that 600,000, and Napoleon -- on his retreat -- his engineer corps stood in the water of the Beresina River in Poland -- not Russia. There wasn't any ice, and they held up the bridge for Napoleon to drive across going west. Napoleon wasn't defeated at Waterloo.

Are you dumb enough to think that the Fascist armies of Hitler were all German? Remember only 140,000 of the 600,000 of Napoleon were French. Of the 300 divisions that Hitler flung at Russia, what were they? He had 140,000 Blue Divisions in Spanish uniform. He had 2.5 million Romanians, 1.5 million Italians; 600,000 Poles; 280,000 French. He had Hungarians, Austrians. What kind of Europe am I talking about? The Western Allies didn't have much to do with the defeat of Fascism in Europe. Almost 90% of the German dead died on the Russian front. And if you want some startling facts, take the report of Schaaf of "D-Day plus 34." Remember that Eisenhower was chief, and Vidal Smith was his chief-of-staff. "D-Day plus 34." What is the number dead and the number captured and then the number of miles of front, and you will find that that number of men in peacetime maneuvers would have killed that many. No war in history had such lousy, low, stinking propositions. Any time you want to lose any money if you have it, just decide to bet against us. We'll give you the figures. You can find them. We are not talking of German figures

or Russian; we're talking of American.

In the Battle of the Niesse River Line, before the Russians took Berlin, they had 3,700 guns to the mile of front. They attacked with over 6,000 Stalin tanks and over 7,000 planes, and they flung 480,000 shells in 2-1/2 hours, and the greatest display of rockets ever seen. They killed more Germans in the one battle on the Niesse River front outside of Berlin than all the allies did in the whole damn war -- 155,000.

Hitler's attempt went out the same Smolensk Highway that Napoleon did. Napoleon took Moscow because Kutuzov kept his Russian armies intact and evacuated it. Hitler came within 16 miles of Moscow. He was on three sides of it. He went around the south at Tula and he cut the Moscow-Leningrad main line railroad, but from then on he retreated.

The Russians did it. We didn't do it.

What kind of a setup is it? It's the same kind of attempt as Napoleon, Charles V, or Felipe Segundo. If Hitler had won, He would have consolidated all of Western Europe. In Europe, you had Catholic Fascism. In Asia, you had the Shinto Fascism of Japan. Back in the days of the Caramesian Empire, you had Moslem Fascism, and you had Lamaistic Fascism under the late Mongul Empire.

WE HAVE THREE QUESTIONS HERE PERTAINING TO CRIMES AGAINST PROPERTY. WHAT IS CAUSING SO MUCH CRIME IN OUR COUNTRY, ESPECIALLY AMONG OUR YOUNG PEOPLE? WHY DON'T THE PREACHERS FAVOR YOUR PLAN?

Well, where do you expect the youth to go? You build your new suburbia, and there aren't even playgrounds in them, are there? They have to go to find them. Besides, poppa and momma are so damned tired out moonlighting or holding down those extra jobs, they don't have time to devote to the family. There used to be a time, you know, when the male was the breadwinner, and he supported the family. Now this monogamy, sanctified by the Christian churches, is hazardous. It's no good for males, and should only be indulged in by females under the present economic order; in other words, a young man today has no chance. The only way he could succeed is marry three of them and have them

"THE CONTINUING CRISIS"  
HOWARD SCOTT, AKRON YWCA

5-2-63

working; then he could afford to pay for the gadgets in the kitchen. Oh, don't laugh. For the first time in history, there's a preponderance of females over males in United States, did you know that? It never happened before in our history. All right, let's get it clear. What does history show? That every time in history that the preponderance of females reaches 112 to 100 males, you have polygamy, whether it's Christian, Moslem, or anything else, whether you like it or not. It won't do you males any good; most of you are too old.

Those are the facts. You may get upset about it, but that is what happened. Older women are 100 to 75 males in United States. They live longer. The poor male tries to really go someplace and do something. The dumb cluck, he doesn't know enough to quit.

Crime? Well, as long as you can steal something, beg or borrow it, as long as you can acquire economic advantage over somebody else -- but under Technocracy's continental accounting, you can't give it away, you can't loan it, you can't steal it, you can't lose it -- nobody can gain anything from taking advantage of any other human being economically. As for stealing, what good would it do an individual under a Technate to lift salt cellars or any other object? He couldn't transform them into coin of the realm. He would have to go out and engage storage space pretty soon, even if he was successful. Of course, that only proves that he's psychotic. Getting a great big pile he couldn't use -- just like some of our multimillionaires. Donner of General Motors -- \$791,000 a year, and how much income tax? \$600,000 some thousand, so he only gets \$100,000. What's the matter with the damn fool anyway -- getting \$791,000 just to be able to say that he's -- the highest paid executive in the country. pay the biggest taxes -- ho, ho, ho, ho. And yet the head of General Motors is proving that what's good for the General Motors is poison for the rest of the country. You'll learn it, but you're going to learn it the hard way.

Crime? How do you like this? Latest figures from California: the suicides in California County exceed the number of deaths by automobile traffic, and the majority of those suicides are age 16 to 24. Where is the American youth going to? Just the same as you -- no place.

HERE'S ANOTHER TWO QUESTIONS WE CAN COUPLE TOGETHER. WHAT IS

"THE CONTINUING CRISIS"  
HOWARD SCOTT, AKRON YWCA

5-2-63

THE PRESENT PROPORTION BETWEEN PRODUCTIVE AND NONPRODUCTIVE  
WORKERS? HOW LONG CAN UNIONS SURVIVE?

Your nonproductive are getting less and less. The productive capacity in United States is increasing, but your total man-hours and your total number employed are declining. As I stated before, only 54% of the working force of United States are employed 50 weeks continuously in a year. The Federal Government employs 2.4 million. The municipalities and the states employ almost another 7.5 million, or a total of 10 million in government employ. The only kind of employment that has a future in United States is the unemployment compensation and the relief and welfare departments. You get yourself a job in them. It's going to be a growing industry.

Where do you think you're going? There isn't going to be an expansion in your coal mining, your chemicals, your steel, your automobiles. In a nice experimental pilot plant outside of Detroit, there is a nice lot of equipment that can take all the piston rings, pistons, crankshafts, bearings, everything down to the sparkplugs, all in nice little separate -- it looks like a bunch of smokestacks, and they all come down automatically and a complete assembled 8-cylinder motor comes off the end of the line running, and nobody touches it. What's wrong with it? Nothing wrong with it, except one thing: it runs close to a hundred an hour. How many plants would you need? You wouldn't need very many, would you? And how many men run it? Two per shift.

In the new potash mines of Saskatchewan, 3,000 feet down, one of the greatest potash deposits in the world, the new machines going in there do 15 tons a minute. There's going to be a lot of employment, isn't there?

CAN WE MAKE SOCIAL CHANGE WITHOUT VIOLENCE? NAME SOME  
FASCIST HOME GROWN ORGANIZATION.

My God, what's the matter with you? Don't you know the Fascists in this country? Senator McCarthy was one, and he was in the Republican Party, wasn't he? You have them in the Democratic Party, too. And you have them in that Swartz, Barry Goldwater, and others of like variety. You've got signs right out here on the highway -- what does that sign say -- why shouldn't we indict Warren? Constitutional rights or something? Even if you indicted

"THE CONTINUING CRISIS"  
HOWARD SCOTT, AKRON YWCA

5-2-63

the entire Congress and Senate and Administration of United States, what the devil good would it do? You haven't got anything to replace it with except more of the same, because you won't do a job of thinking, you won't organize yourself.

Just stop and think what Technocracy is -- the position it has taken. We've had our painted cars, our planes, boats in Canada and United States, we've been through the greatest depression in history, the greatest war in history, and the greatest post-war boom. We're still here, and we're still marching. Yes, I address an audience of this size today, and maybe tomorrow one of twenty or thirty times this size. It doesn't make any difference to me. I'm not flattered whether it's 300, 3,000, or 30,000 -- don't get me wrong. None of us are running for office. It's like the United Automobile Workers in Detroit asking us -- you people get the motorcycles and the squad cars out when you have 100 or more gray cars come into Detroit, but we can't do it and we're the biggest thing in Michigan. Could we put that insignia and paint the cars the same color? Would we have to be members of Technocracy? No, if you buy the decals -- of course, you have all the men and all the paint shops in the automotive industry anyway -- but the only thing we'll require is that you have to paint a minimum 10,000 cars in Detroit, and may God have mercy on your soul -- the rest of them won't! You won't have to join Technocracy. We won't give a hang whether you do if you do it. You see the tactics? Did they? No. You can't tell a UAW member from any other bum out in the street. Just as you can't tell a Democrat from a Republican, can you, except they both smell the same. I mean, we're here.

The Canadian Government tried to give us a battle. We won it, and they had to reinstate us on October 12, 1943, right in the midst of the war, didn't it? Well, I've been trying to get arrested for forty years, and what I'm scared to death of is that I'll probably die before it happens. What do I want to go to jail for? At least I could sit down and rest. I wouldn't have to travel all over the country talking to human beings. They could come and look at me through the bars.

THE NEXT IS ON EDUCATION. COULD YOU EXPLAIN A LITTLE ON THE COLLEGE GRADUATES AND WHAT THEY WILL DO ABOUT EMPLOYMENT?

You're not going to get employment -- what's the sense?

You're going to produce more with less and less. We have designs of steel plants; for instance, continuous ingot casting. Koppers is just putting in the first one in United States. Seven of them have, been running for a number of years abroad. No giant ladle, no ingot molds, no ingot stripper crane, no soaking pit, oxygen beneficiation -- phooey. The Russians have 3,000-ton blast furnaces and they're building one 5,000. The Chinese -- and you can get the document from the Department of Foreign Commerce, "A Review of the Coal and Steel Industry of Red China," and in there you will see photographs of the Chinese installing the 25th 600-ton open hearth in the one plant. As they are installed in double lines, that means there must be an additional one -- 26th -- to complete the double line. Are there 26 600-ton open hearths in operation in any single steel plant in United States? No, there is not. You can't even find that many. So where are the youth going to? Wait until the third son or third daughter or the fourth one bounces back on you with a diploma and no job. Oh, then you're going to scream bloody murder, and then you're going to come to us. We'll say, oh, we're sorry; we've been trying to get you to wake up for forty years. Now you, you dumb cluck, you do it yourself.

HOW MUCH LONGER CAN OUR GOVERNMENT CONTINUE TO HAND OUT  
MONEY FOR VARIOUS THINGS AND REASONS?

United States has dumped \$104 billion, outside of military aid, abroad since the war. If we had dumped half that sum in United States, we could have rebuilt this continent. Instead of that, we go into an abortion like the St. Lawrence Seaway, 27 feet over sill. It is a downright engineering abortion. Bear in mind that there wasn't a single Russian anywhere around the St. Lawrence Seaway project. The Russians over there did the Stalin Canal, and that was an engineering abortion, and there wasn't a single damn American anywhere around the Stalin-Don Canal. I'm just giving you this to show you they are just as dumb in Russia as they are here. Those canals should have been 15 meters -- 12 at least. The locks should be two ways. Instead of the Welland Canal, which takes around 11 hours for the 8 locks -- the 8 locks are larger than Panama -- there should be one lock -- a hydraulic, and not water -- which would lower and raise 60,000 tons each way in 15 minutes. This is all known. We'll have to do it all over again someday, and if we had spent what we have thrown down the ratholes of Europe, we could have rebuilt this

"THE CONTINUING CRISIS"  
HOWARD SCOTT, AKRON YWCA

5-2-63

continent.

THIS HAS TO DO WITH THE AMERICAN PRESS, AND WE HAVE A GOOD EXAMPLE OF IT IN OUR TOWN, ONE NEWSPAPER AND THEY ARE GETTING LESS. WHY DIDN'T THE BEACON JOURNAL GIVE YOU A GOOD WRITE-UP?

Oh, they did once upon a time. After all, I have spoken in some of the largest auditoriums and amphitheatres and others in California, the Pacific Coast, and elsewhere, but there was an amusing incident. I had addressed some 24,000-odd paid admissions on the same day that Mary Pickford, out at Pickfair, had a couple of hundred celebrities and others raising funds for Chinese babies. They gave Mary Pickford and her guests two whole pages of life size newspaper. There wasn't a single mention of the 24,000-odd Americans who paid admission and listened for three hours. One of the great radio commentators out there said, "I was there. I am one of the 24,000 zombies." This is how the press treats you if it wants to turn thumbs down. Remember, Howard Scott has spoken in more places in Canada and more places in United States -- more states -- than any President of United States or Canada, and I haven't had 30 to 60 ghost writers to write my material, I would have loved to. Franklin Roosevelt was a great elocutionist, but for him to deliver an address without its being written and without him having to elocute; for instance, the time when he went across the northwest, speaking from the back of the train, you can recognize that it's Roosevelt's voice, but he couldn't handle it. It was awful.

We have always stated that the American press was the greatest source of misinformation extant. Advertising and entertainment, yes, but information -- misinformation. It all depends on whose bread is being buttered -- then you'll get press coverage.

THIS IS A TWO-BARRELED QUESTION. WHAT IS YOUR OPINION ON THE PEACE CORPS, AND WHAT ABOUT THE SPLIT OF RUSSIA AND CHINA?

Peace Corps -- you mean the one headed by Shriver? Is that what is meant? Well, that should be spelled "piece". Does that question spell it "peace"? The spelling is incorrect, whoever wrote that. Piece. Shriver is what? -- a brother-in-law -- He's part of the Irish Mafia from Boston, isn't he? What's a Mafia?

"THE CONTINUING CRISIS"  
HOWARD SCOTT, AKRON YWCA

5-2-63

Well, they're a Fascist gang, too, aren't they, in Sicily? That's the Black Hand, don't you realize what it was? Oh, hell!

I AM NOT PARTICULARLY ACQUAINTED WITH TECHNOCRACY. I THINK I UNDERSTAND ITS SOCIOECONOMIC PRECEPTS, BUT WHAT FORM OF GOVERNMENT DO YOU PROPOSE TO DEAL WITH THE INTERNATIONAL ECONOMIC PROBLEMS WHICH WOULD SURELY ARISE BETWEEN THE TECHNATE AND THE PRICE SYSTEM?

If there wasn't any Price System in United States and the North American Continent, I don't think you would have to worry very much., We're fighting a losing game abroad. We've backed all the lousy reactionaries from hell to breakfast: Bodin in South Vietnam; Syngman Rhee, of course, has been kicked out of South Korea. President Mendares of Turkey was our stooge, and the Turks hanged him and several others and arrested 612 members of his political party. Where aren't we in trouble? This year, we'll have to evacuate our troops from Iceland, Morocco, and withdraw our Jupiter missiles from Turkey and Italy. They said, "Yankee, go home!" Well, we're coming home. If we'd had any sense, we would have done it long ago.

Do you think we can win a certain thing? We backed Chiang Kai-shek when we knew it was stupid, and then we organized what? An attack on Red China, both in Korea and Indochina -- two things at once. You don't realize that. The Korean War was one of the costliest to United States in history; but what about the French reinvasion of Indochina? They had almost 300,000 troops; they lost 97,000 dead, four full generals, a flock of colonels, and 1,300 graduates of San Cyr, the West Point of France -- dead! And then they had to surrender. The French Government spent \$11 billion in Indochina, plus \$1.8 billion of U.S. equipment that they had to leave. How dumb can you be?

Mac Arthur, if he had had any vision, would have stopped at the 38th Parallel and notified President Truman and the United Nations that he had ended aggression in the Republic of South Korea. Oh, no! He was going on to the Yalu. Was he going to stop at the Yalu? Oh, no, he was going 2,200 miles beyond it to Manchuli on the Siberian border. Did he get there? A couple of units got within sight of the Yalu, and our troops suffered the worst defeat the Marine Corps has ever known in all history. Generalship? Is that generalship? Hardly.

"THE CONTINUING CRISIS"  
HOWARD SCOTT, AKRON YWCA

5-2-63

Bear in mind that colossal blunders are more dangerous than 10,000 traitors. Treachery is an individual thing, but the collective blunders of a nation are strategic, and they are generally fatal. Kerenskys never come back. And while we're at it, let's get this clear: no leader of an ancien régime ever became the leader of a new order yet in history, so none of your existing big brass -- political, economic, or otherwise -- are going to lead this nation anywhere. You don't like it -- wait and see. Thank you.

\* \* \* \* \*

HOWARD SCOTT INTERVIEW  
BY THE CLEVELAND PRESS  
MAY 3, 1963

I DON'T MIND TELLING YOU THAT THIS IS UNUSUAL. I'VE NEVER HAD THIS HAPPEN BEFORE. WHEN I INTERVIEW SOMEBODY, I HAVE NEVER BEEN TAPED.

We do it all over.

MY FIRST QUESTION IS WHY DO YOU FEEL YOU HAVE TO TAPE?

To record it: then there isn't any doubt about it.

ANY DOUBT ABOUT WHAT? WHAT YOU SAID OR WHAT I SAID?

I'm not concerned with what you said -- what I say; in other words, the regulations of the organization insist that if I have a public meeting or an interview or a conference that it be recorded.

WAS THERE EVER AN INCIDENT THAT BROUGHT THIS ABOUT? WERE YOU SUED AT SOME TIME OR DID YOU SUE SOMEBODY AT SOME TIME?

No, we've never been sued. We've never been accused of libel or anything else of the kind.

DO YOU RECALL WHEN THIS STARTED AND WHAT BROUGHT IT ABOUT?

That started years and years ago.

RIGHT FROM THE START THIRTY-SOME YEARS AGO?

Yes.

MUST BE FORTY YEARS NOW, ISN'T IT?

Well, in the early days, back in 1918, we didn't.

WOULD YOU SAY YOU'VE BEEN DOING THIS FOR THIRTY YEARS AT LEAST?

Yes.

WHERE ARE ALL THE TAPES? OF COURSE, YOU DIDN'T HAVE TAPES IN

5-3-63

THE OLD DAYS.

We had wire.

DO YOU HAVE THEM ALL STORED AWAY SOMEPLACE?

Yes, we have spools of wire -- a whole bunch of them.

NOW, DOES ANYBODY MONITOR THESE WHEN YOU'RE FINISHED?

Yes.

WHO DOES THAT?

We have a staff at CHQ. We used to have our offices in New York City on the 25th floor of the Commerce Building. We were there for 14 years. Then we bought a farm out in Bucks County, Pennsylvania. We moved the whole staff out there; we house them and feed them -- 109 acres.

HOW LARGE IS THE STAFF?

There are only six right now. One is down in Mexico.

BUCKS COUNTY, PA? YOU'RE NOT IN NEW YORK ANY LONGER?

No, we haven't been for 13 years.

HOW DOES TECHNOCRACY INC. GETS ITS REVENUE, ITS INCOME?

From the membership. We have no angels, no advertising, no subsidies on the part of anyone.

DO YOU OWN ANY PROPERTY -- ANY INCOME-PRODUCING PROPERTY?

No, we own property, but it's not income-producing; that is, we own complete Section buildings -- headquarters.

IS MEMBERSHIP AN ANNUAL THING? DO PEOPLE RENEW THEIR MEMBERSHIP ANNUALLY?

Oh, yes.

5-3-63

HOW MUCH IS YOUR MEMBERSHIP?

Nine dollars a year.

HOW MANY MEMBERS ARE THERE?

We never make any statement on membership; in other words, some people would be surprised at the amount ....

AT THE SIZE IF IT'S LARGE, AND SOME MIGHT BE SURPRISED IF IT'S SMALL, IS THAT IT?

Well, both ways; we've never made any play on membership, just as we never use any buildup. Just because a man is a doctor of physics, he's not introduced with any splurge. We don't carry any advertising in our publications.

WHAT IS THE SYMBOL OF TECHNOCRACY? WHAT IS THAT SUPPOSED TO BE?

That's a Monad, That's a symbol in biology of the basic cell of all living things. The Chinese and so on -- it's an ancient symbol; it goes way back.

CELL OF ALL LIVING THINGS? Yes. All life. AND YOU FEEL THAT IT IS SYMBOLIC? The Chinese call it the yin and the yang. The Northern Pacific has it in red and black. The 29th Division had it in blue and gray, and Headquarters Air Corp had the same. A VERY ATTRACTIVE THING. DO YOU FEEL THAT THIS IS WHAT TECHNOCRACY IS -- SOMETHING OF ALL LIVING THINGS? Oh, no, that wsn't the reason. We didn't go in for any philosophic .... just because it was a clean-cut symbol, you see. ALL RIGHT.

MAY I ASK HOW OLD YOU ARE? Oh, I don't think that .... THE REASON I ASK IS THAT MANY PEOPLE REMEMBER YOU COMING INTO CLEVELAND AND SO FORTH THIRTY OR THIRTY-FIVE YEARS AGO AND SAY, WELL, A GOOD LONG TIME HAS GONE BY. I've been in most cities in United States, Canada, and Mexico. OH, YES, I KNOW. YOU'VE BEEN AT THIS FOR QUITE A LONG TIME. Quite a while.

WOULD YOU OBJECT IF I SAID YOU LOOK 70-ISH -- WOULD THAT BE ALL RIGHT? Yes.

5-3-63

I WAS THINKING, OF COURSE, OF THE PASSAGE OF TIME, TOO. I JUST VAGUELY REMEMBER TECHNOCRACY PERSONALLY. I WAS KIND OF YOUNG WHEN THIS WAS FIRST COMING INTO FASHION AND SO FORTH, SO WOULD YOU MIND FOR MY PURPOSES DEFINING IT BRIEFLY IN SIMPLE TERMS?

Well, you have two things: you have an organization. Technocracy Inc. is a nonprofit, nonsectarian, nonpolitical membership organization, incorporated under the laws of the State of New York. We're not a political party, we do not run candidates, and we do not accept membership from anyone that is an active political party member. IS THAT RIGHT? Oh, yes, never have. DEMOCRAT OR REPUBLICAN? It doesn't make any difference -- socialist, communist -- no matter what it is, BY ACTIVE YOU MEAN THOSE PROMINENT? Yes, or elected to any political office. If they're elected to any political office, that's out. Voting doesn't constitute membership in a political party. They can vote if they wish. That's their privilege, but they have to be a citizen. We do not accept aliens.

DO YOU HAVE AN APPLICATION BLANK THAT MAKES THIS CLEAR? Oh, yes. It's in the form of an affidavit. If you sign that, you're committing perjury if you make any false statements.

ALL RIGHT. NOW WHAT'S THE OTHER PART? YOU SAID THERE WERE TWO PARTS.

One is the organization; the other is a body of thought. THAT'S TECHNOCRACY? Well, what's autocracy come from? I DON'T KNOW, YOU TELL ME. You know. What's the word "autocracy"? AUTOOCRACY? Yes, what does it mean? AUTO MEANS SELF. Plutocracy means what? What's "cracy" mean in Greek -- it's to rule, isn't it? ALL RIGHT. Plutocracy is the rule of wealth, isn't it? Autocracy is the rule of one. Democracy is supposed to be the rule of many. Technocracy is the rule of science. THAT'S THE ABSOLUTE DEFINITION?

HOW WOULD IT BE IMPLEMENTED? DEMOCRACY IS THE RULE OF MANY. Technocracy is the rule of science. YOU GO FURTHER THAN THAT IN DEFINING A DEMOCRACY. How do you define Democracy? Now don't get into trouble. I MEAN THERE ARE DEMOCRACIES AND THERE ARE DEMOCRACIES. Oh, are there. You're not living in a democracy right now. SOME PEOPLE BELIEVE WE ARE. Oh, no, you're living in

5-3-63

an elective republic, sir. What's the oath to the flag? Come on. YOU DON'T HAVE TO TAKE AN OATH TO THE FLAG. No, no, that's not the point. What does it say? I DON'T KNOW. [SOMEONE IN BACKGROUND: I PLEDGE ALLEGIANCE TO THE FLAG OF THE UNITED STATES OF AMERICA, IN ORDER TO FORM A MORE PERFECT .... ] and the republic for which it stands. YOU SEE, HE DOESN'T KNOW IT EITHER. YOU'RE ASKING THE WRONG PEOPLE. It's a republic.

THAT'S NOT WHAT I CAME HERE FOR, BUT YOU KNOW DAMN WELL THAT'S JUST ONE FORM OF DEMOCRACY. IT'S A REPUBLIC FORM OF DEMOCRACY. ANYWAY, CAN YOU GIVE ME A DEFINITION OF TECHNOCRACY BEYOND THE RULE OF SCIENCE?

That's what it is.

HOW DO YOU PROPOSE THAT THIS RULE OF SCIENCE SHOULD BE IMPLEMENTED?

What do you mean, implemented? HOW WOULD IT GO INTO EFFECT? We're talking about design: railroad systems, power systems, sewerage systems, city design, highway, water control -- in other words, all the physiological functioning. We have designs for them. YOU HAVE DESIGNS FOR EVERYTHING WHERE SCIENCE IS INVOLVED? For every operation -- physical operation. WHERE ARE THESE KEPT? At CHQ. For instance, I brought out a million volt DC power transmission in 1924. The Russians are just starting to put in two 4,000-mile grids right now. Well, do you know what the significance of that is? ABSOLUTELY NOT. There you are. You can transmit power 4,000 miles with only a fraction of the line loss that you transmit from Boulder Dam into Los Angeles.

WHAT HAS THIS TO DO WITH THE RULE OF SCIENCE? That's an application of science to the area in which you live. ISN'T THERE SOME ECONOMIC ....? That involves economics. HOW? It involves everything you use as energy -- Technocracy. IF SOMEONE SAID TO YOU TODAY, MR. SCOTT, AS OF TOMORROW WE ARE GOING TO HAVE A TECHNOCRATIC SOCIETY INSTEAD OF DEMOCRATIC OR REPUBLICAN FORM OF GOVERNMENT SOCIETY, WHAT WOULD BE REQUIRED? WHAT WOULD YOU DO -- WOULD YOU BECOME PRESIDENT OF UNITED STATES? Oh, no. I'm too old. IS THAT THE ONLY THING THAT WOULD KEEP YOU IN THAT CASE? No, there's only one job I've ever applied for. Everybody over this continent -- I've spoken in hundreds of public meetings, and I've got a reservation on that job -- they all know it. I have a sense

5-3-63

of humor, you see. WHAT JOB WAS THAT? To be custodian of the bears in Yellowstone Park, because they hibernate in the winter and in the summertime, the guests feed them. It's an ideal job for a lazy man. VERY GOOD. In other words, I haven't any ambitions like the present resident in the White House, this Irish Mafia from Boston. THAT'S GOING ON TAPE. That's going on tape -- it's been on tape. It has been on the air. ALL RIGHT. TIME MAGAZINE picked it up from my using it. THAT'S RIGHT -- THE IRISH MAFIA? The Irish Mafia from Boston. PRETTY GOOD.

The Republicans really elected Kennedy. WHY? Because they ran Nixon. IF WE WOULD HAVE HAD THIS, IT WOULD HAVE BEEN GOOD A COUPLE OF YEARS AGO. Well, it's good right now -- it's dynamite.

WHAT I WANT TO KNOW -- LET ME GIVE YOU A LITTLE BACKGROUND. I'VE DONE SEVERAL ARTICLES ON THE FACT THAT OUR NATION IS NOW FACED WITH TECHNOLOGICAL UNEMPLOYMENT .... Oh, really? AND AUTOMATION IS GROWING, SO FORTH AND SO ON, AND BECAUSE I HAVE DONE THIS, A NUMBER OF PEOPLE HAVE MENTIONED TECHNOCRACY TO ME. AS I SAY, I REMEMBER HEARING OF TECHNOCRACY AS A YOUNG BOY AND PERIODICALLY THROUGHOUT, I OCCASIONALLY SEE IT UP ON A BUILDING OR SEE YOUR LITTLE SYMBOL, BUT I REALLY DON'T KNOW WHAT IT IS.

It's a whole system of geomechanics of operating of earth's services, whether they're below the surface or on it, and so on, of operating everything that is concerned in the production and distribution of so-called physical wealth. Years ago, we came out in one of our reports and stated that in agriculture in United States, the total number of farms would continue to decline, while the individual farm would tend to increase in size, and that the productivity per acre would rise as you applied technology. You had almost 7 million farms then. Now it's come down to 3.4 million farms. That's quite a reduction, you see, in 40 years.

WELL, IF YOU WILL FORGIVE MY SAYING SO, YOU DON'T HAVE TO BE A GENIUS TO SEE THAT.

Well, wait a minute! We wrote that and drew it up and drew the curves on it 40 years ago. EVEN THEN I DON'T THINK IT TOOK GENIUS. Oh, well, somebody else did it, let's put it that way. Let's avoid this "genius" stuff. I AM SURE THAT'S THE OBVIOUS TREND. All right, we wrote a report back then that the iron ore

5-3-63

of Mesabi, that the Fe content would continue to decline and the Si content (silicon) would tend to increase as a function of depth, and if there was a continuum of the rate of growth in the steel industry of United States, then the economic feasible ore of Mesabi would be exhausted by 1950, and we advised the development of other ore bodies outside of United States at that time. Well, Judge Gary, who was Chairman of the Board of U.S. Steel, wrote a brown letter to the steel companies, and addressed one to me, attacking us for issuing the report that was inimical to the best interests not only of the U.S. Steel but of the entire steel industry of United States. I mean, this battle has been on. It's just like Henry Luce in FORTUNE MAGAZINE -- you can check this, go look at it -- in 1935 he published a little photograph about this big of the cotton picker that we had on the front cover of a magazine. Don't forget, I've spoken on the introduction of the cotton picker in Mississippi, Louisiana back in the thirties, and this organization, Technocracy, is more responsible than all the other organizations in United States for the migration of the negro north. We got one chap in the north of Mississippi, wealthy, and one woman landowner, and the Big Sky Clan. We only needed three. That was enough. The cotton picker went in and was on its way. Well Henry, in FORTUNE, writes it up that Howard Scott was using the cotton picker to frighten American bourgeoisie; and then he goes on, that is, his staff does, to point out twenty different attempts to invent a cotton picker and they had all failed. Of course, today he's accepting full page color ads from seven companies manufacturing cotton pickers. That's just the ironic side of it.

I'D LIKE TO GET A STORY, AND THIS IS NOT A STORY.

The big story in this thing is here is a group that started out originally with scientists, technologists, and engineers, and then it spread out to include anybody. We have farmers, miners, any kind of people, but if Technocracy was correct -- they thought we were so far off the beam, remember, we were a little dizzy. Now they are beginning to realize that we were not off the beam. You're going to have less and less employment and less and less man-hours as you put in more technology. You have 12 billion horsepower in prime movers in United States. HOW DO YOU MEASURE THAT? You will find that in the United States Abstract. One of our men, duly accredited, prepared the research for the United States Abstract. TWELVE BILLION HORSEPOWER? Of prime movers in

5-3-63

United States. PRIME MOVERS. Yes, that's all your motors, diesel engines, many things. THESE COULD TAKE MANY FORMS. Yes, but the total horsepower is over 12 billion. Well, 97%, practically, of that is in automotive vehicles. It's only the remaining 3 to 4% that is in industry, mining, etc. Well, that is what has given the big kick. If you'd double that, you'd have 16 million unemployed in United States.

Stop and think a moment. John L. Lewis had 780,000 coal miners in 1920 -- bituminous coal miners. He and the coal operators did an excellent job. They succeeded in raising the productivity of the American coal miner to the highest in the world: 8 tons per man per day. The new machines coming in do 8 tons a minute. John L. Lewis only has 235,000 coal miners left today.

MR. SCOTT, WHAT YOU SAY IS MORE OR LESS TRUE, AND WE ARE GETTING MORE MACHINES .... But we said this years ago, you see. O.K. WHERE DOES THAT LEAVE US TODAY? WHAT I'M WANTING .... THE THING I WOULD LIKE TO LEARN FROM YOU IS, IS THERE A PLACE FOR TECHNOCRACY IN TODAY'S WORLD? LET'S FORGET WHETHER YOU WERE A PROPHET WITHOUT HONOR .... I'm not trying to establish that. THIS MAY HAVE BEEN FINE. YOU MAY HAVE FORESEEN THIS FOR FORTY YEARS. WHETHER YOU DID OR NOT IS BESIDE THE POINT TODAY. WHAT DO YOU HAVE TO OFFER TODAY, IF ANYTHING? THIS IS WHAT I WOULD LIKE TO KNOW.

You have to have a planned design of the operation of all energy-consuming devices. I mean, this civilization is a technological one, and you are not going to attain anything by turning out the liberal arts from your universities and your colleges. YOU ARE NOT GOING TO OBTAIN ANYTHING BY IT? You will not attain it by liberal arts. ATTAIN WHAT? Any knowledgable understanding of the system we live under. THIS IS A TECHNOLOGICAL CIVILIZATION .... That's why I gave you the 12 billion .... YOU WON'T ATTAIN AN UNDERSTANDING OF IT .... Nor any social perspective of the future BY TURNING OUT LIBERAL ARTS GRADUATES, HUH? Well, your liberal art has no understanding of the basis of this kind of human society. WOULD YOU GO SO FAR AS TO SAY THERE IS NO PLACE FOR LIBERAL ARTS? Their significance is irrelevant today. It's all right for personal enjoyment, THAT'S WHAT I MEAN; IN OTHER WORDS, THERE IS ROOM FOR THAT, IS THERE NOT? Well, that's a subjective thing; we're talking about the

5-3-63

objective things. YOU'RE TALKING ABOUT THE ECONOMIC AND TECHNOLOGICAL ASPECTS? Yes.

O.K. SO, THEREFORE, WHAT IS THE SOLUTION? THIS IS A TECHNOLOGICAL CIVILIZATION, AND YOU WON'T ATTAIN ANY UNDERSTANDING OR ANY SOCIAL PERSPECTIVE OF IT OR THE FUTURE BY TURNING OUT LIBERAL ARTS. The problem of water in United States -- let's take the problem. What are the major components in this national-international situation of continuing crisis? Water, soil, energy, technological equipment, resources, and your population explosion. Those are the major components. Now, we're producing an abundance with an ever-declining employment and ever-declining man-hours, because we are putting in more extraneous energy, I SEE, ON THIS WE AGREE. NOW, WHERE DOES TECHNOCRACY .... Now, wait a minute, you don't have to agree with us. I didn't make it and you didn't make it. O.K. THIS IS A FACT; THIS IS WHAT IS HAPPENING. WHAT DOES TECHNOCRACY DO?

Technocracy is the only one that's been proposing .... PROPOSING WHAT? Technocracy, its whole plan, design of all energy-consuming operations. WHAT IS THEIR DESIGN? DON'T YOU UNDERSTAND WHAT I'M ASKING YOU? Yes, but then you'd have to look over plans -- you'd have to look over design. CAN'T YOU SIMPLIFY ANYTHING? Can you simplify nuclear physics? Nuclear physics is only one infinitesimal part of a design. IN OTHER WORDS, YOU WOULD NOT DIG COAL THE WAY THEY DIG COAL TODAY, YOU WOULD NOT PUT OUT AUTOMOBILES THE WAY WE PUT OUT AUTOMOBILES. DO YOU HAVE SOME OTHER WAY OF PUTTING OUT AUTOMOBILES? DO YOU HAVE OTHER WAYS OF BUILDING BUILDINGS -- OTHER WAYS OF DIGGING MINES -- IS THAT WHAT YOU'RE SAYING? Yes, everything.

ARE THESE WAYS NOT BEEN EXPLORED BY ANYONE ELSE BUT THE PEOPLE IN TECHNOCRACY? That's about all. NOW I UNDERSTAND. No, you don't. No, you don't at all. One of the first things members of this organization brought out was the frosted foods process. IS THAT RIGHT? Yes. WHATEVER HAPPENED TO BIRDSEYE? BIRDSEYE DID ALL THAT. He died a little while ago. You see, Bassett Jones and Clarence Birdseye were the original developers. DO YOU PEOPLE HAVE PATENTS OR ANYTHING? DID YOU MAKE ANY MONEY OFF IT? No. It was just a theory of removal of energy from cellular structures. WHAT DID YOU DO WITH IT? What? WITH THIS THEORY -- WHAT DID YOU DO WITH IT? It went in on chocolates first up in Boston long before it hit on anything else. DID YOU PEOPLE PUT IT INTO

5-3-63

PRACTICE? No, we were advocating it. YOU HAD THE THEORY OF IT, THE DESIGN? And we had members that were in on it. Bassett Jones was co-developer of it and was a member of Technocracy. OH, I SEE. DID HE DO IT ON HIS OWN OR THROUGH THE ORGANIZATION? Oh, no. We have people who are working on biotics and technical developments, and others who are just ordinary doctors or store owners or mechanics ....

ARE YOU HOLDING BACK SOME GREAT SCIENTIFIC DEVELOPMENT THAT WOULD AID THIS COUNTRY AND SO ON? No. DO YOU KNOW SOMETHING THAT THE REST OF US OUGHT TO KNOW IN ORDER TO BENEFIT FROM IT? No. The Russians have taken over our million volt DC. IS THAT SOMETHING THAT CAN ONLY BE BUILT IF YOU KNOW CERTAIN THINGS THAT ARE NOT GENERALLY KNOWN? No, but it could have been done here. It enables you to shift power all over a continent from every time zone to another time zone continuously, you see. You cannot do it with 3-phase AC 60-cycle. NOW YOU'VE GOT ME. I DON'T UNDERSTAND. Your losses are too great. Do you understand me? Your transmission losses. [SOMEONE ELSE IN BACKGROUND: THERE ARE ALWAYS LOSSES IN WIRE. SAY, FOR INSTANCE, YOU GET POWER FROM HERE TO ASHTABULA. THERE'S A LOSS BETWEEN HERE AND ASHTABULA. THE RUSSIANS HAVE THE INSTANTANEOUS PART OF GETTING THE POWER FROM HERE "TO ASHTABULA WITHOUT ANY LOSS,] Relatively little loss. IS THIS SOMETHING THEY DEVELOPED? No. We brought this out in 1924. IN 1924, DID YOU SAY THIS IS HOW TO DO OR DID YOU SAY THIS CAN BE DONE? This is how to do. We even specified the size of the cable. AND NO ONE WOULD LISTEN? We're not concerned with that. We even made models -- a piece of the actual pipe line and the cable -- had them in Sections. DO YOU HAVE ANYTHING YOU CAN SHOW ME NOW? No, we haven't anything with us right now.

CAN YOU TELL ME SOMETHING THAT YOU FEEL SHOULD BE DONE? There are so many things. GIVE ME AN EXAMPLE -- ONE THAT I CAN UNDERSTAND. I'm trying to get at it to show that you can't handle water on the basis of a township or a municipality, you see. HOW SHOULD IT BE HANDLED? It's done on the basis of a watershed. Water is no respecter of state lines. NOW YOU'RE TALKING IN POLITICAL .... No, I'm talking technologically. The Mississippi-Missouri-Ohio watershed covers 43.6% of continental United States. WHAT ARE YOU CRITICIZING -- THE POLITICAL BOUNDARIES? No, no. I'm telling you of the problem of water. If you're going to handle water, that is the way you are going to have to do it. You can't handle it adequately any other way. YOU'RE SPEAKING

5-3-63

TECHNOLOGICALLY NOW? Yes. TECHNOLOGICALLY, WATER SHOULD BE HANDLED WITHOUT ANY POLITICAL BOUNDARIES? No, I'm telling you that that is what is required. Now, wait a minute. Just because water runs across -- if you're going to try to handle it on the township or county basis or municipal, you're just a little piecemeal thing. SURE, I AGREE WITH YOU. WHAT HAS TECHNOCRACY GOT TO DO WITH IT? We have a continental hydrology for the control of .... NOW WE'RE AT SOMETHING -- A CONTINENTAL HYDROLOGY. THAT SOUNDS GOOD. I DON'T KNOW WHAT THE HELL IT MEANS, BUT LET'S TRY IT. It's a planned control and regulation of all water on this continent. AND IT'S NOT POLITICAL. Wait a minute. Leave that out until you find out where it clashes. DO YOU SEE WHAT MY THINKING IS? No, I do not. YOU DON'T SEE MY THINKING? No, I don't even know what you know about it. I KNOW VERY LITTLE ABOUT IT. IS THIS PLAN A PAPER PLAN OR SOME KIND OF A TECHNOLOGICAL PLAN? All technological plans are on paper. I MEAN IS IT A TABLE OF ORGANIZATION; IN OTHER WORDS, ALL THE WATER WILL BE DISPENSED OUT OF COLORADO ....? You've got waterways, you've got dams, you've got power development, you've got water storage for the entire continent. I SEE, AND IT WOULDN'T BE WHAT WE HAVE TODAY? Oh, no. AND WHAT WOULD BE THE PURPOSE OF THIS -- TO GET THE MAXIMUM ....? Maximum use of the water, to increase your water table, to dispense your dispersal and diffusion of water. WHY CAN'T YOU TAKE THIS PROPOSAL TO THE PRESIDENT? Why should I take it to the President? BECAUSE IT WOULD BE GOOD FOR THE COUNTRY TO HAVE THIS. You're assuming that anybody in the White House has sufficient knowledge and understanding. I DON'T KNOW WHY I SHOULD ASSUME HE DOESN'T. He has no training in anything technological. ONLY A SCIENTIST WOULD UNDERSTAND THIS -- IS THAT THE IDEA? Do you think somebody with a degree in law would understand it? KENNEDY HAS NO DEGREE IN LAW. What has he? HE'S IN POLITICS. Yes, he hasn't much of anything, except the \$600 million of the Kennedy family.

THERE ARE PEOPLE IN THE GOVERNMENT WHO DO UNDERSTAND TECHNOLOGICAL .... They're not going to suddenly propose .... THERE ARE VERY INFLUENTIAL MEN IN CONGRESS WHO UNDERSTAND TECHNOLOGICAL THINGS. Very few. They don't want to .... they are interested in being Congressmen.

YOU HAVE A VERY DEFEATIST ATTITUDE. No, not at all. YOUR ATTITUDE IS THAT NO ONE CAN ACCEPT THIS EXCEPT YOU. Oh, no, not a bit. We have all kinds.

5-3-63

TO PHOTOGRAPHER: DO YOU HAVE ALL THE PICTURES YOU WANT? Yes, I'm all through. WHAT TIME IS IT? You can take all the time you want. PHOTOGRAPHER: 2:45. OH, IS THAT ALL? I THOUGHT I WAS RUNNING LOW ON TIME. PHOTOGRAPHER: I'M ENJOYING THIS. REPORTER: You understand it! PHOTOGRAPHER: I understand some of it. CHIEF: Do you want some coffee or something? REPORTER: Listen, let me take the pictures and you write the story, because I don't understand a god-damned word. PHOTOGRAPHER: THIS WAS TOUGH 30 YEARS AGO -- I MEAN THE STORIES THAT LLOYD WRIGHT DID .... IT WAS A TOUGH STORY TO WRITE. Yes, but he did a lot of them. HE DID A LOT AND HE DID THEM WELL. OF COURSE, LLOYD WAS A 'BRILLIANT GUY; HE'S NOT LIKE YOU, TOM. REPORTER: VERY FEW PEOPLE ARE. PHOTOGRAPHER: DID YOU KNOW LLOYD WRIGHT, TOM? REPORTER: I KNEW HIM. HE LEFT ABOUT THE SAME TIME I ARRIVED. PHOTOGRAPHER: HE WAS HERE IN THE COUNTRY LAST YEAR. REPORTER: HE WAS A PRETTY LIBERAL GUY, IF I REMEMBER. Well, but he went into it on his own. We didn't .... DIDN'T HE JOIN THE ORGANIZATION? Oh, no, but I mean into the writing of it.

I DON'T FIND VERY MUCH GOOD SAID ABOUT YOUR ORGANIZATION. MAYBE THIS IS ALL SMEAR, I DON'T KNOW. If there was, it wouldn't be any good. PHOTOGRAPHER LAUGHS. REPORTER: I DON'T GET THAT. Look, if anything is approved of by the existing .... OH, I SEE, IF IT WAS GOOD, THE ORGANIZATION WOULDN'T BE ANY GOOD. Now, you're beginning to .... BUT THAT'S TALKING IN VERY SIMPLE BROMIDE. IF EVERYBODY LIKES IT .... You've got a job to write, and you've got the limitations of the particular publisher, and so on. OH, NO, I CAN WRITE ANYTHING I WANT. I CAN WRITE ANYTHING AND I PROMISE YOU IT WON'T BE CENSORED. No, I don't mean that. I'M UNIMPRESSED. I MEAN, I'M COMPLETELY UNIMPRESSED. I DON'T SEE WHERE YOU'VE GOT AN ANSWER TO A DAMN THING THAT'S GOING TO HELP THIS COUNTRY IN THE SPREAD OF POWER. I WISH YOU COULD CONVINCE ME. No one's trying to convince you. BUT I WISH YOU WOULD. No, I wouldn't if I could. YOU WOULDN'T IF YOU COULD?! No, don't you know what the hell salesmanship is? Well, it's a compromisation of original intelligence to approach the common denominator you are selling to, and a continuum of that compromise. REPORTER: OH, COME ON. Wait a minute! and it leads inevitably to complete capitulation, and you wind up lower than the common denominator you're approaching. OH, I THINK I SEE SOMETHING NOW. Oh, you do?.. YOU DON'T WANT TO SELL ME. It's not a personal thing. THERE'S NOTHING TO SELL, IS THAT IT? I'VE GOT TO EITHER APPRECIATE THIS OR I DON'T APPRECIATE IT. It isn't appreciation.

5-3-63

WHAT IS IT? Well, there's knowledge here, and I'm not trying .... I haven't any ambition.

THERE ARE THINGS I READ THAT SAID TECHNOCRACY WOULD SUPPLANT A MONEY SYSTEM WITH AN ENERGY SYSTEM. Yes, a system of distribution. A SYSTEM OF DISTRIBUTION? A continental accounting system that gives you your total production and your total consumption every hour by every district on the whole continent. WOULD YOU REPEAT THAT SLOWLY, PLEASE. It's a continental accounting system. It's not a medium of exchange. It's a medium of distribution. YOU COULDN'T GIVE ME THIS TAPE, COULD YOU, TO TAKE BACK TO THE OFFICE? No. Every hour you know what's produced, whether it's nuts and bolts, engine pistons, or biscuits or bread or anything else. EVERY HOUR YOU KNOW WHAT'S PRODUCED .... IT'S SORT OF LIKE AN IBM MACHINE? Well, we devised a modified Dewey Decimal System with carbon coding before there was an IBM or a computer machine to use it, you see.

WHAT WOULD YOU DO WITH THIS ACCOUNT? Well, that's your continental accounting system for your national and continental government. IN OTHER WORDS, YOU WOULD KNOW HOW MANY DOUGHNUTS YOU NEED TODAY, AND YOU WOULD PRODUCE THAT MANY DOUGHNUTS? You get that every hour. YOU WOULD GEAR THIS TO YOUR NEED? Than you know what you're doing. AS YOU CONSUME THESE DOUGHNUTS, YOU PRODUCE MORE DOUGHNUTS TO TAKE THEIR PLACE. AM I GETTING THERE? AM I CATCHING ON? Yes, you're approaching it. It would give you a continuous inventory of everything and a continuous record every hour of consumption by sex, by age, by occupation .... ARE YOU GOING TO COUNT SEX? PHOTOGRAPHER: HE'S TALKING ABOUT CONSUMPTION BY A MAN OR WOMAN. WHAT DO YOU USE FOR A MEDIUM OF EXCHANGE? You have no medium of exchange. You have a medium of distribution. REPORTER: YOU DON'T HAVE SALES AS SUCH? Yes, but we have a medium of distribution. What's the difference between a medium of distribution and a medium of exchange? YES, THAT'S WHAT I WOULD LIKE TO KNOW. You now have a credit card. That's not transferable, is it? UNLESS YOUR WIFE USES THE SAME ONE. Usually it's made out to an individual, and is nontransferable. Well, your medium of distribution entitles you to consumption, but the woman would have the same as the male as a matter of citizenship, and if you're going to produce and distribute abundance, why differentiate when you've got so much, you can't differentiate. IN OTHER WORDS, YOU'D HAVE A CREDIT CARD ....? Well, a credit card is a bad thing .... ARE YOU ENTITLED TO SO MUCH OF THE

5-3-63

DISTRIBUTION? Oh, yes. WHAT DETERMINES HOW MUCH OF THIS YOU ARE ENTITLED TO? YOUR NEEDS? No. WHAT? The proportion of population to the total production. IF THERE IS PLENTY OF EVERYTHING, ARE YOU ENTITLED TO AS MUCH OF EVERYTHING AS YOU WANT? No, you're entitled to as much as anybody else. There are no second-class citizens.

THERE WOULD NOT BE AN EXCESS BECAUSE WE CONTROL IT. There would be reserves. RESERVES, BUT THAT'S ALL? IN OTHER WORDS, AFTER EVERYBODY HAS HAD THEIR DOUGHNUT TODAY, IF I WANT ANOTHER DOUGHNUT, I CAN HAVE ANOTHER DOUGHNUT IF THERE IS ANOTHER DOUGHNUT AVAILABLE, AND IF THERE'S ONE FOR HIM AND HE WANTS ONE? There's reserves.

WHAT DO I HAVE TO CONTRIBUTE? Just your functioning as your contract of citizenship. COULD YOU EXPLAIN THAT A LITTLE BETTER? You put in so many hours of service for so many years. YOUR FUNCTION UNDER A CONTRACT AS A CITIZEN? Yes. In other words, all citizens have to function as part of the human society. NOW, I'M A NEWSPAPERMAN. I FEEL THAT MY CONTRIBUTION SHOULD BE IN THE FIELD OF NEWSPAPERS. Well, that's all right or whether it's stringing telephone wires .... I WOULD BE REQUIRED TO PUT IN AS MUCH NEWSPAPERING AS THE NEXT GUY WOULD BE REQUIRED TO PUT IN? That's all -- they're all the same contracts as citizens. WHAT IF I WANT TO PUT IN A LITTLE MORE? Well, that's all right. You don't get anything more for it, but you're privileged to do that if you wish. PHOTOGRAPHER: WHAT IF YOU PUT IN A LITTLE LESS? No, you'd have to .... THEY'D CUT YOU OFF A LITTLE BIT. No, they don't cut you off. THEY'D ENCOURAGE YOU TO PUT IN A LITTLE MORE. There would be other means to handle it. LIKE WHAT? Don't get into the jurisprudence of it, because you're in deep enough now. BUT THERE WOULD BE JURISPRUDENCE? Oh, certainly. YOU WOULD HAVE JUDGES AND COURTS? No, not in the sense that you mean. It would be an entirely different system of jurisprudence.

IS THIS OUTLINED SOMEWHERE? No, not in any one book. IN YOUR MIND, OR WHAT? Oh, no, here and there. YOU COULDN'T PICK UP A HANDBOOK ON TECHNOCRACY THAT WOULD OUTLINE THIS? We'd like to put it all together, but that takes money. I'M WILLING TO DO IT FOR A MODEST FEE. I'M A PRETTY GOOD REPORTER, AND I .... I know, but it would take a lot more than one individual. We have some highly-trained individuals, but if you had the resources of a big corporation

5-3-63

yes, you could turn out operating models of all this.

NOW, TELL ME THIS: DO YOU FEEL KNOWING THAT TODAY MUCH OF WHAT YOU FORECAST THIRTY OR FORTY YEARS AGO IS EITHER HERE OR COMING ABOUT, SUCH AS A GREAT NUMBER OF MACHINES TO DO THE WORK A MAN USED TO DO, AND SO FORTH, AND THIS RAPID APPROACH TO ABUNDANCE -- OUR STEEL CAPACITY IS FAR ABOVE WHAT OUR STEEL NEEDS ARE, YOU KNOW THAT. Well, it is, but our steel plants are antique. We have 140 million tons steel capacity in United States. We did 98 million tons production last year. The Russians did 84 million. We're only growing at 2-1/2%; they are growing at 8-11%. NOW, I DON'T WANT TO LOSE MY QUESTION. MY POINT WAS THAT AS WE ARE GETTING TO THIS POINT THAT YOU SAID WE WOULD GET TO WHERE WE HAVE FAR GREATER CAPACITY THAN WHAT WE CONSUME, DO YOU FEEL THAT THERE IS TIME FOR A REBIRTH OF TECHNOCRACY -- OF INTEREST IN TECHNOCRACY -- OR HAS THERE BEEN A REBIRTH OF INTEREST IN TECHNOCRACY? Yes, there has been continual growth. We've got Sections across Canada and United States. I MEAN, HAS THIS GROWTH BEEN A GRADUAL THING OVER THIRTY YEARS OR HAS IT SUDDENLY ACCELERATED? No, it's coming more in evidence now because of your pressures -- pressures on your youth, pressures on employment.

WOULD YOU MIND GIVING ME A PERCENTAGE OF THE GROWTH YOU'VE HAD THE LAST YEAR. Oh, I don't .... IT HAS GROWN IN THE PAST YEARS? Oh, yes. HOW MANY SECTIONS DO YOU HAVE IN CLEVELAND? There are two in Cleveland. We're in Ashtabula, we're in Akron and in Kent. WHAT DO YOU GET FOR BELONGING? WHAT DO YOU GET IN RETURN FOR BELONGING -- DO YOU GET INFORMATION, DO YOU GET LITERATURE, PAMPHLETS? We publish three magazines. MAY I SEE ONE? I don't know whether we have one here or not. I never bother carrying them. CHENRY ROSE: I HAVE A FEW IN MY CAR. I'LL BRING SOME UP.] IF YOU DON'T MIND, I'D LIKE TO SEE ONE. SOMEBODY SAID YOU HAVE A BUNCH OF LITTLE PAMPHLETS. We publish pamphlets, books, maps, bulletins. We have our own printing presses. DO YOU EVER MAKE MONEY ON THEM? No. DO YOU SELL THE PAMPHLETS? Oh, yes. DO YOU MAKE SOME MONEY FOR HEADQUARTERS ON THOSE -- THE SALE OF THOSE PAMPHLETS? We just charge enough to carry your costs -- a little more for expenses. But that's not what supports the organization.

THE THING I WOULD LIKE TO KNOW MORE THAN ANYTHING ELSE IS, DO YOU FEEL THAT THE AMERICAN PUBLIC WOULD BE MORE RECEPTIVE TO THE IDEA OF A TECHNOLOGICAL OR TECHNOCRACY'S IDEAS OF

5-3-63

DISTRIBUTION TODAY THAN THEY WERE 30 YEARS AGO? Well, you're getting to it in credit cards, aren't you? ARE THEY GETTING TO IT WHETHER THEY KNOW IT OR NOT? Yes. NOW THE CREDIT CARD, OF COURSE, IS A MEDIUM OF DISTRIBUTION WITHOUT A MEDIUM OF EXCHANGE. EVENTUALLY THERE'S A DAY OF RECKONING. But then, you're not handling money, are you? SO YOU FEEL YOU ARE GRADUALLY ELIMINATING THE MONEY ITSELF? Yes. IT BECOMES AN ACCOUNTING SYSTEM, AS YOU SAY. That's right. SO IF EVERYBODY HAD A CREDIT CARD -- IF YOUR SYSTEM WERE TO BE PUT INTO EFFECT, THE SYSTEM YOU ENVISION .... Credit cards wouldn't give you a continental accounting system, though, would it? YOU COULD ALMOST USE THAT AS A BASIS, THOUGH, COULDN'T YOU? No, it's a move in the direction of the elimination of monetary certificates, but you're still quite a ways away from a continental accounting system. You have an accounting system within an individual business or a plant. You see the way this country is going -- United States, Canada, and Mexico -- PHOTOGRAPHER: Corporations -- take gasoline stations, Sinclair has their own credit card system, Standard Oil has, the Diner's Club .... REPORTER: BUT THIS IS PREDICATED ON AN ABUNDANCE OF PRODUCTION. YOU COULDN'T HAVE YOUR SYSTEM IF THERE WAS A SHORTAGE, BECAUSE EVERYONE WOULD COME IN AND WANT TO GET ONE OF THE DOUGHNUTS AND THERE WOULDN'T BE ENOUGH OF THE DOUGHNUTS TO GO AROUND. IS THAT RIGHT? No, it's a system of operating all of your physical drain -- an entirely different system. How do you operate in science? You operate on the basis of energy cost.

SINCE YOU WOULD HAVE DIFFICULTY IN GETTING STUPID PEOPLE LIKE ME TO UNDERSTAND THIS, HOW WOULD ....? Look, 99% of the people don't understand this system right now. EXCEPT THEY UNDERSTAND IF THEY HAVE THE MONEY, THEY CAN BUY THE ARTICLE. Well, that's not understanding the system. THEY UNDERSTAND THAT PHASE OF IT, THOUGH. HOW WOULD YOU LET PEOPLE KNOW THAT THEY HAVE SO MANY ENERGY UNITS, AND THAT THEY'VE GOT TO PRODUCE ENERGY, AND SO ON? The government issues them. WOULD IT BE IN THE FORM OF PAPER OR CREDITS? It's paper. They're cancelled out; it's not money. YOU'RE BACK TO A PIECE OF PAPER THAT REPRESENTS MONEY. No, I said it was a medium of distribution, not of exchange. What's the difference? A medium of exchange -- the holder of it -- possession is 9 points of the law. YES, YOU HAVE TO GIVE IT UP TO GET THE ARTICLE. Under a medium of distribution, you can't lose it, you can't steal it, you can't give it away, so you can't indulge in either charity or philanthropy.

5-3-63

O.K., SO LET'S GET BACK TO MY QUESTION, WHICH IS, DO YOU FEEL THAT YOUR SYSTEM, YOUR ORGANIZATION, YOUR PHILOSOPHY, ALTHOUGH YOU STATE IT IS NOT A PHILOSOPHY .... It's a system of geomechanics of operation of an area. WHY DO YOU THROW WORDS LIKE THAT AT ME? Well, geo is what? Earth. BUT YOU CAN'T LOSE IT, YOU CAN'T STEAL IT, YOU CAN'T WHAT ELSE? And you can't give it away. It's yours only to spend. So you couldn't bribe anybody. Check down on this -- it is quite interesting. IT IS, IT'S VERY INTERESTING. [PHOTOGRAPHER: IN OTHER WORDS, IN ALSO NOT GIVING IT AWAY, THERE WOULD BE NO PEOPLE AROUND THAT NEEDS CHARITY -- EVERYBODY WOULD BE THE SAME.] Right.

TAKE THE AIR WE BREATHE, THE ONE THING WE HAVE PLENTY OF. Under certain conditions. Under other conditions, you'd holler bloody murder if it isn't right, wouldn't you? YEAH, BUT TAKE THE AIR WE BREATHE -- I ONLY WANT SO MUCH OF THAT. YOU CAN TRY TO SELL ME ALL THE AIR IN NEVADA RIGHT NOW. I DON'T WANT IT. I'VE GOT ALL I WANT RIGHT HERE. You can't sell ice to the Eskimos. MAYBE YOU CAN'T, BUT AIR YOU CAN'T SELL TO ME RIGHT NOW. You can't sell ice to the Eskimos -- it's the same thing. AND YOU CAN'T REALLY TAKE IT AWAY FROM ME, SHORT OF ABUSING ME PHYSICALLY. Well, go on, what's your point? THIS IS WHAT YOU WOULD BE DOING WITH EVERYTHING ELSE. What? I THINK OUR ATTITUDE TOWARD AIR IS WHAT YOU WOULD BE DOING WITH BOLTS AND DOUGHNUTS AND EVERYTHING ELSE LIKE THAT. Yes, you're establishing a first-class citizenship. FOR EVERYBODY? Yes, regardless of race, creed, or color. I KNOW YOU ARE NOT A COMMUNIST. No. YET THIS IS AKIN TO COMMUNISM. No, no. Communism, you see, is so damned far right that it's bourgeois as far as we're concerned. Political and economic right that we consider it bourgeois; that it's applicable, yes, to underdeveloped countries, but in a technological situation such as North America .... YOU ARE VERY NICE TO BRING IT UP. I APPRECIATE THAT [REMARKS DIRECTED TO HENRY ROSE, WHO JUST ARRIVED WITH LITERATURE] "TECHNOCRACY IN PLAIN TERMS." Oh, these are just pamphlets that he happens to have with him. JUST LET ME TAKE A LOOK AT ONE OF THEM. That's published in Vancouver, this is Los Angeles, and this one is Seattle.

DO YOU FEEL THAT TECHNOCRACY IS INEVITABLE? Not necessarily. You can have chaos or World War III. WELL, I SEE IT SAYS IT IS INEVITABLE HERE. IS THIS BY YOU? No. We have other writers. REPORTER QUOTING FROM LITERATURE: "BEFORE THAT HAPPENS,

5-3-63

TECHNOCRACY WITH YOUR HELP STANDS READY AND ABLE TO SAVE THIS CONTINENT FROM RUIN AND TO INSTITUTE A BALANCED PRODUCTION AND DISTRIBUTION OF ALL GOODS AND SERVICES COMMENSURATE WITH THE AVAILABLE ENERGY AND RESOURCES OF THE CONTINENT. TECHNOCRACY HAS NOTHING TO SELL AND IS NOT OUT FOR YOUR VOTE. IT IS MERELY GIVING YOU THE FACTS OF A DANGEROUS SITUATION. NOR IS THIS ARTICLE ATTEMPTING ANY PROOF. PROOFS THERE ARE, BUT TO HAVE THEM YOU WILL HAVE TO GET IN TOUCH WITH YOUR TECHNOCRAT FRIENDS." I'M IN TOUCH WITH THE TOP TECHNOCRAT AND HE CAN'T EXPLAIN ANYTHING. That's an allegation, sir. REPORTER, AGAIN QUOTING: "BELIEVE IT OR NOT, YOU CAN HELP. EVERY ABLE MAN AND WOMAN IS NEEDED IN THE CRISIS NOW APPROACHING SO RAPIDLY .... OF COURSE, IF ENOUGH OF US UNDERSTAND, THE INEVITABILITY OF TECHNOCRACY ...." NOW, DOES THAT MEAN THAT TECHNOCRACY IS INEVITABLE OR NOT? Oh, I'm not concerned. "AND IF PREPARED TO ACT, WE COULD HAVE IT RIGHT NOW WITHOUT HAVING TO WAIT AND GO THROUGH THE HELL THAT OTHERWISE ...." You could have it because you don't require any addition to the lump sum of total human knowledge in order to operate.

I PRESUME THAT ONE OF THE FACETS OF TECHNOCRACY IS TO MAKE GREATER USE OF THE TECHNOLOGICAL INFORMATION THAT WE HAVE. ISN'T THAT RIGHT? Oh , yes. I MEAN, I'M SURE WE CAN BUILD A WONDERFUL AUTOMOBILE, BUT UNDER YOUR SYSTEM, WE COULD BUILD A BETTER AUTOMOBILE WITH LESS ENERGY, I PRESUME. It would be very simple. I can tell you what the general design of the car would be. WHAT THEN? It wouldn't have any carburetor, wouldn't have any sparkplugs, wouldn't have any water pump, wouldn't have any clutch, transmission, or differential. WHY DON'T YOU MAKE AN AUTOMOBILE LIKE THAT? We have. WHERE IS IT? It's up in Connecticut. It has no axles, but it drives oil hydraulic in each wheel, so you eliminate 1,100 parts. Very simple. You can either run it with a gas turbine or a 21:1 opposed pistons -- 21:1 compression, supercharged -- well, that would run on anything that burns, you see. If you ran short, you could go in the A & P and throw in four pounds of margarine. WHY DON'T YOU HAVE IT HERE? WHY DON'T YOU DRIVE IT AROUND? WHY DON'T YOU MAKE THEM? Oh, look. That's takes money and organization. THAT ISN'T WHAT YOU WANT, RIGHT? YOU'RE NOT OUT TO MANUFACTURE SOMETHING BETTER THAN SOMEONE ELSE. No -- Oh, no, this isn't an individual .... I SEE. We're not making money.

WELL, COULD I GET INTO IT -- BECOME A TECHNOCRAT? You're a

5-3-63

citizen, aren't you? AND WHAT IF I GOT IN THERE, AND I DECIDED, WELL, GEE, IF I COULD GET THE PLANS FOR THAT AUTOMOBILE -- It wouldn't do you any good. WHY NOT? With a life of 750,000 miles, do you think the automobile industry -- go on, you're crazy! I COULD JUST BUILD TEN OF THEM. PHOTOGRAPHER: THERE ARE BATTERIES NOW THAT YOU CAN USE FOR TEN-FIFTEEN-TWENTY YEARS THAT THE AUTOMOBILE COMPANIES BUY UP AND JUNK. REPORTER: WHO TOLD YOU THAT? PHOTOGRAPHER: I KNOW THAT! Sure, the Germans had them in their submarines. THE CADMIUM -- IS THAT WHAT THEY CALL THEM? Yes, they'll last for 20-30 years.

WHY NOT MAKE HALF A DOZEN OF THEM? What for? We're not in the manufacturing business. OH, NO. I GET IN. I GET THE PLANS FOR THIS AUTOMOBILE AND MAKE HALF A DOZEN OF THEM. We don't care -- you can have it if you want it. REALLY? PHOTOGRAPHER: WHERE ARE YOU GOING TO MANUFACTURE IT? REPORTER: SOMEBODY'S GARAGE, I SUPPOSE. I DON'T KNOW. Well, it costs a lot of money to do one. I IMAGINE ANYTHING LIKE THAT WOULD. You're darn tootin', it would.

MY POINT WAS THAT THINGS WOULD BE DONE DIFFERENTLY THAN THEY ARE NOW -- SOME THINGS, RIGHT? Oh, yes; in other words, you would have an automotive transportation vehicle. We have railroad systems that would be three meter gauge instead of 4' 8-1/2". You understand the gauge in a railroad? YES. Between rails? Well, 4' 8-1/2", which is standard gauge, of course -- there are three railroad gauges in the world that are wider than that, the Spanish, Indian, and Russian, but at three meter gauge, that would be 9 feet, 10-1/10 inches wide, and your cars would be over 16 feet wide. They would be pedestal suspension. They'd % average better than 200 miles an hour, so that you could make New York to Chicago, center to center of city, in less than five hours. I LOST THAT. THE AUTOMOBILE WOULD BE 16 FEET WIDE? No, railway trains.

Just as we have designs for -- instead of this abortion of the Welland Canal up here, you'd have hydraulic instead of eight locks that take you around eleven hours -- you'd have one lock that would do the 326 feet between Lake Ontario and Lake Erie -- 60,000 tons up and 60,000 tons down in the same time of 15 minutes. DO YOU KNOW THAT THIS IS AN ENGINEERING POSSIBILITY? Oh, yes, sure. The members of Technocracy that designed that also designed the world's greatest hydraulic presses -- 50,000 tons -- Lyman Gordon and others for the Air Corps -- the big presses.

5-3-63

PHOTOGRAPHER: THOSE ARE IN USE NOW? The presses are, yes, it's the same principle, you see.

You see oil -- we're running out of copper, lead, and zinc, and iron ore. Oil in United States -- we're down to 11 barrels per well per day average for all our wells. We're not discovering any new fields. We're importing almost two million barrels a day from abroad to run our petroleum proposition. Well, in Iran, there's only 82 wells operating, but they produce 10,000 barrels per well per day instead of 10 and a fraction, do you understand me? In other words, here's our resources declining. We've made billions out of it, we've made automobiles, trucks, and busses -- you've got in the 70 millions of them -- but the drain on the national resources is terrific, isn't it? Can you continue it? Iron ore -- we're importing ore from a dozen countries. Copper ore -- all the copper ore mining in United States today is less than .8 of 1% copper. It used to be something. In other words, you're handling more and more tons to get less and less.

SHORT OF A WORLD CATASTROPHE, DO YOU FEEL THAT TECHNOCRACY WILL BE ACCEPTED OR PUT INTO PRACTICE IN THE UNITED STATES WITHIN YOUR LIFETIME? Well, that depends on how long I live. WELL, LET'S SAY YOU LIVE ANOTHER FIFTY YEARS. DO YOU THINK IT WOULD BE IN THE NEXT FIFTY YEARS? Considerably less than that. IN LESS THAN FIFTY YEARS, TECHNOCRACY WOULD BE ....? Well, where are you going to be within the next decade -- not fifty -- in the next decade? IN THE NEXT DECADE, DO YOU THINK THAT TECHNOCRACY WILL BE ....? Let's put it this way: It will be a decade of decision; we will have to decide, and it will be these physical factors which force a decision.

DO YOU THINK THAT ENGINEERS WHO ARE EMPLOYED BY LARGE CORPORATIONS TODAY -- I'M TALKING ABOUT PROJECTS -- KNOW THAT SUCH THINGS AS THE WELLAND CANAL COULD HAVE BEEN ENGINEERED DIFFERENTLY AND ARE DELIBERATELY HOLDING BACK? Yes; for instance, we protested the Grand Coulee Dam before it was built. WHAT IS THEIR MOTIVATION FOR DOING THAT? Whose motivation? ENGINEERS WHO KNOW BETTER, AND YET GO AHEAD AND DESIGN .... But then they're working for corporations that are called on to do a limited project, you understand? YES. The execution of Boulder Dam or Grand Coulee -- the dam itself -- that's done according to the best engineering practices, but the Grand Coulee, for instance, its water level is 1,288. We protested that. We wanted a water

5-3-63

level of 1,420. WHAT DIFFERENCE WOULD THAT HAVE MADE? I DON'T UNDERSTAND. Well, that would have practically eliminated pumping water up onto the plateau and would have meant an additional two million kW, and this present controversy between Canada and United States over the additional dams on the Columbia, for instance, Micro Creek that's proposed by General McNaughton is only 1,400 feet elevation. In other words, if you had built the original Grand Coulee to our specifications, you'd have had 375 miles of deep water transportation north of Grand Coulee, and then you couldn't put in a Micro Creek, because it would be twenty feet under water, wouldn't it?

DO YOU SAY YOU PROTESTED HOOVER DAM, TOO -- BOULDER DAM, AT THAT TIME? Yes, it's in the wrong place. IT'S IN THE WRONG PLACE -- NOT THE CONSTRUCTION IF IT? That's not what I'm talking about. The construction, as I said, the execution is according to the best practice.

DO YOU FEEL THAT TECHNOLOGICAL KNOWLEDGE IS BEING WITHHELD FROM THE AMERICAN PUBLIC FOR ECONOMIC REASONS? Oh, definitely. SUCH AS WHAT? Almost anything. A BETTER AUTOMOBILE IS ONE, CORRECT? Automobiles -- anything. You haven't got a real complete sewer system. You have Los Angeles spending millions of dollars for a big penstock several miles out in the Pacific in order to dump the effluent from its sewerage disposal plant out in the Pacific Ocean. WELL, THE MEN WHO DESIGN THAT -- DON'T THEY KNOW BETTER? That's not it. Who is the prime mover? That's the Municipality of Los Angeles and Los Angeles County, isn't it? WHY WOULD THEY DO THIS WRONG? Read the report. They state it quite clearly; in other words, they would have to make it into fertilizer, and they would be in the fertilizer market in competition with the fertilizer companies. The City of Los Angeles in its report states that; and, therefore, it spends all this money to build .... THEY DON'T WANT TO BE IN THE FERTILIZER BUSINESS, BECAUSE THEY WOULD BE IN COMPETITION WITH THE FERTILIZER BUSINESS? Yes.

WHY DON'T THE AUTOMOBILE COMPANIES WANT TO COME OUT WITH A BETTER AUTOMOBILE? Because what's the automobile industry running? It's got built-in obsolescence. ALL RIGHT, SO THE ENGINEERS WHO DESIGN THESE THINGS KNOW THIS AND THEY GO ALONG? Oh, yes, they've got a job. They have to do what the General Motors tells them to do or Chrysler or Ford.

5-3-63

HOW ABOUT THE AIRPLANE INDUSTRY? COULD THEY BUILD A SAFER AIRPLANE? Oh, yes, sure. THEY WANT TO RISK THE LIVES OF THE PEOPLE WHO GO UP IN THESE AIRPLANES BECAUSE OF THE PROFIT?

LAPSE IN TAPE

.... is either indicative of approaching senility or sexual incompetence. IS THAT RIGHT? GEE, I'M GOING TO USE THAT ON MY GOLFING FRIENDS. I DON'T LIKE GOLF. I pulled this on an audience of 8,000, and what happened? 1 had over 200 American males come backstage to tell me what lousy golfers they were. I'm giving you this as the ironic thing. THAT'S WONDERFUL!

THE CONTINUING CRISIS, WHICH IS THE NAME OF YOUR SPEECH ....? It's the components and factors of continuing crisis; in other words, what are the factors and components today in United States and the world? Well, it's world population, it's social revolution, it's energy, water, soil, and resources. Those are the chief factors and components of the continuing crisis. WHAT ARE THOSE AGAIN? Water, soil, resources, technological equipment, extraneous energy consumption, social revolution, and population explosion. AND YOU THINK THE NEXT TEN YEARS WILL BE CRITICAL? Correct. I AGREE WITH YOU, BUT I'M WONDERING IF YOU THINK THAT AT THE END OF THIS TEN-YEAR PERIOD, TECHNOCRACY WOULD BE IN THE SADDLE? No, not necessarily. I'm not a prophet. BUT TECHNOCRACY IS THE ONLY ANSWER TO THIS CONTINUING CRISIS? It's the only plan for survival that exists for survival so far that we know in North America, You have political parties, but you haven't any planned design for survival and operation of the area. We would like to see somebody else come along and do a better job than we have done.

IF ENOUGH PEOPLE BECAME INTERESTED AND WANTED TO KNOW WHAT THE PLAN FOR SURVIVAL WAS IN SPECIFIC TERMS, YOU WOULD HAVE SUCH A PLAN? YOU WOULD BE ABLE TO OPEN UP THE BOARDS AND SAY SO-AND-SO GOES HERE AND SO-AND-SO GOES THERE, THAT SORT OF THING? I don't: think we would have much difficulty, let's put it that way. IS THERE ROOM FOR HIM (REFERRING TO THE PHOTOGRAPHER)? TELL THE TRUTH. Why not? There's room for anybody. PHOTOGRAPHER : I CAN BE A FIRST-CLASS CITIZEN!

THANK YOU VERY MUCH. IT'S BEEN INTERESTING TALKING TO YOU.

5-3-63

Well, it's such a gigantic field, sir. HOW COME YOU DIDN'T MIND HAVING YOUR PICTURE TAKEN WHEN YOU DID THIRTY YEARS AGO? Well, we weren't after publicity then, and we aren't now. IT'S NOT WORTH FIGHTING ABOUT. HE'S A NICE GUY. He's all right. LAPSE IN TAPE .... by newspapermen, by TV, and radio, all over this continent from Mexico to the Far North. Bear in mind that I've spoken more places in United States and Canada than any President of the United States or any Premier of Canada. PHOTOGRAPHER: That picture of you was taken in January of 1933, and two weeks later it made TIME MAGAZINE. That's right. IS THERE A MRS. SCOTT? No. There's nothing wrong with me -- the only thing I'm queer for is women. (LAUGHTER)

HENRY ROSE: I don't know whether you fellows are aware of it or not, but the last week of December, 1932 [CHIEF: He was at the meeting of the City Engineers at the City Club] .... there were about 8 full pages, I think, just before that meeting about Technocracy -- the front page was solid. [CHIEF; Look up your morgue of THE PRESS.] PHOTOGRAPHER: HE LOOKED IT UP BUT HE DIDN'T READ IT.

THANK YOU VERY MUCH. All right. Best luck.

\* \* \* \*

HOWARD SCOTT INTERVIEW  
BY THE PLAIN DEALER  
CLEVELAND, OHIO  
MAY 4, 1963

IN THE RELEASES WE HAVE SO FAR, MR. SCOTT, THEY DON'T REFER TO ANY MIDDLE INITIAL. IT'S RATHER A PICAYUNE POINT, BUT WE'RE STICKLISH FOR MIDDLE INITIALS IF YOU HAPPEN TO HAVE ONE.

Never had one. Would you give your name? ROY ADAMS, PLAIN DEALER.

DO YOU HAVE ANY IDEA OF HOW BIG AN AUDIENCE YOU ARE EXPECTING TONIGHT? No, I haven't.

HOW MANY PEOPLE, ON THE AVERAGE IN A CITY OF THIS SIZE, USUALLY TURN OUT TO HEAR YOU? It runs anything from 500 to 5,000, depending on the city. It's a matter of interest and conditions in the city and the surrounding community. WOULD YOU HAVE SOMEBODY YOU MIGHT KNOW OF AT PUBLIC HALL TONIGHT, SAY, ABOUT 8:45 or 9:00, IF I GAVE A QUICK PHONE CALL FOR AN ESTIMATE OF THE NUMBER OF PEOPLE WHO ATTENDED. Well, there will be people there, but just what the hookup, I don't know. It will probably run around 500.

I'VE READ A BIT OF THE THINGS -- YOU STARTED THE ORGANIZATION IN 1930 OR IN 1918? 1918 -- that was in August.

DO YOU HAVE MEMBERS AND GROUPS IN DIFFERENT CITIES? That's right. IT'S LIKE, SAY, YOU BELONG TO THE UNITED WORLD FEDERALISTS OR SOMETHING LIKE THAT? No, it's not quite that. Technocracy's By-Laws and Regulations say you have to have 50 members in order to have a Section charter, and those 50 members have a Board of Governors of eleven. They're elected every year. FIFTY MEMBERS FOR A MINIMUM PER CLUB? No, a Section charter. HOW MANY SECTIONS DO YOU HAVE AROUND THE COUNTRY? Oh, quite a few. CARE TO ESTIMATE OR MAKE A STATEMENT? Not off hand, COULD YOU STATE HOW MANY MEMBERS YOU MIGHT HAVE? We have never made a statement of the membership; in other words, it would appall many people and surprise others.

TONIGHT YOUR TOPIC IS "THE CONTINUING CRISIS," IS THAT RIGHT? That's correct, sir. IT SAYS HERE THAT YOU PLAN TO BRING UP, AMONG OTHER THINGS, WHY NOT LEARN TO MAKE ENFORCED LEISURE AN

5-4-63

AMERICAN WAY OF LIFE INSTEAD OF CREATING A BIGGER TAX BURDEN TO CARRY THE GROWING NUMBER OF DISEMPOWERED. THAT SOUNDS LIKE A TERM YOU CREATED -- DISEMPOWERED AGAINST UNEMPLOYED. No, what is happening as you continue to introduce more and more technology and more and more energy-consuming devices, then you can produce and distribute goods and services with less and less employees and less and less man-hours, and what the direction is headed to -- and we have stated this years -- when the total consumption of extraneous energy reaches a certain amount per capita, on or before that, you will be able to produce and distribute an abundance of physical wealth in United States with a minority of the able-bodied employees; therefore, the majority will not be able to be provided with jobs under this type of system. Therefore, you'll have to find some way of paying the unemployed -- the majority -- as much as you pay the minority. Now this isn't because we are flowing with the milk of human kindness -- that isn't it. I mean, this is a factual trend of the way it's going; in other words, United States is a warfare-welfare state, and it's been subsidized .... A WARFARE-WELFARE STATE; IN OTHER WORDS, A WARFARE ECONOMY, RIGHT? That's right, and it's been subsidized by collecting the withholding tax and pumping that into the war materiel and expenditures of the cold war. I DON'T THINK YOU NECESSARILY MEAN WITHHOLDING TAX -- YOU MEAN INCOME TAX. Yes, the entire tax structure, you see. Your federal government's civilian employment and your municipal and state have been growing very rapidly; for instance, you have 2.4 million in the federal government and almost 7.5 million in municipal and state employment. That's a total of ten million. THAT GIVES YOU TEN MILLION GOVERNMENT WORKERS OUT OF THE WORK FORCE OF 66.6 MILLION. WHAT HAVE WE -- ABOUT 66 MILLION WORKERS TODAY? Total, but not that in non-farming. WELL, WHAT IS THE FIGURE THE GOVERNMENT USES IN RELEASES OF THE TOTAL WORK FORCE?

You see, what you are facing -- you have over 22 million women working in United States, and you have almost 36% of your married women, and their husbands have jobs. The United States Labor Department and your Tax Department shows that you only have 54% that are employed fifty weeks in the year -- of the work force. WHAT DOES THE OTHER 46% FIGURE OUT AT? Well, they're unemployed part of the year or laid off; in other words, this affluent society of ours -- the affluence is only for about six million at the top, and there are 77 million Americans at the bottom who have less than nothing. And we didn't make those

figures.

We have 17 million over 65 years of age, and it's increasing at approximately a million a year. In 1965, it is estimated that there will be over 20 million that are over 65 years of age. Well, that increases your social load nationally, doesn't it? So we face a future that unless we cut out the cold war and attempt to invest -- instead of the \$98 billion in war materiel -- you're going to have more taxes ....

WHEN YOU SAY, "WHY NOT LEARN HOW TO MAKE ENFORCED LEISURE AN AMERICAN WAY OF LIFE?" .... It's going to be that, you see, whether we do it -- we're merely pointing it out, that's all.

ARE YOU GOING TO MAKE ANY CONCRETE PROPOSALS TONIGHT? I generally do. You see, I do not write my speeches ahead of time. I haven't 25 or 30 ghost writers like Kennedy or Roosevelt or Eisenhower. WELL, YOU PROBABLY BY THIS TIME HAVE A FAIRLY GOOD IDEA .... It depends on how your audience is. I've been speaking for years on radio, TV, and in public without notes. EVEN WITHOUT NOTES, YOU MUST HAVE SOME SORT OF PRIOR PLAN. Well, but there's such a terrific field to cover, and when you realize what the facts are in the history of our country, John L. Lewis had 780,000 coal miners in 1920 -- bituminous coal miners. He and the coal operators, yes, did succeed in raising the productivity of the American coal miner to the highest in the world: 8 tons per man per day. But his coal miners are now down to 235,000, but the new machines coming in do 8 tons a minute -- not a day. HAVEN'T A LOT OF THOSE PEOPLE BEEN RETRAINED? THAT'S WHAT I UNDERSTAND. Retraining in this technological day and age is utter and sheer hypocrisy, and whoever advocates it should have a wooden medal tied around their neck. I would like to get one thing over to you, A WOODEN WHAT TIED AROUND HIS NECK A wooden medal. WHY WOOD? Because you can make it large enough so it would be heavy and he could carry it around and then everybody could see it. I don't wish him any ill luck -- I don't wish him to be buried, but I just wish him to wear it.

WHY DO YOU CLAIM THAT RETRAINING CAN'T WORK OR DOESN'T WORK? It's very interesting that you bring that up. Because the technological progression in this country and this continent in the next 30 minutes invalidates all the social wisdom of yesterday. By the time that you retrain them for something,

5-4-63

they're not trained for anything. IN OTHER WORDS, BY THE TIME YOU RETRAIN THEM FOR A JOB .... Then that's disappeared.

Now, your railroads in this country -- they're a mess as far as physical operation is concerned. They had 2,140,000 employees in 1920. Now they have just under 800,000, including station and Railway Express, but the mergers that are on the boards at the present moment -- not contemplating any future mergers -- when they are consummated, the total employment of U.S. railroads will be under 500,000.

The steel workers have lost 182,000 members since 1955, your previous peak in steel. Automobiles have lost more; in other words, it's a declining proposition, and organized labor has no future except as a bargaining agent for a continually declining minority. WE DO HAVE AN EXAMPLE OF THE OKLAHOMA CITY TIMES OR THE LOS ANGELES TIMES WHERE ALL THE PRINTING IS DONE BY ALL THE TYPISTS AND SO FORTH BY SOME SORT OF AN IBM MACHINE. We've advocated that for years. BUT THEN, OF COURSE, THOSE MACHINES CAN'T GO ON STRIKE.

You see, one of the first things we were involved in was the frosted foods process. And I spoke in Louisiana and Mississippi, introducing the cotton picker. Henry Luce in FORTUNE MAGAZINE in 1935 reprinted the front cover of our magazine with the cotton picker on it, and below that picture, he said, "Howard Scott is using the cotton picker to frighten the American bourgeoisie." And then he goes on, that is, his staff writes it up, that there had been about sixteen attempts to develop the cotton picker and they had all failed. In other words, writing it down. Well, of course, the irony of that is, Henry Luce and his publications today are accepting full page, full color advertisements of over six firms manufacturing cotton pickers. The irony of the other side of the thing is that Technocracy is more responsible than all other organizations put together for the migration of the negro north. YOU MEAN YOUR ORGANIZATION IS? On the introduction of the cotton picker. We were the big advocates of the cotton picker, and we told them so then, and that's practically 30 years ago.

Another example, for instance, is that we came out with a million volt direct current power transmission for long distance in 1924, and we even had models of the cable, the pipe line, and

5-4-63

everything else on display in our Sections for years. Well, that was presented to various organizations in this country -- yes, it was technically correct, but we'd never get to it. But now the Russians are putting in two 4,000-mile grids -- 4,000 miles long each. The Swedes have gone in for it, and the new cable connecting France and Great Britain under the Channel will be high voltage DC, The high voltage DC -- you can transmit power from Alaska to Los Angeles or Labrador to Los Angeles for less line loss than Boulder Dam transmits it to Los Angeles now. It wouldn't alter the generating voltage any, you see, or the present tools and attachments in the kitchen. You transmit it at a million volts DC, and then you'd convert it to a million volts 3-phase AC 60-cycle and transform it down to your secondary voltages.

I GATHER THAT THIS ORGANIZATION -- THIS IS PRACTICALLY THE FIRST TIME I'VE .... We have been acting as kind of consulting social engineers; for instance, we protested Grand Coulee. We protested the St. Lawrence Seaway. The St. Lawrence Seaway is totally inadequate, you see. YOU PROTESTED IT BECAUSE IT WASN'T BIG ENOUGH? It wasn't correctly designed. OH. I GATHER FROM WHAT I'VE LEARNED TODAY THAT YOU ARE PROMOTING THESE TECHNOLOGICAL DEVELOPMENTS, ARE PROMOTING AUTOMATION .... That's right .... BUT YOU SEE AT THE SAME TIME WHERE IT CREATES SOCIAL PROBLEMS, AND YOU'RE ALSO TRYING TO MAKE RECOMMENDATIONS TO ALLEVIATE THE ILLS THAT YOUR BASIC PROMOTION CREATES, IS THAT IT? Yes. Now the great components, the fundamental factors underlying the continuing crisis in this country and the world-at-large are arable soil, water, sewage and pollution, energy and technology, population explosion, and social revolution. In other words, in this little more than a half century, that never happened before in human history, but it's here with a bang. So you have to control the population. You'll have to control water, sewage, and garbage. Water is no respecter of state lines or provincial lines or any political boundary line. To give you an idea, the Missouri-Mississippi Ohio watershed occupies 43.6% of continental United States. You would have to treat the entire watersheds, you see, and for one municipality or one county or anything else to get all wrought up about water, sewage, or pollution when the other fellow is dumping it in on the other side .... WE HAVE OUR PROBLEMS RIGHT HERE IN THIS AREA .... right here, yes.

It takes you eleven hours to go through the eight locks in

the Welland Canal, which are larger than the locks in Panama. Under our design, you would put 60,000 tons up and 60,000 tons down the 326 feet -- the difference between Lake Ontario and Lake Erie -- in 15 minutes. GEE WHIZ. DID YOU PRESENT THIS DESIGN BEFORE THE SEAWAY WAS BUILT? Oh, yes, just as we presented the Grand Coulee. Out in Grand Coulee, when they were building it, they had a big long exhibit room for the visitors, and they would put the model of the existing dam in on the pegs and explain to the visitors that that would back the water up to the big red boundary line on the relief map, and then they would take the larger one -- which Technocracy advocated -- then they find that it gained considerable support amongst scientists and engineers -- well, that would back the water way up beyond the red boundary line, way up into Canada, but that we didn't have a treaty, you see. Well, of course, we said go ahead and build it and simply put in your siphon spillway at the 1,288. We wanted 1,420, you see. Now, of course, all the battle in Canada over new dams on the Columbia and the treaty, General McNaughton proposes a dam at Mica Creek at 1,400 feet elevation. If they had built the dam we proposed at Grand Coulee, you couldn't build the other dam, and you would have had 2 million more additional kW and all the other things.

DO YOU HAVE A RECEPTIVE GOVERNMENT AUDIENCE FOR THESE THINGS? No, you only get so far in any of these projections, because .... LIKE YOUR SEAWAY PROJECT. DID THEY GIVE ANY CONSIDERATION TO IT? The Canadians started to do the canal on their own. Then the Eisenhower Administration jumps in to get in on the act. Now, there wasn't a damn Russian anywhere near the project, and they made an abortion of it. Now, wait a minute! The Russians, over on the Don-Volga Canal -- called the Stalin, they changed the name of it now -- they made an abortion out of it, and there wasn't a damn American involved. I'm just showing that one was just as stupid as the other. AT THE TIME THE TWO GOVERNMENTS WERE BUILDING THE SEAWAY, THOUGH, DID EITHER GOVERNMENT GIVE CONSIDERATION TO YOUR PLAN? Our Continental Hydrology has been out for years. We have maps of it. Those maps are all over Canada and United States. For years now, there's been discussions, we have pamphlets and books on it.

REGARDLESS OF THE SIZE OF YOUR AUDIENCE TONIGHT, AS YOU STATE, THERE ARE MANY DIFFERENT SUBJECTS THAT YOU WOULD OR COULD DISCUSS, BUT BASICALLY IT WOULD ALL HAVE TO BOIL DOWN TO ONE

MAJOR POINT, PERHAPS .... Where is this economy going? Is it a viable economy, and can you create the growth in this economy? The present growth is only approximately 2-1/2% -- that's the annual growth. For instance, we have in excess of 140 million tons of steel capacity in United States. We produced 98 million tons last year. The Russians produced 84 million, and they and their satellites did 127 million tons. Their rate of growth is between 8 and 11 percent volume, and to show you the way things are shifting, Russia in '62 became the second-largest producer of petroleum in the world, passing Venezuela. But she did 568 million tons of bituminous coal last year -- world's number one producer. HER PEOPLE STILL CAN'T GET GOOD SHOES. Well, but wait a minute! United States isn't even number two producer in bituminous coal. Red China passed her in 1962 -- Red China. BUT, OF COURSE, MAYBE WE DON'T NEED SO MUCH BITUMINOUS COAL. Well, it's a question of development of a resource. Temporarily we're using up a lot of gas and petroleum, but then we're importing almost two million barrels a day of petroleum, and our oil wells are only averaging less than eleven barrels per well per day. THEY'RE CONTROLLED .... No, that's only the Texas Railroad Commission.

Iran, for instance, has 82 wells, but they're averaging 10,000 barrels per well per day; in other words, they're doing 1,000 times per well per day than we are. We're not discovering new oil fields, but we are manufacturing more and more petroleum-consuming devices, that is, automobiles, trucks, busses, all the lawnmowers, tractors, every damn thing.

ALL RIGHT, SO YOU'RE GOING TO ASK THEM WHERE THE ECONOMY IS GOING AND ASK THEM IF IT'S VIABLE AT ONLY 2-1/2% ANNUAL GROWTH? Yes. All the copper we're mining in United States today is less than .8 of 1% copper. There was a time when we had 4, 6, and 12 percent copper in this country. WELL, WHAT ARE YOU GOING TO SUGGEST AS THE ANSWER TO YOUR QUESTION? It has to be a controlled design. You can't just throw it down every rathole from now on out. You've got to have a plan or else you are headed into a chaotic, anarchic situation, in which you cannot even rescue the national economy -- even that Irish Mafia from Boston can't do that. I use this on the platform and on the air. I DON'T THINK I'LL QUOTE THAT. Why not? TIME MAGAZINE has. YEAH, BUT WE HAVE A VERY SENSITIVE READERSHIP. Oh, you do? Well, you might say the reason that Kennedy got elected was because the Republicans

5-4-63

elected him. THAT'S POSSIBLE, TOO. They ran that rat Nixon. I'm giving you stuff that's really dynamite if you want it. WELL, THAT MIGHT GO GOOD IN THE NEW YORK GENERAL AMERICAN, BUT .... SO YOU SAY WE MUST HAVE A PLAN FOR ALL THE FACETS OF OUR PRODUCTION .... You'll have to have a designed operation for all energy-consuming devices. This is a technological civilization, and what's your latest thing published in New York by your Engineers Council? That the 70,000 engineers of all the schools of United States in 1958, in one year, they go down to 40,000+, and in 1962, only 34,000 graduated. We're not going to run this country by graduating hundreds of thousands in liberal arts and business administration, because it's a technological civilization. WE'LL HAVE TO HAVE MORE ENGINEERS? Russia in this coming period will do 1.3 million engineers and scientists compared to -- if we make 100,000, we'll be lucky. WE'LL HAVE TO PRODUCE MORE PHYSICAL SCIENTISTS AND ENGINEERS, NOT SOCIAL SCIENTISTS. Not fewer social scientists. SCIENCE, HISTORY .... Well, that's all right, but it's the liberal arts. WELL, THAT'S SOCIAL SCIENCE. No, liberal arts is only one of them. SOCIAL SCIENCE IS ONE PHASE OF LIBERAL ARTS, THAT'S TRUE. Most of them that go in for liberal arts don't even take up sociology or economics, do they? WELL, THEY HAVE TO TAKE SOME OF IT. Some, but they do not graduate in it.

WOULD YOU SAY TO KEEP PACE WITH THE SOVIETS OR DON'T YOU WANT TO SAY ....? Oh, no. If you want a good wisecrack, we contend the only way for United States to catch up to the Russians is for United States to give the Russians all that we have and then the Russians would be three years behind us. I'LL HAVE TO THINK ABOUT THAT ONE FOR A LITTLE BIT.

No, we are not operating on the basis that you have to compete with the Russians, but what are the technological requirements for this country and this continent, regardless of whether the Russians exist or not.

THIS WAS YOUR CRACK ON HOW TO CATCH UP WITH THEM? Yes. The United States give the Russians everything we have, and the Russians will be three years behind us. YOU CLAIM THAT THEY'RE THREE YEARS AHEAD OF US? Well, I didn't say that.

I WANT TO ASK YOU A COUPLE OF QUESTIONS .... Go ahead, ask anything you like .... IT MAY BE A LITTLE EMBARRASSING TO YOU,

BUT I'M JUST CHECKING OUT SOME TIPS AND RUMORS AND THINGS LIKE THAT. BEFORE I ASK THOSE QUESTIONS THAT I MENTIONED, I WONDERED WHO IS PAYING THE PUBLIC HALL RENTAL TONIGHT? That's the local Sections. We have two Sections here in Cleveland. WHICH ONE WOULD THAT BE? BOTH OF THEM TOGETHER. Oh, yes. We have Sections in Ashtabula, Akron, and Kent. DO THEY HAVE ANY NAMES -- THESE SECTIONS? No, they are Section 15 and 16, 8141. Now what's that number mean, do you know? No. Well, we use a numbering system. That's the latitude and longitude of the lower righthand corner of a degreed quadrangle -- that system is now being adopted by geologists and by ichthyologists, biologists, and so on. Instead of trying to find a name on the map or a location -- your radio stations have that latitude and longitude, so we adapted a system where you combine the latitude and longitude of the degreed quadrangle of the lower righthand corner. Cleveland is 8141. St. Louis is 9038; New York, 7340. There are no two numbers the same, you see, and it gives you the exact location. Oceanographers, geologists, biologists, even the spider boys -- insects. You can find spiders or insects right away.

THE QUESTION IS, IS THERE AN ACTIVE CHAPTER OF TECHNOCRATS IN PARMA? Parma -- where's Parma? That's Section 16. THERE WAS A STATEMENT, I BELIEVE, THAT YOU WERE UPSET SOME TIME AGO BECAUSE THIS PARMA GROUP SUPPOSEDLY ACTED AND TALKED LIKE FASCISTS AND WORE NAZI-LOOKING UNIFORMS. Who said this? OH, I DON'T KNOW. THIS IS SOME TIP THAT WE GOT, AND I'M JUST CHECKING IT OUT. Oh, no, we have been the chief opponents of Fascism in this country for years. Sure, we called McCarthy a Fascist when he first started out. We called the Birchites the same thing. THE BIRCHBARKERS, HUH? Birchbarkers? THEIR BARK IS WORSE THAN THEIR BITE. Yeah.

DO YOU KNOW OF ANY SUCH MILITANT GROUP IN CLEVELAND THAT IS PERHAPS NOT A PART OF YOUR ORGANIZATION BUT IS SORT OF CROWDING OR FRINGING ON YOUR ORGANIZATION OR ANYTHING? I don't know of any in Cleveland. They leave us alone. We haven't heard of them. IS THERE ANY MILITANT ASPECT TO YOUR GROUP AT ALL? No, we stated years ago we would never use bullets or ballots, NEITHER ONE? That's in our original preamble. We're not a political party, we're nonsectarian, nonprofit, and nonpolitical. Anyone can be a member of Technocracy provided they are a citizen and do not hold elective political office and are not an active member of a political party. Voting is not construed as constituting membership in a political party. We do not operate off this

5-4-63

continent. We're quite strong in Canada. ACTIVE ONLY IN U.S. AND CANADA, IS THAT IT? Well, we have members in Alaska, Hawaii, Venezuela .... SOUTH AMERICA, TOO, THEN? Not only the top end -- this continent -- the top end of South America, that is, Colombia, Venezuela, the Caribbean,

I WAS CURIOUS. YOU HAVE THE SYMBOL OF ORGANIZATION IN YOUR LAPEL. WHAT DOES THE RED STAND FOR? That's an ancient generic symbol -- it's called the Monad -- and in biology, it's the symbol of the basic cell of all living things. Of course, you'll find it in China and Korea. The Northern Pacific uses it as their insignia -- that's red and black -- and the 29th Division in World War II had it in blue and gray, and the headquarters Air Corps had it the same as this. But the Chinese call it the yin and the yang, and if you look at the cover of Edgar Snow's book, "The Other Side of the River." you'll find a big one like that right on the cover. YOU SAY IT'S A SYMBOL OF LIFE? Yes, it's as old or older than the swastika or any of those things, and it's distinctive. We picked it -- not because of its philosophic connections, but because it was clear-cut, and one interesting fact that we discovered is that you can put the Stars and Stripes or the Union Jack on the ground and go up to 10,000 feet, and, bang, it blurs out, but not this.

IS A LARGE PERCENTAGE OF YOUR MEMBERS ENGINEERS? Originally they were, but then we spread out and we include anybody from coal miners and farmers to mechanics to ordinary people. I THINK WITH THE TYPE OF THING YOUR ORGANIZATION APPARENTLY ATTEMPTING TO DO .... Originally, you see, Steinmetz of the General Electric was a member of our original board, the chief engineer of the Otis Elevator, the chief chemist of the United States Department of Agriculture -- these are the original board members -- and Bassett Jones, who was a member of the firm Meyers, Strong and Jones, and co-inventor of the frosted foods along with Clarence Birdseye -- he was an original member. Comstock, one of the biggest electrical contractors in the world. The president of the American Institute of Architects. Some of the outstanding architects and geologists were members of that original board. Therefore, the tendency until the publicity broke in the thirties was more engineers, scientists, technologists, and so on predominated. If you really want to get into the interesting thing of this, Franklin Delano Roosevelt grabbed over 18 of our men. It's all there if you look it up. Leon Henderson was Price

5-4-63

Administrator. Otto Byers was top of the Office of Defense Transportation. Leland Olds was Federal Power Administrator. Dr. Tolman -- he and Vanderveer Bush were head of the scientific -- and Dick, that's Dr. Tolman, was made Atomic Representative of the Combined Chiefs of Staff of United States and Great Britain. John Carmody was made head of the electrical -- the Rural Electrification, then the Maritime Commission, then he was placed in charge of the dispersal of the funds of the E.A.C. in Europe -- that's the European Advisory that dispersed the money of the Marshall Plan. That's just a few of them.

I GATHER THAT YOU MAKE YOUR LIVING FROM THE ORGANIZATION, I WOULD ASSUME. YOU'RE PROBABLY FULL TIME .... I'm full time .... MOST OF YOUR PEOPLE .... Oh, they're working at all kinds of things, professions, manufacturing, everything. THIS IS MORE OF AN AVOCATION AS FAR AS THEY ARE CONCERNED? THIS IS NOT A PAID -- IT'S VOLUNTARY. They're making their livelihood out of professional fields -- any kind of function, and they paint their own cars, those that do; Technocracy doesn't own the cars -- they do. WHY IS GRAY YOUR COLOR, APPARENTLY? Oh, we just did that. What happened was, it happened right here in Cleveland -- he's dead now, but he was Vice President of Cleveland Worsted Mills, and in discussing cloth with him, he developed a cloth -- and by God, don't we wish we had it. That was 74 Merino -- you couldn't wear them out, and until he died -- the Cleveland Worsted folded up, you remember. WHEN WAS THAT? In 1953. I WAS IN THE ARMY. They were the biggest woolen worsted west of New England, and I discussed the type of cloth and if we could only get that made -- and he made it. He made it in the gray, and, of course, we kidded about it that the gray was gray enough so that south of the Mason-Dixon Line they would all remember it, and it was blue enough that north of the Mason-Dixon Line, nobody would know what the hell it was. That was just my sense of humor. The members aren't compelled to wear it. They only wear it as a demonstration and platform. I'd say 99 and a fraction percent are not dressed in gray. PRETTY CLOSE TO THE GREYHOUND CORPORATE COLORS, AREN'T THEY? Well, we did it first. I SEE.

ACCORDING TO BILL TANNER, WHOM YOU TALKED WITH FROM THE PRESS, HIS STORY .... We have the tape. If you'd listen to that tape, what he got out of it -- even his photographer sat here and corrected him four or five times, so that he got so sore he said to the photographer, "Well, you do the interview and I'll take

5-4-63

the photographs." HE SAID SOMETHING THAT YOU THINK MONEY IS OLD-FASHIONED, AND I HAVEN'T HEARD YOU SAY ANYTHING ABOUT REPLACING MONEY. You'd have to have an entirely different system of distribution if you're going to distribute abundance. WHAT WOULD YOU USE? MONEY IS A SYMBOL ANYWAY. Even that's going, because what have you got? You've got one wife, two cars, three kids .... ONE, TWO, THREE .... Go ahead, you're right into it .... FOUR CREDIT CARDS .... and eight cents in his pocket. Got ten credit cards and eight cents in his pocket -- that's the joke that's going around here. So, you're getting out of handling the actual currency.

Your big fiscal operations today are in check transfer. Billions of checks. Most of your currency is handled by check, not by money, and in the retail end of it, you're getting more and more on your credit cards, aren't you? YOU'RE NOT PROPOSING .... I'm merely showing you that's the way it's going. In spite of all these credit cards and your coded checks, you still have no continental accounting system that gives you an instantaneous inventory every hour, have you? It doesn't exist. WHAT'S AVAILABLE TO WEAR FOR SOMEBODY WHO WANTS IT SOMEPLACE ELSE? They simply haven't got that kind of a system, but it can be done, because you can report it in on your carbon coding to a central headquarters and you know every production of everything every hour and the consumption of everything every hour by geographical region, by sex -- male or female -- age, what day of the year. You can have it just like that (fingersnap). AS THE CASHIER IN THE SUPERMARKET RINGS UP THE SALE, IT AUTOMATICALLY REPORTS -- TRANSMITS AN IMPULSE THAT RECORDS .... They're doing that in certain gas stations right now. SO YOU HAVE A CENTRALIZED INVENTORY CONTROL. A continental inventory, a continuous continental accounting. DON'T YOU THINK INVENTORY CONTROL IS A BETTER WORD THAN ACCOUNTING? Well, it's an inventory and accounting. It's a continental thing. We do all of our design for a continent, just as our continental hydrology is a design to control and regulate all the water that runs on this continent.

WOULDN'T YOU HAVE TO PUT SOMETHING IN THE HAND OF "X" BUYER TO ENABLE HE OR SHE TO HAVE THE PURCHASING POWER? It would be a medium of distribution -- not a medium of exchange. ALL RIGHT. Now a medium of distribution is entirely different from a medium of exchange. WHAT ARE YOU PROPOSING FOR A MEDIUM OF EXCHANGE? None. YOU ARE PROPOSING ABOLISHING MONEY COMPLETELY? It's a

medium of distribution. A medium of distribution is non-transferable -- so is your credit card, correct? YEAH. With a medium of distribution, you could purchase anything that you purchase now when you get your certificates, but it is non-transferable. YES, BUT JOE BLOW PERHAPS COULD PURCHASE MORE THAN JIM SMITH. No, it's just the same as your ABA checks -- you'd have so much, that's all. You can't steal it, you can't borrow it, you can't loan it, you can't lose it. A woman has the same amount, so she has an independent income, and you can't bribe anybody. You can't accumulate it; for instance, if it's not spent within the balanced load period for which it's issued, it is null and void. In other words, it was not consumed within a balanced load period, which is about two years. Sugar cane processing takes about 16-18 months -- I mean, that's what runs it over one year. I'M A LITTLE BIT CONFUSED NOW. Well, you can't expect to absorb all of this in any one interview. It's beyond .... I'm trying to give you the differences between .... WHAT WOULD REPLACE It eliminates crime -- 96 percent of it. You couldn't go in for political bribery or individual bribery, you couldn't steal anything -- you could steal salt cellars or any object like that, but you could not convert any physical object into so-called coin of the realm; so, therefore, you'd stop very shortly, because you'd have to get storage space to pile it up in. And if you're going to distribute abundance, you cannot differentiate. You have to distribute it to everybody. That's what we're up against now. We've got 704 million pounds of tobacco in commodity storage. We have huge amounts of wheat. WOULD SOME PEOPLE GET MORE ABUNDANCE THAN OTHER PEOPLE BECAUSE OF THEIR ABILITY TO PRODUCE? It has nothing to do with their ability to produce -- just that they are citizens; in other words, it's a prorated division. YOU'D HAVE A BASIC DIVISION .... Outside of your production for reserves .... SOME PEOPLE WOULD WANT A CRISS CRAFT AND SOME PEOPLE MIGHT WANT A HORSE, AND MAYBE THERE ARE JUST SO MANY CRISS CRAFTS AND THREE TIMES AS MANY PEOPLE WANTED THEM. It would take a social revolution to do it, and by the time you get through a social revolution, I doubt if those imponderables -- they're imponderables now. The imponderables that will exist will not be the same imponderables, let's put it that way. WE WILL REPLACE IT WITH OTHER IMPONDERABLES. I don't know what they would be, but they wouldn't be what they are now. [SOMEONE IN BACKGROUND: BUT YOU ARE FACING IT JUST THE SAME -- YOU ARE GOING TO HAVE TO GO THROUGH IT. YOU HAVEN'T A CHOICE IN THE MATTER.]

5-4-63

A LOT OF THIS REMINDS ME OF A BOOK THAT I READ -- MY UNDERGRADUATE MAJOR WAS POLITICAL SCIENCE -- I REMEMBER WE WERE STUDYING VARIOUS UTOPIAS, AND THERE WAS SOMEBODY -- I CAN'T REMEMBER RIGHT NOW .... You ought to know, because the previous owner of The Plain Dealer, his name was Bellamy, wasn't it? YEAH. And his father was the famous Edward Bellamy. OH, YEAH, THAT'S WHO IT WAS, WASN'T IT? What was the name of it? [SOMEONE IN BACKGROUND: "LOOKING BACKWARD."] But Paul Bellamy was so far off the beam that he didn't want to acknowledge his father. In fact at a dinner here -- you don't have to go into this, I'm just telling you -- I was handing him a compliment for being the son of Edward Bellamy, and he got all upset about it, and a few minutes later I withdrew it and said that Edward Bellamy couldn't possibly have been his father. He never forgave me for that, you know. PETE BELLAMY IS OUR THEATER CRITIC NOW -- THAT'S PAUL BELLAMY'S SON. He hasn't got the same animosity towards his father Paul Bellamy had. I THINK THIS IS A BOOK THAT PICTURED SOME SORT OF FUTURISTIC CITY WHERE MAIL WAS DISPATCHED .... You couldn't take Edward Bellamy's "Looking Backward" and design a new social system from it, although it was interesting, just as was Jules Vernes "Twenty Thousand Leagues under the Sea" an interesting novel about a submarine, but you couldn't design a submarine from Jules Verne's "Twenty Thousand Leagues under the Sea." I'm not attempting to discredit Jules Verne or Edward Bellamy, you understand. THERE SEEMED TO BE LITTLE CRYSTALS OF IDEAS PERHAPS THAT BELLAMY THREW OUT THAT YOU HAVE ADOPTED. Here and there there are similarities, but nothing -- purely coincidental. EXCEPT THAT BEFORE YOU AND THE OTHERS WHO HELPED ORIGINATE THIS ORGANIZATION, ETC. MUST HAVE READ THAT FIRST. We didn't borrow anything from Bellamy. Just the same as we had Thorstein Veblen on our board, but we didn't borrow anything from Veblen. Veblen even borrowed the price system from us when he wrote, "The Engineers and the Price System," back in the twenties.

I THINK I'VE GOT A PRETTY GOOD IDEA. I'LL JUST GLANCE OVER IT. WHAT DO YOU CLAIM AS YOUR HOME NOWADAYS? CHQ Headquarters, Rushland, Pennsylvania. Rushland is about 23 miles from Philadelphia, 19 from Trenton, about 8 or 9 miles from Doylestown, and less than that to New Town. We have 109 acres there on the banks of the Neshaminy. There's a horseshoe bend -- the Neshaminy goes around three sides of it. AND WHAT DID YOU CALL YOUR HEADQUARTERS? Continental Headquarters -- CHQ. OF

5-4-63

TECHNOCRACY INC.? You see, the Sections are called SHQ, Section Headquarters. There's only one CHQ, but there's slews of SHQs all over.

WERE YOU TEACHING AT COLUMBIA BACK IN THE '30s? No, sir, I never taught at Columbia. We had no connection whatsoever with Columbia University except this. We had space at 101 Park Avenue, where Kamill and Walker and others gave us the huge drafting rooms because of the depression, they were all off but they had their leases. Then at lunch one day at the Architects Club, a number of the Engineering Society officers said, here we have thousands of these engineers, chemists, and draftsmen who are out of work, which we have on the Engineers Emergency. You can't put them out selling apples. There was already too many selling apples. I said we could put them to work. "Oh, you could?" The Engineering Building at Columbia (SMALL LAPSE IN TAPE) Dr. Hubbert, one of our members, was in geology at Columbia University, and I went to lunch with him and Dr. Rautenstrauch -- I told him we were offered all these engineers and draftsmen. He said, well, I've got a couple of floors over in the Engineering Building, drafting tables, calculating machines .... THEY WERE STANDING THERE EMPTY -- WHY DON'T YOU COME USE THEM? TYPE OF THING. Yes, and that is how it happened. We put the men in there, and, of course, we ran long hours -- not just the scholastic, and then Nicholas Murray Butler's political campaign manager discovered that we had 268 of these individuals working on research, and at that time we were the largest consumers of metric cross-section paper in the world, plotting all the consumption, production, and growth of every darn thing that was produced -- over 3,000 charts. He was the one that broke the publicity. He sent it out Saturday for Monday's press. We didn't know anything about it -- they didn't consult us. When we arrived up at the Engineering Building Monday morning, here was the Paramount, the Fox Movietone, and 46 newspapermen and photographers. THAT'S WHEN YOU GOT MAD AT PHOTOGRAPHERS, HUH? Well, it was crazy, you see. We only had one typewriter. We didn't have any publicity staff. They broke it over our heads because this great research project. We were supplying the money for the paper and everything else. All they were doing was the same as several other firms -- giving us space for nothing. So that's the connection Columbia University had with it. Not that there were not certain professors in Columbia that were members, but we had no official standing. SO THIS GIVES THAT MISTAKEN

5-4-63

IMPRESSION THAT YOU WERE SOMEHOW CONNECTED WITH COLUMBIA UNIVERSITY. I never was, and, of course, when this thing got so tough, they kicked us out of the quarters in the University. We went on to become a continental organization and not just a research appendage of Columbia University, put it that way.

DO YOU HAVE ANY PARTICULAR WAY OF SUGGESTING HOW TO MAKE THE MOST OF ALL THIS LEISURE TIME THAT YOU ARE PROMOTING? I think that can be safely left to the future generations, seeing that we have 1,300,000, according to Washington, who graduated from colleges and high schools last year who have never had a job. We're going to have more this year,

I THINK THAT IF YOU EVER RUN INTO THE QUESTION, AS I ASKED YOU EARLIER, ABOUT THE FASCIST QUESTION .... We have never been accused of being Fascist. They've tried to hang the Communist thing on us.

I NOTICE HERE IN THIS RELEASE THAT YOUR ORGANIZATION PASSED OUT, IT SAID, "The future of North Americans lies with the new order of science and technology, etc., etc." and they capitalize new and order, you see, and that brings back memories of Hitler, and that's what they called theirs, "The New Order." THEY DID CALL IT THAT. No -- they take things out of context to give it a perverted meaning. SOMEBODY WANTS TO GIVE YOU A DOLLAR BILL.

We were the first to publicize this. This is what he means. We advocated turning over the Great Seal of United States. The reason that this is on the bill is because we spoke on this all across the continent. THE REASON THIS IS ON THE BILL? Right here -- now what do the words say? I DIDN'T STUDY LATIN. Novus Ordo Seclorum, correct? I HAD SPANISH. Novus Ordo Seclorum Annuit Coeptis. It's a New Order of the Ages. AND YOU WANT TO TURN THAT UPSIDE DOWN? No, this is legal. This is the reverse of this. This side is our eagle according to an Act of Congress, and we advocated that instead of this predatory bird, the eagle, which Benjamin Franklin didn't want on there either, that you turn it over and use this side of the Great Seal, which is also legal, instead of this, because this says, "Time Makes Way for a New Order of the Ages." I SEE. THAT'S INTERESTING. I NEVER STUDIED THE DOLLAR BILL THAT CLOSELY. We brought that out before Hitler got in power.

5-4-63

ONE FINAL QUESTION: THIS IS NOT MEANT TO BE RUDE OR ANYTHING, BUT SINCE THIS IS TO BE IN THE NEWSPAPER, MAY I ASK HOW OLD YOU ARE NOW? I'm old enough to know better, and I'm still young enough .... AT NO PLACE IN HERE .... No, I'm not interested in playing up myself. I'm not old enough to play golf. I'll explain it to you. We contend that proficiency at golf on the part of the American male is indicative of either approaching senility or sexual incompetence. I WON'T PUT THAT IN. It's on the tape -- it doesn't make any difference. I've said this in public. I was speaking to over 8,000 in the Shrine Auditorium in Los Angeles when I said that. When it was over, 200 Americans came backstage to tell me what lousy golfers they were. Of course, I kid an audience, just tease them. But my health -- I haven't shrunk any. SIX FEET FIVE IT SAYS HERE. Well, I'm a little over that. YOU'RE TALLER THAN SIX FIVE? Six five and a half. My weight remains around the same, I don't know -- I'm not trying to establish any longevity.

YOU APPARENTLY HAVE BEEN AT THIS FOR 45 YEARS. Yep, we started it in August, 1918, and survived the greatest depression in history, the greatest war in history, and the greatest postwar boom.

HAVE YOU SERVED IN THE MILITARY AT ANY TIME? No. The only thing you could say is that I've served in the Department of Unintelligence. WHAT'S THAT? Well, we won't go into all the war stuff that we proposed. That would be a book in itself.

HAVE YOU WRITTEN A NUMBER OF BOOKS? No, I have never written a book by myself. There have been all kinds of books written about Technocracy and myself in something like sixteen languages. We have most of them. The Czechs did the best job of all. The Engineering Institute wrote, "Der Welt Energie," which is a really excellent job.

WOULD YOU SAY THE RANGE OF THE THINGS WE'VE DISCUSSED HERE THIS AFTERNOON PRETTY WELL COVER ANY POINTS THAT YOU'D BE LIKELY TO MAKE TONIGHT? Not necessarily, because you see we will touch on resources and the technology of foreign countries in comparison to this. YOU'LL BE CITING SPECIFIC FACTS THAT HAVE BEEN PUBLISHED IN MAGAZINES AND SO FORTH, AS YOU'VE TALKED ABOUT PRODUCTION IN STEEL, AND SO FORTH. Some of them have and some of them haven't. WELL, I MEAN THEY'RE NOT PHILOSOPHIES. No, they are

5-4-63

not subjective -- purely objective. I MEAN ANY OF THE PHILOSOPHIES THAT YOU MIGHT BE LIKELY TO DISCUSS, WE'VE RANGED OVER THAT PRETTY WELL, WOULDN'T YOU SAY? Well, we don't spend any time on them, except that to us all political parties are the same -- they all smell alike, and the same way with social philosophy. If they personally amuse you, well, that's one thing, but don't try to design a technological system .... YOU WOULD ABOLISH ALL POLITICAL PARTIES? I'm merely saying that to us they all smell alike. YOU HAVE NO USE FOR POLITICAL PARTIES? No. There isn't any Left in United States. There's only the Conservative Right, the Reactionary Right, and the far Fascist Right, that's all the political faces you have in this country. WHAT ABOUT THE WILD LEFT? There isn't any. WELL, MAYBE NOT IN THEIR PARTY TITLE, BUT THERE'S A LOT OF THEM RUNNING AROUND. Where? OH, INDIVIDUALS. There isn't any indication. Technocracy is the only thing that's Left. COMMUNISTS ARE. We don't consider them Left of anything. We consider Communism so damned far to the right that it's bourgeois. In other words, Communism has some validity in an underdeveloped country, but to apply it in a technological area, no, it's just as much nonsense as going back to the oxcart.

WHY DO YOU CALL IT RIGHT WHEN IT'S GENERALLY CONSIDERED TO BE LEFT? We consider it so far Right that it's bourgeois. We're just insulting the Communists, you see. WHAT WOULD BE SOMETHING TO THE LEFT THEN? I don't know of anything Left except us, and we're so far Left, you see. We don't consider Communism revolutionary. It's only a political philosophy to divide up scarcity. They eulogize labor -- eulogize the worker. What we're out to do is eliminate toil, and if you eliminate toil, you also eliminate the bourgeoisie, don't you? I SUPPOSE. [SOMEONE IN BACKGROUND: THE FASCISTS AND THE COMMUNISTS.] Yeah, the Fascists and the Communists all go down the drain in that case.

Well, now, you've got something there if you want to use it. Have you had any of our magazines lately? NO, I HAVE ENOUGH HERE FOR WHAT I .... Well, we publish three magazines; we publish books, pamphlets, and maps, and we don't carry any advertising. We have our own presses. I THINK FOR WHAT I NEED TONIGHT, I HAVE HERE. IN MY REGULAR READING -- ONE THING THAT I GET ALL THE MAIL FROM IS MILITARY INFORMATION. I'M THE MILITARY WRITER, AND I'M SO FAR BEHIND IN THAT RIGHT NOW .... Do you write on the military at all? YES, AS I SAID, I'M THE MILITARY WRITER OF THE PLAIN DEALER. I INTERVIEWED GENERAL WESTMORELAND LAST WEEK. I wish I'd known

CLEVELAND PLAIN DEALER  
INTERVIEW OF HOWARD SCOTT

5-4-63

that. We'd have taken General Diepp. You probably read, "The Street without Joy," by Bernard Fall .... WELL, I'VE HEARD ABOUT SOME OF THOSE VIETNAMESE BOOKS IF THAT'S IT. And South Korea and other places. I THINK I'VE GOT ENOUGH HERE FOR THE SPACE I'M ALLOTTED TONIGHT. Well, I wish you best luck. THANKS A LOT. I HOPE YOU HAVE A NICE AUDIENCE TONIGHT.

★ ★ ★ ★ ★

MEMBERSHIP MEETING WITH HOWARD SCOTT  
CLEVELAND, OHIO -- SECTION 16, R.D. 8141  
MAY 5, 1963

Yesterday, of course, we had The Plain Dealer up; the day before. The Cleveland Press. This Bill Tanner of The Cleveland Press was all upset because we were making a tape recording of it. He had never had an interview -- neither did the other one on The Plain Dealer. Well, Tanner's attitude from the very beginning was an attempt to get me angry. Instead of that, he was the one who got that way. Of course, he made the mistake of coming in with the photographer that photographed me in December, 1932, at the City Club and the combined Engineers Club -- December 4 or 6, 1932. And the photographer kept on correcting him to such an extent that this Tanner got sore and said, "Well, you better do the interview and I'll take the photographs." So this Tanner got so mad that he used "God damn" several times and "crap" and everything else -- we have it on the tape. I don't think the Press Association in Washington -- he would get a good name if you played that tape back. He wanted to know why we did this. I said simply so that .... "Well, do you know what I say?" "No, it's irrelevant what you say. I merely want what I say on record, so that you cannot misquote us." "Well, what do you do with these reels?" "Oh, we store them up." "Do you play them back -- do you check on them?" "Oh, yes." "Well, are you going to play this one back?" "Yes." "Well, what are you going to get out of it?" I said, "Well, they'll get a lot of laughs out of your questions." We have a sense of humor.

Now there are two tapes from each one -- those interviews, both of them were two hours, and they took six to eight photographs each, and yet you have the kind of photograph that appeared in the paper. The last one from the Plain Dealer was decent enough, frank enough, to say that they were undoubtedly going to cut his article. They had cut his interview with the West Point Commander, cut it down to nothing and cut out the photograph; so, he said, don't be surprised. That's what you have to contend with. It isn't only here. There are only a few all over the country that you can get a clean-cut, straight interview from. You can get it from foreigners, yes, the head of Reuters, the Havasse, the chief political reporter of The St. Louis Post Dispatch, the top one of The Times, things like that, they play it straight; but the average newspaperman across the country that doesn't know, his city editor says, well, give it a once-over -- that attitude.

What I propose is for you to ask me questions. I'll sit here and try to answer them. Come on, there was enough thrown at you in the last few meetings.

WHAT ABOUT THE LATEST DOMINICAN-HAITIAN FIASCO? Well, what about it? The problem in Haiti? YES. THEY TELL US IT'S DICTATORSHIP. Well, that's Duvalier, see. Of course, you had a clash on in Haiti for two hundred years practically. The French had it, and you had civil war, you've had so-called coup d'états and revolution, any number of them. What has happened in Haiti is that your mulattos were more intelligent than your blacks, and they would rise up to dominate the regime and run the rackets. Then they would get too rough, and the blacks would slaughter them off. This has occurred a number of times in Haitian history. If you want to read up on Haiti, read up on the history of Toussaint L'Ouverture and you'll find something interesting to read. He was a capable organizer, he was a son-of-a-bitch in the language of , but he was a tough guy and he got things done. He defeated the French and was a better soldier and general than the French were. Also, the famous ruins down there, of which there are none larger in the West Indies -- magnificent structures, but that is more than a century-and-a-half ago.

But this Haiti today -- you see, the first real settlement in the New World was on the Island of Santo Domingo, which is now the Dominican Republic, and Haiti is the other end. Haiti is the end nearest Cuba. That's only about 47 miles from Cuba. What is upsetting the applecart right now, and why we would like to get somebody else a little more stable and a little more manageable, put it that way, is the giant bauxite deposit that has been discovered in Haiti, which equals that in Jamaica, and a brand new copper deposit. So, we're out to "liberate" Haiti.

You see, United States put the Marines in the Dominican Republic years ago, and in Haiti, and in Nicaragua and other places, and United States set up a national constabulary and one of the officers, a captain of that constabulary in the Dominican Republic, was named Raphael Trujillo. He became Presidente and stayed there thirty-some years. So did Somoza in Nicaragua. He was also a captain in the national constabulary of Nicaragua, Well, his sons and the Somoza boys are still there, although he was assassinated a couple of years ago. When Raphael Trujillo --

he was persona grata with United States -- sugar and everything else -- put in plants -- but the parochial school system was no good, so he called in foreign architects and engineers and others and started to build brand new -- not parochial schools, public schools. Then the propaganda against Raphael Trujillo started, and finally we manipulated his assassination. I'm not condoning Raphael Trujillo, but at least he was better than anything the Dominican Republic had had. He did produce results in roads, plants, and docks, and so on, but then South American dictators more or less followed that path, but he did install substantial structures, even if it was that type of dictatorship. But then to have him bumped off because he wanted to educate them, not in the parochial method but in the public schools -- brand new concrete buildings and teachers -- not nuns or priests -- but trained teachers -- tout finis. Does that answer your question?

Come on, this is something we can have a lot of fun at, if you work at it. Didn't I bring up anything in any of the meetings that .... ?

WHAT IS THE PRESENT SITUATION IN CUBA? Well, what do you mean by the present situation? [SOMETHING ABOUT RUSSIAN MISSILES] Look, the Russians have installations across Russia in various places. Vladivostok had underground compartments under the Tzar in a number of hills around Vladivostok Harbor. In the Russo-Japanese War, they had big underground chambers, munition storage, food, hospitals. They since have been tremendously enlarged. The Russians have missiles located at various points on their boundary, but they did not install missile bases the way they did in Cuba. In Cuba, they just took a bulldozer like this, ripped it out, and made a great big scar that you could see for fifty miles; in fact, they might just as well have sent photographs to our CIA. Why do you do such a thing? They didn't do it anyplace else. What is this? Why should the Russians, who have installed over thousands of missiles, when it comes to a place like Cuba, do what they have never done any other place? Well, they could only have done it in order to say to somebody else, "Well, look, you can see it."

The Russians weren't going to fight a war over Cuba -- that's obvious, but it was a nice chess play, and it ended up with United States guaranteeing Cuba's political totality and integrity, didn't it? As to how many missiles they had doesn't

5-5-63

make any difference. Frankly, I don't think they had any long-range missiles. You wouldn't park long-range missiles out in the open -- in the ballpark, for instance. They never have any place else, and they didn't do it there. In fact, we got a number of surprises in Cuba. One was that the Swedish liners bound for Havana refused to recognize the blockade. They wouldn't halt their speed and they flatly told the United States Navy that the blockade was illegal and an act of war, and that if the United States navy wished to fire on the Swedish liner, it would constitute an act of war on His Majesty's Government and Sweden would be at war with United States. It was not reported here. It was reported with photographs in Europe.

Another one of the big surprises we got was the size of boats. One of the boats was on a maiden voyage from Russia to Havana, and when the U.S. destroyer -- she didn't slacken her speed -- she had a flat wake -- no waves -- a flat wake. I've told you about certain propulsion for years, and she had two flat ribbons in her rear, and she was making time. She wasn't poking along at any 10 knots or 11 or 12 or 15 or 16 -- oh, no, she was moving. They didn't even slow up, but the U.S. destroyers that came alongside, even from their bridge couldn't look down on the deck of that ship. Why? The reported tonnage of that ship is 58,000 tons, brand new, so they had to put a chopper up and fly it over and down like this and then they pulled the tarpaulin back. Well, whether those were missiles or not, I don't know, but they told them to lower down the line with the camera on it, and they put a bag on it with three bottles of vodka.

One of the other interesting things is that Cuba and United States, as you know, have had a sugar agreement for years, in which we took a great percentage of Cuban sugar production. In return, of course, we monopolized the export-import trade into Cuba. Well, in order to put the squeeze on, we cut that -- stopped it cold. Well, raw sugar was just a shade over two cents a pound when we did that. Then United States called on the Philippines, Porto Rico, Hawaii, Brazil, Peru, and other parts of the world to produce more cane sugar. The Russians and the Chinese took the Cuban sugar, and Cuba has reduced her production somewhat, but not to a great extent. Now tell me, what's the price of sugar today on the world market? .0905. And the Philippines, Peru, Brazil, and all the others want to sell their sugar in the world market and not here! Do you see the way these

smart boys are -- they're so damned smart in local chiseling that they have no realization or knowledge or a grand strategy.

Cuba can develop a giant fish industry, it can grow three crops a year, it's got beautiful land -- remember that the Island of Java is approximately the same size as the Island of Cuba, except Cuba has got more arable land than the Island of Java. How many million population has Java got? Java is the most populated island of the Indonesian Republic. What's the total population of Indonesia? You'll find that Indonesia and Java -- Java is the biggest population, practically the square mileage. There's more arable land in Cuba than there is in Java. The population of Java is many times that of Cuba. Cuba has nickeliferous ores on the far end -- there's two big developments. Of course, you've known that it has been the biggest producers of cigar tobacco, but there's nothing to prevent Cuba from becoming a big producer of cigarette tobacco, of pineapples and other fruits, and they could be big fish producers. They've got a wealth of fish around Cuba, and if they were to put in our system of concrete blocks designed for the particular type of fish -- 8 to 16 feet wide, 20 feet high, 10-20 miles long, and 6-8 strips, then the fingerlings could come in the holes in the concrete blocks, you see, and the predators couldn't eat them, so you would have a terrific increase in fish. Remember we proposed this clean around the continent. It would take hundreds of millions of blocks; in other words, let's farm the fish and make the fish work for you. What's the losses in fish from the fingerlings to full-size fish? It's terrific. So if you saved half of them, you'd have many times the available tonnage of fish by this method, and that's the way to do it. You'd really have a fish crop -- you'd raise the protein consumption.

Of course, Cuba -- outside of Havana and Tourist Alley -- you only had to go a short distance before you ran into the barrios, where, if the wind was right, you could smell the excreta and the urine, because there were no sidewalks, no pavement, no water closets, no urinals, and it was filthy. You have the same thing in Buenos Aires. Only a short distance from the Avenida de 9th of Julio -- that's their great square of the republic -- there's a million of them living under the same conditions. You have it in Rio, you have it in Caracas, you have it in Lima, Peru.

They're cleaning it up. They're laying in concrete platforms and putting the houses on them with water closets, shower baths, and sinks, and the television shows these kids do a regular snakedance from one house to the other -- hundreds of them like this -- going in to see the "john" and the shower and the sink. In Cuba -- and I've been over most of Cuba -- I've been in practically all the giant sugar cent rale, because my sugar process -- if they had put it in, Castro would have a bigger problem than he has now, because there would be practically no workers in sugar. Only he would have had a sucrose chemical industry. Cuba would have been the world's largest producer of not only sugar but butyl alcohol, ethyl alcohol, furfural, and the 200,000 by-products that you can produce from that organic intermediate, as well as plastics, anesthetics, etc.

In the old days in Cuba, you went into a restaurant. The subisio -- you know enough about Spanish, come on, tell me. BEER. No, it's the "can," and it was always off the kitchen. The joke of it is that the attorney who incorporated Technocracy bought the Havana racetrack and one of the biggest, swellest gambling hotels in Havana. When he incorporated and got the charter for Technocracy, he was a partner of the great legal firm of Cadwallader, Wickersham and Taft. You don't walk into Cadwallader, Wickersham and Taft and ask them to take your case, you understand. You have to be duly examined, and then deposit a retaining fee. Incidentally, while we're at it, they never sent us a bill for it. Interesting? We don't know what happened to it.

Now, if Cuba were to put sugar on a modern technological basis, you'd have Faulkner sugarcane harvesters. You wouldn't cut the sugarcane with machetes, and you wouldn't crush it between rolls. You'd cut it into 100-mm. lengths, and then you'd macerate it, and with a high pressure, hydraulic diffusion process, you'd extract about 99 percent of sugar instead of about 86-87 percent. But you wouldn't produce raw sugar and then into refined. You'd produce colloidal sucrose, about 5,800 to 6,000 fineness. As that is very hygroscopic, it would have to be handled in a carbon dioxide atmosphere. You'd blow it into a ship and blow it out, all under carbon dioxide pressure, with the result that colloidal sucrose would become a by-product of cane -- not the main product. You see, when you consider that there's seven million tons of sugar and there's only 13-14 percent of that is sugar, how many times does 12 go into 100? Well, then you multiply the 7

million by 8 and you'd have that many tons of cane. You're running close to 60 million tons of cane. You're up against the proposition that the cane contains chemical compounds that are just as important as the sucrose. Just as in the corncob, and the corn that the farmer takes off the cob -- well, yes, you get corn oil, corn syrup, and corn starch, and so on, but the corncob, 25 percent by weight is furfural, and the furfural will do more things than the corn. And when we're at this, the latest photographs from Red China show the giant, tall sugarcane of the new sugarcane plantations and the new sugarcane refineries, and there isn't a single Chinaman carrying a bag of sugar or shoveling sugar or handling it. It's all done by pipes and conveyors; and do they burn any of the bagasse? Not a bit. They convert it into furfural and other products.

WHAT IS THE ACTUAL GOVERNMENT OF CUBA? IS IT COMMUNIST? Well, what difference does it make whether it's communist or what? It's how they propose to physically operate. After all, Castro .... United States installed Batista, and they did it twice. It did it with other Cuban presidents over sixty years. Jose Marti, yes, was a revolutionary leader, but he never got anywhere. Well, Castro started out, and it was the craziest darn proposition you ever heard of. That unstable, leaky boat with the bum clutch and everything else and about eighty of them. Well, only twelve of them got into the Sierra Maestra Mountains -- only twelve of the eighty-two. The rest drowned or were shot. What did it amount to? It didn't amount to anything, but the Batista racket went from bad to worse. Now remember I've told you hundreds of times you can run any racket provided that racket can pay out 80 cents of every dollar it collects. You'll have all kinds of friends and supporters, but the moment that that racket can't pay 80 cents and can only pay 20 cents, that racket is on its way out. Well, that's what happened with Batista, and then Batista made the mistake of taking on other women -- you can't do that in the Catholic Church -- you can't have a mayor of New York or a governor of New York who is a divorced Roman Catholic. You can live with the old bag and she may be nuts, but you're stuck with it.

We were not pro-Castro, and then we started to get pro-Castro because Batista got so damned rotten -- bump-offs, supressions, and shootings, even torture and everything else -- and your upper middle class, along with your Reondos and your

Lobos -- do you know what I'm talking about? Who are the Reondos and the Lobos? The multimillionaires. Lobo is worth damn near a billion. Well, they gradually switched. Here, you see, this thing was going from bad to worse. Now Castro didn't fight his way into a revolution -- the Batista thing disintegrated. It went completely to pieces. He didn't have to fight his way the entire length of the island from Sierra Maestra to Havana. They just disappeared. It was like Francisco Madera in Mexico, where he had a triumphal thing on the railway train and everybody turned out like this and he arrived in Mexico City -- he didn't fight his way there. Well, something similar happened -- Batista and his gang all got out, like Jimenez and his Chief of Police in Venezuela. Castro comes to Washington for aid, and we refused to accept him officially -- wouldn't even invite him to the State Department, let alone the White House. They went over to a second-class hotel to ask him what he was doing here.

So what? The record is quite clear. Dr. Sun Yat-sen of China, years ago, came to United States for aid. He went to Washington -- they turned him down. He went to London, 10 Downing Street. Well, 10 Downing Street turned him down on consultation with United States. Well, there was only one other place to go: he went to Moscow, and Lenin gave him General Borodino and 200 Russian technicians, and they set up the Wampo Military Academy, and that started the training which Chiang Kai-shek took over and later double-crossed. But here's the same precedent -- so Castro was left no other place to go. Whatever he was before this doesn't make a cent's worth of difference. He could trade Cuban sugar, and when he made the deal with Russia to get oil for the sugar, and The Standard Oil, the Shell, and the Texan refineries refused to handle the Russian oil, he took them over and that started it. It went from that to complete. And don't forget that the Director Generale of the Havana Electric was a Technocrat.

DOES THE LOCKOUT IN EUROPE TIE IN IN ANY WAY WITH AMERICAN INDUSTRY? No, only with American investment and that indirectly. This is the steel and metal production of Bavaria and the South Rhineland. Coming Monday, it's not a strike -- it's a complete lockout, they locked the gates and closed them out. That involves 700,000, but there's 1,200,000 more. The Volkswagen plant and the Opel may close this coming week. THERE WAS AN ARTICLE IN THE BEACON JOURNAL ON THAT TODAY. Well, but the NEW YORK TIMES tried to make out it was a strike in the second article -- not the

first. It's not a strike -- it's a lockout. THE BEACON JOURNAL CALLED IT A STRIKE-LOCKOUT. You see, they were bargaining for an 8 percent increase, and they're getting \$125 to \$135 U.S. a month. The employing organizations broke off the negotiations and closed it. Now they're afraid of the same thing happening in West Germany that happened in France when the coal miners came out, and de Gaulle threatened to conscript the entire coal miners of France. Well, he didn't, because the populace started to back up the coal miners and the transportation and the power'boys called .... and everything shut down in Paris and Lignonne -- the taxicabs, the tubes, the hospitals, everything. So, they're scared. The American is only involved to the extent that U.S. foreign investment -- the Opel plant is General Motors and a number of other plants in which American capital is of considerable interest -- a number of those are involved, yes, but it's not directed from the United States or instigated by the United States. The damn Germans, you know, are just as bullheaded as the British, sometimes a little more so, especially the south Germans. If any of you have relatives in South Germany, you know what I'm talking about.

You see, Britain produced, last year, 4 million less tons of steel than she did two years ago. Japan dropped hers 7 million tons. But the boom in Europe is reaching the point that where .... you drive out here and you pass these steel companies down here -- what do you see? Tell me, come on, what do you see? LOTS OF STEEL. STACKS OF ORE. Yes, you've got one of the biggest supplies of iron ore at terminals -- that's down here at your steel plants in history. THERE'S ALMOST SIX MILLION TONS OF ORE THERE IN ONE PILE. Well, that's just there, but there's over 48 million tons at terminals. You have plants where they're stacking up ingots -- slabs -- not even the finished strips. They're running the ingots up and piling them up higher than you are. Don't you think there are similar things happening other places in the world? They are.

WHAT ABOUT OTHER COMMODITIES? What other commodities? WHEAT AND CORN? Well, France produced 510 million tons of wheat last year. She only consumed about 230 million. United States had a nice profitable agricultural export to Europe of around \$1.1 billion to \$1.2 billion a year. The U.S. base price for wheat is \$1.82. The French, I think, is \$2.26, and the German guaranteed base is \$3.15 a bushel, France can therefore export, say, 270

million and do it by barge -- low-cost transportation -- and get the high German price if it's within the so-called Common Market; therefore, the United States will lose its agricultural market in Europe to the tune of \$1,200,000,000 a year. Of course, the Russians will not be importing U.S. wheat. They did over 2 billion bushels of wheat. They're the world's largest producers of wheat.

HOW SOON ARE OUR BASES GOING TO BE RETURNED? Well, Iceland and Morocco -- we have to get out this year. We also have to withdraw the Jupiter missile bases from Turkey and Italy this year. Yankee, go home, and get the hell out of there! And that is not because of the Russians. HOW MANY WILL THAT ADD TO OUR UNEMPLOYMENT? Oh, they'll still be in the Armed Forces. How many have we in our Armed Forces? Approximately 3,200,000, and over 2,400,000 federal civil employees.

WHAT ARE SOME OF THE PROBLEMS INVOLVED WITH NATO ... OR WITH THE VATICAN? Well, I don't know what you mean by that -- get a little more specific. [SOMETHING ABOUT THE VATICAN AND WALL STREET] Well, they have the connection of invested capital, plus the Treaty of Rome. I advise you to go to the libraries in Cleveland and see if you can get a copy of the Treaty of Rome. Go ahead and try it. They haven't got it in the public library in New York even, I DON'T MEAN THE COMMON MARKET. I don't know what you mean -- you'll have to ask the question in .... I MEAN DE GAULLE SAYING THEY WILL HAVE SOME KIND OF NUCLEAR DEVICE .... Why, certainly, they all want to join the atomic club. They'd all like to have that. There are only a few that have the resources. China has the uranium resources, the thorium. So has Russia. You see, the most efficient reactor is not the 60:40 or the 50:50 U-238 : U-235, but the 99% U-232 and 1% U-235. What's U-232? It's non-fissionable. U-238 is your uranium. U-235, you get into your plutonium. Now, what's U-232? You don't know? Thorium. Outside of the Russo-Chinese bloc, the only countries that have large deposits of thorium are Brazil and India, and they will not permit the export of thorium chloride in the raw state, but only small samples of thorium nitrate. So, United States can't run the thorium reactor.

WHAT CAN YOU TELL US ABOUT THE PROJECTION OF THE BLACK TERROR IN SOUTH AMERICA? That came out of the result of Kennedy's visit down to San Jose. And what did you have happen? You had a

new dictatorship set up in Guatemala right away, and with the Somoza gang in Nicaragua and the bunch in San Salvador, they started arresting everybody as a suspect. That's the beginning of your Black Terror. What the hell do you think you have in The White House for heaven's sakes? I call it the Irish Mafia from Boston. What is a mafia? The more correct name would be Fascist. The shadow cabinet is over in Georgetown, and he lived over there for a year. His son was baptized. Oh, by the way, did you see in your papers that Prince Stanislaus Radizwill was here at the Polish thing, and they gave him a very nice -- they didn't say anything about his Polish setup, except that he had married so-and so that was a sister of Mrs. Kennedy. So the Poles here in Cleveland had quite a celebration welcoming Prince Stanislaus Radizwill. Do you know your Polish history? Well, the Radizwills and the Potockis -- who are the Potockis? Your greatest landowners and feudal princes in Poland. They were Hungarians originally -- they were papal nobility, Hungarian nobility, and Polish nobility. They've gone down the drain, too. THEY'LL COME BACK. Yes? So will Jesus! No, they've got to quit kidding themselves they're not coming back. As I have said many times before: Kerenskys never return. Presidente Porfirio Diaz, when he resigned and took that German boat out of Vera Cruz and sailed to Paris -- yes, he used to drive around in Paris and go to the sidewalk -- he never came back. Unfortunately, we've never had any political refugees from United States. True, your United Empire Royalists went to Canada, but they didn't carry anything with them -- they were just opposed to what was here. And at the end of the Civil War, a number of confederates went down to Brazil to three different places. Well, they stood it for a number of years, and, of course, one of your most famous things was General Ronald McIver and General Paret of Paret bullpup guns -- you remember those, reading about them in the Civil War? Well, General Lee Hunt -- they refused to surrender with Lee and asked permission to ride out. When they reached the border of Mexico down at Texas, when Lincoln's Amnesty came out, McIver and Paret said to Hunt, "Well, you're married, you have a wife and child -- you have something to go back to. You go on back." So, they went on into Mexico and offered their swords to what? Who -- come on, tell me. MAXIMILIAN. That's right -- Emperor Maximilian. They were on one losing side, and they go and make the same mistake all over again. But there is this to say for them -- when Juarez captured the situation at Queretaro in 1867, those two were allowed to march out with the honors of war. Paret went to an

island in the Pacific, and he died with the Stars and Bars still flying on two of his bullpup guns out in front. McIver became Field Marshal of the Armies of Emperor Don Pedro of Brazil. He was-also the Generale LeGuerre of the Central American fighting, that you will find written up in Richard Harding Davis's "Soldier of Fortune." Well, that's about the closest United States ever came to having political emigres.

Canada has had them. We had William Lamb McKenzie and Louis Riel come over here and then go back into Canada. They had a price on their heads. We have not had any. True, at the beginning of the Civil War, we permitted the students of West Point to march out to go down to join the south. The BMI student body marched out solid to join the Confederate Army, but we have yet to find a university in United States that have fought the army and police to a standstill, where the national government had to permit the students to march out with the honors of war. There have been universities that have done that, but they do not exist in United States.

ARE THERE GOING TO BE ANY SPECTACULAR CHANGES IN OUR ECONOMY IN THE NEXT YEAR OR TWO? What do you mean "spectacular"? ANY BIG UPS OR DOWNS OR ANY SHARP .....? Well, all it has to do is keep going the way it is. Then the only way the majority of the American public can go is ujd. It's like asking that negro in the diving suit if he was on the bottom. He said, "I's so fah down, I can reach up and touch the bottom!"

One of our members has just completed the design and development and they are making the installation in a new type of pipe plant in United States, and as and when it goes into operation, every other pipe plant on this continent -- flop over, brother, or close up. It is so fast, so accurate, they'll only have a couple of people per shift, that's all. But that's happening in various things. When your new plants abroad are coming on, as they say in the oil industry, on-stream or on-line, how many are coming on -- where? You have six giant steel plants in China -- this is not the backyard steel plants -- this LIFE stuff is a joke, because these are running around 3.8 million to 4 million tons each. They have modern blast furnaces, open hearths, oxygen beneficiation, giant by-product coke ovens. You have a pipe plant in China piercing the pipe from a solid billet; in other words, not welded, it's pierced, any wall thickness up

to 9-1/2 ID, 40 feet long. Well, you have to produce steel, brother, in order to do that. So those six plants would be anywhere from 20-24 million tons additional to China's steel.

You're building a 4 million ton steel plant on the Piatt River not so far from Buenos Aires; you're building another 4 million ton in Brazil -- Southern Brazil -- the foundations are in, and the new steel plant in Venezuela, ladies and gentlemen, is in operation. So is the hydroelectric on the Koroni River there, and they're working on the new bauxite plant in Venezuela. The Czechs are building a 4 million ton steel plant in the Teschen area, and the Poles are building another. The Russians are building some plant. We can't get quite where it is, but we'll find out. The Trans-Siberian Railroad is electrified as far east as the Kutz and the bottom of Lake Baikal, and the electrification is moving east. They are laying the pipelines along the Siberian right-of-way going east, too, and if you had a map of Russia, the new oil field, the highest pressure oil field ever hit in Russia, is [TALK ENSUED WHILE PRODUCING A MAP] There's Lake Baikal right here, and here's your Lena River. She's doing 7,000 barrels a day choked in.

Here's the Danube, isn't it? Goes up here like this, and the head of navigation of the Danube is where? What's the name of it? It's the name of a port. Reigensberg -- that's just a little ways beyond the Austrian territory. Your pipelines are coming from here, and they're going over here like this into Czechoslovakia and up to East Germany here. The other ones are coming this way, and they are now going to deliver the oil in Finland by pipeline. No more tankers -- they have notified Finland. And that comes down to the Baltic. The latest photographs show the power lines and the towers are here and the pipelines are moving down this way to join here and make the group complete. One pipeline that they have just completed that's delivering oil in Czechoslovakia is approximately 3,200 miles straightaway without sidelines. Sidelines would run it well over 4,000. We have no such distances in United States, have we? 3,000 miles would go across from New York to Los Angeles and have some to spare. It would be out in both oceans.

The Russian program calls for 40,000 miles of pipeline, and the pipelines they are building are 36" and 40" in diameter. Down in here, they have one of the great gas fields of the world. Gas

there is not associated with petroleum; therefore, it is sweet. Do you know what that means in the oil industry? NO. Well, gas in Alberta and in Algiers and in France is sour. It has so damned much hydrogen sulfide in it that it -- do you know what hydrogen sulfide smells like? Rotten eggs -- quite sickening if you get a bunch of it. So you have to extract that; in other words, you have to sweeten it. So Canada will shortly be the world's second largest producer of sulphur from taking the sour out of Alberta oil. Tehaunapec, Mexico, of course, is the great producer of sulphur. France has been next in extracting the sulphur out of the sour oils out of the fields south of France up against the Pyrenees. But this gas is not -- it's sweet. It's 100 percent methane, coming out at approximately 3,600 pounds pressure, and they have been running it 600 miles without a pumping station.

It is of such high calorific value that you have to dilute it to put it in the city main to use it in a gas stove -- pure methane is, but the gas pipelines in Russia are pumping at 880 pounds pressure. At 36" in diameter, that means that the wall of that pipe is slightly thicker than one inch thick of high tensile strength steel. You don't use ordinary boiler plate to handle 880 pounds pressure -- not more than once, and if you're anywhere near it, you won't be around. So it is delivering oil in Czechoslovakia for the past three and a fraction months. The terminal will be up here near Stettin in the Baltic, and if they wish to, they can lay a pipeline into Sweden -- it's only a short distance.

Now, the British Petroleum Association has issued an excellent report. They're worried. Now they are talking about the energy of Western Europe, whether it's from coal, oil, gas, or atomic, and their contention is that as and when the Russians complete these pipeline grids, plus the million volt DC, the towers are in here now near Riga crossing the Duena River which runs into the Gulf of Riga right there -- they're 90-foot towers. But as and when the Russians complete that, they will be able to deliver one billion BTU or more, but their cost per one billion BTU in Poland, East Germany, Czechoslovakia, Hungary, Romania, will only be forty percent of one billion BTU delivered in Western Europe. In that case, ladies and gentlemen, the chips are not only down but the cards haven't any faces on them, haven't any spots, and the dice have no spots on them either. You're only

kidding yourselves if you think the Common Market is going to go anywhere unless -- what are they proposing? The British Petroleum Associations says the only thing that can offset that is to lay a pipeline across the Mediterranean from Africa. Do you know what the conformation of the bottom is near Gibraltar? You come out like that on a little shelf and you have a sheer drop of over 1,400 feet before you have another little thing and then you go down what? Thousands of feet farther. Well, just try hanging a 40-inch pipeline on that. You'll have to build a couple of Eiffel Towers to hold it up, and they practically admit that, you see, that it's absurd.

Now there's been an excellent, pretty fair-sized, gas field discovered in Eastern Holland, right up against the [Baden]. It's quite a gas field, but it won't last more than ten or fifteen years, and they'll export most of that gas to the rest of Europe. That only gives them a little breather. Now, they also point out that coal mining in Western Europe, which is now over 200 million tons, will decline within the decade to less than 90 million tons. Let's get it clear -- you see what these people are saying? They are only confirming what Technocracy has pointed out for years. Now we've got the best experts in the world who are not Technocrats confirming it. If coal in Western Europe is going to decline, then you'll have to bring in more of other energy supplies to try to keep this damn thing up.

LATELY IN THE NEWS WE HAVE HEARD A LOT ABOUT THE DANGERS OF THESE ATOMIC REACTORS THEY ARE BUILDING FOR POWER STATIONS. DO YOU HAVE ANY INFORMATION ON THAT AT ALL ABOUT WHAT THE DANGER IS?

There are over 700 different types of reactors known, but there are only a few that are efficient, and the trouble with them is -- as I said, there are three general types: 50:50 or 60:40 U-238:U-235 and the 1% U-235 and 99% U-232. Well, U-232 is not fissionable until it's bombarded with U-235, and then it becomes U-233, which is fissionable. Now those are three broad categories, and there are different types of reactors within those: heavy water, liquid sodium, gas, you can go on down the line. Regardless of what type of gas or liquid that you use as a conductor, you fabricate the rods that have the fissionable material in. They are fabricated in long rods and then they are encased in metal, and they are like a lot of long pencils, like

5-5-63

this, going down in a long tube. You fill this up, and then you have graphite or other control rods which you raise up and down to control the reaction, you see. The interesting part of all this is that those rods that are put in them, you have to pull them because they become contaminated before they give up one percent of their total energy. Do you follow me? if you have to pull the coal out of your boiler or the oil before it gave up one percent of its energy, you've used four-letter words. You say the hell with this thing. Of course, remember it does give a terrific energy.

When you pull them, they have to be sent back to a plant, stripped of their metal case, the interior crushed, ground up, and decontaminated, then pressed into shape and recased in the metal and shipped back. So, therefore, you have one set of rods in the reactor, one uncontaminated set of rods lying there ready to go into the reactor, one going back from the reactor to the decontamination plant, one being shipped from the decontamination plant, and one in the decontamination plant being decontaminated. That's quite a set of rods. Well, I haven't the latest figures, but a year ago the contaminated products, there were 24,000 barrels dumped in the Pacific and 46,000 dumped in the Atlantic. Those are those beautiful big drums of 28-18-8 stainless steel. I don't think, John, that you can buy that on the market, can you? They are lined with one inch of lead. There are a number of them made by the Republic Steel. They've dumped 46,000 of those drums in the Atlantic and 24,000 in the Pacific. You take them out into the deep and dump them in there, and we do not know what the reaction time at, say, 10,000 to 15,000 feet of depth of air pressure. We do not know. Instead of putting them through a complicated process to decontaminate them by atomic reaction -- in other words, to reduce the fissionable thing -- we don't.

The boys in the industry -- it's a very nice setup. You have the government supply the fuel and you run a breeder plant and then you sell the plutonium back to the government. You get all the cream, and the public pays for the original fuel and the purchase of the plutonium. How dumb do we have to be? Does that answer your question?

You can't get insurance. There's one plant outside of Chicago where a little incident occurred. The Supreme Court of the United States ruled they were liable, and the insurance

company -- it will be five years before anyone is permitted inside to see whether it's still "hot". It's still hot right now, but you are not permitted anywhere near it, and the company collects the insurance. The insurance companies fought it, but the ruling is against them, and the unions, the insurance companies, and the government are this way right now -- nobody wants to really bring it up in public. They don't want to wash that many dirty shirttails, put it that way.

WHAT IS TECHNOCRACY'S POSITION IN REGARD TO THE SPACE PROGRAM? WOULD THE TECHNATE APPROVE THE SPACE ACTIVITIES SUCH AS NOW?

Don't ask me what the Technate would do. You can't get me to commit the Technate. How much weight do we throw in space? What's the largest weight? 5,500 POUNDS. Did we throw 5,500 pounds? 2,000 POUNDS. Well, when we orbited them, he was in a cramped position, wasn't he, in his suit? The Russian ones were walking around inside. They were 8 tons. Instrumentation -- we've only got a few hundred pounds in them. So they must have some propulsion system. They landed theirs on dry land. We've had two narrow misses of having our astronauts drown when they landed.

[COULD NOT UNDERSTAND THE QUESTION]

Any of our missile and space programs are using up a lot of rare metals. We have nine billion dollars in our strategic stockpile of metals, but now the arrangement is to release those gradually on the market so that American private enterprise can transfer those to Western Europe and the Common Market. [INAUDIBLE COMMENT] Oh, you're just beginning to get it, are you? We don't want to make the slip of trying to give this away, you see, so we'll get American enterprise firms, let us say, to have "competitive bidding" on it, and then they will take it in pieces. How do you suppose Parke-Davis, Lilly, and others get certain drugs today -- effedrine sulfate, for instance? We don't make it in this country. We buy it from Switzerland, Hong Kong, and Singapore. Where does Switzerland get it? From Hong Kong or Singapore. Where does Singapore and Hong Kong get it? From Red China, Red China just announced that they are going to offer the world all the biotics, sulfas, tetracyclines, and everything, penicillin, hormones that are selling here for \$15 -- they're going to offer for less than thirty cents, and they guarantee

them to be double U.S. Pharmacopoeia standards. Well, I know -- we'll wait and see.

DO YOU HAVE ANY INFORMATION ON THE CANCER DRUG CALLED KREBIAZIN THAT HAS BEEN CONTROVERSIAL FOR THE LAST TEN YEARS?

Krebiazin? It may have some effect in some types of cases, but it doesn't go at the base of cancer; in other words, it's [illimited] -- I've forgotten the medical term -- it may have some effect on . What the hell are you worrying about that for? Suicides in Los Angeles County exceed the total deaths in that county, by automobile accident. How do you like that? And the majority of those suicides are between 16 and 24 years of age. NICE FUTURE FOR CHILDREN. I mean, what are the total deaths from cancer in United States per year? [UNDISCERNIBLE ANSWER] Well, that's not high, is it, in around 190 million population. It's high, yes, but you're running over 40,000 for automobiles. You can't fix that.

I've been asked a number of times about syphilis, because syphilis is on the increase, and it is. It's accelerating to beat the devil in certain areas of United States. Well, they all get wrought up if they suddenly discover the public health department in their municipality or their state shows a big jump increase in syphilis cases. What do they expect? They have no control, but the pathological syphilis -- physiological syphilis -- of the individual citizen is a comparatively"simple matter to handle, very simple. The social syphilis of the country club and golf -- now that is really something, because you can't cure that short of a complete, utter social revolution in United States. Who wrote, "Sartor Resartus"? He was quite a noted author in Britain. THOMAS CARLYLE. Right, Thomas Carlyle. What happened to him the day after he got married? He went down with his golf club and knocked down all the rose bushes. Well, I can tell you a lot more, but .... Once upon a time, years back, you could say that you played golf for exercise. Out in Palm Springs, you know, they've developed that to where it's all magnificent, and there are golf clubs like this going on up. Now, we have them right close to CHQ in two big golf clubs, and what have you got now? You've got nice, big, wide electric golf carts, and they have great big tires like this. They seat four wide, and then they have a compartment back of the covered seat in which you put the

clubs and the Tom Collins and the other liquid spiritual refreshments, and then the driver sits up here, and there's a continuous wireless telephone all the time -- he sits up above them and steers the thing. I'd like to point out that one garage alone in Palm Springs has 1,728 golf buggies. Now, don't think that these are cheap. The good ones cost as much as your automobile. They're over \$3,000. They have to be quiet. They have nice great big airfoam cushions, and they're air-conditioned. LAUGHTER. Well, why not? What's the average age of the golf members out in Palm Springs? Sixty-eight years of age. They have reached the point where they no longer have any initiative, and they only have incentive left. I'm giving you these as indices -- indicators.

Well, what's happening? Eisenhower's favorite golf course is out there in Palm Springs. That was the original spring up that arroyo there that the Indians had. We should have left the Indians alone. I remember Palm Springs years and years ago when there was nothing but desert there and a few Indians on a little place, and now you can't even get near it.

The reels are running and you're not asking questions. If you don't ask some questions, I'll quit on you.

A QUESTION ABOUT THE STATUS OF CHQ BUT NOT UNDERSTANDABLE.

We haven't got the superintendents yet. When we get the superintendents and the crews organized, we may do it, and then, again, I don't know.

DO YOU WANT TO FINISH THE STORY ON THE GOLFERS? What? THE DEFINITION OF A GOLFER. Oh, the proficiency of golf in the American male is indicative of approaching senility or sexual incompetence. In the great Shrine Auditorium audience in Los Angeles, there were over 200 males came backstage to tell me they were lousy golfers.

Come one, now, there's nothing holding you back. I don't throw the sink at you, you know. A lot of you have never seen me handle a large audience. I don't handle it the way I handle a small one. You got a reaction there; if you had had a couple of hundred more, we'd had a bigger reaction.

TELL US ABOUT TECHNOCRACY'S TUBE DELIVERY. IS THAT ?  
No, that's local. That's for local package delivery. WOULD IT  
DELIVER FROM COAST TO COAST? No, that's too high cost. With a  
three-meter-gauge railroad you could average better than 200  
miles an hour. What more do you want? Your tube will hit a speed  
of 1,000 miles an hour. That's for urban delivery. That's a high  
frequency tube, wound right around the tube like that. Then  
you've got to wind it in reverse coming into a terminal, because  
she's coming in there, say, 4 feet in diameter, 8 feet long, or a  
little larger in diameter and a little longer, and you have to  
have that tube wound in reverse as well as the other way in order  
to slow it down. Now there's no current or energy used until you  
put the container in the tube. Your pneumatic tubes are on all  
the time. You have to continually throw the air in and pumping,  
but a high frequency, no. Why don't you ask me about building or  
something? Come on with you.

TELL US SOMETHING ABOUT THE BUILDINGS YOU TOLD US ABOUT IN  
DECEMBER -- THE APARTMENTS.

Well, you have certain reasons -- certain physical reasons.  
If you design the energy flow, the material flow, into large  
populations, you see it's quite a different setup than your  
present commuter transportation, sewers, water, and gas, and  
everything else quite indiscriminate. They're all on racks  
underground like a subway, only it's bigger than a subway. In  
other words, your water, your gas, your telephone, your low  
power, your high voltage power. they're all on racks -- you can  
walk or drive along and inspect them. They're all coded in color.  
You never dig up a street -- never -- after you do it.

Are there any determining factors about buildings? Yes. A  
minimum-sized building has to have 2,500 apartments. Well, now  
why? What are the reasons for all this? I mean this isn't just  
guesswork and you pull it out of the blue. Come on, tell me why.  
Give me what you think is why. LOWEST ENERGY COST. Well, that's  
one of them. EFFICIENCY. Well, the apartments would be 4.9  
persons per apartment or approximately 12,500 minimum to a  
building. They are a bent H type -- I mean, they may vary this  
way, but our theory is a bent H -- 30 to 40 stories in the air.  
There is only one drugstore there. There's only one laundry and  
dry cleaning. You see, you have to have a certain minimum to run  
a laundry and a dry cleaning, correct? And you also have to have

a certain minimum to maintain a so-called outside hospital -- 12,500 people, any city of that size has to have a good hospital, hasn't it? Well, with this there would be only one dry cleaning, one laundry right there. It has a theater, so what happens? You eliminate all that traffic from the streets, do you not?

Come on, do you begin to see where this goes? It gets quite interesting as you go on.

Now your roof area is such that you collect all the rain water that falls on it; it goes down through the center of the building. What do you do with it? Dump it in the sewer and run it out to sea? Oh, no. You save it. When you've got a number of buildings like that, you can accumulate a terrific volume of rain water, which is beautifully soft water. So you've got several different kinds of sewer systems. You've got a sewer system for your house, toilet, and so on. You have another one for your basin. You have another one for industrial sewerage.

Building buildings of that type, your floors are so designed so that the down piping can be done with a 40 percent saving over the modern 40-story building, and the back of the building faces on the street. There are reasons for that. The front of the building faces on a marina park block. Your garage -- cars and so on -- are all down underneath. You come in underneath. There's no motor vehicle traffic on the same level as sidewalks. The sidewalk is up above that. Your trucks would be down below -- the top of the truck -- below the sidewalk level, and the side of that is a concave curve so as to take the sound and bounce it off there back onto the pavement to prevent the sound from going on up.

With that kind of street, of course, you can close any street any place, and all the streets all the places -- all you have to do is push a button and she's [Chief apparently made a gesture that showed it closing off]. What are you talking about -- delinquency, robberies, what? How far do you go? More than three blocks? No. It's "doubtful if you would get that far.

Now, when it comes to warehouses, bear in mind that in 1938, the Bureau of Combustibles in New York City had 10,000 places in which silk was stored in that city alone. Butcher stores? Not Greater New York but just New York were close to 10,000.

Groceries and so on -- 29,000. You see the way this runs up? Now if you include the suburbs, you multiply it, that is, all the other cities around New York. Now, under a Technocracy, there would be only one place outside of the retail outlet in which silk was stored, or canned tomatoes, or anything.

Would you have the existing docks where you bring the ship in like that and turn it in and take the tugs to put it in and then you have stevedores, longshoremen, and everything from hell to breakfast. It takes days, and the trucks are standing there for days waiting to load that ship or to unload it. No, the harbor terminal is one long shoreline, and then out from the shore is another long line; in other words, incoming you unload out here on the Long Island, outgoing you load here in the terminal. The turnabout time, ladies and gentlemen, is 5-1/2 hours for a 20,000-ton ship -- not 5-1/2 days or 6 days! You can't use the same crew -- oh, let's put another crew on. Your entire manifest is known by wireless, and you know exactly where to stop that boat coming in, it unloads in your center island, goes down like that, across and up. How do you get the cargo to load at your different terminal sectors? What? 10,000 cases of tomatoes, 5,000 cases of this -- you push a button and nobody goes up there to get it. It comes on down like that.

We know how to do all of this right now. You wouldn't have warehousing in Cleveland or Chicago. Let's take the steel companies. How many steel companies have you out here -- whether it's Cleveland, Chicago, or Pittsburgh, or whether you move to a city like New York, every one of the big steel companies has distributors -- piles of steel and they've got shears in storage and everything else, and they've got trucks to deliver. Well, there's 16 major steel companies, so you will find a minimum at least of 16 steel company warehouses in every damn major city, and they're all handling steel. Goofy? Yes. You go down on the Orinoco, and you've got the Bethlehem, you've got United States Steel, Republic, and all the others all mining a separate ore body, building a separate railroad to the Orinoco, with a separate loading dock, a separate set of ships, to take it over the bar in shallow draft and load it on to a big draft. Why, kids know better than that. They go out to build a little mud hut out there, and they don't do that kind of thing -- a bunch of kids -- watch them.

Up here in Quebec, what? You've got the iron ore, and what's happening? The U.S. Steel's iron property in Quebec is just a little bit west, and it is building a separate railroad from the St. Lawrence, when it could have been run over the same thing. Oh, no, they have to go through this performance all over again.

What have you got to say about buildings like this? I DON'T LIKE IT. You don't? Pourquoi, monsieur? A lot of you don't like it. No mortgages, no bankruptcies. Vernon, that profession of yours wouldn't be worth a hoot in hell! Fireproof, vermin proof, waterproof, reinforced concrete -- not steel frames -- now understand, where your bearing walls carry the load, designed for hurricane winds of a Cooper E 50 loading of a 150-mile-an-hour hurricane.

WHAT KIND OF IMMIGRATION WOULD WE HAVE? Immigration? YES. Well, if you are speaking about an incoming Technate, I think for some time there would be mostly migrations. Only one thing about it -- if they left here, they never could come back. And Americans, as I said before, have never had any experience at being a political emigre. They wouldn't be happy. They would be miserable as hell no matter where they were. No, it would be some years before you would have to bother about any immigration policy. You can understand why.

HOW LONG CAN OUR OIL SUPPLIES LAST? They're down to less than eleven barrels per well per day, and we're not discovering new fields. In our wildcat drilling, in California 16 out of 17 wells are dry. In the other regions about 9 out of 10. Go back -- when was spindletop, the last great gusher? 1901! You see, we haven't had a major copper discovery or anything -- you have to go back years.

THE LATEST ISSUE OF OIL & GAS JOURNAL HAS A HEADLINE FEATURE ARTICLE THAT BOTTOM HOLE PRESSURE IN WEST TEXAS IS DROPPING SO FAST, THEY ARE REALLY GETTING WORRIED. I know that; after all, who has been the world's leading proponent of the theory of aggregate pool pressure? It wasn't developed by an oilman, and you've only got one guess. ARE THEY DOING ANY BETTER THAN THAT IN THE WESTERN PROVINCES OF CANADA ON NEW WELLS? Oh, yes, they are, but that's a series of spotty fields. The great East Texas field, you see, runs north and south. That is one of the most prolific things in the world. That's cut in two, crosswise, east and west,

as well as being cut this way in the other part. They allowed the reduction of pressure and the water to come in and cut the field in pieces; so you haven't got another East Texas. And in your Sprayberry field, Permian, and West Texas, there are other things happening. Where are you going to get it? Get it from abroad.

A QUESTION POSED, BUT COULD NOT BE UNDERSTOOD. Well, Saudi Arabia's production is falling. And you've got giant high pressuring stations, both gas and hydraulic, in Saudi Arabia running 25 to 30 million apiece. You're drilling offshore -- 100 miles offshore in the Persian Gulf from the top end clean away down. You don't go in for offshore drilling or high pressuring except when your existing wells are failing. That's an indication that maybe it's running out on you. Now the Pan Arab thing arises from another thing. What soil has Morocco got? Or Algiers? Libya, of course, has practically nothing. Egypt only has about six million acres. The Aswan Dam -- the big one -- will bring in 1-1/2 million, but then the population increase starting from 23 million Egyptian population at 3% a year will nullify the population advance by the time the Aswan is completed.

Syria and Lebanon haven't the land. Iraq is the only country in the Arab world that has the land:population ratio. Its land:population ratio is 20 times that of Egypt. That's the hope of the Arab world, if they can manage that, that it would become the big food producer, but if they do the same as Pakistan is doing with the big Indus River development -- and that has a greater land irrigation acreage than all of Egypt -- do you realize that? Well, but foreign money, plus the previous British dams -- you're making more water available than has ever been available in the whole history of the Indus River; and you flood these millions of acres 8-10 inches deep in water and then you let it soak in. Then you plow it. The temperature is 116°. The evaporation is terrific! Well, it went saline centuries ago. It's going that way faster than ever before, because you've got more water to evaporate over more area.

If they're going to do in in the Near East on the same kind of nonsense, then they'll mess it up. Do you understand what I am talking about? If there is any question about it, tell me. The Mesa Indians in Arizona didn't go out because of any hostility of any other Indian tribes or disease. They went out because the salinity increased across the whole Gila Valley and the Salt

River Valley. I remember the argument I got into with the University of Arizona and Southern California sociologists and all the rest -- oh, no, the Indian culture went out because of this reason. We said nonsense, and the Engineering Department -- I got them to take drillings across it, and the drillings showed that the increasing concentration of settling salts -- that's what did it. In other words, they operated for several centuries, and it kept .... Imperial Valley is going that way now. But the Indus River Valley is going faster.

GETTING BACK TO OIL, HOW ABOUT THE ATHABASCA OIL SANDS? Yes, you've got gigantic reserves. The only process in there that will really amount to anything is the Shell process, but we've got gigantic shale deposits in Colorado and Utah in the Green River Valley, but 20-30 gallons per ton. A ton is how many thousand pounds? And what's 20 gallons -- how much does that weigh? All right, come on, what's the total weight of 20 gallons? 140-150 at the most. Well, 150 from 2,000 leaves you how much? 1,850. Then, for every 20 gallons you take out, you've got 1,850 pounds of waste to deposit where? If you're going to do ten million barrels a day -- come on, figure out the amount. You can fill up some of the valleys in the Rocky Mountains, can't you?

The only process on oil sands that's worth a damn is a high pressure, tetraline solvent process that would shove it through on a traveling process. Heat, high pressure going through and the sand traveling, and the other traveling. EIGHTEEN BILLION POUNDS PER DAY. Quite a sizable chunk I would call it. Well, the same thing to make oil recovery from the Athabasca sands, it can be made effective, provided you build it big enough, and then you've got the proposition of what do you do with the sand? Of course, we jokingly can provide the answer: There's a hell of a lot of bastards on this continent should be buried in the debris! IT COULD BE COMPACTED INTO BUILDING BLOCKS, COULDN'T IT? There's a lot of other things could be compacted into building blocks, too, but the ones I'm thinking about would have a slight odor. No, that's difficult to do -- to compact pure sand.

You take in Africa -- have any of you ever seen any colored movies or photographs of Timbuctoo, where the walls are 40 feet high and they're 30 feet thick? Down at the top end of Chile and around Timbuctoo -- in the Chilean thing, it rained once in the last 108 years. Well you have a similar situation around

Timbuctoo, but there have been several cases in the history of Timbuctoo where it was hit by a rain. Now it is not the stuff we have down in our south and Mexico -- the adobe, which has sufficient clay in it, you see, to where you have moisture and you ram it down, it will bake hard. There's not sufficient clay or soil in the Sahara sand stuff. They build it up, but actual cases, when the rain came and the whole 45-foot-high wall flowed back into the desert. Sand is not very good for a building block. That's why I'm bringing this out.

Well, have you had enough? Do you want to quit? I can't even get them to say yes or no to that.

A QUESTION APPARENTLY ABOUT EDUCATION BUT CANNOT BE HEARD. Well, I'll give you one facet. We proposed it years ago to the State of New York that all school children have complete psychiatric and physiological examinations and blood, urine, and everything else before puberty, and the second examination is after puberty before graduation from high school. That means that your hospitals in your large urban center would have to be capable of 10,000 examinations complete per day. Have you got any such kind of hospital? I'm not talking about the ordinary kind of bed cases; I'm talking of examinations. Then you'd catch all your borderline cases delinquent, defective, and so on. You'd begin to know what you are doing inside of five years. You'd have an accumulative data, and when you're at it, I might as well hit you with this. As every citizen would have his social passport, which is also his birth certificate and all records, therefore all cases of sickness of any kind are reported and the average doctor could get a better diagnosis from the computing machines in the central headquarters than he could do and do it within five minutes. Furthermore, if he made a mistake in reporting the symptoms, it would come back and tell him he was in error. There's no reason why you shouldn't have 97 percent and better correct diagnoses. You would under this. You cannot under this system you are using at present.

Now, your educational system -- schools as you know it today -- how many hours do they operate, what kind of thing are they? Technocracy doesn't talk about schools for infants -- it talks about schools for everybody. So you have an educational center that operates 24 hours a day every day in the year. Where is it situated? You have the biggest power plant right in the lobby.

That's your source of energy, isn't it? You have your libraries, amusements, and everything else, and your adults go to classes, too. Of course, we would almost have some kind of phobia if our schools had to run 24 hours. Imagine our darling daughter being out late at night with all those boys. Hot diggety-dog! In other words, if she's seduced in a Ford, it's a calamity. If she's seduced in a Cadillac, oh, success!

You go on the entire system -- it's so different. It wouldn't only take hours -- it would take weeks, frankly. SOMEONE APPARENTLY HANDS THE CHIEF A PUBLICATION WHICH HE HAD JUST RECEIVED FROM SOMEONE. The Chief says to pass it up, that they have the same thing, but he does read a quote from it: "Education can be dangerous. It is very difficult to make it not dangerous. In fact, it is almost impossible. The only way that you can prevent education from being dangerous is to try to develop an educational system in which the pupil is exposed to no ideas whatsoever,"

The only thing that would stop you in a Technocracy would not be the status of your parents or your color, your religion or your morals, but merely your capacity to absorb and pass the examination. The more you could demonstrate, the more you could move. It's an entirely different system, because you would be out to train people to do what? To have the knowledge to operate this society, technology and its energy-consuming devices. If you wanted to take up liberal arts for your own personal pleasure -- opera or ballet dancing -- that is your privilege, but you don't run anything with liberal arts.

WHAT WILL TECHNOCRACY DO FOR THE WOMEN? What the hell do we have to do anything for the women for? Just make it so they can do it themselves. You didn't get my sense of humor, did you? If they didn't have to unlearn so damn much, they might have a better chance.

WOULD YOU ELABORATE ON THE WATER SITUATION IN THIS COUNTRY? Well, to go into water, you have to go into the whole continent. IS IT GETTING WORSE? It's getting worse. You're getting more chlorine and other things. The water table is going down all over, more so in some places than in others. In California, your wells are going salt 8 miles inland from the sea. The Ford power plant at Long Beach has sunk down so that you have to have a

seawall around it 6-7 feet high -- it's sunk. Nobody undermined it; of course, they have been pulling oil out from under it for some time.

IN A TECHNATE, HOW WOULD YOU GO ABOUT THE REMOVAL OF EXCESS SNOW? I NEVER HEAR ANYTHING ABOUT THAT. NOW IT PILES UP. WOULD THERE BE A BETTER METHOD? Well, do you think you're going to have 100 million cars in United States? .... CARS OR NO CARS. Cars have a lot to do with it. How long do you think you could go on building petroleum-consuming devices -- rotary motors, outboard motors, busses, trucks, cars, everything -- if we're not discovering more oil. We'd have to bring in more and more, wouldn't we? Well then you're at the mercy of what? A foreign country, and they can put the squeeze on. If you've got a nice ranch house 120 feet long, and it's 55 miles from any urban center and gasoline -- ordinary gasoline -- goes to 55 cents seaboard, your damn ranch house isn't worth a plugged nickel, because your average price of gasoline in the interior would be well over 60 cents. Do you follow me? And if you've got to do 100 miles a day just going to and from work, the proportion of your income that is spent on transportation -- the costs are too high. You're finished. So what do you think -- there's going to be three automobiles for everybody in the United States? UNDECIPHERABLE COMMENT. Oh, there's too many now, huh? NOT ENOUGH OF THEM GRAY. Oh, I'll grant you that. CLEVELAND IS GOING TO TAKE THE ELECTRIC BUSES OFF THE STREETS AND PUT DIESEL BUSES ON THEM. Well, why not? GENERAL MOTORS. Well, maybe not General Motors, but some other. If you had the type of urban center we're talking of, where you had a minimum of 12,500 to a block -- now, you've got excellent situations around here. I'll give you one. You run a canal from New York Harbor to the Delaware River. It hits the Delaware just upriver from Camden a little. It would be 50 feet deep and 1,000 feet wide. It travels through that part of Jersey that is mostly scrub oak, some pine, and sand. You're only a few minutes from the ocean beach. You're right there on a main line waterway with your industry right on it. And you'd walk to work because you would be less than a couple of miles, and only those who are incapacitated, crippled, or sick and so on are given individual transportation; so, you're going to have to walk, Casey!

Well, but wait a minute! What could you do here -- what should be done here? Your canal should go from close by to

Ashtabula and go clean down into the Ohio. Well, you should have another one right through here. You can do same thing on that kind of a waterway that you do on the waterway I've just described. You'd come in at Toledo -- that's the Maumee, isn't it? -- and the Maumee would be canalized into the Miami and into the Wabash, wouldn't it? Correct? Well, now you've got a low-cost transportation, and you build your city of that type with your low-cost transportation, how far do you have to go to work and how far to recreation? Now, this is not taking long trips; I'm talking of daily.

We can build ships today that could take 6-8,000 at 35 miles an hour. Well, for runs on the Sound or a body of water, how far is that? In three hours you could go 100 miles. That's better than having two million cars trying to make that 100 miles in road traffic. It takes you how long? Four hours. So your traffic picture has to change. It will change under this system, let alone under a Technate. You could run from the center of New York City to the center of Chicago in 4 and a fraction hours. It wouldn't pay to take a plane, because you would have to land outside the city and it would take you an hour to get to the airfield at one end and an hour to get from the other. The train ride would be better, because the cars would be over 16 feet wide, pedestal suspension. Do you know what pedestal suspension is? There's no bolsters -- it's suspended from the end on hydraulic .... You can put a glass of water brimful to the edge and run it at 200 miles an hour and hit the curve. What -- does the top of the car go out? No, the bottom of the car comes out and it remains vertical. Therefore, transportation as you now know it -- we cannot afford this type of transportation. Go look at them building a house, and there's ten individuals -- 250 horsepower to each car and more, 10 or 12 of them. Three thousand horsepower out there, and what have they got to build a house? One one-horsepower saw, a drill, another .... They haven't got three horsepower on the job and they've got 3,000 horsepower to get there. Did you ever hear of such a collection of idiots in all history? Well, but that's the kind of rat race we're living in. We've kidded people that they are really something, and that this is going to go on ad infinitum into the wild blue yonder forever and forever. Oh, brother!

That's an entirely different transportation system. Your marine trains will haul 300,000 tons. And by the way, you've

heard me talk of 3-point suspension hulls. Well, brother, they're bringing them in in 17-foot boats, and they're the only boats that have gone up the Colorado River rapids -- not down -- they ran the Colorado upstream -- jet propelled, three-point suspension hulls. You can run them on the beach, on the sand, and pull them off. 300,000 tons -- that's twelve 25,000-ton units. You run them in tandem. They would be a little over a mile long. Five men, and the cost is 1/11 of a cent per ton mile, and you've got deck space galore. You can take the 25 to 30 million kids of this country and run them all over the damn continent for nothing, because you're running the marine trains anyway. All you do is put the portable housing right on the deck, the nurses, the doctors, the counsellors, and the rest, and go on -- go to Alaska or wherever it is. Take one trip this time and other trip that time; by the time they've graduated, they've been a dozen places on the continent. A little different picture, isn't it?

An ordinary freight train -- what do you do? Do you need a locomotive engineer, a fireman, a couple of brakemen, and a conductor? No, you can run them on your off-peak loads. They pick up and move like that, and stop, and pick up and move.

You move your power across the continent from time zone to time zone with million volt DC. You can't do it today. The Russians have got it on us because they have twice our time zones. They've got an awful territory. We only go from Newfoundland to Alaska. They've got twice our time zones, and then plus, but you could shift .... In the Russian case, the potential hydroelectric of Siberia alone is 204 million kW. Even if you only shifted 100 million kW across the continent, what a power load that is.

IN WHAT ORDER OF PRIORITY IN THE INSTALLATION OF A TECHNATE WOULD YOU ATTACK THE PROBLEMS WE HAVE NOW WITH THE PRICE SYSTEM? I don't quite understand what you mean. What do you start first? You've got to start your power development, your transportation, and industrial -- that's your biggest thing -- and your agriculture; and then as you got your original installations under way, then you can take on the others. In other words, you're not trying to suddenly throw somebody the hell out here and create mass propositions. You wouldn't be tough with a banker, stockbrokers, and all the rest. You'd let them play golf; there's no use in trying to do anything with them. So, put them

where they don't do any damage. Move over, buddy, or we'll fence you in! You don't have to have any hostility toward anyone.

YOU'D HAVE TO BUILD THE GOLF COURSES FIRST TO GET THE INTERFERENCE OUT OF THE WAY. Oh, no, we've got plenty of golf courses in this country. You wouldn't be able to run what you've got now.

SOMETHING ABOUT CANADA. Well, Canada is limited, yes; so is Siberia, so is the Sahara, so is Patagonia, so is the Antarctic, and the Arctic. You have to maintain the body temperature in the Arctic. What type would you have to be? A long, heavy body; short arms, short legs, a short neck, and practically no body hair, and the capacity and metabolism to handle 7-8,000 calories of blubber fat. That means that your kidneys are slightly different and your endocrine system is slightly different -- 99.9% of you couldn't do it. If you brought them down here, they couldn't do it either.

You'd have certain mining and transportation things in that land. Take in Fairbanks, you go to school in the dark and you come back in the dark -- the United States citizen. The kids don't see daylight until when? Then on June 21st, they open the baseball game of the year at midnight -- play ball at midnight. Why? Because it's light for 24 hours. So, you get a lot of light in a short period of time and little in the other. It declines like this five months -- blank -- and then gradually comes up to where it is practically 24 hours less a few minutes.

So, if you're talking about soil or water, a treeline in Canada is a way south of what it is in Russia, Sweden, and Finland -- a way south. Why? That's the way it is. It's been that way for a long time. Siberia never was glaciated. True, the Canadian north is rising in elevation. Maybe sometime in the distant future, it will be high enough. It's higher than others now and may accumulate a tree growth that will go farther north. When you get up in the iron ore district there at Scheffersville, you only go to Lake \_\_\_\_\_, and the trees are about this size, little \_\_\_\_\_, you're in the tundra -- muskeg, granite, water. You haven't got the basis for human life. Now that goes away north. Up around Archangel, it's only .... Northern Norway, Sweden -- but that's way far north of what our line is.

SOMETHING ABOUT OUR MEMBERSHIP IN MEXICO AND A UNIVERSAL

LANGUAGE. Well, there are only three languages today that are important: English, Russian, and Chinese. Spanish -- three besides English -- but I might point out to you that the language of the fliers around the world, the flying fields, is English, whether you come down in India, Burma, or where it is. Maybe in Russia, they may talk them in in Russian, but the rest of them are English.

In Mexico, we have a few members. We have some scattered farther south, nothing of importance. You would have to publish in Spanish. You've got all kinds of problems besides publishing and membership. Mexico started to have a revolution, and it stalled on dead center, and it became a political abortion with a rising Mexican bourgeoisie. Venezuela is boiling. So is Brazil; so are the other parts, but they still haven't got the realization of what it takes technologically. They're talking about land reform. You want to give the peasants a few acres of land. Well, what the hell's the sense. That will only stall it a short time. They don't see it.

United Fruit gives away its banana farms, and then neither the government nor the peasant want the power plants, the irrigation pumping plant, or the planes, because you have to spray them every other day, and how can anybody with ten acres spray them? Stupid!

Come on, what have I done to you? You come down to CHQ and you can ask more questions than you do here.

A QUESTION ABOUT TEMPERATURE CONTROL. What do you mean temperature control on a continent? ANOTHER COMMENT. We don't know. There's evidence of the long-range climatic cycle. Of course, there's shorter range ones. The long-range ones are about 800 years. In other words, when the Medes and Persians moved northwest across the Hellespont and fought the Battle of Thermopylae and ten years later they were stopped again in the Battle of Salamis, that was the first time we knew much about it. The next time was when Attila the Hun got to France in 420 A.D. -- that's 800 years after the other -- well, we have some of the temperature records. When Genghis Khan went west in 1220 -- now we know because the rings on the California redwoods, starting from about 1190 -- 1188 -- there's 72 years of drought, and the rings are so close together, you have to use a microscope. There

must have been terrific drought.

We have geologic and other evidence there was the same thing back in about 400 and back another 800 years before that. We still don't know enough, except that the old Viking legends, they have it several places in their legends that they sailed between the Islands of Greenland. The geophysicists and the engineers testing for Thule Air Base and the French expedition on the geologic year, they made seismic soundings and so on clean across Greenland, and what did they discover? There's one place in Greenland where the ice goes down 1,000 feet below the sea level clean across Greenland; so, the Vikings may have been right. Herring -- fifty years ago -- cod, no, they weren't up there. Greenland in the last fifty years has developed a big cod fishing, because your fish have moved north. You once had gigantic fishing in the Baltic. That was centuries ago. It may come back if there is no pollution. LA QUESTION ABOUT MODIFYING THE ICE] No, you are more into the Arctic. The Arctic is an ocean. The Antarctic looks as if it's two continents instead of one, too, like Greenland, but the water coming into the Arctic Ocean is fresh. There's more freshwater coming in than there is ocean seawater; therefore, it freezes faster, correct? Now, I don't know where you're going to dam them, because they're all low rivers -- the Obi, the Yenisei, the Lena, and the Mackenzie -- they're low in a big, flat delta. You have a problem there of permafrost and the whole mouth freezing solid. Well, that can be solved by building a two-side canal and cleaning out the main river; and then the canal, when it starts to freeze, you let the water in, if it's not already in, and you freeze it until it's two to two-and-a-half feet thick. Then you close the gates and take the water out from underneath the ice, and that thickness of ice would provide insulation. Then when your opening session comes in spring, you let the water in and you knock the three feet of ice out to sea, and you use that as a channel, and then you have control of things upriver to where, say, tainter gates 35 feet high or fifty feet high on top of your dam, you hold your water until you get your big volume and let it go and knock the ice floeey. You see, in the Canadian north, the Liard breaks up 40 days -- so does the Mackenzie -- before the Great Slave; in other words, if you could clean the Great Slave out, you would have 40 days additional river navigation to the Arctic. Well, it can be done. You are doing it on Lake Labarre on the Yukon in a small way, and they will eventually do it there.

WHAT IS THE POSSIBILITY OF A TEMPORARY FASCISTIC COUP D'ETAT? Oh, you always have that or a World War III. If you have World War III, it will all go down the drain anyway. What have you got here now? You have no political Left in United States. Your Socialist Party, your others, have disappeared. All you've got in United States is Right. You've got your conservative right, the next right is the reactionary right, and far right is the fascist right. That's what you've got. You might as well face it. It's going to be difficult to put in an actual Fascism here, but you can have a pseudo-one, and especially with that Irish Mafia from Boston in there, and a Daley in Chicago and a Wagner in New York, Brown in California, and Rossellini in the State of Washington. Kind of tough. Well, cheer up -- if you get a Fascism, you'll be the first victims, so you won't live long.

WOULD IT BE POSSIBLE TO SUBSIDIZE THE GOLD MINES IN UNITED STATES AND BUILD UP THE GOLD FOR INTERNATIONAL .... No, what's causing the drain on our gold supply is the stationing of United States troops abroad. All you've got to do is pull them in, cut that, and our gold supply will jump. As for subsidizing the obsolete goldmines of this country, phooey! There's enough gold left. You'd be moving a hell of a lot of rock, unless you want to fill in Salt Lake or a few other little holes in the earth. I don't think anybody wants to do that. The Mormons, you know, where they should have located was on Lake Utah, and not on Salt Lake. Do you know Utah? But then they've drained that pretty well, haven't they? I've spoken at the University of Utah, the Engineers Club, Ogden, Bingham Canyon, and some more down there. I've spoken at a lot of places in Utah.

IS THERE ANYTHING TO REPORT ABOUT TECHNOCRACY TALKS AT UNIVERSITIES? No, I never bother talking to universities. I have spoken at universities all the way from Northeastern United States clean across to the Pacific and from Mexico to the Far North, but I gave that up. What did I give it up for? Because the educational profession in United States is the great third American sex. Let's face it. It can never make up its mind which sex it belongs to, because the only way it can really live is under an assumed name in another town. Do you get the significance of what I am talking about? You don't? Well, what am I talking about? You've got females in your school system, and they and the males are demivierge, as the French would say, half

a virgin; and you're going out to teach the youth of this country to be men and women! My God, they've got a battle on down in Venezuela in the press and TV that has more sense than what you're doing here.

Oh, yes, I've filled blackboards at M.I.T., Harvard, Yale, Renselaar, Stevens, you can go right clean across the continent. They wanted the mathematics, and they got it. Then what? Then as one great world-famous mathematician -- they said, well, we'd like to have such-and-such equations explored more. He said, "It won't do you any good, because you are dealing with mathematics of the third and fourth order," and he said, "you haven't got beyond the first or the second one yet." I'm talking about the university-faculty now -- not the student body. You know, a lot of people have microcosmic knowledge. They know about the little business, they know about the little portion of their profession or something else, or engineering or science. Well, microcosmic knowledge is necessary, but knowledge of the macrocosm is something quite different! As Henri Poincaré, the great French mathematician, said of that microcosmic knowledge and the other, he said, "I am able to determine the next most probable state, that is, the macrocosm, because I know nothing of the microcosm, and, stranger still, the answer will be correct, because I know nothing of it." In other words, you can study the Brownian movements of a molecule of a gas, photograph it, and everything else. That doesn't tell you a single thing about the next probable state of that gas as a whole.

You can make cookies, soles on shoes, many of those things -- yes, that knowledge is necessary; I'm not belittling it, but it belongs in the order of the microcosm. The knowledge of the entirety is an entirely different type of thinking, and the mathematics are quite different. In the microcosm, yes, the numerals and so on, the number of differentials -- why, you can't have very many. In the other, the greater the number of differentials, the greater the accuracy. In one, what? The whole is the sum of the parts, isn't it, correct? Isn't that what you were taught? In the macrocosm, what? The sum of the parts is greater than the whole! Now you are confused, aren't you? Don't ask me to go back over it. One and one are two in ordinary .... Two what? You can add two apples, two potatoes, two boats, and so on, but if you added one -- I'll give you the one: Betelgeuse. Could you add it? The diameter of Betelgeuse is greater than the

diameter of the orbit of earth around the sun. Could you add it? None of us would be here. So, it depends on which one, and when you are in macrocosm, you are dealing with an entirely different thing. What's effective and so on in microcosm may be entirely erroneous or ineffective in a macrocosm.

Now, it's a different type of thinking. Well, just to be personal for a moment, I happen to have probably had more experience in macrocosmic thinking than most human beings, and that's what puzzles a lot of people. I think I'm safe in saying that. I'm not trying to be funny or evade them if I'm thinking that way, but they can't follow you, and I'm not doing it because I want to mislead them or to confuse them or anything else. They just get lost, that's all. It's not their fault. Please understand that, because it's even worse than trying to make a pinochle player into a chess player, because they are still games. Only you might compare it this way: The chess player -- he can play with the great big pieces of light that you move on wheels in the park or the little ivory ones that you put in pegs on a travelling chess set, lhd you still can play chess, because the value of those pieces are constant. Now let's do one thing: don't change the human being at all -- the same human being, has the same aptitudes, knowledge, genius, and ability as before -- you throw all the squares in motion, and the genius of the greatest chessplayer on earth is not as accurate as the guess of the damnest moron! That's not saying much for either, but the actual guess is more accurate than the attempted, because he is attempting to operate in a dynamic world, where his values and his aptitude and everything else from a background of static. Did you ever try to shoot crap with no spots on the dice or to play cards when there are no pictures, no spots on them? Just try it sometime.

SOME COMMENTS BUT CAN'T BE HEARD. There was a play that was a hit on Broadway years ago. It ran for quite a long time. What was the name of it? Captain Jack, where this particular pirate beat all the other pirates, you know. Finally, "in the last one, the beautiful femme says, "But, darling, how do you do it?" And he picked it up like this and he throws them in the air, "ACES -- ALL ACES!" He just had the whole deck of aces. Well, in that way, you can do it. But you see what people cannot realize today is that the last 60-some years in our history -- that for thousands of years the acceleration of speed, it took centuries -- this

doesn't, but today it's cumulative. Where it wasn't cumulative for 5,000 years, it has become cumulative with a vengeance! You haven't got time to even shovel away the debris. You want to go in for moral reform, stop juvenile delinquency, and all the other things. What success are you going to have? As much success as a celluloid dog would have in chasing an asbestos cat in hell! There's no sense in it.

If you want to purify the water in one place, 15 places upriver on the same one are dumping it in faster than you can purify your little rathole. But, no, you won't go outside of your township or your municipality.

LAPSE IN TAPE

Your friend, the ones next door, do they ask you whether you're a Christian? Do you tell them? Well, are you?

APPARENTLY A QUESTION POSED ABOUT THE DOGS AT CHQ. Oh, you don't have to worry about them. I have to worry about you people out here. If you had their vitality and innate viciousness ..... What is innate viciousness? Why do you say a dog is vicious? Because it has the ability to bite, if necessary. Not that it's bad-tempered or anything.

We were coming downtown last night, and a patrol car with a senior office was driving, and he says, "Hi. You're still in there at it, aren't you?" I said, "You're correct." "Well, he said, "more power to you." I said, "I guess you're going to need police dogs pretty soon." He said, "You said it!" I said, "Well, I have a few of them." "You have?!" Only a real police is a German shepherd that is black, so you can't see him in the dark, and to do the real policework that way, you have a motorcycle with a sidecar with two dogs, and you send the dogs up the dark alley where they're in the garbage cans and so on. You don't go in there -- you send the dogs in. They can smell the individual out even if he is in the garbage can with the cover on top. So, they're going to use more of them. Philadelphia is having riot guns in the car, and one stays in the car to cover the other two who go out.

In other words, you've got a crazy situation building up in a lot of cities. The kids want .... what do they want? They want

convertibles, don't they? And they're going to get it if they can beg, borrow, or steal it. Who is responsible? Papa and mama. Can papa and mama say NO in United States? Not if their little brats tease them into it. That's correct. Their little darlings are always better than anybody else's little darlings, aren't they? And if they want something and you can get it for them, you would be just damn fool enough to break your neck trying to get it, but every other papa and mama are more or less the same order, you see. Nobody is trying to stop anything -- they're all trying to accelerate it, that's the amazing part of it. They all want picture windows, they all want shower baths, they all want wall-to-wall carpeting -- even the dogs have got it now. They want wall-to-wall carpeting in the doghouse, for God's sakes. Yeah, it's really funny. That cartoon where the dog comes in. He says, "All right, all right, I'll put in wall-to-wall carpeting for you!"

Well, if you haven't got any sense, I've got a little left. I think we had better terminate this and have some coffee. What do you think? APPLAUSE

\* \* \* \*

HOWARD SCOTT TELECONFERENCE  
LOS ANGELES AND CHQ  
OCTOBER 27, 1963

LA: HELLO, CHIEF.

HS: Right.

LA: THIS IS CLOUSE. WE'RE WONDERING HOW THE WEATHER IS IN YOUR AREA.

HS: The temperature went over 80 today here. There hasn't been any rain. It's hung up an all-time weather record here. The reservoirs in New York and other cities are down to 35 percent of capacity. In New York State, there are over 100 fires burning. Bear Mountain Park has a fire out of control with a five-mile front, and they're drafting people to fight the fire.

The same is true in Jersey. Pennsylvania. Connecticut, and Ohio. Now water is getting to be a serious problem. The Susquehanna River is dry in three places so you can walk across it. and what they're worried about, of course, is if there's no rain -- and the long-range predictions so far do not hold out any hope of more than a little passing showers for the next 30 days -- well, if that is the case, then what happens in any large city? Take New York as an example. Water will be difficult to obtain above the third story; so. therefore, all the johns in those 20- and 30-story apartments will smell like home. Well, that's the situation here. It's dry. very dry.

LA: HOW IS THE NESHAMINY?

HS: The Neshaminy is down to an all-time low and it's polluted. The local newspapers are carrying warnings of its pollution. The Neshaminy was once nice and clear where you could see the bottom, the fish, the minnows, and everything else. Now you can't, and it also smells.

LA: WE ARE WONDERING WHAT CASTRO HAS THAT WE DON'T HAVE THAT HE CAN MAKE HIS HURRICANES STAND STILL?

HS: Well. I don't know; after all, we at CHQ here have been waiting for that mythical hurricane to come up the coast and

go straight up the Hudson at about 125 miles per hour. Well, we want to see what will happen to the George Washington Bridge and Al's Smith's last erection.

LA: THERE'S SOME DANGER ON THE BRIDGE. IS THERE?

HS: Well, there would be a lot of glass and a lot of defective buildings. How are things in California?

LA: WE'VE HAD A SERIES OF EARTHQUAKES IN THE IMPERIAL VALLEY AND DOWN IN MEXICO. THIS IS SOMETHING YOU'VE BEEN PREDICTING FOR SOME TIME.

HS: Yes. the earth pressures have been increasing along those several faults for some years.

LA: SO. IF WE HAVE A SERIES OF SMALL ONES. WE'LL BE BETTER OFF?

HS: That might ease the adjustment rather than a good one, but I couldn't say definitely until you've examined all the data on the earth faults.

LA: WHY CAN'T THE PRICE SYSTEM GO THE SAME WAY, WITH AN EASY ADJUSTMENT?

HS: Why can't the national crises go the same way?

LA: RIGHT.

HS: Oh, no. you're proceeding from one crisis to another; therefore, each succeeding one has to be accelerated. It's like Whittaker's Hidden Frequency (a book on mathematics) where the phenomenon of the arcing ground and the high-tension transmission line, well, it oscillates and, of course, the end is infinity and zero: but the actual physical condition never arises on the power line because it always breaks down before it reaches that mathematical conclusion. So. don't worry about it; you'll get enough crises in the near future. The earthquakes aren't going to disturb it one iota. They might add a little color to it,

LA: IN THE PAST YEAR OR SO. ALL OF THIS PUBLICITY ABOUT AUTOMATION AND THE EFFECTS OF IT. THE PRICE SYSTEM HAS BEEN

PLAYING THIS DOWN IN THE PAST, WHY ARE THEY PUTTING THE PRESSURE ON NOW?

HS: Well, because it is getting serious, but then the word automation doesn't carry with it -- you see, any social connotation -- that the word has any meaning that you wish to ascribe to it: in other words, those who write about it and discuss it can. if in their minds they can construe it to be, is the proper way to say it.

Technocracy, on the other hand, has definite, positive social connotations. Now, you don't want to mention anything as definite and direct, but if it's vague enough, then it's permissible, so that you can sound the drums of alarm and beat the bushes; and you will be viewed as a prominent figure calling attention to a serious condition. I think you'll find that whether it's LIFE Magazine or FORTUNE -- what did they put my photograph in FORTUNE for? Remember the article? The amount of words they put in about Technocracy and Howard Scott didn't justify the photograph, did it?

Now that you're eliminating -- you've seen the latest figures -- the technological attrition is now 40,000 a week, not 35,000; so, that's 2 million jobs a year, not a million, 800-some thousand. All you have to do is keep going for a couple of years.

LA: THAT PARTIALLY ANSWERS THIS NEXT QUESTION -- WHY THEY ARE NOT MENTIONING TECHNOCRACY IN THESE ARTICLES. IS THERE AN ULTERIOR MOTIVE?

HS: Oh, definitely. You don't want to mention anything that has the connotation of social revolution. After all, the Bourbons never learn and they never forget. The power elite of this system want to protect their interests even if they have to go in for bribery or mayhem or anything else, correct?

LA: DID YOU GET YOUR COPY OF The American Scholar?

HS: No. I did not.

LA: SECTION 5 MAILED IT. I GUESS IT WASN'T IN TIME. WHAT IT HAS

IS A LITTLE ESSAY BY DANIEL BELL. DO YOU KNOW THAT INDIVIDUAL?

HS: I don't know whether it's the same Bell or not. Columbia University?

LA: THE SAME ONE. HE WAS PAST EDITOR OF Fortune Magazine. HE HAS WRITTEN AN ESSAY THAT WILL APPEAR AS AN INTRODUCTION TO A NEW EDITION OF VEBLEN'S "ENGINEERS AND THE PRICE SYSTEM."

HS: Oh, is that so?

LA: AND, OF COURSE, IN THERE THEY REFER TO HOWARD SCOTT IN A COUPLE OF PLACES AND REFER TO TECHNOCRACY AS BEING A QUASI-FASCIST MOVEMENT WITH GREY CARS AND GREY SUITS.

HS: Well, all you Technocrats on the Pacific Coast get busy and write letters.

LA: YOU THINK THIS WOULD DO SOME GOOD?

HS: Well, flood them in. What do you mean fascist, the only anti-fascist organization in the country.

LA: O.K. WE'LL GET BUSY WITH IT.

HS: That's the only way to treat these people.

LA: IT'S TIME TO GET ROUGH WITH THEM.

HS: Certainly.

LA: I IMAGINE THEIR PURPOSE WOULD BE TO GET SOMETHING IN PRINT BEFORE THE BIG PUBLICITY ON TECHNOCRACY HITS AGAIN. IS THAT IT?

HS: Well, that's the game. You create the big lie. The big lie travels faster than the truth. That was Hitler's technique, Goebbels. You get on that and see what you can do.

LA: STILL ON THE SUBJECT OF TECHNOLOGICAL EXPLOSION. WE WOULD APPRECIATE SOME ILLUSTRATION TO HELP US BETTER UNDERSTAND THE RECENT STATEMENT OF YOURS IN THE LETTER TO REO McCASLIN.

"WE ARE FACING A PERIOD IN HISTORY THE LIKE OF WHICH NO AGE HAS EVER SEEN BEFORE. WHAT IS SO HARD TO UNDERSTAND AND SO DIFFICULT TO COMPREHEND ON THE PART OF OUR KNOWLEDGEABLE INDIVIDUALS IS THAT THE TECHNOLOGICAL PROGRESSION OF THE NEXT THIRTY MINUTES INVALIDATES ALL OF THE SOCIAL WISDOM OF PAST HISTORY." AND WE'D LIKE SOMETHING TO HELP US THOROUGHLY UNDERSTAND THIS OURSELVES.

HS: I doubt that you have any difficulty in understanding it. The question is whether you can comprehend it or not. Well, how many fundamental scientific advances, inventions or discoveries were made in the year 300 BC. 200 BC or 100 BC or 1 AD, 500 AD or 1000 AD? How many? In other words, it was practically a void. Today, they're rolling off. No scientist or engineer today can even keep the abstracts in his particular compartmentalism. his division of science or technology. He simply can't keep up with it. Publications, technical publications, are growing so fast that you have to create a new set of abstracts for every so many thousand or hundred thousand works of original scientific or technological data. I'm just trying to point out how fast it is moving.

Now, we have pointed out before that Napoleon or Julius Caesar or George Washington would have no difficulty in understanding each other. They lived in the same kind of world, and the world operated the same way in doing work. Today, no matter how good their intentions were, they would have absolutely no understanding in the direction, the movement or the order of magnitude. It's way out beyond them. They're still teaching the majority of our youth the humanities, the liberal arts, in a scientific-technological day and age. After all. they prefer to be graduated from the Harvard School of Business, do they not? So, all right, you have to wait until the social impact hits. I don't want to give you a lot of technical explanations over the telephone.

LA: I THINK THAT HELPS, CHIEF. ABOUT CORPORATION PROFITS BEING AT AN ALL-TIME HIGH IN ALMOST EVERY FIELD. AT THE SAME TIME THERE ARE REPORTS OF HOW THE LOAD FACTOR OF TOTAL EMPLOYMENT IS DROPPING RIGHT ALONG WITH IT. IS IT A DIRECT APPLICATION OF AUTOMATION OR IS IT THE RESULT OF HIGH PRICES?

HS: It is the result of technological application. Now, you look up the report in FORTUNE of the 500 largest corporations, and you will find that those 500 corporations have produced about \$299 billion of the gross national product. When you extract the dividends and interest and so on from the gross national product, that means about half of the gross national product of the United States -- a little over it -- well, many of those corporations have more stockholders than they have employees. They're making more profit. Not only are they making more profit, but they're dumping more money into the reserves and depreciation than they ever did before.

Well, what's the total number of businesses in United States -- individual, partnership, and corporations? Well, realize that 36,000, or a little over 36,000, that's all there are in United States that employ over 100. If you take the 1,000 largest corporations, you might just as well throw all the other partnerships and everything else away, because technology has enabled the big corporations to put in the equipment, the process, and the control to create ever bigger profits, and the only power that exists in this system is the power elite of corporate direction and control. So, the little man is on his way out.

Sure they're going to have more profits. Why shouldn't they? They can put in the technology and make it faster for less, and your profit goes up and your wage-payroll goes down. Then also look up how many corporations are receiving 60 percent of their gross from outside of the United States that once were solely dependent on their gross from within the United States. It's very interesting.

LA: THIS WOULD AFFECT THE GOLD BALANCE ALSO?

HS: Oh. yes. but then stationing our troops abroad is also affecting our gold payments. It was true then, the gold payments would be exactly in reverse.

LA: WELL, IT'S TOTALLY THE TROOPS THEN THAT'S CAUSING THE IMBALANCE?

HS: No, not totally, but they're part of it. That, in

conjunction with the others, and you could reverse it in 90 days.

LA: COULD THIS BE CONNECTED WITH THE PROPAGANDA ABOUT THE BIG LIFT THAT'S GOING ON RIGHT NOW, THAT IS. LEADING TO THE IDEA OF BRINGING OUR TROOPS HOME BECAUSE WE DON'T NEED THEM OVER THERE?

HS: Oh, no. We -- this is a warfare-welfare economy, and United States cannot operate without the threat of war, a cold war, hot or otherwise. If you were to proclaim peace and disarmament, you would have 16 million added to the unemployment rolls of United States. We don't want to go to war, and we're more afraid of peace than we are of nuclear annihilation; in other words, this nation is on the brink of national schizoid paranoia, psychotic delusions.

LA: IT'S LOOKING MORE THAT WAY EVERY DAY.

HS: Oh, yes. When we moved 47 million people from their previous residences to the new suburbia, they had arrived in the promised land and they became reactionary. Now they only want to add a room to the ranch house; in other words, they want to climb three more layers up the social manure pile. They want more of the same, and they do not want any change. They're apathetic, they're opposed to anything that might even cast a cloud on their bourgeois horizon, correct?

LA: IN OTHER WORDS, THE SHOCK OF THIS THING WILL CREATE WHAT YOU DESCRIBE?

HS: Well, you're headed for trouble.

LA: THIS DEAL IN NEBRASKA WHERE THE SUPREME COURT HAS MADE ILLEGAL USURIOUS INTEREST CHARGES -- HAVE YOU FOLLOWED THAT?

HS: Oh, well, that's just another of the cross plays between the various conflicting interests as to who is going to collect it faster, that's all. I mean, you get something illegal one time, a slightly different version will be highly legal in another state.

LA: AND THE TWO BANK FAILURES IN ILLINOIS DON'T NECESSARILY

INDICATE A TREND EITHER?

HS: No. Say there is an individual bank -- doesn't mean anything, because the majority of your banks have so much money, the majority of corporations have so much money that they're -- the failure of one or two small ones does not mean anything, because the great institutions are really drowning in their own liquidity.

LA: THIS EXPLAINS WHY THEY'RE BEGINNING TO BUY BACK SOME OF THEIR OWN STOCK, RIGHT?

HS: That's right. You know there's that famous -- I don't know whether I'd better tell you a story over the air or not.

LA: CARRY ON.

HS: Well, that charming, beautiful woman who came to the summer resort. The men all went quite crazy over her. So, all the other women decided to find out what she had that they hadn't. So they invited her to a cocktail party and said, "Darling, how do you do it?" She looked around the room and she said, "Darling," looking at a few of them, "when I was your age, I'd give it away." And to another group, "When I was your age, I made them pay for it. Now I'm buying it back."

That answer your question on the banks?

LA: THAT TAKES CARE OF THE FINANCIAL PROBLEM RIGHT THERE. THIS SALE OF AGRICULTURAL PRODUCTS TO RUSSIA AND HER SATELLITES -- DOES IT HAVE ANYTHING TO DO WITH THE GOLD SHORTAGE. TRYING TO STRAIGHTEN OUT THE BALANCE OF PAYMENTS?

HS: Oh. well, Russia has been shipping 300 to 500 million a month abroad for some time, but have you had any confirmation of any Russian orders for wheat to United States?

LA: SO MUCH TALK SO FAR.

HS: There's no firm order as yet.

LA: THE LATEST TODAY WAS THAT KRUSCHEV WAS BEGINNING TO BACK UP BECAUSE WE INSISTED ON AMERICAN SHIPS.

HS: Well, we want to get American ships into Russian ports to find out how they do it. What is the usual wheat crop in Russia?

LA: THAT'S WHAT WE'D LIKE TO KNOW. WE CAN'T FIND IT.

HS: Who's the leading wheat producer of the world under normal conditions?

LA: I GUESS RUSSIA IS.

HS: Yes. over 2 billion bushels. You got that? She's also the greatest sugar beet producer, sunflowers, flax, bituminous coal. So, we would like -- the Department of Agriculture's statistical report just came in a couple of days ago. Well, they hold forth, but they do not give any production figures, although they give production figures for every other country, but they don't give production figures for Russia or China.

LA: THEY DON'T KNOW?

HS: Well, they don't want to. They're trying to play the game with the State Department. I mean, presupposing that there was a 20 percent drop in Russian production. Just assume that for purposes of discussion, 20 percent of 2 billion would be 400 million, wouldn't it? 400 million down in 2 billion. Is that really serious?

LA: THAT'S WHAT I SAY -- IT DOESN'T MAKE TOO MUCH SENSE. IT SOUNDS MORE LIKE A RUSSIAN CHESS MOVE TO ME.

HS: No. it was one of those -- still another one of those blunders of that Irish Mafia from Boston.

LA: EVEN TO OFFER THE SALE?

HS: Well, after all. the Russians bought the wheat from Canada at a fixed price for delivery from now until next July and not at world prices. They're also buying wheat from

Australia. Canada is selling to other ones besides Russia. Well, we've decided we were going to get in on it because we had the big surplus of wheat, did we not?

LA: RIGHT. WILL THEY BE SELLING THE NEW WHEAT OR THE WHEAT THAT'S BEEN IN STORAGE FOR YEARS?

HS: Well, Kennedy stated that the wheat would be sold by private enterprises at world prices for gold or U.S. dollars on usual commercial terms -- I'm quoting, and that the said private enterprises would be supplied with the same amount of wheat from government storage, if required, to maintain their inventory.

LA: IN OTHER WORDS. IT WILL BE NEW WHEAT.

HS: No, you don't know what it is. There isn't any firm order yet.

LA: WE KEEP FORGETTING THAT.

HS: That's what you're forgetting. Does that answer your question?

LA: RIGHT. THERE'S ANOTHER INTERESTING SIDELINE WE NOTICE THEY'RE WORRIED ABOUT. WE DON'T HAVE THE ORDER YET. BUT THEY'RE ALREADY WORRIED ABOUT A SHORTAGE OF FREIGHT CARS TO EVEN SHIP THE WHEAT IF THEY DO GET AN ORDER.

HS: Oh. you're worried about a shortage of freight cars for an order you haven't got yet?

LA: ACCORDING TO The Wall Street Journal. YOUR FUNNY PAPER.

HS: That's my chief funny paper.

LA: THE IMPLICATIONS OF THIS IS THEY'RE CLAIMING IT WOULD FOUL UP THE CHRISTMAS BUSINESS AND A FEW OTHER INDUSTRIES IF THEY ATTEMPT TO SHIP THIS WHEAT ON SCHEDULE. IT APPEARED TO US THAT THE PRICE SYSTEM CAN'T STAND A SHOCK THIS BIG.

HS: Well, Russia has one of the fastest growing maritime fleets in the world. Why can't the Russian boats take it?

LA: IT WAS THE SHIPMENT INSIDE OF THE COUNTRY -- FREIGHT CARS.

HS: Oh, yeah, I understand that. We'll get lots of cars if we want to move it. That's simply Madison Avenue malarky of the Kennedy gang, that's all.

LA: HAS THE KENNEDY GANG DECIDED THAT THE NEGRO ISSUE IS TOO HOT TO HANDLE? BECAUSE IT SEEMS TO BE DROPPING OUT OF THE FRONT PAGE NEWS.

HS: Well, what's the negro going to get? You can get him civil rights. In other words, he can move from back of the bus to the front of the bus under the civil rights; and then he's going to discover and do the same thing with the Pullman car: and then he's going to discover that he has to have the fare to get on the bus or the Pullman car, and that's where the trouble starts.

LA: SO THE KENNEDY BUNCH HAVE FOUND OUT THEY DON'T HAVE AN ANSWER TO THAT PROBLEM -- IS THAT IT?

HS: Well, what are you going to do in Washington where 55 percent of the total population is black and 80 percent of the school children are black?

LA: DID THEY CHANGE THE NAME OF THAT CITY?

HS: No, they're -- Kennedy is going to order that they only drink scotch whiskey because they're going to paint the White House black and white.

LA: SOME MEMBERS ARE WORRIED ABOUT THE FACT THAT TECHNOCRACY HASN'T MADE A GREATER EFFORT TO REACH THE NEGRO WITH TECHNOCRACY'S PROGRAM. HAS THERE BEEN A PARTICULAR REASON FOR THIS?

HS: Well, what negroes are there that have evinced any ideas of social revolution?

LA: WE KNOW OF ONE.

HS: Outside of Boggs.

LA: YEAH. WHO ELSE?

HS: I don't know of any, do you?

LA: NO. WE HAVEN'T RUN INTO ANY THAT'S EXPRESSED ANY PARTICULAR INTEREST.

HS: Well, Technocracy has distributed more of Boggs' "Notes on American Revolution" than all the other things he's associated with. We've exhausted all the copies he had in Detroit, and we've reordered -- they're still coming in. CHQ gets in 50 copies, and we have nothing left in 24 hours.

LA: HAS THE MAGAZINE MADE ANY COMMENT ABOUT THIS?

HS: Why certainly not. You wouldn't expect those three well-to-do socialists to make any comment on that, would you?

LA: WHAT'S A WELL-TO-DO SOCIALIST?

HS: Well, Huberman made a lot of money. Birand is a professor. He's out there in California -- Paul Birand. the University of California. They pay very well, do they not? A full professorship. I would hardly call them working class, old deah.

LA: WELL. HAS BOGGS PAID A VISIT TO CHQ YET?

HS: Oh, no. He's been to Technocracy meetings in Detroit. We'll hear more about it.

LA: HOW ABOUT THE NEGRO MARCH ON WASHINGTON? DOES THIS HAVE ANY EFFECT ON ANYONE AT ALL?

HS: Well, it was a good television show, and did you see the television, the thing on television? Well, you had the Catholic priests, you know, in solid formation, marching with placards. You had Jewish rabbis, one-sixth of Jewish rabbis went past with the signs: The Jewish Rabbis of Akron. Ohio.

LA: LET ME ASK THE AUDIENCE IF THEY'VE SEEN ANY PART OF THAT.

ABOUT HALF OF THE AUDIENCE HAVE SEEN IT ON TV HERE.

HS: Well, we had Technocrats as official designates from Cleveland, Detroit, and other places that had to go to Washington to march in that parade.

LA: AS PART OF LABOR?

HS: Yes, so you had white labor. Protestant ministers, Jewish rabbis, Catholic priests, movie actors, singers, and so on. Every Tom, Dick, and Harry from soup to nuts that wasn't negro jumping in front of the parade so he could take on a little color. You couldn't even allow the negro to stage a 100 percent negro event.

LA: THAT WOULD NEVER DO.

HS: Certainly not.

LA: WHAT IS IT -- MORE LIKE CAPITALIZING ON CALAMITY OF THEIR SITUATION?

HS: Oh, absolutely. You're ballyhooing the drums politically so that the negro can be given more political equality so as to increase the installment buying market and the votes in the northern cities. The majority of negroes are now in the north, you know, not in the south.

LA: WHAT ARE THE CHANCES OF THE KENNEDY ELECTION NEXT TIME?

HS: Well, who have they got to oppose Kennedy?

LA: THEY'VE GOT GOLDWATER OUT HERE.

HS: Goldwater, that geltvasser. He's snail potatoes, because he and his brother only got 9 million a year gross. I mean they're in the chips, understand, but they're not in the 600 million category. I mean, how many of you out there read that highly-illuminating article in the SATURDAY EVENING POST -- Richard Nixon, his wife and two children looking over the wall in West Berlin. Ask that audience out there.

LA: I SEE FIVE PEOPLE -- ABOUT ONE PERCENT.

HS: That only goes to prove that that rat Nixon is just as reactionary as Goldwater or Rockefeller or anybody else. He wants a war, he wants to liberate everybody behind the Iron Curtain -- even the Russians. Now. how do you expect to sweep Kennedy off the election in 1964 if that's all they can stir up?

LA: KENNEDY SEEMS TO BE GATHERING UP A LITTLE SUPPORT BECAUSE HE IS PLAYING DOWN THE COLD WAR PUBLICLY.

HS: He's appearing to do that. He's also playing the svelte politique of the Vatican. I mean, how dumb are these dumb Protestants got to be?

LA: THAT'S OBVIOUS. HOW ACCURATE IS THIS MATERIAL THAT THE P.O.A.U. HAS JUST RELEASED ABOUT THE WEALTH OF THE CATHOLIC CHURCH?

HS: Well, they have been pretty fair on the average for the last ten years or more.

LA: SEVENTEEN BILLION FOR THE VATICAN?

HS: Oh, it's not enough: it's more than that. They're being conservative.

LA: AND 177 MILLION FOR THE KNIGHTS OF COLUMBUS.

HS: Oh, no. That's god-awful.

LA: TOO SMALL?

HS: How much has the Bank of America got?

LA: ANYBODY KNOW THE ASSETS? THERE'S NO STOCKHOLDERS HERE. THEY ALL CARRY CREDIT CARDS.

HS: I think it's around 14 billion, isn't it?

LA: LET'S GET INTO SOMETHING A LITTLE MORE FUNDAMENTAL CONCERNING OUR HIGH-VOLTAGE TEST STATION WE HAVE UP IN BONNEVILLE. HOW LONG HAS THIS BEEN UP THERE?

HS: Oh, it's been up there some time. We've got a photograph of the plastic dome. Now they're doing exactly what we described that they would do; in other words, you are putting the transformers to transform the generator voltage up to a million-volt, three-phase AC -- 1,100,000 are up there -- and then you split the phase to six. You ask the electrical engineers to explain it to you. because you cut the wave in half on the top and bottom. That makes it easier to transvert it.

LA: IN OTHER WORDS, YOU DO THIS ALTERNATING CURRENT AND THEN YOU CONVERT IT.

HS: You can only transform alternating current. You cannot transform DC; so, therefore, you raise the generating voltage to the 1,100,000-volt and then transvert it to 1,000,000 and more DC.

LA: AND THEY HAVE A FIVE-MILE LINE UP THERE?

HS: Oh, something like that. We'll get the data on it one of these days. We've got a couple of photographs but not enough yet to make it worthwhile.

LA: IT DOESN'T SOUND LIKE MUCH COMPARED TO WHAT THE REST OF THE WORLD SEEMS TO BE DOING. ESPECIALLY RUSSIA.

HS: Well, the Svenska Electrobolaga are building equipment for three or four places around the world. They have big photographs of the equipment in two-page advertisements. Now what the Russians are doing, we don't know, except they're building the 90-foot transmission towers for the million-volt AC, but what the details are we do not know yet.

LA: HOW ABOUT THE REST OF THE POWER COMPLEX? WE HEARD THE OTHER DAY THEY HOOKED UP AN OIL LINE INTO EAST GERMANY.

HS: Oh, that's been hooked up for some time.

LA: IT WOULD START PUMPING IN DECEMBER?

HS: Oh, no, that's been delivering oil -- let's see -- more than

six months ago, eight months ago to Czechoslovakia via the Komsol Line, and they're delivering oil to Finland by pipeline instead of tanker. Russia had to build 40,000 miles of those big pipelines -- 36-inch and 40-inch. Their gas lines will operate at 880 pounds pressure.

LA: HAS THE EUROPEAN COMMON MARKET GOTTEN EXCITED ABOUT IT YET?

HS: Oh, yes, they're definitely excited, because this means that Eastern Europe can get its total energy for only a fraction of what the west has to pay. The Russians have three automatic pipelines, you know, building 36" to 40" pipe, and their capacity is 8,200,000 tons. Well, they're building a fourth one which should be completed before winter and that will shove the capacity up over 10,000,000 tons. Well, they won't need any pipeline from abroad pretty soon.

LA: ANOTHER QUESTION ON SOME OF THE FOREIGN PROBLEMS. DO WE KNOW YET WHAT WAS BEHIND THE BRITISH PROFUMO SCANDAL -- WHAT THEY WERE TRYING TO COVER UP?

HS: Well, the play here was to make a scandal out of it. That's the old Clivden set I pointed to which was associated with the Anglo-German Fellowship and The Link before WWII. They were a fascist setup. Profumo is a multimillionaire, you know, married to a very good-looking, charming person. Not that the -- a little extracurricular activity -- why get excited about it? It doesn't mean anything. It's only the American press that did that.

LA: THE BRITISH DIDN'T PLAY IT UP THE SAME WAY?

HS: They didn't play it up the same way at all, because there has been a number of them over there. What Dr. Ward said to Christine Keeler was, "Doing business with you, dear, has been a great pleasure." No, there's much more underneath.

LA: IT HAD NOTHING TO DO WITH MacMILLAN'S RESIGNATION?

HS: No, and the question of somebody going to bed with some woman -- they've been doing that for a few thousand years in Europe.

LA: EVEN THE INDIANS DID IT BEFORE WE GOT HERE.

HS: Oh. much longer, old dear, much longer.

LA: IS THERE ANYTHING IN WASHINGTON THAT COMPARES TO THE PROFUMO SCANDAL? THERE ARE INDICATIONS THEY ARE TRYING TO STIR ONE UP.

HS: Well, how do you mean? I don't know what you're talking about.

LA: IN OTHER WORDS. THERE ISN'T ANY.

HS: I didn't say that.

LA: WE'VE HEARD RUMORS IN SACRAMENTO HERE IN CALIFORNIA THAT THERE'S A FEW SITUATIONS. THEY'RE PLAYING IT DOWN.

HS: Well, Henry Ford has a very charming and a very lovely person in an apartment in New York.

LA: A LOVELY WHAT?

HS: Didn't you hear me? I said he had a very lovely, charming person in an apartment in New York City.

LA: WE BETTER DROP THAT THERE.

HS: Oh, I hope it's progressing favorably.

LA: BACK ON THE OIL BIT IN THIS COUNTRY. THE COLONIAL PIPELINE FROM HOUSTON TO NEW YORK -- WHO IS DOING THE FINANCING ON THAT. DO YOU KNOW?

HS: I don't know. You don't mean the Texas Eastern?

LA: THEY CALL IT COLONIAL HERE.

HS: Well, there's so many of them. Unless I know what they're associated with -- oil company or the other gas line hookup. What about them?

LA: WE WERE WONDERING WHAT THE MONEY WAS BEHIND IT.

HS: Well, it's all the same money anyway; only the one person has more of it than the other.

LA: DOES IT COMPARE TO THE RUSSIAN PIPELINES IN ANY WAY AT ALL?

HS: Oh, no. The Russians completed one pipeline lately which is 3,400-some miles in length. I'm talking of the straightaway, not the branch lines. We haven't anything like that. We haven't the territory. After all, if you started a pipeline like that in Washington, it would run way beyond Los Angeles out into the Pacific, wouldn't it?

LA: HAWAII?

HS: Not quite. It would be out in that direction.

LA: THIS Life Magazine, DID YOU HAVE A CHANCE TO PICK THAT UP ON LINUS PAULING?

HS: No, I haven't seen the latest LIFE.

LA: THEY INTIMATED THAT IT WAS A BIG INSULT TO THIS COUNTRY FOR THE NORWEGIANS TO GIVE PAULING THIS NOBEL PEACE PRIZE.

HS: Is it correct out there that Dr. Linus Pauling has resigned from the faculty of the California Institute of Technology and is now joining the Center for the Study of Democratic Institutions at Eucalyptus Hill in Santa Barbara, California?

LA: THAT'S IN THE NEWS. AND THAT'S WHAT WE'RE WONDERING WHETHER HE RESIGNED OR WHETHER THEY PUSHED HIM OUT OF THERE.

HS: Oh. I don't know. It sounds as if he were soft in the head.

LA: THEY MIGHT BE TRYING TO KICK HIM INTO AN IVORY TOWER WHERE HE CAN'T DO ANYTHING.

HS: Well, it isn't that. He gets \$52,000 out of the Nobel Prize. I mean, he's not exactly broke.

LA: BUT HE WILL BE IF HE DONATES ALL THE MONEY TO HUTCHINSON.

HS: To Hutchins? Well, Hutchins and that whole thing -- the Fund for the Republic is in a bad way.

LA: THEY'RE SCREAMING FOR MONEY.

HS: No. I haven't seen that editorial.

LA: WE'LL SEE THAT YOU GET A COPY OF IT. WEATHER, WORLDWIDE, SEEMS TO BE IN A STATE OF CHANGE. AND I THINK THE POINT IS THAT. WHAT'S CAUSING IT?

HS: Look. Mark Twain years ago said, "There was no such thing as good weather or bad weather -- just weather." Now you have long-range climatic cycles, and then there's the shorter range ones. Now whether this is part of a longer long-range cycle or whether it's just a phase of a shorter one, you'll have to wait until the digital and analog computers get all the data to give you the answers.

LA: THEY'RE ACTUALLY PICKING UP ENOUGH INFORMATION TO ANSWER THIS?

HS: Well, this weather isn't due to God or fallout.

LA: DO YOU KNOW MUCH ABOUT THE RUSSIANS SPRINKLING COAL DUST ON THE GLACIERS IN SIBERIA?

HS: That has been proposed for years. We've proposed that, so that it absorbs the solar energy and melts the glacier faster.

LA: BUT THEY'RE ACTUALLY DOING IT?

HS: I don't know whether they are or not.

LA: IT'S REPORTED IN THAT LITTLE PROPAGANDA SHEET OF THE CANADIANS -- NORTHERN NEIGHBORS.

HS: Oh, that's a lousy Communist sheet. I wouldn't bother with that thing.

LA: WHAT DO WE DO TO GET TECHNOCRACY MOVING A LITTLE FASTER?

HS: Well, get that collective posterior of yours up off the seat and go out and get some new members. Get your cars painted and get some new members.

LA: IT SEEMS LIKE IT SHOULD BE A SIMPLE JOB WITH ALL THE PUBLICITY WE'RE GETTING ON AUTOMATION.

HS: Just stop and think. All you've got to do is imitate the Black Muslims. The Black Muslims have everybody in the family in the Muslim organization, and they pay \$8.00 a week per family, and they don't drink or smoke. If the Black Muslims can do it, Technocrats can do it.

LA: WHEN THEY GET SERIOUS THEY CAN. THAT WOULD GIVE US ENOUGH MONEY TO MAKE A LITTLE NOISE WITH. RIGHT?

HS: Well, if you're going to spend so much time on all these diversionary escape mechanisms that you haven't any time to devote to Technocracy, well, naturally you've only time to look at the TV.

LA: THINGS ARE BEGINNING TO CHANGE A LITTLE BIT, THOUGH. WE STILL HAVE A LITTLE RESISTANCE ON PAINTING CARS.

HS: That mostly comes from your female.

LA: AND THE BOSS AT WORK.

HS: Oh, cut the boss at work. That's utter nonsense.

LA: IT REALLY IS?

HS: Yes.

LA: WE HAVE A FEW OF THEM THAT ARE A LITTLE WORRIED ABOUT THAT.

HS: What are they, Casper Milquetoasts? Who wears the pants in the family? They're frightened of their boss, they're frightened of themselves, and they're frightened of the guy next door. That's what it boils down to. What do they want to do, live forever?

LA: A LITTLE BIT IMPOSSIBLE.

HS: It certainly is.

LA: I THINK THAT ABOUT WINDS IT UP, CHIEF. ANY LAST WORD YOU WANT TO SAY? ARE THERE ANY INDICATIONS AROUND THE COUNTRY THAT THE ORGANIZATION IS BEGINNING TO MOVE?

HS: You just saw the photographs in the last issue of a nice new Section headquarters in Ashtabula, Ohio. What's the matter with you?

LA: WE LOOKED THAT OVER: IN FACT, THE DIRECTOR PAID US A VISIT A COUPLE OF MONTHS AGO.

HS: Yeah. Well, that's a darn nice job inside there -- that's a real job. They've got a nice group there.

LA: WHAT DO YOU HEAR FROM THE NORTHWEST?

HS: Oh, they're moving. Nobody's moving as fast as I'd like it to, but that's my personal feeling.

LA: WELL, THAT'S A GENTLE HINT. MAYBE WE CAN DO SOMETHING ABOUT IT.

HS: Well, that could be. That's what the girl said, "You'd better do something."

LA: BEFORE IT'S TOO LATE.

HS: Yeah.

LA: WELL, O.K., CHIEF, WE THINK WE KIND OF ...

HS: Are you making a copy of this?

LA: RIGHT. WE HAVE IT ON TAPE.

HS: Well, now, you send me the tape.

LA: WILL DO. WE'LL WISH YOU A SALUTE. CHIEF, AND A GOOD NIGHT.

TELECONFERENCE, LOS ANGELES AND CHQ

10-27-63

HS: All right and a salute to you. Goodbye.

TELECONFERENCE WITH HOWARD SCOTT AT CHQ  
AND  
SECTION 1, R.D. 12247 -- EVERETT, WASHINGTON  
FEBRUARY 15, 1964

FIRST, WE'D LIKE TO INQUIRE ABOUT YOUR HEALTH, CHIEF. HOW'S EVERYTHING GOING WITH YOU?

If you people would only quit worrying about my health. The only thing wrong with me is my head and my general disposition. A real snowstorm is blowing in here right now, and everyone here at CHQ is healthy, and I don't know whether to say happy or not but they seem to be enjoying it. Full of vigor, someone says.

YOU HAD MADE REFERENCE TO THE STRATEGIC CONCEPTS THAT ARE BEING OFFERED TO DEAL WITH THE PANAMANIAN SITUATION, THE PANAMA CANAL, AND WE'RE CURIOUS TO KNOW WHAT YOU HAVE IN MIND IN THIS REGARD. THERE ARE A NUMBER OF PROPOSALS, WE UNDERSTAND, AND WE'D LIKE TO GET A LITTLE RUNDOWN AND BACKGROUND ON JUST WHAT THESE PROPOSALS CONSIST OF AND WHAT CHQ REGARDS AS ONE OF MORE STRATEGIC IMPORTANCE.

Well, let's review it. Ever since Balboa looked out over the Pacific, the area of so-called Panama, Central America, has figured in international piracy, war, revolution upheaval, and general [FEEDBACK BLOCKED OUT REMAINDER]. That's at your end. I've taken off the amplifier. A number of kings of Spain proposed and had surveys made of oceanic canals, interoceanic canals, from the Tehuantepec, the Nicaragua -- that's up the San Juan River -- Panama, the present location, the San Bias location, which is south of the existing Panama Canal, and another one in the Republic of Panama -- that's the Darien, and they didn't get as far down as the Atrato River in Colombia. In the last century, of course, those two Panama Canal companies that Nicaragua commissioned, and finally, of course, Panama was separated from the Republic of Colombia and the United States granted immediate recognition and the construction of the Panama Canal was undertaken.

We sent down the first engineer, and he propped a sea level canal. Well, his recommendations were not followed. We followed that with Stevens -- Jim Wallace was the first -- and John R. Stevens was the second engineer, and it wound up, of course, with the whole thing being placed by President Theodore Roosevelt and the Army Engineers Corps with General Goethals in complete and

supreme charge.

The sum and substance of it is this: The existing Panama Canal is not wide enough. It is tortuous -- I mean twisting -- and has considerable curves which are very bad, and it doesn't run, you know, from east to west; it runs from north to south with almost a double curve in it, contrary to what most people expect. They think the Panama Canal runs from east to west from the Atlantic to the Pacific. Well, it does go from the Atlantic to the Pacific, but it doesn't go in that direction.

From the strategic position, the ideal thing would be a sea level canal across the Isthmus of Tehuantepec of Mexico, starting out at Puerto Mexico and coming out at the Bay of Salina Cruz. That could be sea level, and, of course, it would be several thousand miles shorter than going down the Panama. Building any one of the canals -- the new proposals -- other than the Panama would still have the same headaches as the Panama even if you do build them sea level. True, the Tehuantepec Canal would be longer, but what's a little cost, what difference does it make today, 20 million yards more or less is a bagatelle today with modern equipment. The Nicaraguan Canal is out because there would have to be locks up the San Juan River into Lake Nicaragua and locks down into the Pacific. The Atrato in Colombia -- that is one of the gigantic swamps. That is a disease-ridden place to put a canal and still farther away than the existing Panama Canal.

Now what CHQ would like every Section to do is write letters to the press and to their Congressmen and to other figures advocating that the Tehuantepec Canal be undertaken -- sea level, 200 meters wide, and 20 meters deep, with flowgates -- not locks -- the reason you have to have flowgates is because of the tide differential between the Atlantic and Pacific in order to prevent a current flow being created in the canal. Tehuantepec Canal could be built by the United States and Mexico jointly and would be toll-free to the shipping of this continent. United States could then indulge' in noblesse oblige for the first time in its history and donate the existing Panama Canal to the United Nations for international shipping. Then let the Panamanians collect the tolls! They only have two sources of income down there: bananas and fruit and the Canal. Well, let them run the Canal.

Have you got the dimensions now clearly in mind? YES, SEA LEVEL CANAL, 20 METERS DEEP, AND YOU WOULD HAVE FLOWGATES -- NOT LOCKS. 200 meters wide and 20 meters deep. Now, remember, that is the bottom width. Do you know what that means? That is the minimum dimension of the bottom width. In certain types of soil, you would have to have a 1-1/2:1 slope from the bottom width; in other words, it is 200 meters wide on the bottom. O.K., WE HAVE IT. Well, there isn't any canal of such dimensions in existence any place in the world.

That would at least put us in a bargaining position where you bargain from strength. Also, you wouldn't be interfering in the internal affairs of the Panamanians, but they wouldn't like it. The world isn't going to like it, because you wouldn't permit the shipping of the world to go through the Tehuantepec -- only continental shipping, flying the flag, bound from one port of the continent to another port of the continent in the other sea. That, of course, would force back a lot of American home shipping now under foreign registry, wouldn't it? YES. Oh, yes, they'd be in one God-awful hurry to get that foreign flag off the boat! In other words, the Yankees are going to come home, whether they like it or not.

Have you any questions on that while we're on it? NOT OFFHAND, CHIEF. Well, the audience may have. I'LL CHECK AND SEE. ANY QUESTIONS OUT THERE ON THIS CANAL -- ON THIS PROPOSAL? CHIEF, THE QUESTION IS, IS IT ECONOMICALLY FEASIBLE UNDER THE PRICE SYSTEM? Is it economically feasible under the Price System? Well, if you've got to build another Panama and you still have the headaches, isn't it feasible to avoid the construction of another Panamanian headache? What is it you've got to have -- two migraine headaches before you get any sense, nationally speaking? Does that come through clear out there now. YES, IT DOES. YOU GOT THE DESIRED RESPONSE. I mean, that is the only way you can answer a question of that kind.

THE QUESTION IS: HOW LONG WILL THIS CANAL BE, CHIEF? Oh, it's a little bit longer. You can measure it on the map. That will be good exercise for members of the Section. I don't mean these little maps -- one page in a geography book. Get the big-sized ones.

What have you got on your mind next?

AS LONG AS WE'RE IN THE AREA OF LATIN AMERICAN AFFAIRS, WHY IS IT THAT VENEZUELA GETS MORE U.S. ATTENTION, SAY, THAN OTHER COUNTRIES OF SOUTH AMERICA?

Venezuela is the third largest petroleum producer of the world. United States is first and Russia is second. What are the largest producing companies down there? The main one -- the greatest -- is the Creole. The ownership of the Creole Petroleum is what -- Chinese? Hardly. It's the Standard Oil of New Jersey. Do you follow me? HEAVY INVESTMENTS FROM THE ROMAN CATHOLIC ....? No, not yet; they don't intermingle with that. You have other American oil companies in there. You also have the Shell. Besides oil, then you have the iron ore boys. The Bethlehem Steel is farthest east, south of the Orinoco. You have the United States Steel, , and then you have the other steel companies. Then you have the new Venezuelan steel plant -- a beautiful one -- and they've completed that hydroelectric power plant on the Coroni River, and they're building a petrochemical complex and an aluminum plant -- that will all be paid off, so we are trying to, let's say, butter the bread for the Venezuelan elite; in other words, we've got big interests in Venezuela.

Presidente Betancourt, that was, he flopped around from being a so-called leftist radical to being a conservative bourgeois, let's say, under the tutelage of American interests. Is that clear? YES. In other words, what side was his bread buttered on?

Of course, you might bring out one of your present interests in national politics. What political candidate for the presidency has three ranches in Venezuela? I DON'T KNOW. What? Goldwater doesn't mention that far south. He wants to take over Cuba by the force of arms. But there are others. We have prominent actors, you know, and actresses that have acquired ranches in Venezuela and Brazil as hedges from their investments and their income from their films shown abroad that they do not have to bring back into United States. Comprenez-vous? YES. They are quite valuable, too, some of them. So, we're making a great play to hold Venezuela as a supporter of private enterprise in Latin America, but Venezuela's birth rate is what? Three times that of Japan. THREE TIMES? Yes, 47, one of the highest in the world.

ON THIS QUESTION, CHIEF, WHAT SEEMS TO BE THE TENOR, THE TONE, OF THE PUBLIC-AT-LARGE IN VENEZUELA? ARE THEY COMING INTO A MORE REVOLUTIONARY FRAME OF MIND?

Well, no, it's the same old story. Wherever you have industrialization and development in any large South American entity, you have the terrific growth of modern hotels, apartments, office buildings, public buildings, and new plants, and then you have the growth of the local bourgeois in combination with the American and foreign financial power, but as far as the great mass of Venezuelans, they're not participating in this. A slight number, but the great mass are not. The percentage of people living in bohias without any floors, without any sanitation, that's increasing in every big Latin American country. You have it in Caracas with the beautiful buildings. A short way down the slope, they're loaded with the shack towns. The tallest reinforced concrete building in the world, a 58-story apartment house, is in Caracas, Venezuela. You have those great extremes -- luxury and poverty that really smells. BUT IT'S NOT ENOUGH OF AN INDUCEMENT YET FOR ANY DRASTIC ACTION ON THE PART OF THE VENEZUELAN PUBLIC? Well, there's been all kinds of drastic action in Venezuela, but you're not hearing very much about it in the U.S. press. You probably get less reports in the press of Seattle and Everett than you do here in THE NEW YORK TIMES. THAT'S PROBABLY TRUE. Or do you mean to say that your press out there is more enlightened than the ones on the eastern seaboard? I DON'T THINK THAT THAT'S CORRECT. Well, now, I thought that the SEATTLE TIMES was the newspaper .... INTELLECTUAL NEWSPAPER? Well, I'm saying this with my tongue in my cheek. THEY MAINTAIN THE FACADE, LET'S SAY. Well, it's liable to blow, because how are you going to handle the increasing population? True, the great shipments of oil are temporarily holding the Venezuelans together, but it's liable to blow apart. Does that answer your question? YES, IT DOES, VERY COMPLETELY.

WOULD YOU GIVE US YOUR BACKGROUND ON ANOTHER AREA OF INTERNATIONAL POLITICS CONCERNING THE MOVE OF FRANCE TO RECOGNIZE CHINA.

The background as to why de Gaulle's France is recognizing China? YES. Well, after all, de Gaulle, now that Kennedy is no longer with us and has gone to his just rewards, the Cross of Lorraine has become the leading symbol of Western Europe. He

didn't like taking second position to John Fitzgerald Kennedy. He resented it, because he was there first. He had saved France. Kennedy hadn't saved anything yet. So, here's his opportunity to come back on the international scene. China was due to be recognized anyway, and it was only a question of time until de Gaulle instituted his squeeze play and recognized Red China. Of course, that means that the Chiang Kai-shek Chinese of Formosa have to surrender the beautiful Chinese Embassy in Paris to the true Chinese. Well, that complicates the whole Chinese-Western NATO relationship; in fact, it kind of makes a lot of spaghetti out of it.

That enhances de Gaulle's prestige the same way as interfering in Indochina, because France was a big factor in Indochina for a century, and they still have investments over there in Laos, South Vietnam, and Cambodia, and they would like to come back. Well, they could never forget that they reinvaded Indochina at the instigation of United States, and that was a long and bloody war. The two wars -- the reinvansion of Indochina and the war in Korea were started at the same time and for the same purpose, one attack on the North Chinese border and the other an attack on the South Chinese border, and the French went into it with our backing. Almost 300,000 French troops were involved, 97,000 died, 4 full generals, a flock of colonels, and 1,300 graduates of San Cyr lieutenants died -- 97,000 dead; and it cost France \$11 billion from several millions of U.S. equipment. They finally had to surrender. Now they would like to wipe that score out because they feel U.S. got them into that dirty hole, you see. That's a stigmata on the Tricolour de France. They would like to reclaim some of their prestige and standing, and they can't do it backing United States. They can only do it by some clear-cut departure from that. Is that clear? YES. But they are also going to make money on it, just as they are offering Cuba 2,000 trucks. Well, Britain is supplying the [bumpers]. They also want to supply road equipment. Well, Red China will be next. What is Cuba going to pay in? Sugar and tobacco. What will China pay? Well, we'll wait and see, but it will be long-term credit, and it will be guaranteed by the banks of France and the French Government exactly as this new polyester plant in Russia is backed by the British bank and guaranteed by the British Government. So they all have to go in for it, because the only sizable market left is no longer the western world, but Indonesia, China, India, Russia and its satellite countries. What

are you going to do with darkest Africa? GOOD QUESTION. Have you any questions on that?

WELL, OF COURSE, THERE WAS A QUESTION ABOUT WHY FRANCE HEADED BY A REACTIONARY, SUCH AS de GAULLE, WHOSE AVOWED PURPOSE IS TO ELIMINATE COMMUNISM AROUND THE WORLD WOULD RECOGNIZE THE MAJOR POPULATION ENTITY IN THE WORLD. Yes, but that same reactionary power in its religious beliefs says, "When the devil is sick, a saint he will be." Now, there's a certain desperation in Western European industrials. They've got the equipment, but they've got to produce. Who are they going to produce for? THAT'S WHERE THE PRESSURE IS. Yes. Did German steel production go up in 1963 in West Germany? No, it declined. So did Japanese steel production decline. Well, they're getting worried. They can't permit much of a decline in Western Europe, and they're going to do their utmost to see if they can't obtain large orders extending over a period of time which will be paid in materials which they can use for their internal consumption and for reexport. Is that clear? YES. SO IT'S A MATTER OF ECONOMICS THAT'S INVOLVED HERE? Yes. Why did France buy petroleum products and ores from the U.S.S.R. Well, then she paid Russia in an entire cement plant of Russian design. Well, that keeps French plants going. That's what the object is.

TO FOLLOW UP ON THIS SCENE THEN, UNDER THE PRESSURE OF ECONOMICS AND DEMAND THAT EXISTS, SAY, ON THE CHINESE MAINLAND FOR THE PRODUCTS OF THE WESTERN WORLD, IS THE TENDENCY TO MOVE TOWARDS PEACE RATHER THAN WAR AS AN ANSWER TO THE PROBLEM?

Well, peace in the sense that you've got to have orders to keep it moving. War would be a last maneuver, I mean, Kennedy didn't want war -- that's what he said, but then he set the scene for one in Cuba. He had more troops in Florida than Florida has ever seen in history. He had all the artillery on the Florida Coast, anti-aircraft guns -- why, the Cubans were going to come over and take Florida, weren't they? It cost millions of dollars, but it was a darned damn good election stimuli, correct? YES, IT WAS. It was just before election, but Eisenhower did the Budapest thing before the Republican election, correct? RIGHT. WHAT'S JOHNSON GOT, CHIEF? What's Johnson got -- Texas fleas. There's a lot of them down there. No, he's promising even more than his predecessor; so it's going to be extremely difficult, because he's facing what? He's facing increasing wage demands on the part

of any large number of unions, shorter workweeks; there will be increasing commodity prices, and the debt payment -- that interest on previous debt -- will be higher, and as for this economy thing of cutting down the lights in the White House -- oh, Dorothy, turn off the lights -- I can feel in the dark. It's wastepaper basket economy. It sounds good on the air and on the TV. BUT THE BUDGET IS \$100 BILLION. Certainly, and they haven't started yet. Wait until they put in the additions. Well, how does that strike you? VERY INTERESTING. In other words, the inflationary pressures are going to continue. They will attempt to control them, yes, and they would like to have a controlled easy, gradual upward movement of the spiral of inflation, going to higher levels, so you can buy it now, sit on your fanny, and cash in later.

As as for his war on poverty, let's get it clear, there's always been a war on poverty on the part of the elite few. They always enrich themselves. They were the ones who warred on poverty, correct? Now they want to make the war popular. THAT COULD BE DISASTROUS. Well, it's liable to get out of hand. You can't do these things, you know. I'd better quit kidding you.

ON THIS SAME LINE OF DISCUSSION, DO YOU ANTICIPATE SERIOUS ECONOMIC TROUBLE? WE ALREADY SEE SOME CONSTIPATION IN THE ECONOMY IN VARIOUS AREAS, SAY, IN THE NEXT YEAR O R TWO? In the next year or two, because mergers, consolidations, and absorptions are proceeding apace. Then more technological equipment is going in. Look what is happening. Your rate of reduction of bonds -- that has increased.

Now you have the tomato-picking machines, the cabbage-picking machines that detect the ripe cabbages by electronic sump, sonar sump(?) -- ripe cabbage is hard, unripe cabbage is soft. We have tomato-picking machines, cabbage-picking machines, lettuce, asparagus, grapes, well, there aren't going to be many jobs left in agriculture. Have you seen the photographs of the new fence erecting machines in United States fields? NO, I HAVEN'T. Oh, they're advertising them in two full-page color spreads. It goes along and drives in the posts and puts the wires on, and at the end of a five-mile run, he looks back and sees a fence in perfect position, all in perfect tension. You don't even need the cowboy to run the barbed wire anymore.

Well, if higher wages and shorter hours come on, it's going to create pressure to put in more equipment to cut out the higher wages, and all this nonsense about the unskilled being unable to get jobs, let us ask ourselves the question: what occupations are paid the most? The skilled ones, aren't they? YES. Well, therefore, the only sizable reduction that can be made economically in the work force are in the higher skilled, not in the unskilled. You can get rid of those any time, but you're going to eliminate the higher skilled -- the seniority boys. Do you understand it now? YES, I CAN SEE IT HAPPENING RIGHT HERE. Oh, it's going to happen -- more of it.

Organized labor has no future except the protection of a declining minority: the seniority boys. Well, but then, private business has no future either. They don't see that yet. They will. They're analogous -- they go together. Do you want any more of that?

WELL, WE MAY HAVE A LITTLE ITEM ALONG THIS LINE THAT MAY BE OF INTEREST TO YOU. THE BOEING COMPANY IS REDUCING ITS FORCES ANTICIPATED FROM A PEAK OF 64,000 DOWN TO ABOUT 35,000 BY THE END OF THIS YEAR OR, SAY, THIS PART OF NEXT. From 64,000 to 35,000? YES. The end of this year? THE END OF THIS YEAR OR ON INTO THE FIRST PART OF NEXT. Well, that's novel. That's doing it nicely -- that's Boeing. AND INCLUDED ARE SEVERAL THOUSAND ENGINEERS. Several thousand engineers are included? YES. Well, that serves them right. They ought to have sense enough not to get that much skill. If they weren't skilled, you see, they could go off and be retrained for a better job -- which they haven't got. I hear they're laughing. YES, THEY ARE. THEY GOT A KICK OUT OF IT. Well, what else are you interested in?

WELL, WE HAVE SEEN SOME EVIDENCE, CHIEF, OF A CERTAIN AMOUNT OF INTELLECTUAL COMMENT AMONG SCIENTISTS, AND WE HAVE SOME LETTERS AND SO ON EXPRESSING THESE SENTIMENTS, LET US SAY, ABOUT SOCIAL CHANGE, AND WE'VE HEARD DOCTOR LAPP AND PUBLISHERS LIKE GERARD PIEL SAY THINGS THAT ARE A LITTLE OFF PACE AS FAR AS TYPICAL THINKING GOES. DO YOU SEE ANY SIGNIFICANT INCREASE OF INTEREST IN TECHNOCRACY AMONG THESE TECHNICALLY COMPETENT? Oh, not that much, because they're the publicity boys looking for the limelight on the stage [TAPE BECAME RATHER INAUDIBLE AT THIS POINT] So, they all become authorities and geniuses, and they wish to keep in the limelight by talking vaguely about social

change and the wonderful                      and how we'll have to adjust ourselves spiritually, intellectually and morally. That girl says, "I don't know where you come from or what you is, but I's here every Thursday." Oh, you don't appreciate colored jokes out there? WELL, I'M NOT SURE IF THEY GOT IT, CHIEF. Well, all right, we'll let them think that one over. I MEAN THEY MAY NOT HAVE HEARD IT CLEARLY. [Laughter from the Chief] Well, let's go on with the next one.

TECHNOCRATS, AND OTHER PEOPLE, FREQUENTLY REFER TO DR. ALBERT BURKE AND HIS PROGRAM, "PROBE," AND WHATEVER ELSE IT HAS BEEN ENTITLED. HOW DOES CHQ ASSESS THIS INDIVIDUAL?

Oh, we think he's an awful farce, because he takes a few facts and then he builds a whole lecture about it, and what has he said when he's finished? Now, any man that has his pamphlets and his lectures printed by the millions of copies by the savings institutions of California -- what does that mean? It must mean that he is considered "safe" and a sound proposition to dish out to the public. Well, if the banking institutions of the Pacific Coast consider him a                      in things to promulgate, then it stinks. WELL, THAT'S A PRETTY GOOD ANSWER TO THAT, Remember they hand them out to every bank depositor and everyone who cashes a check in a bank in California. We have 40 or 50 of them in here. Anyone who comes into a bank building, they hand out one of his latest. THAT'S INTERESTING; I DIDN'T KNOW THAT. Oh, yes. They're going to hand them out with the green stamps pretty soon.

CHIEF, WHAT IS THE TRUE ESTIMATE OF UNEMPLOYMENT IN THE U.S. AS IT LOOKS RIGHT NOW? THE GOVERNMENT FIGURES DO NOT .... There are several agencies and research organizations -- one is the University of Michigan Economic Research and there are several more in that category who contend that the unemployment rate is 8-1/2 to 9 percent right now. A LOT OF THE UNEMPLOYMENT IS HIDDEN THEN IN THE STATISTICAL PICTURE THAT .... Oh, yes, it's hidden. They do not list everybody. They do not list those who have never had a job, and, of course, they list every job as being held by an individual, when you have several million that are holding two jobs. THEN WE HAVE AS MUCH AS BETWEEN 6 AND 7 MILLION UNEMPLOYED. 8-1/2 to 9 percent is the figure used by three research organizations, and none of those leftist organizations at all. They're research organizations of respectful, conservative institutions. You can draw your own conclusions. The government

figures are not correct, but we haven't sufficient data to say which one of the other three are more correct than the others, and it really isn't worthwhile wasting our time over, because they'll cut each other's throats. Is that clear? YES IT IS. The Economic Research of the University of Michigan, that's one of them. They have published these figures. They're not just an oral statement. They've published analyses of the whole situation.

CHIEF, ON ANOTHER SUBJECT, CAN THE U.S. EXPECT SERIOUS TROUBLE WITH THE RACE PROBLEM SOON? Yes, you're going to have race problems in United States; you're going to have race problems in Africa. In Africa, the blacks are chasing the whites out, and when they get that job done, they will probably turn on the browns; in other words, the Arabs to the north will be the final big conflict in Africa; so who is going to run Africa, the browns or the blacks? Well, the blacks outnumber the browns and they are better fighters than the browns. And I'm not talking about baseball teams!

Well, now as your economic conditions tighten up here in United States, the great majority of negroes now are north of the Mason-Dixie Line. The City of New York has over one million negroes, about 640,000 to 650,000 in Philadelphia, 235,000 to 240,000 in Detroit, and practically a million in Chicago. So the tension centers in United States -- never mind those little squabbles down south -- will be Washington, D.C., Baltimore, Philadelphia, New York, Cleveland, Detroit, Chicago, Milwaukee, Cincinnati, and St. Louis. That will be your trouble areas. And as your economic pressures increase, and if they keep up the public battle of taking it into the streets, then you're liable to have open trouble. You read what happened in Cleveland there for a couple of days, didn't you? YES, WE HAVE. WE'VE BEEN WATCHING THAT. Well, there will be more of that. Now, CHQ is not laying the blame on the negro or the white or anything. That's the organization of the country -- you can expect it. The wonder of it is that it hasn't broken out before. They did have some race riots, of course, in Chicago, Washington, and Detroit some years ago, but I'm speaking of the thirties. If you create jobs for the negro, that's one thing, but if you have to take the jobs away from the whites and more whites are going to be unemployed, then if you further that thing, you are only going to increase conflict between your whites and your blacks. There are about 77 million people in United States that are at the economic bottom,

of which about 12-13 million are negroes, leaving about 65 million whites. They're down there, but you have to lift the entirety up. You can't lift up one section of the economy, and you can't lift up that section or the other 65 million under this system, black or white, brown or green, or no matter what color it is. You can't bring prosperity and so on to one state in the union and leave the other 48 out, or can you? I HAVEN'T SEEN ANY EVIDENCE OF BEING ABLE TO DO THAT. It would be suicide to try it, but there are some people that stupid that they will seek to fan race hatred and race conflict in this country, because it would take the mind of the nation off the oncoming social change, and anything that would split the country wide open would be preferable to complete social change. Am I making myself clear? YES. There are interests in this country that would foment and instigate such hatred and activate groups to do it. which you've got to watch on the Pacific Coast as well as back here. Any questions on that now from your audience? I'LL CHECK.

QUESTION: IS AGITATION TO CREATE A RACE PROBLEM APT TO COME FROM, SAY, ECCLESIASTICS OR RELATED, THAT IS, RELIGIOUS .... Well, that depends on what certain ecclesiastic heirarchies want to further. If they think they can score an advantage by backing certain groups, they might. Is that clear? YES. But I don't care to state definitely at this time.

NOW THAT GOES ON TO ANOTHER QUESTION, CHIEF, ABOUT THE RIGHT WING FACTIONS OF THE COUNTRY. WHICH ONES TO YOU APPEAR TO BE THE MOST INFLUENTIAL AND SOCIALLY DANGEROUS? According to public figures, the Birch Society has the big income. A couple of anti-Communists, Swartz and Parker and so on, but they're all pretty vicious. That will include -- I mean, what's the essential difference in a Goldwater and a Nixon? VERY LITTLE. Very, very little. Nixon would be all for using nuclear bombs -- he was, you know, at Dien Bien Phu, Well, Goldwater isn't any better. Who have you got on the national scene that has any vision? Well, let's put it another way: Who do we have on the national scene that has ever designed anything that operates -- even a privy on wheels? And if somebody is very particular about that, we'll take the wheels off the privy. You have a sense of humor, haven't you? OH, YES. All right.

WE REGARD THIS AS THE NEXT BEST THING TO HAVING YOU OUT HERE, CHIEF. WE'D REALLY LIKE THAT. IT'S BEEN TEN YEARS. It has?

YES, IT HAS. THE LAST TIME YOU WERE OUT HERE -- WELL, IT'S ALMOST TEN YEARS. Well, I'll have to come out there then. WOULD YOU LIKE TO? I would very much. WELL, WE'VE BEEN TALKING ABOUT THIS AND WONDERING HOW WE COULD ARRANGE IT AND WHETHER OR NOT YOU WOULD BE AMENABLE TO THE IDEA, AND WE'LL GO TO WORK ON IT. You will? YES, WE'LL GO TO WORK ON IT. I do not wish to appear like a coy maiden, you know, that has to be persuaded or seduced. WELL, I'M THINKING ABOUT IT FROM THE STANDPOINT OF MAKING THE NECESSARY FINANCIAL ARRANGEMENTS. IF YOU'RE WILLING, WE'LL DO SOMETHING ABOUT IT. Well, bring it up and give us a couple of alternatives, and we'll take it under advisement and consideration, as the General Motors executives would say. Of course, Boeing doesn't say that much. OH, NO.

Well, anything else on your mind?

YES, ANOTHER ITEM OR TWO, AND WE'VE GOT PLENTY OF TAPE, I UNDERSTAND, SO THERE ISN'T A PROBLEM THERE, AND THE PHONE CALL ISN'T COSTING US TOO MUCH AND WE REALLY ENJOY IT. SO, IF YOU DON'T MIND, WE'D LIKE TO GO ON A FEW MORE MINUTES. Go right ahead; I'm perfectly all right. WELL, I KNOW YOU CAN TALK TO 4 OR 5 IN THE MORNING WITHOUT TOO MUCH OF A STRAIN, BUT I'M AFRAID WE COULDN'T AFFORD THAT; HOWEVER .... Oh, that's all right, you go on as long as you wish.

IN OUR ACTIVITIES HERE IN THIS AREA, WE HAVE BEEN CONCENTRATING ON MAILING CAMPAIGNS AND GETTING INFORMATION INTO PEOPLE'S HANDS IN GENERAL MAILINGS AND SPECIFICALLY DIRECTED AT PEOPLE WHO SAY SOMETHING THAT MERITS SOME KIND OF RESPONSE. WE'VE GOTTEN QUITE A LITTLE RESPONSE FROM THIS. WE'RE GETTING, IN FACT, BETTER THAN ONE REPLY FOR EVERY THREE LETTERS WE WRITE. Well, in that case, your average is high. WE ASK FOR REPLIES. WE COMMENT ON WHAT THEY ARE TALKING ABOUT, AND WE CALL THEM OR SOMETHING LIKE THAT, AND ASK FOR REPLIES, AND WE'VE BEEN GETTING THEM. SOME OF THEM ARE RATHER INTERESTING; IN FACT, WE'RE GOING TO COMPILE A LITTLE REPORT FOR CHQ ON THIS. Good. HAS CHQ GOTTEN ANY SIMILAR EXPERIENCE FROM YOUR STANDPOINT -- ANYTHING YOU CARE TO TELL US ABOUT? No, not right at the moment. I haven't anything at hand. There are several places that are attempting it.

HAVE YOU SEEN THE EDITORIAL IN THE GRANT'S PASS NEWSPAPER, "THE DAILY COURIER"? Yes, we're writing a letter in answer to that, WOULD YOU SUGGEST THAT WE DO SOMETHING ABOUT IT FROM THIS

END, TOO? Well, take the title and say what? So-and-so wasn't any good either. And even if there's heaven, he wouldn't like it, I mean, don't be too serious with him. After all, he's only a newspaper editor. ALL RIGHT.

REGARDING ACTIVITIES IN OTHER AREAS, IS THERE ANYTHING YOU SUGGEST THAT WE USE? No, you go ahead on your own and try out your own techniques. ALL RIGHT. And when we get a little bit more of it, we can make a comparative analysis of your area plus some other areas. That would be the best way. Now, of course, the difficult thing is to find a comparable area. That's the trouble, but it might be done. How does your audience feel about this? THEY APPEAR TO BE ENTHUSIASTIC. How long have they been sitting there now? ABOUT AN HOUR. Have they had dinner and everything before then? OH, YES, WE'RE WELL FED. And I'm not keeping any of them up? Of course, you're not near midnight yet. IT'S ONLY TEN HERE. It's after one here. WE'VE GOT A FEW WHO MILK COWS. Oh, a few have to milk cows? WELL, I DON'T, BUT WE HAVE A FEW WHO DO. I didn't know they milked cows any more! WELL, THEY LOOK WIDE AWAKE, CHIEF. Oh, they do, Well, ask them if they have any questions. We might as well have some fun for a few minutes. VERY GOOD. ANY QUESTIONS OUT THERE -- ANYTHING YOU'D LIKE TO ASK? HERE'S YOUR CHANCE.

THERE'S A QUESTION ABOUT THE OSWALD-RUBY SITUATION, Yes, what is the question? HOW DO YOU FIGURE RUBY IS GOING TO MAKE OUT? Well, of course, after all, Oswald had to be bumped off, whether he did it or not, and Ruby can always be declared mentally incompetent or he can fall out the 18th story window or something. There were three killed in Dallas, you know: Oswald, Kennedy, and the policeman, and it was a stinking proposition. But, after all, you should go back and dig up the history. That's the fourth presidential assassination, and three other attempts in our history, correct? Violence has always been rife here, especially if there is conflict in the economic and, let's say, religious and social order. Now we're a little bit worried. It might get to be a popular pastime to assassinate presidents. After all, Hollywood and all the kids' toys bring them up to that, don't they? THAT'S RIGHT.

CHIEF, DO YOU REGARD SYMBOLIZATION AS IMPORTANT AS IT HAS ALWAYS BEEN FOR THE ORGANIZATION? Why, certainly. Get as many painted cars as you can. After all, the painted car talks whether

the individual driver-member does or not. Even if the driver is deaf and dumb, the painted car will talk. Follow me? YES. Let's get in new members and let's get more painted cars. And by the way, there's some excellent gray gabardine. You can have your suits produced in Hong Kong, China, and the measurements and the tailoring are excellent. IS THAT RIGHT? Yes, what do you think of it? IF IT'S GOOD. It is. DOES IT MAKE ANY DIFFERENCE TO US? What? IF WE GET THEM IN HONG KONG? No, de Gaulle, after all, is going to do business with them. The British are, and they have offices here in United States, you know, HONG KONG TAILORS? Yes. I don't know if they have any in Everett or not, but probably in San Francisco and Los Angeles, and they have several in New York. WHAT DOES IT COST, CHIEF, DO YOU KNOW? Oh, for two pairs of trousers, about \$90. NOT BAD. The workmanship is out of this world. IS THAT RIGHT? HAVE YOU GOTTEN A SUIT YET? Oh, yes, we're talking from a model.

WELL, CHIEF, WE HAVE THE PERENNIAL QUESTION. What? HOW CLOSE IS THE END OF THE PRICE SYSTEM? Do you mean to say that somebody is really asking me that in that audience? WELL, YES, THEY DID. You know, in all these religious organizations, they always have somebody that's asking when the resurrection is going to occur, and in many cases, he's not quite sure if there's going to be any resurrection. Now the question is why anybody wants to know. What do they want to do -- make a quick profit before the end? I don't want to hurt the questioner's feelings, but it certainly is analogous. Now, suppose that I did know definitely. What would any person do with that knowledge? I HAVEN'T THE FAINTEST IDEA, CHIEF. Why, go out and sell everything short, wouldn't you? WELL, I DON'T HAVE ANYTHING. Well, then you don't have anything to worry about. Well, why then does he ask the question or she? I mean, I'm not trying to be facetious, but there's no reason for it; you cannot give any definite date. But the person who asks that question, that's what they want. They're not satisfied with anything less, are they? PROBABLY NOT.

LET'S PUT IT ANOTHER WAY, CHIEF. I'M NOT TRYING TO GET THE LISTENER OFF THE HOOK. Oh, you're not trying to get the listener off the hook? OR THE QUESTIONER, BUT WOULD YOU PREFER THAT WE HAD MORE TIME THAN WE APPEAR TO HAVE? Well, I don't know what you mean by "more time." WELL, WE'VE GOT QUITE A CONDITIONING PROBLEM, AN INFORMATION PROBLEM, OF GETTING OUR INFORMATION TO THE PUBLIC, AND WE NEED MORE HELP AND WE COULD USE SOME MORE

TIME. Certainly, but now the thing to remember: How many members of the Bolshevik Party did Lenin have in March, 1917, when the first revolution occurred? He didn't have any number of members. We have more Technocrats in a couple of places than he had members in all Russia. He didn't try to get members. The thing started to fall around Kerensky's ears. Do you follow me? YES, I KNOW THAT, CHIEF. After all, we've nailed our social objective to the top of the board on this continent, and if anybody else who comes along, to get anywhere they've got to move it up the board to approach us. Well, in a collective psychological sense, they're going to say, well, why don't you shove it up there where the Technocrats have it -- if we're going to have something, well, let's get the whole hog. That's always what happens to the national pressure. So, I wouldn't worry about that. WE'RE WAY AHEAD OF THEM. Yes. Of course, events are moving in our direction all over. They're even beginning to admit it. Did you see that column from San Gabriel, California? NO, I DIDN'T. A whole column. That's what you're going to get -- what these Technocrats have been telling you years ago -- you're going to get it. He doesn't figure we are going to like it, but he thinks it's the best -- that's the way it is. So, look out, all you Technocrats -- I got you into a hell of a lot of hot water, didn't I? Just think what nice people you would have been if you had joined the proper lodge and made a success, kept up all your payments on the house and lot -- it would have been wonderful, wouldn't it? But you'd have been bored stiff! WE ALL KNOW IT. Well, I'm guilty; I admit it.

WELL, CHIEF, WE HAVE ONE MORE ITEM. WE HAVE ONE OF THE MEMBERS OF THE SECTION WHO HAS BEEN ONE OF THE "BACKBONE" TYPE. HE SHARED THE LOAD ALL THE TIME FOR MANY, MANY YEARS. HE'S QUITE ILL. WE EXPECT AND HOPE THAT HE WILL HAVE A SPEEDY RECOVERY. HIS NAME IS JOE INGRAM, AND I'M SURE HE WOULD APPRECIATE A LITTLE WORD FROM YOU AT SOME TIME. Joe .Ingram is not there tonight, is he? NO, HE'S NOT. He's sick? YES. Has he a telephone? YES, HE DOES. Well, if you'll give me his telephone number and what hours I can call him, I will call him. How would that be? HE WOULD APPRECIATE THAT NO END. HIS NUMBER IS HU 6-1477. What's the area code number out there? I can find it. Now, what time .... ANY TIME IN THE EVENING, THEY SAY, WOULD BE FINE, CHIEF. Well, now, wait a minute. After 9:00 here would be 6:00 or after there. YES. Would that be all right? YES, IT WOULD. O.K. Convey the message that I will call him in the next 24 hours. VERY GOOD, I'll be

very glad to do that.

Convey my regards and respects to everyone there, regardless of what Section, even if they aren't members. If they aren't members, they should be. WE'RE GOING TO TALK TO THEM. Tell them to get up there and join up. It's no use wasting time on them.

WELL, CHIEF, THIS HAS BEEN A REAL PLEASURE AND HONOR TO HEAR YOU TALK ABOUT THESE THINGS AND TO GIVE US THE BACKGROUND AND INFORMATION THAT YOU HAVE, AND WE WISH YOU THE BEST AND ALL THE OTHER MEMBERS OF THE STAFF AT CHQ. They all appreciate it. I do, and I know they will. WE WANT TO KNOW AT ANY TIME WHATEVER WE CAN DO TO GIVE YOU A HAND IN ANY WAY, AND I KNOW THAT WE WILL HEAR FROM YOU. We could stand some assistance this coming year; so, stand by and we'll see what we can tell you to do about it. SWELL. WE'LL BE WAITING.

A salute to one and all of you. AND SALUTE TO YOU, CHIEF. Best luck. THANK YOU. GOOD NIGHT.

\* \* \* \*

RADIO INTERVIEW  
JULY 11, 1964  
HOWARD SCOTT AND PAT BURNS  
GJOR - VANCOUVER, B.C.

FROM VANCOUVER, BRITISH COLUMBIA, THIS IS AN OPEN LINE RADIO SHOW. IT'S NOT ONLY HEARD IN BRITISH COLUMBIA; IT'S HEARD IN THE STATE OF WASHINGTON, AND FROM THE STATE OF WASHINGTON, I GOT A CALL THIS MORNING TO GET YOU ON THE LINE AND FIND OUT SOMETHING ABOUT TECHNOCRACY AND CERTAIN STATEMENTS YOU HAVE MADE IN THE PAST. SO, AS WE SPEAK NOW, WE ARE RIGHT ON THE AIR.

You're on the air now? THAT'S RIGHT. Right. NOW, IT SEEMS THAT ONE OF OUR LISTENERS, I THINK IT WAS IN MARYSVILLE, WASHINGTON, HEARD YOU IN A LECTURE A FEW YEARS AGO IN WHICH YOU REFERRED TO THE FIFTIES AND SIXTIES -- I CAN'T REMEMBER HIS EXACT WORDS -- I THINK IT WAS SOMETHING LIKE THE "FIFTIES WOULD SET A TREND FOR THE WAY OF LIFE OF THE FUTURE, AND THE SIXTIES WOULD BE DECISIVE" OR SOMETHING ALONG THOSE LINES. YOU MADE OTHER STATEMENTS AS WELL, MR. SCOTT, I'M GOING TO GIVE THE PHONE TO YOU IN A MINUTE. SUCH AS THE FACT THAT AT ONE OF THESE LECTURES YOU HAD SAID THAT A NUMBER OF PRIESTS OF THE ROMAN CATHOLIC CHURCH HAD VISITED YOU AND HAD OFFERED YOU A LARGE SUM OF MONEY -- WHAT THE REASON WAS I AM NOT JUST TOO SURE AT THE MOMENT WHETHER YOU WERE TO TONE DOWN SOME OF YOUR REMARKS OR WHAT NOT.

That last statement is without foundation in fact, substance, or else.

IT ISN'T TRUE?

No, we've never been visited ....

AND SO THE OTHER ONE WAS THAT IF A BETTER PLAN EVER CAME ALONG THAN TECHNOCRACY, YOU WOULD SUPPORT IT.

Why, certainly.

ALL RIGHT, MR. SCOTT, WE'LL THROW IT OVER TO YOU FROM THERE. WOULD YOU FIRST OF ALL -- AND I KNOW THIS IS ALWAYS A DIFFICULT QUESTION -- WOULD YOU FIRST OF ALL GIVE US FOR OUR LISTENERS WHO ARE LISTENING RIGHT NOW, A THUMBNAIL SKETCH OF TECHNOCRACY.

Well, Technocracy is a whole new design of operating a continental area on the basis of modern technology. It is not a

RADIO INTERVIEW WITH HOWARD  
SCOTT BY PAT BURNS, GJOR,  
VANCOUVER, B.C.

7-11-64

question of religious beliefs or political philosophies, but what is the maximum use that can be obtained by the application of science to the physical resources of the continent with a maximum of conservation. This has nothing to do, and is antithetical to all theories of socialism, fascism, or communism or so-called political party government. Technocracy Inc. is non-sectarian, non-political, and we do not run candidates or support any candidates.

NOW, MR. SCOTT, YOU SAY IT IS ANTITHETICAL TO SOCIALISM, FASCISM, AND ACCEPTED MODES OF PARTY GOVERNMENT AS WE HAVE IT NOW. DOES IT NOT ALSO TEND TO BE ANTITHETICAL TO DEMOCRACY AS WE UNDERSTAND IT?

Well, Democracy, you know, by the Greeks was considered a tyranny, if you remember.

BY SOME. IT WAS CONSIDERED TO BE A TYRANNY, FOR EXAMPLE, BY PLATO. HE THOUGHT IT WAS. MOB RULE; BUT NOT NECESSARILY BY ALL OF THE GREEKS.

Democracy is the rule of the many; plutocracy is the rule of wealth; autocracy is the rule of one; and Technocracy is the rule of science.

NOW, HERE'S WHERE WE'RE GETTING TO THE RULE OF SCIENCE ABOUT TECHNOCRACY. WOULD IT NOT BE TRUE TO SAY THAT TECHNOCRACY, OR THE TECHNOCRATS, BELIEVE IN THE EXPERTS -- THOSE TECHNOLOGICALLY ADVANCED OR KNOWLEDGEABLE, RUNNING THE AFFAIRS AS OF RIGHT RATHER THAN GOING THROUGH THE PROCESS OF VOTING.

That clouds the issue -- HOW ELSE ARE YOU GOING TO GET THEM THERE? -- because science is one thing and opinion is another. For instance, we have proposed -- we brought out our million volt DC power transmission in 1923. If you are going to transmit power and hook up the power resources of a continent, then you have to operate on a technological design and not on the political partisanship of any state or province.

MR. SCOTT, I PERFECTLY UNDERSTAND THIS; IN FACT, I HAVE READ QUITE A BIT ON TECHNOCRACY MYSELF, BUT THERE ARE MANY LISTENERS WHO DO NOT, AND I AM SUGGESTING TO YOU THAT, WHILE WHAT YOU SAY IS UNDOUBTEDLY MATERIALLY BENEFICIAL TO THE PEOPLE, HOW COULD YOU

RADIO INTERVIEW WITH HOWARD  
SCOTT BY PAT BURNS, GJOR,  
VANCOUVER, B.C.

7-11-64

POSSIBLY IMPLEMENT THE IDEAS OF TECHNOCRACY WITHOUT CUTTING RIGHT ACROSS THE LINES OF DEMOCRACY, BECAUSE AS LONG AS IT'S A MATTER OF THE PUBLIC AS A WHOLE TO VOTE, THERE IS NO WAY THAT YOU CAN GET TECHNOCRACY INTO BEING. ARE YOU THERE?

We were cut off there. YOU DIDN'T HEAR MY QUESTION THEN? No, we were cut off.

ALL RIGHT, WE'LL START AGAIN. WHAT I'M SAYING IS, THAT WHILE TECHNOCRACY UNDOUBTEDLY IS AN IDEA, OR AN IDEAL .... It is a whole proposed design .... BUT YOU CAN'T IMPLEMENT IT IN A DEMOCRATIC SOCIETY.

Well, the more energy-consuming devices you install, the more production will occur with less man-hours, and this will force an adoption of precision controls whether it's under Democracy or whether it's under Russian communism.

WE SEE THIS IN AUTOMATION, IT'S TRUE, BUT FOR TECHNOCRACY, WHICH WOULD HAVE TO ENTAIL A PLANNED ECONOMY -- IT HAS TO, BECAUSE IT IS TOO SCIENTIFICALLY ADVANCED FOR MANY PEOPLE. IF YOU PEOPLE ARE GOING TO DO WHAT YOU WANT TO DO -- AND I'M NOT SUGGESTING THAT WHAT YOU WANT TO DO IS A BAD THING -- I DO NOT SEE HOW, TO HAVE A COMPLETE, FULLY PLANNED, TECHNOCRATIC TYPE OF SOCIETY, YOU CAN HAVE IT ON THE QUESTION OF COUNTING HEADS.

We have no assumption of power theory. We are not proposing to take over either Canada or the United States. We're contending that the march of events are going to force it. We're not going to do it. We're in the position of consulting engineers, social consulting engineers, not politicians, and we're not advocating any assumption of power or any Technocratic political party. Is that clear?

YES. ARE YOU SAYING, THEREFORE, THAT YOU DON'T THINK THAT EITHER THE SEA OF CIVIL SERVANTS OR THE MINISTERS, THE CABINET MINISTERS, SHOULD BE TECHNOCRATS IN ORDER TO GIVE PROPER GUIDANCE AND LEAD TO THE IDEAL OF TECHNOCRACY?

No, there will be more scientists and technologists and engineers. There will have to be more as you increase the number of energy-consuming devices. Our culture is becoming a technological one, and that will force more trained men to be in

RADIO INTERVIEW WITH HOWARD  
SCOTT BY PAT BURNS, GJOR,  
VANCOUVER, B.C.

7-11-64

the positions, whether they like it or not.

IN OTHER WORDS, YOU THINK THAT IT IS TOTALLY UNNECESSARY FOR  
TECHNOCRACY TO TAKE ON A POLITICAL FORM, AND THAT THE MARCH OF  
EVENTS WILL DO IT FOR US.

That's so. We bar anybody from membership in Technocracy  
that is an active member in any political party.

THIS IS AN INTERESTING POINT. WHAT HAPPENS WHEN AN ELECTION  
COMES?

Well, if they want to vote, that's up to them individually.

I AGREE, BUT DOES TECHNOCRACY IN ANY WAY URGE OR ENCOURAGE  
ITS MEMBERS TO VOTE FOR THIS PARTY OR THAT PARTY OR THIS  
CANDIDATE OR THAT CANDIDATE? I'M NOT SUGGESTING THAT IT SHOULD OR  
SHOULDN'T. I'M MERELY ASKING THE QUESTION.

No, Technocracy has never opposed or endorsed any political  
party or any political candidate. It never will. We're social  
scientists and engineers; we're not politicians.

SO THIS REALLY IS A PACIFIST TYPE OF MOVEMENT, CONFIDENT,  
SECURE IN ITS CONFIDENCE, THAT IT IS GOING TO WIN WITHOUT GETTING  
INVOLVED IN POLITICS.

Let me give you an illustration, I introduced the cotton  
picker in Louisiana and Mississippi in the early thirties. Now,  
we've probably been more responsible for the negro north than all  
the other organizations in the country, yet we didn't advocate it  
politically. Do you understand? YES. And the cotton picker is now  
going around the world. It's the whole tempo of the nation.

HOW DO YOU GET YOUR IDEAS ACROSS? DO YOU IN ANY WAY TRY TO  
INFLUENCE POLITICAL THINKING, EVEN THOUGH YOU ARE NOT A POLITICAL  
PARTY NOR DO YOU OPENLY SUPPORT PARTIES?

We publish literature, books, pamphlets, maps. We hold study  
courses which run over a year. We give public lectures, but we do  
not attempt to influence the members of the Dominion House of  
Commons or the Provincial House or any state legislature or the  
Congress or Senate of United States.

RADIO INTERVIEW WITH HOWARD  
SCOTT BY PAT BURNS, GJOR,  
VANCOUVER, B.C.

7-11-64

CAN YOU GIVE ME AN IDEA OF WHAT YOU HOPE TO SEE AS THE COMMANDER-IN-CHIEF OF TECHNOCRACY -- I beg your pardon. CAN YOU GIVE ME AN IDEA AS COMMANDER-IN-CHIEF OF TECHNOCRACY .... Mr. Burns, I am not Commander-in-Chief. THIS IS THE TITLE THEY GAVE ME. Pardon? THIS IS THE TITLE SOMEBODY SUGGESTED YOU HAVE. Oh, no. WHAT IS IT? There are 12 continental governors, and I am chief executive officer of that executive body. Three are elected every year for a four-year term. I am not Commander-in-Chief. I DIDN'T MAKE THE TERM MYSELF, IT SMACKED TOO MUCH OF THE MILITARY. Oh, yes, and we're not a military organization.

WOULD YOU GIVE ME SOME IDEA OF WHAT TECHNOCRACY CAN SEE AS THE TYPE OF GOVERNMENT AND ECONOMY THAT WE WOULD HAVE IF YOU COULD IMPLEMENT IT?

Everyone would have an income, not as a matter of work but because of citizenship. In producing and distributing abundance, you cannot differentiate in any citizen. Under Technocracy, your baby, when born, is an adult citizen, not a non-citizen such as it is now, a legal infant. Do you understand me? YES, IN OTHER WORDS, YOU DON'T BECOME A FULL CITIZEN UNTIL 21 NOW. Yes, And that purchasing power cannot be abrogated, except by death or leaving the continent.

THIS IS FINE, TO SAY THEY WOULD ALL HAVE PURCHASING POWER FROM THE TIME THEY WERE BORN, AND EVERYONE WOULD, IN EFFECT, HAVE A RIGHT TO INCOME .... A right to income as citizenship .... BUT WHAT ESTABLISHES, APART FROM CITIZENSHIP, THEIR RIGHT TO INCOME. DO THE INDOLENT HAVE THE SAME RIGHTS AS THOSE WHO HELP TO ADVANCE .... That's where you run into a lot of social concepts that are in conflict, because today, it's not a question of work any more. The farm population of United States is now less than 8 percent of the total population, and we could eliminate three-quarters of the existing farms and still produce agricultural abundance in United States. MERELY THROUGH MECHANIZATION AND AUTOMATION, OF COURSE. Yes, through the application of technology. Let us put it this way: The technological progression of the next fifty minutes is invalidating all the political and economic wisdom of history.

YOU ARE SPEAKING NOW ON THE SOCIAL-POLITICAL SIDE -- THE SOCIAL-ECONOMIC SIDE. WHAT ABOUT THE POLITICAL SIDE? WHAT DO YOU SEE AS THE FORM OF GOVERNMENT WHICH WILL ENSURE THAT TECHNOCRACY

RADIO INTERVIEW WITH HOWARD  
SCOTT BY PAT BURNS, GJOR,  
VANCOUVER, B.C.

7-11-64

IS TO BE IMPLEMENTED? Well, there would have to be a government that could arrive at decisions. The arrivation of social decisions will have to be based on the probabilities of energy consumption and your control of all your energy-consuming devices; therefore, the decisions will have to be made with the speed of a modern computer. You do not have time in the modern powerhouse today to count noses. If you did, there would be no power.

BUT DO YOU SEE THE SAME KIND OF GOVERNMENT AS NOW EXISTS IN UNITED STATES -- THE CONGRESS, THE STATE LEGISLATURE, AND THE SAME FORM OF GOVERNMENT -- BY "THAT I MEAN THE SAME FORM OF ELECTING THE GOVERNMENT, OR DO YOU SEE ANY CHANGE HERE AT ALL?

Considering the futility and incompetence of present political setups, I wouldn't care to endorse any of them, Mr. Burns.

WELL, NOW, THIS IS MY POINT. IF YOU WOULDN'T ENDORSE ANY OF IT, WHAT WOULD YOU CHANGE?

Well, you see, I'm not changing anything. I think that you have been given the wrong impression. We're stating what you will have to do on this continent to produce and distribute abundance. We're not going to change it; we're the consulting engineers. Consulting engineers do not build the bridge; they design it. Am I making my point clear?

YES, YOU ARE, MR. SCOTT, FROM THE TECHNOLOGICAL POINT OF VIEW, BUT YOU HAVE NO POLITICAL OUTLOOK AT ALL AS TO HOW THIS COULD BE BEST IMPLEMENTED?

Oh, one could theorize about it, but frankly I don't think -- In this fast-moving day and age, you could put up a lot of theories, none of which might be valid a year from now.

WELL, I'M GOING TO PUT IT ANOTHER WAY: I'M GOING TO SUGGEST THIS, THAT TECHNOCRACY WOULD BE MUCH MORE EFFICIENT AND WOULD COME INTO BEING A LOT QUICKER IF IT WERE UNDER A FORM OF DICTATORSHIP RATHER THAN A DEMOCRACY. WOULD YOU AGREE WITH THAT?

No, I wouldn't agree with that at all.

RADIO INTERVIEW WITH HOWARD  
SCOTT BY PAT BURNS, GJOR,  
VANCOUVER, B.C.

7-11-64

WELL, IF YOU WANT QUICK DECISIONS, YOU CAN'T GET THEM UNDER DEMOCRACY.

A dictatorship is just as stupid, because it would be the decision of one nose.

BUT THEN SUPPOSE IT WAS A TECHNOCRATICAL NOSE?

Oh, that wouldn't make any difference in the system; that's the individual. A dictatorship is an individual thing.

BUT YOU SEE, MR. SCOTT, THIS IS MY POINT. IT IS FINE TO HAVE THESE IDEAS AND IDEALS, AND HOW WE HARNESS THE RESOURCES OF NATURE IN ORDER TO SUPPLY THE WHEREWITHAL FOR ALL THE CITIZENS, BUT THERE HAS GOT TO BE A SYSTEM SOMEWHERE ALONG THE LINE FOR POLITICAL CONTROL.

Well, we're not denying that. It's up to the people of United States and Canada to do that. It's their choice. We're providing the design. We're not going to do it. The people of Canada and United States will have to do it. They are the leading national entities on this continent.

TELL ME, WHAT MEMBERSHIP DO YOU HAVE IN TECHNOCRACY.

We run into the thousands. We're all across Canada, in United States; we're in Alaska, even the Northwest Territories, Newfoundland, and we're down into Venezuela and Colombia. We do not go off this continent. NOT INTO THE HUNDREDS OF THOUSANDS? Oh, no. HOW LONG HAS TECHNOCRACY BEEN A FACT? BY THAT, I MEAN YOUR ORGANIZATION. We started out, Mr. Burns, in July of 1918.

AND SO AFTER CLOSE TO FIFTY YEARS, THE ORGANIZATION IS STILL ONLY IN THE THOUSANDS. WHERE IS THE IMPEDIMENT TO ITS GROWTH?

We're not a religion; we're not a political party. We do not promise rewards either here or hereafter. If you cannot do that, then you cannot expect to have any rapid growth.

I WILL AGREE WITH THE HEREAFTER PART, BUT SURELY YOU DO PROMISE REWARDS HERE.

No, we state what can be done to attain those, but we aren't

RADIO INTERVIEW WITH HOWARD  
SCOTT BY PAT BURNS, GJOR,  
VANCOUVER, B.C.

7-11-64

in there proposing a political party. We have no assumption of power theory whatsoever.

DOES TECHNOCRACY AS SUCH BRING FORWARD PLANS, FOR EXAMPLE, TO HARNESS THE RIVERS, WATERPOWER OF CANADA AND UNITED STATES? DOES IT DO ANYTHING ALONG THESE LINES? WHO FINANCES THIS SYSTEM?

Yes, we have plans of a complete continental hydrology. That's all the rivers, all the runoff of the continent would be harnessed with a maximum water usage, power, transportation, subsoil, and subsequently your water pressures. There would be a deep sea waterway across Canada via the Qu'Appelle Valley and the Peace River to the Pacific, It would be at least 750 feet wide, 200-meter bottom width, and 20 meters deep. There is also one across United States. It would take too long to go into it over the air here, but it's a complete system that also connects in with your continental power system.

A STUDY OF THIS NATURE WOULD TAKE SOME YEARS. WHERE DO YOU GET THE FINANCES FOR IT?

We have been working on it for some years, Mr. Burns.

WOULDN'T IT BE A VERY COSTLY VENTURE? YOU'RE NOT SUBSIDIZED BY GOVERNMENT. I'M TRYING TO THINK, YOU SEE, OF THE ROLE OF TECHNOCRACY WHERE, FOR EXAMPLE, YOU WOULD TAKE SUCH A MASTER PLAN, AFTER MAYBE FIVE, EIGHT, OR TEN YEARS' STUDY, AND PRESENT IT TO THE GOVERNMENT OF CANADA AND SAY, "LOOK, THIS, WE BELIEVE, WOULD VERY MATERIALLY AND RAPIDLY ENHANCE THE WHOLE OF THE CONTINENT OF NORTH AMERICA, CANADA AND UNITED STATES, AND WOULD BE BENEFICIAL TO ALL THE PEOPLE." I THINK THIS IS GOOD, BUT WHERE DO YOU GET THE FINANCES?

From our members. They have worked on them. We have some of the prominent geologists, water men, engineers, scientists in both Canada and United States have been working on this.

AND YOU HAVE PRESENTED PLANS OF THIS NATURE -- I PICKED ON A BIG ONE, MIND YOU, BECAUSE THIS WOULD BE A TREMENDOUS STUDY -- TO BOTH THE CANADIAN AND AMERICAN GOVERNMENTS?

Well, not officially. We have tried to arouse their interest in it, and some members in scientific positions in the Canadian

RADIO INTERVIEW WITH HOWARD  
SCOTT BY PAT BURNS, GJOR,  
VANCOUVER, B.C.

7-11-64

Government and U.S. are quite interested. You have this firm in Los Angeles, this engineering firm, proposing this \$100 billion, and that is only about ten percent of Technocracy's continental hydrology.

YOU MEAN THAT YOURS WOULD BE TEN TIMES THAT MUCH?

Ten times the amount of work. This is not in the terms of money.

NOW, THIS IS \$100 BILLION PROPOSITION THAT THIS FIRM HAS COME UP WITH. DO YOU PEOPLE ENDORSE IT OR DOES IT FORM OR INCORPORATE PART OF YOUR PLAN.

It's chiefly thought up to provide a scheme that will involve both the Canadian and U.S. Governments financially to sell water to Nevada, California, and other places, plus some transportation, plus some power; in other words, the emphasis is in the wrong places. Do I make myself clear? OH, YES, INDEED. They only come as far east as Lake Superior.

I AM WONDERING IF YOU COULD GIVE US SOME -- THIS IS, PERHAPS, JUST A SUBJECTIVE THOUGHT FOR THE FINAL QUESTION -- WHAT, FROM A TECHNOCRAT'S POINT OF VIEW WOULD BE THE ECONOMY AND THE NATURE OF OUR SOCIETY AS HE ENVISAGES IT, SAY, FIFTY YEARS FROM NOW. WHAT WORKING HOURS, HOW MANY DAYS A WEEK?

Under the Technate on the North American Continent, the able-bodied citizen would only work four hours a day, four days a week, once it was in operation. It would take over twenty years to place it in operation.

BUT YOU WOULD FORESEE A SOCIETY IN WHICH MEN WORKED FOUR HOURS A DAY?

In which there wasn't any poverty and there was no crime for any acquisition of wealth.

THERE WOULD BE NO CRIME FOR THE ACQUISITION OF WEALTH?

Because the currency is not transferable; so, therefore, no citizen could gain from taking anything from any other citizen.

RADIO INTERVIEW WITH HOWARD  
SCOTT BY PAT BURNS, GJOR,  
VANCOUVER, B.C.

7-11-64

I AM WONDERING IF YOU WOULD GO OVER THAT LAST REMARK -- NO CURRENCY WOULD BE TRANSFERABLE.

Yes, the same thing as a credit card or a check. The individual citizen could spend it for his services or goods, but no one could steal it. It wouldn't be lost if he lost it, much as a traveler's check today.

SO CURRENCY AS WE UNDERSTAND IT .... Would be .... WOULD BE A THING OF THE PAST. Or even the present currency, but it would be a system of distribution and not of exchange.

HOW LONG DO YOU THINK IT WILL BE BEFORE WE LIVE IN SUCH A SOCIETY?

If we keep on at this present rate, we'll be in trouble before we get a Technocracy -- serious trouble.

O.K., MR. SCOTT, YOU CERTAINLY HAVE GIVEN US AN AWFUL LOT TO THINK ABOUT.

Mr. Burns, may I ask you if you have made a tape recording of this?

YES, I HAVE, INDEED. YOU WOULD LIKE A TAPE RECORDING OF IT?

We'd be pleased to pay for a taped reproduction of this.

ALL RIGHT. NOW I'LL TAKE YOUR FULL ADDRESS, BECAUSE I HAVE YOU DOWN ONLY AS RUSHLAND, PENNSYLVANIA. Well, our office is at Rushland, PA. AND THAT WILL REACH YOU? Technocracy Inc., Rushland, PA. And the telephone number is (215) 598-7858.

I'LL TELL YOU, MR. SCOTT, I HAVE A FEELING THAT YOU PROBABLY WILL BE CALLED BY ME AGAIN ON THE AIR. I'LL TELL YOU WHY. AS A RESULT OF YOUR CALL, I AM QUITE SURE WE HAVE THOUSANDS OF LISTENERS IN BRITISH COLUMBIA AND NORTHWEST WASHINGTON. YOU'VE NO DOUBT TRIGGERED OFF IN THEIR MINDS MANY QUESTIONS WHICH THEY WOULD LIKE TO HAVE ANSWERED.

I wouldn't doubt it, sir, and thank you very much for your courtesy in this matter.

RADIO INTERVIEW WITH HOWARD  
SCOTT BY PAT BURNS, GJOR,  
VANCOUVER, B.C.

7-11-64

THANK YOU, MR. SCOTT. I'LL HAVE THE TAPE RECORDING SENT TO  
YOU.

\* \* \* \*

RADIO STATION KYW, CLEVELAND, OHIO  
RADIO INTERVIEW WITH HOWARD SCOTT  
AND VERNON CARTER  
NOVEMBER 19, 1964

OUR CONTACT SUBJECT TONIGHT IS "THE SOLUTIONS OF  
TECHNOCRACY."

Technocracy states that the war on poverty will be lost; in fact, there will be no survival within a decade unless North America adopts a technological operation.

THAT'S THE VOICE OF MR. VERNON CARTER, TECHNOCRACY ORGANIZER FOR THIS AREA, AND AN ATTORNEY FROM ASHTABULA. AND NOW HERE'S MR. HOWARD SCOTT, THE DIRECTOR-IN-CHIEF AND THE FOUNDER OF TECHNOCRACY INC.

Well, I'll try to make our position clear. Technocracy's position is rather unique; in other words, we have been social analysts and innovators and have conducted research for over thirty years into national and continental problems. Now, the approach of Technocracy is not a political, moral, or philosophical approach to the problems of operating this country and this continent. It's a physical operational approach. We view the continent as a closed field of operation, and if one can visualize for a moment that for 70 centuries of human history, human toil and hand tools have been the sole means of providing food, clothing, housing, and general living for the untold billions of human beings, and in the last 60 years, technology has moved up to where no longer are we dependent on human toil and hand tools. In fact, as Technocracy has pointed out, you have to eliminate the human toil in order to achieve progress and advance, and it has now reached the point to where from now on out we will produce more and more with less and less human beings in less and less time by consuming more extraneous energy and greater installations of energy-consuming devices and technological equipment, which, of course, includes automation and cybernation, and all of the other little portions of modern technology.

DIAL 241-5637 ON HARVE MORGAN "CONTACT." OUR SUBJECT IS "SOLUTIONS OF TECHNOCRACY." WITH UNEMPLOYMENT BECOMING MORE AND MORE A CONCERN OF MORE AND MORE, AND THE GENERAL PUBLIC BEING FAR MORE AWARE TODAY THAN EVER BEFORE OF THE OVERALL ECONOMIC CONDITION, NOT ONLY OF AMERICA, BUT OF THE WORLD ITSELF, THE

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

SOLUTIONS OF TECHNOCRACY HAVE BEEN BORROWED, THEY CLAIM, MORE AND MORE BY ECONOMISTS FROM AROUND THE WORLD. 241-5637 FOR YOUR OPINIONS, YOUR QUESTIONS, YOUR OBSERVATIONS ON THE OVERALL ECONOMY AND PERHAPS YOUR REFLECTIONS ON THE THINGS YOU HEAR FROM MY TWO GUESTS, MR. VERNON CARTER AND MR. HOWARD SCOTT. NOW HERE ONCE AGAIN THE DIRECTOR-IN-CHIEF AND THE FOUNDER OF TECHNOCRACY INC., MR. HOWARD SCOTT.

Now, once upon a time we grew wheat by planting it with a hoe. We went up through the various stages, and now we have equipment in United States and Canada -- down in the southwest, there is one installation of equipment that fertilizes and seeds 70 acres of wheat an hour and 30 acres in Alberta an hour. That's a long, long way. It could not be done by human toil. The same thing has occurred in coal mining, in chemical production, iron and steel -- manufacturing in every field of human endeavor. So we face tomorrow with the inability of this system to distribute purchasing power through salaries and wages and to employ the adult working population of the country or the continent. Modern technology has no ancestors and it has a tomorrow. It has to devise new ways of operating our economy, both of United States and the continent, because United States is part of the continent. So that we're faced with an advance into a new era whether we like it or we do not like it.

Franklin Delano Roosevelt proclaimed the New Deal, and President Harry Truman had the Fair Deal. President Kennedy had the New Frontier, and now President Johnson is proclaiming the Great Society. All of this is all very well, but there is no indication that any of them have any realization of the reorientation that must be done in order to bring about the proper distribution of physical wealth on this continent, because the first thing that has to be realized is that the technological progression of the next 30 minutes invalidates all the social wisdom of history, and we must design a social operating economy based on modern technology and not on past precedents or political institutions. This naturally, of course, is revolutionary, not in the old political sense, but in a new sense, far more revolutionary than any of the so-called leftist or rightist doctrines. No one outside of Technocracy, to our knowledge, has dealt in it. They have played around in it and made little minor advances, but to treat the thing as an entirety to which we are going to be faced because we cannot employ them

11-19-64

in production any more or in the services, and we will have to pay everybody whether they work or not a national annual income as citizens and not derived from their hours of work or professional toil. Now that's something that has never been viewed before in social history. The old idea that you have to earn your living by the sweat of your brow goes down the drain in the face of modern technology. The only way that we can operate modern technology is getting rid of the human toil.

Communism, of course, eulogizes the worker. Technocracy, on the other hand, proposes to eliminate human toil, and when you eliminate human toil, then you are faced with the vast social changes, the like of which has not been envisaged by any social or political philosophy. It is in that vein that Technocracy approaches tomorrow and not the compromises that political and financial institutions that are proffered as panaceas or patchwork dealings with this social system and its ills. If this sounds strange, we can provide, of course, all kinds of illustrations. There were 780,000 bituminous coal miners of John L. Lewis; now there are only 235,000, but John L. Lewis and the coal mine operators did succeed in raising the productivity of the American coal miner to 8 tons per man per day; but the latest equipment that is coming out now and is being installed mines 8 tons per minute, instead of 8 tons per day. The same thing intrudes itself into every field of human endeavor in United States and the rest of the continent.

Their plans are not great enough, they are not pervasive enough, they are not wide enough. For instance, we have to deal with water on the continent and not with the water of the municipalities or the county or even the state. United States in the Great Lakes are short of water, but we will have to go to Canada, because Canada occupies a strategic position in the relationship of water to the continent -- water for the Great Lakes, water for the western plains, water of the Yukon -- all of those Canada has a supply of water and United States has not. To the south of us, Mexico hasn't the water. Mexico has 40 million population today. It hasn't the arable land. Its population is going up at 3.1% per annum. The population of Mexico will double in the next 23 years. Mexico, whether we like it or not, is also a responsibility of United States, because United States is the dominant economic and social order of this continent; and whether it's water of Canada or arable land in Mexico or transportation.

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

Just as in power, we have to devise power systems that will enable power to be transmitted from anyplace on the continent to any other place on the continent, whether it be atomic power from fission or fusion, fuel cells, thermal power, hydroelectric, or solar energy. All plans for the future will have to be designed on a continental basis for a continental control, and the distribution will be a medium of distribution and not a currency of exchange.

A medium of distribution immediately calls for and is part of a continuous continental accounting system which records the production and distribution of every single commodity and service every hour continentwide. In other words, we have to envisage an accuracy and a control on a continental basis and not as one of the little 104,000 governments in United States; that is, 3,027 counties, 16,000 municipalities, and 17,000 townships, and 53,000 odd educational districts in the 48 states we are speaking of. It is this kind of problem which we in United States and on this continent face today, and Technocracy views the tomorrow as the great opportunity for America to be even greater than a Great Society -- to be a New America of Technocracy.

WHEN WE REACH THIS STATE OF UNEMPLOYMENT -- CORRECT ME IF I'M WRONG -- THE ASSUMPTION IS THAT A GREAT NUMBER OF PEOPLE WILL BE UNEMPLOYED IN USING THE TERM AS WE USE IT TODAY. AM I CORRECT?

There will be unemployed or idle; in other words, you install enough technology, and we'll be able to produce and distribute physical abundance on this continent with a minority of the healthy, able-bodied adult citizens.

THE FIRST QUESTION THEN, HOW WILL THESE PEOPLE BUY THE PRODUCTS WE ARE DISTRIBUTING OR WILL THEY BUY THEM?

They will have a medium of distribution instead of a medium of exchange. They will receive that because they are citizens and not because they work or do not work.

DO YOU NOT HAVE SOMETHING CALLED AN ENERGY CERTIFICATE?

Yes, there is an energy certificate, which is also a part of a continental accounting.

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

HOW DOES THAT WORK?

Well, that is cancelled out when they purchase any goods or services.

HOW DO THEY GET THESE ENERGY CERTIFICATES? THESE ARE THE EQUIVALENT OF MONEY, ARE THEY NOT?

No, more equivalent of an ABA. It's made out to them and is non-transferable. That would be their income from the government.

THE GOVERNMENT JUST GIVES THEM BECAUSE THEY ARE HUMAN BEINGS, BECAUSE THEY EXIST, RIGHT?

In other words, for the first time in history we'd have to be our brother's keeper whether we liked it or not.

WHO WOULD BE THE BROTHER'S KEEPER; IN OTHER WORDS, WHO WOULD DO THE KEEPING -- THE PRODUCTIVE BEES, AS IT WERE?

Well, the entire government of the country -- the state -- would have to operate it.

THE GOVERNMENT IS MADE UP OF PEOPLE. Yes. SO SOME OF THE PEOPLE WOULD THEN BE WORKING, A PERCENTAGE OF THE PEOPLE? Oh, yes, some people working, but you would only require four hours a day four days a week. HOW DO YOU DETERMINE WHICH ONES ARE WORKING AND WHICH ONES ARE NOT? That would be a matter of skills and those who are required. I mean, it isn't up to us to determine at this moment just how they're going to distinguish. Probably some classification of skills will eliminate, let's say, the least required.

HOW WILL A PERSON COME INTO POSSESSION OF PROPERTY REAL AND OTHERWISE. For the first time, there would be no personal property in production and distribution. Personal property would be what they require for living, etc., but if they die, they couldn't bequeath anything other than their personal property, and the medium of distribution, for instance, runs on a balanced load period for two years on this continent, and if you haven't spent your allowance or income, whichever you care to call it, in that two years, it's cancelled out. So you cannot save it whether you like it or not.

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

YOUR NEEDS WOULD BE SUPPLIED BUT NOTHING BEYOND YOUR NEEDS?  
Oh, well, you would have an income in excess of \$30,000 a year  
right now.

EVERYONE WOULD GET THE SAME AMOUNT OF MONEY THEN, IS THAT  
IT?

Yes, everyone, regardless of race, creed, color, or size or  
previous condition of servitude.

WHERE WOULD A THING CALLED INCENTIVE COME IN? ISN'T THIS  
REQUIRED OF A HUMAN BEING?

That is extremely doubtful. We contend that initiative is  
much more important, that you can have incentive if you are  
crippled and incompetent in a wheelchair, but you certainly have  
no initiative. In other words, it would be unfortunate for some  
of the people whose values today because you couldn't indulge in  
charity or philanthropy to other human beings. They would be on  
the same status -- social level -- as yourself.

WHAT ABOUT PROPERTY -- REAL ESTATE PROPERTY -- LAND?

I doubt if we would have any property considerations in such  
a system as that to worry them.

HOW DO YOU MEAN, A PERSON DOES NOT OWN THE PROPERTY THAT  
THEY LIVE ON, AND IF THEY WANTED TO, THEY COULD OWN A FEW  
SURROUNDING ACRES FOR THEIR OWN PLEASURE? No, I don't think you  
would have that, just the same as you wouldn't own a car, but  
they would be nearer to the approach of rent-a-car; in other  
words, if you wish to use a car, a car would be provided, but it  
would cost more to have the car standing idle than it would to  
operate it.

WOULDN'T IT BE A PRETTY -- I THINK SOME PEOPLE WOULD MAKE  
THE CHARGE -- WOULDN'T IT BE A PRETTY DULL WORLD YOU ARE  
CREATING, MR. SCOTT?

No, you'd have more opportunity than you have ever had in  
history.

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

OPPORTUNITY TO DO WHAT?

Opportunity to do anything. You would have the leisure and you would have the income.

BUT YOU'D HAVE NO CHALLENGE, WOULD YOU?

Oh, yes. YOU WOULD? WHAT? This way you would have challenge of really having new frontiers. LIKE WHAT? Well, there's everything from running a feed plant for fishes, extending the full coast of the continent, all kinds of biologic fields, educational, everything.

CAN'T WE RELATE A LOT BETTER TO A YOUNG COUPLE GETTING MARRIED AND SAYING, GEE, WE'D LIKE TO GET THIS NICE HOME ON A HILLSIDE SOMEDAY AND THEY CAN WORK WITH A FOCUS IN MIND OF WORKING TOWARD AN OBJECT BECAUSE THEY KNOW THAT THE PRODUCT OF THIS IS GOING TO BE SOMETHING THEY WANT. THIS IS A CHALLENGE TO GET THAT.

Oh, but that kind of challenge is antique, because today your small farm is disappearing and will disappear. I DON'T MEAN A SMALL FARMER. I MEAN A YOUNG COUPLE WHO WANTS TO BUY A HOME ON THE CORNER OF SIXTH AND VINE. Oh, well, they will be able to have places in national parks, mountainsides, etc. That can be made available very easily, but your technological agricultural unit will be 25 miles by 25 miles, approximately the size of a good-sized county.

WELL, THERE'S A RECENT PLAY THAT RAN ON BROADWAY CALLED, "STOP THE WORLD, I WANT TO GET OFF!" IT WOULD THEN SEEM THAT A LOT OF PEOPLE WOULD HAVE THAT FEELING, THAT NOW THIS IS A PRETTY UNCHALLENGING WORLD -- STOP, I WANT TO GET OFF.

This thing is coming whether we like it or not, and we can't get off and we can't reverse the direction. This would provide a million challenges, where today there's, say, only a few, a handful.

TECHNOCRACY HAS BEEN KICKING AROUND SOME THIRTY YEARS. WHEN DO YOU VISUALIZE THIS THING WILL TAKE PLACE?

After all, what happened with the cotton picker? We were

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

laughed at when we publicized it in the early thirties, but the cotton picker went in in spite of all the objections, and we probably are more responsible than any organization for the negro coming north, although we didn't have any motive in that at all.

WHAT ABOUT WORLD COMMERCE? HOW WOULD THIS GOVERNMENT -- AND YOU VISUALIZE THIS AS A GOVERNMENT ON A CONTINENTAL BASIS WITH THE MERGING OF MEXICO, CANADA, AND THE U.S., DO YOU NOT?

That's right, a continentalism.

HOW WOULD THIS GOVERNMENT SET UP ON TECHNOCRACY'S BASIS ENGAGE IN WORLD COMMERCE WITH OTHER GOVERNMENTS SET UP ON, SAY, CAPITALISM, COMMUNISM, OR ....?

It could conduct commerce with anything regardless of the form of government of the foreign country. EVEN THOUGH THERE'S NO MEDIUM OF EXCHANGE? Yes, that can be done. It's done now on a basis where there is no real medium of exchange, so there would be no difficulty there. In other words, Technocracy could be installed on other continents, but the social results would not be the same on the North American Continent, and the reason for that is that the soil, climate, water, mineral resources, etc. would give a different result. It would be far greater than what is now, but it would not be equal and identical to United States and North America. Am I making my point clear? I THINK SO, BUT IF NOT, OUR LISTENERS WILL HAVE A CHANCE TO CROSS-EXAMINE YOU ON THE SUBJECT OF TECHNOCRACY AT 241-5367. WE'LL HAVE A CHANCE TO TALK FURTHER LATER IN THE PROGRAM. LET'S TAKE THE FIRST CALL IN SIXTY SECONDS AT 241-5367.

MY GUEST ON THE "CONTACT" LINE TO LAMBERTVILLE, PENNSYLVANIA, THE FOUNDER OF TECHNOCRACY AND THE DIRECTOR-IN-CHIEF, MR. HOWARD SCOTT, AND MR. VERN CARTER, A TECHNOCRACY ORGANIZER AND AN ATTORNEY FROM ASHTABULA. NOW HERE ONCE AGAIN IS MR. VERN CARTER.

Technocracy approaches the social problems of North America, as the Director-in-Chief has stated, on a physical basis, the North American Continent being the minimum area required for a maximum technological operation to produce and distribute abundance to all inhabitants. The principal barrier to adopting such a program lies primarily in a lack of perspective. Our

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

obsession for individual salvation or an individual approach to the problem will not solve our problems. In lay terms, we must think of the approximately 200 million people who live on this continent and organize the physical resources required for their survival, train them for a functional operation, and apply the latest science and technology. In this manner, we could have washing machines, refrigerators, and automobiles that would last a lifetime. As we apply this science and technology, we would eliminate the waste and duplication of effort which anyone, by looking around, would know is something terrific on this continent. We can reduce the hours in service and the age of retirement and eliminate this waste and duplication of effort and allow participation of all of the people in the production and allow full sharing in the distribution of the goods and services of this continent. We could anticipate very readily in a few years that we would only need to serve four hours a day, four days a week, from the age of 25 to 45 to obtain full maximum distribution of goods and services.

241-5367 IS OUR NUMBER FOR HARVE MORGAN "CONTACT." OUR SUBJECT TONIGHT IS "THE SOLUTIONS OF TECHNOCRACY." LET'S HAVE THE FIRST CALL, PLEASE. LET ME CHECK IN FIRST, PLEASE, WITH LAMBERTVILLE, PENNSYLVANIA, MR. SCOTT. ARE YOU IN CONTACT?

Rushland, Pennsylvania. IS THAT A SUBURB OF LAMBERTVILLE? No, Rushland, Pennsylvania. I DON'T KNOW WHERE WE GOT THE LAMBERTVILLE, BUT THE OPERATOR GOT US THROUGH WHEN I SAID THAT. LET'S HAVE THE FIRST CALL, PLEASE. GO AHEAD, YOU'RE IN CONTACT.

SIR, I THINK THESE GENTLEMEN ARE 100 PERCENT CORRECT. I'M WITH THEM ALL THE WAY, AND I HOPE THEY CAN PUT THEIR PROGRAM ACROSS. AS YOU KNOW, I HAVE BEEN TRYING TO PUSH SOMEWHAT THE SAME TYPE OF PROGRAM, AND I HOPE THE PEOPLE LISTENING TONIGHT WILL LISTEN VERY CAREFULLY, BECAUSE THESE GENTLEMEN HAVE A LOT OF GOOD COMMON SENSE. THE PRESENT SYSTEM MAGNIFIES THE INEQUITIES AND INEQUALITIES AMONG MEN; THEREFORE, IT INTENSIFIES THE MALDISTRIBUTION OF WEALTH, WHICH IS THE DIRECT CAUSE OF POVERTY. WE HAVE TO SET UP SOME MASTER CONTROL OVER OUR SOCIETY IN ORDER TO ELIMINATE THESE INEQUITIES. NOW, IF ANYONE CAN'T GO ALONG WITH THAT, THEN I WOULD SAY THAT THEY OUGHT TO ASK THEMSELVES WHETHER OR NOT THEY REALLY HAVE THE CHRISTIAN SPIRIT.

MODERATOR: I GUESS I JUST HAD THE "CHRISTIAN SPIRIT"

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

EXAMINATION, DIDN'T I? LET'S HAVE ANOTHER QUESTION, 241-5367.  
THAT WAS MORE OF A STATEMENT THAN A QUESTION. WE'LL TAKE ANOTHER  
STATEMENT. GO AHEAD, YOU'RE IN CONTACT.

I WOULD LIKE TO ASK MR. SCOTT WHAT KIND OF GOVERNMENT THIS  
WOULD BE. I MEAN, WE ARE NOW OPERATING UNDER A DEMOCRACY. FROM  
WHAT I GATHER, HE IS TEACHING SOCIALISM, AND FROM THIS VIEW, ALL  
YOUR SOCIALISTIC GOVERNMENTS THAT HAVE EVER BEEN ORIGINATED AND  
BEEN SET FORTH, NONE HAS EVER EXISTED. IN OTHER WORDS, YOU NEED A  
POOR MAN AND A RICH MAN. [MODERATOR: YOU MEAN THIS IS NECESSARY  
FOR THE HUMAN FUNCTION?] RIGHT.

MR. SCOTT, YOU HAVE BEEN GIVEN A LESSON IN SOCIALISM. I  
can't hear it. HE SAYS THIS IS NOTHING BUT SOCIALISM. ARE YOU  
HAVING A HARD TIME HEARING? Yes, I am. THE QUESTION WAS ABOUT  
SOCIALISM. THIS IS NOTHING BUT SOCIALISM. Oh, that is utter  
nonsense. Technocracy has no relation to socialism, communism,  
fascism, or any other political philosophy. We owe nothing in our  
origins from Adam Smith, Ricardo, Pareto, Proudhon, Bakunin, Karl  
Marx, Lenin, or any of the rest of the political philosophies. We  
do owe a debt to J. Willard Gibbs, Nikola Tesla, Steinmetz, Mac  
and John Rusk, and a thousand other American chemists, engineers,  
scientists, and technologists. But Technocracy is not socialism.

MR, MORGAN, I HAVE A COUPLE OF QUESTIONS FOR MR. SCOTT OR  
MR. CARTER. FIRST, I WOULD LIKE TO GET SOMETHING STRAIGHT. MR.  
SCOTT, IS IT TRUE THAT YOU ADVOCATE THAT BECAUSE THE ECONOMIC AND  
SOCIAL ORDER ARE TOO COMPLICATED TO BE UNDERSTOOD AND CONTROLLED  
BY MERE POLITICIANS, CONTROL SHOULD BE IN THE HANDS OF THE  
ENGINEERS, TECHNOLOGISTS, AND SCIENTISTS, ETC.? [MODERATOR: ASK  
ALL OF YOUR QUESTIONS NOW. THEN WE'LL COMMENT ON THEM.] WELL, IF  
THIS IS TRUE AND BECAUSE THERE WOULD BE SUCH A SELECT GROUP OF  
MEN CONTROLLING THE GOVERNMENT, WHAT'S TO KEEP A BUREAUCRATIC  
GOVERNMENT FROM COMING INTO CONTROL LIKE IN RUSSIA, WHICH IS  
SUPPOSED TO BE A DICTATORSHIP OF THE PROLETARIAT? That is quite a  
long question. After all, the scientists, engineers, and  
technologists would not be in control as a class in Technocracy.  
[THEY WOULD NOT BE IN CONTROL?] Would not be in control. [WHO  
WOULD BE IN CONTROL THEN?] Well, that is the system -- decision  
arrivation, a modern technological state, where, as we install  
more energy-consuming devices, then the arrivation of social  
decisions will have to be as swift as the transfer of energy to  
all energy-consuming devices. [BUT HUMAN BEINGS WOULD STILL

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

BE .... ] Oh, yes, human beings or those with training to a scientist or engineer might be closer to the point of decision .... [BUT ALSO WOULD THEY NOT BE SUBJECT TO HUMAN FAILINGS, SUCH AS GREED, SUCH AS LUST FOR POWER?] No, it won't make very much difference whether they are or not. If you can't steal it and you can't rob it, it doesn't do very much for you if you have any greed. [WHAT ABOUT THE SECOND PART OF THAT QUESTION: HOW DO YOU KEEP BUREAUCRACY OUT? ] There's nothing wrong with a bureaucracy. Any organization has a bureaucracy which functions. It's a question of whether you have a competent bureaucracy or not.

MR. CARTER, DO YOU HAVE ANY COMMENTS ON THIS QUESTION? The administration of Technocracy, of course, is functional, and each function -- food, clothing, shelter, transportation -- would select their own leaders, and the directors of these various functions would select the Continental Director. In this way, all functions would complement each other, which is actually what is required for survival. WOULD THIS NOT REACH AN APEX SOMEWHERE UP THE LINE WHERE ALL OF THESE WOULD HAVE TO COME TOGETHER IN ONE CENTRAL CORPS? The continental direction would naturally peak at an apex with a Continental Director giving implementation to all of the functions coordinating together. AND WHAT POWER WOULD HE HAVE? The power of directing a design of continental operation to accomplish the production and the distribution of goods and services to every inhabitant of this continent.

ONE OF THOSE GENTLEMEN VISUALIZES A SYSTEM WHERE A PERSON RECEIVES A SUBSTANTIAL INCOME SIMPLY BECAUSE HE IS A MEMBER OF THE SOCIETY WHERE HE LIVES. DO YOU THINK THAT OUR PRESENT SOCIAL SECURITY SYSTEM, WHERE PEOPLE OBTAIN A MONTHLY INCOME SIMPLY BECAUSE THEY HAVE ATTAINED THE AGE OF 65, AND THE POSSIBLE PROPOSED MEDICARE BILL, ARE POSSIBLY THE BEGINNINGS OF A SYSTEM WHERE PEOPLE ARE PAID SIMPLY BECAUSE THEY ARE LIVING IN THE SOCIETY? [A VERY GOOD QUESTION.] Vern Carter: Social security and paid income on retirement, of course, is only evidence of the fact that we do not need all of our people to participate in society. Technocracy's program of the production and distribution of abundance goes completely beyond this point to guarantee to all citizens the goods and services, not in terms of money, but in terms of the delivery of such goods and services as a physical presentation to the inhabitants of this continent. They are required only to serve what time is necessary to make this

11-19-64

production possible.

MR. SCOTT, DO YOU HAVE ANYTHING TO ADD TO THAT? There is no comparison between the present social security program and any kind of Medicare and Technocracy's program. Under a Technocracy, all citizens would receive medical and physiological and psychiatric care without any particular pension plan. THEN, THIS YOU WOULD NOT ACCEPT AS A BEGINNING POINT? No, we would certainly not, because it's not comprehensive enough.

I HAVE MORE OF A STATEMENT THAN A QUESTION HERE. IN MY HISTORY CLASS AT COLLEGE, I TALKED WITH MY PROFESSOR ABOUT THE SAME POINT THAT IS ON NOW. IN OUR DISCUSSION, WHEN WE CAME UP WITH THE CONCLUSION THAT THE HUMAN BEING WAS ALMOST NEGLIGIBLE, BECAUSE THE HUMAN BEING HAD NO RIGHTS REALLY. WHAT I'M TRYING TO SAY IS, HE HAD NO PROPERTY FOR ONE THING. HE HAD NO INCENTIVE AS TO WORK, AND WITH THIS, SURE, YOU HAVE ALL THE AUTOMOBILES, THE FACTORIES, AND THE EQUIPMENT THAT YOU NEED TO SURVIVE, LET US SAY, BUT YOU COMPLETELY FORGET ABOUT THE YOUNG ADULT AND THE CHILDREN GROWING UP. THESE THINGS THAT ARE ESSENTIAL TO THE INDIVIDUAL ARE COMPLETELY IGNORED. WHAT'S HAPPENED IS THAT EVERYTHING IS TAKEN OUT OF THE HANDS OF THE INDIVIDUAL, AND THE SCIENTIST, ALTHOUGH HE IS NOT HEAD OF THE GOVERNMENT OR ANYTHING LIKE THIS, IT'S ALMOST COMPLETELY AUTOMATIC. YOU SEE, I LIVE IN CLEVELAND, AND IN WASHINGTON, D.C., IT'S COMPUTED IN AN IBM MACHINE THAT THE PARTICULAR PLANT THAT I'M WORKING IN IS NO LONGER NEEDED, THEN I WOULD HAVE TO GET UP AND LEAVE TO, SAY, LOS ANGELES, WHERE THE PLANT IS NEEDED. [MODERATOR: THIS IS QUITE A LONG STATEMENT. LET ME INTERRUPT YOU. THIS IS UNDER THE THEORY YOU WERE DISCUSSING WITH YOUR PROFESSOR OR WHAT YOU ARE ASSUMING IS THE THEORY OF TECHNOCRACY.] IT'S THE END RESULT OF TECHNOCRACY. IT'S NOT THE THEORY OF. [MODERATOR: WELL, LET'S FIND OUT IF OUR TECHNOCRACY SPOKESMEN AGREE WITH YOU. I HARDLY THINK THEY WILL.] I HARDLY DO, TOO. Vern Carter: Technocracy is designed for the production and distribution of the required goods and services for your survival and a minimum amount of time. Certainly if you are only required to serve four hours a day, four days a week, from the age of 25 to 45, you'd be able to find ample time for individual expression, because you would have the means at your disposal to travel the length and breadth of this continent to search and research any item of knowledge that you cared to and enjoy all the pleasures of this great continent of ours. WHAT ABOUT THOSE WHO COULDN'T GIVE A HOOT-AND-HOLLER

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

ABOUT PURSUING ANY INTELLECTUAL PURSUITS OR ANYTHING. YOU KNOW, THIS JUST ISN'T THEIR CUP OF TEA. We're going to have enforced leisure, and we probably will have to do a great deal to encourage people to develop an interest in using that leisure to their own enjoyment. WELL, THEN, YOU WILL HAVE SOMEBODY POINTING A FINGER AND SAYING, "YOU WILL ENJOY YOURSELF, EVEN IF IT KILLS YOU," THIS SORT OF THING? Now this, of course, is not true. The point is that with automation coming on into hand, we will not be working. Is it better to work with adequate facilities to enjoy life or to work on a small remittance of unemployment compensation, social security, or old-age pensions?

MR. SCOTT, DO YOU HAVE ANYTHING TO ADD? Well, I think they're off base on this, because they're making a series of assumptions that human beings are going to be pushed around without any consideration as human beings. After all, the purpose of our operating a society is for the human beings. That's the reason Technocracy has done all of this designing -- to facilitate the use of energy and the consumption of resources for the satisfaction of the wants of man, I THINK THE YOUNG MAN ON THE TELEPHONE WAS ASSUMING -- AND I CAN SEE HOW HE MIGHT -- THAT THIS WAS AN ATTEMPT, ALTHOUGH NOT A PURPOSEFUL ATTEMPT, OF TAKING HUMANITY OUT OF HUMAN NATURE ALMOST. Yes, something of that kind.

HOW DO YOU PROPOSE TO MAKE ANYONE OR EVERYONE COOPERATE WITH THIS PLAN, SINCE I THINK THAT EVERYONE, OR ALMOST EVERYONE, BEING HUMAN, WOULD EDUCATE THEMSELVES TO THE MINIMUM AND GET THEMSELVES THE EASIEST JOB AND WANT TO LEAVE THE HARD JOBS TO SOMEONE ELSE, AND THERE WOULD BE NO ONE TO FILL THE HARD JOBS. [MODERATOR: DO YOU REALLY BELIEVE THAT, THAT PEOPLE ARE LOOKING FOR THE EASY JOBS IN LIFE?] YES, IF THEY WOULD GET THE SAME BENEFITS OUT OF TAKING AN EASY JOB. [I DON'T KNOW WHERE YOU ARRIVED AT THIS. DO YOU AGREE WITH THIS, MR. CARTER, THAT THIS IS THE PRINCIPLE OF EVERYONE WANTING TO TAKE THE EASY WAY?] I don't think that Technocracy anticipates that people will refrain from wanting to perform useful functions. We think that Technocracy considers that when you create the proper physical environment, you create a healthy individual who will then have initiative, and he can find incentive in a society that furnishes to him the physical goods and services which Technocracy proposes.

ALL RIGHT, NEXT QUESTION.

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

IT WAS MENTIONED EARLIER IN THE SHOW THAT TECHNOCRACY WAS IN NO WAY LIKE COMMUNISM. I WAS WONDERING -- I'VE READ KARL MARX'S "COMMUNIST MANIFESTO," AND IT IS STATED THAT HE WAS WORKING FOR A ONE-CLASS SOCIETY. NOW AS FAR AS I'VE HEARD SO FAR, TECHNOCRACY IS JUST ABOUT THE SAME THING. HOW IS IT DIFFERENT FROM COMMUNISM?

MR. SCOTT? I think that's perfectly obvious. Communism is a philosophy. This is designed to operate the physical functions of a continent, and we do not say that all human beings will be alike or that their tastes will all be the same. Under a Technocracy, they do not have to believe in Marx or anything else unless they wish to. Marx wanted all power to the workers. Technocracy proposes to eliminate toil, and if you eliminate toil, you haven't any workers, which would be kind of upsetting to Marx, of course. If there is no toil, there is no exploiting of the bourgeoisie either, which is very interesting. [WHAT ABOUT CERTAIN JOBS THAT YOU CAN'T VERY WELL DO WITHOUT TOIL, LIKE BARBERS, AS AN EXAMPLE?] Yes, but it's not toil in the sense that we have it today. You'd still have doctors, nurses, therapists, and everything else, more so than you'll have now, but it would be shorter and much more competent and with much greater facilities. That is not in the same category. The barber could be underpaid today, if he gets a living wage if he's in some out-of-way place; but then the barber would get as much as the individual he shaves.

I HAVE A COUPLE OF QUESTIONS AND AN OPINION. [LET'S GET THE OPINION FIRST, O.K.?] O.K., THE OPINION IS: I'VE BEEN TO THIS TECHNOCRACY IN EAST CLEVELAND HERE, AND I SAW THIS SIGN THAT SAYS THAT MAN IS JUST A MERE ENGINE THAT JUST HAS TO WORK. I'D HATE TO SEE THE DAY WHEN WE'D BE REDUCED TO JUST BEING CALLED ENGINES WITHOUT HAVING ANY MOTIVES OR FEELINGS OR EMOTIONS. QUESTIONS: IN THE BEGINNING, HE SAID HE HAD NO POLITICAL MOTIVES IN TECHNOCRACY. NOW HOW DO THEY PLAN TO PUT THEIR PROGRAM INTO EFFECT UNLESS THEY GET INTO POLITICS? OR DO THEY PLAN A MASS REVOLUTION OF THE PEOPLE? HE SAID CITIZENS OF THE UNITED STATES -- THE ONES THAT ARE CITIZENS -- WOULD RECEIVE THE MONEY JUST BECAUSE THEY ARE CITIZENS. WHAT ABOUT THOSE KINDS OF PEOPLE WHO AREN'T CITIZENS OR WHO AREN'T QUALIFIED FOR CITIZENSHIP, LIKE ALIENS?

MR. SCOTT, ARE THERE ANY COMMENTS FIRST ABOUT THE SIGN THAT SAYS MAN IS A MERE ENGINE? ARE YOU FAMILIAR WITH THAT SIGN? No,

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

I've never heard of that sign. PERHAPS MR. CARTER IS. The sign that he refers to indicates that man's consumption of materials is like an engine. He needs water, fuel, food. His consumption of these articles is the same as an engine -- he has to reduce them to energy in order to live and breathe, these things upon which his survival depends. And it's this approach that Technocracy makes to the physical requirements of man before he can even be an intelligent human being. If you ignored these physical requirements, there wouldn't be anybody here at all. [THEN IT DOES NOT BELITTLE MAN?] It does not belittle man at all. It recognizes the fact that if the air was shut off in this room here, there wouldn't be anybody talking, that's for sure.

WHAT ABOUT THE QUESTIONS THE GENTLEMAN ASKED, MR. SCOTT? What question is that? ABOUT NO POLITICAL MOTIVES. No, Technocracy has no assumption of power theories. We're not a political party; we're not a philosophic movement. THEN HIS QUESTION WAS, HOW WILL YOU GET THE THEORY INTO EFFECT THEN? Technocracy is not going to do that. The march of events will compel the people of this country. Let me put it this way: If Lake Erie falls another two feet, what will people do in Cleveland? Will the boats go up the Cuyahoga River? Hardly. [LET ME ASK YOU THIS, THEN. IS IT NOT TRUE THAT SOME HIGHLY RESPECTED ECONOMISTS ARE NOW, IN EFFECT, BORROWING FROM SOME OF THE THEORIES OF TECHNOCRACY? I HAVE REFERENCE TO RECENTLY SOME 30-40 ECONOMISTS HEADED BY, I BELIEVE, ROBERT THEOBALD, SENT A LETTER TO THE PRESIDENT THAT THEY START THINKING, NOW, THIS YEAR, ABOUT A GUARANTEED INCOME FOR EVERYBODY. IS THIS NOT A PART OF YOUR PRESENTATION?

Well, no, they're trying to move in the same direction and trying to catch up to us, is all they are doing, and we wish them well, but as the pressure of events moves up, it's going to compel more and more people to move in that direction. Technocracy stated 32 years ago that we would never ask the public of this country to indulge in either bullets or ballots.

I THINK THE OTHER PART OF THE QUESTION WAS -- AND LET ME CHANGE THE QUESTION JUST A LITTLE BIT -- THE GENTLEMAN WANTED TO KNOW ABOUT THE CITIZENS OF THIS COUNTRY. I'M SURE YOU MENTIONED CITIZENS OF THIS CONTINENT -- EVERYBODY LIVING ON IT, NOT JUST CITIZENS OR NATURALIZED CITIZENS -- WOULD BE ELIGIBLE FOR THESE ADVANTAGES OF TECHNOCRACY. IS THAT CORRECT? Everybody living on

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

the continent would be eligible. WHY JUST THIS CONTINENT? HOW ABOUT THE REST OF THE WORLD? HOW WOULD THEY SURVIVE ....? A continent is the minimum unit for social planning, just as the minimum unit planned and designed for water control is a watershed of a major river or lake system. The Missouri-Mississippi watershed, for instance, occupies over 43 percent of continental United States, and the minimum size for planning in production is an entire industry. So, North America is the most advanced technologically, and that's why it is proposed here. It can be done on other continents, but then that's up to the people of other continents. WHY SHOULD IT BE UP TO THE PEOPLE OF OTHER CONTINENTS? Why, because they live there. After all, it is not exactly our business to go over and show them at this time unless we can show them by example. WHY, THEN, WOULD IT BE OUR BUSINESS TO SHOW THE PEOPLE OF CANADA, FOR INSTANCE, OR ISN'T THERE AN ARBITRARY BORDERLINE YOU ARE DRAWING? YOU'RE SAYING IT'S A MINIMUM ON A CONTINENTAL BASIS. WELL, THIS IS ONLY AN OPINION. I'M SURE OTHERS WOULD SAY YOU COULD DO IT IN A ONE-MILE-SQUARE AREA OR YOU COULD DO IT NATIONWIDE OR A WORLD-WIDE. WHY JUST CONTINENT-WIDE? Because the continent is the minimum area that you can start to plan for. Canada is part of the continent, part of our power lines, our pipe lines, and our railways, our rivers, water, they run across the Canadian boundary line; in other words, we cannot do anything unless you included Canada, Mexico, and the continent.

THE HOURS THAT MR. CARTER STATED THAT PEOPLE WOULD BE WORKING WOULD BE BETWEEN 25 AND 45 YEARS OF AGE. I WAS WONDERING IF THIS INCLUDED WOMEN WITH CHILDREN AT HOME. IF SO, WHAT HAPPENS TO THE CHILDREN -- PRE-SCHOOL CHILDREN -- WHO IS GOING TO TAKE CARE OF THEM AND EDUCATE THEM AND GIVE THEM THE MOTHERLY LOVE DURING THOSE FOUR DAYS? [MODERATOR: DOES THIS INCLUDE WOMEN, TOO, THEN?] VERN CARTER: This includes every man, woman, and child on the continent. In this design of Technocracy of machines for living certainly includes medical care centers. nurseries, and all of the things which would implement the opportunities of women to have their children properly cared for and for them to participate in society their required time. OH, I THINK YOU'RE IN TROUBLE NOW. OH, NOW I THINK WE'RE IN TROUBLE WHEN WE INFRINGE UPON PEOPLE'S RIGHT TO BE JUST A MOTHER AND NOTHING MORE. MR. SCOTT, WOULD YOU AGREE TOTALLY WITH MR. CARTER'S STATEMENT? What is his statement? MR. CARTER SAID THAT WOMEN WOULD ALSO BE REQUIRED TO WORK BETWEEN 25 AND 45 WITH PROPER CARE TAKEN FOR

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

NURSERY CARE AND EVERYTHING. Well, that happens today and will happen anytime. THAT HAPPENS BY CHOICE TODAY DOESN'T IT FOR THE MOST PART OR BY ABSOLUTE NECESSITY. There isn't much choice today if you haven't got the wherewithal, unless you have an independent income. IT WILL BE INTERESTING TO GET OUR LISTENERS' REFLECTIONS ON THAT. WOMEN OF THE WORLD ALSO WILL BE REQUIRED -- REQUIRED, THAT IS, IT ISN'T A PRIVATE RESERVATION? If they, are healthy and able-bodied, yes. THIS HAS BEEN A BURDEN THAT MEN HAVE LONG SAID, "WELL, WE'RE THE ONES THAT HAVE TO WORK. WOMEN HAVE AT LEAST A CHOICE." LET'S HEAR WHAT THE LISTENERS SAY ABOUT THAT. 241-5367 IS THE NUMBER. LET'S HAVE THE NEXT CALL. GO AHEAD, YOU'RE IN CONTACT.

I'M A SALESMAN, AND IN THIS PROGRAM OF TECHNOCRACY, IS THERE A PLACE FOR SALES PEOPLE AND ADVERTISING PEOPLE TO MAKE THEIR LIVING OR WILL THEY HAVE TO FALL INTO LINE WITH THE REST AND GO INTO ANOTHER LINE OF WORK? [MODERATOR: LET ME ASK ALSO IF THERE IS ROOM FOR A GUY WHO DOES COMMERCIALS ON THE RADIO? MR. SCOTT.] He asked the question of whether a salesman .... ADVERTISING PEOPLE AND PEOPLE LIKE THAT, YES .... would have a place as salesman? Well, may I point out that the process of salesmanship and merchandising under this Price System is a process of compromising original intelligence in order to approach the common denominator, and a continuum of that process leads inevitably to complete capitulation and you wind up lower than the common denominator you're approaching. Under a non-Price System, there would be no necessity to have salesmanship or merchandising, and the said salesman who asked that question could be more profitably employed -- engaged or whatever the term -- in some other form of human endeavor.

ALL RIGHT. OUR SUBJECT THIS EVENING IS "THE SOLUTIONS OF TECHNOCRACY." I'LL BE GETTING BACK TOGETHER WITH MY GUESTS OF THE EVENING IN CONTACT WITH MR. VERN CARTER, TECHNOCRACY ORGANIZER, AND ON THE CONTACT LINE TO RUSHLAND, PENNSYLVANIA, WITH HOWARD SCOTT, THE DIRECTOR-IN-CHIEF AND FOUNDER OF TECHNOCRACY INC. WE'LL HAVE THE NEXT CALL FOLLOWING THE NEWS ON KYW RADIO, CLEVELAND, OHIO, A GROUP W SERVICE OF WESTINGHOUSE BROADCASTING.

LET'S HAVE THE NEXT QUESTION, PLEASE. THIS IS HARVE MORGAN, YOU'RE IN CONTACT.

I WOULD LIKE TO KNOW IF THIS SYSTEM PROVIDES FOR

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

ENTERTAINMENT -- OF MASS ENTERTAINMENT FOR ALL THESE PEOPLE WHO ARE OUT OF WORK, BECAUSE EVENTUALLY THEY WOULD EXHAUST ALL CHANNELS OF DIVERSION? MR. SCOTT, DID YOU HEAR THE QUESTION? No. Mr. Carter can handle that one. O.K. The provision for recreation, of course, would be greater than ever before in history due to the planning of technological programs to allow first, of course, the leisure time and economic security by which you could take advantage of these recreational areas. In addition to this, providing for transportation to the entire continent so that every man, woman, and child could visit every part of the continent to see all of the things many people would like to see at the present time but cannot afford.

I WONDER IF THAT, THOUGH, WOULD NOT BE RECREATION FOR RECREATION'S SAKE? THE WORD "RECREATION," IF I'M NOT MISTAKEN, COMES FROM THE MEANING TO RE-CREATE, RE-CREATE YOURSELF WHATEVER COULD BE SOMETHING FOR UNDER THAT PURPOSE AGAIN. WHAT IS THIS PURPOSE WE ARE HAVING RECREATION FOR? WE ARE RE-CREATING OURSELF FOR WHAT? FOR MORE RECREATION? Technocracy's program recognizes the advent of automation is going to give people leisure time regardless of their desires. The fact that Technocracy includes the provision of facilities for enjoying recreation -- of course, it is entirely up to the individual whether they do or not. Most sports today are spectator sports. I think if people have the proper facilities, there will be more participatory sports indulged in. IS THIS NOT -- WHEN YOU SAY "REGARDLESS OF THEIR DESIRES," THAT'S LIKE SAYING, "YOU'LL TAKE THIS AND EAT THIS AND ENJOY THIS STRAWBERRY PIE REGARDLESS OF YOUR DESIRE." PEOPLE DO NOT LIKE TO TAKE THINGS REGARDLESS OF THEIR DESIRE, DO THEY? It doesn't make any difference when they're going to be displaced with automation whether they like to be unemployed or not. It is going to be quite important that, while they are forced to have a certain amount of leisure, they have the facilities for enjoying that leisure. ALL RIGHT. WE'LL GET MORE REACTION ON THAT FROM LISTENERS.

WHAT WOULD YOU DO WITH PEOPLE LIKE MYSELF WHO WOULD REFUSE TO CONFORM TO TECHNOCRACY?

ALL RIGHT, MR. SCOTT, Well, after all, Technocracy is not the government of the future. When you're asking what would happen to you on a government of the future on this continent, that's a question that nobody can answer. After all, we're not

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

speaking for the future government. We're merely proposing the designs of operation. What would happen to you now if you refused to obey the laws of United States? YOU WOULD HAVE NO ROOM THEN FOR REBELS WITH OR WITHOUT A CAUSE. ALL RIGHT, LET'S HAVE THE NEXT CALL AT 241-5637. WE'LL HAVE THAT CALL COMING UP IN JUST A MOMENT.

HOW IS IT POSSIBLE TO SUBLIMATE SELFISHNESS AND GREED, THAT DRIVING FORCE BEHIND CAPITALISM? THIS DYNAMIC AVARICE MUST BE COMPENSATED FOR, BUT HOW? [MODERATOR: THAT'S THE KIND OF QUESTION I ASKED EARLIER. HOW DO YOU GET RID OF AVARICE AND GREED? IT'S PART OF HUMAN NATURE, ISN'T IT?] VERN CARTER; Human nature is the same, but human behavior changes in your environment, and Technocracy proposes an environment in which there would be no opportunity for avarice or greed, and each one is entitled to his share of the productive capacity of the continent. Certainly his nature will respond, and his behavior will be corrected to the new culture of abundance.

ALL RIGHT. NEXT CALL THEN -- 241-5637. YOU'RE IN CONTACT.

YES, I THINK THIS GETS MORE LOGICAL AS IT GOES ALONG. I REALLY ENJOY LISTENING TO THIS. [MODERATOR: I KNEW YOU WOULD, JOE.] I HAVE A FEW QUESTIONS THOUGH. HOW OFTEN WOULD THESE ENERGY CERTIFICATES BE ISSUED AND FROM WHERE WILL THEY BE ISSUED AND WILL THEY BE LIMITED TO THE ACTUAL AMOUNT OF PRODUCTION -- OF COURSE, THEY WOULD. THERE'S NO OTHER WAY TO LOOK AT IT, ISN'T THAT RIGHT? VERN CARTER: The Technocracy energy certificate is a method of national accounting, is proposed to be issued every two years to guarantee to the individual an income equivalent to his share of the productive capacity of the continent. This cannot be stolen or given away or loaned to anyone. BUT SUPPOSE I'M A REAL SPENDTHRIFT. YOU GIVE ME MINE AND I GO OUT AND HAVE A REAL BALL. I BLOW THE WHOLE BIT FOR THE TWO YEARS. WHAT DO I DO THEN, STARVE? Certainly there would have to be a certain amount of social control involved; however, I don't anticipate if you have an energy certificate to buy all the things you need, you have all the facilities to go and visit and see all the things you want to see that you would be that greedy. YOU'LL ALWAYS HAVE IRRESPONSIBLE PEOPLE, WON'T YOU, OR WILL THEY ALSO RESPOND TO THIS BEAUTIFUL ENVIRONMENT? The program of Technocracy would provide such a [use] of the physical things that people want that they could learn to regulate their consumption in accordance with

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

the energy certificate. THEY COULD, BUT HERE GOES HUMAN NATURE AGAIN. WHAT ABOUT GAMBLING? I doubt that there would be any possibility of gambling with their energy certificate .... DO YOU WANT TO BET? (LAUGHTER) WITH HUMAN BEINGS? THEY WILL ALWAYS FIND A WAY TO GAMBLE, I AM TOLD, The Price system is designed something like a crap game, in which people attempt to gain more from their fellow man, but when you have an adequate amount for use, he would be foolish to enter a crap game and let one man walk away with it all when he would have to go without. MILLIONAIRES WOULD BE FOOLISH, TOO, TO RISK A FORTUNE THEY ALREADY HAVE ON THE POSSIBILITY OF BUILDING OTHER FORTUNES THAT THEY REALLY DON'T NEED.

ALL RIGHT, LET'S HAVE THE NEXT CALL. WE'LL HAVE IT COMING ALONG IN JUST A MOMENT.

IS MR. SCOTT AWARE OF THE FACT THAT NO RULING CLASS EVER GAVE UP THEIR RULE WILLINGLY? THEREFORE, BY WHAT MEANS OR WHAT KIND OF ORGANIZATION OR FORCE DOES HE PROPOSE TO USE TO DO AWAY WITH THE PRESENT CAPITALISTIC, POLITICAL STATE, AND AT THE SAME TIME TO GET AND GAIN CONTROL OF ALL THE PRIVATE PROPERTY OF THE RULING CLASS AND THE MEANS OF PRODUCTION AND DISTRIBUTION? WHAT IS HE PROPOSING TO DO ABOUT THIS? WHAT KIND OF AN ORGANIZATION WILL HE USE TO GET THE POWER?

MR. SCOTT? Technocracy doesn't propose to do anything about it. That's up to the people of United States and Canada. HOW DO YOU FEEL IT WILL COME ABOUT, THEN? We are consulting social engineers. The engineers who design a bridge are consulting engineers, but they do not fabricate the materials; neither do they erect the bridge. The fabrication of materials and the erection of bridges are in the hands of other people, and to do the job on this continent, the people of United States, Canada, and the other entities will have to do it. IT'S STILL UNCLEAR, I THINK, TO THE LISTENERS AND TO ME HOW PHYSICALLY, ACTUALLY THIS WILL COME ABOUT. YOU SAY THE PEOPLE .... EXACTLY HOW? Well, that's up to them. WELL, YOU DON'T HAVE ANY GUIDELINES FOR THAT, THEN? We do not have any theory of assumption of power whatsoever. That's up to the population of United States and Canada and the rest of the continent. When the march of events forces it, then they'll take action, but Technocracy Inc. cannot guarantee what action they will take.

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

VERN CARTER: Technocracy does not advocate or predict a physical crisis. You might compare this to a flood. When the water gets up around their ears, they'll all want a ride.

ALL RIGHT, LET'S RIDE ALONG WITH THE NEXT CALL.

I WANT TO KNOW HOW THEY'RE GOING TO RUN THE RAILROAD ON FOUR HOURS A DAY. [MODERATOR: I'M SURE DIFFERENT PEOPLE WOULD RUN THE RAILROAD, WOULDN'T THEY?] VERN CARTER: The modern railroad is designed to travel from coast-to-coast in excess of 200 miles an hour, and there won't be anybody running it. WILL YOU EVEN HAVE RAILROADS PROBABLY. Railroads will probably be built to the extent and improved so that they can take care of mass transportation, because they will be safer than airplane travel and certainly safer than automobile travel.

NEXT QUESTION.

I WOULD LIKE TO KNOW -- THERE WAS A PICTURE OUT ON TECHNOCRACY, I WOULD SAY MAYBE TWENTY-FIVE OR THIRTY YEARS AGO, AND THIS PICTURE [MODERATOR: THE NAME OF IT WASN'T "1984", WAS IT?] PARDON? [GO AHEAD, SIR.] NO, THIS -- I'VE SEEN THIS PICTURE. THERE WAS A LOT OF CONTROVERSY ABOUT IT, AND IT WAS TAKEN OFF THE SCREENS IN THIS COUNTRY. AS FAR AS I KNOW, TECHNOCRACY AT THAT TIME WAS SO FARFETCHED, BUT NOW IT SHOWS THAT THE MASS IS GOING UP AND DOWN THESE MOUNTAINS, AND IT SHOWED SLAVES DOING ALL THE WORK [MODERATOR: IT SHOWED SLAVES?] WELL, SO-CALLED AMERICAN SLAVES. [MODERATOR: JUST A MOMENT. LET ME FIND OUT IF MY GUESTS HERE KNOW ABOUT THIS. DO YOU, MR. CARTER?] I'm afraid I never heard of it. MR. SCOTT, DO YOU KNOW ABOUT THIS FILM? Are you talking to me? YES, WE WERE, BUT NEVER MIND, YOU DIDN'T HEAR THE QUESTION, APPARENTLY. THE GUESTS HAVE NO KNOWLEDGE OF THIS PICTURE. ARE YOU SURE IT WAS TECHNOCRACY? Yes, it was, WELL, APPARENTLY, I GUESS YOU'RE WRONG, BECAUSE THE PEOPLE HERE -- THERE ARE FOUR OF THEM I AM LOOKING AT RIGHT HERE IN THE STUDIO, AND THEY HAVE BEEN WITH TECHNOCRACY A LONG TIME, THEY KNOW OF NO SUCH FILM, SO IF YOU CAN BE MORE EXPLICIT. HAVE YOU ANYTHING ELSE TO SAY? No, I just wondered what had happened to this film. WELL, APPARENTLY YOU WERE MISTAKEN, BECAUSE IT DOES NOT HAVE ANYTHING TO DO WITH TECHNOCRACY. MR. CARTER? The willing and tireless slaves of Technocracy is the technology of this continent.

ALL RIGHT. WE'LL HAVE THE NEXT CALL.

11-19-64

MR. SCOTT, I AM SURE YOU DON'T MEAN THAT THERE IS NO CONNECTION BETWEEN TECHNOCRACY AND THE SLP [MODERATOR: WHAT IS THE SLP, THE SOCIALIST LABOR PARTY?] YES. I DON'T MEAN THE FALSE SOCIALISM OF SAY A NORMAN THOMAS. I HAVE STUDIED BOTH YOUR PROGRAMS TO A GREAT DEPTH, AND I FIND ONLY A MINOR DISAGREEMENT AS REGARDS METHODS OF DISTRIBUTION AND/OR PURCHASING POWER -- AND (2) [MODERATOR: NOW THIS SOCIALIST LABOR PARTY -- SO WE CAN DIFFERENTIATE -- THERE ARE SO MANY SOCIALIST LABOR PARTIES. THIS IS THE ONE THAT MR. IS THE EXECUTIVE OF STATE SECRETARY OF, THAT WAS ON THIS PROGRAM LAST WEEK?] YES, AND MR. WERE PRESIDENT AND VICE PRESIDENT [AND THEY WERE ON THIS PROGRAM LAST WEEK?] YES. [ALL RIGHT, NOW WE KNOW ABOUT WHICH SOCIALIST PARTY YOU'RE SPEAKING OF. THERE ARE SO MANY OF THEM RUNNING AROUND. GO AHEAD. YOU WANT TO KNOW IF THERE IS A CONNECTION BETWEEN THE SOCIALIST LABOR PARTY?] I CAN'T CONCEIVE THAT THERE IS POSSIBLY ANY -- OR RATHER I SHOULD SAY TOO MUCH OF A DISCONNECTION. [ALL RIGHT, LET'S FIND OUT. MR. CARTER?] There is no connection whatsoever of Technocracy with any other organization on this continent or abroad. Technocracy is a scientific approach to the social problems. All other organizations known are political approaches with varying degrees of political control of society. Technocracy is a technological control and has nothing to do with any political organization of any kind.

MR. SCOTT, WOULD YOU AGREE WITH THIS GENTLEMAN THAT PERHAPS SOME OF THE ENDS OF YOUR PROGRAM ARE THE SAME AS THE ENDS DESIRED BY THE SOCIALIST LABOR PARTY, OR NOT? No, I would not; in fact, the end results of Technocracy have nothing in common with any Socialist Labor Party, Socialist Party, Communist Party, or Fascist organizations.

ALL RIGHT. YOU ARE IN CONTACT.

I WONDER WHY THEY HAVE TO PUSH SOCIETY TO SUCH AN INDUSTRIAL SPEED, WHY COULDN'T WE DO IT BETTER, SAY, IN HAVING A CONTROL ON POPULATION? [CONTROL OF POPULATION IS PART OF THE PROGRAM. MR. SCOTT?] Population control? Yes. Human beings are energy-consuming devices [IS THAT ALL WE ARE?] and at the rate of the population explosion -- Mexico, for instance, has a birthrate of 45 and over; Venezuela 45 to 47. Those are three times that of Japan, and there will have to be control of population growth,

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

not the so-called "voluntary parenthood" of planned parenthood, but a collective control of the growth curve of these energy-consuming devices known as human beings. [WHAT WOULD YOU DO ABOUT THE RELIGION OF THESE ENERGY-CONSUMING DEVICES KNOWN AS HUMAN BEINGS? THERE WOULD BE RELIGIOUS OBJECTIONS THAT MIGHT EXIST.] Well, Technocracy is not opposed to any religion. It is merely pointing out that when the situation develops, there will have to be a control instituted, whether anything concurs or not. [AND THE RELIGION WOULD JUST BE FORCED TO GO ALONG?] No, that is not our job. That's the job of the government that operates it, [BUT THE RELIGION NEVERTHELESS WOULD HAVE TO GO ALONG WITH THE BIRTH CONTROL?] Well, they are apparently moving in that direction now.

GO AHEAD. LET'S HAVE THE NEXT CALL.

I AM IN COMPLETE AGREEMENT. I HAVE A COMMENT TO MAKE, THAT THERE IS GOING TO BE SOME NEED FOR SOME SOLUTION FOR THE INEVITABLE THING THAT IS HAPPENING RIGHT AT THE PRESENT TIME. I HAVE BEEN CHECKING AND WATCHING ALL THESE YEARS SINCE AUTOMATION REALLY BECAME THE MAIN TOPIC, THAT THERE HAS BEEN VERY LITTLE CUTTING DOWN OF THE WORKING TIME; IN FACT, I NOTICE THAT THERE ARE ONLY TWO INDUSTRIES THAT I KNOW THAT HAVE SHORTER WORKING. THAT IS, IN NEW YORK CITY, I BELIEVE THE ELECTRICIANS, AND I BELIEVE THE RUBBER INDUSTRY HAS A SHORTER WORKING WEEK. NOW THOSE ARE THE INEVITABLES AS I SEE THEM THAT MUST COME ABOUT, BUT SO FAR IT HAS BEEN VERY MINIMAL. NOW, WHAT I'M WONDERING ABOUT IS THAT IF THESE PEOPLE THAT ARE CONCERNED HOW IT'S GOING TO COME ABOUT, THE VERY FACT THAT WE ARE DOING SO LITTLE ABOUT IT IS JUST BRINGING THE INEVITABLE, AND IT WILL HAVE TO COME ABOUT, WHETHER YOU WANT IT OR NOT. HOW IT WILL COME ABOUT -- WHETHER IT WILL BE TECHNOCRACY OR WHAT HAVE YOU, WHATEVER THE NAME, SOMETHING WILL HAVE TO BE DONE. THEN I WOULD LIKE TO ASK THIS QUESTION. MR, HARVE MORGAN, THAT YOU, LIKE MANY PEOPLE, ARE AWFULLY CONCERNED ABOUT WHAT WILL BE DONE WITH THE IDLE TIME. I WONDER WHY NOT BE CONCERNED A LITTLE BIT WHAT'S BEING DONE WITH THE IDLE TIME OF THE PEOPLE AT THE PRESENT TIME THAT ARE IN THE ASHCAN -- THE SO-CALLED PEOPLE THEY HAVE NO USE FOR ANYMORE, THAT ARE OVER FIFTY, WHO ARE OUT OF WORK OR LOOKING FOR WORK -- THE UNEMPLOYED -- AND I AM TALKING ABOUT THE ONES WHO ARE PERFECTLY CAPABLE OF WORKING, AND THERE ARE MANY OF THEM WHO ARE DOING NOTHING. I WISH SOMEBODY WOULD WORRY ABOUT THE WAY THEY SPEND THEIR TIME. [I'M NOT GOING TO COMMENT, SINCE I DON'T ANSWER QUESTIONS. THANK YOU VERY MUCH. WE'LL TAKE IT AS A STATEMENT.]

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

LET'S HAVE THE NEXT CALL.

YOUR GUESTS STATE THAT IN THE SYSTEM OF TECHNOCRACY THAT ALL THE NEEDS OF THE POPULATION WILL BE SUPPLIED. I WOULD LIKE TO KNOW WHO WILL DETERMINE THESE NEEDS AND HOW THEY WILL BE DETERMINED, SINCE, AS I UNDERSTAND IN TODAY'S SOCIETY, SOME PEOPLE THINK THEY NEED MORE THAN OTHER PEOPLE. VERN CARTER: The program of Technocracy provides for functional administration. Each function has a determining organization as to how many things people need, whether it's potatoes, transportation, housing, and this is approached by a scientific point of view. The requirements of the continent can be met only by continental measurement, and these measurements can be made only by scientific approach to the problem. [BUT SOMEONE WILL TELL YOU WHAT YOU NEED? YOU WON'T SAY, I NEED THIS, AND THEN GO GET IT?] The energy certificate provides a method of determining within an hour what people's requirements are, because at the time they present their energy certificate to purchase goods and services, they can express a desire for a change or a different type of article, and this will be taken into consideration.

ALL RIGHT. LET'S HAVE THE NEXT CALL.

I AM A GRADUATE STUDENT HERE AT WESTERN RESERVE, AND I RECOGNIZE MANY OF THE PROBLEMS OF THE PRESENT AND THE FUTURE THAT THE GENTLEMEN TONIGHT ARE TRYING TO SOLVE OR AT LEAST PARTIALLY SOLVE. I HAVE TWO QUESTIONS. I AM WONDERING IF THE GENTLEMEN ARE NOT ADVOCATING A WELFARE STATE UNDER DEMOCRACY, BUT RATHER A TOTALITARIAN WELFARE STATE WITH A CLOSED "POLITICAL SYSTEM" AND THE PRACTICAL REDUCTION OF HUMAN DIVERSITY TO SUBHUMAN UNIFORMITY OF FREEDOM OF SERVITUDE. MY SECOND QUESTION IS, BY WHAT MEANS WOULD THESE GENTLEMEN INITIATE THEIR SYSTEM? [MODERATOR: NOW THAT QUESTION HAS BEEN ASKED SEVERAL TIMES, AND I DON'T GUESS WE ARE GOING TO GET A SATISFACTORY ANSWER THAT WE CAN UNDERSTAND. AS FAR AS THE FIRST PART OF THE QUESTION IS CONCERNED, LET ME SAY THAT I AM SURE TO YOU, MR. CARTER, AND YOU, TOO, MR. SCOTT, THAT THIS IS WHAT IT SOUNDS LIKE THAT IT'S A FASCIST STATE ALMOST, BUT I'M SURE YOU WON'T AGREE THAT THAT IS WHAT YOU INTEND, BUT IT SOUNDS LIKE IT.] HS: This is far from a fascist state. A fascist state would freeze all the people to the land and freeze them in their present occupations. [WELL, A TOTALITARIAN STATE, THEN?] Fascist. [WELL, LET'S USE TOTALITARIAN INSTEAD, THEN. WOULD YOUR

RADIO STATION KYW, CLEVELAND,  
INTERVIEW WITH HOWARD SCOTT  
AND VERN CARTER

11-19-64

ANSWER STILL BE THE SAME?] Totalitarian is fascist, so that Hitler's first act when he came to power was to freeze all the land, and agricultural production couldn't be sold or mortgaged, and then freeze all those workers on the soil so they couldn't move. Technocracy would move them off the soil. [THAT SOUNDS LIKE THE RIGHTS AND MOVEMENTS OF INDIVIDUALS WOULD BE CURTAILED TO A MUCH GREATER DEGREE THAN WE ARE USED TO NOW. MR. CARTER?] The faster movement of a vehicle -- the same thing would be true of the faster movement of a society -- would require a stricter and stricter control; however, as you move faster, you obtain greater freedom at the end of the line. It is the time that you have left after the required service is performed that is the real freedom that you are searching for and that you will have to accept because of the advance of science and technology. [THAT SOUNDS LIKE WHAT YOU'RE SAYING, AND THEN AGAIN, WHY YOU'RE NOT SAYING -- BE A SLAVE NOW FOR FREEDOM LATER, YOU KNOW, GO NOW AND PAY LATER.] Anyone who is required to operate a train must be there at the exact time if he wishes to earn his living or participate in society in that respect, but the better the train is designed and the quicker it makes its trip, the more leisure time he will have. That leisure time he will have to decide for himself how he wants to use it.

WELL, SPEAKING OF TIME, WE DON'T HAVE LEISURE TIME; IN FACT, WE HAVE NO TIME AT ALL LEFT. OUR TIME IS UP THIS EVENING ON "CONTACT". MY THANKS SO MUCH TO MR. VERN CARTER, TECHNOCRACY ORGANIZER, AND MR. HOWARD SCOTT, THE DIRECTOR-IN-CHIEF AND THE FOUNDER OF TECHNOCRACY INC., FOR THESE VERY ENLIGHTENING AND ENJOYABLE 90 MINUTES ON "CONTACT" ON THE SUBJECT OF "THE SOLUTIONS OF TECHNOCRACY". THIS HAS GIVEN US SOMETHING TO THINK ABOUT, WHETHER WE AGREE OR DISAGREE WITH THE CONCLUSIONS AND THE DIRECTION IN WHICH THEY ARE POINTING. AND PERHAPS WE CAN HAVE ANOTHER PROGRAM AND TALK ABOUT IT AGAIN.

\* \* \* \* \*

EXCERPTS FROM TWO TELEPHONE INTERVIEWS  
BETWEEN HOWARD SCOTT  
AND  
12247-3, SEATTLE, AND 11855-2, LOS ANGELES  
March 21, 1965

We'd like to present to the Members there just a few salient facts. The United States Government in the last 25 years has \$980,970,000,000 on war and the preparation for war. That is quite an item! That amount of money could rebuild several continents and have enough left over to do almost anything; but all we have gotten out of it is billionaires, greater profits, more problems, and greater headaches than we ever had before in history. We are afraid of peace because we are a warfare-welfare state. We are frightened to death to disarm or to have peace, because that would involve 12 million unemployed individuals in the United States for whom we would have to find something to do besides manufacturing materiel for war and training for war. We are in a desperate state, so we are trying to escalate South Vietnam into World War III. It is pretty pathetic, but that is the way it is.

True, we are going to have more prosperity in certain sections and greater profits, more automobiles, TV sets, and almost everything. We can manufacture them at a rate that has never happened before in history. You will not know what to do with it, but in the meantime, in spite of all the billions in profits and capital expansion, we will still have with us more problems than we had 25 and 50 years ago.

We would like to present this to our Membership: that the water of Canada and United States is insufficient in the way it is being handled. It is being polluted with insecticides, pesticides, sewage, and everything else. Our land problem, our transportation problem, and our population problem -- let alone a few thousand others -- are not being dealt with. They are being shoved aside and covered up in the hopes that they won't make too much of a stink and too much noise when they are under the rug.

The population chart we sent out is the latest and most informative statistical recording of population increase by countries around the world -- some 129 countries. Some of the salient things are these: The population of the United States has really no knowledge of how fast the population explosion is occurring -- yes, they think it is somewhere but not here. Well,

it is here, and it is around the world at the same time. Nigeria, for instance, has 18 million more population than Nigeria or any other statistical body ever previously admitted, A number of countries in Africa that have been statistically listed as having 2.2 to 2.5 percent rate of growth annually now are found to have 4.7 to 5.4 percent rate of growth annually. Now this means you do not have 50 years, you haven't 25 years; you have less than 15 years in which to cope with the problem. This is very difficult for people to comprehend. For instance, Mexico is the largest Spanish-speaking country in the world. Mexico has 40 million population and is going up; in other words, increasing at 3.2 percent a year. That means that within a short time -- before 1980 -- Mexico would have 80 million in population; but Mexico has not sufficient soil or water to make a viable economic social order with 40 million, let alone 80 million. You may ask the fool question: What do we have to do with Mexico? Mexico is part of the Continent of North America, and if Mexico blows up socially, this country, United States, being the dominant economic entity of North America, will have the responsibility, whether we like it or not.

I advise every Technocrat in every Section to study those figures on population on those charts and to discuss it. You will then come to a greater realization of what we are facing than by merely reading newspaper articles.

QUESTION: There are a couple of questions of our policy in Vietnam, on escalating the war. We wonder if you would cover that just a bit.

We haven't had any. The United States has never had any real policy. It didn't have one under Franklin Delano Roosevelt. You have to bear in mind that if you want foreign policy, you have to have an internal policy, because the strategy of a foreign policy of a nation should be a reflection of its internal policy of operations, not a guesstimate of expediency. Franklin Delano Roosevelt was rescued by World War II; Harry Truman was rescued by the Truman War -- you know, the thing in Korea; Eisenhower got rescued from the Great Crusade by the Hungarian thing; and John Fitzgerald Kennedy got rescued by the Bay of Pigs. Now LBJ -- we haven't declared war -- we are only bombing and napalming the countryside for a few hundred miles north and south, but it proves to the country that he is doing what Goldwater would do if

he were president. So Goldwater said it and Johnson is doing it. What a cockeyed way to run a country! But it will have its effects, because bombing and napalming every village and hamlet in South Vietnam which is suspected of holding a Vietcong won't kill off or defeat the Vietcong, but it will drive hundreds and thousands of refugees into the urban centers; and the United States Marines can have the biggest baby feeding system in the world. What do you do when a million come in and surrender unconditionally?

QUESTION: The other question refers back to our own organization. They want to know if there is any indication on the continental scale of increased interest in the Organization of Technocracy?

Yes, there is definite interest here and there. It is not uniform, but the interest is increasing.

QUESTION: What is our best bet as far as keeping the word Technocracy before the public -- what are the tactics that you would suggest as being tops?

Driving an official painted car, writing letters, distributing literature, and getting subscriptions to our magazines. That is something every able-bodied Technocrat can do.

TELECONFERENCE  
CHQ AND NORTHWEST TECHNOCRAT OFFICE  
JUNE 17, 1967

Well, I suppose they're all-interested in the Middle East?

YES, THEY ARE. WE SENT NOTICES TO THE AREA INDICATING THIS WOULD BE A SUBJECT OF INTEREST TONIGHT.

It's very interesting. There are a lot of factors involved that are not brought out on TV or the official communiques or by United States, Russia, France, or anybody else, or the Israelis or the Arabs. Nobody seems to want to lay the fundamental factors on the line. They are all playing cards with their own particular little game.

To begin with, Israeli is not very large; I'm talking about pre-the-split Israeli -- 7,993 square miles, with a population of 2.6 million. That square mileage is just 400 square miles larger than the State of New Jersey with 7,521 square miles. That gives you some idea of the relative size.

The smallest Arab state is Lebanon. That has 4,000 square miles and a population of 2.3 million.

Israeli's geographic layout was an impossible one. The Jordanian bulge west of the Jordan River was a big bulge into the Israeli territory and was only 10 miles across the Israeli territory from the Jordan far western boundary to the Mediterranean. That could be cut in two very simply.

One has to pay the respects to Moshe Dayan and General Rabi of the Israeli military forces for their organization, their strategy, and their execution. Of course, you must realize that all Israelis, both male and female, were subject to military service to 49 years of age, and they had to serve one month per year in military training, and one day a month in that entire period; so the entire country was really mobilized and trained on a war footing, but their war would have to be fast, because mobilizing that percentage of the population, they had no reserves and they wouldn't be able to run their economy very well with that percentage of the total population involved in the armed forces. Is that clear?

YES, IT IS CHIEF. Now, is that coming through clear? YES, IT

IS.

They did a marvelous job in wiping out the Egyptian Air Force, mostly on the ground. The Egyptians weren't even on a military alert. Their anti-aircraft crews were unattending. They were out celebrating. That gives you some idea of the disjointed mess that the Arabs were in. The Israelis attacked the Egyptian airfields, the Jordanian, Syrian, and even went as far as to attack the Iraqi airfield at Baghdad. They therefore took the wind out of the Arabs military sails, you might say.

Egypt had MIG-21s and MIG-19s. The Israelis had the French Mistaire, and the French Mistaire is no match for the MIG-21 in the air; so, there's no excuse for the Arabs in that sense. The Arabs had, of course -- United States and Russia, France and Britain supplied equipment to Wallstein. Russian tanks and Russian Migs, of course, were predominant in the URA forces, but in case you did not know it, United States had \$400 million of ground to air missiles all ready to ship to Egypt.

TO EGYPT? Yes, they didn't get there. They have been on order for two years. LAUGHTER. Oh, yes, quite a laugh, isn't it? So, we were selling arms to any place we could peddle them, and the Russians were doing the same thing.

The Israeli forces did an excellent job, and the only thing they could do was win and win fast; they couldn't fight a long war. Now they have a problem. Well, let's review the Israeli economy before this started. Israel was being populated by emigrants into Israel from other countries -- Jewish. It reached the height of 240,000 a year, and the Israeli economy was expanding 10.4 to 10.6% a year up until '65. In '65 it fell off, and in '66 the emigrants into Israel dropped to 12,000. That's quite a drop from 230,000 to 240,000, and the exodus from Israel in 1966 was 11,000, and they were mostly trained scientists, engineers, administrators, doctors, etc., which they will probably never get back.

The sale of Israeli bonds and so on and the United Jewish Fund fell away to practically nothing; in other words, Israel was on the verge of bankruptcy. That is not generally known. Did that come through all right? YES, IT DID. WE'RE LISTENING VERY QUIETLY HERE, CHIEF. Oh, they are? THEY'RE TAKING IT ALL IN, INCLUDING

SOME NOTES.

In 1965-66, the expansion of the Israeli economy fell to 1.6% per annum instead of 10.5%. Last year, the construction in Israel fell off 50%, and for the first time since 1948, Israel was faced with large unemployment. Now this is a different story than what is being presented by even the Arabs in their hate for Israel. Here is a little 2 x 4 country with 2.6 million population and 7,993 square miles, prior to this conquest, and, of course, Mosha Dayan the other day stated in an interview that Israel, was not going to absorb the Arab refugees in the occupied territories, because if it did, then Israel would cease to be Jewish because there would be as many or more Arab refugees than there were Israelis. So that means that the refugees in the Gaza Strip, the Sinai, part of Syria, and the occupied part of Jordan, they will have to evacuate. That's a different story.

Now, Jordanians, in 1948 and in 1956, the Arab Legions were one of the finest military organizations in the Near East. Their fighting was so tough that the greatest Israeli losses occurred in the attack of the Israeli armed forces to take Old Jerusalem. This time, they took it, but Major General Dorf, who organized the Arab Legion, was no longer there.- He was British. He and his staff were moved out, and the Arab officers moved in to take over, and, as usual, the Arab hostilities and intrigues decimated the morale and the generalship of the famous Arab Legion. This is to point out a few things.

The Jews are now in control of the so-called Holy City of Judea. If they had waited three years more, it would have been nineteen centuries since the Jewish people as a nation and an entity occupied Jerusalem. The Roman Legions, in 70 A.D., demolished the temple and other buildings and left only the Wailing Wall; so, this is 1967, just three years short of nineteen centuries. Of course, the biblical stories that when the Jews migrated into the so-called Holy Land, it was the Land of Milk and Honey. Well, that was Madison Avenue malarkey then, and it is still Madison Avenue malarkey now. They haven't the soil, they haven't the water, and they haven't the resources. The capture of that Jordanian bulge west of the Jordan River, yes, will add a little more. They only produce 7 percent of their oil, and they have not enough arable land and enough water to create a viable economy that can stand much more population.

There are ten Arab nations, and those ten Arab nations have 3,990,573 square miles, with a population of 102 millions of Arabs. THAT'S A LITTLE HIGHER THAN HAS BEEN REPORTED. These are the facts. After all, Technocracy didn't create the population or the facts. After all, we haven't any father of our country here. You don't get that, do you? I don't hear anybody smile. After all, George Washington didn't have a bicycle.

So you have an area in Arab lands larger than United States, with the Arab populations, of course, increasing. The largest populated unit of the Arab states, of course, is Egypt. It has 29.6 million, with an area of 386,198. The largest Arab state is Sudan, if you can call it an Arab state, and that is 967,500, but it's not correct to call Sudan a completely Arab state, although it is Moslem, because the Arabs are only in the northern part of Sudan and the rest is Nilotic negro population, but this list includes Morocco, Lebanon, Algiers, Tunisia, Sudan, Egypt, Syria, Saudi Arabia, Iraq, and Jordan, ten in all.

So, here is the Israeli nation, who are blood brothers of the Semites -- Semitic Arabs -- they, too, are Semites, but they are a drop in the bucket, and they haven't the resources and the area to build a viable economy -- and, incidentally, neither have most of the Arab states. If it wasn't for oil in some of the Arab states, they would be defunct now, but oil, well now, that's a problem, yes. U.S., of course, is producing in excess of 8,300,000 barrels of petroleum a day, and the Soviet Union is next with over 5 million barrels per day, and Venezuela is third with over 3,400,000 barrels a day. Next on the list comes Saudi Arabia with 2,582,000 and Kuwait 2,436,000, and Iran 2,100,000. Libya is in the picture today, where it wasn't in 1960, and it is now doing 1,472,000. There's an interesting note here that isn't being made public: Venezuela has had more oil wells drained in the last ten years, and it has put in repressuring, gas repressuring, big stations -- 1,500,000 kW in a single station -- that has kept up the oil flow, except in 1966, the total production of Venezuela, in spite of the increased drilling and the big repressuring stations, dropped 5 percent.

Kuwait, Saudi Arabia, and others of the Persian Gulf, along with Iran, originally opened up at 12,000 barrels per well per day. Iran has still got the greatest potential and only has 82

producing wells, doing better than 11,000 barrels per well per day; but Saudi Arabia has fallen to 4,100 barrels, in spite of both hydraulic and gas repressuring.

Algiers that does 710,000 barrels a day, its yield is only 880 barrels per well per day, and if you want a comparable figure on the U.S., Louisiana offshore and on shore, does 15.4 barrels per well per day and Texas does 11.2 barrels per well per day. So, there is something happening to the oil fields, both in Arab countries and non-Arab countries. That's one of the important things back of it.

When you realize that the Jews started out as a racial, religious, linguistic (really) tribe some 57 centuries ago, their leaders were religious. True, after the Romans chased them out, they migrated to other countries than the Near East. The Arab migration has been practically infinitesimal outside of Africa and the Near East; but the Moslems came along and only got under way after 700 A.D. They, too, were a tribal religious, linguistic, and led by religious leaders, and the religious leaders of the old time Judaism and the old time Moslems, they have more-or-less fallen by the wayside, and now they are alike led by military leaders, but their culture and their patterns are still the nationalism of a theocracy, a linguistic and racial basis. They are blood brothers and yet they have the hatred for each other, because one is such a close imitation of the other. THAT'S THE PROBLEM. Now, I'm not stating this from any attitude towards either side. This is the way it is.

The Arabs are in a worse position than the Jews for the simple reason that there are 2.6 million Jews involved, but there are 100 million Arabs, and the Arab territory from Morocco clean across North Africa right up to Turkey, they haven't the arable land, they haven't the soil, they haven't the resources outside of oil. Oh, some phosphates, a little iron ore, but not in the soil and water. There are only three rivers -- really four -- freshwater in that entire area: the Tigres, the Euphrates, the Jordan, and the Nile. Well, the Jordan is away down about 1,200 million cubic meters a year. The Tigres and Euphrates are 22-24,000 million cubic meters a year, and the Nile is 88,000; in other words, the Nile is twice that of the Tigres and the Euphrates. There's no water in Libya worth talking about, and Egypt only has the Nile -- 550 miles, the last 550 in an over

4,000-mile long river. The big mistake that Krushchev made in involving Russia was the colossal blunder over the Aswan Dam. Yes, it will add 1,600,000 acres, but by the time the dam is finished, the population ratio will be just as bad as it ever was, and you've messed up the Nile because you've blocked transportation and the evaporation rate on the water back of the Aswan Dam is 7 times the evaporation rate of Lake Victoria, where the bulk storage should occur.

Sudan has the largest swamp in the world, and that swamp consumes most of the water of the White Nile, runoff of the swamp and evaporation. Now, the Arab nations north of the Sahara have very little to expand on in the way of soil. They can, yes, develop some -- it's not a total loss -- but the potential is minimal. Egypt, yes, but Egypt's population is increasing at three and a fraction percent per annum. Iraq, on the other hand, is the only Arab nation in all that group that has a potential. The population: land ratio of Iraq is 20 times that of Egypt. Of course, Iraq was once a great producer. It was once the great breadbasket of the Moslem Arab nations until Tamerlane cut them to pieces and destroyed the irrigation ditches, the canals, and the dams. It really hasn't come back since, in spite of the new engineering construction. It has come up, yes, but not to achieve the old standards.

Palestine, its present area, Judea, Jordan, and all those weren't the land of milk and honey of the ancient Hebrews, and they aren't today, and the problem is that the Arabs and the Jews have to work together. If the Jewish try to operate the territory, they haven't enough to go on -- that means foreign support -- and unless you expect the Jewish population of United States to migrate to Israel -- they'd hardly like to do that; they're much too opulent and successful. So where are they going to get any new great migration from? If they did, they couldn't support it. On the other hand, the position of the Arab fellahin -- that's the Arab peasant -- is lower than any negro or white ghetto in United States and has been for centuries. They've been deficient in their diet, and their nutritional factors have been so low for centuries that they haven't the vitality and they haven't the intelligence to organize it themselves. Now this is not a very nice picture.

You have to pay credit to a military leader like Moshe

6-17-67

Dayan, and you have to be amused at some of the Arab leaders, but the Arab leaders are just as pathetic and so is the Israeli. Where are they going to do it? The United Nations -- that's a washout -- and the Russians really aren't interested any more in it; in fact, they are less interested than United States, because the Russians don't have to have any oil. They have it. Now, is that clear? YES IT IS, CHIEF.

Now, how about some questions. Let's see what they want to know on this.

WHAT IS LIKELY TO BE THE RESULT OF THIS WAR BETWEEN THE ARABS AND JEWS, LET US SAY, LOOKING ON TOWARD A YEAR FROM NOW? Well, it isn't a year from now. It's the years ahead. I've just been laying it out for you. If these facts are correct, you can make your own answer. The facts are apparent, aren't they? YES, NEITHER IS IN VERY GOOD SHAPE. I mean, no Arab city was damaged; that is, Cairo, Damascus, Baghdad, any of them. They have no great losses -- only equipment. They could fight on, but the Israelis could not. Is that obvious? YES, I THINK IT IS.

ANOTHER QUESTION: WOULD THIS NEAR EAST AFFAIR HAVE ANY EFFECT ON THE VIETNAM SITUATION? Well, yes, it could have, but, after all, Johnson and this Administration and Wall Street -- this is a warfare-welfare state, so they wish the war to expand; and General Thieu of South Vietnam wants 600,000 American troops there, and we'll probably send them! We've bombed and napalmed and practiced a scorched earth policy in South Vietnam and yet we're kind of horrified with something that happens as fast as this, but realize that this refugee and population problem has been going on before '48, and the Arab refugee is living on seven cents a day from the United Nations and other relief agencies. How would the Americans like to live on seven cents a day? They couldn't! We're supposed to be nice, kind Christian people, aren't we? Let me hear the reaction of the audience, if you can. APPLAUSE.

Now you know there are a lot of questions you could throw at me on this.

I'VE GOT ANOTHER ONE HERE, CHIEF. THE QUESTION IS PREFACED BY A STATEMENT: THE RUSSIANS HAD TEN WARSHIPS IN THE AREA, YET THEY DO NOT HAVE ANY PARTICULAR REASON FOR THE INTEREST IN, SAY,

6-17-67

ARABIAN OIL. WHY WHERE THEY THERE? After all, Russia has a perfect right in international waters, to send warships any place in the world, correct? YES. After all, we put a U.S. ship in the war zone -- the damn fools -- and what? It got all smashed up and a number of American dead, because it had no license to be there. Well, now you're trying to interpret because the Russians had three destroyers and a missile cruiser that they are interested in fighting for the Arabs? That's nonsense. Do you follow me? YES. They were nice, big destroyers, though. They've got a beautiful lot of radar equipment and missiles on them. Now, what do you mean, the Russians having warships down there. We've got a huge fleet in the Mediterranean, but they won't be able to keep that there very long because we're ordered out of Wheeler Base in the Port of Tripoli in Libya, correct? YES. Well, you can't maintain a fleet without a base, except you live on LSD.

ANOTHER QUESTION: WHO IS APT TO WIN THE MARBLES IN THE UNITED NATIONS GENERAL ASSEMBLY COMING UP? It doesn't make any difference if anybody wins or everybody loses. It's in the United Nations. What power and what authority have the United Nations? United States has done its best to sabotage the United Nations ever since the Congo, and now it's feeble and emasculated; so, it really makes no difference who holds the show -- it's just another show. Are you going to order the Israeli to withdraw? What happens if the Israeli says, "No, we're going to stay here"? Is that what you mean by "marbles"? APPLAUSE. I need to pick up some better ones than that.

CHIEF, THERE SEEMS TO BE A NOT-TOO-OPEN BUT GENUINE CONCERN FOR THE NATIONALIZATION OF OIL BY THE ARABS. Well, it's there. They'll play it as a trump card in the squeeze play on the so-called U.S., British, and French economy. It's there; they can exercise it, and if there is a decline in oil production, they'll want to maintain their annual income, so they will demand more and more of the profits, and you might just as well let them nationalize it if it goes to a certain point. WHAT'S THAT APT TO DO TO THE PRICE OF GASOLINE ON THE PUMP HERE? After all, the President's conference with the oil companies stated quite definitely that, except with the war, when the United States didn't have to worry that we could raise the production of oil 20-25% in Texas, the same amount in Venezuela, so we wouldn't have to worry about whether oil was nationalized in the Near East; but how long could you run Texas at an increased

production? That's the question.

THAT BRINGS UP ANOTHER QUESTION TYING RIGHT INTO IT. IN THE PAST YOU HAVE REFERRED TO THE TENUOUS STATE OF THIS FIELD -- What state? THE TENUOUS CONDITION OF THE EAST TEXAS FIELD -- Of what? THE TENUOUS CONDITION. YOU'VE MENTIONED THAT IF THE BOTTOM HOLE PRESSURE DROPPED TO 1,200 LBS., AS I RECALL -- You're not getting through. Now state it again. YOU HAVE IN THE PAST MENTIONED THE EAST TEXAS FIELD, AND THE PROBLEM INVOLVING THE BOTTOM HOLE PRESSURE IN THAT FIELD. Oh, not only that field, but all the fields in Texas. The East Texas field is split in two in more directions than one. It has long since passed its zenith and is declining. What were you going to ask on that? WELL, IF, AS YOU SUGGEST, TO TURN THE VALVES OPEN WIDER TO TRY TO INCREASE PRODUCTION, WHAT EFFECT IS THIS APT TO HAVE ON TEXAS FIELDS? Well, that's what I've pointed out. All oil production in Texas is under the control of the Texas Railroad Commission, and they have allowed for so many days a month that the wells are permitted to open up. Well, if you operate them wide open, oh, that will just be ducky. What would Texas be without oil? You wouldn't be able to run the ranches, because you've got to have an oil well for every dozen steers. Texas without oil, well, that's unthinkable! They'd all move to Florida and California.

WHAT IS THE PROSPECT FOR THE MEMBERSHIP OF TECHNOCRACY IN VIEW OF THE CONDITIONS THAT ARE DEVELOPING? WE'RE THINKING OF WORKLOAD, Well, I don't understand the question. What do you mean workload? ACTIVITY. Where -- on the job or where? What is it they are talking about? IN REFERENCE TO THE ORGANIZATION ITSELF. After all, things are becoming more critical, the issues are being [joined]. It's going to be lovely, but you have Technocrats all over who thought they could sit on their posteriors and wait. They were like the preordained Presbyterians. They got salvation, so they didn't have to carry it to anybody else. They had it. DO YOU THINK IT'S TIME TO CHANGE THE ATTITUDE, THEN? Yeah, they had better change their attitude and get off their fannies. THAT'S PLAIN ENOUGH. Well, I can't put it any plainer without descending to the parlance of the vulgate.

WE COULD REPORT AT THIS TIME, CHIEF, THAT IN LINE WITH THIS THAT THIS IS THE BIGGEST MONTH WE'VE HAD IN BRIEFS PRODUCTION. SHIPMENTS JUST PAST MID-MONTH ARE RIGHT AT 50,000. 50,000 for the month, huh? SO FAR THIS MONTH. So far? SO FAR THIS MONTH -- JUST

6-17-67

PAST THE MIDPOINT. Well, have you shipped those? YES, OR ARE IN THE PROCESS OF DOING SO. if you continue the same way for the rest of the month, what would it run? WELL, AT THIS RATE, WE WOULD HAVE A PROBLEM. You're no Moslems; you haven't got four wives -- what do you mean problem. WELL, THERE WOULD BE SOME WEAK GRINS AROUND HERE. A lot of weak grins, huh? I THINK THERE WOULD BE IF THE ORDERS KEPT COMING IN THE REST OF THE MONTH AS THEY HAVE SO FAR THIS MONTH; IN FACT, THEY WOULD BE HAPPY TO SLUG AWAY AT IT, I'M SURE. O.K.

Well, how does that audience out there feel about what I've given them tonight? WELL, I THINK THEY FEEL GOOD ABOUT IT. [APPLAUSE] Have they got anything else on their minds? I'LL FIND OUT.

THE QUESTION GOES BACK TO THE OIL SITUATION AGAIN. IS THERE ANY CHANCE OF RATIONING? Oh, not immediately, no. We don't face the immediate rationing of oil. If it keeps it up and the Arab nations shut it off, of course, the chief difficulty is Western Europe and Japan. They take most of the oil in the Middle East. Iran supplies 90 percent of Israel's oil. Iran, of course, is Moslem but not Arab; so, it's Western Europe that would feel the pinch, and so on and not here. The war would have to get larger, and we'd have to open up Texas and others, and that would last for a while, and then the cut would come. So, there's no immediate .... Does that answer that? I THINK SO.

DO YOU EXPECT THAT THE WAR IN VIETNAM AND IN THE MIDDLE EAST WILL GET LARGER? There isn't any war in the Middle East right now, is there? NO. Of course, there's fighting in Nigeria, Yemen, and a little action in Peru, Bolivia, and Colombia. We've got to keep the war going. We'll be in a bad state if we don't, and then what? DO YOU ANTICIPATE THAT THE WAR WILL BE EXPANDED TO THE CHINESE MAINLAND? Well, any time we invade North Vietnam, then China will come into the war. So, it's up to United States whether she escalates it, but now that China has the hydrogen bomb, we don't know whether we should venture that far. Of course, the hydrogen bomb is a misnomer, because it's a fission-fusion-fission bomb; it's not a hydrogen bomb any more than ours are. I've explained that to you before. IT'S THE SAME THING? What? THE CHINESE BOMB? Well, we don't know that, but it's a nuclear bomb, not a plutonium U-235-238.

THE DOMESTIC ECONOMY HAS SHOWN A SLIGHT DECLINE. CAN WE EXPECT THAT IT WILL CONTINUE? Well, as you concentrate on the war and if you don't expand your debt, then you can expect certain facets of the economy to decline, because their main emphasis will be on the big boys, the big contracts; in other words, the big gravy troughs. The little spigots won't matter. You have it out there on the coast -- your little contractor, your little businessman, they're being squeezed all over. Around here in the east, they are cutting out the overtime; in fact, on 40 hours a week, they're 32. Well, everybody is screaming because they bought their houses on long-term mortgages and 60 hours a week. They can't live on 40; so, there will be a lot of people with economic indigestion. That's what's happening out there too, isn't it? YES, IT IS. Well, what do they want? They don't like Johnson. They wouldn't be any better off with Kennedy, Truman, or Roosevelt or Eisenhower. But down in California, they'd be fine because they've got Ronald Reagan! LAUGHTER Well, what else is on your mind?

THE QUESTION, CHIEF, HAS TO DO WITH THE RACIAL PROBLEM, THE NEGRO MOVEMENT AND THE CHANCES OF ANY GENUINE INTEGRATION. What do you mean by "genuine integration"? Why do these people use words like that? WELL, PERHAPS THAT'S MY OWN INTERPRETATION OF THE STATEMENT. Well, what did they say? WELL, THEY ASKED ABOUT INTEGRATION AND THE NEGRO MOVEMENT. Well, what do they mean? Ask them what they mean by integration. ALL RIGHT. WELL THE QUESTION SEEMS TO BE HOW MUCH MORE OF A PROBLEM WILL THE NEGRO PROBLEM BE; IN OTHER WORDS, I THINK WE'RE TALKING ABOUT CONFLICT, CHIEF. I'M HAVING A LITTLE TROUBLE GETTING AN EXACT CLARIFICATION. Well, after all, what have I been giving you? Here's the Israelis -- they date their beginning back to 5700 and some. Here's the Arabs -- they only got it back to 700. Well, they're blood brothers and what? Can you integrate the Israelis and the Arabs? They're not black; they're not white. One is Moslem; one is Jewish. One speaks Hebrew; the other speaks Arabic -- yet they're blood brothers and you can't integrate them. None of them want to be integrated. What do they think about it? What do they mean by integration? You mean they should all join the Baptist Church? You can't even get the black Masons and the white Masons in the Masonic Order to exchange aprons. What are you talking about? What do they think of that? THEY FIND IT AMUSING. But it isn't amusing; it's pathetic. Now, if they believe in integration, how many of them would practice it? People profess Christianity one

6-17-67

day in seven. They walk out of the church, and a block away, you can't tell which one they belong to, correct? YES.

NOW, I GUESS THE QUESTION IS MORE DIRECT FROM SOMEONE ELSE. DOES IT LOOK LIKE A LONG, HOT SUMMER? Does it look like a long, hot summer? YES. Back here it does. It's dry. The ground is dry. The dogs out here beat their tails, and the dust flies up. How do you like that? WELL, I THINK THEY WERE REFERRING TO THE NEGRO PROBLEM AGAIN. Oh, well, that will occur. You've had riots in Lansing, Michigan, Dayton, Ohio, Cincinnati, and Tampa, Florida. Destroyed property, set fire to stores and automobiles, and then what? Then you've got Martin Luther King's breadbasket in Chicago, where the AMT and others are having negro contractors refurbish the chain stores in negro areas and they're going to buy any food process or materials for sale from negro manufacturers, and then the sale of that is going to be deposited in negro banks. Well, that's going to create what? Negro black bourgeoisie, correct? YES. Well then the black bourgeoisie will sell out the blacks like white bourgeoisie sells out the whites. I mean if they're bourgeois, it doesn't make a damn bit of difference what their color is -- the bastards will do the same thing! After all, the title I'm proudest of is the title conferred on me by the magazine NEW YORKER in a column on Profiles: "Howard Scott, enemy of the bourgeoisie." How do you like that?

WELL, CHIEF, DO YOU HAVE ANY INSTRUCTION TO US THAT YOU WOULD LIKE TO CONVEY AT THIS TIME, THINGS WE MIGHT BE DOING OR SHOULD BE DOING? Oh, I could tell you lots of things, but I'm not going to tell you. After all, what's the matter with your brains out there -- are they brand new, never been used? You've got intelligence. After all, I'm not "poppa," you know, sitting back here spanking little boys that don't perform right, correct? YES. I don't think that's the function of the chief executive officer of this organization. Did they expect that? YES. Oh, they did? [Chief laughs] Well, I'm enjoying it just as much as you are. WE'VE KEPT YOU ON THERE FOR AN HOUR. ARE YOU TIRED? Not if you people want to go on; I'm all right. WELL, WE'VE GOT MORE TAPE HERE. You have? Well, use up your tape, only get some questions.

THE QUESTION IS: ISN'T THE PROBLEM OF THE NEGRO MORE ECONOMIC THAN IT IS SOCIAL? Well, now any minority, regardless of color, the moment that they acquire economic eminence, what

happens? If they're black, they tend to become blacker and more consolidated. If they're brown, they tend to become browner and more consolidated. Now, for instance, you can't join the Black Muslims if one or the other in a family is married to a non-black, correct? I THINK THAT'S THE RULE, CHIEF. Oh, yes, the Black Muslims, the black Africans, and the African Nationalists are all the same. Over in Africa, they're kicking them out if they're light colored even. Well, that's nothing. The Burmese have planes leaving every day and two liners a week taking out the Hindus. The Singalese in Ceylon -- they're kicking out the Tamils, and the Indonesians are kicking out the Chinese; so, it isn't a question of blacks and whites. It's a question of discrimination, which is brought on by economic differences and racial and religious backgrounds and habituated action patterns. So what do you mean by economic? After all, the black American that can acquire a brand new Cadillac, well, he'll smoke a big, fat cigar and wear a batiste shirt just the same as the white businessman that acquires a Cadillac. And he'll want to join the same country club; he'll want to play golf. Well, why not? Is that what they mean? I THINK THEY'VE GOT THE ANSWER, CHIEF. Anything will become more intense the moment they acquire political and economical eminence and economic power. Then they become a bloc, and then they can engage in power plays. The moment they do, then the fun is on.

THE QUESTION IS: WHEN ARE WE GOING TO RUN OUT OF MONEY? The United States run out of money? Is that the question. YES, IT IS. Oh, no, run out of money -- no. The government can always print more money. It hasn't even got a gold backing any more, and they're pulling the silver out, so it hasn't even got a silver coinage any more. Of course, they're still carrying that thing "IN GOO WE TRUST." That's rather a dubious statement. Does the person who asked that question understand my answer or not? YES, HE SAYS HE DOES. You can always print money. After all, one of the soundest currencies in the world was in Mexico when Pancho Villa printed the currency on butcher paper. That didn't have any backing except the fiat power of Pancho Villa's guerillas. If you had any other kind of currency, they shot you. So, it was good.

ANOTHER QUESTION: WHEN CAN WE START PRINTING THE ENERGY CERTIFICATE? Somebody is a humorist out there. WE'VE GOT THE PRESS TO DO IT. No, that press isn't big enough. You would have to have different kind of presses than that. I wouldn't worry

about that.

WHAT WILL BE THE VALUE OF AMERICAN MONEY IF WE CONTINUE TO PRINT IT WITHOUT THE BACKING OF SILVER OR GOLD. That doesn't make much difference. After all, as you inflate the values in your economy, then your currency drops off. Of course, it's not likely to get to the German or Russian inflation. You know that story of the two Jewish merchants in Moscow. They had a million rubles and they were short of nails. Well, they wired the million rubles abroad, and down into Odessa comes a big boat full of nails. They sell the whole boatload of nails for a billion. They're still short of nails in Moscow, so they send the billion abroad. No boatload comes in this time; only a carload. They sell the carload for a trillion. They're still short of nails, so they sent the trillion abroad, and all they got back from Europe was one nail, so they drove that in the wall and hanged themselves. LAUGHTER Does someone want to see inflation of that kind? I THINK THAT BEARS ON THE QUESTION. Well, in China, it reached the ironic situation where the paper currency created more BTUs in the Shanghai electric station boilers than it would buy. They burned up the currency in BTUs. It had more in the paper than the currency would buy in fuel. That's Gresham's Law. Do they get it? YES.

What else is on their minds?

QUESTION: ARE THE FIRES, THE DISTURBANCES, THE BURNING OF BUILDINGS AND SO ON BY BOTH BLACK AND WHITE APT TO LEAD TO THE SABOTAGE OF THE PHYSICAL FACILITIES HERE ON THE CONTINENT? The sabotage of facilities -- that would have to be civil war before you got any widespread enough destruction. Are they anticipating civil war? The questioner -- is he or she envisioning civil war? YES. If it goes far enough, that could happen, but the blacks are in the minority. Down in Houston, Texas, in 1917, the negro division that were down there joined in on the riots and used army rifles during World War I. What happened? Doesn't anybody know? I DON'T SEE A RESPONSE ON THAT, CHIEF. Well, how many were executed by a firing squad of the United States Army? NO ANSWER. Well, now that's a little research in history they can do. A LESSON FOR TONIGHT? Yes, they can find it out in a university or a public library. It was more than ten, but you can look it up. WE'LL HAVE THE ANSWER THE NEXT TIME WE CALL YOU. Oh, you will? All right.

TELECONFERENCE  
CHQ & NORTHWEST TECHNOCRAT

6-17-67

Well, I'm getting tired holding this thing to my ear. YES, I CAN IMAGINE, CHIEF. WE'VE HEARD EVERY WORD THAT YOU'VE SAID THIS EVENING VERY CLEARLY. WE HAVE TWO RECORDINGS. Well, how about the PA system to your audience. THEY COULD HEAR EVERYTHING. IT'S THE BEST YET. O.K. All right, that's fine. I've enjoyed it, and I hope the Technocrats and others out there have enjoyed it equally. APPLAUSE. THEY EVIDENTLY DID.

My compliments and best luck to all of you. WELL, THANK YOU, CHIEF, AND A SALUTE TO YOU FROM ALL OF US. Salute. Thank you. Good night.

\* \* \* \*

TELECONFERENCE  
VANCOUVER  
SEPTEMBER 3, 1967

What kind of audience do you have?

IT'S A FULL HOUSE, AND THERE APPEARS TO BE REPRESENTATION FROM A GOOD SHARE OF THE WESTERN U.S. AND CANADA.

Can you give me a rundown of where they come from?

LET'S SEE -- FROM AS FAR SOUTH AS LOS ANGELES. OF COURSE, REO IS HERE FROM SAN FRANCISCO, AND [AUDRY FORD] IS HERE FROM PHOENIX: AND, OF COURSE, FROM EVERETT, BELLINGHAM, AND SEATTLE -- EARL PATTERSON IS HERE FROM SEATTLE -- AND PORTLAND, WE HAVE MEMBERS HERE FROM PORTLAND, AS WELL. THEN IN CANADA FROM VANCOUVER ISLAND. FROM FAULKLAND, CLOSE TO KAMLOOPS.

Anybody from Trail or Kimberley?

I DON'T KNOW -- APPARENTLY NOT.

Anybody from Prince George?

NO.

Nothing farther east in Canada?

NO. SPOKANE AND RICHLAND.

Well, you seem to have quite a representative aggregation there.

YES. WE'VE HAD A PRETTY FRANK DISCUSSION JUST NOW, CHIEF. You have? YES, ON THE AFFAIRS IN THE AREA -- THE JOINT AREAS -- AND THEY CONCERN THE CHALLENGE TO CONFRONT THE PUBLIC WITH TECHNOCRACY, AND WE TOOK UP SPECIFIC THINGS SUCH AS RELATIVE MAGAZINE PROGRESS IN TERMS OF GROWTH ACTIVITY, THE ISSUE OF THE PRESS HERE IN VANCOUVER, AND THE NEED TO SEPARATE THE MAGAZINE AND THE SECTION.

Yes, that will apply to all magazine publications in the organization in United States and Canada.

WE ALSO MADE THE POINT THAT THE VANCOUVER SECTION HERE SHOULD FURNISH AS MUCH LEADERSHIP AS POSSIBLE FOR ALL OF CANADA.

Well, certainly. They are large and you've got a nice section headquarters. They've got the membership, and they ought to be able to provide it.

WELL, THE MEMBERS DISCUSSED THE THING, AND I THINK SOME OF THEM WERE A LITTLE SURPRISED AT MY REMARKS, BUT WE DISCUSSED THE ISSUE AND THERE DOESN'T SEEM TO BE ANY GREAT VITUPERATION AND I THINK I MAY GET OUT ALIVE.

There is no necessity for any hostility or for any acrimony. The point is let's move it. It's time you got it rolling, and that's what I want every Technocrat to understand. The technological impact, not only in United States and Canada but around the world is accelerating, and it has passed the point of no return. It may be very difficult for some of you to realize that, but it has. For instance, Israeli, with 2,600,000 population prior to June 5th of this year, it had an expansion of 12 percent per annum and an influx of thousands of new immigrants. That 12 percent expansion in GNP in 1966 dropped to 1.56 percent. The sale of bonds dropped to almost nothing. There were only 12,000 Israeli immigrants into Israeli; 11,400 Israelis -- specially trained people -- left Israeli. Unemployment went up, and the Israelis had no point but desperation. Now they've got shorter frontiers than they had before, a little bit more land, but they have 1,300,000 Arabs. The birthrate of the Arabs is four times that of the Israelis, The Arab population of the Arab countries and of Israeli by 1980 the Israelis will be six million and the Arab countries will be 200 million. And there's no solution, even for the oil, for the Israelis and the Arabs under the present conditions.

West Germany, which was the prize poodle dog of private enterprise in the Marshall Plan -- it was extolled, eulogized -- well, West Germany today is on a zero basis. It has declined, not increased. Volkswagen has laid off 26 percent and reduced its output. The machine tool industry in West Germany has laid off 14,000. There are layoffs and shutdowns in the coal and steel mills. Several of the largest corporations -- in fact, half dozen of them -- have gone under financially and have had to be revived

by 52 banks and the German government.

Great Britain has approximately 600,000 unemployment or the greatest in 30 years. The layoffs are also coming there. Consolidations are on the way fast in France, Italy, Belgium, Holland, West Germany, and Great Britain. This move is on and the impact is finally hitting home. We are seeing it here. The war -- the United States in South Vietnam -- is not large enough. The war will only provide a GNP increase of about 2-1/2 to 2-3/4 percent. In order to be successful, it would have to be 5-1/2 to 6 percent expansion; so, if they can't escalate the war by attacking the airbases in China -- they propose to attack five -- Kunming is 340 miles from North Vietnam -- they propose to attack that. This is printed stuff.

In Canada, yes, you won't have the wheat crop that you had last year, and you'll also have declines in United States, but, politically, things are boiling. The Social Credit Party and the Conservative Party and the gang in Quebec propose to join hands in a new conservative party. There is only one odor to that that has got a fascist smell. Same thing here in United States. Remember that your civil rights riots in various cities, your looting and burnings, that is a breakdown of law and order. Not that there aren't thousands of concerned negroes -- there are; not that they haven't sufficient grievances -- they have; but the point is that it is also being used to create a breakdown of law and order. Let me point out that the breakdown of law and order in Portugal, Spain, France, Belgium, Holland, Germany, Italy, Hungary, Romania, Poland, and so on -- why did it happen? That was the prelude to what? The Sinarquista of Portugal, the Falangista of Spain, the Croix de Feu and Cagoulards of France and Belgium, the Fascista of Italy, the Knights of St. Michael and the Iron Guard of Romania, the Arrow Cross of Hungary, the Nazis in Germany, and I can't think of the Polish name -- it's too complicated. The breakdown of law and order in Europe was the prelude to fascism, and fascism -- remember, Mussolini came in in 1923, ten years ahead of Hitler. Hitler came in in the same month that Franklin Delano Roosevelt was inaugurated. But it was preceded in each case by a breakdown in law and order.

What is it you want? We've got the organization. The ferment is on. There is going to be a greater impact, a further application of technology in this country and abroad, and we're

asking every Technocrat to get it rolling. There is no sense standing still. Posterioritis, you know, doesn't even help the one that's sitting on it. Unless it's moving, it's no good. Is that clear?

WOULD YOU LIKE TO TALK TO SOME OF THE REPRESENTATIVES HERE, CHIEF?

I'll talk to anybody who wishes to ask questions or discuss it with me. Is that fair enough?

I'M SURE IT IS. I'LL ASK RIGHT NOW TO SEE IF ANYONE HAS A QUESTION HE WOULD LIKE TO ASK YOU AND HE CAN COME UP HERE AND ASK IT PERSONALLY. OLIE WALLEN FROM VANCOUVER. THE ONE PROBLEM THAT WE HAVE HERE IS THAT WE CAN BRING UP THE SUBJECT OF TECHNOCRACY OR MENTION IT OR IN ANY WAY TRY TO GET IT ACROSS TO PEOPLE, AND THERE IS WALL OF APATHY ABOUT THE WHOLE THING, THAT IS, YOU MIGHT JUST AS WELL TALK TO A STONE WALL. JUST WHAT CAN WE DO?

Well, apathy has been more so in United States than it has been in Canada, but the apathy is breaking down in this country. You've had, of course, such a marvelous advance under Premier Bennett of British Columbia that maybe you've gone into a trance up there.

WELL, I THINK THAT'S WEARING PRETTY THIN.

I know that, but it will wear thinner, but you can expect that. And that occurs in certain sections of the country. Now in a place like Bucks County, where 9/10ths of them are rock-ribbed Republicans, Goldwaterites and Birchites, if you think you have some difficulties, you ought to be down here.

WELL, UP HERE IT SEEMS TO BE A DIFFERENT TYPE OF APATHY, IN THAT THERE YOU WILL PROBABLY GET A VERY VIOLENT REACTION. HERE IT'S LIKE DROPPING A BALL BEARING INTO OIL. NOTHING HAPPENS.

If you drop enough ball bearings into the oil, you'll overflow the oil. You know that.

O.K., WE'LL HAVE TO TRY THAT, CHIEF. THANKS A LOT.

THERE'S A QUESTION ABOUT THE BOOK, "TECHNOCRATS PROPHETS OF AUTOMATION," CHIEF.

Well, read them my letter.

IT'S BEING TYPESET. I DIDN'T BRING IT WITH ME FOR THAT REASON.

Somebody else must have it. We sent it out to Vancouver, didn't we?

ALL RIGHT. MAYBE RUPERT WOULD HAVE A COPY. (ASIDE: THIS IS A COPY OF THE LETTER TO J.A. LIVINGSTON.

We sent a copy of Livingston's article and a copy of my letter to Donald Bruce. I could read it to you if you haven't got it, but you people should have it.

THEY'VE GOT IT HERE.

Now, will you read that to your audience?

RIGHT THIS MOMENT? Yes. I DON'T HAVE IT RIGHT THIS MOMENT. IF SOMEONE WILL DIG IT UP, I'LL READ IT. IN THE MEANTIME, WE CAN GO ON TO OTHERS. WHO ELSE HAS A QUESTION? OH, THERE'S ALSO A QUESTION ABOUT THE NEWSPAPER REPORTER AND PHOTOGRAPHER THAT CAME TO CHQ A FEW DAYS AGO.

Well, they've got that, haven't they?

I HAVEN'T RECEIVED A COPY OF IT YET, CHIEF.

They were mailed out long ago.

THAT'S STRANGE. THEY DID RECEIVE THEIRS HERE.

Well, now what is it they wish to know about it?

APPARENTLY A NUMBER OF MEMBERS DON'T KNOW WHAT HAPPENED THERE.

What do they think happened? What is the question?

THE QUESTION WAS, WHAT HAPPENED IN THE INTERVIEW. THERE WAS A REPORTER AND A PHOTOGRAPHER THERE, AND WHAT RESULTED FROM IT?

You've got the article they published, haven't you -- the photographs?

I DON'T HAVE IT YET. I HAVEN'T RECEIVED IT IN SEATTLE YET.

Somebody in that audience has it, don't they?

WELL, I THINK PROBABLY THEY HAVE. HERE IT COMES.

Well, what is it they wish to know?

THEY JUST WANT A LITTLE BACKGROUND ON IT. WE HAVE THE ARTICLE HERE, THOUGH. WE CAN READ IT.

You don't have to read it if they have it. The one was the Livingston article. That wasn't any interview, you know. He did that on his own. That's THE BULLETIN. Then the next big paper is THE INQUIRER. They called up for an interview. So they sent up a reporter in one car and a photographer in the other, and it was taken down on microphone. He had a microphone and it's all on tape. They tried to play it dirty, but they couldn't really do it. They kept the headlines and some of the stuff under the photographs. What is it they want to know about it?

I GUESS NOTHING SPECIFIC. THEY'VE GOT THE ARTICLE HERE THAT THEY CAN READ.

Well, there isn't any burnt grass around. It's all lush and beautiful green. The best growth of grass in years and flowers. We'll pay \$1,000 an inch for that burnt grass if you can find it. Now that's the kind of nonsense. When they go out of their way to make that kind of attack -- remember, something is hurting. They are afraid of us. I SEE. Certainly.

RAY KELLY HAS A QUESTION FOR YOU, CHIEF.

WELL, CHIEF, IT ISN'T A QUESTION. I JUST WANTED TO REPORT TO YOU AND GET YOUR REACTION TO THE ACTION TAKEN BY THE FINANCE

COMMITTEE AT THIS MEETING TODAY. WE SUGGESTED THAT A SUM OF \$50,000 BE RAISED TO GET TO CHQ FOR ADVERTISING PURPOSES OR WHATEVER THEY SEE FIT. WE FIGURE THAT THIS IS POSSIBLE AND PROPOSE THAT COMMITTEES BE SET UP IN AREAS TO START DOING THIS HERE.

That's all very well. We could use part of that -- not for advertising --

THAT DOESN'T MATTER.

For a few pieces of additional equipment, and we'd be in running order.

USE IT WHEREVER IT WOULD BE MOST ADVANTAGEOUS, BUT THE IDEA IS THAT THE COMMITTEE FELT THAT THIS IS POSSIBLE. WE'RE TALKING ABOUT DONATIONS OF \$1,000 AND SO ON. WE'RE NOT TALKING ABOUT

JUST TRYING TO GET BY FOR A LITTLE WHILE.

Set it up and put it on paper and send it in.

O.K. WE PROPOSED IT HERE TO THE MEMBERSHIP AND THEY AGREED ON IT.

My compliments to all of those.

IT'S A BIG THING, BUT I DON'T THINK IT'S IMPOSSIBLE.

No, I don't either. We need all the push and finances we can possibly get. We haven't any friends, you know, in corporate enterprise, and we haven't any angels.

OUR IDEA WAS THAT WE ARE GOING TO HAVE TO DO IT -- NO ONE ELSE.

Certainly. We'll have to do it. Thanks a lot, Ray.

I'LL TURN IT BACK.

(BRIGGS) CHIEF, DO YOU WANT ME TO READ THAT LETTER NOW?

Yes, you read that letter that I wrote to Livingston.

O.K. HERE GOES.

"J.A. LIVINGSTON  
FINANCIAL EDITOR  
EVENING BULLETIN  
PHILADELPHIA, PA.  
DATE: AUGUST 9, 1967

DEAR MR. LIVINGSTON,

ACCORDING TO YOUR COLUMN, THE BUSINESS OUTLOOK, PUBLISHED IN THE 'EVENING BULLETIN' THURSDAY, AUGUST 3, 1967, ENTITLED, 'TECHNOCRACY STILL LIVES BOTH AS AN IDEA AND ON THE FARM', YOU APPARENTLY RECEIVED A COPY OF 'THE TECHNOCRATS -- PROPHETS OF AUTOMATION' BY HENRY ELSNER, JR., PUBLISHED BY THE SYRACUSE UNIVERSITY PRESS. SEEING THAT YOU TOOK YOUR INFORMATION FROM THAT VOLUME, NO WONDER YOU WERE IN SUCH A HURRY TO WRITE YOUR COLUMN THAT YOU DIDN'T EVEN CALL BACK TO INTERVIEW ME. THE BOOK, 'TECHNOCRATS -- PROPHETS OF AUTOMATION,' BY HENRY ELSNER, JR., IS PROBABLY THE WORST SOURCE THAT ANYONE COULD HAVE TAKEN ON ANYTHING. IT IS LIBELOUS, SLANDEROUS, AND IS REplete WITH MISSTATEMENTS IN SUBSTANCE AND IN FACT, IN ADDITION TO COMPLETE FABRICATION. THIS BOOK WAS CONCEIVED IN MALICE AND PERPETRATED IN MALEVOLENT HOSTILITY. IT IS SO VICIOUS AND SO MALIGNANT THAT IT DEFEATS ITS OWN PURPOSE.

HENRY ELSNER, JR. WAS ATTENDING HIGH SCHOOL IN DETROIT WHEN HE JOINED SECTION 1, R.D. 8342, OF TECHNOCRACY INC. IN THAT CITY IN 1942 AT 16 YEARS OF AGE. HE WAS DROPPED FOR NONPAYMENT OF DUES 2-1/2 YEARS LATER. DURING THE PERIOD OF HIS MEMBERSHIP IN TECHNOCRACY, HE BECAME A PROTEGE OF ROBERT LANGAN, WHO AT THAT TIME WAS EDITOR OF 'THE GREAT LAKES TECHNOCRAT.' ROBERT LANGAN AND A SMALL NUMBER OF OTHERS BECAME ENGAGED IN A CONSPIRACY TO SUBVERT TECHNOCRACY AND TURN IT INTO A POLITICAL PARTY AT THE TIME OF HENRY A. WALLACE AND HIS PROGRESSIVE PARTY. HENRY ELSNER, JR., AS A PROTEGE OF LANGAN, BECAME INVOLVED BY ASSOCIATION IN THIS CONSPIRACY. THESE DISSIDENT CONSPIRATORS WERE DEFEATED AND THE POSITION OF TECHNOCRACY WAS UPHELD BY A DECISION OF THE COURTS OF THE STATES OF NEW YORK, ILLINOIS, CALIFORNIA,

WASHINGTON, AND BRITISH COLUMBIA, CANADA; THEREFORE, IT IS NOT TECHNOCRACY OR TECHNOCRATS THAT HAVE DISAPPEARED, BUT THE CONSPIRATORS AND ASSOCIATES OF HENRY ELSNER, JR. IT BEGAN IN 1948, AND THEIR DEFEAT WAS COMPLETE IN 1950.

HENRY ELSNER, JR. NEVER INTERVIEWED ANY OF THE OFFICERS NOR THE DIRECTOR OF SECTION 1, R.D. 8342, IN DETROIT, MICHIGAN, OF WHICH HE HAD BEEN A MEMBER. NOR HAS HE EVER INTERVIEWED A MEMBER OF THE CONTINENTAL BOARD OR MYSELF. WE UNDERSTAND THAT HE HAS BEEN EMPLOYED AT THE UNIVERSITY OF PENNSYLVANIA AND IS NOW ON THE STAFF AT VILLANOVA, A CATHOLIC UNIVERSITY; IN OTHER WORDS, HE HAS BEEN IN THIS AREA, CLOSE TO BUCKS COUNTY, FOR THE LAST 12 OR 14 YEARS. RATHER STRANGE, WE WOULD CALL IT.

TECHNOCRACY INC. DIDN'T FORM COMMITTEES ALL OVER THE COUNTRY. WE DIDN'T FORM ANY COMMITTEES. THEY WERE CHARTERED SECTIONS OF TECHNOCRACY INC. THE REQUIREMENT FOR A SECTION IS A MINIMUM OF FIFTY MEMBERS AND A BOARD OF OFFICERS OF ELEVEN ELECTED ANNUALLY BY THE MEMBERSHIP. WE HAVE SECTION HEADQUARTERS IN MANY STATES AND PROVINCES. IN SOME CASES, WE RENT OR LEASE PROPERTIES: IN OTHER CASES, WE BUY THE BUILDING OUTRIGHT OR WE DESIGN AND ERECT A NEW BUILDING. WE HAVE PUBLISHED MAGAZINES CONTINUOUSLY SINCE 1935. WE PUBLISH MAPS, BOOKS, LEAFLETS, PAMPHLETS, AND SECTION BULLETINS. WE HAVE OUR OWN PRINTING PRESSES. WE EXPECT TO HAVE ALL OF OUR MATERIAL PRINTED ON OUR PRESSES SHORTLY.

TECHNOCRACY INC. IS NOT SUBSIDIZED BY ANY GROUP, ASSOCIATION, BUSINESS CORPORATION, OR POLITICAL PARTY. IT DERIVES ITS INCOME SOLELY FROM ITS MEMBERS. TECHNOCRACY INC. IS A NON-PROFIT, NON-SECTARIAN, NON-POLITICAL MEMBERSHIP ORGANIZATION. ITS OFFICERS ARE ELECTED ANNUALLY. IT PUBLISHES LITERATURE, HOLDS MEETINGS, HAS SPEAKING TOURS, IS ON THE AIR -- RADIO AND TV -- BOTH IN CANADA AND THE UNITED STATES. IT NATURALLY FOLLOWS THAT AN ORGANIZATION WITH THE MEMBERSHIP WE HAVE, IT IS A LITTLE TOO EARLY TO ERECT GRAVESTONES AND WRITE EPITAPHS ABOUT OUR DEMISE. WE ARE SORRY TO DISAPPOINT YOU. WE REGRET, OF COURSE, THAT YOU HAVE BEEN MISINFORMED BY THAT MONUMENTALLY SCURRILOUS PUBLICATION, 'TECHNOCRATS -- PROPHETS OF AUTOMATION.'

CONTINENTAL HEADQUARTERS OF TECHNOCRACY IS LOCATED IN

(WARWICK) TOWNSHIP ON DARK HOLLOW ROAD. IT IS A FRACTION LESS THAN 109 ACRES, BUT A FRACTION OF AN ACRE MORE THAN THE VATICAN STATE. WE UNDERSTAND THAT YOU, TOO, LIVE IN BUCKS COUNTY AT (TINNICON?). TECHNOCRACY HAS NO DEBTS, FUNDED OR OTHERWISE. WE ARE THEREFORE IN A FORTUNATE POSITION IN THESE DAYS OF INFLATIONARY PRESSURE.

WE ARE ENCLOSING SEVERAL COPIES OF OUR PUBLICATIONS, AND IF YOU FEEL FREE TO CHECK FURTHER INTO THIS INTERESTING SUBJECT, WE WILL BE VERY GLAD TO RECEIVE YOU WITHOUT MALICE.

SINCERELY,

TECHNOCRACY INC.

HOWARD SCOTT, DIRECTOR-IN-CHIEF

END OF QUOTE

Now, if the audience wishes to ask questions on this, I might say that Henry Elsner, Jr. entered the Sunday Study Courses in Detroit under one John Spitler. He was conducting the Study Courses at that time. He is Director of that Section, and he happens to be seated right opposite this desk at CHQ at the present moment. He is a member of the Continental Board of Directors of Technocracy. Now if the members wish to ask any questions on that book or my letter, I would be very glad to entertain them.

A QUESTION IS, WHERE DID WE GO WRONG ON THIS YOUNG FELLOW.

Go wrong on him! I don't understand that. Where does the organization go wrong on Henry Elsner? YES. We didn't go wrong on him; he went wrong on us. Rats always leave us. I don't get it. We didn't go wrong on him.

HE THOUGHT HE HAD SOMETHING GOING IN A BETTER DIRECTION FOR HIS OWN PURPOSES MAYBE.

He was a young science fiction writer at age 16. He's still a fiction writer. And while you're at it, bear this in mind that the Syracuse Press is subsidized by the CIA. What's the matter with you people -- don't you know what's happening?

THAT'S NEWS TO A GOOD MANY HERE.

Oh, it is. Well, THE NATION MAGAZINE isn't subsidized by the CIA, but the printing of the NEW REPUBLIC was.

IT WAS?

Why, certainly. It's public. It's in the public press here. Of course, it doesn't get that far out there to Vancouver. They smother it before it gets halfway across the country. Now does that give them any daylight?

I THINK IT DOES.

Henry Elsner wasn't even born, let alone acquainted with the stuff that was dug up. He had assistance. One of the photographs in this PHILADELPHIA INQUIRER is what? That gray fleet in front of the Art Institute in Detroit, isn't it? YES, CORRECT, I REMEMBER THE PICTURE. Well, Technocracy never held a meeting to promote me as Director-General of Defense. Isn't that interesting? YES. Never held any meetings in its entirety. Now that photograph was printed first in the Sunday edition of the COMMUNIST SUNDAY WORKER OF NEW YORK, and then the entire article of the COMMUNIST SUNDAY WORKER was lifted, along with that photograph and the other and printed simultaneously in 47 Catholic Diocesan papers. Do you begin to smell something now? YES. We have those Diocesan papers here on file at CHQ. They didn't even change a comma from the COMMUNIST SUNDAY WORKER, but they never stated where they got it from. We were subject to attack by the Communist Party, and we were subject to attack by the Catholic press. What better recommendation do you want? You couldn't do any better if you were kissed by Jesus! What's the matter -- are they laughing? YES, SIR.

Well, now what have they got? We might as well trot a lot of things out into the open.

THIS IS PETE MYRTLE SPEAKING. WHAT I WAS PARTICULARLY INTERESTED IN WAS TO GET A BROADER PICTURE OF THE TRENDS AND EVENTS THAT ARE OCCURRING ALL OVER, PARTICULARLY THIS CONTINENT, BUT ALSO ABROAD, AND HOW THEY MIGHT IMPINGE ON US. THINGS ARE ACTUALLY RATHER SUPERFICIALLY, ANYWAY, RATHER STATIC IN THIS AREA, BUT WE DO SEE THINGS HAPPENING.

Well, if you're static out there, you are practically the only area in the globe that's static right now.

WELL, THIS COULD BE. EVERYBODY'S HAPPY.

What's -- the new Simon Fraser University?

WELL, YES, AND A CERTAIN AMOUNT OF BALLYHOO.

Yes, but they have that all over. Quebec is going to be assisted now by Le Grand Charles.

You'd better watch out or Quebec will come out there and smack you.

WELL, THEY OWE US MONEY, YOU KNOW. THE PROBLEM IN B.C., OF COURSE, IS ESSENTIALLY RAW MATERIAL PRODUCERS, AND AS LONG AS THE PEOPLE ARE BUYING COPPER AND SO ON, EVERYBODY APPEARS FAIRLY HAPPY.

That doesn't stop people from having the ability to do a little thinking on facts.

NO, I THINK PEOPLE ARE REALLY CONCERNED QUITE BROADLY, BUT AS TO ACTUALLY TAKING ANY ACTION IS ANOTHER QUESTION ENTIRELY.

Well, what do they want to do -- sit down at the wailing wall?

THEY'RE WAITING FOR SOMEONE ELSE TO DO IT, PERHAPS.

Well, they want to let George do it. YES. Since when has that been the spirit of Technocracy?

OF COURSE, BEING GEORGE GETS A LITTLE WEARING AFTER AWHILE.

I know, but Technocrats of any term over the years, they have enough understanding. What's the matter with them?

I THINK GENERALLY THEY UNDERSTAND. I THINK PERHAPS I MIGHT POINT OUT FOR EXAMPLE THAT THERE HAVE BEEN NO RIOTS, MOST

PEOPLE ARE WORKING, THERE'S CONSIDERABLE UNREST AMONG THE YOUTH, BUT THIS IS ONLY IN THE INTELLECTUAL FIELD. THEY ALL THINK THEY ARE GOING TO GO OUT AND MAKE A MILLION DOLLARS. THE INDIANS AREN'T CREATING ANY PROBLEMS, BUT THAT'S MILES AWAY. THE STATES ARE FAR AWAY, TOO.

Oh, but you're talking as though British Columbia wasn't part of this continent.

WELL, THAT'S THE WAY THEY FEEL.

It doesn't make any difference how they feel. It's a question of what the Technocrats are going to do.

THIS IS A POINT ALL RIGHT, BUT WHAT I WAS WONDERING IS, VIEWING FROM WHERE YOU ARE, WHAT IS GOING TO BE THE IMPACT, PARTICULARLY IN THIS AREA -- IT'S WHERE WE RESIDE.

Oh, you want to know what will be the impact in your area?

YES, WHAT CAN WE EXPECT TO SEE HAPPENING?

Well, it's happening around the world. Canada had how much wheat production last year? A BUMPER CROP LAST YEAR. Yes, but how much? ABOUT 400 MILLION BUSHELS. That's way off. What was the wheat production of Canada in 1966? 800. That's better. It was up over 800 million. What was Australia? I DON'T KNOW. Argentina? What was the United States in '66. I DON'T KNOW. Well, bear this in mind. Russia produced more wheat last year than United States, Canada, Australia, and Argentina.

AND THEY'RE STILL IMPORTING.

Oh, no, now, cut that out. They would still buy wheat from Canada on the west coast. What's the transportation cost? New York is closer to Moscow than Vladivostok is, and if they had to give wheat away in Europe, it would still pay them to buy Canadian wheat at Vancouver for shipment to the far east Russian possessions. Well, now, after all, you should do a bunch of thinking out there. That's what's going to happen to a lot of things. Like those coal mines up on the Athabasca in Alberta. They were all shut down, but they're running wide open. What are they doing? They're shipping coking coal to Japan. You're also

shipping copper concentrates out of British Columbia, aren't you? YES. Where? To Japan. AND TO THE STATES. Yes. And you're shipping pulp -- so is Alaska -- to Japan.

THIS IS THE SORT OF IMPACT, I THINK, THAT WOULD RESULT IN SOMETHING IN THIS AREA -- SOMETHING QUITE PERSONAL TO THESE PEOPLE.

To the members -- not the apathy on the part of the public. The public is always apathetic until something moves it. What are you looking for -- salvation or a judgment day when they'll all come walking in? They won't walk in as long as they have some other escapism to indulge in. Is that clear? (BRIGGS) YES, I THINK IT IS, CHIEF. Well, you go out and help roll it. Don't worry about the apathy.

Is Harry Briggs there? I'M HERE, CHIEF. Well, any more questions?

MARGARET CLOUGH(?) ASKED THAT YOU VERIFY WHAT YOU SAID ABOUT EQUIPMENT ALREADY INSTALLED AT CHQ, CHIEF.

I haven't said anything about equipment installed at CHQ.

SHE MENTIONED A FEW THINGS HERE AT THE MEMBERSHIP MEETING TODAY.

Well, I don't know what she mentioned, and I'm not going to discuss it. After all, she isn't making an official report of the organization. She came down here as a visitor, didn't she? YES. I wouldn't question what she said. That's her opinion. If any Section wants to send officers down here, we will be very glad to show it to them and give them a list, but I don't think it should be discussed until we are ready to discuss it. Is that clear? I THINK IT IS. Except to say that the equipment we have is the finest technological equipment in its line. There isn't anything better. There may be larger, but nothing that has greater precision. Is that clear? YES. When it is completed, we will be very glad to discuss it with the organization and show the photographs. Do you get my attitude? YES. There are reasons for it.

We're proud of it but we'll be prouder still when it turns

over.

WELL, WE'LL BE LOOKING FORWARD TO THE PRODUCT OF WHATEVER IT IS THAT YOU HAVE.

That will take time. It takes more equipment. There's been a whole gang working here night and day. They worked all day today. We're adding more space. You wouldn't know it from two years ago or a year ago.

WELL, IT SOUNDS GREAT. YOU'RE MOVING BACK THERE.

Yes. They've been here from a dozen places yesterday and today. We've had visitors this summer from several places in Saskatchewan -- other places in Canada. We haven't had any from B.C. except Margaret Clough, but we've appreciated that they care to come. Did they hear that?

SO THE GROUP HERE HAS AN OPEN INVITATION.

Oh, yes, anybody has. What else is on your mind while we're at it?

I'LL CHECK. ANY OTHER QUESTION THAT YOU WOULD LIKE TO ASK THE CHIEF WHILE HE IS ON THE LINE? THIS CALL IS AT HIS EXPENSE, BY THE WAY.

At the expense of CHQ.

RIGHT. ANY OTHER QUESTIONS? OH, A QUESTION IS WHAT WERE THE RESULTS OF THE ADS FOR HELP THAT YOU RAN IN THE MAGAZINES?

We've gotten some results, but we can always stand some more; in other words, the more the merrier. We'd like to have it ten times what we want and make selections. That would be the ideal way. We get it in letters, in telephone calls, and they drive in. Unless you see them, you can't tell exactly what it is even from the written page of a letter. Does that satisfy them? I THINK IT DOES. REO SAYS IF YOU NEED A DISHWASHER, HE'LL COME BACK.

No, Reo, we have an automatic dishwasher. You know that.

CHQ AND VANCOUVER TELECONFERENCE

9-3-67

TAPE ENDED HERE

TABLE CONVERSATION WITH HOWARD SCOTT IN ALBERTA  
SEPTEMBER 23, 1967

(TAPE BEGINS IN THE MIDDLE OF A SENTENCE BY THE CHIEF, AND APPARENTLY HE HAD BEEN DISCUSSING THE COPPER DEPOSIT LOCATED AT CORONATION GULF)

.... 33 or 34 years ago, and now comes the biggest mining staking in all Canadian history. They used to ask me questions from a big audience about it. You've had the samples over there for 100-some years -- nearly two centuries -- in the South Kensington Museum in London, and you haven't done a damn thing about it. This is going to produce another -- watch, they're going to shove that railroad like they shoved up to Pine Point at Great Spirit Lake. They're going to try to shove that one up to Coronation Gulf. Well, but that isn't the solution, because high-priced silver, that's one thing, but a huge lead deposit and copper deposit, you'd have to get water transportation out of there to make it pay. Do you see what I'm driving at?

(APPARENTLY THE ABOVE WAS NOT COMING OUT CLEARLY TO THE AUDIENCE, SO PART OF THE FOLLOWING IS A REITERATION MADE AFTER THE SOUND SYSTEM WAS SMOOTHED OUT.)

Sixty-eight hundred this last week -- 50-acre claims. Well, the interesting part about all this is that 30-some years ago, I pointed out to Canadian audiences that the original copper samples from the Coronation Gulf copper mine were deposited in the South Kensington Museum in London, England, by Samuel Heame, and that they had reposed there for almost two centuries, and nobody had done anything about it, but the analysis of the samples was very high. Now this is the biggest staking, and you've got fifty diamond drill rigs being flown in -- fifty.

THAT'S THE TIME TO BUY STOCKS.

A little late. If you get in on the original syndicate, then you're all right, but it takes a lot of money to get in on a secondary basis. Hearne, I think, was captured by the French, wasn't he, when he had to surrender that beautiful big fortress in Hudson Bay. The gentlemen's ventures in Hudson Bay -- otherwise, the Hudson Bay Corporation -- were so penurious that they wouldn't give him enough men to load the guns. You know, that's one of the biggest fortifications in North America. It's been refurbished by the Dominion Government now as a tourist

9-23-67

trek, and the big guns and everything, well, he didn't have enough men to load the guns; so he had to surrender to the French fleet, and he was taken back to France, and then turned back to Britain after the Treaty of Westphalia. I think I'm correct. He discovered that, you see.

So, here you have the copper, the silver, and the lead going east along the ... 34 years ago, I pointed that out. Just the same as we knew of the potash in Saskatchewan from oil drillers long before it became a potash field. Very funny.

So, the fun will really be on. The two largest steel corporations in Japan have now combined, making it the second largest steel corporation in the world next to the U.S. Steel, and here in this country, LTV are paying \$625 million for the Jones & Laughlin steel. That deal is just completed. I guess they're trying to block the consolidation, which is already agreed on, of the Northern Pacific, the Great Northern, and the CB&Q, the Burlington Route, but it will go through. So, when the little pigmys are cleaned up, the battle of the giants will begin.

You're having it happen in Britain, Italy, West Germany, Belgium, and France. The same type of thing in Japan and here. There are 2,000 mergers yet to be completed in the United States this year. So, Premier Manning and his white paper won't make much difference, if you'll pardon me. I haven't anything against Premier Manning, but it's like Bobby Kennedy. Bobby Kennedy shouldn't be elected to public office. In this day and age with the population explosion, with his 11th child coming in January, he should be castrated, not nominated. Well put it in a Brief. LAUGHTER Well, Wilton, what's-his-name Vogt of the Population Reference Bureau of the Scientist -- REPLY: COOK -- Well, Cook is head of it, but Vogt, he has already made this statement, that in view of the world population situation, the United States shouldn't set an example by electing any person like that to office with 11 children.

Our name for the Kennedy bunch is the Irish Mafia from Boston. Well, of course, you're trying to collect the same thing in Canada with Trudeau and the other combinations. I THINK TRUDEAU IS A BACHELOR. As long as he stays that way.

I HEARD THAT THE BIRTHRATE IS FALLING RECENTLY IN UNITED STATES.

Oh, yes, it's falling but not enough. What are you going to do in Mexico and Venezuela, where the rate is three times higher than in Japan. By the way, Ball and this other one. General Gavin, I've got to write him on this and ask him to read his book. I'll have to write him a letter and tell him I've read his book talking about birth control. It's all right, but he misses the point. He does admit that Planned Parenthood is no good, but he doesn't get to the other. He criticizes one, but he doesn't come to any positive proposition. The present contraceptive pill is based on an estrogen compound which nullifies the ovulation of the female human. Well, that builds up side effects. You're interfering with a process that has been going on for a million years probably, but the other way of doing it is the pH factor of the womb, and it doesn't call for any inhibiting of ovulation or any other natural function. No mammal would become pregnant if you put it in the drinking water, and the amount you put in the drinking water is .00041 percent. That's how effective it is. If you discontinued it for one menstrual period, 28 days plus 14, that's 42 days, all the mammals, two-legged and four-legged female mammals, could then conceive again. So, this is your only collective form of safe population control. And the ones that discovered it -- there are five of them, biochemists, and three of those five are Technocrats.

WE HAVE PROBLEMS ENOUGH TO ADD FLUORINE TO THE WATER.

Well, they have problems here. They fight fluoridation and everything else. They even go so far as to think it's communism.

IS IT POSSIBLE TO ENLIGHTEN US ABOUT THE PROGRAM AND ORGANIZATIONAL DEVELOPMENT SO THAT WE CAN MUCH BETTER THE REQUIREMENTS THAT WE HAVE TO DO OVER THERE?

I really don't understand,

OTHERWISE, WHAT UNDERSTANDABLE) ARE YOUR PLANNED ACTIVITIES FOR TECHNOCRACY INC. (REMAINDER IS NOT

Well, of course, in an election year, you can't do very

9-23-67

much. She's moving ahead, you've got your tomato picker working. Your latest, of course, is the cucumber machine that does 70 tons an hour. You're now handling by mechanical means lettuce, cabbage, cauliflower, sprouts, potatoes, tomatoes, cotton, cucumbers, asparagus, and corn. You've got 8-row corn pickers now.

(FOLLOWING ENSUED A FAIR AMOUNT OF DISCOURSE BY ONE OF THE MEMBERS, BUT THE MICROPHONE DIDN'T PICK IT UP SUFFICIENTLY TO BE ABLE TO UNDERSTAND WHAT WAS BEING SAID)

CHIEF CONTINUES: So, if you have a Kennedy elected, you're going towards an American Catholic Centerist Party. That's the same thing that Germany had when you had the Catholic Centerist Party and Bruening was Chancellor, and Bruening resigned and dissolved the Catholic Centerist Party to make way for Hitler. These are the moves.

Now they can't control it. The nonsense that you're going to do something about ghettos and slums, you are like hell. You're going to do pieces all over the country by local bond issues. There's going to be the goddamndest bunch of bond issue stuff, and the banks are all going to be in on it. Well, with government money at 6-3/4 percent and mortgage money at 8 to 9 percent in United States, hah, hah.

Now, housing should all be on-the same specification. There shouldn't be any individual housing permitted, and the machines for living should have a minimum of 2,500 apartments each and a minimum of 12,500 people to each building. Then you're going somewhere, but if you are going to do it on an individual basis, no, you're not going to go anyplace. The roof will cave in on you.

(ANOTHER LONG DISCUSSION ENSUES BETWEEN TWO MEMBERS REGARDING ONE MEMBER'S IDEA THAT TECHNOCRACY'S APPROACH TO BRINGING ABOUT THE TECHNATE SHOULD BE DIFFERENT THAN IT WAS 15 YEARS AGO BUT WITH A REBUTTAL FROM ANOTHER THAT THE APPROACH OF EDUCATION, ETC. IS STILL THE WAY; HOWEVER, THE CONVERSATION OF ONE IS IN A VERY BROAD SCOTTISH ACCENT AND CANNOT REALLY BE UNDERSTOOD COMPLETELY ENOUGH FOR TRANSCRIPTION.

9-23-67

ANOTHER SPEAKS WITH MORE CLARITY: PROBABLY ONE OF THE THINGS THAT THEY HAVE BEEN KICKING AROUND IS THE STUDY COURSE WAS DESIGNED FOR CLASSROOM STUDY TAKING A PERIOD OF TIME IN A CONTROLLED AND PERHAPS DISCIPLINED ENVIRONMENT -- YOU HAVE STUDY COURSES, YOU HAVE A LEADER AND SO ON. FOR MASS DISSEMINATION OF THIS INFORMATION, WE WONDERED IF THERE COULD BE A BOOK WHICH COULD BE SOLD BY THE THOUSANDS OR HUNDREDS OF THOUSANDS MADE AVAILABLE TO --

If we had the help, we would get it out, but to give you an example, the Northwest Technocrat was printed by Section 3 in Seattle. It only shipped 15,000 Briefs in a single year. We've got two presses in there now, and they've done 86,000 Briefs a month -- not 15,000 in a year. We have another press that's just gone in in Los Angeles. I'm trying to get a press in Vancouver, so that you have three on the west coast and probably two or three in the middle of the United States and Canada -- Middle West, Cleveland, Detroit, here. Your mailing costs are so high today with increased mailing rates that you can't ship big distances.

TAPE ENDED HERE

TELECONFERENCE  
CHQ AND SECTION 3, R.D. 12247  
MARCH 30, 1968

THIS IS A TELEPHONE COMMUNICATION BETWEEN CHQ AND SECTION 3,  
R.D. 12247, MARCH 30, 1968.

People there from Vancouver, B.C.? AND THERE IS EVEN ONE  
HERE FROM ALASKA. From Alaska? AND FROM BELLINGHAM, EVERETT. Any  
from interior B.C. or interior Washington? LET'S CHECK. NOT FROM  
THE INTERIOR. How about Portland, Oregon? OH, YES, PORTLAND,  
OREGON IS HERE. Portland is there, huh? YES. All right, now how's  
that for testing? IT'S EXCELLENT -- A FINE REPRODUCTION. CAN  
EVERYBODY HEAR EVERY WORD? DOES IT SOUND ALL RIGHT? Well, the  
only thing is I can't hear -- (APPLAUSE) DID YOU HEAR THAT,  
CHIEF? Oh, yes, that came through quite clear. AND NOW WHAT I  
WOULD LIKE TO DO IS TURN THE PHONE OVER TO LOU VERNE RIGHT HERE,  
AND THE AUDIENCE IS SUPPLIED WITH QUESTION CARDS TO GET THEIR  
QUESTIONS WRITTEN DOWN AND FIRE THEM AT YOU. This is the  
beginning, is it? YES, SO HERE'S LOU VERNE.

GREETINGS, CHIEF. Greetings, Lou, and how are you? AND A  
SALUTE FROM A LONG WAYS FROM HOME. A long ways from home, eh?  
YES. That's quite a way.

WE HAVE A FEW QUESTIONS HERE, CHIEF.

You want to ask questions first?

WELL, PERHAPS YOU MIGHT VOLUNTEER SOME INFORMATION --

No, you had better ask your questions. Have you got them on  
cards?

YES.

Give us the questions.

COULD YOU TELL US IF ANY OF THE SCIENTISTS OR ENGINEERS IN  
THE STEERING GROUPS OF THE COUNTRY -- ARE THEY SHOWING US  
ANY INTEREST IN SOCIAL FIELDS, IN TECHNOCRACY IN PARTICULAR?

Are any scientist or engineering groups showing any interest  
in the social field -- is that your question? YES, IN TECHNOCRACY  
IN PARTICULAR. Well, they are, of course, but then they're in the

same position as all the other groups, namely, that they may be scientists and engineers in their laboratories, development workshop, or their office, but when they drive into that split-level called home in suburbia, they're just the same -- bourgeois conformity -- as all the others in the suburbia around them. They've forgotten all about their technical training, and they have to conform or momma, momma-in-law, and all the rest of the relatives would be on the poor bastard's back.

THEY ENJOYED YOUR ANSWER, CHIEF.

They did? Well, don't you realize what the situation is today, and it's been coming on for years. Remember that nice sunshiny day in a beautiful suburb where a number of kids are out playing, and a slight altercation ensues. So, young Jimmy, who is 9-1/2, socks Bobby, who is 11, and the respective mommas rush out and grab their offspring and drag them into their nice suburban houses; and young Jimmy's mother gives young Jimmy a lecture for striking Bobby, and young Jimmy says, "Well, look, Mom, he called Dad a liar." "Well," says mother, "it didn't make any difference what Bobby called. You mustn't strike Bobby, because Bobby's poppa is Daddy's best customer." Now that's the condition in every better-class residential area in the country in Canada and United States; so, don't expect anything more from the scientist or engineer unless he breaks loose himself.

WOULD YOU SAY THEN THAT CONFORMITY IS THE ORDER OF THE DAY?

Oh, certainly. What's the next question?

THIS IS JIM CURLISS(?) OF EVERETT. MY QUESTION IS: ARE THERE ANY SIGNIFICANT DEVELOPMENTS IN COLLEGE LEVEL THINKING AMONG STUDENT GROUPS VISIBLE AT CHQ?

Well, there's a certain ferment going on all over the country in high schools, colleges, and universities. That doesn't say that it has reached the point where it is going to develop into any intellectual thing. The pressures aren't high enough. Remember, all you have to do is look at your TV everyday and look at the TV shows that are on. Now they show the audience from time to time on these TV shows, do they not? You get a view of the audience in a TV show, isn't that correct? YES. Well, now you look at a number of those TV shows and the people in them. What

are they? They're all nice, comfortable, clean, well-dressed. They haven't any complaints. All they want to do is be entertained. The only time they get a little bit peeved is when the entertainment dries up or they've heard it too many times. They haven't any ideas. They come and sit on their posteriors for an hour to have the TV put on four or five or half dozen jokes to entertain them. You can't expect the colleges or the universities to be any better than the TV audiences, because that's what makes up the country is the public, and the university professors or college professors or students, they come out of that melange.

After all, a great many of them wouldn't be able to go to college or universities unless their fathers or mothers were working in well-paying war industries or other industries. So, they're quite satisfied to have things go on as they are. After all, South Vietnam is far away, and it's not here on our own doorstep; so, don't expect the high schools, colleges, and universities to be disturbed as yet. There will have to be more pressure than there is now. You are only seeing the beginning. Does that answer your question? YES. I can be even more dirty about it, but I'll leave that until a little bit later.

WELL, I THINK THAT YOU ARE SUGGESTING THAT THE THEME OF THE TV HAS BECOME STRICTLY ENTERTAINMENT AND HAS NO SEMBLANCE OF EDUCATION.

It has nothing to do with education. Your academic institutions are not departing very much from the norm. True, you have a few students protest, signs, sit-ins, and all that, but what do they propose? They're as bad as the negro civil rights -- they all want to protest or loot or set fire to something, but they don't want any direction. If they had direction, they would all have to go in the same way at the same time, and that's just exactly what they don't want. That wouldn't give them the opportunity of enhancing their ego, where they could all be the same but all could be different. When you come into revolutionary social conditions, you cannot do it with multiple political parties; it can only be done by one organization, and they all have to go in the same direction at the same time. Otherwise, you've got chaos. Well, none of them want to go in the same direction at the same time. They get caught up in this intellectual liberalism or they all want to debate the subjective entities or the imponderables interminably. That gives them what

they think is the right of choice. Actually, they haven't got any choice when it comes down to it. Will that hold you?

YES, I THINK SO.

HELLO, CHIEF, THIS IS LOUELLA. Yes, Louella, how are you? I'M FINE, HOW ARE YOU? Fine, I haven't heard your voice for a long time. NO, YOU HAVEN'T. WELL, I'M STILL HERE. You're still there? Well, I'M still here. WELL, GOOD! WE'RE EACH IN OUR PLACE. Well, I don't know about that. I don't know whether I belong here or whether I belong anyplace.

WELL I'VE GOT TWO QUESTIONS. I HAVE ONE FROM MINNIE JOHNSON IN EVERETT. SHE ASKED ME TO RELAY THIS TO YOU, AND SHE SAYS, 'CHIEF, THE THING WE ARE CONCERNED ABOUT IS HOW IS YOUR HEALTH, WHICH WE ALL WISH. ALSO, HAPPY BIRTHDAY FROM ALL OF US.

Well, thank you.

OH, WAIT A MINUTE. I GOT IT WRONG. I KNEW HER WHEN SHE WAS JOHNSON, AND I KEEP CALLING HER THAT. IT'S MINNIE LIVINGSTON. Livingston is her name? YES. That's the trouble with these people when they get married.

Well, I was in the hospital and I did lose a little over 30 pounds, but I'm back now to about 196, and from what they tell me, I look all right. I wouldn't take my opinion on it. I'LL BET YOU DO. Well, there's a whole bunch around in here. Some from New York and some from Detroit, Lancaster, Pennsylvania, and other places. They're all listening. GOOD.

I HAVE A QUESTION ALSO. WE'VE BEEN READING RECENTLY IN THE PAPERS THAT THE STOCK MARKET HAS BEEN GOING DOWN WHILE THE VIETNAM WAR HAS ESCALATED, AND THEN IT GOES UP WHEN PEACE IS DISCUSSED.

I wouldn't bother about the stock market.

WHAT MAKES IT DO THAT?

You see, today in the market there's such vast holdings of trust funds and pension fund holdings and your mutual funds --

they hold huge amounts -- so they can come in and alter the market if it gets too bad one day. Then they make it on the up and they make it on the down. That contributes to the manipulation. Do you follow me? YES. IT USED TO BE THAT THE STOCK MARKET WOULD GO UP WHEN THE WAR WAS ESCALATED AND DOWN WHEN PEACE WAS DISCUSSED. IT SEEMS LIKE THE TREND IS A LITTLE BIT REVERSED NOW. Well, some of the highest paying things in America are not on the stock market. No, some of your original sulfur companies and the trust of the du Ponts -- that's only about \$4,800 a share -- they're not listed, you know. I could name you a couple dozen of those. There's really safe blue chips. They're the blue chips that nobody mentions. But the others are "play" chips in today's game. So I wouldn't bother too much about the fluctuations in the market. JUST CURIOUS. Oh, I know. They can load it either way if they want it. It does not reflect international conditions except under rare circumstances or national conditions. O.K., THANK YOU. All right, thanks a lot Louella.

HELLO, CHIEF, THIS IS RUPERT URQUHART. Yes, how are you? FINE, HOW ARE YOU? I'm excellent.

CHIEF, MY QUESTION HERE IS CONCERNING A SITUATION DEVELOPING ON THIS CONTINENT -- THE WASTAGE OF RESOURCES IS REACHING SUPERIOR LEVELS AS THE PRICE SYSTEM DETERIORATES. IS IT POSSIBLE THAT IF THE PRICE SYSTEM GOES ON FOR ANOTHER FIVE YEARS THAT THIS WASTAGE MIGHT CANCEL OUT THE PROSPECT OF AN ECONOMY OF ABUNDANCE?

No, but it might alter certain factors. Right now, you see, you're in the dangerous stage -- this economy of ours -- after all, I might just as well start and give you a lot of material on it. You see, back in the Spanish American War in 1898, we defeated the Spanish in both the Philippines and in Cuba. Well, then we went to war with the Filipino liberator called Aguinaldo. He had confiscated the big landholdings of the Roman Catholic church and the multi-millionnaire (Hastienvista?) and others, and United States fought a war with Aguinaldo and finally Aguinaldo surrendered. Then we returned the properties to the big holders. That's practically 70 years ago, and the United States started on the course that it's now on back then being a counterrevolutionary nation -- not that they advertised it, but their acts were that.

We went into various parts of the world; for instance, we set up the constabulary in Nicaragua and other Central America republics. We made papa Somoza a captain in the national guard, and he later became dictator, which he held for thirty years. Of course, he got assassinated, but his two sons, the Somoza boys, are running the racket today. Well, Trujillo of the Dominican Republic, he was a captain, too, of the national guard, which was set up by the armed forces of the United States. He, too, became a dictator.

You go on down the whole gamut of time from the Spanish American War to the present. United States has increasingly become a counterrevolutionary nation out to block social change around the world and in United States. Greece, Spain, Africa, Congo Republic, the Near East, everywhere we've stuck our nose in, Korea and South Vietnam -- these are counterrevolutionary attempts. Do you follow it?

YOU ARE POINTING OUT THEN THAT ALL THE EFFECTS THE U.S. IS MAKING FROM A MILITARY STANDPOINT IS TO HOLD STATUS QUO.

Certainly, it is. Now in this latest issue of LIFE, March 29th, there is a big article spread by George W. Ball -- the biggest single article in the issue -- entitled, "Three-and-a-half Superpowers." George W. Ball was at one time a legal partner of Adlai Stevenson. President Kennedy brought him in, and he was advisor to President Kennedy and later to President Johnson. He became Undersecretary of State, and he has written a book, which is not yet published but from which this article is made up, entitled, "The Discipline of Power, Essentials of a Modern World Structure," published by Atlantic Little Brown of New York. This book is equivalent to an American Mein Kampf. It's in this issue of LIFE. Get it and read it. In other words, in 50 years, United States has failed in its encirclement of Russia and in its cold war, and they're scared. Remember that United States invaded Russia at Archangel in the north and Vladivostok in the east; participated along with Britain, France, Japan in the invasion of that territory. The Russians finally won out, but today, 50 years later, we are not the economic power that we thought we were in 1918 or 1940, The world has changed, and Russia today is the greatest producer of bituminous coal, the greatest producer of wheat, of cement, and the second greatest producer of steel and

oil. In wheat, they generally run about 2.7 billion to 3 billion bushels. China, in this last year '67, did 190 million tons of food grains. They have come up. This is not the world that we thought. We thought that the world was our oyster, and we could open it wherever we pleased around the globe -- that we could exploit anything -- that we were the proprietors of the great establishment of finance capitalism.

We've taken over from most of the European nations. Britain no longer has an empire; neither has France; neither has Holland. Their empires are in pieces. Britain cannot feed itself. It has too many Britishers. Holland has too many Dutch; of course, if you could export 82,000 Holland Dutch a year, you might maintain an ecological balance.

This is happening. The world has altered, and United States is no longer in the position that it was 20 years ago at the finish of World War II or 50 years ago at the beginning of World War I. Yes, we have more equipment, more telephones, more automobiles. We have more TV shows, more Kleenex, and Coca-Cola than the rest of the world. If that's an achievement, well, let's write it down, but how far do you go with it? We're running out of oil reserves and gas reserves. We still have immense coal, molybdenum, limestone, phosphate, etc. We have immense land areas, but we're no longer the technological power complex in relation to our resources that we were 50 years ago. Neither are our allies. Italy hasn't got it. Spain, Portugal, West Germany or Britain. France is the only country that has the soil, the technological equipment and the resources to make a viable economy in western Europe.

What are we going to do? Are we going to continue on our pathway of being the greatest counterrevolutionary nation on earth and take over the cloak of Hitler? Because that is our direction. Bear in mind that in 1919, fascism started in Europe. You had the Sinarquista in Portugal, the Falangista in Spain, the Cagoulard and the Croix de Feu in France and Belgium, the Fascista in Italy, the Stahlhelm in Austria, the Knights of St. Michael in Romania, which later became the Iron Guard, the Arrow Close in Hungary, and the Ustachi in Yugoslavia. I can't think of the Polish one -- its unpronounceable; but you had all of these organizations, and the National Socialist Party of Germany -- the Fascist Party of Germany -- remember that came 10 years later. In

other words, Hitler didn't produce the fascism of Europe. The catholic fascism of Europe produced Hitler, and all Europe joined in the German fascist armies to attack Russia. They were beaten, and our help was minimal. They could have won without us. And the reason they hastened to invade at the Normandy beach was the fear that the Russians might go through to the Bay of Biscay. Eighty-five percent to ninety percent of the German casualties were on Russian soil. So, having met this kind of an impasse and instituting the cold war, we have continued to cherish the idea of the Cordon Sanitaire of World War I and the containment policy of World War II. Now that we find that neither one has worked and our so-called opponents are stronger than ever and too strong to take unilateral military action against, we are trying to form a coalition similar to the Anticomintern Pact of Hitler. Read this book by Ball and you'll find it out.

Now, what we are running into nationally and internationally is very simple. The time is running out for this system of ours. We have over 16,000 municipalities and 17,000 townships in United States, and a little less than 100,000 total governments that are empowered to levy taxes and collect them and to issue debentures. In other words, there has been no major change in the structural operation of the United States in 180 years. Our structure is obsolescent and antique. It is incompetent to take care of the imperatives of this modern world of our day. So, what? We have done some marvelous things in many ways. We've put in installment buying, we've promoted this, we recovered Germany after World War I with the Young Plan and the Dawes Plan and after World War II the Marshall Plan, bolstered up every economy in Europe and some not in Europe. Well, now they're all bolstered up with a lot of new technological equipment and capacities beyond that they ever dreamed of,

Italy's steel capacity has increased 700 percent since the end of World War II. Italy has no iron ore and no coking coal; so, United States advances them the money to build ships to bring the ships over to Newport News, and advances them the money to buy the coking coal to take it back to Italy. Marvelous! This kind of game is about running out.

The total debt in United States just announced is 1.4 trillion. It's increased enormously in the last seven years. The interest on the federal debt this year -- that's interest

payments -- will exceed \$15 billion. That's a sizable chunk. The total budget of United States didn't reach that for more than a century and a half. Well, now we're stuck with it.

You're going to renovate the cities of the United States, you're going to take up the problem of pollution -- well, that will run \$600-800 billion, and the interest rate will probably be 6 percent. Does it mean that you can afford to pay \$60 billion a year for interest service on debt alone and then have no solution? In other words, time is running out for this system. In the last 17 years, United States has had a deficit in its balance of payments to the nations abroad. They are getting tired of these discrepancies. They are also buying gold, silver, platinum, vanadium, and any other rare high-cost metals. At least they would have something solid instead of so-called dollars, and they are going to compel us to introduce some fiscal changes. That will only be temporary; it won't solve anything.

This is the way it's going. We want you to realize the direction in which we are moving, so when a Martin Luther King leads a parade down the street, that's only a gesture. Not that he isn't sincere, but sincerity can't direct a social revolution any more than hatred can. There has to be design, and the civil rights movement or the political parties haven't got it.

Just the other day you had Bobby Kennedy out there in Seattle, did you not? Bobby is part of the Irish Mafia from Boston; so is Eugene McCarthy. Do any of you think that any of these political sideshows for the Republican or the Democratic are going to alter anything? Oh, no. They hope to stall it, and what could be worse than Nixon or Kennedy? Nixon is a rat and Kennedy is the fox in the chicken coop.

Now I think I had better let you ask a couple of questions on that.

ARE THERE ANY VERBAL QUESTIONS ON THAT? THE CHIEF LAID OUT QUITE A STORY THERE, DIDN'T HE?

HELLO, CHIEF. THIS IS SYDNEY BRIGGS. Oh, yes, Sydney. THEY'RE OPENING THE LONDON STOCK EXCHANGE ON YOUR BIRTHDAY, AND I'M WONDERING IF YOU ANTICIPATE SOMETHING DRASTIC HAPPENING TO THE DOLLAR, IMMEDIATELY?

What stock exchange are they opening?

THE LONDON GOLD EXCHANGE.

Oh, they're opening it up?

YES, THEY CLOSED IT FOR TWO WEEKS.

Yes, I know they did,

BUT THEY'RE OPENING IT ON YOUR BIRTHDAY.

Oh, they're opening it on my birthday?

YES.

Well, anyone who operates anything on my birthday is crazy.

(LAUGHTER) WELL, I JUST WONDERED IF THERE WAS A PARTICULAR SIGNIFICANCE.

Oh, no, not at all.

HAPPY BIRTHDAY.

Thank you very much.

ARE THERE ANY OTHER QUESTIONS AT THIS TIME. THERE'S ONLY ONE THERE?

HELLO, CHIEF. THIS IS PETE MYRTLE. I'M FROM VANCOUVER. THE QUESTION I HAVE IS A RATHER MUNDANE ONE, BUT I'M ON THE RESEARCH COMMITTEE. Oh, I know. AND I WAS CONCERNED WITH THE RESEARCH CLIPPINGS AND THIS TYPE OF THING AND WONDERING -- I'M SETTING UP A BIT MORE OF A FILING SYSTEM -- I WANTED TO KNOW WHAT CLIPPINGS MORE EXACTLY DO YOU REQUIRE, HOW MANY OF THOSE I SEND ARE REDUNDANT OR ARE THEY ALL PERTINENT OR WORTHWHILE? Oh, yes, most clippings that the Sections send in are pertinent. Anything that you can clip that has anything on the rates of doing work or production or worthwhile comments, send them in. Is that what you mean? YES, IN PART. NOW DO YOU FIND IT WORTHWHILE TO KEEP THEM ON

TELECONFERENCE  
CHQ AND 12247-3

3-30-68

FILE OR DO YOU JUST SCAN THEM FOR TRENDS AND THEN DISPOSE OF THEM? Do you mean here? YES. Oh, no, we save them. YOU MUST HAVE AN AWFUL STACK. We have. NOW WHAT IN PARTICULAR ARE YOU LOOKING FOR? IS THERE A GREAT DEAL OF REDUNDANCY IN .... Oh, no. up in British Columbia, you might get us statistics on the amount of coking coal shipped to Japan and the copper concentrates and the iron ore and the oil. I could go on with a lot of other things.

MY ATTEMPT VERY RECENTLY HAS BEEN TO RESTRICT WHAT I SEND TO MORE PURELY LOCAL MATTERS OR NORTHWEST CONTINENTAL MATTERS. WOULD THAT BE IN LINE WITH YOUR THINKING?

You don't have to do that. They could also be toward general articles in the British Columbia press that don't refer to British Columbia but that are worthwhile sending in. They would be a reflection on the kickback attitude of the press or somebody else in British Columbia. That would be worth knowing.

THAT'S THE KIND OF INFORMATION I WANTED. I'LL PASS IT ALONG.  
LOTS OF LUCK

CHIEF, THIS IS LOU VERNE AGAIN. IT INCIDENTALLY REMINDS ME THAT WE GOT A CALL HERE FROM LONG BEACH JUST A LITTLE WHILE AGO, AND THEY WERE QUITE ENTHUSED AS BOTH TRENDEVENTS SALES AND MAGAZINE SALES SEEM TO HAVE TAKEN A SUDDEN SPRINT. PERHAPS OUR INFORMATION IS BECOMING MORE AND MORE IN DEMAND.

Lou, somebody said that you were appearing on TV?

YES. I'D LIKE TO TALK TO YOU ON THAT. MAY I CALL YOU TOMORROW, CHIEF. You will. All right, call me tomorrow. Any more questions?

HERE'S ANOTHER QUESTION, CHIEF. HELLO, CHIEF, THIS IS GEORGE SCHELL OF SECTION 3. MY QUESTION IS: IS THE SOCIAL UNREST RELATIVE TO THE NEGRO CHANGING THE SOCIAL THINKING AMONG THE POLITICAL LEADERS IN THE UNITED STATES?

Oh, that's bound to, you see, because after all, the negro is in a different situation today than he was 40 years ago. The majority of the negroes have moved north into the urban centers -- Baltimore, Washington, Philadelphia, New York, Buffalo,

Cleveland, Detroit, Chicago, Cincinnati, and St. Louis are the chief centers. You have two cities in United States that have over 1.1 million negroes. Well, there's no such city in the south. The maximum number of negroes in the city in the south is 300,000; so the political complexion in cities is changed due to the infiltration of your big potential black votes. Do you follow me? YES. They'll make any play they can think of to cater to that vote, and if there were a few million green colored individuals, they'd make a play for the green colored individuals for their vote. If they were Hindu or Muslim and so on, we'd have Muslim representatives. Of course, now we've only got the black Muslims, but if you had enough Muslims here, you'd have whites becoming Muslims in order to get the Muslim vote. QUITE A PIECE OF GOULASH, ISN'T IT? Why, certainly, and your political parties are playing it.

The Kennedys never gave a damn about the negro vote. They only started the civil rights thing in order to break up the solid bloc Democratic Party machine in the south so they could control it. The same way that they financed McCarthy -- Eugene McCarthy, I'm talking of. In other words, they paid for shilling 5,000 college kids up in New Hampshire, and then they put three of the Kennedy advisors in to handle the kids. Now that Gene McCarthy is not in the same boat in Wisconsin, the three Kennedy advisors have resigned and who's going to put up the money? So they'll pull the rug out from under Gene McCarthy. Well, they do the same thing in the negro vote. Here's Martin Luther King coming out to say that he is going to support Bobby Kennedy. How do you like that? WE'RE KIND OF BAFFLED WITH THAT SITUATION. Well, they'll play any angle, but it isn't going anywhere except into a more messy situation. KIND OF LIKE FLIES ON FLYPAPER? Well, that's my phrase for the war in Vietnam, "The flies have captured the flypaper." IT'S FUNNY HOW THE FLY STARTS OUT WITH JUST ONE FOOT STUCK AND PRETTY SOON HE'S IMMERSSED IN IT.

Got another question there? YES.

HELLO, CHIEF. THIS IS FROM SECTION 3. MY QUESTION IS: HOW ARE CHANCES OF TECHNOCRACY INC. GETTING A BOOK, FOR EXAMPLE, ON CONTINENTAL SURVIVAL PUBLISHED?

We're not in position to write a book of that kind, and we haven't got the equipment to publish a book as yet. We hope to

TELECONFERENCE  
CHQ AND 12247-3

3-30-68

add to our existing equipment and to someday be able to be in that beautiful condition. I would like to be able to say we could, but we are not equipped at the present time to do it. Does that answer your question?

YES, CHIEF, IT DOES.

Any more?

HERE'S RENA PARKER, CHIEF.

Any people in the audience have any questions on what I've said this evening?

THEY SEEM TO BE QUITE SATISFIED, CHIEF.

They do? Well, you've been running quite awhile.

HERE'S RENA, CHIEF. HELLO, CHIEF. Hello, Rena, how are you? I'M FINE, HOW ARE YOU? Good. I'm excellent. WE'RE SO PLEASED THAT YOU HAVE TALKED TO US TONIGHT, AND IT'S BEEN THE HIGHLIGHT OF THE EVENING. THERE'S A GOOD CROWD HERE. THE SECTIONS IN THE NORTHWEST ARE WELL REPRESENTED, AND MONDAY IS YOUR BIRTHDAY AND WE WANTED TO ALL WISH YOU A HAPPY BIRTHDAY. SYDNEY BRIGGS IS GOING TO COME UP NOW AND LEAD THE SINGING OF "HAPPY BIRTHDAY."

Oh, you're going to sing? Well, Rena, this is ....

HERE'S SYDNEY. (BACKGROUND SINGING OF HAPPY BIRTHDAY).

I can hear it. All right. Rena?

THANKS SO MUCH FOR GIVING US THIS TALK.

Well, I'm always delighted.

WELL, THAT'S FINE. WE WERE SO GLAD TO GET YOUR LETTER.

Thanks for everything, Rena.

ANY OTHER QUESTIONS FOR THE CHIEF?

No, I don't think so. We've spent an hour at this, and if

TELECONFERENCE  
CHQ AND 12247-3

3-30-68

they're satisfied, I am. O.K.?

RIGHT, CHIEF, AND A SALUTE TO YOU AND THE STAFF AT CHQ.

Thanks a lot.

GOOD NIGHT, CHIEF.

Good night.

TELECONFERENCE BETWEEN HOWARD SCOTT AND  
SOME STAFF MEMBERS OF THE NORTHWEST TECHNOCRAT  
PLUS SOME VISITING MEMBERS  
AUGUST 24, 1968

(PROBABLY HARRY BRIGGS IS MODERATOR -- SOUNDS LIKE HIS VOICE)

WE CAN PROBABLY ASK QUESTIONS AS YOU GO ALONG.

Well, that's fine. Where are they from?

WE HAVE MOST OF THE NORTHWEST TECHNOCRAT STAFF HERE WITH US THIS EVENING, AND WE ALSO HAVE MR. PERRY AND MR. BILLS FROM THE WASHOUGAL AND CAMAS AREAS. WE HAVE MR. HEMBLING FROM PENTICTON -- Oh, yes, British Columbia -- YES, AND THEN WE HAVE SOME VISITORS FROM SECTION 1 IN EVERETT, AND MEMBERS OF SECTION 3 AS WELL.

All right, you've got a fair representation then. How's my voice coming through?

WHY, I THINK IT'S VERY GOOD. HOW DOES IT SOUND?

Can I hear the audience, now that's the question?

APPLAUSE.

I can hear that part of it. Seeing that they're all curious out there, suppose they ask a couple of questions.

ALL RIGHT. WHO WOULD LIKE TO ASK A QUESTION?

Dead silence?

YEAH. THEY FIGURE YOU'RE GOING TO UNLOAD ON THEM, I GUESS.

Oh, no, I'm just trying to have some fun here.

HERE'S STEVE LIVINGSTON, CHIEF.

I DON'T KNOW IF THIS HAS A BEARING ON THE SITUATION OR NOT, BUT THE PUBLIC DEBT OF THE U.S. AS OF DECEMBER 31st WAS \$345,947,345,000.

That's the federal debt?

THE GROSS PUBLIC.

What about it?

WELL, IT EXCEEDS THE PUBLIC DEBT OF ALL OF THE OTHER NATIONS OF THE WORLD -- THERE'S 133 OF THEM -- BY \$43,819,000,000, ALMOST \$44 BILLION.

That's doing pretty good.

THIS PUBLIC DEBT HAS GROWN IN THE LAST YEAR \$4,398,000.000.

Yes, it's moving up every year. What is your question?

WELL, HOW FAR CAN IT GO BEFORE SOMEBODY STICKS A PIN INTO THE BALLOON?

Oh, it can go quite a ways yet. After all, what is debt? Is it a physical thing?

WELL, I GUESS NOT.

No, it's not physical; it's paper, isn't it? It would take quite a while to drown this country in paper, even toilet paper, wouldn't it? So the chief thing about debt is the expansion that it brings with it in physical equipment, not the amount of the debt. The total debt of the nation, of course, is over \$1 trillion, and we're paying more and more interest every year on the government debt, and the payment of interest on the federal debt is, I think, around \$15 billion a year. So, it can go a ways yet. There is nothing immediately cataclysmic in that. Is that what you want to know?

YES, THAT ANSWERS MY QUESTION. THAT'S ABOUT ALL I'VE GOT TO OFFER. I SEE LLOYD'S OF LONDON HAD THEIR FIRST LOSS IN THEIR HISTORY THE OTHER DAY.

Well, of course, Lloyd's of London is one of the great institutions, you know. If you can afford to take flood insurance on the Delaware from Lloyd's of London, the premiums are so high you could live anywhere in the world. Why in the hell live on the Delaware then?

8-24-68

WELL, THAT ANSWERS MY QUESTION, AND I'LL TURN THIS OVER TO SOMEBODY ELSE.

What else have you people got on your mind out there? You've got a lot more than this.

THERE HAS BEEN SOME DISCUSSION TODAY ABOUT THE CZECHOSLOVAKIAN SITUATION.

Well, what about it? What's the question?

I DON'T KNOW IF THERE IS A QUESTION OR NOT.-BUT THERE HAVE BEEN SOME COMMENTS.

What do they want to know? That's what I'm trying to find out.

(TO AUDIENCE: O.K., WHAT DO YOU WANT TO KNOW ABOUT CZECHOSLOVAKIA? ) A QUESTION IS WAS THE CIA INVOLVED?

Well, western powers have been monkeying in there for the last couple of years, and in the case of Hungary in '56, the Russians pulled out and let it break out. This time the Russians and the Warsaw Pact nations moved in Tuesday night, which would be early Wednesday morning over there. They've been playing footsie in there with the Slovakian bunch. Well, if you remember when Hitler first took over Sudetenland, and then he took over the rest of Czechoslovakia. Moravia and Bohemia were incorporated into the Third Reich, but Slovakia, on the other hand, was made an independent republic under President Monsignor Tiso and remained that way until the Russian and Czech armies came in at the end of the war and liberated it. They hung Monsignor Tiso and his other collaborators in their clerical robes in the public square of Bratislava. The Slovakian part is predominantly Roman Catholic, and that was the most vicious part of the occupation of entire Czechoslovakia.

They've been trying to come from in under, and this Dubcek and his so-called liberation policy -- you see, he appointed six new bishops, and they wanted the public schools to go back under the parochial system of the church. That's one angle. So, the Russians let them go until they got ready to move, and then the

Russians, Bulgarians, Poles, East Germans, and Hungarians all moved in -- moved in so fast that it became a fait accompli and it was all accomplished, and the United States intelligence didn't know a damn thing about it. How's that? The Russians did an excellent job. Czechoslovakia is 49,000 square miles, about the same size as the State of New York, about 500 miles in length and its widest is 175 miles; so, it didn't take them long to move in from all of the different directions.

They'll straighten it out. Of course, they'll clean out the agents provocateurs. Do you understand that term?

THEY SAY NO.

Paid agents. Undercover agents. They have always been called agents provocateurs in European history. Do they understand it" now? YES. In other words, if there were CIA in there, they would be agents provocateurs. And by the way. East Germany has just published a book which is quite a sensation in Europe right now because it contains 2,500 names of employees and their addresses and descriptions of the CIA. That's published in East Germany; so, the countries behind the Iron Curtain are a little more informed on this than our countrymen here at home are. Is that obvious? SOUNDS LIKE IT. Oh, yes, definitely.

Well, the other significant thing is this: The big Russian (Comcon) pipelines are bringing vast quantities of oil and gas -- one pipeline comes up through Hungary and a branch goes to Czechoslovakia. The other comes down the Baltic shores and will terminate in East Germany. Austria has just signed a treaty with Russia for the delivery over twenty years of starting in around 800 million cubic meters and will go on up to 2,000 or more million. That will be an extension from the Hungarian terminus of the Russian pipeline.

Italy wants to get gas from Russia, tapping into the Austrian pipeline system. The state-owned steel plant in Austria is making the steel for the pipeline and the West Germans are going to make the pipe from the Austrian steel for the Austrian pipelines. East Germany has vast deposits of brown coal, and Poland has coal, oil, and gas, Hungary has gas, Albania has new gas fields and oil fields, Romania, as you know, has considerable oil fields -- two of them, and Czechoslovakia has some indigenous

8-24-68

gas, not as much as Romania, but not enough to satisfy the expansion of her industrial requirements' capacity. Austria had several oil fields and gas, but she expanded so fast that she chewed up her resources and she hasn't got six months to go. That's why they have suddenly signed the treaty with Soviet Russia.

The move was on in West Germany to try to stop Czechoslovakia from signing a further extension of energy contracts with the U.S.S.R., and West Germany would supply the energy rather than coming from Russia in the east. Now does this give you a different picture? YES. Now, Italy wants ten times the gas of Austria. Italy would have to build its pipelines. France also wants gas from Russia. How do you like that? This is being reported in the British Petroleum Press and the International Petroleum Press here in this country, but not in our daily press.

The longest pipeline in the world is in Russia. If you laid one end of it down in New York, the other end would pass through Los Angeles and go 700 miles out in the Pacific. That was mainline only; that does not include branch lines. The Russian pipelines are one meter ID, The pressure is 880 pounds, so you don't make that out of ordinary boilerplate. It has to be alloy steel and practically an inch or more in thickness. In other words, that's some pipeline.

If you're going to shove energy into western Europe in this volume that is being talked about then NATO, the Common Market, and all the other subterfuges, political or economic, go down the drain, because your big energy supply will be coming from east of the Iron Curtain. Is that understandable? Do you comprehend that? YES. Well, that's what the main fuss is back of all this. One is the economic tie-in; the other is the church, of course, and the Slovakian. Well, the Slovaks have always been the parochial hillbillies of Czechoslovakia. The Russians should have given them to somebody else. I'm talking of the Slovaks, now, not the Bohemians or the Moravians. After all, your Thirty Years War was fought over Bohemia and Moravia, you know, and John Hus, who was burned at the stake in the early 1400s. The Treaty of Westphalia in 1648 finally terminated it, but the war itself finished in 1632. So that was several centuries after they burned John Hus. So, there's a long history of conflict, religious and otherwise in Czechoslovakia with the so-called Christian west, and the

Russians would not permit any member of the Iron Curtain countries to secede, any more than we in the United States would permit the Confederacy to secede from the Union. It was simply that the Russians had enough knowledge and enough goods on everything to move in and do this before the election in United States, while, previously, we were the ones who pulled a move previous to election, right? THAT'S RIGHT, Yes, Eisenhower, the Hungarians, and the riots in East Berlin, Cuba, they were all pulled prior to elections in United States, correct? YES. Only this time the Russians turned around and said, "Pardon us, but we think we'll do it now for a change."

If you want to ask any more questions on Czechoslovakia, speak up and let me know.

JIM CURLISS: I WANT TO FIND OUT IF THE TECHNOLOGY THAT'S BEEN DEVELOPING IN CZECHOSLOVAKIA IS VERY MUCH DEVELOPED IN THE SLOVAKIAN SECTION?

No, most of it is in Bohemia and Moravia. True, they're putting a steel plant in down in Kosice.

YOU'VE CONFIRMED WHAT I SUSPECTED.

The Slovakian part is more mountainous and agriculture and more primitive. Of course, the tailend of Czechoslovakia before the war was Carpathian Ruthenia. That was ceded to Russia. If you go back in history, I think it was Casimir IV of Poland that captured it and told them they had to become an eastern light of the Roman Catholic Church or he would slaughter them. Well, they did, and now that they have become Russian, they have gone back to their orthodox catholicism. Interesting, isn't it?

The reason that Russia did that was partly because they were Slavs and also by taking that small piece of territory, they then had a common boundary with Hungary; so, therefore, if they wanted to march into Hungary, they didn't have to march across any other nation's territory. There are a few mountain passes for transportation. That was what was strategically involved in it.

THAT'S VERY INTERESTING.

Has anybody else got a question?

8-24-68

HELLO, CHIEF. THIS IS SYDNEY BRIGGS TALKING. THE RIGHT WING IS HAVING A FIELD DAY BECAUSE OF THIS CZECHOSLOVAKIAN AFFAIR. DO YOU THINK THAT THE U.S. WILL GO THROUGH A PERIOD WHERE THE U.S. WILL USE THE SIX CONCENTRATION CAMPS IT HAS, AND, IF SO, ARE TECHNOCRATS GOING TO BE IN THEM?

(Chief laughs) No, you don't have to get that frightened yet.

You have a wonderful choice, now, out there in Seattle. I suppose you're all going to vote for Nixon, are you?

OH, NO. WALLACE!

Oh, Wallace?

YES, WITH LESTER MADDOX FOR VICE PRESIDENT.

And Lester Maddox for Vice President? YES. Well, that makes about as good a combination as any. It doesn't make much difference what bunch of rats you put in.

OH, CHIEF, I WONDER. THE REACTION TO THE POPE'S ENCYCLICAL HAS BEEN TERRIFIC, EVEN AMONG CATHOLICS, AND DO YOU ANTICIPATE SOMETHING DRASTIC HAPPENING TO THE CHURCH?

Oh, no. The church has made terrific mistakes in history before, and in most of their dealings in this hemisphere, they've made their major blunders.

I HAVE HEARD CATHOLICS SPEAK ABOUT THE ENCYCLICAL AS BEING DOWNRIGHT CRIMINAL.

Well, naturally, of course. There's only one catholic country with a birthrate in accord with the times, and that's Ireland, and that isn't because of the mandates or the edicts of the church. That's purely economic. But republics like Venezuela, Mexico, Colombia, and so on, that have birthrates of 47 to 49 and a 3.5 to 3.7 annual increase, well, they're going to be in trouble whether they receive the holy benediction or not in the next two years. You see, Mexico has 42 million population. She's going up at about 3.5 to 3.6 percent per annum. Even the pope

8-24-68

won't be anywhere within a couple of years. Do you follow me? THANK YOU VERY MUCH. In other words, catholic women will be driven into contraceptives. They are now to the extent of several million in United States according to the sales of the pharmaceutical manufacturers. They're having a gold mine rush -- the pharmaceuticals.

HELLO, CHIEF. HEMBLING HERE FROM PENTICTON. IT'S A LONG TIME SINCE I HAVE HEARD YOU, IT'S QUITE A TREAT TO HEAR YOU AGAIN.

Well, I'm still walking around just as bad as ever.

IS THERE ANYTHING WRONG WITH MY TAKING A TAPE FROM THIS INTERVIEW?

Well, wait until we get it in here to check on it.

YES. O.K., THAT WILL BE FINE. WE'RE DOING OUR BEST -- (HARRIS?) AND MYSELF -- WE SEEM TO BE THE ONLY ONES HOLDING UP IN PENTICTON NOW. WE HOPE TO HAVE SOME GROWTH THERE.

Well, it's starting up. Oren McGraw has a nice set of slides. Why don't you contact him?

WE PLAN TO GO UP.

He's got a nice set of slides of CHQ.

I'LL TURN THIS OVER TO HARRY NOW.

WE'VE GOT ANOTHER QUESTION.

All right. Give me the question and then I'll pause for a minute to take a drink of water.

THIS IS (SADIE JOHNSON?) FROM EVERETT. HOW'S BUSINESS?

Which business? Whose business?

THE DOLLAR BUSINESS AND BOEING, ETC.

Oh, you mean the business system?

IT HAS BEEN PREDICTED THAT IN OCTOBER WE WILL GO INTO A SLIGHT RECESSION. WHAT IS YOUR COMMENT ON THAT?

The only trouble is that it won't be big enough -- the recession. You can have little ups and downs in this managed economy of ours, slight dips and rises, but that's not important, except to someone caught in the downward trek of their particular field, but, collectively, no. Do you follow me? In other words, you could have a decline in housing and a half dozen other things, and that doesn't say that the entire economy is going to be squeezed. Wait until they slow down the plants to four days a week; then you'd have a real squeeze on. Because today it's not like the Dirty Thirties, where they dropped over 80 percent. Today your income only has to decline 20 percent, and more people are in trouble than ever existed in trouble in the Dirty Thirties. Do you understand me? Does that answer your question?

YES, IT DOES. I'LL TURN IT BACK TO HARRY.

EARL PATTERSON HAS A QUESTION. HE WANTS TO KNOW ABOUT THE TIGHT MONEY SITUATION.

They can tighten the money anytime by raising the discount rates and so on both here and abroad. That squeezes your loans, gets higher return. It might in some cases induce foreign capital to send its liquid over here to get higher interest rates, but in the long run, what difference does it make? It's like turning the valve to slow it down or speed it up a little. That's about all it amounts to.

I HAVE ANOTHER QUESTION HERE. THERE ARE SEVERAL INDIVIDUALS HERE WHO ARE GUESTS, AND ONE OF THEM WANTS TO KNOW HOW THE RACIAL CONFLICT IS APT TO AFFECT THE POLITICS OF THE COUNTRY AND THE POLICE ACTION.

You're going to have more of the same, you know; in other words, there are 5,600 National Guard with tanks, bazookas, and everything else out in Chicago tonight. All of the tanks aren't over in Czechoslovakia. There are a lot of them in Chicago. Besides, they've got that big anchor link fence all around the Amphitheater, and they've got bullet-proof entrances to the Amphitheater. You've read about it or heard it on TV, haven't

8-24-68

you?

YES, YOU'D THINK THEY WERE SCARED.

Scared? Well, after all, they're having a hippie convention out there, too. And then you've got this what's-his-name that wants to have 1,000 white women march barebreasted in the streets of Chicago. Have you heard about that?

NO, THAT'S NEWS TO ME.

Oh, that's news to you. YES. Oh, you're just too far away from things, then.

WE SURE ARE.

Yes, he wants to have 1,000 women -- white women, that is, -- none of those dark-colored ones -- wants them to march barebreast down Michigan Avenue.

WHAT'S THE PURPOSE OF THIS, CHIEF?

Why, it's the hippie convention, whether you're going to call it a love-in, a sit-in, or a breast-in, (LAUGHTER) So, you're having all kinds of things in Chicago.

IT'S A PRETTY INTERESTING PLACE TO BE.

Well, look at the shows they put on in Miami. They had all kinds of shows. They've pulled a similar thing in Chicago, provided, of course, somebody doesn't toss a lot of Molotov cocktails around and start a real disturbance. Then it doesn't make any difference who they nominate, whether it's a Humphrey, a McCarthy, McGovern -- it's all the same nonsense, you know.

What I'd like to ask that audience you have there: How many are registered voters?

HOW MANY HERE ARE REGISTERED VOTERS? ABOUT SIX OR EIGHT, I WOULD GUESS.

What the hell are they doing there? Did they have to register because they had a civil service job or something?

8-24-68

MAYBE THEY THINK THERE WOULD BE SOMETHING WORTH VOTING FOR  
SOMETIME.

Yeah, after Peter takes them in through the pearly gates,  
but not before. What else have they got on their minds?

THIS IS WALT BARTON, CHIEF. I READ THE MILLIONNAIRE'S  
MOUTHPIECE, THE WALL STREET JOURNAL, AND IT SPELLS OUT  
PRETTY CLEARLY HOW THINGS WILL BE DOWN IN THE FIRST QUARTER  
OF NEXT YEAR AND GOES ON TO MENTION THAT IT WILL BE EVEN  
WORSE THE SECOND QUARTER. DO YOU THINK THINGS WILL CLIMB  
BACK UP OUT OF THAT OR DO YOU THINK THAT IT WILL BE THE  
BEGINNING OF A DOWNTREND?

There are a lot of factors here and abroad. I've got to find  
out yet what's going to happen to a lot of things. In other  
words, Great Britain is in trouble. So will western Europe be.  
Where are they going to put all of the production? United States  
can't police the world, and it can't finance the world. It can  
only engage in futile gestures from now on, like telling the  
Russians to get out of Czechoslovakia. You're going to have a  
world excess of newsprint, potash, and a few other things, which  
may force certain raw materials down. Of course, you're going to  
have booms. Canada has the biggest mining boom in history,  
greater than the Klondike Goldrush; in other words, you are  
staking over 6,000 claims a week in the famous Coronation Gulf,  
which I have talked about for years. You now have thousands of  
claims in there with diamond drills, both in the copper, farther  
east in the silver, and still farther east in the lead. In the  
big oil discovery on the Arctic coast of Alaska, which is as big  
as the East Texas field, eight to ten billion barrels, that  
formation extends over to the Arctic Islands, and hundreds of oil  
firms are in there with 27 million acres -- this is on the  
Canadian side -- for oil leases. So, one of the craziest booms in  
history is on. So you've got that side of the picture.

From the standpoint of foods, U.S. is coming in with about  
4,7 billion of corn, about 1.6 billion of wheat, soybeans have  
gone over a billion to about 1.9 billion for the first time in  
history, and sorghum to 700 some million bushels. If Canada goes  
over 520 million bushels of wheat this year, she'll be in trouble  
with her carry-over. So, we'll have plenty of grain. The only

8-24-68

trouble with that is the Russians will have even more than we have, with the exception of corn. Where do we put it? These are basic propositions, do you understand me? YES, I DO.

Now, we were producing steel here at the rate of 145 million tons. We piled up an inventory because of the so-called steel strike; now we're cutting down. This is the ninth consecutive week that the steel industry has dropped its production; so, we've got 35 million to 40-million tons of steel surplus, more than we should have. So they can afford to slow down; in other words, they have it.

Like these movie actors, you know. Bob Hope has several hundred millions, Mitchum's got over five million -- gets a couple hundred thousand for a picture and 27 percent of the take. People like that and corporations like that are on the gravy train. They're not the ones who are going to be hit. It's the average little person. You'll pay more taxes and your prices will go up, and the squeeze is really on you. If you think it's going to bother people, just wait for another 16 months. It will be worse and tighter. Does that give you any satisfaction?

I DON'T KNOW IF IT'S ANY SATISFACTION OR NOT. IT'S LIKE HAVING TO GO THROUGH A SCRAPYARD TO GET TO A PICNIC.

That's right. That's exactly what it is.

I JUST HOPE THAT I LIVE LONG ENOUGH TO GET PAST THE SCRAPYARD SO THAT I CAN ENJOY THAT PICNIC.

Oh, don't worry. There's no use trying to get rich.

ONE OTHER THING, CHIEF, THAT I'VE WONDERED -- THIS IS PROBABLY JUST OPINION, PROBABLY NO ONE CAN PUT A DIRECT ANSWER ON IT, BUT WHEN THE U.S. FINALLY GETS ITS TAIL KICKED OUT OF VIETNAM, DO YOU THINK THAT THIS GOVERNMENT WILL BE ABLE TO FIND A WAY TO KEEP ENOUGH MILITARY MEN OVER THERE OR DO YOU THINK WE'RE GOING TO HAVE HALF A MILLION GIs COMING HOME ALL AT ONE TIME?

They won't all come home at one time, but there's 600,000 over there, considering the ones that are in Thailand and the fleet, and if we have to bring them home from other parts abroad,

8-24-68

it will be interesting, won't it? We have approximately 3.6 million in the total armed forces of United States, correct?

AND IS IT STILL SO THAT THERE ARE FIVE PEOPLE EMPLOYED IN THE U.S. FOR EACH MILITARY MAN OVERSEAS?

Oh, it's more than that. We're the most profligate nation in the world. It runs better than nine to one.

YET THEY'LL STILL TELL US THAT OUR ECONOMY DOESN'T DEPEND ON WAR.

Oh, yes. They'll tell us anything, and we're naive enough to believe it.

THOSE ARE MY QUESTIONS. THANK YOU, CHIEF.

WE HAVE A GUEST ASKING A QUESTION, A GUEST WHO HAS BEEN IN THE STUDY CLASS WHOSE NAME IS BOB TOBIN FROM THE UNIVERSITY.

University of Washington?

YES. HE WOULD LIKE TO KNOW -- YEARS AGO TECHNOCRACY HAS POINTED OUT THAT WHEN THE KILOGRAM CALORIE CONSUMPTION REACHED 200,000 PER CAPITA PER DAY THAT THE SYSTEM WOULD BECOME INOPERABLE.

That wasn't quite what was said -- that the majority of able-bodied adult Americans will no longer be required. We could produce an abundance with a minority of able-bodied Americans. What are you going to do with the majority then? Put them on the annual income? Would the system survive that? Do you follow me?

YES, NOW THE QUESTION IS: WHAT IS THE PRESENT PER-CAPITA KILOGRAM CALORIE RATE?

It's only around 170,000.

IS THAT RIGHT? Yes. BECAUSE OF MILITARY ABSORPTION OF ...

Military, atomic, and so on, and exports. Remember that amount was the production, distribution internally in United States. Is that clear? Does that answer his question?

I THINK IT DOES.

You see, the reason for a lot of this is that the population increase of United States in the thirties, i.e., the decade of the thirties, the ten years, was only 9 million, while the increase in population in the decade of the fifties was 28 million, or more than three times than that of the decade of the thirties. Do you understand what I am saying? YES. That you had a terrific increase in population; therefore, that pulled down your calories per capita, i.e., it put in more population but the energy increase was not as proportional as the other. If you had had only the same population increase as you had in the decade of the thirties, you'd be there, Charlie, as the boy says. Do you understand my gibberish?

YES.

O.K., any more questions?

MR. PERRY FROM CAMAS WOULD LIKE TO ASK A QUESTION.

Down on the Columbia River, huh? YES. PRETTY CLOSE.

THE QUESTION IS: WHAT RESOURCES OTHER THAN COAL AND TIMBER, AND SO ON, ARE LEAVING CANADA FOR JAPAN, AND WHAT ARE THE REPERCUSSIONS?

There's copper concentrates and other metals, iron ore, timber, chemical pulp, coking coal, steam coal, zinc, and a lot of other things. Why?

I THINK HIS REASON FOR ASKING, ACCORDING TO WHAT HE SAID, IS WHAT WOULD THE REPERCUSSIONS BE ON CANADA?

That's just making more business on the international scene. The coal mines along the Canadian National Railroad from Edmonton up to what-do-you-callum pass, well, they were shut down for years. Now they're running around the clock shipping coking coal to Japan. That's from Alberta; but you've got this kind of thing in British Columbia, Yukon, and in Alaska. There are big Japanese investments in there. They have to get it; they haven't got it. The Japanese want to get oil from THE U.S.S.R. from the new Lena

fields. The Russians have offered them ten million tons a year but they won't take yen, rubles or dollars. The Japanese will have to build the pipeline and the pumping stations. The Japanese don't know whether they want to undertake it or not.

That's the same kind of a deal.

HAVE WE WORN YOU OUT, CHIEF?

Your ear gets kind of tender after holding this receiver against it.

HOW'S TECHNOCRACY DOING?

It's moving along all right. Nobody has to worry about that. After all, I've done all the worrying for years. So now I'm laughing. There's going to be more dead crows come home to roost very shortly than there has ever done in history in this country. If you're in good health and last another five years, you'll see it.

THAT'S FAIRLY DEFINITIVE.

Yes. Well, how did the audience like this little question-and-answer?

APPLAUSE.

All they've got to do is keep on going and push it.

WE'RE GAINING GROUND OUT HERE, CHIEF, IN TERMS OF CIRCULATION OF THE MAGAZINE.

The Los Angeles TECHNOCRAT will soon be properly equipped. They've got their IBM in now, you know.

THEY DID?

Yes, so it won't be long until they'll be moving.

Well, I'll call it quits. My compliments to all of you.

CHIEF, WOULD YOU CONSENT TO ANSWERING ONE MORE QUESTION?

8-24-68

Go ahead.

THE QUESTION IS: WHAT ARE THE CHANCES OF U.S. WITHDRAWING FROM VIETNAM?

A sensible withdrawal, no. We haven't done anything sensible in years. In other words, if it gets too tough, we may have to get out -- the kind of get-out that we had in Korea. We're still in Korea, aren't we? 50,000 troops. We're still there, and we don't know what the hell to do about it. So just to make it funny, they take the PUEBLO and hang onto it. We send in three aircraft carriers up there, and we were going to flatten the North Korean port of Wusang, but then we found out that the North Koreans have more and faster planes, several times that than were aboard the three aircraft carriers. When we're at it, just put this in your pocket: the fastest plane in the world today is the Russian Mig-23, flies at Mach-3, 2,100 miles an hour. OH, BOY. Oh, baby, yessir!

So, the finale in Vietnam may be dragged out the same stupid way as in Korea has, and the incoming president can arrange a desultory truce, put it that way. Does that answer your question?

YES. WELL, CHIEF, WE ARE MOST APPRECIATIVE OF YOUR TIME AND THE INFORMATION YOU HAVE GIVEN US. WE WILL LOOK FORWARD TO THE NEXT TIME WE HAVE AN OPPORTUNITY TO TALK TO YOU, AND WE HOPE THAT IT WON'T BE TOO LONG.

All right. Well, fine, Harry. Give my regards to everybody.

I SURE WILL. GOOD NIGHT AND SALUTE TO YOU.

Good night and salute.

TELECONFERENCE WITH CHQ  
AREA MEETING IN VANCOUVER, B.C.  
SEPTEMBER 1, 1968

CHIEF, WE HAVE A GOOD GROUP HERE THIS AFTERNOON. A NUMBER FROM SEATTLE, BELLINGHAM, TACOMA, EVERETT, PORTLAND, AND, OF COURSE, SAN FRANCISCO. THEY'VE BEEN WAITING HERE ANXIOUSLY TO HEAR WHAT YOU HAVE TO SAY TO THEM, AND I THINK THE FIRST THING THEY WOULD LIKE TO KNOW IS JUST HOW YOU ARE AND HOW ARE THINGS BACK THERE AT CHQ?

Everybody wants to know how I am? YES. Well, how do I sound? Can you hear me? YES.

Well, I'm just as good as I sound. How's that? There's nothing wrong here that a million dollars wouldn't cure. How do you like that?

THERE ARE SO MANY THINGS HAPPENING RIGHT NOW. WE JUST DISCUSSED, AMONG OTHER THINGS, THE DEMOCRATIC CONVENTION IN CHICAGO AND THE IMPACT THAT THAT MUST HAVE ON PEOPLE TODAY.

Well, we'll see if we can go into a lot of these problems. Kindly convey my greetings to the Technocrats and officers and guests assembled at the area meeting there in Vancouver.

Just to give a slight review, the establishments of the Price System of the western world are in trouble. They're in trouble from a number of directions. When the consumption of energy and resources over the past fifty years and, of course, the United States with its massive injection of Marshall Plan funds, U.S. Government loans and American private enterprise investments of over \$50 billion abroad, all of these are contributing factors. For instance, Israeli was quite successful in one of the shortest wars in history and captured all of the Egyptian oil wells on the southern end of the Suez Canal and on the bank of the Sinai Peninsula. Those oil wells were delivering -- and still are -- 90,000 barrels a day or better. This oil is going down the Red Sea into the Gulf of Aqaba and up to , and therefore Israeli has with the oil wells of her own a nice supply of petroleum. That alters the old picture of an oil-scarce Israeli. Yes, but American and British oil companies have been surveying east Egyptian territories. They have brought in gas to the Egyptian Nile Delta, and the Depression, and on the western side of the Red Sea, the Egyptian territories. -- there

9-1-68

are 4 fields down there. is already hitting 100,000 barrels a day and expects to be 200,000 barrels a day by the first of the year; therefore, the Egyptians are building pipelines from those southern fields to the Mediterranean. Well, with gas in the Delta and new oil lines, then, of course, the Egyptians are going to be encouraged that they are a first-class power instead of a second-rate conglomerate; and that may increase their ego stature as a national entity to where they think they can lick the world. They will be encouraged in this by other national interests.

Kuwait was once one of the big oil producers. It still is, but Libya now produces more oil than Kuwait.

Nigeria, of course, has a field of great promise, but the civil war going on there may be carried to such a point that it will lead to practically extinction of the Ibo tribes, whose territory takes in most of the oilfields offshore and onshore of Port and others. So, while that is downgrade, the others are on the upbeat, as you would say.

Industrially, things are just as complicated. The German government has had such an increase in the production of butter because of better feed, better fertilizer, and equipment. It has had to buy up 80,000 tons of butter in West Germany alone, and they're storing it. In West Germany, it's called the "butterburg"; in other words, the butter mountain.

In France, they are destroying 10,000 tons of this, 15,000 tons of that -- one fruit or vegetable after another are in surplus quantities.

So we're not the only nation in the world that is going in for the destruction of crops. Other nations, running into the surpluses, are hit with the same kind of thing and have no other solution or no other vision that we've had.

Let's take a further look at the picture. France had excellent oil and gas fields down in southern France against the Pyrenees and other fields. Italy has the Po Valley, which was a nice good yielding field of gas and oil. They made a few gas discoveries in other places. Austria had several oil fields and gas -- not East Texas, you understand, but they were in ample

9-1-68

quantities in all three of these. Well, but in the last 12 years there's been a terrific expansion in the industrialism of Italy, Austria, France, and West Germany, and Austria has gone so fast and so far that her energy resources indigenous to Austria have practically been exhausted. She hasn't got 6 months to go. Italy is not quite as bad but almost. France is doing the same thing. So, here's a situation where they were making so-called progress, that is as far as the language of private enterprise is concerned, and liberty -- if one cares to use that word, but they're eating up their specimens.

The Austrian government, some weeks before the Russian-Warsaw Pact takeover of Czechoslovakia, signed a treaty contract with the U.S.S.R. for the supply of Russian gas for 800 to 1,000 million cubic meters, Austria's government-owned steel plant is making the steel for the Austrian pipeline system on the same specifications as the (Comcon?) pipelines in Russia, i.e., one meter inside diameter, 800 pounds pressure, and MAN and Teschen in Germany are taking the Austrian steel and making the pipe for the Austrian pipeline system,

Italy, strange to say, now wants Russian gas and wants the Austrians to build their pipeline down to the Italian-Austrian border, so that the Italians can build and connect to their pipeline system, and they want ten times the amount of Russian gas that the Austrians have contracted for. Well, if you think that's funny, France wants to connect into the Austrian pipeline system to get a supply of Russian gas for France. Now, remember, Italy, Austria, and France are making these approaches on their own because of the internal energy situation of these three countries. It is not being forced on them by Russian troops, not at all.

The Slovak bunch in Czechoslovakia, that's Dubcek, have been playing footsies with the west since January of this year. The Shell-Esso combination in West Germany offered Dubcek and the Czechoslovak government an energy contract delivered through Bavaria to Czechoslovakia provided they wouldn't sign the treaty extension for energy with the U.S.S.R. The Russians did a beautiful job. United States intelligence, the West German intelligence, and the British intelligence didn't know a damn thing about it. They didn't even know any tank or plane or anything else was going to move, and they moved in in the early

9-1-68

hours of the morning. They occupied every railroad station, every power plant, every airfield, every mile of border. Now, remember, that's the Russian troops, the East German troops, the Hungarian troops, the Polish, and the Bulgarian. It was all over before the Czechs woke up for breakfast.

They took General Svoboda -- he had a seat in the plane, because he was the general in the Russian-Czech armies that liberated Czechoslovakia in World War II. He's a hero of the Soviet Union. He sat in a seat, but Dubcek and 32 others sat in handcuffs on the floor of the plane. Now, of course, the Russians didn't hang or shoot Dubcek. Oh, no. They've learned a few lessons. They just returned him to Czechoslovakia, and, of course, the Czechs may shoot him or hang him or he may commit suicide himself, but he's politically finished. It doesn't matter a hang what Washington, London or Rome thinks of it, he has reached the end of the line.

What I am trying to point is that the Russian-Warsaw Pact movement didn't have anything to do with liberty or suppression of a liberalization. After all, these energy contracts for Russian gas and oil, if they are permitted to go in for ten to twenty years, what is the effect? Right now, all of the central stations in Italy and thermal power plants are running on heavy residual Russian crude, so the Russians are already in on the energy situation in Italy as a prime factor, and now supplying gas -- and undoubtedly oil will come along, they will be the big energy suppliers to western Europe. Just stop and figure it out. NATO, the Common Market, and any other political-economic agreement that western Europe has had in an attempt to dominate the economic-political structure of western Europe isn't worth a hoot in hell. His Holiness, the Pope in Rome, had better be nice, because somebody might turn off the valve, and he'd have a cold shower.

This is only one of a number of factors, and this kind of situation is occurring in various places.

On July 18th was announced the discovery of a big new field -- an oil find -- on the Arctic Coast of Alaska. The Navy has had geologists, geophysicists, and oil well rigs in there for some years laying the groundwork for the private enterprise boys to come in and take over. Well, it may interest you that the find up

9-1-68

on the Arctic Coast is estimated by one of the best firms of geologists in the country as between 8 and 10 billion barrels. It's large, as the famous east Texas field was. Well, since July 18th, firms in Canada, British Canadian, American and other oil firms have taken lease options. This is in Canadian territory, bear in mind, on 43,736,000 acres of potential oil lands east of the Alaskan boundary throughout the delta of the (Mississippian?), of the Mackenzie, and over offshore and on the Arctic Islands. You've got a terrific oil boom, but you also in Canada have a terrific mining boom, a mining boom greater than the Klondike goldrush, because you've been registering claims at 6,000 claims a week.

The copper mine, of which I have spoken so many times in Canada and other speaking tours -- remember the samples that were taken by Samuel Hearne in 1700s to London, and they were deposited in the South Kensington Museum and remained there as exhibits -- that's Cu bornite from Coronation Gulf on the Coppermine River. Now they're flying in diamond drills by the dozens. Copper, silver, and lead. The copper is farthest west, the silver is farther east, and the lead is farther east than the silver. There's also big discoveries in the Yukon and other areas of the Canadian north. They'll have to get transportation to take out huge volume, because you're no longer putting in hundred-tons-a-day mining plants. You're putting them in 10,000 to 20,000 -- undreamed of 20 years ago. This is on the move.

Well, where do we go? In Canada, you've elected -- I think he's what, 49 years of age? -- Trudeau as Premier. He got a clear majority. Of course, what was hatching was that the Kennedy machine was rolling here in United States. They put McCarthy out as a front-running stooges and the Kennedy machine set six organizers up to help McCarthy in New Hampshire, and they put up the wherewithal to bus the hundreds and hundreds of high school and college gals to help McCarthy in New Hampshire. Well, the action of fate was very funny. A psychotic Jordanian assassinates Senator Robert Kennedy. Well, that's one of the nicest things that has ever happened in the political history of United States. What? You don't like it. Well, let's realize that the Kennedy machine had it all bought and paid for. The steamroller was running, and what was the grand motif? There were going to found the Catholic Centerist Party in the United States under the guise of the American Democratic Party, and with the French-Canadian

9-1-68

Trudeau in Ottawa, Premier of Canada with a working majority, it was all set.

This convention in Chicago and the one in Miami Beach -- no one really wanted to run, no one wanted to campaign so long as Bobby Kennedy's steamroller was really running. They were all hesitant and a little bit bothered to do anything at all. The Republican convention was all cut and dried for Nixon before any delegate ever got there. The same thing happened in Chicago, except that the Kennedy machine and McCarthy -- they were all together -- did everything possible to delay, disturb the convention, to break it up, to adjourn it, and to move it out of Chicago for two weeks -- the whole New York delegation, Massachusetts, and part of Wisconsin and California, They pulled every dirty trick in the books. They didn't succeed because the southern states stood by dear little Hubert, and in the eulogy to Bobby Kennedy, Illinois delegation and the Texas delegation, the Alabama and others, refused to rise from their seats when they asked the convention to stand to honor Bobby Kennedy. They said they'd had enough from the Irish Mafia from Boston. They didn't want any more of it. Right on the convention floor!

This gives you some idea of what is going on, and if anybody is under the illusion listening to this that things aren't happening, we could go on with this kind of data and material for hours. The world is in transition, and it's the energy and technology relationships that are doing it. Money will not cure it and political parties won't cure it, whether you have two or twenty-six like Israeli. And no church can cure it, whether it does it with a benediction or not. So, we're headed into something and we're headed into it fast. We're merely asking the Technocrats to wake up and to realize it.

There's going to be more trouble in United States, more trouble abroad. We're in a war we can't win, but then there's trouble in the Congo, in the French Congo in the capital of Brazzaville, where the army has mutinied, Mauritania and Chad -- well, but there's also trouble in South America, open shootings, guerilla warfare, and there's other things liable to break out at any moment.

Now, if you think you're going to have a success; yes, you'll have some success. You'll get higher wages, higher taxes,

9-1-68

higher prices, and the little man will be squeezed. The big ones will consolidate more, and very shortly there won't be any little ones left, and the battle of the giants will begin. I'd like to stop at that point and have you ask questions on what you've heard.

THANK YOU, CHIEF, FOR THE INSIGHT ON THE AFFAIRS THAT ARE TAKING PLACE AT THE PRESENT TIME. DO YOU WANT THE MEMBERS TO ASK ANY QUESTIONS?

I'm open to any questions they want to ask on what we have said in this interview or even outside of the interview if it's germane.

WE'LL HAVE THEM COME UP.

Anyway, whichever is the easiest way. Just give their name, that's all.

HELLO, CHIEF. THIS IS MAXINE GARRISON, AND I'M SO HAPPY TO HEAR THAT YOUR HEALTH IS FINE NOW. I WISH I HAD THAT MILLION DOLLARS TO GIVE YOU. DO YOU SUPPOSE THAT THE CHICAGO FIASCO COULD HAVE A BEARING ON BRINGING NIXON IN?

Well, of course, the dissident Democrats, that is, the Kennedy-McCarthy machine, are liable to swing the Catholic vote of United States to Nixon. That's what they threatened to do.

WAS MAYOR DALEY INSTRUCTED TO CARRY THIS THING OFF LIKE HE DID?

Well, whether he was or not, the riots on the outside were mostly staged riots -- an attempt to break up the convention. Daley was the tough political boss of Cooks County, and he naturally seeing the Kennedy machine has gone to pieces, he's going to play his own machine to the best offer. It's fortunate that he played it the way he did, or they would have broken up the convention. I'm not handing any palms to Mayor Daley, but he had to be tough, or there wouldn't have been any convention. Is that clear? YES, THANK YOU, CHIEF.

THIS IS PAUL THOMAS, A MEMBER OF SEATTLE. I HAVE TWO QUESTIONS. ONE CONCERNS THE A-BOMBS THE RUSSIANS ARE

9-1-68

REPORTED TO HAVE DROPPED IN THE OIL WELLS TO CREATE ALL THIS GAS THAT THEY ARE GOING TO SELL IN WESTERN EUROPE.

Oh, you've got some report that the Russians used atomic bombs in the oil wells?

YES SIR.

No, the Russians aren't doing that. They have an enormous gas supply. They have one gas field in Siberia that's coming out of the ground at 3600 pounds pressure, and its 99.999 pure methane. That is the most lovely stuff in the world for triple contact catalysis. Russia and Iran have signed a treaty contract for the building of the same one meter ID pipelines from Iran to Russia and for building a steel plant, fertilizer, chemical, and textiles plants in Iran. Iran will pay for the pipelines and for the industrial plants by 20 years of billions of cubic meters of Iranian gas. Now that has some sulfur in it, and the Russians will probably put in a gigantic plant for extraction of the sulfur from the Iranian gas, and they will be a big sulfur producer. They can also shove that into the system of Austria Italy, and France. In other words, Russia is going to deplete her energy resources to supply the western world. Why should she? The western world never did anything to help her. She'll render quid pro quo, but she won't be humanitarian about it. Does that answer it?

YES, CHIEF. HIS OTHER QUESTION WAS: WHAT CAN I DO TO HELP PROMOTE TECHNOCRACY MORE THAN HAS BEEN DONE UP UNTIL NOW?

Ask him if he owns a car. Is it in good condition? Is it painted?

NO.

Well, why isn't it?

I CAN'T ANSWER THAT FOR YOU, CHIEF.

After all, British Columbia is supposed to be prosperous.

THIS QUESTIONER HAPPENS TO BE FROM THE STATES, CHIEF. HE'S FROM SEATTLE.

Well, they're still a little prosperous there, aren't they?

FLORENCE HUNTING SPEAKING. WE HAVE BEEN HEARING REPORTS THAT RUSSIA IS GOING INTO OTHER COUNTRIES OTHER THAN CZECHOSLOVAKIA.

What do you mean is going?

INTERFERING WITH THEIR GOVERNMENT.

Which country are talking about?

I CAN'T GIVE YOU THE SPECIFIC COUNTRIES, BUT MY QUESTION IS THIS ....

I can't hear you. What is Russia going to do to other countries?

THE IMPLICATION IS THAT THEY ARE PLANNING TAKEOVERS SIMILAR TO WHAT THEY DID IN CZECHOSLOVAKIA. MY QUESTION IS THIS: THE UNITED STATES IS LOOKING INTO THIS. ARE WE LIABLE TO GET INTO SOME KIND OF FRACAS OVER SUCH AS THIS?

Well, seeing as how we can't fight the war in Vietnam, why should we attempt to stop the Russians?

WELL, WE'VE DONE FOOLISH THINGS BEFORE.

I can't hear you. Get someone else. Your voice is not coming through.

HERE'S ANOTHER QUESTION, CHIEF.

Well, no, what was her question?

WHAT SHE WANTED TO KNOW, CHIEF, WAS THAT THEY CLAIM THAT RUSSIA IS INTERFERING WITH OTHER COUNTRIES.

What other countries?

WELL, SHE DIDN'T KNOW JUST WHAT OTHER COUNTRIES.

9-1-68

Well, this is rather vague. Let's hope that Russia takes over Romania, too. That's a bunch of bastards like the Slovaks, you know, that are causing the trouble in Czechoslovakia. Bear this in mind that when Hitler used to give an excuse first and then marched in and took over Czechoslovakia, they took over Czechoslovakia according to the accounts of the meeting in Munich and the other one, according to the statements of Janno, Mussolini, Hitler, and von Ribbentrop that Czechoslovakia had to be liquidated in order so that Italy and Germany could make war on the U.S.S.R. Hitler took over Czechoslovakia, incorporated Bohemia, Moravia into the Third Reich, but Slovakia wasn't incorporated. It was left as an individual republic under Presida Monsignor Tiso. When the Russian army, with the Czechs, came into Czechoslovakia and liberated it, General Svoboda was with them. They captured Presida Monsignor Tiso and his cabinet, and they hung them in their clerical robes in public square in Bratislava. So, let's don't be squeamish about this. If there are any other of these bastards around, let's hope the Russians clean them up; and if they have to interfere with Romania -- Romania is the only other one. The CIA has been working in there.

Now bear in mind this little fact -- one of the best-selling books in Europe today is published in East Germany, and it contains the names, partial biographies of 2,500 foreign employees of the American CIA. We're trying to get a copy of it, but if they know that much, they know what is going on. Does that answer your question?

RIGHT, CHIEF. THIS IS HARRY BRIGGS. Right, Harry. AT THESE MEETINGS WHERE YOU ARE SPEAKING IN AN INTERVIEW SUCH AS THIS, YOU NORMALLY ONLY HAVE ONE TAPE RECORDING, IS THAT CORRECT, UNTIL IT'S CLEARED? Yes, only one recording. WELL, WE APPARENTLY HAVE ONE UNAUTHORIZED. Well, who's making it? ONE OF THE MEMBERS HERE. There should only be one tape recording made. If anyone has made a recording up to date, that should be turned over. TURNED OVER TO WHOM? Turned over to CHQ. Turned over to you people right at the meeting by whoever is doing the recording. THEN, ONE OF THESE TAPES. WE MAKE TWO COPIES AND SEND ONE TO CHQ AND WHEN IT IS CLEARED BY YOU, THEN IT CAN BE CIRCULATED TO THE AREA. IS THAT CORRECT? That's correct. BUT THERE WILL BE ONLY ONE SUCH RECORDING. That's all. There will be only one such recording that will be permitted to be duplicated after it has been

9-1-68

checked here. O.K., THANKS. WE'VE HAD THIS PROBLEM BEFORE  
AND I THOUGHT I HAD BETTER BRING IT UP.

THIS IS OLAF SPEAKING. I JUST WONDERED HOW'S THE  
STATE OF JOLLY OLD ENGLAND THESE DAYS?

England is in a bad way, too. You don't expect England to  
recover with her deficient resources. She's going to try to  
export that surplus population or she'll be in trouble. Don't  
expect the economic and political system of Britain to ever pull  
them out, even if it is a labor party.

AS FAR AS I'VE BEEN ABLE TO ESTABLISH, IT'S PRETTY WELL A  
CONSERVATIVE GOVERNMENT ANYWAY.

Whether it's conservative or labor party, they don't seem to  
have any initiative over there as to what to do. I mean, as long  
as you've got Oxford and Cambridge, Eaton, Harrow, and Winchester  
and other like institutions of learning that haven't changed  
their curriculum in 300 years, what do you expect? You still have  
the House of Lords. Can you imagine the House of Lords  
deliberating on any question of importance of the British nation?

DO YOU HAVE ANY IDEA WHAT DIRECTION THEY MIGHT SEND THEM?

It won't make any difference which; in other words, the  
British public is hit with a lot of same things now. In France,  
you couldn't get the students, the workers, and others to act  
together, so DeGaulle was able to really snow them under with a  
middle class fascist reaction. You've got a similar thing in  
Britain. It won't make the slightest bit of difference. Be glad  
you're here on this continent, and what the devil are you  
worrying about Old Blighty for?

IT'S JUST THAT I WAS INTERESTED ...

I know it is; I was just teasing you. You can't save Britain  
from here.

I DIDN'T HAVE ANY INTENTION.

I know you didn't. How about some other questions.

9-1-68

CHIEF, I THINK THERE ARE A LOT OF COMMENTS HERE, BUT SOME OF THEM ARE NERVOUS ABOUT COMING UP, BUT ONE THING THEY ARE WONDERING ABOUT IS THE UNREST OF THE YOUNG PEOPLE AND WHAT IS THE ULTIMATE GOAL -- WHAT DIRECTION WILL IT HAVE TO TAKE EVENTUALLY?

Unrest of the young people in Canada and United States? Is that what they're asking about?

YES.

What do they go in for? What-you-call-'em music, long hair, yippies, mini-skirts and miniminds, huh? Now, what do they propose? What do the students of any university propose? Don't forget, you had huge newspaper full-page ads in THE NEW YORK TIMES that cost \$8,000 a page -- four pages of them -- practically all the professors of the colleges and universities protesting against the war. Well, have they ever done anything except protest? Not a bit. Has the student body done anything? No. They only want to graduate and get a house in the suburbs, a job with a big corporation or the government or an educational institution that has a good retirement policy. They don't want to be disturbed.

Unrest of the youth? You had the unrest after World War I. Remember the fracas they put on over women suffrage. They put up a battle. They went to jail, and then they got the votes for women; and what happened? Have the votes for women altered the political structure of United States and Canada? Oh, no, they've forgotten all about that. If you pull these students out and give them a job, they'll be satisfied, as long as it's Quaker Oats, U.S. Steel or some other of the thousand biggest corporations in the United States. As long as you have country clubs and golf and something for the students to aspire to, there isn't much unrest. The small percentage that put on demonstrations realize that you'll have over 25 million students in United States. What percentage rebel? That is what you've got to face. The pressure isn't great enough and the catastrophe isn't large enough to force anything else. Is that what you want?

O.K., CHIEF, THANKS A LOT. ANY OTHER QUESTIONS? THAT SEEMS TO BE ABOUT IT, CHIEF. WAIT JUST A MOMENT. HERE'S ANOTHER ONE.

9-1-68

CHIEF, THIS IS RUBERT URQUARDT. I AM GLAD TO HEAR YOU'RE WELL, CHIEF. MY QUESTION IS THIS: IT HAS BEEN INDICATED BY A NUMBER OF PRICE SYSTEM SOURCES THAT THE PRICE SYSTEM IS LIKELY TO BE IN VERY-SERIOUS DIFFICULTY BY 1970. WHAT CAN TECHNOCRACY DO IN THAT TIME TO MAKE SUFFICIENT IMPACT ON NORTH AMERICANS TO RESURRECT OUR CIVILIZATION WITHIN THAT PERIOD OF TIME?

All you have to do is get more Technocrats. That's simple.

WELL, THAT'S EASIER SAID THAN DONE.

Oh, I know, but we're getting them. We're getting them in places you wouldn't think of.

THE TIME IS SO SHORT. IS THERE ANY WAY TO ACCELERATE THIS?

Keep on fighting. Don't forget that Lenin, in November, 1917 in Russia, didn't have many Bolsheviks; in fact, there are more Technocrats in one state in United States that Lenin had in all Russia in November, 1917. Was Lenin disappointed? Maybe he was -- I don't know; but if you're asking me to -- the fact that Technocracy has come through the greatest war in history, the greatest postwar boom, and this boom, and we're still here. I'm looking at the faces -- almost every seat in this office of mine is occupied -- men and women from Canada, Detroit, Windsor, New Jersey, several places in Canada, and they don't seem to be disheartened. So, it's quite possible. It's a battle, I know. You're telling me, because I've been at it a long time, and when you fight this long and have gotten to this eminence of equipment and personnel on the magnificent sum of \$35.00 a week before taxes -- now, some of you just try living on that for a change. I mean, you've got to be a rebel; you've got to fight. The public will find out when the pressure becomes tight enough. I wouldn't worry.

WE JUST HAVE TO FIGHT A LITTLE HARDER FOR A LITTLE WHILE LONGER.

Well, it takes time, Look at the time we've been at it. You don't make a movement overnight like a political McCarthy or a Trudeau. Where was Trudeau ten years ago or McCarthy? It takes

9-1-68

years to make a movement. You can make a political overnight if you've got the money, but you have to be correct in a social movement. Your strategy has to conform to the historic parallelism of events. You can be clever tactically, but that isn't enough. You might win victories like Napoleon did. He won them all -- even Borodino, but strategically it was a terrific blunder. He was defeated on the Smolensk Highway and not at Waterloo. Do you follow me?

YES, CHIEF, THANK YOU VERY MUCH.

CHIEF, THIS IS SCHUYLER FROM BELLINGHAM. ANY CHANCE OF STOPPING THE WAR IN VIETNAM OR WOULD WE HAVE TO START UP AGAIN ELSEWHERE TO MAINTAIN OUR ECONOMY? THE SECOND PORTION: ANY FIGURES ON THE ARMY-AGED AMERICANS THAT HAVE GONE TO CANADA AND OTHER COUNTRIES FOR ASYLUM SO THAT THEY CAN STAY OUT OF THE DRAFT?

Technocracy has no figures on the number of Americans that have gone to Canada to evade the draft. I think there is a lot more important data to obtain than that. After all, we are sorry, of course, that all the Canadians that have migrated to the United States in the last forty years don't return to Canada and take their country back. But for the number avoiding the draft, that's incidental in 200 million people. We are a warfare-welfare state in United States, and we need the warfare to dispense the welfare to the thousand largest corporations and about 28 million human beings on the relief status level. So, you can expect further adventures. Is that clear? YES, THANK YOU, CHIEF.

WELL, IT SEEMS LIKE WHEN WE GET DOWN TOWARDS THE END, THERE ARE QUITE A FEW QUESTIONS ON THE MINDS OF THESE LISTENERS AND THEY WANTED TO TALK TO YOU. CHIEF, WE WANT TO THANK YOU A GREAT DEAL FOR THE INSIGHT YOU HAVE GIVEN US ON WORLD AFFAIRS AND ALSO DOMESTIC PROBLEMS, AND I KNOW THAT THE AUDIENCE ENJOYED IT. I CAN TELL BY THEIR FACES AND HOW ATTENTIVE THEY WERE IN LISTENING TO EVERY WORD THAT YOU HAD TO SAY. DIDN'T WE ENJOY IT, AUDIENCE? (APPLAUSE)

All right, Reo, my compliments and regards to all of you there in Vancouver. Thanks and salute and the best to you.

GOOD NIGHT, CHIEF.

TELECONFERENCE  
HOWARD SCOTT AND SECTION 2, R.D. 11833  
DECEMBER 31 ,1968

Hello.

HELLO, CHIEF, RAY SEGARS HERE. HOW ARE YOU?

Fine.

WE HAVE A LARGE GROUP OF PEOPLE HERE -- MEMBERS. WE'VE JUST LISTENED TO A REPORT FROM UP IN SEATTLE FROM HARRY BRIGGS AND THE STAFF. WE THOUGHT WE WOULD CALL YOU, CHIEF, AND SEE IF THERE IS ANYTHING YOU WOULD LIKE TO TALK TO US ABOUT.

Fine. Is Seattle connected in?

NO, WE CLOSED THAT TALK. WE TALKED TO SEATTLE ABOUT SOME OF OUR MUTUAL PROBLEMS. WE TOLD THEM ABOUT WHAT WE ARE DOING HERE. FOR YOUR INFORMATION, WE JUST PRINTED THE RED ON THE DECEMBER ISSUE OF The Trendevents, AND WE HAVE THE PLATES ALL READY TO PRINT IN THE BLACK. WE DIDN'T QUITE FINISH IT, BUT WE'RE QUITE PROUD OF IT. WE'VE CHANGED THE RED INKING TIME, AND WE'RE ABLE TO PUT IT ON MUCH BETTER, AND I THINK YOU'RE GOING TO LIKE IT BETTER.

I WANT TO SAY, TOO, RELATIVE TO OUR PRINTING HERE, AND THEN WE'LL HEAR WHAT YOU HAVE TO SAY AND MAYBE SOME OF THE MEMBERS WILL HAVE SOME QUESTIONS THEY WOULD LIKE TO ASK -- WE HAVE A FOLDER HERE, TOO, NOW. IT'S AN OLD ONE BUT A REAL RUGGED ONE, AND WE'LL BE ABLE TO FEED OUR SHEETS INTO IT AND GET IT ASSEMBLED OUT THE OTHER END. FOR \$55.00, TOO. ROY ELLIOTT, DOWN IN SAN DIEGO, MANAGED TO FIND THIS, AND ONCE WE GET IT CLEANED UP AND IN OPERATION, IT WILL BE ANOTHER IMPORTANT PIECE IN OUR OPERATION.

WHAT HAVE YOU GOT IN MIND, CHIEF?

Well, now, have you got a pretty good crowd there?

I'LL SAY. I COUNTED 30 HERE A MOMENT AGO -- 34 OR 35.

How does my voice come through -- loud and clear?

IT DOES. FINE, CHIEF.

Well, what I want to ask that audience is how much did Nixon win California by?

THE FIRST COMMENT WAS THAT THEY ARE NOT INTERESTED IN POLITICS.

I'll go along with that. How much did California go to Nixon?

230,000, I HEAR. Out of how many million votes? OUT OF THREE MILLION VOTES. Out of three million votes? Well, that's marvelous; in other words, he seems to be a president that nobody wants -- put it that way. Nixon didn't carry any large city in the United States according to the analysts, and you have over 9 million votes for Wallace, a little over 30 million for Humphrey and Nixon; so then you have 57 million that didn't vote. You also have to look at the situation that the Wallace vote and also the Nixon vote is a reactionary vote, while the Humphrey vote is composed of all kinds of combinations of so-called liberals, labor, negro, and everything else, but then they got sabotaged by the breakup of the Kennedy machine. The Kennedy machine was steamrolling, and Bobby Kennedy would have been the nominee. It was all cut and dried. So McCarthy and the broken-up Kennedy machine couldn't get over their enmity to Humphrey, and they never really got rolling again. So you have a Trickie Dickie.

You see, the White House years ago when it was half burned was all dark and dirty, so they painted it white to cover it up. That's how it became the White House, which I think is historically correct, but now they'll have to name it the Rat House. What people aren't realizing is that the majority of the country is reactionary, definitely. The only good thing you did out in California was that you defeated Rafferty, didn't you? YES. And you don't know how in the hell you did it. Well, that's like the rest of the country. Nixon's situation probably will be that he will control the house and the senate. To get a like situation, you have to go back to Zachary Taylor in 1848, and the percentage of votes, you'd have to go back to Woodrow Wilson in 1912.

The Democratic Party retains the same quorum in the senate and the house as they did before; so, Nixon will only have his

Agonizing Agnew and his cabinet, and any deals that he makes will have to be compromises between the reactionaries -- the reactionary Democrats of the northeast and the reactionary Republicans -- none of those trust each other so they'll compromise simply for ; of course, always in favor of bigger profits for business. That will be the tone. But he won't have a chance abroad and he won't have a chance here for any progressive legislation. It's going to be a sweet kettle of fish, and abroad he isn't talking to the same world that existed when he was Vice President under Eisenhower. So, it is something very interesting to look forward to in these United States. Bear in mind that over 123 million are eligible to vote in United States, so that 52 million didn't vote. Just what this means is hard to say. With 9,000 golf clubs in United States, they'd rather go to the country club than consider anything of national significance. So, I'd like to see what your audience out there thinks about it.

What are they interested in? Ask me questions. Come on.

HOW MANY MORE PRESIDENTS ARE WE GOING TO HAVE?

I haven't any "hot" line to God. I'll leave that to Richard Milhous Nixon.

I HAVE A QUESTION HERE AS TO THE DEVALUATION OF THE FRENCH FRANC AND THE POSSIBLE IMPLICATION AS FAR AS WE ARE CONCERNED IN REGARD TO THE DOLLAR.

All Western Europe, you see, has more capacity productive-wise than it has ever had before in history; of course, they are running short on resources, and when you devalue currency, the chief reason is to enable the foreigner to buy more than he has been buying hitherto; and with francs, pounds, marks, or lira, they can increase their sales abroad. By devaluating currency, that puts the squeeze on the nationals at home; in other words, the wages, salaries, pensions buy less at home, but the foreigner can buy more. This is done to increase the foreign trade, the exports from Europe, but there is grave doubt as to whether it will work at all, because every place is at it to get into the high-price markets, so it's production capacity, and they're going to run into that difficulty.

Britain's devaluation of the pound isn't enough. They're

going to put the squeeze on France because DeGaulle pulled out of NATO, and if they see a chance to do it, well, they'll do it. But that won't solve anything internally. The big problem in Europe is where they are going to get their energy from and the raw materials. Austria signed a treaty with the U.S.S.R. ten days before the Warsaw Pact got the occupation of Czechoslovakia. That treaty was for the supply of Russian gas to Austria starting in at 800 million cubic meters and working up to 2,000 million cubic meters of gas a year. Well, Italy has come into the scene and wants ten times as much as Austria. The Austrian state-owned steel plant is running night and day making steel and shipping that to Mann and Teschen in Germany to make into Russian pipeline transportation for an Austrian pipeline. Well, France also wants to hook up to Russian energy. How do you like that? Whoever controls the energy supply of a nation determines its future. So regardless of any devaluation of currency in Western Europe, in the long run it doesn't make very much difference if you're going to have to go east for your energy supply. Does anybody want to ask any questions on that?

#### SOMETHING ABOUT DUMPING HUGE QUANTITIES OF GOLD.

Well, why should you bother about gold? I can give you something more important. Do you understand the significance if Italy hooks up with the Austrian pipeline? Italy will be dependent on Russian energy. So will Austria. The contract runs for 20 years, and you can't pay it in gold, paper, or lira, pounds, dollars, or any other currency. You can only pay it in manufactured products. That will mean that a percentage of the productive capacity of the nation that takes the energy will be engaged in manufacturing machinery and other supplies to be delivered to Russia. It doesn't make a damn bit of difference whether it's gold or salt that they have for currency. Do you understand that? In order to get the energy, you will have to manufacture and ship the physical manufacture -- not the currency. Is that understandable?

I'M GETTING AN AFFIRMATIVE ANSWER FROM THE GROUP HERE, YES.

Now, why should Russia dump the gold? She could if she wanted to, but she isn't interested in saving anything of Western Europe. I mean, the pope is in the sad position if this goes through where he had better be careful, because somebody might

shut off the valve before he pulls the chain. Come on, this opens up all kinds of avenues.

ONE PERSON QUESTIONS THAT HOW WILL THE EUROPEAN MONETARY MANIPULATION AFFECT OUR MONETARY SYSTEM IF ANY.

Well, I'm trying to show them that is not the question. It doesn't make a damn bit of difference, because this will force the productive capacity of certain countries -- a portion of it -- to be allocated to pay for ... Well, then our markets would be therefore limited by such a move, would they not? We wouldn't have a chance in that market. Considering that these treaties are for 20 years -- Now the treaty with Czechoslovakia which has just been signed calls for greater deliveries in the form of gas, petroleum, and also iron ore, chrome, manganese, wheat, cotton, etc. Wait until it's published. In other words, Czechoslovakia under Dubcek thought they were going to sign up with Britain, United States, and West Germany to bring in West German gas from the Groningen field controlled by the Shell-Esso, and the Russians were too fast for them. The Russians did the most intelligent thing they have done in years. They didn't shoot Dubcek. The Czechs are going to shoot him or hang him or exile him, A VERY INTERESTING POINT. Yes, they're clever.

Now, the tanks, missiles, guns, planes they flung into Czechoslovakia, why, that wasn't for Czechoslovakia. That was lined up on the Bavarian frontier and the Austrian frontier. They had enough long-range missiles to threaten Munich, Frankfurt, Bohn, Cologne, Rome, Genoa, and Venice in five minutes; in other words, the 42,000 West German troops and the 20,000 American troops are close to the Czech border -- why, that was a drop in the bucket. They would have been threatened in no time flat. It was the fastest military maneuver in history. I'm trying to get them to realize what happened. OH, I THINK THIS HAS BEEN AN EXCELLENT PRESENTATION OF IT. I'M SURE THIS IS UNDERSTOOD. IT'S THE POINT YOU JUST MADE. Well, now, you see to back that up, Iran, of course, has signed a treaty with Russia and they are building the pipeline. Now remember all these pipelines are one meter ID -- that's 40-inch pipeline -- for 880-pound pressure lines. That's to take the gas from Iran into Russia, and Russia will build steel plants, chemical, fertilizer, and cement plants in Iran, and Iran will pay for the pipeline, the pumping station, and these industrial plants by the export of huge volumes of gas

for 20 years; and, as that gas has a high sulfur content, Russia will desulfurize it and become the second largest producer of sulfur in the world. If that isn't enough, Iraq proposes to connect up with the Iranian-Russian pipeline to export its gas to Russia. So, this gives Russia a big gas collecting system. Furthermore, Russia has discovered a gigantic gas field on the Arctic at the mouth of the , larger than the Dutch Groningen. So, where does it go from here? West Europe hasn't got it. Austria only has a six months' supply of indigenous energy left. She has to sign. Italy has the same quick exhaustion; in other words, she has expanded and overdrained her indigenous energy, and she's short of energy. All the central stations and industrial plants in Italy are run on Russian residual oil, and they want to increase the imports of that 50 percent this spring, but the Russians refused. Now Italy has got to go to the import of gas to bring up their energy quotas. Do you follow me? VERY INTERESTING. All the nonsense you are reading in the press is just sheer tripe; the fundamentals are what I am talking about, because if you are dealing with energy in these volumes, it doesn't make a damn bit of difference what the hell the currency you have or whether you have currency at all. I want to stress that.

THE UNITED STATES WILL BE A LONELY COUNTRY.

Yes, it will be all by itself, and all the dead cats from all over the world will be coming back into its backyard. It will stink to high heaven.

APPARENTLY SOMETHING HAPPENED TO EITHER THE TRANSMISSION OR THE TAPE, AS THE TAPE ENDED HERE.

\* \* \* \*

TELECONFERENCE BETWEEN HOWARD SCOTT  
AND SECTION 3, R.D. 12247, SEATTLE AREA MEETING  
MARCH 22, 1969

I would like to point point out a few things that might be of interest.

Thirty-seven years ago, in July, 1932, Technocracy predicted that national frigidity would set in in the banking system of the United States, and that the banks of United States would freeze and close on or before April, 1933. Suffice it to say, that is what happened. Of course, Franklin Delano Roosevelt was inaugurated in 1933 as President of the United States. Adolf Hitler became Chancellor of the Third Reich.

World War II started September 1, 1939, and ended with the final surrender of the German forces in Berlin on May 9, 1945. That's 24 years ago.

Also 37 years ago, we predicted the dissolution of the British Empire, and that trade would follow the flag home, and that Britain would become two islands off the coast of Europe. That's 37 years ago. Of course, that inimitable statesman, if you wish to use that in quotes, Winston Churchill, was so far out of order that he stated that he did not become the King's First Minister to preside at the demise of the British Empire. How wrong he was!

Since the end of World War II, with all its devastation in Europe, Asia, and all around the world and 30 million dead, conditions have altered. The power complex politically, diplomatically, and militarily has completely altered from what it was in September, 1939, or in 1945. There is no resemblance. In Europe today, the NATO forces of western Europe and the United States are insufficient in capacity, armament, and organization to meet the Russian forces. United States, of course, is still superior in the naval, ships at sea, and the nuclear weapons, but then those nuclear weapons can only be used for offense. They are not a defensive weapon.

Well, let's see how the position looks today.

Once upon a time, the United States was the world's greatest exporter of beef, of copper, of automobiles, and of many myriad of manufactured goods. In 1968, Japan produced more automotive

vehicles than West Germany. West Germany produced slightly more passenger cars than Japan, but Japan's production of trucks and buses brought her total automotive production above that of West Germany's. So, Japan became No. 2 producer of automotive vehicles of the world. Japan, of course, is the biggest shipbuilder and has the largest transistor plant in the world and a few other things; but, of course, Japan has no coking coal and no iron ore, but she is backed by United States in subsidies for her bases in our armed forces and she is trying to extend her economic empire.

Canada, too, has surged, and the boom is on in Canada, a mining boom unparalleled in her history, whether it's the zinc of New Brunswick, the iron ores of Quebec, or the copper-lead ore or the copper-molybdenum. The Prudhoe oil discovery in Alaska, one of the great fields, that formation extends over into Canada and into the islands of the Canadian Arctic. There will be wide-scale petroleum and gas developments; for instance, in B.C., the Lornex(?) Mine in Highland Valley will shortly be producing 38,000 tons of ore per day. That ore is .4 of 1 percent copper content and .014 molybdenum. That makes it one of the biggest mining things in all Canada, if not in the entire world.

These are only a few of the developments.

Nickel -- International Nickel, of course, has been the dominant nickel of the world. Hanna and International Nickel are pouring in \$170-200 million into the big discovery of nickel in Guatemala. Australia has a nickel deposit. So has Haiti which is being developed. Australia, of course, is another boom -- gas and oil, bauxite, iron ore -- foreign capital is rushing in at tremendous speed. Australia has oil in the North Islands, gas clean across Australia, and oil in the Bass Strait offshore between Australia and Tasmania. That gives Australia a great boost up in the exploitable nations', just as Canada is being exploited for its mineral resources. The copper concentrates of that Lornex Mine in British Columbia will be going to Japan, Japan, of course, is into the coal of British Columbia and five different uranium in a minority interest in the rest of Canada, along with other copper and iron ore and pulp and timber.

United States is not in such fortunate position. As far as production is concerned in some manufacturing lines, yes, but United States is no longer the great wheat-producing nation of

3-22-69

the world. Russia is number one. In bituminous coal, United States used to lead the world. Russia is number one today. Russia is second in steel production with 117 million. United States with a little over 130 million tons in steel. So, in two years, they will probably close the gap.

In portland cement, Russia leads; so, Russia is second in oil, second in steel, first in wheat and bituminous coal.

There have been, of course, new discoveries. The oil in Libya has come up to a greater production today than Kuwait. Nigeria can easily move up into a million barrels a day. Egypt, that lost its oil wells in the Sinai Peninsula to Israeli, with a production of around 90,000 to 100,000 barrels a day, has come back with four discoveries on the west side of the Red Sea, and the (Marsoon?) field alone is now hitting 200,000 barrels a day. Gas has been discovered in the Egyptian Delta, and a further discovery of oil in the Katara Depression. This brings Egypt, with American, British, and other financial help, in their oil field development, to be an up-and-coming producer.

The power forces have altered, and the world is no longer what it was.

In the case of Russia, they have discovered three gigantic new gas fields -- one on the Taimyr Peninsula on the Arctic, 2,700 miles from Moscow. It is four times greater in the total calculated reserves, according to the British Petroleum Association, than the Groningen gas fields on the coast of Holland. The other two gas fields are somewhat comparable. Russia has a treaty with Iran, and they are building the pipelines from Iran to Russia, and Russia will undertake the construction of steel plants, textile, cement, and chemical, and Iran will pay for all the construction, including the pipeline and the pumping station, with 20-25 years' export of gas to the U.S.S.R. That gas, of course, has a sulphur content, and Russia will put in desulphurization plants in Russia and will become the second biggest world producer of sulphur.

Iraq now wants to have its gas cut into the Iranian pipeline and export its gas to the U.S.S.R. Therefore, the great energy producers on the scene today in Europe and Asia are no longer Britain, France, Holland, Belgium, West Germany, Italy or

anything else west of the                    It lies east, and the Russians are now proposing to build gas pipeline of 2,520 millimeters inside diameter. That's 99 inches. They will undoubtedly build it of reinforced, precast concrete in 25-foot sections weighing over 90 tons. Casting stations can be set up, and it will save an immense amount of steel, but the main thing it would do is that one pipeline of that size will transmit a volume of gas energy equivalent of fifteen 40-inch pipelines.

Austria, of course, has signed the contract for initial delivery gas energy from Russia of 800 million, and in the few years to come, it will go to 2,000 million cubic meters of gas a year. Italy wants to connect into the Austrian system to get ten times that amount of gas energy. France also wants to come in. We're bringing this out to show that he who controls the energy dominates the future of any area that consumes it. Therefore, NATO is merely a gesture, and a straw gesture at that in the wind, and the Common Market is a delusion; because the Russians will not accept any currency or gold in payment for energy. It will have to be made in manufactured goods from that country. That means that the manufacturing complex of an Austria, an Italy, or France, or whatever country consumes vast quantities of it, will have to have a considerable portion of its industrial complex working 24 hours a day to pay for this gas energy. Currency and the gold basis are sheer nonsense in the face of this.

Therefore, when you are talking about where this country and Canada are going, it is not the direction that one Monsieur Trudeau blithely talks about or Richard Milhous Nixon. It's a far different direction and far different consequences. I'm bringing this up to show that we have the facts, that we have the knowledge, and we have always had them. This is a slightly different direction, a vastly different one, and it's not going to be solved whether it's the problem of the ghettos, the poverty, or the educational system, by more money or by private enterprise. It can only be solved by a continent-wide design of a new physical operation. This is what we are faced with, and this is the imperative that this continent has to deal with -- not a Europe that once was. It doesn't make any difference whether Big Ben tolls the time anymore, because time is not dictated by any bells of western Europe. The energy from someplace will tell the time, and the empires of yesterday are toppling into the dust in

3-22-69

history and they will have to be reorganized.

Now I think you can take it from there and see what kind of questions we can get out of our audience.

WAS PRESIDENT NIXON'S RECENT TRIP TO EUROPE PRIMARILY TO BOOST THE MORALE OF THE LEADERS OF WESTERN EUROPE OR WAS IT SOMETHING MORE SIGNIFICANT?

That was arranged by Madison Avenue to give him stature in his public image here, just as support of the ABM antimissile. The reason for that is that the missile system would run into \$30-40 billion, and, after all, he has to get contracts for the deserving Republicans that helped him. The Democrats have had the gravy train, so now he wants to move into the gravy train. He can't do anything in Europe except make gestures. He used the word in his speech the other day twelve times that they do something at the "appropriate" time or the "appropriate" moment. "Appropriate" seems to be the great word of the middle managers of the Nixon system. Does that answer your question?

YES, THANK YOU VERY MUCH. WE HAVE ANOTHER QUESTION FROM THE AUDIENCE. I'LL HAND IT BACK.

HELLO, CHIEF, THIS IS OLAF FROM VANCOUVER. WHAT HAS CHANGED THE ATTITUDE OF THE U.S.A. BUSINESS COMMUNITY REGARDING THE RECOGNITION OF COMMUNIST CHINA?

We are trying to create a divisiveness between Red China and the U.S.S.R. If you look at the latest issue of LIFE, it has a big article in there on China. It's Woody Allen on the front cover with a kind of montage of Humphrey Bogart in the background. Now that's a big article on the Chinese frontier, which is misrepresentation. It was probably dug up by the CIA in an attempt to make out that we're in favor of the Chinese. Anything to be anti-Russian. We still are trying to play the motif that the great big bad wolf of the world is the U.S.S.R., and it won't work any more.

THERE'S NO POSSIBILITY OF THE AMERICANS TRYING TO TRY TO MOVE IN ON THE CHINESE MARKET?

Move in on the market? That's hardly likely. We'd like to

3-22-69

exploit Chinese resources, yes, but we're not going to be permitted to do that. The Chinese aren't that dumb.

THANKS A LOT.

HERE'S ANOTHER QUESTION, CHIEF, FROM THE AUDIENCE. SINCE AUTHORITY OR LEGISLATION IS BEING USURPED BY THE MILITARY AND PRESIDENTIAL AND BUSINESS INTERESTS, WHAT CAN THE PUBLIC LOOK FORWARD TO?

All the public can look forward to is that they are going to do everything they can to usurp the control, because what they are after is a near fascism. They're proposing a "protective custody arrest" -- not charging them and trying them, but just throwing them into protective custody if they're suspect. That's what you had with the storm troopers in Germany and the fascisti in Italy. That's what it turns out to be. Does that answer your question?

YES, THEY SEEM TO BE SATISFIED. ARE THERE ANY MORE QUESTIONS? WE HAVE A FEW HERE, CHIEF, THAT ARE BEING PASSED UP FROM THE AUDIENCE. THEY SEEM TO BE RELUCTANT TO COME UP THEMSELVES. ONE HERE IS: HOW LONG CAN THE CREDIT KEEP EXPANDING TO MAINTAIN THIS FALSE ECONOMY?

They can expand it quite a bit, but you see, if you are talking about an internal market, there are about 40 million in the United States, that is, the poor whites, the indigent, and the blacks and the browns and the Indians, who haven't the money to buy. So, the big merchandising potential is to find out how to sell to those who haven't got the money to buy. They can do it. Well, then comes the problem -- you can only do it by getting them in debt, and when you get that portion of the American public in the same per capita debt density that you have of the rest of the nation, that's the cotton-picking end because you haven't any more latitude to go on. That's when the fun begins, and that isn't far away. Do you follow me?

YES, THANK YOU.

THERE IS A QUESTION HERE REGARDING THE BALLISTIC MISSILE SYSTEM, THIS, OF COURSE, WILL HAVE AN EFFECT ON THE ECONOMY. WHAT IS YOUR EVALUATION OF THIS?

3-22-69

What is it they want to know about the missile system?

THEY WANT TO KNOW -- IT OBVIOUSLY HAS NO TACTICAL VALUE. ITS PRIME REASON SEEMS TO BE TO EXPAND THE ECONOMY -- TO PUMP PRIME.

That's the main reason. It's not an effective protection, and, of course, there is no reason for it except you're going to wage an offensive war, and Russia in her setup isn't interested in offensive war, only defensive protection. Therefore, we're proposing in case we withdraw from Vietnam -- that's about \$30 billion a year -- we're proposing something else to fill in, and this ABM antimissile system would be a positively beautiful filler. Of course, it would take some 3,000 contractors and Nixon could reward the "most deserving"; namely, Republicans. Oh, there would be some Democrats in it, yes, and that would fill in the economy by giving a priming of \$20-30 billion. Does that answer your question?

YES, VERY WELL, THANK YOU.

IN VIEW OF THE INFORMATION YOU GAVE REGARDING THE ENERGY RESOURCES BEING DISCOVERED IN THE MIDDLE EAST, IT WILL CAUSE A GREAT DEAL OF TENSION IN THE MIDDLE EAST. TO WHAT EXTENT WOULD THE MAJOR POWERS ATTEMPT TO PREVENT A MAJOR CATASTROPHE OR MAJOR WAR ERUPTING IN THE MIDDLE EAST?

Oh, but the big discoveries I was giving you were not so much in the Middle East. Nigeria, Libya, and so on are Africa, and, except in the case of Libya, they're not Arabs. The other big discoveries are Russian; so, that's not the Middle East. Libya exceeds Kuwait, and the production per well in Kuwait Neutral Zone, Saudi Arabia, and so on has declined per well. The only one that has remained up is Iran. You see, the production per well in Algiers is only 880 barrels per well per day -- not as a lot of people think. It's much higher, of course, in Libya, but has declined in Saudi Arabia, the Kuwait Neutral Zone, and so on, and will decline; but they will do their best to keep the present intermittent terror going to prevent any real breakout. Russia isn't going to confront anybody in the Middle East. That's too far from home. Is that clear?

3-22-69

YES, BUT IS IT REALLY POSSIBLE FOR THE MAJOR POWERS TO CONTAIN ISRAEL, FOR EXAMPLE, FROM NOT ONLY MAINTAINING ITS PRESENT TERRITORY IT HAS CONQUERED BUT EXPANDING EVEN FURTHER?

Who do you mean by the major powers? Do you mean that the major powers would guarantee peace in the Middle East?

YES.

Well, who would constitute the major powers?

UNITED STATES, RUSSIA.

Oh, no. You leave Russia out. She isn't stupid enough to step into that trap. After all, you couldn't believe the United States. United States, Great Britain, and France -- hah, hah -- they don't want to guarantee it unless they can get Russia into it, and Russia isn't going to step into it. Is that clear?

YES. ARE THERE ANY MORE QUESTIONS? HERE COMES ONE FROM THE AUDIENCE, CHIEF.

HELLO, CHIEF, THIS IS HAROLD WELLAND(?). I DON'T KNOW IF YOU REMEMBER ME OR NOT.

I remember you, Harold. IT'S BEEN QUITE A FEW YEARS. Yes, quite a few years, it is.

CHIEF, IN VIEW OF THE FACT THAT YOU PAINT QUITE A DIFFERENT PICTURE FROM THE ONE WE LEARNED MANY YEARS AGO IN REGARD TO THE RESOURCES OF THE UNITED STATES, NOW YOU JUST PAINTED WHAT RUSSIA IS DOING AND HOW EVERYTHING SEEMS TO BE GOING THEIR WAY, JUST WHERE IS THAT GOING TO LEAVE US?

The United States and Canada still have resources,

I SEE THERE IS STILL EVIDENCE OF ENOUGH RESOURCES LEFT.

We have enough resources. Of course, you might ask the Canadians what they are going to do with all that wheat they've got. After all, they won't be able to sell much of it to the Chinese this year. China rescued the Canadian wheat growers once,

but it may not do it again.

WELL, THANK YOU VERY MUCH. IT WAS NICE TALKING TO YOU AGAIN.

All right. Best of luck to you.

WE HAVE HEARD A GREAT DEAL OF INFORMATION HERE TONIGHT FROM THE VARIOUS SECTIONS REGARDING THE UPSURGE OF INTEREST IN TECHNOCRACY AND, OF COURSE, WHAT TECHNOCRACY HAS BEEN TALKING ABOUT FOR THESE MANY YEARS. Yes? HOW DO YOU FEEL THAT THE PRESENT UNREST AND THE PRESENT DISCONTENT ON THE PART OF THE POPULATION OF THESE TWO COUNTRIES WILL AFFECT TECHNOCRACY'S PROGRAM, AND WHAT CAN THE MEMBERS DO IN GENERAL TO TAKE ADVANTAGE OF THIS PRESENT INCREASE OF INTEREST?

The big job of the membership of Technocracy is to go out and get more members. Sign up members into the organization. After all, we're a real insignificant minority in some ways, as far as numbers are concerned, but then we happen to be correct. Just because we're correct, we don't have to sit on that derriere, you know and do nothing about it. Go out and sign up members and gain more members and spread it. That's what the organization needs -- activity, and it's beginning to show up here all over. It's in LIFE MAGAZINE, in TIME this week, newspapers, it's on the air in various places. We're watching it with delight here at CHQ. Does that give you any idea?

YES. THE IDEAS ARE THERE. IT IS UP TO THE MEMBERS TO TAKE ADVANTAGE OF THESE IDEAS AND PUSH THEM TO FRUITION.

Sure. We never did have a Section in Miami, but we do today.

WE'RE REALLY REACHING INTO THE BIG TIME IF IT'S HAPPENING THERE.

Oh, it's happening other places. You've got new MAs from half a dozen places in Canada in the last five months. It's moving.

THAT SHOULD BE GRATIFYING. HERE'S ANOTHER QUESTION FOR YOU.

HELLO, CHIEF, THIS IS RENA CORCORAN. Oh, yes, Rena, how are

3-22-69

you? OH, FINE. WE HAVE BEEN WORKING WITH THE REST OF THE SECTIONS IN SENDING THESE BRIEFS OUT TO EDITORS OF NEWSPAPERS OF A THOUSAND OR MORE CIRCULATION. WE HAVE SENT TO ALL THE EDITORS IN ALASKA AND WE'RE WORKING ON INDIANA. HOW DO YOU EVALUATE THIS FUNCTION?

You mustn't expect too much, but it has results. After all, here's a newspaper printed one of our Briefs as an editorial -- full half page.

WAS THIS AS A RESULT OF THESE MAILINGS?

Well, some newspaper got it. They got it from someplace. CHQ didn't send it to them.

WE HAVEN'T HEARD FROM ANY OF THEM. ONE ENVELOPE WAS RETURNED AS SAYING NOT WANTED.

Well, that's fine. We're glad to have that. Don't let that worry you.

OH, NO. I WAS WONDERING IF YOU HAD RECEIVED ANY DIRECT ...

There are indications. It's coming out in different papers -- little papers, little magazines, university papers.

WELL, WE WERE SURE WE WOULD HAVE THE SCHOOL AND COLLEGE PAPERS.

There is a number of those that are ....

LAPSE IN TAPE

WOULD YOU COMMENT ON WHAT OUR WASTE OF RESOURCES HAS DONE TO OUR EXPECTED STANDARD OF LIVING NOW AND INTO THE FORESEEABLE FUTURE?

I don't quite understand what the person wants to know.

I THINK THEY ARE A LITTLE CONCERNED ABOUT THE WASTE OF NATURAL RESOURCES AS THEY WILL AFFECT THE FUTURE OF NORTH AMERICA. DO WE STILL HAVE SUFFICIENT RESOURCES?

3-22-69

We have the resources; of course, when you dump 28 billion tin cans a year and 20-some billion bottles -- that's a lot of stuff to dump every year, let alone all the paper, 156 million tons of debris besides sewerage. You're certainly cluttering up the landscape, messing it up, polluting it, but we still have resources. We won't run out. We may be restricted on one or two things, but lots of others are more restricted than we are. We are in a fortunate position. So, I don't think that person has to worry.

HOW MUCH LONGER CAN WE DIP INTO THE RESOURCES IN THE WASTEFUL WAY THAT WE ARE AT THE RATE -- THE ACCELERATING RATE -- AND STILL LOOK FORWARD TO AN ABUNDANCE IN THE NEXT 20, 30, 40 OR 100 YEARS?

You're going to run into a crisis in the next 3 or 4 years -- never mind the next 100 or 50. We're liable to drown ourselves in our own debris very shortly. You haven't got so much of it in Canada, but there's an awful lot of it in United States. It's going to be very shortly that if you fall into Lake Erie, you won't drown; you'll be poisoned or asphyxiated. How's that? You don't have to wait 10 years; you've got it now. Is that what they want to know?

I THINK THE CONCERN WAS A MATTER OF TIME RUNNING OUT AS REGARDS TO DEPLETION OF OUR RESOURCES.

Well, the time is not running out for us. It's running out for the Price System, and all those supporters of the establishment.

IN OTHER WORDS, THE FUTURE IS OURS?

It is. What was it Victor Hugo said? "More powerful than armies is an idea whose time has come." I think it is worth repeating.

CHIEF, THIS IS GEORGE (BARNEY?). Oh, hello, there, how are you? FINE. I haven't laid eyes on you for quite a while. YES, I REMEMBER THAT VERY WELL.

I ONLY JUST HAVE ONE QUESTION. DO YOU REMEMBER THAT TREE AT CHQ THAT WAS SPREADING AND I CLIMBED UP AND PUT THE BAND

TELECONFERENCE HOWARD SCOTT  
AREA MEETING SEATTLE

3-22-69

AROUND IT? Yes. IS THAT TREE GROWING? I'VE ALWAYS WONDERED.

No, there was another hurricane that took it apart.

WELL, CHIEF, I JUST WANTED A CHANCE TO SAY HELLO TO YOU BECAUSE I HAVEN'T HEARD YOUR VOICE IN A WHILE. BEST OF LUCK TO YOU.

The same to you. If you come east, you know where to come.

I CERTAINLY DO. GOODBYE.

CHIEF, ON THE PART OF THE MEMBERSHIP -- IT MAY BE A WEEK PREMATURE -- BUT THEY DO WANT TO TAKE THIS OPPORTUNITY OF WISHING YOU A VERY HAPPY BIRTHDAY THIS COMING APRIL FIRST.

Thank you one and all very, very much. APPLAUSE. Now I can hear that.

WELL, YOU CAN SEE THAT IT IS A VERY SINCERE WISH.

Right. I know it is. Now as far as I'm concerned, everybody is healthy, the two big Shepherd dogs and the big tiger cat. Nobody is decrepit -- not yet, anyway. So, you have nothing to worry about as far as my health is concerned or the conditions back here at CHQ. How's that?

THEY ARE VERY GRATIFIED TO HEAR THIS NEWS.

Now, if anybody wants to attend my birthday, the celebration starts a week from tonight.

I AM SURE THAT EVERYBODY HERE WOULD LOVE TO DO JUST THAT.

They're all invited.

THERE'S A GIGANTIC BIRTHDAY PARTY NEXT WEEKEND .

Thank you very much, and this has been most interesting. My best wishes to all, and salute.

CHIEF, ON BEHALF OF EVERYBODY HERE AT THIS AREA ACTIVITY HERE IN SEATTLE, WE THANK YOU VERY MUCH FOR THE TIME AND THE

TELECONFERENCE HOWARD SCOTT  
AREA MEETING SEATTLE

3-22-69

INTEREST YOU HAVE TAKEN IN PRESENTING THIS REPORT. YOU HAVE  
DONE A GREAT DEAL TO CLARIFY SOME QUESTIONS THEY OBVIOUSLY  
WERE CONCERNED ABOUT AND HAVE DONE A GREAT DEAL TO PUT THE  
PRESENT SOCIAL PROBLEMS IN A MORE CLEAR ...

END OF TAPE

TELECONFERENCE  
HOWARD SCOTT  
AND  
NORTHWEST TECHNOCRAT OFFICE  
MAY 24, 1969

(TAPE DOES NOT CONTAIN ANY KIND OF INTRODUCTORY DISCUSSION.)

BACK IN 1933, AFTER YOU MADE THE HOTEL PIERRE ADDRESS, THERE WAS AN ENORMOUS FLOOD OF LETTERS AND REQUESTS FOR INFORMATION. That's right. COULD YOU DESCRIBE BRIEFLY TO US WHAT HAPPENED? SOME MEMBERS HERE HAVE NEVER HEARD THIS.

Well, we were flooded with telegrams and mail from all over the country. We didn't have the typewriters -- we only had one typewriter -- we didn't have the staff. What do you do when you get 1,100 telegrams in one day and mail by the sacksful? You have to have an organization to answer it. We didn't. You had to do the best you could, and we did. But even if you had been able to answer every letter, that doesn't say that it would have been much different than it is now. Do you follow my reasoning or not?

WELL, IT MIGHT TAKE SOME ADDITIONAL COMMENT THERE, CHIEF.

What do they think? I'm trying to get them -- I want to hear their questions.

WELL, THAT WAS ONE THAT THEY WANTED TO ASK.

What did they want to know besides what I've said?

WE HAVE A QUESTION FROM JIM (CURLEY?) COMING OVER.

THE QUESTION I WANT TO ASK IS: SINCE WE ARE NOT LIMITLESS IN OUR RESOURCES HERE FOR REACHING PEOPLE, IS THERE, IN YOUR MIND, A CERTAIN GROUP WHO MIGHT BE MUCH MORE IMPORTANT AND EFFECTIVE FOR US TO REACH?

Who do you think would be effective for you to reach?

MY THOUGHT IS IN AGREEMENT WITH WHAT HAS BEEN GENERALLY EXPRESSED HERE IN THE OFFICE, THAT ANY PERSON WHO SHOWS SIGNS -- ANY PERSON IN THE FIELD OF SCIENCE OR IN THE FIELD OF EDUCATION IN THE GENERAL MEDIA WHO SHOWS SIGNS OF BEING DEEPLY DISTURBED AND IS PERCEIVING A LITTLE BIT OF WHAT IS

TELECONFERENCE HOWARD SCOTT  
AND NORTHWEST TECHNOCRAT OFFICE

5-24-69

TAKING PLACE, ARE THE PEOPLE WHO CAN PRODUCE THE GREATEST RESULTS THROUGH OUR REACHING THEM WITH INFORMATION.

You never know where you are going to strike paydirt.

THAT'S THE THOUGHT, AND THAT AMONG THOSE THERE WOULD BE A FEW PRIME MOVERS. That's correct. AND FOR THE FIRST REACTION (TO INCREASE OUR SUBSCRIPTION LIST ) WOULD BE TO A GREAT MANY TO GLANCE AT THE PUBLICATION, PERHAPS TO READ SOMETHING IDLY, AND DROP IT ASIDE FOR MORE PRESSING THOUGHT; BUT AMONG THESE THAT WE REACH, THERE ARE SOME WHO WILL BE HIT HARD BY MAYBE A CERTAIN ARTICLE, AND THIS WILL QUICKEN THEIR INTEREST IN WHATEVER ELSE ...

You're giving me a speech rather than a question.

YES, BUT I DON'T KNOW HOW TO SHORTEN IT. AT ANY RATE, THESE PEOPLE WILL IN TURN REACH OTHERS WHO HAVEN'T BEEN MOVED BUT WHO HAVE BEEN MADE COGNIZANT OF THE SITUATION AND VAGUELY HAVE AN IDEA ...

It's a process. If you can reach one or two, they will reach others, wherever they may be found, whether they have a scientific education or no education at all.

I JUST WONDERED IF YOU HAD ANY SUGGESTION.

None at all at the moment. I want to get more questions.

O.K., FINE. THANK YOU VERY MUCH.

WE HAVE A WRITTEN QUESTION HERE, CHIEF. WHAT ARE THE PROSPECTS FOR WORKLOAD FOR MEMBERS OF TECHNOCRACY IN THE NEAR FUTURE?

I don't know what that means. What have been my prospects for the last 40-some years?

WELL, THAT'S THE QUESTION.

I've had one holiday in the last 40 years. I went down onto the Keys in Florida for two weeks. That's the only holiday I've had. Now, what does anybody mean by workload?

5-24-69

WELL, I CAN TELL YOU THIS NOW, CHIEF. WE'RE HAVING PROBLEMS  
HERE NOW IN TRYING TO KEEP UP WITH WHAT WE HAVE TO DO.

So has Los Angeles.

IF WE ARE PUSHED MUCH HARDER THAN WE ARE NOW, WE'VE GOT TO  
HAVE MORE HELP.

I need more help at CHQ. I'm not trying to contradict you;  
I'm only trying to point out that that situation is, let's say,  
prevalent. Do you follow me?

YES. WELL, I GUESS WE WOULD LIKE SOME INKLING OF WHAT WE ARE  
UP AGAINST, BUT I DON'T SUPPOSE THAT'S EASILY DEFINED  
EITHER.

No, I was trying to throw some things at the audience there  
to see what they would come back at me with. What do they think?  
I'm trying to get them to respond.

WELL, CHIEF, I KNOW THIS -- THAT THEY ARE A BUSY BUNCH.  
ALMOST EVERYBODY WHO'S HERE, AND MAYBE THEY HAVE SOME  
ADDITIONAL THOUGHTS ALONG THIS LINE. ANY QUESTIONS YOU THAT  
(AUDIENCE) WOULD LIKE TO ASK THAT'S BOTHERING YOU?

THE QUESTION IS: DO WE FACE THE POSSIBILITY OF A MILITARY  
TAKEOVER HERE IN THE U.S.?

Of course, they are trying to foment the breakdown of law  
and order just as was done in Europe; in other words, Portugal,  
France, Spain, Italy, Austria, Hungary, Romania, Germany, all  
fomented the breakdown in law and order so as to bring in  
fascism. Well, they would like to do the same thing here, but  
they don't know quite how to do it.

ARE YOU THINKING OF THE STUDENT-LED ACTIVITY LIKE THE SDS  
AND THAT KIND OF THING?

No, that's a mere drop in the bucket. They haven't any  
direction. They don't know where they're going, whether it's the  
blacks or the whites. I mean, the blacks aren't against liberal  
arts; neither is the SDS. What we should do is downgrade liberal

5-24-69

arts to where it belongs and put in a complete technological education. Then the youth would have a future. Now it has no future. Well, if there's no future, what's the sense of education. They're correct in that thing, and that's about the only thing they're correct in. The student movement, what? What direction is it? We get all the papers, different universities, underground papers. It's sad, really sad, that they have to spend that much energy going nowhere. They only want to graduate, get a diploma, and get a house in the suburbs, with two cars, with retirement all set. Isn't that it?

WELL, THAT SEEMS TO BE THE IDEAL.

Yes. You've got the University of Washington right there. You have been in contact with a number of them. Have you discovered anyone yet that is a social revolutionary?

I CAN'T SAY THAT WE HAVE.

No. Well, the same thing is true of other universities across the country. What kind of a system have we been running for the last fifty years? We're producing petit bourgeois. Well, let me ask the audience a question. Did the students of the universities in Russia in 1917 provide the leadership for the social revolution? Did it?

WE GET A NEGATIVE. WE GET A NO.

It's no, isn't it? In other words, Lenin had less Bolsheviks in Russia than we have Technocrats in one state. How do you like that -- in 1917, I'm talking about. All we have to do is keep our head above water and keep it rolling, and you'll be in hot water from here on out.

WELL, THAT'S A PLEASANT PROSPECT.

That's better than being in cold water. How about it?

THEY'RE ENJOYING IT. THIS IS GOING TO BE AN EXCITING TIME THEN FROM ALL INDICATIONS.

NO DULL MOMENTS.

5-24-69

They're just as dumb in other places as we are here, only here a little dumber. For instance, Hungary has the lowest birthrate in all Europe -- 14.6. Romania had the lowest birthrate -- 14.3 until 1967, when they made abortions illegal in Romania, and now the birthrate has jumped to practically the highest in Europe -- 27.-something. So, your Iron Curtain countries can be just as dumb and stupid as that of the United States. Does this sink in, what I'm talking about?

YES.

Remember, these human beings are energy-consuming devices; so is an electric motor, a gas turbine, a diesel engine, an atomic generator, and so is the louse, a cockroach, an elephant, or a human being. They're all energy-consuming devices. Some of them are organic, and some of them are inorganic; and, therefore, they can operate to a certain density and certain latitudes north and south of the equator, and if it exceeds that amount, then they're in trouble. Maybe we had better think of using our nuclear weapons to decimate the population of the underdeveloped countries so we wouldn't have any problem. How do you like that?

THAT SOUNDS PRETTY RUTHLESS.

Why, sure. Well, now you might consider the fact that the Puerto Ricans are somewhat brown skinned, are Roman Catholic, and speak Spanish; therefore, you could ship them out to the Philippines, and that would be one little minor incident. Of course, the Filipinos might slaughter them, but it wouldn't occur on this continent. Well, what do they think of that?

I DON'T KNOW IF THEY'RE THINKING IT OVER. IT MAY BE ...

It may shock them, huh?

YES. IT'S A MENTAL ASSAULT.

Certainly, but that's what we're up against. We're going to be assaulted right down the line with it. Here you've got coal machines mining 7,000 tons a day and others coming in to do 9,000 tons a day. The new potash thing in Spanish Sahara, the crop interests propose to open it up and build a conveyor 60-some miles in length to take the potash to the Atlantic Ocean for

5-24-69

shipment. In other words, these are big things. The Russians, on the Vakhsh River at , are building a 1,000-foot high concrete dam. It's underway, the conversion tunnels are all in.

Russia signed a treaty with Afghanistan to build eight hydroelectric power plants on the Amu Darya River, one of them 5.7 million kW. The Vakhsh River runs into the Amu Darya River, but that 1,000-foot high dam is in Russia and not part of the Afghanistan-Russian Treaty.

Czechoslovakia is building dams in South America, nice structures. This technological acceleration is increasing all over the world, and we're in the midst of it and we don't know where to go. Well, we're not going anywhere under this political structure under 100,000 different governments in these United States, and we'll have to consider a change. Or are we going to wait until the roof caves in and the cellar floor comes up through the dining room?

Your universities, your colleges, your high schools, your churches -- who is discussing this? Practically nobody. They all want to ameliorate something; they want to patch it up with black capitalism or white capitalism. We are not going to do it.

MARGARET BARNES IS HERE WITH A QUESTION, CHIEF.

GREETINGS, CHIEF. Good evening, Margaret. HOW ARE YOU? Fine, thank you. WELL GOOD. I HAVE A QUESTION RELATING BACK TO THE STUDENT RIOTS. I WAS WONDERING JUST HOW MUCH MORE SERIOUS CAN THEY GET ON THE CAMPUSES AND IN THE STREETS AND EVERYTHING IN GENERAL GETTING TO A POINT OF DISASTER BEFORE WE HAVE MARTIAL LAW?

We don't have martial law really when we put in the National Guard. That's a misnomer. When you have real martial law, the armed forces come in and run everything in that area. The National Guard merely come in to police it and to help out the police and to let private enterprise run it. So, the armed forces don't want real martial law. They would have to run the laundries, the milk deliveries, the hospitals, and everything else. They don't want that.

WHAT ABOUT THE UTILITIES LIKE TELEPHONES ...

5-24-69

Oh, that wouldn't be much trouble, but you see they only want to quiet this down, and what? There hasn't been much trouble. You haven't killed a couple thousand in anyplace yet. Now how many students has the University of California got? The University of Minnesota? The University of Minnesota has 66,000, Texas 56,000, University of Maryland about 44,000, and the University of California has 100,000. How many students are involved out of the total attending student body? Do you follow me now? If they were involved, Margaret, and you had 80 percent of the student body, it would mean something. I SEE THE PICTURE. One or two percent, no.

O.K. I THINK HARRY HAS SOME OTHER QUESTIONS HERE TOO. THANK YOU VERY MUCH.

CHIEF, WE'VE GOT A DOOZY OF A QUESTION.

Yeah, what?

SOME MEMBERS WHO COULD BE USEFUL ARE SAVING THEMSELVES FOR THE FINAL DAYS OF THE PRICE SYSTEM. COULD YOU SAY SOMETHING ON THIS IDEA?

Are doing what?

SAVING THEMSELVES FOR THE FINAL DAYS OF THE PRICE SYSTEM.

They are saving themselves for the final days? What for? A wheelchair? I mean, are they going to go in wheelchairs. Do they follow me? What's the sense in a question like that?

I DON'T KNOW. IT'S HERE, SO I READ IT.

Well, I could make certain remarks about it, but I'll refrain. I don't wish to hurt any person's feelings. What are they saving themselves for? Do they want to live forever? After all, all you have with most people is to have them look in the glass, and they will see what it has done to them already. There's been death and destruction in this system. We haven't orientated the establishment to produce life. We've orientated it to produce profits and death. So, why are they trying to save themselves for the last days? That sounds like a religious thing.

5-24-69

They want to wait for the resurrection. Do you follow me now?

I THINK THEY DO.

They want to go up and knock on the gates and tell St. Peter, "Well, let me in. I got here." They haven't done a damn thing other than that. What's another one -- we might as well have some fun while we're at it.

WELL, I WILL SAY THIS. THERE AREN'T VERY MANY FREELoadERS, IF ANY, IN THIS GROUP, CHIEF. THEY'RE DOING WHAT THEY CAN DO, AND THE QUESTION THAT SEEMS TO BE REOCCURRING THAT THEY ARE ASKING ALL THE TIME IN ONE WAY OR ANOTHER IS WHAT ELSE CAN THEY DO THAT WOULD BE EFFECTIVE.

They're engaged in producing the magazine mostly and the Briefs; in other words, they're printing things. Between their jobs in making a living and trying to get out the publications, the organization keeps them damn busy, correct?

THAT IS A FAIR STATEMENT.

All you've got to do is gather in more volunteers. We haven't got enough good-looking gals in miniskirts, that's what's the matter. Go out and drag in those boy students at the University of Washington. They'll follow good miniskirts anytime, whether they've got any brains or not. You know what the American male is. He's a sucker for a feminine left hook anytime. No, we have to keep on going the best we can and see if we can interest people and drag them into it. How about it?

I'VE GOT ANOTHER QUESTION.

Well, I'll answer this one, but I'm getting tired holding this thing to my ear for an hour, you know. Go ahead, tell me.

WHAT IS YOUR OPINION FOR THE INSTITUTE FOR THE STUDY OF DEMOCRATIC INSTITUTIONS?

Down in Santa Barbara? YES. That's a nice endowed institution, quite liberal. It's really being used to put the finger on anybody who has an idea. You didn't think of it that way, huh? If I could hear the audience, I could tell what effect

5-24-69

it might be. What do they think? APPLAUSE. It's heavily endowed, you know. They've got a couple of Jesuit priests down there. They've got others. They even have an Episcopal bishop. Oh, it's some collection of "mammies." Don't expect anything to come out of that organization.

WELL, HOW DO YOU ASSESS OUR FUTURE, CHIEF, AS AN ORGANIZATION? DO WE HAVE A FIGHTING CHANCE?

Oh, certainly, we're the only ones that have a chance. That's what I'm trying to tell you. APPLAUSE. The rest of them don't have the chance of a celluloid dog chasing an asbestos cat in hell. How do you like that way of putting it? After all, strategically we're correct, and if our strategy of the organization conforms to the historic parallelism of events, we'll be there. I only hope I can stay alive for a few more years and watch the fun. APPLAUSE.

WELL, YOU SOUND GREAT, CHIEF.

I'm feeling good. All I need is a long-legged blonde that can cook or, I should say, can also cook, so I get a trailer and go down to the Keys for the winter. You talk about a health problem; I've got a serious one right there. (CHIEF LAUGHS) I even have to laugh at it myself.

WELL, THIS HAS BEEN GREAT, CHIEF. I KNOW IT'S GETTING TIRESOME HANGING ONTO THAT PHONE.

One of these days I'll have one of these things where you can talk both ways without holding it.

THAT'S WHAT YOU NEED.

Yes. Well, it's been fine talking to everybody. I hope that everybody is in fair condition. After all, stick around until Nixon makes a bigger mess of it. YES. He and God are going to fix it.

OH, IS THAT RIGHT?

Yes. It's like that old story of the man that did the beautiful restoration of the store, you know, and bought up the

TELECONFERENCE HOWARD SCOTT  
AND NORTHWEST TECHNOCRAT OFFICE

5-24-69

beautiful flowers and everything, and they ran tours in to look at it, and a priest had a busload of kids, telling them what a beautiful job God had done to it, and he happened to be there and he said, "Just a minute. Father. You should have seen this place when God was working at it all by himself." So, that's our position. There's nothing to worry about except your immediate problems. The problems of tomorrow -- there's noplacel else to go but Technocracy. They're finding it out more and more.

WELL, IT LOOKS LIKE IT MAY BE CLOSE AT THAT, DOESN'T IT?

It's closer than it was a year ago. How close do you want me to tell you?

I'M THINKING ABOUT IT IN TWO TERMS: MAKING IT, GETTING BY

Don't worry about that. You'll see lots of action in the next two years.

WE'LL DO WHAT WE CAN TO GET SET FOR IT. All right. AND OUR APPRECIATION AGAIN TO YOU CHIEF, FOR DOING THE INTERVIEW.

Well, my compliments and regards to everyone there, and salute and good luck.

GOOD NIGHT AND SALUTE TO YOU.

TELECONFERENCE  
AUGUST 31, 1969  
HOWARD SCOTT  
AND  
SECTION 1, R.D. 12349  
VANCOUVER, B.C.

GOOD AFTERNOON, CHIEF. THIS IS JOHN DARVILL SPEAKING TO YOU FROM THE AREA MEMBERSHIP MEETING AT SECTION 1, REGIONAL DIVISION 12349, IN VANCOUVER, BRITISH COLUMBIA.

Hello, John. Does my voice come through clear?

YOUR VOICE IS COMING THROUGH VERY CLEAR AND DISTINCTLY. Good. WE HAVE MEMBERS HERE THIS AFTERNOON FROM AS FAR SOUTH AS PORTLAND, OREGON. FROM WASHINGTON WE HAVE MEMBERS FROM SPOKANE, RICHLAND, SEATTLE, EVERETT, AND BELLINGHAM -- SORRY, FARTHER SOUTH, STILL, SAN FRANCISCO, CALIFORNIA. Who is there from San Francisco? Reo McCaslin. AND FROM HERE IN BRITISH COLUMBIA, WE HAVE MEMBERS FROM THE KAMLOOPS AREA, AND, OF COURSE, VANCOUVER. And from Victoria? NOBODY HERE FROM VICTORIA. Trail? NO, NOBODY FROM TRAIL. Can you hear me? YES, QUITE WELL. It seems they can hear, John. I can hear the applause. THAT'S GOOD, WE ARE ALL WAITING TO HEAR WHAT YOU HAVE TO SAY ABOUT SOCIAL CONDITIONS AND THE GENERAL APPEARANCE OF THINGS ON THE NORTH AMERICAN CONTINENT, AND, OF COURSE, AROUND THE WORLD IN GENERAL.

That's quite an order. We'll see what we can do, John. My compliments to all of you, members and officers from all over.

These are interesting times. It's only a few weeks ago on one weekend that three men traveled 241,000 miles and made the right turn and landed on the moon. The same weekend, Senator Edward Kennedy went a mile on a dirt road in Martha's Vineyard, made the wrong turn, and landed in the soup. The first one heralded the end of an era, and the second one proclaimed the end of a dynasty, the Irish Mafia from Boston.

You haven't got quite the same conditions in Canada. The Honorable Pierre Elliott Trudeau -- PET, as you call him up there, Lover Boy; slightly different, that's Quebec. Nevertheless, there's problems with the continent to be enjoyed by Canadians, the U.S., Mexicans, and everybody else. So here we are in 1969 facing a very uncertain tomorrow. Our colleges and universities are very much upset; of course, the so-called

student revolt -- that's nonsense. They're really not revolting at all, but instinctively they're correct, because they're objecting to the education that's provided to them by the institutions in their respective areas. The education provided doesn't take into account that the youth of this continent has no future under the present setup, so why educate them for no future? They sense that, and, of course, they are rebelling in their naive, adolescent way.

Up in Canada, you are going to be bothered with a slight surplus of wheat, plus some other grains. Well, you haven't China to rescue you from your wheat dilemma this time. The Chinese might buy a little wheat, but it won't amount to anything. United States has come in with a good crop of wheat. Our total crop this year will be less than the total Canadian crop towards reserves; in other words, it looks as if Canada will have 1,500,000,000 or more bushels of wheat. That's nice if you can sell the wheat, but as Russia produces more wheat than Canada, United States, Argentina, and Australia combined, it's becoming more and more complicated,

Japan is now the number one nation in automobiles, trucks, and buses although she produced last year slightly less cars than West Germany, but her number of trucks and buses exceeded that of West Germany. True, she has the largest transistor plant in the world, and does the largest shipbuilding, but then she hasn't the iron ore and a lot of other things, so she has to "grummage" around the world for her resources and manufacture for export in order to have the Japanese population have a higher standard of living than most of Asia.

The same thing is happening in Europe. Everybody is getting more and more additional productive equipment, and there are less and less places to put it, because you can't suddenly export Kleenex, Kotex, and automobiles if the country hasn't any room, and the Arabs use the Kotex for sweatbands. It takes time to create the social milieu necessary to understand and use these refined products of our erudite civilization. You begin to appreciate this if you move about in certain parts of the world.

Russia has three new gigantic gas fields. One of them in the Arctic has five times the reserves of Groningen in Holland. The Russian Treaty with Iran -- that was last year -- and they are

building the pipe lines -- 40-inch -- and Iran in 25 years will export billions of cubic meters of Iranian gas to Russia, which, by the way, will have a sulphur content, and the Russians will build two large-scale desulphurization plants in Russia to desulphurize the Iranian gas and become the world's second largest producer of sulphur. It will pay for the gas lines, cement plants, steel plants, textiles, and other things that Russia is building in Iran. Well, Iran is not Arab, so this ties in Iran to the Russian economy, and it's well to understand what this move makes in the balance of power. It makes quite a difference. It was the special stamping grounds of the Burma Oil, the British and United States, and the consortium of foreign oil companies. There are only 82 wells operating, but they do better than 11,000 barrels per well per day, and they have the oil reserves.

Now the interesting news this week is that Iraq has signed contracts with East Germany, Poland, Hungary, Czechoslovakia, and the U.S.S.R. for pipe lines, for survey parties, for drilling rigs, for storage facilities, and new plants -- giant sulphur plants in Iraq to produce reserves of its own sulphur, one of the largest in the world. The Polish will build it, and the interesting thing, instead of their being on a debt basis of 2-1/2 percent per annum, it will be paid for 70 percent or more by petroleum and gas from Iraq. This ties in Iraq with the Russian-Iranian bloc. That, of course, leaves Saudi Arabia, Kuwait, the neutral zones, Libya, and other areas still under the domination of the Free World; but then Russia and this new bloc will have the major energy resources of the Near East plus Russia, and in forwarding huge amounts of gas to Austria Czechoslovakia, and eventually Italy and France, they won't have to worry about their currencies. The Russians don't give a damn whether these countries have a currency or not or whether they print it on toilet paper, because the Russians will only take payment in manufactured goods, manufactured to Russian specifications; so, therefore, the currencies or gold really doesn't matter at all.

That's the way the game is being played, and as Technocracy has pointed out time and time again over the years, he who controls the energy supplies of any large-sized social system dominates that economy and dictates its future direction, so much so that NATO, the Common Market, and all of the treaty agreements with western Europe aren't worth the paper they're written on,

except as interesting historical documents of something that once was but has no further validity, because if France and Italy are going to take the volumes of gas, then they will have to pay in manufactured goods, and that will necessitate 15 to 20 percent of the production facilities of their economies manufacturing goods to Russian specifications in payment for Russian energy. A beautiful denouement of the world situation -- it has never happened before and will probably never happen again.

The interesting thing is what happens now. Well, we're going to have more taxes, more inflation, more federal doles, and more political nonsense, trying to stave off the day when an entire renovation has to be undertaken on this continent. Money, fiscal policies, and political appealings won't help in the slightest. You're not going to rescue the western Canadian farmer or American industry by putting import agreements -- that's only a stopgap, and Nixon and his doling out of \$5 billion to local municipalities and townships, that only introduces a giant local pork barrel, larger than has ever been undertaken in U.S. history. You'll have similar attempts in Canada, but, of course, temporarily you have a magnificent mining boom on in Canada, mines like the                    Mine in Hiram Valley, British Columbia, will be hitting 30,000 tons a day of .4 1 something of copper and .014 molybdenum, and then another one up on the north end of Vancouver Island which will hit 33,000 tons a day. These are big mining operations, but you have                    things in the Yukon in the north, and of course all this adds up to more staking of claims than were ever done in the boom days of the Klondike gold rush. Oil -- Prudhoe on the Alaskan Coast -- that only adds to it, because it doesn't change the social fabric, the social structure of Canada and United States; and that is what has got to be undertaken sooner or later and mostly sooner if we are going to survive without catastrophe and disaster.

I think I will leave it open for the audience to ask questions from now on. How about it? APPLAUSE

THANK YOU VERY MUCH. FROM THE RAPT LOOK OF CONCENTRATION AND ATTENTION, I THINK YOUR WORDS WERE VERY WELL RECEIVED. WE WILL NOW ASK THE AUDIENCE IF THEY HAVE ANY QUESTION OR COMMENTS THEY WISH TO MAKE, NOW IS THE TIME TO COME UP TO THE PHONE AND SPEAK DIRECTLY WITH THE DIRECTOR-IN-CHIEF. WHILE WE ARE WAITING FOR SOMEONE TO COME UP, THE QUESTION USUALLY ASKED IS HOW IS THE

TELECONFERENCE - HOWARD SCOTT  
AND 12349-1, VANCOUVER, B.C.

8-31-69

WEATHER BACK EAST?

How's the weather down here? YES. Oh, warm, a little muggy today. We've had some beautiful weather here the last of August. July has been God-awful. We only had two sunshiny days. We had the biggest rains almost on record. Everything is lush green down here. Terrific for soybeans and crops, but the peaches are rotting on the trees and the tomatoes didn't get ripe. Now the sun comes out the last week or so, and we've got tomatoes galore.

WE'VE GOT A BEAUTIFUL WEEKEND HERE. THE WEATHER HAS BEEN GOOD TO US FOR THE AREA ACTIVITIES. WE'VE HAD SOME BEAUTIFUL SUNSHINE, REAL WARM, CLEAR DAYS. That's the way to have it, John. IT SURE IS. AT LEAST IF THE WEATHER IS GOOD, YOU CAN BEAR SOME OF THE OTHER THINGS. Trials and tribulations. THAT'S ABOUT THE SIZE OF IT. WE DON'T SEEM TO HAVE A VERY RESPONSIVE AUDIENCE HERE THIS AFTERNOON, NO ONE IS BREAKING HIS NECK TO GET UP -- OH, YES, HERE WE GO. What happened, did I frighten them? I THINK IT MUST HAVE. HERE'S [UNDECIPHERABLE]

HELLO, CHIEF. I WAS WONDERING IS THERE A LIKELIHOOD OF THE AMERICANS PULLING OUT OF VIETNAM OR SOUTHEAST ASIA AT ALL? Oh, that's a political gesture. It was undertaken -- the political strategy of United States has been for a warfare-welfare state. Now we have to have the warfare in order to provide the welfare, but the welfare we're talking about is not the welfare of the individual. It's the welfare to corporate enterprise; so without the warfare, we can't provide good enough welfare to corporate enterprise to profitably operate. And Vietnam -- that was a strategic error in becoming involved in there, but still it paid off until lately. Now it isn't big enough. You see what we wanted was a limited war of unlimited duration, and we're facing the fact that we may get the unlimited duration but not a limited war. That isn't good. The war isn't big enough; we would like to have a bigger war in order to create more debt. The economy here is profitable provided it can get that huge injection of government taxes. You have the same thing in Canada on a lesser scale; so, they're in no hurry to really pull out. In fact, it's not a pullout, it's just a withdrawal of some of the troops. Do I make myself clear? NO, THEY'RE NOT LIKELY TO GIVE UP THEIR TERRITORY. If you're crazy enough to believe me, you're nuts. LAUGHTER, You wouldn't trust Richard Milhous Nixon any more than you would Pierre Elliott Trudeau, would you? NO, I DON'T THINK HE

IS CALLED "TRICKIE DICKIE" FOR NOTHING. No, you're correct.

THIS IS PETE MYRTLE SPEAKING, AND MY PARTICULAR INTEREST IS LATIN AMERICA AND IF YOU COULD COMMENT ON THAT AND POSSIBLY ENLARGE A LITTLE ON THE QUEBEC SITUATION? On what situation in South America? THE SITUATION GENERALLY. I WAS THINKING OF THEIR SOCIAL PROBLEMS, THE POPULATION EXPANSION .... You've got social problems in every one of the national entities in South America. They've got a high birth rate; for instance, Venezuela and Colombia have a birth rate three times that of Japan. People mostly think of Japan and so on as a high birthrate area. Well, they are incorrect. Venezuela is three times that. Mexico is also three times. The Mexican birth rate, at its present rate, there is liable to be 80 millions in a few years. Well, they can't feed the 42 million they've got, let alone a probable increase to 80 million. Now, don't think it's just Mexico's problem. Anything on this continent will also be the problem of the dominant economic national entity of the continent. You can't permit anarchy and starvation in a national entity of this continent and still be the U.S.A. Do you follow me? OH, YES, I THINK SO. Now in Chile, they have nationalized the mines -- the copper mines. Of course, the Braden in Chile and so on gave up first. The Anaconda is the last to go. Well, that's really \$1,200,000,000, but it means out of the control 360,000 tons of copper annually. Well, that's the beginning, Peru confiscated the national oil. Now the sugar estates of W.R. Grace and others -- well, they'll confiscate more.

Now, over in Africa, Zambia is confiscating the [Rome Selective Trust], the Anglo American, and even non-copper companies they're confiscating. That means the control of 780,000 tons of copper. So between Chile and Zambia, that's a big copper supply of the Free World, and it's being nationalized. India nationalized its banks and is nationalizing its export trade. It will nationalize more. Iraq and Iran are headed toward nationalization of their oil. So, why worry about South America? You can't do much about it under the present setup anyway. Between the church and the haciendista and the big corporations, they want to maintain the same kind of social disparity that exists all over South America, and it will go until it blows up. How's that? WELL, IT WILL GO UNTIL IT BLOWS UP, ALL RIGHT. You haven't seen anything yet. Wait until the roof caves in. I FELT ALL ALONG THAT THE LATIN AMERICAN COUNTRIES WOULD BE MUCH OF OUR

TROUBLES EARLY ON .... Oh, that's only part of the troubles. We're in trouble all around the world, wherever there are U.S. investments. This year, we're putting in about \$10.4 billion of private enterprise funds abroad. Next year, they plan to put in \$12.6 billion. Well, you have over \$50 billion invested. Twenty-six percent of corporate enterprise in Great Britain is now American controlled, and that 26 percent is in the top growth group of British industry; so, if they really expand, they will be the most profitable part of British industry. Therefore, you are inviting nationalization, the only form of retaliation that they, let's say, that such a nation can take.

WOULD YOU COMMENT ON THE INDUSTRIALIZATION OF QUEBEC? Oh, no, we know about its industrialization, but you would have to be more specific than that. There's all kinds of things. What do you mean by industrialization of Quebec? WELL THEY HAVE DEVELOPED CONSIDERABLE POWER RECENTLY, AND IT WOULD SEEM LIKELY THAT THEY ARE GOING TO TRY TO BREAK INTO MORE INDUSTRIALIZATION. THEIR SOCIAL SITUATION ISN'T .... Well, they developed the power because they wanted Catholic Quebec to have the disposal of the power. You don't get the                      yet, do you? After all, Ontario Hydroelectric Power Commission was the first, wasn't it? YES. It was the first to nationalize power in Canada. THAT'S RIGHT. Well, Quebec only went in for nationalization of Quebec Hydroelectric Commission after they discovered that that was also going on in Manitoba, Saskatchewan, Alberta, and British Columbia; so if they were to have some power -- I'm not talking of power now electrically, I'm talking about economic-political power -- to gain revenues for Quebec, not for the rest of Canada.

HI, CHIEF, THIS IS GEORGE [KELLOGG] SPEAKING TO YOU FROM SECTION 3. Right. I DON'T HAVE ANY TECHNICAL QUESTIONS. I'D LIKE TO KNOW HOW YOUR HEALTH IS. My health is excellent. HOW ARE THINGS AT CHQ? They're good. All I need here is a million dollars and a good-looking blonde. VERY GOOD. Does that answer your question? YES, SIR.

YOU SPOKE A LITTLE THE OTHER NIGHT ABOUT THE ELECTION IN BRITISH COLUMBIA, AND YOU'VE PROBABLY HEARD THAT                      TOOK THE SOCIAL CREDIT PARTY TO A HUGE MAJORITY HERE IN B.C. He did? Well, that's good. I hope he gets 100 percent majority. Then there won't be any opposition at all. HE CAME AWFULLY CLOSE. How much did he get? 39 OF THE 55 SEATS. He's reelected for what term? HE

TELECONFERENCE - HOWARD SCOTT  
AND 12349-1, VANCOUVER, B.C.

8-31-69

HAS FIVE YEARS. BUT HE'S NEVER GONE OVER THREE IN THE PAST. Well, five years ought to do it, John. WELL, HE'S GETTING PRETTY OLD, SO I GUESS HE'D BE PRETTY CREAKY FIVE YEARS FROM NOW. Oh, yes.

Is the name of your railroad the Pacific Great Eastern? YES. British Columbian railroad? YES, THE PGE. Well, if you shove that up through Fort Nelson, that's the head of navigation on the Liard. Then his pet project is to shove British Columbia up to the Arctic, Alberta to the Arctic, Saskatchewan and Manitoba to the Arctic, and then there will be no Dominion Federal Territories left, will there? NO. Well, then he can compete with Quebec, correct? WELL, I GUESS IT WILL BE THE EAST AGAINST THE WEST THEN. That's right. WELL, WE'VE THE GREAT CROP, I GUESS WE MIGHT AS WELL HAVE THE REST OF IT. You might as well. It won't do you any good. NO, IT WILL DO US A LOT OF HARM. You'll have to export it to Japan anyway. WE'RE DOING QUITE A BIT OF THAT NOW, OF COURSE. GOLD AND COPPER, AND THEY'RE SHIPPING BACK THEIR CARS AS FAST AS THEY CAN PRODUCE THEM. Well, certainly. We did it before World War II when we sold them all the scrap. Remember what I said back then? Mrs. America, don't squawk when your son is killed with a Pennsylvania coal car, a Ford rearend and a 6th Avenue El, because when it comes back to you, it won't be bouquets. When was that said? I DON'T KNOW. THAT WAS A LITTLE BEFORE MY TIME. Well, that was before war was declared. That was in '39 and '40. TWO YEARS LATER THEY WERE SHIPPING IT BACK WITH A VENGEANCE. Certainly. Roosevelt made the ruling that you couldn't ship the No. 1 scrap. Well, the way they did it was they put in 95 percent No. 1 scrap and then scattered No. 3 scrap, 10 percent on top. and that passed the inspectors. MUCH THE SAME AS THEY DID WITH TEN-YEAR-OLD WHISKEY. That's it. Oh, they're good businessmen, OH, YES, WE'VE GOT TO GIVE THEM THAT MUCH. Well, we've got to look forward to a lot of changes. YES, AND THEY WON'T ALL BE PLEASANT ONES, EITHER. No, they won't, John. HERE'S ANOTHER MAN FROM THE AUDIENCE COMING UP.

HELLO, CHIEF. I HEARD ABOUT YOUR HEALTH AND AM HAPPY TO HEAR THAT IT'S GOOD. My health? YES. It's excellent. I weigh 196 pounds. That's a little lighter than what it used to be, but there's nothing wrong with me except my head. LAUGHTER No, I'm not impotent yet, if that's what you want to know. IT'S SO LONG SINCE WE'VE SEEN YOU. THAT'S WHAT BOTHERS ME. I THINK YOU SHOULD COME UP HERE VERY SOON. I should come up there, eh? Well, I'll make it a point to try to come up there; how's that? THAT'S VERY

TELECONFERENCE - HOWARD SCOTT  
AND 12349-1, VANCOUVER, B.C.

8-31-69

GOOD. THAT'S GOOD NEWS. [APPLAUSE] DID YOU HEAR THAT? IT SOUNDS LIKE ALL MEMBERS HERE APPROVE OF IT. I'll try my best.

NOW YOU'LL FIND IT HARD TO GET OUT OF. I know, John, that's the trouble with it. It's like the girl saying yes. YES, AND NOT MUCH MEANING IT.

HELLO, CHIEF. THIS IS (PAUL McKAY] SPEAKING FROM SPOKANE. Oh, yes. WE'RE ALL WONDERING WHY WE CAME OVER HERE. WE'RE ALL CONCERNED ABOUT THE POLLUTION OF OUR AIR AND OUR WATER. THERE HASN'T BEEN ANYTHING MENTIONED ON THAT, AND WE'RE ALL WONDERING HOW LONG WE CAN SURVIVE UNDER THE PRESENT PRICE SYSTEM. WE KNOW THAT IT'S GETTING SERIOUS AND WE'D LIKE SOME COMMENT FROM YOU. Oh, yes, this year there will be 52 billion tin cans consumed, billions of bottles, and more billions of paper containers. You are pouring untreated sewerage into the East River right alongside the United Nations. Building. You are doing it in various rivers and so on across the country -- New York, Cleveland, Detroit, Chicago, St. Louis, etc. clean to the Pacific Coast. Well, we're not the only ones. Rome is dumping its untreated raw sewage into the Tiber, Venice into the canals, and in a penstock almost a mile out in the ocean to dump its untreated sewage out there, and if the tide and the wind is right, it dumps it up on the beaches of the Riviera. So the question is whether Rome, Venice, and other cities that dump their raw sewage into the Mediterranean should be permitted to exist. Genghis Khan had the right idea in 1220 when he gave his orders to [Sabitay] and [Sheepnoyan], his two marshals, to level Rome so flat that the Mongol cavalry of the Golden Horde could ride over it at a gallop. So now the Mongols aren't going to do it. They're going to do it with their own sewerage. So it isn't just here. You've got it in various places. You're polluting it out to sea. The lakes, yes, the phosphates that you've got in the waters, they, of course, produce the oxygen-consuming algae, and that eats up what? The available free oxygen in the water, and it will not support marine life. So you've got about 140 square miles in Lake Erie and a similar amount coming up in Lake Michigan that will not support marine life. Do any of your high schools in your area, colleges, universities, or churches know how much sewage that is dumped in the various lakes, rivers, and harbors in British Columbia? Do they take their high school students or their college students down and photograph it and get a pailful of it? Oh, no, you don't discuss things like that, do

you? Well, until you do and this populace wakes up, you're going to wade through it, and you haven't long to wait. What do you suppose the total garbage removal and sewage load is? It runs into the billions of tons a year. You can't survive it long.

Everything is made disposable and nonreturnable. Now, of course, we have -- Kotexes have been nonreturnable for some time, as you very well know. But now with nonreturnable bottles, disposable diapers and disposable panties, so pretty soon it will be all disposable and will add to the general pile, won't it? A nice, odoriferous, Christian civilization!

CHIEF, UNDER THE TECHNATE WE KNOW WHAT COULD BE DONE WITH THAT. IT COULD BE BENEFICIAL TO MAN. That's right, it could be. You can have electrolytic sewage disposal systems that will take out 100 percent of the bacteria, 90 percent of the solids, and all of the phosphates. All you do is solute and you've got double A No. 1 potable water. Every city would have to have three different sewer systems. There are a few cities that would have to have four different sewer systems, but nothing of sewage pollution would pollute the waters of this continent if it were properly designed. Well, you can have garbage the same way. You can separate out your tin cans, your bottles, your plastic containers, and your paper. They could all be salvaged, and you could make gas out of the rest.

ANOTHER THING: HOW LONG WOULD YOU THINK THAT AFTER .... THEY KNOW THAT LAKE ERIE IS A DEAD LAKE. HOW LONG UNDER POSSIBLE WORK COULD THAT BE RECLAIMED? COULD IT BE RECLAIMED IN A VERY SHORT TIME? IT WOULD TAKE SOME TIME THOUGH, WOULDN'T IT? Well, it could be reclaimed in about 20 years, but you've got to start now. WE'RE ALMOST TOO LATE. No, it's not too late. What are you going to do with these businessmen and politicians. WE SHOULD HANG THEM, I GUESS. Oh, that's too much effort. They're not worth that. WELL, THANKS, CHIEF.

Well, did that cover the waterfront for you? VERY GOOD. WE DO APPRECIATE IT. My regards to everyone there. Could they hear it? OH, YES, QUITE WELL. [APPLAUSE] O.K. Well, best luck, and salute to all of you. THANK YOU VERY MUCH, CHIEF. WE MUST SAY BEFORE WE CLOSE THAT IT HAS BEEN A VERY GREAT PLEASURE TO HAVE THIS OPPORTUNITY ONCE AGAIN OF SPEAKING TO YOU, OF HEARING YOUR SUMMATION AND COMMENTS ON THE SOCIAL CONDITIONS WHICH, OF COURSE,

TELECONFERENCE - HOWARD SCOTT  
AND 12349-1, VANCOUVER, B.C.

8-31-69

ARE WORRYING US ALL TODAY, AND I'M SURE THAT THE MEMBERSHIP HERE  
HAVE GOT A GREAT DEAL FROM WHAT YOU HAVE SAID. ON BEHALF OF ALL  
OF THE MEMBERS PRESENT HERE IN VANCOUVER THIS AFTERNOON, WE WISH  
TO EXTEND TO YOU OUR SINCEREST BEST WISHES AND THE HOPE THAT  
BEFORE TOO MUCH LONGER YOU CAN MAKE GOOD ON YOUR PROMISE THIS  
AFTERNOON .... To come out there? RIGHT. All right, thank you  
very much. THANK YOU VERY MUCH AND GOODBYE.

WE HAVE THE MEMBERSHIP PRESENT THIS EVENING. I'M NOT TOO FAMILIAR WITH THE PROCEDURE. DO YOU HAVE ONE YOU WANT US TO FOLLOW?

No. How many have you got.

WE HAVE 12 MEMBERS PRESENT.

Any non-members?

We have two.

DO YOU WANT TO SPEAK TO NICHOLSON?

How many people have I met there and how many haven't I?

YOU HAVEN'T MET MOST OF THE MEMBERS. DO YOU WANT ME TO INTRODUCE THEM AND HAVE THEM SAY A LITTLE

You tell me who they are, and then I'll say hello to them.

FIRST, RAY COSKEY. OF COURSE, YOU KNOW HIM.

YES, WE MET LAST JULY. I STAYED THERE A COUPLE OF DAYS WITH BOB.

That's right, Ray, I remember.

HERE'S ALIECE ALTON.

It's nice to know you; nice to hear you.

AL BIROL(?)

How are you?

I'M FINE. I CAN HEAR YOU VERY WELL.

THIS IS MARY NICHOLSON.

TELECONFERENCE HOWARD SCOTT  
WITH 8025-A, FLORIDA

9-7-69

How are you, my dear?

THIS ISN'T A GOOD LINE OR YOU WOULD HAVE KNOWN MY VOICE,  
WOULDN'T YOU?

Different voices miss confusion on clearing the line. You  
can't tell.

IS IT ALL RIGHT NOW?

It's all right, my dear.

AND HOW ARE YOU?

I'm fine, thank you. GOOD. Glad to hear you.

CHIEF, THIS IS DAVE LONDON. I MET YOU LAST SUMMER.

Oh, yes, I remember you. You were here at CHQ.

YES, VERY BRIEFLY. I'LL HAVE MORE TO SAY LATER,

HELLO, CHIEF. I'M THE YOUNGEST MEMBER. (COULD NOT UNDERSTAND  
THE NAME.)

You're the youngest member?

YES, I'M 13.

13? Well, my compliments to you. How tall are you?

5'4"

Do you expect to grow some more.

I DO, YES, SIR.

How tall are your parents?

ABOUT 5'8" and 5'6".

Oh, you'll grow taller than that, probably. Glad to hear

TELECONFERENCE HOWARD SCOTT  
WITH 8025-A, FLORIDA

9-7-69

you.

HELLO. CHIEF, THIS IS LORRAINE COSKEY.

Hello, Lorraine, it's nice to hear your voice.

IT'S NICE TO HEAR YOURS, SIR. I STARTED SCHOOL WEDNESDAY.  
I'M GOING TO TRY TO BE A MEDICAL TECHNICIAN.

You've started school already? My compliments to you, THANK YOU. And how are the family? VERY WELL, THEY'RE TAKING IT IN STRIDE AND EVERYONE IS VERY WELL CONDITIONED FOR THE EARLY MORNING HOURS. What time do you have to get up to get there? 6:00, Oh, for heaven's sakes. IT'S WORTH IT. I'M VERY INTERESTED. IT'S ALL IN THE SCIENCE AREA. Right. Now, don't work yourself to death at it. I WON'T. Cause we want you around, you know. THANK YOU. WE HAVE ONE MORE MEMBER HERE.

HELLO. MY NAME IS BILL MATHEWS.

Glad to hear you, Bill.

IT'S NICE TO TALK TO YOU AGAIN. I'LL PUT PAUL CORDSMEYER BACK ON AGAIN.

Right.

THIS IS ALL THE MEMBERS THAT COULD MAKE IT THIS EVENING. SOME OF THE PEOPLE HAD TO WORK. THE AIRLINE STEWARDESS HAD TO MAKE A FLIGHT THIS EVENING, I THINK, AND DON SAID HE WOULD BE INDISPOSED THIS EVENING AND COULDN'T MAKE IT. HE'S ON CALL. I DON'T KNOW WHAT HAPPENED. SONNY TANNENBAUM IS OUR SECRETARY, AND I THINK WE'LL BE REPLACING HIM.

HE'S GOT A SECOND JOB, HE'S BEEN HAVING QUITE A DIFFICULTY. WE'RE UNDER PRICE SYSTEM PRESSURES.

Well, that happens, Paul. That's all that are there tonight?

YES, CHIEF.

You'll get a chance to get more together in another couple of months likely.

9-7-69

I'M SURE. WE HAVE QUITE A FEW CONTACTS -- PEOPLE WHO ARE INTERESTED.

Well, the interesting things here today are the march of events here and abroad, as you know. Of course, when those three astronauts left here and landed one weekend, they made the right turn and landed on the moon 241,000 miles away; and Senator Edward Kennedy went a mile on a dirt road and made the wrong turn and landed in the soup. Now, the three that landed on the moon, you might say, herald the end of an era, and Kennedy's incident proclaimed the end of a dynasty. That's one way of putting it.

There are events showing up at home and abroad that are very interesting. For instance, Iran and Iraq are both big producers of petroleum and gas and have hitherto been in the orbit of the so-called powers of the free world. Iran was the first to make moves in another direction, and last year they signed the treaty contract with the U.S.S.R. for the delivery of huge volumes of petroleum gas to Russia on a 25-year basis for the return of the Russians building the pipelines, pumping stations, steel mills, chemical plants, textiles, and others. That's a 40-inch pipeline going from Iran to Russia, and the Iranian gas is high in sulphur; therefore, the Russians will have to build two quite large-sized plants for the desulphurization of the Iranian gas, and that will place the U.S.S.R. in the place of being the second largest producer of sulphur in the world.

Iraq wanted to get in on the transport of gas because the Iraqi boundary isn't far from the Iranian-Russian pipeline. Well, they have just signed a treaty with the U.S.S.R. and with Poland and some of the other countries back of the Iron Curtain in which Poland will build a plant for the production of sulphur from the huge sulphur domes, one of the largest in the world, in Iraq, and the Russians will put in drilling rigs, geologists, geophysicists, and build pipelines, and the interesting part of it is that Iraq in the treaty calls for payment to the U.S.S.R. or Iron Curtain countries in 70 percent or more of the total debt owing to be paid in petroleum. This means, of course, that they are moving out of the orbit of the so-called free world and moving into the energy orbit of the U.S.S.R. That means petroleum in large-size orders and gas, and Iraq, in other words, is passing out from in under the free world domination.

9-7-69

Now the latest blowup in Libya may appear not to have any connotation, but it has, because it is a coup d'état managed by the west, oil companies, CIA, and others, and this is apparently to try to make it safe in the western orbit. That remains to be seen, because certain things are happening that are not yet divulged. For instance, in Chile, Chile has not nationalized the big copper properties; of course, the Braden & Chile Copper caved in a year or more ago and finally the great Anaconda caved in, and Chile's nationalization of copper was practically complete. That involves about 360,000 tons of copper annually. To add to the international scene, Zambia is nationalizing its copper, as well as other countries. The great , the Anglo American, and other mines -- that runs up to almost 780,000 tons of copper; so that Zambia and Chile are the biggest copper supply of the free world, and their being nationalized is going to, let's say, throw a lot of hooks into the international economic picture, with copper at 52 cents a pound, and it will probably go up.

Of course, you've all heard the news that Peru has nationalized the International Petroleum and the sugar estates of Grace & Co. and others. India has nationalized her banks now and their export trade, and shortly expects to nationalize its import trade. So, these are moves on all over which are making it more and more complicated for the Nixon Administration of United States and the Trudeau in Canada to play little fancy games.. They can't do it. Canada will have one of the biggest supplies of wheat in history. We'll come in in United States with about 1.4 billion and Canada will come in -- plus its carryover and a big crop -- with about 1.5 billion. As China is not buying any wheat worth talking and Russia is producing a greater wheat crop than Canada, United States, Argentina, and Australia combined, it's a question of what is going to happen to the agricultural situation in Canada. Trudeau is responding, i.e., Pierre Elliot Trudeau -- the initials stand for PET. The farmers are carrying big placards in front of Trudeau meetings, "PET -- LOVERBOY." This comes over on TV. I don't know whether it reaches down in Miami or not, but Trudeau has announced that he is discharging 25,000 Dominion employees. Richard Milhous Nixon has announced he is cutting 75 percent of all federal aid to construction. That is going to cause a cutback here.

There are all kinds of complications setting in that are not

TELECONFERENCE HOWARD SCOTT  
WITH 8025-A, FLORIDA

9-7-69

adequately and sufficiently reported in the public press. There are many questions involved here, and, of course, we can't answer them all in a night, but I have given you a little of a touch and if you care to think up a few questions, I will be glad to entertain them.

AL VIRAULT WANTS TO KNOW WHAT IS HAPPENING WITH RUSSIA AND CHINA. ARE THEY HAVING A WAR. WHAT IS THIS BORDER CONFLICT -- JUST A DIVERSION BY OUR PRESS?

Most of it is propaganda manufactured here. Russia and China just signed a new agreement on the boundaries on the Ussuri River and the Amur River. That's over where the shooting was some time ago. So it couldn't have been so very serious or they wouldn't be speaking to each other.

JUST A DIVERSION.

Oh, there are conflicts, of course, out in Sinkiang. There the population is not Chinese; it's Turko, and the population is also as anti-Chinese as it is anti-Russian, so they pull anything both ways. Of course, we're trying to make out that Russia is liable to bombard the Chinese nuclear site at Pon Nor. Well, that's another pipe dream. Does that answer the question?

HERE'S DAVE LONDON.

CHIEF, WHEN YOU MENTION ABOUT RUSSIA'S PRODUCING MORE WHEAT THAN THE U.S., CANADA, AND ARGENTINA COMBINED, DO THEY ACTUALLY HAVE WHAT MIGHT BE CONSIDERED A SURPLUS OF WHEAT FOR THEIR OWN NEEDS?

Yes, to some extent. I mean, when you run 3 billion bushels, that's some order of wheat, isn't it? YES, I GUESS SO. I'll tell you what you do. You add up the production of United States, Canada, Argentina, and Australia and see if it exceeds 3 billion.

I WILL. IF THEY ARE ABLE TO DO THIS TYPE OF THING, I READ IN ONE OF THE TECHNOCRACY PUBLICATIONS AROUND 1950, IF I REMEMBER CORRECTLY, THAT IT WOULD TAKE THE SOVIET UNION ABOUT 15-25 YEARS' TIME TO PERHAPS BE READY TO MOVE INTO A TECHNATE. DO YOU CONSIDER THEM TO BE ABLE TO MOVE INTO A TECHNATE THEMSELVES.

9-7-69

Not yet. WHAT DO THEY ACTUALLY NEED? Oh, they need a lot of things; in other words, they've got to shove their energy consumption per capita up to 170,000 kilogram calories per capita per day, and they are quite a way from that. I SEE. THANK YOU.

ONE OF THE MEMBERS IS CURIOUS ABOUT THE 50 AIRCRAFT THAT ISRAEL IS GOING TO RECEIVE FROM THE UNITED STATES.

We have just shipped and some have landed in Israeli -- what is it, F-105s U.S.? Isn't that the designation? YES, CHIEF. Well, Israeli has just received some from United States.

That's one of the reasons for Libya and Arab resentment against the U.S.

IT LOOKS AS IF THESE ARE JUST CONSTANT DIVERSIONS. ARE WE TRYING TO CREATE A QUASI-WAR?

After all, the situation in South Vietnam. What we had hoped to be was a limited war of unlimited duration, but the trouble with this one in Vietnam is it's not large enough to subsidize and expand the economy of the budget size that we have. Is that clear? YES. And, of course, our total budget runs close to \$190 billion now -- \$80 billion for the war. But that isn't big enough; so, we're in a pretty sad pickle.

ARE THEY TRYING TO CUT BACK ON SPENDING FOR ROADS, SCHOOLS, ETC.?

Yes, they're trying to cut it back but not to cut back on the war to any extent.

IT DOESN'T SOUND LOGICAL. HERE THEY ARE TRYING TO CUT BACK SPENDING FOR LABOR -- IS THAT WHAT IT IS, CUTTING BACK SPENDING FOR LABOR TO KEEP US IN BUSINESS?

Your big production manufacturers for the war, that's one thing. That's higher profits and more direct subsidy than the ordinary production in United States. Is that clear? YES. We're a warfare-welfare economy, and we have to have the warfare in order to provide the welfare; by that, I do not mean welfare to the average citizen. I mean welfare to corporate enterprise. Now,

TELECONFERENCE HOWARD SCOTT  
WITH 8025-A, FLORIDA

9-7-69

here's the governors' conference just completed in Colorado, where they voted 47 to 1 to transfer all the welfare of the 48 states to the federal government. They can't handle it. That will be lovely, especially down in Florida.

CHIEF, HERE'S A QUESTION: SOMEONE BROUGHT UP THIS REPORT OF THE IRON MOUNTAIN. THEY SAID IT SEEMS THAT THIS MUST BE RIGHT. ARE YOU FAMILIAR WITH THIS NOVEL?

No, I'm not.

IT'S SUPPOSEDLY A FICTIONAL ACCOUNT.

I have so much other stuff to read ...

I UNDERSTAND.

I THINK THE PEOPLE DON'T HAVE TOO MANY QUESTIONS TONIGHT, THEY'RE NOT TOO FAMILIAR WITH HEARING INFORMATION THIS WAY, CHIEF.

They're not too familiar with hearing this kind of information?

I DON'T THINK THEY ARE.

If I knew what they were interested in, I could go into various other fields.

DAVE HAS SOME MORE QUESTIONS, CHIEF.

CHIEF, I HAVE A QUESTION REGARDING THE WORK OF BUCKMINSTER FULLER. I HAVE BEEN STARTING TO READ JUST A LITTLE BIT ABOUT WHAT HE'S DOING AT THE WORLD RESOURCES INVENTORY AT SOUTHERN ILLINOIS, AND I WAS WONDERING TO WHAT EXTENT YOU ARE FAMILIAR WITH HIM AND HIS WORK AND ITS SIGNIFICANCE, IF ANY.

Well, I knew him years ago. He wasn't even a graduate architect, you know. Did you know that? He's a kind of science fiction gadgeteer.

I KNOW HE'S SUPPOSEDLY AN ARCHITECT AND ENGINEER.

9-7-69

No, he's not. He designed that teardrop automobile. He brought it around to give me a ride in it. I told him not to build it. That's where it had the two wheels in the front and one in the rear, and they built three of them. Well, but the Shell Oil that bought them, in going south from Chicago in Illinois with six executives, it went off the road and killed them. It's like his dimaxium house. That's a fine lot of guff. He's a good advertiser, you know, and during the war, he and LIFE-TIME on the geodesic domes for the dewline made money out of it. He's not a Technocrat, you know. I KNOW. And he's a long way removed from it. Oh, he tries to make out he's a Technocrat.

O.K. I KNOW HIS WORK IN SOUTHERN ILLINOIS, MANY PEOPLE FELT IT TO BE QUITE SIGNIFICANT.

Oh, he goes around and delivers lectures at different universities.

O.K., THANKS.

CHIEF, THESE RECENT CUTBACKS IN GOVERNMENT LOANS AND THE HIGH INTEREST RATE -- WHAT IS THIS GOING TO DO TO OUR ECONOMY?

It's cutting out the construction industry; of course, the blacks are hollering for more jobs in the construction industry, but this is cutting it down. There are unemployed carpenters, masons, electricians, and so on mounting rapidly around the Detroit, Michigan-Toledo area right now, and it's happening around here. Do you hear me? YES, CHIEF. And, of course, that's going to mean quite a reduction.

IT LOOKS LIKE THEY'RE GOING TO PUT UP A LOT OF PREFAB HOMES.

The Aluminum Company, U.S. Steel, and Fruehauf Trailer are putting up plants to build the finished home, where you move it out on a lowboy on a train and you just lay it down on a slab. Then you avoid the craft unions. You make it all in a plant. Do you see what the drive is? Do you hear me? YES. You avoid the craft union rates.

HERE'S A QUESTIONS: HOW WILL GOVERNMENT CUTBACK AFFECT SUBSIDIES TO EDUCATION?

TELECONFERENCE HOWARD SCOTT  
WITH 8025-A, FLORIDA

9-7-69

They'll do the same thing. They'll make gestures to the educational system in certain fields, but it will only be a gesture and not a reorganization. Is that understandable? You don't expect a Nixon or a Trudeau to do anything more than diversionary gestures.

SOMEONE HAS WRITTEN A QUESTION OUT. THEY WANT TO KNOW WHAT MAGAZINES DO YOU SUBSCRIBE TO TO GET THE INFORMATION THAT YOU TELL US.

Well, you've been here. We subscribe to any number of technical, scientific, and trade publications of the United States, Canada, Great Britain, France, Sweden, and other countries.

WELL, I GUESS THAT'S ALL WE NEED TO KNOW, AND I REALLY APPRECIATE YOUR CALLING, CHIEF, AND TALKING TO US. I don't think I can do much more for you. OH, NO. I THINK I'VE PRESSED YOU TOO MUCH. I HOPE I HAVEN'T. That's all right. Is the audience satisfied tonight? I BELIEVE SO. DAVE HAS ANOTHER QUESTION. HE JUST WANTED TO KNOW IF YOU HAVE PLANS TO COME DOWN. No, we won't go into that right now. O.K., CHIEF. THANK YOU VERY MUCH, AND WE HOPE YOU STAY IN GOOD HEALTH. All right, Paul. Best luck to all of you.

TELECONFERENCE  
HOWARD SCOTT  
WITH  
SECTION 1, R.D. 8342, DETROIT  
DECEMBER 14, 1969

(NO INTRODUCTORY DISCUSSION ON TAPE) JOHN SPITLER IN DETROIT.

(1) WOULD EFFORTS OF MORATORIUM GROUPS, IF SUCCESSFUL THROUGH POLITICAL ACTION, STOP THE VIETNAM WAR?

Well, that's hard to tell what is meant by that, because if they follow the proposals of Sam Brown and the Kennedy machine, then they're going out to elect Democrats, Republicans, and Independents who are the proper people to see that the troops back home when they get elected to the new Congress and Senate. That doesn't follow at all, does it? There's nothing inherent in electing anybody -- individuals -- to carry out a change in policy. Can you hear that?

WE GOT IT, CHIEF. IN OTHER WORDS, A CHANGE IN ELECTING A FEW REPRESENTATIVES OR SENATORS IS NOT GOING TO CHANGE A FUNDAMENTAL POLICY.

Not a bit. Does that cover it?

YES, IT SEEMS TO SATISFY THE GROUP.

(2) IN THOSE THAT SUPPORT THE MORATORIUM, WILL THEY BE ACTIVE IN SUPPORT OF THE POLITICAL ACTION? IS IT PROBABLE THAT THEY WILL FOLLOW THROUGH AND SUPPORT THE POLITICAL ACTION? THERE SEEMS TO BE A FEELING THAT THERE'S ABOUT FIFTY MILLION PEOPLE WHO ARE SYMPATHETIC TO THE OBJECTIVES OF THE MORATORIUM.

There are millions of people across the United States that want the war terminated; but you're going to take the peace movement off the streets, according to the magazines, and meet with the officials of the moratorium and take it into politics. Unfortunately, the millions of sincere people who want peace are being used by several political machines.

DO YOU WANT TO ELABORATE A LITTLE BIT ON THAT, CHIEF?

12-14-69

Now here's Sam Brown -- Sam Brown was the chief legman of Bobby Kennedy -- and he's got an organization set up in every congressional precinct. This is printed. Now that takes money to set up an organization in every congressional precinct across the country. That's takes millions, and they didn't get the millions from the mobilization of the sympathetic people. They got \$250,000 in Washington, they have an ad in the SUNDAY TIMES OF NEW YORK calling for more money donations, but they haven't got that kind of money. That kind of money comes from particular sources. Now, who all is in it besides the remnants of the Kennedy machine and Eugene McCarthy, that's a question. You'll just have to wait until it comes out. The ad today in THE TIMES -- Sam Brown is the name whose name appears to where you send your money.

THEY'RE SWINGING QUITE ACTIVELY IN ON THEIR POLITICAL ACTION THEN?

Right, that's what they're doing. They're thinking that they can convert this movement of sincere people across the country into a new political direction; in other words, you're going to revamp the Kennedy-for-Youth thing. Kennedy never had any use for the negro or the youth. Nobody with \$300 million has. That's downright hypocrisy.

WELL, THEY'RE DOWN-THE-RIVER PRIVATEERS FROM A LONG TIME AGO.

Right.

O.K., THEY'RE SATISFIED ON THAT ONE, CHIEF.

(3) ARE THE DEMONSTRATORS REALLY USEFUL TO FORCE WITHDRAWAL OF FORCES FROM VIETNAM?

Put it this way. You had an aggregation in Washington, but it was what? You had singers, you had soloists, you had politicians, you had a hoi polloi of everything. They carried all kinds of signs, banners, flags, coffins -- there was no cohesion, no solidarity, and no direction on the part of the entirety. Let's face it. If it had been 25,000 that had march down there in gray without any signs, without any flags, without any banners, it would have caused more consternation than what they did have

happen in Washington. Is that clear?

WITH A LITTLE ORGANIZATION AND A LITTLE ESPRIT DE CORPS.

Right. They didn't have it. They had to have 6,000 trained. They were trained in 12 different places. Parade marshals wore armbands. They had first-aid stations. They had nurses. They had portable toilets. This was all organized beforehand. Well, now, Dr. Spock is a noted, sincere baby physician. Yes, he carried a sign down and deposited it in the coffin. What the hell good is that? It's not the dead that's going to do anything. It's the living! Am I making myself clear on this? You see, I'm not questioning the motives of Dr. Spock or any of them. They can be quite sincere, and there are millions of people in the country that are sincere about it; but never forget this: That there has been more trouble caused in human history by sincere damn fools than there ever has been by unscrupulous crooks. The unscrupulous crook only operates from the standpoint of self-interest, while the sincere damn fool doesn't know what his self-interest is.

THAT'S PUTTING IT RATHER BLUNTLY. WELL, WILLIS STILL SEEMS TO THINK THAT THE ACTIVITY ON THE PART OF THE MORATORIUM GROUP IS HAVING AN EFFECT ON THE POLITICAL STRUCTURE, IN THAT IT'S CAUSING THEM TO PULL IN THEIR HORNS A LITTLE BIT.

And they're getting more vicious by the day.

SO THIS CAN BE A LOT NASTIER THAN IF LEFT ALONE.

Right, because they're going to go far right in their viciousness to suppress and circumvent any legitimate dissent. There's been 28 Black Panthers murdered by gunfire of the police since 1968. What do we call that? They were crazy, of course, to try direct confrontation with 19,000 police forces in these United States. It was too many police.

THERE'S NO DOUBT ABOUT IT. IF ANY ONE OF US WAS PROBABLY A MEMBER OF THE POLICE DEPARTMENT-AND KNEW WE WERE UP AGAINST THE PROPOSITION OF WHERE THERE WAS AN ARSENAL OF ARMS, WE WERE GOING TO TAKE STEPS TO GET THAT OUT OF THE ROAD. IS THAT THE GENERAL ATTITUDE, CHIEF?

That's the attitude, and there will be more of it. It will

TELECONFERENCE HOWARD SCOTT  
WITH 8342-1, DETROIT

12-14-69

be tougher. Take the Governor of Ohio this week. What happened? He had the National Guard and the State Police out inside of an hour-and-a-half. They came out with their hands up. The same way at Harvard. Harvard has kicked out 75 black students and has told the others that it will kick the entire number out if they take the same attitude. Well, now that dear old "Havard" has become forceful, which they should have done two years ago, now any one of the lesser than the Ivy League can take action. Do you follow me?

THEY SAY IT'S CLEAR TO THEM.

NOW HERE'S A QUESTION: WHAT KNOWLEDGE DO YOU HAVE OF THE "SUPPORT THE PRESIDENT" PROGRAM?

That's being furthered by the press, the TV, business interests, just as you have the football thing giving the plaque to Nixon at the Waldorf Astoria. You're using every single item to get publicity and support. The only thing is that 5,000 turned out, and when they hoisted the red flag on the Waldorf Astoria flagpole and it took 50 police to take it down, and 150 broke through the police ranks and they had to be thrown out of the Waldorf Astoria. Well, of course, they didn't play that up much. But it simply shows that the Nixon machine is working overtime trying to manufacture publicity so as to create the public image in the media, and they will do every possible.

THAT'S THE SILENT MAJORITY.

Yes. They've been silent a hell of a long while.

WE OUGHT TO KNOW.

IF WE DID NOT HAVE A MORATORIUM, WOULD THERE BE GREATER MILITARY INVOLVEMENT. HAS THE MORATORIUM BEEN PARTIALLY EFFECTIVE IN STALLING FURTHER MILITARY INVOLVEMENT?

No, I don't think it has. The military involvement out there is stalling for different reasons. It would still be stalled if there were no moratorium. It was a strategic blunder to begin with, and the war wasn't big enough. Now they want something larger, and they don't know quite where to get it.

TELECONFERENCE HOWARD SCOTT  
WITH 8342-1, DETROIT

12-14-69

JUST ENCOMPASSING THE REST OF THAT PENINSULA WOULDN'T DO IT  
EITHER, WOULD IT?

No, it would not. I mean, if you involve Cambodia, Laos, and  
part of Thailand, it wouldn't do it either, because if you did  
that, you would involve Red China. And we don't want to go to war  
with Red China.

THAT WOULD BE A LITTLE TOO BIG.

Oh, that's too much. Red China has 32 million armed militia.

QUITE A SIZABLE FORCE.

Yes. They have the machine guns, the arms, and so on with  
them. They don't have to be distributed.

WHAT'S MORE, THEY HAVE A CERTAIN AMOUNT OF TIME SET ASIDE  
EACH DAY FOR MILITARY EXERCISE.

That's right. They have an esprit ae corps.

IS IT POSSIBLE TO GET ANY ACTION OUT OF THE OLD PARTIES OR  
IS A NEW PARTY THE ANSWER?

A new party would do exactly what the old parties are doing.  
They are going to play in the same ballpark, are they not?  
They're going to seek to be elected.

I TOLD THE WRITER WHO ASKED THAT QUESTION THAT HE WAS GOING  
TO GET A REAL FAST ACTION ON THAT ONE.

Yeah. When you start to count noses, what difference whether  
you count noses for the Republicans, the Democrats, or the horses  
asses?

BACKGROUND LAUGHTER.

JERRY SAYS THAT IF THE HORSES' ASSES GOT IN, THEY'D HAVE TO  
DO IT FASTER BECAUSE THEY HAVEN'T BEEN THERE BEFORE.

That's correct. They would have to work overtime, and the  
General Motors doesn't want it.

TELECONFERENCE HOWARD SCOTT  
WITH 8342-1, DETROIT

12-14-69

WELL, THEY'RE HAVING A LITTLE TROUBLE WITH THAT IN OUR FAIR CITY NOW. (A SMALL LAPSE IN THE TAPE HERE) AND GENERAL MOTORS ARE GOING TO HAVE NICE LONG VACATIONS FOR THE HOLIDAYS.

Oh, I love that. They can enjoy Christmas with the dear little kiddies.

THAT'S RIGHT. THEY'LL BE DAMNED GLAD TO GET BACK TO WORK.

HOW BIG DOES THE MORATORIUM HAVE TO BE TO FORCE REDIRECTION FROM THE GOVERNMENT?

Twenty million.

TWENTY MILLION, AND THEY'VE GOT TO HAVE BETTER COORDINATION THAN THEY'VE GOT NOW.

Oh, yes, and they can't be under this undercover political mesmerism. The chances to get twenty million Americans to declare themselves for any one direction right now are what?

WE'VE BEEN AT IT A LONG TIME. WE OUGHT TO KNOW WHAT IT MEANS TO TRY TO MOVE PEOPLE.

The public of any nation is not going to move until there's a force majeure that compels them to move. Don't forget that in Russia in 1917 in the war, the hundreds of thousands were going everyday to the offices; they were traveling back and forth; they didn't know there was anything wrong. It collapsed around their ears.

THAT'S WHEN THEY HAD ONE GUN FOR EACH THREE MEN AT THE FRONT.

That's right.

NO FOOD. POOR SANITATION, AND ALL THE REST.

The roof caved in, and whoopee, what happened? The public didn't know what happened.

Neither did the elected representatives.

I'M JUST FINISHING THIS BOOK BY ZINDER. HE POINTS OUT THAT IN RUSSIA IN 1917, PAGE 21, YOU HAD ONE OF THE GREATEST OF DEATH BY TYPHUS. AND I THINK HE SAID IT TOOK ABOUT TEN MILLION OR BETTER OF RUSSIANS IN THAT TIME.

Yes, it was quite devastating.

WOULD A TURNOUT OF TWENTY MILLION CONTRADICT WHAT YOU HAVE WRITTEN IN MORATORIUM AD NAUSEUM?

What contradiction?

THAT THE MORATORIUM CAN BE EFFECTIVE IN CALLING A HALT TO THE WAR.

Well, but it wouldn't be the moratorium if you got twenty million, would it?

WHY WOULDN'T IT BE THE MORATORIUM?

Because it would be a national movement. What's the word "moratorium"? A moratorium is a delay, isn't it? Correct?

FERN MCFARLAND SEEMS TO THINK THE MORATORIUM IS CREATING A NATIONAL MOVEMENT. Not yet, but the indication ....

SHE DOESN'T GET THE POINT THAT YOU NEED SOME OTHER OBJECTIVE THAN JUST GETTING OUT OF VIETNAM.

Oh, yes, the ending of the Vietnam War isn't big enough to create a change in national policy in this country. You could bring them all home from Vietnam, and it would be worse than you have it now. Well, then what? What are you going to do with them?

SHE SAYS, "THEN, TECHNOCRACY."

Oh, no, you'll have a lot of attempts before that. Don't forget the Russians had the Prince Lvov government, Milyukov, Karensky before they had Lenin, and each one collapsed. The Bolsheviks didn't upset them. They killed themselves.

TELECONFERENCE HOWARD SCOTT  
WITH 8342-1, DETROIT

12-14-69

LENIN WAS JUST A CLEVER TACTICIAN WHO MOVED IN AT THE RIGHT TIME.

He was, and the Allies helped him.

O.K., ONE MORE QUESTION, CHIEF. THIS VAST STATEMENT YOU MADE IN THE ARTICLE, BACK IN THE EARLY DAYS OF OUR HISTORY, IT MIGHT HAVE HAD A CHANCE WHEN POOR RICHARD PUBLISHED HIS ALMANAC -- TODAY, NO. THE SAD FACT IS THAT POOR RICHARD HASN'T AN ALMANAC TODAY, HE'S JUST POOR RICHARD. Right. A COUPLE OF OUR MEMBERS HERE WOULD LIKE A LITTLE FURTHER ELABORATION ON THAT.

Well, the almanac has a certain direction for the year, has it not? It's supposed to tell you what's going to happen, weatherwise and otherwise, for the year. Isn't that the purpose of an almanac. RIGHT. Well, Poor Richard hasn't got anything to tell them how to do. I think we all ought to end our letters on Poor Richard. He hasn't got an almanac.

AND YOU'RE NOT TALKING ABOUT RICHARD AND HIS ALMANAC EITHER.

That's right.

I GET YOU.

Now you haven't got the last Trendevents, have you? IT HASN'T COME IN YET, CHIEF. I'll ask all of those who are attending to read that when you get it. MAYBE WE'LL HAVE ANOTHER MEETING. You could very well have. WE MIGHT HAVE TO CALL YOU DOWN IN FLORIDA AT THAT TIME. I hope so. Does that hold you?

JUST A MINUTE, CHIEF. I'VE GOT ONE QUESTION THAT I WANT TO ASK ON ANOTHER SUBJECT. O.K., EVERYBODY SEEMS TO BE HAPPY. THEY SEND YOU THEIR GOOD WISHES.

Thank you very much.

THIS QUESTION I HAVE: THE OTHER NIGHT YOU TOUCHED ON THIS SITUATION WITH JAPAN TYING UP WITH THE U.S.S.R. ON ENERGY RESOURCES, CHIEF. I WASN'T WRITING TOO FAST AT THAT TIME, AND I DIDN'T HAVE THAT LITTLE TAPE RECORDER HOOKED UP. WOULD YOU GO OVER THAT AGAIN FOR ME?

12-14-69

The treaty proposition on which they are negotiating at the present moment is between Japan and the U.S.S.R. The proposal is to build two 4,000,000 kW thermal power stations, one in Northern Sakhalin and one on the mainland opposite Sakhalin. They can run on gas, oil or coal. That 8,000,000 kW would be transmitted down the Island of Sakhalin on 2,000,000 volts DC and underneath the channel to Japan, and according to the Japanese statement, it would supply 8,000,000 kW 24-hour in Japan less than the cost of atomic power. Is that clear?

RIGHT.

And on top of that, they want the Russians to pipe the gas down the Island of Sakhalin and under the strait and divide it in two pipelines under the strait, so they can have Russian gas energy as well as Russian electrical energy. The treaty contract would run for 25 years.

THAT'S FIVE YEARS BETTER THAN MOST OF THE EUROPEAN NATIONS HAVE GOT.

Yes. Then who's going to tell Japan where to go?

NOT THE U.S.

That's correct.

BY THE SAME TOKEN, WE'RE NOT GOING TO TELL GERMANY, ITALY, OR THE REST OF THEM WHERE TO GO EITHER.

No, because tie up that much energy and you can only pay it in capital goods, not in currency, in Europe. And the same way with Japan. She can only pay in capital goods.

JUST A MOMENT, CHIEF, WE'VE GOT ANOTHER QUESTION COMING HERE. MRS. ? WANTS TO KNOW IF THIS TAKES THE FLOOR OUT OF THE RECENT AGREEMENT THAT SATO WAS OVER HERE WITH NIXON ON REGARDING OKINAWA.

Well, no. They can live up to the Okinawa thing. You'd have to get out of Okinawa and the others, because the Japanese no longer need us and our \$700 and some million a year. Is that

TELECONFERENCE HOWARD SCOTT  
WITH 8342-1, DETROIT

12-14-69

clear? In other words, we'll give it back to Japan, not because we're magnanimous but because we had better get out of there.

THAT'S PART OF THE TOTAL WITHDRAWAL FROM THE ORIENT?

Right.

O.K., I BELIEVE THAT'S ABOUT IT, CHIEF. JUST A MOMENT -- ONE MORE.

? IS ASKING DO WE HAVE ANYTHING IN THE PLANNING STAGE IN THE EXISTING SETUP FOR THE INCREASE IN THE GENERATION OF POWER TO OFFSET THE SHORTGAGES THAT EXIST HERE IN THE UNITED STATES.

I don't quite know what he means. Does he mean additional central station capacity?

ADDITIONAL CENTRAL STATION CAPACITY, THAT'S RIGHT.

Oh, yes, but then there are 3,500 public utility companies in the United States. It's very difficult to get them together to have a unified power system -- very difficult.

AND THEN THERE'S THE QUESTION OF CAPITAL INVESTMENT.

Capital investment, and then the question of controlled loads. We're going to have more blackouts for the simple reason that -- New York City, for instance, yes, but it can't switch its load. It can only do it by regions. By that I mean it can't switch off the advertising load independent of the street lights. Do you follow me? RIGHT. Well, that kind of load switching would cost about \$300 million in New York City.

BUT THE GOVERNMENT HAS NO SOLUTION FOR THEM EITHER.

Oh, no, they just want to continue as is, and hope to hell they can get away with it. The more energy that you feed out into the system, the more tenuous becomes the energy relationship; and you can't just decide you're going to go fishing and pull the circuit breaker.

You can't do that with an 8-10 million kW load.

TELECONFERENCE HOWARD SCOTT  
WITH 8342-1, DETROIT

12-14-69

THAT'S WHAT THEY FOUND CUT IN THAT BLACKOUT THEY HAD  
RECENTLY.

Yes. It has to be a planned energy disposition control; and  
that doesn't exist in any of the 3,500 power companies. Now if  
you want to go into energy systems, that's another long  
discussion. I mean, we have it here.

CHIEF, JERRY ? IS HERE, AND I DON'T KNOW -- WE  
TALKED TO HIM THE OTHER NIGHT, I BELIEVE, ON THIS 6-12 VOLT  
SITUATION IN YOUR TRAILER --

We found out how to do it. You just put a 12-volt alternator  
in the front of the car and build it up and run a separate  
circuit back.

WITH A SEPARATE BATTERY?

Well, it has a 12-volt battery in the trailer.

SO, YOU'RE USING YOUR ALTERNATOR TO RECHARGE YOUR TRAILER  
BATTERY, AND THAT'S USED TO POWER YOUR BRAKES AND ALL THE  
REST?

Right. We're all ready to roll as soon as we get the  
registration.

VERY GOOD, AND WE PASSED OUT THE NOTICE FROM CARTER THIS  
EVENING HERE REGARDING THE COMPLETION OF THE TRAILER FUND,  
AND THEY'RE AL VERY PLEASED WITH IT.

My compliments to everyone.

O.K., CHIEF, AND THANKS A LOT.

Thanks, John.

## ADDENDUM

This is not to be considered as an attempt to make a complete accounting of Howard Scott's innumerable statements and observations. Rather, it is only a reporting of those which one Technocrat heard him say over the years -- starting about 1938 -- during personal meetings with Scott at Continental Headquarters in Rushland, Pennsylvania, at membership meetings, and at some public lectures.

The quotations are not in any order of chronology or of relative importance. Where no date is ascribed, it is because either the idea/words were reiterated by the Chief so many times that a date is unimportant or that no notation was kept of the date by the listener. Most likely they were during the 1950s or 1960s.

A few of these statements by Scott -- spoken at public meetings and in more formal conversations with Technocrats -- may have also appeared in his published articles, where his decisive mastery of the semantic clarity of the English language is demonstrated.

## THE PRICE SYSTEM

You think you can solve it by shortening the work week alone?

"Confidence" in this Price System is the condition desired by every chiseler where the sucker forgets the last time he was trimmed.

The Soviet Union does not have the rule of the proletariat but the catastrophe of the bourgeois.

The Rockefellers and the Morgans and their like only hold the major debt claims, and if you had to operate their system, you'd operate it worse. If you cannot validate the debt claims, the structure will become washed out. Don't blame the major debt claim holders for present conditions. The responsibility is yours.

Are you kidding yourself that you want to "work"? Nobody ever got rich working, and nobody but a sucker ever tried to. What is there about work that you like? We propose that you put

the overalls on the machine -- where they belong -- and put the recreation shorts on the human. Well, why not?

[To businessmen at a Rotary Club luncheon] Don't kid yourself; you're all on relief right now. Government injections are what is keeping your system going.

We of Technocracy consider Marxism so far to the right that it is bourgeois.

Communism is a moral philosophy proposing a more equitable division of a scarcity.

(In the United States and Canada) the nominal or de jure government consists of the officials (politicians) elected to office, the de facto government consists of the major holders of debt claims; in other words, the nominal government is just the office boy for the de facto government.

In a static society, it is almost impossible for real functional ability to rise (1938).

Democracy is a type of political government so arranged to give the citizens the illusion that they have a say-so in that government.

#### THE TECHNATE OF NORTH AMERICA

Technocracy calls for a new statesmanship plotting (on charts) the rate of growth of all energy-generating and energy-consuming units in the area per unit of time.

The new Great Lake, Lake Albany, proposed north of Lake Superior and as large, would add 38 percent more fresh water flow to the Great Lakes. Its power capacity would be 6 million horsepower, and it would have cost only \$700 million (under the Price System) in the year 1935 when first proposed.

After 45 years of age in the Technate, upon retirement the color of your Energy Certificate changes, though its energy purchasing power doesn't change, and from then on it doesn't make any difference whether you use your energy income playing tiddledewinks in the Bahamas or making mud pies with the Eskimos.

In this technological day and age, you have no right to decide the social operation of this continent as a matter of opinion when it can be decided as a matter of fact.

Only when there is zero opinion in the arrivation of social decisions will there be a maximum of personal selectivity, choice, and opportunity.

The Continental Energy-Materials-Products Accounting Board would be at least 3,000 feet long and 20 feet high -- on one side tabulating the constant flow of input and production output; on the other side, the flow of distribution-consumption (to citizen consumer-users) -- everything in materials being in standard multiples of a modified Dewey Decimal System, so that, for instance, all axles have the same prime number regardless of size, weight, etc. The figures will run up vertically, not horizontally. You can thereby see your governance in operation at any time of the day or night on remote closed circuit television screen/computer display panels to be located in every university on the continent (December 6-7, 1969, at CHQ). It would be 2,500 feet minimum length and 4,000 feet maximum (October 24-25, 1964 at CHQ).

#### ENERGY, SCIENCE, AND ENGINEERING TECHNOLOGY

The lower 20 percent of total steel capacity is so obsolete it uses three times as many man-hours as modern equipment -- 280,000 steelworkers will never work at steel again.

The per capita travel in this country averages 5,000 to 6,000 miles per year, whereas in some countries it is 4. (Late 1950s or early 1960s)

Population problem? Well, there is this chemical that you introduce into the city's drinking water supply to the miniscule extent of 0.0004 of 1 percent. It is odorless, tasteless, has no side effects, and allows for normal ovulation. All it does is alter the pH factor in the womb where the fetus is dissolved in any mammal -- human, cat, dog, cow (so long as they are drinking the water daily), and you automatically solve the population problem for as long as it is necessary to hold down population increase. During this period, if any couple just has to have a

child, all you have to do is drink bottled water for a while. Just that simple. Incidentally, two of the five or six scientists who developed this are Technocrats. The formula in city water is effective even after conception but better for prevention. A Technocrat, 40 years old, wanted a natural abortion -- 5-1/2 months pregnant -- and the formula in her drinking water accomplished it. On a city-wide scale, when the formula is withdrawn (no longer used) from the water supply, 28 days after resuming regular water, women could be potentially fertile again for babies.

#### IN GENERAL AND TECHNOCRACY THE ORGANIZATION

We as a nation never had the need, or the time, to consider where we were going.

If there is anything that Technocracy has accomplished, it has made it possible for more Americans to retain their sanity than any other organization (1948).

Why did Technocracy raise its flag, its "social ante" at the top of the mast from the very start? So that any other organization, or any ideology, could steal it, if they could do any better than Technocracy proposes, but none can (1953).

It was not until the year 1840 that a book was written in the English language to prove that a woman had a soul.

If we're right, then everybody else is wrong; but if we're wrong, we're only human, (That is, everybody else -- the entire corpus of the past/present Price System, is wrong; but, being human, we could be mistaken; however, Technocracy, being the only social concept derived from science -- the scientific method -- of determining by physical research, measurement, and prediction of the laws of nature -- if we're wrong, so is science!)

#### PERSONAL NOTES

At the depths of the depression and the heights of the first frenetic journalistic furore over Technocracy, Scott was offered a \$30,000-a-year "sinecure" (which he later called the Price System's "platinum handcuffs") to buy him off, plus office and travelling expenses, to be on the Board of Trustees of one of the

wealthiest and more prestigious foundations in America. It would have meant abandoning his vision -- in effect, selling out Technocracy. He declined, choosing instead a \$30-a-week future -- the same salary as others working on the staff of Technocracy Inc.'s Continental Headquarters in New York City, the nonprofit, nonpolitical, educational, and research organization he founded (that being the equal staff salary at CHQ in the late 1930s and early 1940s.) Alger Hiss accepted the job on that foundation.

During a press conference for Scott in a Chicago hotel about 1939-40, the reporters around him after listening to his summary of the serious problems facing North America and of Technocracy's alternative solution, began to remonstrate with him: "But Mr. Scott, doesn't so-and-so and so-and-so believe that ....?" "But, sir, in my opinion," etc., etc. To all of that, he stopped them short with: "I don't care what you or anyone else 'believes' ". Hell, it doesn't matter what your 'opinions' are -- or mine either for that matter. What do you know? It is only the facts that count!"

In one of Scott's public lectures in Chicago about 1938\*, it was at Engineer's Hall that he went into some detail on the concepts of authority and responsibility: Authority, as considered, defined, and practiced from the start of the Price System's power holders -- political "power" (kings, dictators, presidents, governors, prime ministers, revolutionary councils, etc.), that is, those empowered to make and establish and enforce policies -- the decision makers. Responsibility, on the other hand, is relegated/delegated to those who have the functional duty to carry out the policy decisions set by those in "authority" to perform -- the engineers, teachers, farm and industry workers, technicians, nurses, generals/admirals (told who to make war against), soldiers (who, in turn, carry out orders from the generals), et al. One of the fundamental rules of the game of the Price System throughout the world, regardless of which variation, such as feudalism, capitalism, fascism, socialism, etc., is to keep authority separate from responsibility. This is to be expected, since under a Price System its politico-economic decisions have to be made in terms of monetary-price-debt factors and/or the arbitrary legalized

---

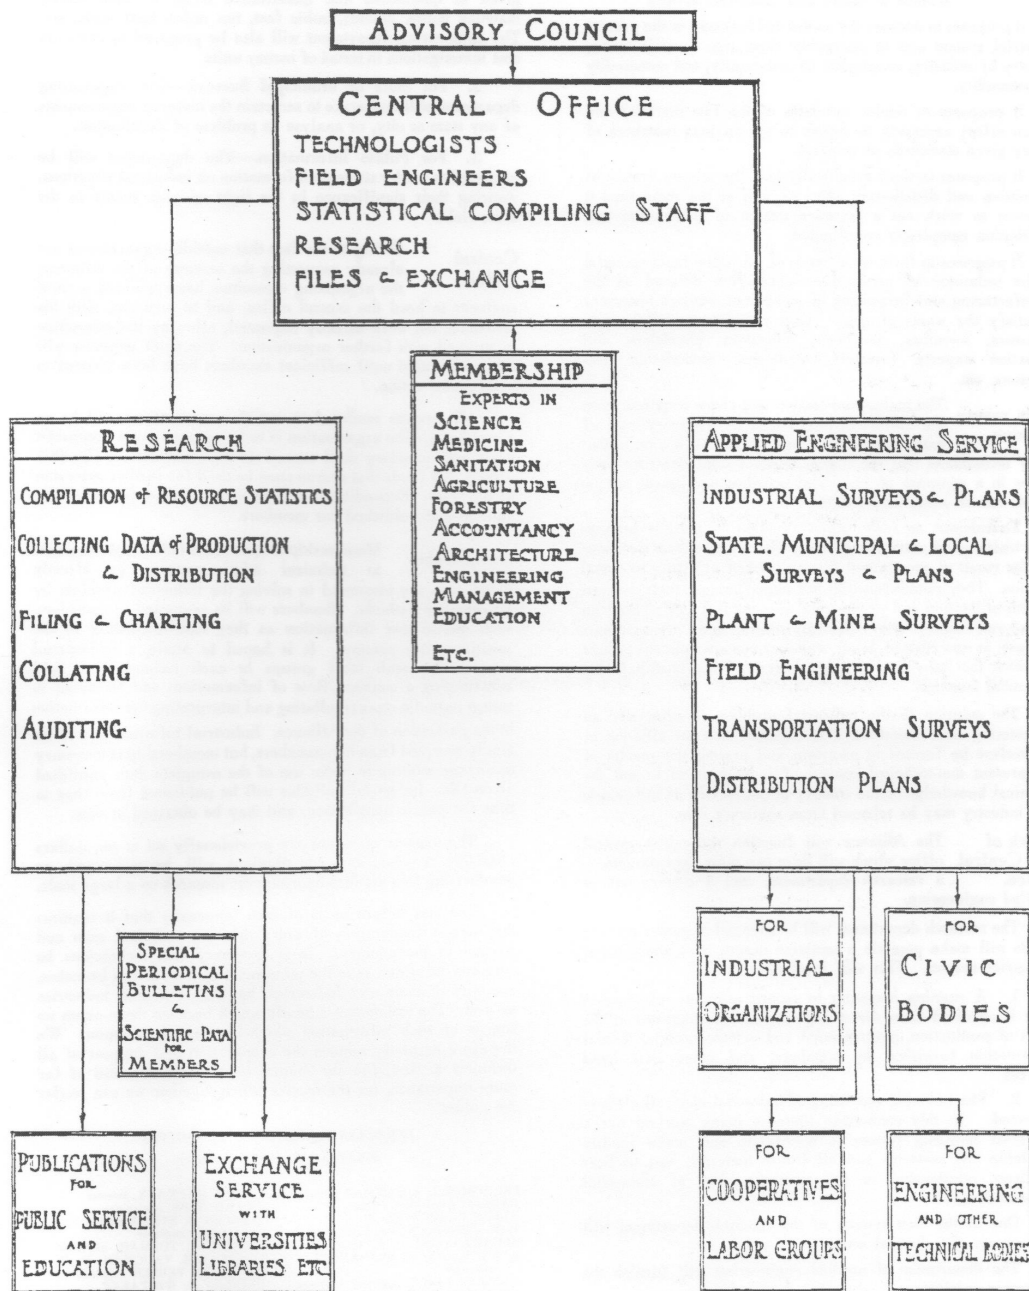

\* No notes were taken; so this is reconstructed. The concepts were impressed indelibly because little or nothing on this point has appeared in the Technocracy printed literature.

control over masses of people, and only politico/financial leaders can do this.

In the functionally interdisciplinary Technate, for the first time in human history anywhere, authority and responsibility will be one -- integrated from the top down at every level; in other words, when you make a decision (whether you are a chief engineer or a telephone lineman, etc., you have to carry it out; it is your responsibility). You have to know what you're doing -- the competence necessary for a functional governance, a functional society, including interdisciplinary decisioning with other sequences.

# THE TECHNICAL ALLIANCE

## ORGANIZATION

## THE TECHNICAL ALLIANCE

### WHAT IT IS, AND WHAT IT PROPOSES.

ENGINEERING IS THE SCIENCE OF PLANNING AND UTILIZING NATURAL RESOURCES AND HUMAN EFFORT FOR THE SATISFACTION OF THE WANTS OF MAN.

**What Is Projected.** The Technical Alliance proposes to survey the possibility of applying the achievements of science to social and industrial affairs.

It proposes to uncover the wastes and leakages in the present industrial system and to interpolate them into specific terms, industry by industry, community by community, and commodity by commodity.

It proposes to render estimates of the raw material and human effort necessary to insure to the various members of society given standards of comfort.

It proposes to show graphically how the present system of production and distribution operates, and at the same time it proposes to work out a tentative design of production and distribution completely coordinated.

It proposes to form an alliance of all individuals essential to the technique of production—production defined as the manufacturing and furnishing of goods and services necessary to satisfy the wants of man. Such individuals will include engineers, scientists, architects, educators, physicians and sanitation experts, foresters, managers, accountants, statisticians, etc.

**Facts versus Opinion.** The maladministration and chaos imposed upon the industrial mechanism by arbitrary rule of extraneous interest has reached such a point that many technicians feel the urgent need of confederating their forces in a program of industrial coordination based, not on belief, but on exact knowledge.

Technicians as such cannot function in politics because their training has placed them in a position where their decisions are the result of ascertained fact and not of arbitrary personal opinion. They cannot function in finance because their concern is with utilization and production, whereas finance is based on money and credits. They cannot function in labor organizations because, as now formed, labor organizations are political groups in which the individual member bears no relationship to his industrial function.

The solution to the industrial problem is primarily an engineering one; therefore it is essential that an alliance of technicians be formed to ascertain and present the results of the present non-technical control of industry, and to put the technical knowledge of the country at the service of the people that industry may be released from arbitrary rule.

**Work of The Central Office.** The Alliance will function through a central office which will have two main departments,—a research department, and a department of applied engineering.

The research department will be engaged in gathering data which will make possible a tentative design of a coordinated industrial system. This will involve,—

1. A running inventory to record essential information as it is obtained from direct engineering investigations at the point of production, governmental and private reports, special information furnished by members, and other first hand sources.

2. The indexing and filing of industrial material already collected. In this connection there is being worked out a universal indexing system to coordinate and make readily available this material and all future material, and to bear a direct relationship to the synthetic plan of industrial organization.

One of the first reports of the research department will be a survey of industrial waste.

The department of applied engineering will furnish the following services,—

1. For engineering, civic, labor and other industrial groups,—engineering estimates of production processes, man-

agement, material specifications, plant locations, related industries, and distributing methods. These estimates will be given in qualitative and quantitative terms of man hours, machine hours, pounds, cubic feet, ton miles, heat units, etc. The engineering department will also be prepared to carry on cost investigations in terms of money units.

2. For State or Municipal Surveys.—The engineering department will undertake to ascertain the material requirements of any state or city, or analyse its problem of distribution.

3. For Public Information.—The department will be prepared to render strategic information on industrial situations, showing their significance in the light of past events in the same field.

### Central Office

Owing to the fact that outside organizations are already requesting the services of the Alliance, the organizing committee has appointed a chief engineer to head the central office, and to turn out, with his assistants, the work already requested, allowing the committee to proceed with further organization. The chief engineer will act as executive until sufficient members have been secured to justify new action.

All services rendered to outside organizations will be on a cost basis. The organization is to be operated on a non-profit basis, and no salary shall exceed six thousand dollars (\$6000) a year. All funds that accrue must be used for further extension of the work. Expenditures and disbursements of funds will be audited and published for members.

### Membership

Membership is open to all individuals essential to technical administration, as already listed, who are interested in solving the industrial problem by engineering methods. Members will be requested to contribute such advice and information as they can, according to the positions they occupy. It is hoped to attain a widespread organization with local groups in each technological field contributing a constant flow of information, and receiving in return periodic reports collating and interpreting the information in the possession of the Alliance. Industrial information will be gladly accepted from non-members, but membership is necessary to anyone wishing to make use of the complete data published or on file. Industrial bulletins will be published from time to time for public distribution, and may be obtained at cost.

The dues of members are provisionally set at ten dollars (\$10.00) a year, but contributions will be welcomed, as membership fees alone cannot support research on a large scale.

The task before us is of such immensity that it requires the earnest cooperation of every thinking technical man and woman in the country. It is necessary that technicians be correctly informed as to the occurrences in the various branches, not only of their own industries, but of all related industries as well. The technician is handicapped because there exists no source of such information which he may draw upon. We therefore earnestly request the cooperation and support of all technicians, first, for our mutual benefit, second, and of far more importance, for the service which together we can render the public.

### TEMPORARY ORGANIZING COMMITTEE

SULLIVAN W. JONES, Secretary

FREDERICK L. ACKERMAN, architect	BENTON MACKAYE, forester
CARL L. ALSBERG, chemist	LELAND OLDS, statistician
